- Appendix 1 (interferons).
- Avoid simultaneous administration of foreign proteins including immunological products (risk of exaggerated immune response).

#### SIDE-EFFECTS
- Common or very common Abdominal pain, arthralgia, chills, depression, diarrhoea, fatigue, fever, headache, injection-site reactions, myalgia, nausea, rash, vomiting
- Rare Confusion, systemic lupus erythematosus
- Frequency not known Neutropenia, proteinuria, raised liver enzymes, thrombocytopenia

#### CONCEPTION AND CONTRACEPTION
- Effective contraception required during treatment—consult product literature.

#### NATIONAL FUNDING/ACCESS DECISIONS
- NICE technology appraisals (TAs)
- Peginterferon alfa, interferon alfa, and ribavirin for moderate to severe chronic hepatitis C (January 2004 and September 2010) NICE TA200
- Interferon alfa may be switched to peginterferon alfa.
  - www.nice.org.uk/TA200

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

**EXCIPIENTS:** May contain Benzyl alcohol

- **IntronA** (Merck Sharp & Dohme Ltd)
  - Interferon alfa-2b 10 mega u per 1 ml IntronA 10millon units/1ml solution for injection vials | 1 vial (PST) | £37.21
  - Interferon alfa-2b 15 mega u per 1 ml IntronA 18million units/1.2ml solution for injection multidose pens | 1 pre-filled disposable injection (PST) | £74.83
  - Interferon alfa-2b 25 mega u per 1 ml IntronA 30million units/1.2ml solution for injection multidose pens | 1 pre-filled disposable injection (PST) | £124.72
  - Interferon alfa-2b 50 mega u per 1 ml IntronA 60million units/1.2ml solution for injection multidose pens | 1 pre-filled disposable injection (PST) | £249.45

- **Roferon-A** (Roche Products Ltd)
  - Interferon alfa-2a 6 mega u per 1 ml Roferon-A 3million units/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (PST) | £14.20
  - Interferon alfa-2a 9 mega u per 1 ml Roferon-A 4.5million units/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (PST) | £21.29
  - Interferon alfa-2a 12 mega u per 1 ml Roferon-A 6million units/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (PST) | £28.37
  - Interferon alfa-2a 18 mega u per 1 ml Roferon-A 9million units/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (PST) | £42.57

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- **Imimkin** (Boehringer Ingelheim Ltd)
  - Interferon gamma-1b (recombinant human) 200 microgram per 1 ml Immunkin 100micrograms/0.5ml solution for injection vials | 6 vial (PST) | £450.00
INTERLEUKINS

Aldesleukin

**DRUG ACTION** Aldesleukin produces tumour shrinkage in a small proportion of patients, but it has not been shown to increase survival.

**INDICATIONS AND DOSE**

- Metastatic renal cell carcinoma (specialist use only)
- BY SUBCUTANEOUS INJECTION OR BY INTRAVENOUS INFUSION
  - Adult: (consult product literature)

**SIDE-EFFECTS**

- Common or very common Bone-marrow toxicity · CNS toxicity · hepatic toxicity · renal toxicity · thyroid toxicity
- Rare or very rare Alopecia · bone-marrow suppression · extravasation · hyperuricaemia · nausea · oral mucositis · thromboembolism · tumour lysis syndrome · vomiting
- Also consult product literature.

**CONTRA-INDICATIONS** Consult product literature for information about aldesleukin contra-indications.

**CAUTIONS** Consult product literature for information about aldesleukin cautions.

**INTERACTIONS** → Appendix 1 (aldesleukin).

**SIDE-EFFECTS**

- Common or very common Bone-marrow toxicity · CNS toxicity · hepatic toxicity · renal toxicity · thyroid toxicity
- Frequency not known Alopecia · bone-marrow suppression · extravasation · hyperuricaemia · nausea · oral mucositis · thromboembolism · tumour lysis syndrome · vomiting
- Also consult product literature.

**CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women.

**PREGNANCY** Use only if potential benefit outweighs risk (toxicity in animal studies). See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

**BREAST FEEDING** Discontinue breast-feeding.

**DIRECTIONS FOR ADMINISTRATION** Aldesleukin is now rarely given by intravenous infusion because of an increased risk of capillary leak syndrome, which can cause pulmonary oedema and hypotension.

**MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**

- Proleukin (Novartis Pharmaceuticals UK Ltd)
  - Aldesleukin 18 mega u Proleukin 18 million unit powder for solution for injection vials | 1 vial £112.00 | 10 vial £1,036.00

THALIDOMIDE AND RELATED ANOLOGUES

Lenalidomide

**DRUG ACTION** Lenalidomide is an immunomodulating drug with anti-neoplastic, anti-angiogenic, and pro-erythropoietic properties.

**INDICATIONS AND DOSE**

- Multiple myeloma (newly diagnosed) in patients not eligible for transplant, given in combination with dexamethasone
- Until disease progression
- BY MOUTH
  - Adult: 25 mg once daily for 21 consecutive days of repeated 28-day cycles, for doses of dexamethasone, and dose adjustments due to side-effects, consult product literature

Multiple myeloma in patients who have received at least one prior therapy, given in combination with dexamethasone

BY MOUTH

- Adult: 10 mg once daily for 21 consecutive days of repeated 28-day cycles for up to 9 cycles, for doses of melphalan and prednisone, and dose adjustments due to side-effects; consult product literature

Multiple myeloma in patients not eligible for transplant, given in combination with melphalan and prednisone followed by maintenance monotherapy

BY MOUTH

- Adult: 10 mg once daily for 21 consecutive days of repeated 28-day cycles for up to 9 cycles, for doses of melphalan and prednisone, and dose adjustments due to side-effects, consult product literature

Treatment of transfusion-dependent anaemia due to low- or intermediate-1-risk myelodysplastic syndromes (MDS) associated with an isolated deletion 5q cytogenetic abnormality when other treatment options are insufficient or inadequate

BY MOUTH

- Adult: 10 mg once daily for 21 consecutive days of repeated 28-day cycles, for dose adjustments due to side-effects; consult product literature

**CAUTIONS** High tumour burden—risk of tumour lysis syndrome · patients with risk factors for myocardial infarction

**CAUTIONS, FURTHER INFORMATION**

**Thromboembolism** Risk factors for thromboembolism (such as smoking, hypertension, hyperlipidaemia) should be minimised and thromboprophylaxis should be considered in patients with multiple risk factors.

**Second primary malignancy** Patients should be carefully evaluated before and during treatment with lenalidomide using routine cancer screening for occurrence of second primary malignancy and treatment should be instituted as indicated.

**INTERACTIONS** → Appendix 1 (lenalidomide).

Use caution with concomitant drugs that increase the risk of thromboembolism.

**SIDE-EFFECTS**

- Common or very common Abdominal pain · anaemia · arhythmias · arthralgia · ataxia · atrial fibrillation · bacterial infections · bradycardia · cardiac failure · cataract · cerebrovascular events · chest pain · cholestasis · constipation · decreased appetite · deep vein thrombosis · dehydration · depression · diarrhoea · diziness · dry mouth · dyspepsia · dysphagia · dyspnoea · electrolyte disturbances · falls · flu-like illness · fungal infections · haematoma · haematuria · haemorrhagic disorders · headache · hearing disturbances · hyperglycaemia · hyperviscosity · hypertension · hypothyroidism · insomnia · iron-overload · lethargy · leucopenia · malaise · mood changes · musculoskeletal disorders · myalgia · myocardial infarction · nausea · oedema · peripheral neuropathy · pneumonia · pruritus · pulmonary embolism · pyrexia · rash · renal failure · respiratory distress · respiratory tract infections · sepsis · severe neutropenia · sexual dysfunction · sinusitis · skin disorders · stomatitis · syncope · tachycardia · taste disturbance · thrombocytopenia · tremor · urinary incontinence · urinary retention · vasculitis · viral infections · visual disturbances · vomiting

- Uncommon Acquired Fanconi syndrome · angioedema · blindness · cecitis · clotting disorders · colitis · haemolysis · hepatic failure · ischaemia · secondary malignancies

- Rare Stevens-Johnson syndrome · toxic epidermal necrolysis · tumour lysis syndrome
PATIENT AND CARER ADVICE

- **Frequency not known** Cholestatic hepatitis - cytolytic hepatitis - interstitial pneumonitis - leukocytoclastic vasculitis - pancreatitis - toxic hepatitis

**SIDE-EFFECTS, FURTHER INFORMATION**

**Monitor visual ability regularly (risk of cataract).**

**Monitor full blood count (including differential white cell count) impaired liver function.**

**Interrupt treatment if neutropenia, thrombocytopenia or hepatitis develop.**

**Abnormal liver function**

**Patients and their carers should be made aware of the symptoms of neutropenia and advised to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat) or of thrombocytopenia (such as bleeding) develop.**

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- **Lenalidomide for the treatment of multiple myeloma (June 2009) NICE TA171**
  Lenalidomide in combination with dexamethasone is an option for the treatment of multiple myeloma in patients who have received two or more prior therapies. The drug cost of lenalidomide will be met by the manufacturer for patients who remain on treatment for more than 26 cycles. www.nice.org.uk/TA171

- **Lenalidomide for treating myelodysplastic syndromes associated with an isolated deletion 5q cytogenetic abnormality (September 2014) NICE TA322**
  Lenalidomide is recommended as an option, within its marketing authorisation, for treating transfusion-dependent anaemia caused by low or intermediate-1-risk myelodysplastic syndromes associated with an isolated deletion 5q cytogenetic abnormality when other therapeutic options are insufficient or inadequate, with the following condition:
  - the drug cost of lenalidomide (excluding any related costs) for people who remain on treatment for more than 26 cycles (each of 28 days; normally a period of 2 years) will be met by the company. www.nice.org.uk/TA322

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium has advised (April 2010) that lenalidomide, in combination with dexamethasone, is accepted for restricted use within NHS Scotland for patients with multiple myeloma who have received at least two prior therapies (and (March 2014) for those who have received prior treatment with bortezomib and for whom thalidomide has not been tolerated or is contraindicated.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

- **CAUTIONARY AND ADVISORY LABELS 25**
  - **Revlimid (Celgene Ltd)**
  - **Lenalidomide 2.5 mg** Revlimid 2.5mg capsules | 21 capsule | £3,426.00
  - **Lenalidomide 5 mg** Revlimid 5mg capsules | 21 capsule | £3,570.00
  - **Lenalidomide 10 mg** Revlimid 10mg capsules | 21 capsule | £3,780.00
  - **Lenalidomide 15 mg** Revlimid 15mg capsules | 21 capsule | £3,969.00
  - **Lenalidomide 25 mg** Revlimid 25mg capsules | 21 capsule | £4,368.00

**Pomalidomide**

- **DRUG ACTION** Pomalidomide is structurally related to thalidomide and has immunomodulatory properties and direct anti-myeloma tumoricidal activity.

**INDICATIONS AND DOSE**

Treatment of relapsed and refractory multiple myeloma in patients who have received at least two prior treatment regimens, including both lenalidomide and bortezomib, and who have had disease progression during the last treatment (in combination with dexamethasone)

**B y mouth**

- Adult: 4 mg once daily for 21 consecutive days of repeated 28-day cycles, for doses of dexamethasone and dose adjustment due to side effects—consult product literature
CAUTIONS
Cardiac disease • cardiac risk factors • high tumour burden—risk of tumour lysis syndrome • interstitial lung disease—discontinue if suspected • peripheral neuropathy

CAUTIONS, FURTHER INFORMATION
Thromboembolism Risk factors for thromboembolism (such as smoking, hypertension, hyperlipidaemia) should be minimised. Thromboprophylaxis should be considered, particularly in patients with additional risk factors.

Second primary malignancy Patients should be carefully evaluated before and during treatment with pomalidomide using routine cancer screening for occurrence of second primary malignancy and treatment should be instituted as indicated.

INTERACTIONS
Appendix 1 (pomalidomide).

SIDE-EFFECTS
Common or very common Anaemia • bone pain • cardiac failure • confusion • constipation • cough • decreased appetite • diarrhoea • dizziness • dyspnoea • febrile neutropenia • hypertension • hyperkalaemia • hypertension • impaired consciousness • interstitial lung disease • leucopenia • malaise • muscle spasms • nausea • neutropenia • neutropenic sepsis • pelvic pain • peripheral neuropathy • peripheral oedema • pneumonia • pruritus • pyrexia • rash • renal failure • respiratory tract infection • thrombocytopaenia • thromboembolic events • tremor • urinary retention • vertigo • vomiting

Uncommon Hepatitis

Frequency not known Atrial fibrillation • pulmonary oedema

CONCEPTION AND CONTRACEPTION
For women of childbearing potential, pregnancy must be excluded before starting treatment with pomalidomide (perform pregnancy test on initiation or within 3 days prior to initiation). Women must practise effective contraception at least 1 month before, during, and for at least 1 month after treatment, including during dose interruptions (oral combined hormonal contraceptives and copper-releasing intra-uterine devices not recommended) and men should use condoms during treatment, during dose interruption, and for at least 1 week after stopping if their partner is pregnant or is of childbearing potential and not using effective contraception. Patients, prescribers and pharmacists must comply with pregnancy prevention measures as specified in the manufacturer’s Pregnancy Prevention Programme.

PREGNANCY
Important: teratogenic risk.

BREAST FEEDING
Avoid—present in milk in animal studies.

HEPATIC IMPAIRMENT
Manufacturer advises caution—no information available.

RENAL IMPAIRMENT
Manufacturer advises caution—no information available.

MONITORING REQUIREMENTS
Monitor full blood count before treatment, then every week for the first 8 weeks, then monthly thereafter (reduce dose or interrupt treatment if neutropenia or thrombocytopaenia develop—consult product literature).

Monitor for arterial or venous thromboembolism.

Monitor for signs and symptoms of cardiac failure.

Monitor for acute onset or unexplained worsening of respiratory symptoms.

Monitor liver function for 6 months after initiation, then as clinically indicated.

PRESCRIBING AND DISPENSING INFORMATION
Patient, prescriber, and supplying pharmacy must comply with a pregnancy prevention programme. Every prescription must be accompanied by a completed Prescription Authorisation Form.

PATIENT AND CARER ADVICE
Patients and their carers should be made aware of the symptoms of thromboembolism and advised to report sudden breathlessness, chest pain, or swelling of a limb. Patients and their carers should be made aware of the symptoms of neutropenia and advised to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat) or of thrombocytopaenia (such as bleeding) develop. Patient counselling is advised for pomalidomide capsules (pregnancy and contraception).

NATIONAL FUNDING/ACCESS DECISIONS
NICE technology appraisals (TAs)
Pomalidomide for relapsed and refractory multiple myeloma previously treated with lenalidomide and bortezomib (March 2015) NICE TA338 Pomalidomide, in combination with dexamethasone, is not recommended for the treatment of relapsed and refractory multiple myeloma in adults who have had at least 2 previous treatments, including lenalidomide and bortezomib, and whose disease has progressed on the last therapy. www.nice.org.uk/TA338

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Capsule
CAUTIONARY AND ADVISORY LABELS
3, 25 EXCIPIENTS: May contain Propylene glycol

N N N

Imnovid (Celgene Ltd) ▼ 1 capsule
Pomalidomide 2 mg
1 capsule
Pomalidomide 3 mg
1 capsule
Pomalidomide 4 mg
1 capsule

Thalidomide

DRUG ACTION
Thalidomide has immunomodulatory and anti-inflammatory activity.

INDICATIONS AND DOSE
First-line treatment for untreated multiple myeloma, in patients aged 65 years and over, or for those not eligible for high-dose chemotherapy (for example, patients with significant co-morbidity such as cardiac risk factors) in combination with melphalan and prednisolone

BY MOUTH
Adult: 200 mg once daily for 6–week cycle for a maximum of 12 cycles, dose to be taken at bedtime

CAUTIONS
High tumour burden—risk of tumour lysis syndrome

CAUTIONS, FURTHER INFORMATION
Thromboembolism Risk factors for thromboembolism (such as smoking, hypertension, hyperlipidaemia) should be minimised. Thromboprophylaxis is recommended for at least the first 5 months of treatment, especially in patients with additional thrombotic risk factors.

Second primary malignancy Patients should be carefully evaluated before and during treatment with thalidomide using routine cancer screening for occurrence of second primary malignancy and treatment should be instituted as indicated.

Peripheral neuropathy Patients with pre-existing peripheral neuropathy should not be treated with thalidomide unless the potential clinical benefits outweigh the risk.
2.8 Photodynamic therapy responsive malignancy

**PHOTOSENSITISERS**

**Porfimer sodium**

- **DRUG ACTION** Porfimer sodium accumulates in malignant tissue and is activated by laser light to produce a cytotoxic effect.

- **INDICATIONS AND DOSE** Photodynamic therapy of non-small cell lung cancer and obstructing oesophageal cancer
  
  **BY SLOW INTRAVENOUS INJECTION**
  
  **Adult:** (consult product literature)

- **CONTRA-INDICATIONS** Acute porphyrias p. 864  
  - broncho-oesophageal fistula  
  - tracheo-oesophageal fistula

- **SIDE-EFFECTS** Alopecia  
  - bone-marrow suppression  
  - constipation  
  - extravasation  
  - hyperuricaemia  
  - nausea  
  - oral mucositis  
  - photosensitivity (sunscreens offer no protection)  
  - thromboembolism  
  - tumour lysis syndrome  
  - vomiting

- **PREGNANCY** Manufacturer advises avoid unless essential.

- **BREAST FEEDING** No information available—manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Avoid in severe impairment.

- **PATIENT AND CARER ADVICE** Patients and their carers should be advised of the symptoms of thromboembolism and advised to report sudden breathlessness, chest pain, or swelling of a limb.

- **PATIENT AND CARER ADVICE** Patients and their carers should be made aware of the symptoms of neutropenia and advised to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat) or of thrombocytopenia (such as bleeding) develop.

- **PATIENT AND CARER ADVICE** Patients and their carers should be advised to seek medical advice if symptoms of peripheral neuropathy such as paraesthesia, abnormal coordination, or weakness develop.

- **PATIENT AND CARER ADVICE** Patient counselling advised for thalidomide capsules (pregnancy and contraception).

- **NATIONAL FUNDING/ACCESS DECISIONS** NICE technology appraisals (TAs)
  
  **Bortezomib and thalidomide for the first-line treatment of multiple myeloma (July 2011) NICE TA228**

  Thalidomide in combination with an alkylating drug and a corticosteroid is recommended as an option for the first-line treatment of multiple myeloma in people for whom high-dose chemotherapy with stem cell transplantation is considered inappropriate. [www.nice.org.uk/TA228](http://www.nice.org.uk/TA228)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, oral suspension, tablet

  - peripheral neuropathy  
  - peripheral oedema  
  - pneumonia  
  - pulmonary embolism  
  - pyrexia  
  - skin reactions  
  - Stevens-Johnson syndrome  
  - syncope  
  - thrombocytopenia  
  - tremor  
  - vomiting

- Frequency not known
  - Atrial fibrillation  
  - atrioventricular block  
  - cerebrovascular events  
  - convulsions  
  - gastro-intestinal haemorrhage  
  - gastro-intestinal perforation  
  - hearing loss  
  - hepatic disorders  
  - hypothyroidism  
  - intestinal obstruction  
  - menstrual disorders  
  - myocardial infarction  
  - renal failure  
  - second primary malignancy  
  - sexual dysfunction  
  - toxic epidermal necrolysis  
  - worsening of Parkinson’s disease symptoms

- **CONCEPTION AND CONTRACEPTION** For women of childbearing potential, pregnancy must be excluded before starting treatment with thalidomide (perform pregnancy test on initiation or within 3 days prior to initiation). Women must practise effective contraception at least 1 month before, during, and for at least 1 month after treatment, including during dose interruptions (oral combined hormonal contraceptives and copper-releasing intra-uterine devices not recommended) and men should use condoms during treatment, during dose interruption, and for at least 1 week after stopping if their partner is pregnant or is of childbearing potential and not using effective contraception. Patients, prescribers and pharmacists must comply with pregnancy prevention measures as specified in the manufacturer’s Pregnancy Prevention Programme.

- **PREGNANCY** Important: teratogenic risk.

- **BREAST FEEDING** Avoid—present in milk in animal studies.

- **HEPATIC IMPAIRMENT** Caution in severe impairment—no information available.

- **RENAL IMPAIRMENT** Caution in severe impairment—no information available.

- **MONITORING REQUIREMENTS**
  
  - Monitor white blood cell count (including differential count) and platelet count (reduce dose or interrupt treatment if neutropenia or thrombocytopenia develop—consult product literature).
  
  - Monitor for arterial or venous thromboembolism.
  
  - Monitor patients for signs and symptoms of peripheral neuropathy.
  
  - Hepatic disorder Liver function should be monitored, particularly when there is history of, or concurrent viral liver infection, or when thalidomide is combined with drugs known to be associated with liver dysfunction (e.g. paracetamol).

- **PRESCRIBING AND DISPENSING INFORMATION** Patient, prescriber, and supplying pharmacy must comply with a pregnancy prevention programme. Every prescription must be accompanied by a complete Prescription Authorisation Form.

---

**BREAST FEEDING**

- Avoid—present in milk in animal studies.
2.9 Targeted therapy responsive malignancy

HEDGEHOG PATHWAY INHIBITORS

Vismodegib

- **DRUG ACTION** Vismodegib is a hedgehog pathway inhibitor.

**INDICATIONS AND DOSE**
Symptomatic metastatic basal cell carcinoma | Locally advanced basal cell carcinoma not appropriate for surgery or radiotherapy

**BY MOUTH**
- Adult: 150 mg once daily

**Important safety information**
Risks of incorrect dosing of oral anti-cancer medicines, see p. 745

- **INTERACTIONS** → Appendix 1 (vismodegib).
- **SIDE-EFFECTS**
  - Common or very common Abdominal pain | abnormal hair growth | alopecia | amenorrhea | arthralgia | constipation | decreased appetite | dehydration | diarrhoea | dyspepsia | hypoponataemia | malaise | muscle spasms | musculoskeletal pain | nausea | pruritus | rash | taste disturbances | vomiting | weight loss
- **CONCEPTION AND CONTRACEPTION**
  For women of child-bearing potential, pregnancy must be excluded before initiation of treatment, and monthly during treatment. Women must use two contraceptive methods (including one highly effective method and one barrier method) during treatment and for 24 months after the final dose of vismodegib. Men must use a condom during treatment and for 2 months after the final dose.
- **PREGNANCY** Important: teratogenic risk — may cause severe birth defects and embryo-foetal death.
- **BREAST FEEDING** Avoid during treatment and for 24 months after final dose.
- **HEPATIC IMPAIRMENT**
  No information available — manufacturer advises caution in moderate to severe impairment.
- **RENAL IMPAIRMENT**
  No information available — manufacturer advises caution in severe impairment.
- **PRESCRIBING AND DISPENSING INFORMATION**
  Prescribers and pharmacists must comply with prescribing and dispensing restrictions as specified in the manufacturer’s Pregnancy Prevention Programme, and ensure that the patient fully acknowledges the programme’s pregnancy prevention measures — consult product literature for further information.
- **PATIENT AND CARER ADVICE**
  Counselling on pregnancy and contraception advised. Patients must comply with the manufacturer’s pregnancy prevention programme.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Capsule**
CAUTIONARY AND ADVISORY LABELS 25
- **Erivedge** (Roche Products Ltd)
  - Vismodegib 150 mg | Erivedge 150 mg capsules | 28 capsule Pack £6,285.00 (Hospital only)

**Temoporfin**

- **DRUG ACTION** Temoporfin accumulates in malignant tissue and is activated by laser light to produce a cytotoxic effect.

**INDICATIONS AND DOSE**
Photodynamic therapy of advanced head and neck squamous cell carcinoma refractory to, or unsuitable for, other treatments

- **BY SLOW INTRAVENOUS INJECTION**
  - Adult: (consult product literature)
**PROTEASOME INHIBITORS**

**Bortezomib**

- **DRUG ACTION** Bortezomib is a proteasome inhibitor.

### INDICATIONS AND DOSE

Treatment of multiple myeloma that has progressed despite the use of at least one therapy, and where the patient has already had, or is unable to have, haematopoietic stem cell transplantation (either as monotherapy, or in combination with pegylated liposomal doxorubicin or dexamethasone). Treatment of previously untreated multiple myeloma in patients who are not eligible for high-dose chemotherapy with haematopoietic stem cell transplantation (in combination with melphalan and prednisolone). Induction treatment of previously untreated multiple myeloma in patients who are eligible for high-dose chemotherapy with haematopoietic stem cell transplantation (in combination with dexamethasone, or with dexamethasone and thalidomide).

**BY INTRAVENOUS INJECTION OR BY SUBCUTANEOUS INJECTION**
- **Adult:** (consult local protocol)

**Important safety information**

Bortezomib injection is for **intravenous or subcutaneous administration** only. Inadvertent intrathecal administration with fatal outcome has been reported.

- **CONTRA-INDICATIONS** Acute diffuse infiltrative pulmonary disease - pericardial disease
- **CAUTIONS** Amyloidosis - cardiovascular disease - consider antiviral prophylaxis for herpes zoster infection - dehydration - history of syncope - pulmonary disease (discontinue if interstitial lung disease develops) - risk factors for seizures - risk of neuropathy - consult product literature
- **INTERACTIONS** → Appendix 1 (bortezomib). Caution with concurrent use of medication which may cause hypotension.

### SIDE-EFFECTS

- **Common or very common** Constipation (cases of ileus reported) - decreased appetite - diarrhoea - dyspnoea - fatigue - headache - herpes zoster - hypotension - myalgia - paraesthesia - peripheral neuropathy - pyrexia - rash - reactivation of herpes zoster - sensory neuropathy

- **Uncommon** Acute diffuse infiltrative pulmonary disorders - heart failure - posterior reversible encephalopathy syndrome (discontinue treatment) - pulmonary hypertension - seizures

- **Rare** Autonomic neuropathy

- **Very rare** Progressive multifocal leucoencephalopathy

- **Frequency not known** Alopecia - bone-marrow suppression - extravasation - hyperuricaemia - nausea - oral mucositis - thromboembolism - tumour lysis syndrome - vomiting

### SIDE-EFFECTS, FURTHER INFORMATION

For further information on side-effects, consult product literature.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for 3 months after treatment in men or women.

- **PREGNANCY** Toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** Reduce dose in moderate to severe impairment — consult product literature.

- **RENAL IMPAIRMENT** No information available for creatinine clearance less than 20 mL/minute/1.73 m².

**MONITORING REQUIREMENTS**

- **Monitor** blood-glucose concentration in patients on oral antidiabetics.

- **Monitor for symptoms** of progressive multifocal leucoencephalopathy (presenting as new or worsening neurological signs or symptoms) — discontinue treatment if diagnosed.

- **Chest x-ray** recommended before treatment to monitor for pulmonary disease — discontinue if interstitial lung disease develops.

### NATIONAL FUNDING/ACCESS DECISIONS

**NICE technology appraisals (TAs)**

- **Bortezomib monotherapy for relapsed multiple myeloma** (October 2007) NICE TA129

Bortezomib monotherapy is an option for the treatment of progressive multiple myeloma in patients who are at first relapse having received one prior therapy and who have undergone, or are unsuitable for, bone-marrow transplantation, under the following circumstances:

- the response to bortezomib is measured using serum M protein after a maximum of four cycles of treatment, and treatment is continued only in patients who have a reduction in serum M protein of 50% or more (where serum M protein is not measurable, an appropriate alternative biochemical measure of response should be used) and

- the manufacturer rebates the full cost of bortezomib if there is an inadequate response (as defined above) after four cycles of treatment. [www.nice.org.uk/TA129](http://www.nice.org.uk/TA129)

- **Bortezomib and thalidomide for the first-line treatment of multiple myeloma** (July 2011) NICE TA228

Bortezomib in combination with an alkylating drug and a corticosteroid is recommended as an option for the first-line treatment of multiple myeloma if:

- high-dose chemotherapy with stem cell transplantation is considered inappropriate and

- the person is unable to tolerate or has contra-indications to thalidomide. [www.nice.org.uk/TA228](http://www.nice.org.uk/TA228)

- **Bortezomib for induction therapy in multiple myeloma before high-dose chemotherapy and autologous stem cell transplantation** (April 2014) NICE TA311

Bortezomib is recommended as an option within its marketing authorisation, in combination with dexamethasone, or with dexamethasone and thalidomide, for the induction treatment of adults with previously untreated multiple myeloma, who are eligible for high-dose chemotherapy with haematopoietic stem cell transplantation. [www.nice.org.uk/TA311](http://www.nice.org.uk/TA311)

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium, has advised (December 2013) that bortezomib (Velcade®) is accepted for restricted use within NHS Scotland in combination with dexamethasone and thalidomide for the induction treatment of adults with previously untreated multiple myeloma who are eligible for high-dose chemotherapy with haematopoietic stem cell transplantation.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Powder for solution for injection**
  - **Velcade** (Janssen-Cilag Ltd)
  - **Bortezomib 3.5 mg** Velcade 3.5mg powder for solution for injection vials | 1 vial (PoS) £762.38 (Hospital only)
PROTEIN KINASE INHIBITORS

Afatinib

**DRUG ACTION** Afatinib is a protein kinase inhibitor.

**INDICATIONS AND DOSE**

Treatment of locally advanced or metastatic non-small cell lung cancer with activating epidermal growth factor receptor (EGFR) mutations, in patients who have not previously been treated with EGFR tyrosine kinase inhibitor

**BY MOUTH**
- Adult: 40 mg once daily for 3 weeks, then increased if tolerated to 50 mg once daily, consult product literature for details on dosing and dose adjustment due to side effects

**SIDE-EFFECTS**

Common or very common Acne - conjunctivitis - cystitis - decreased appetite - dehydration - diarrhoea - dry eyes - dry skin - dysgeusia - dyspepsia - epistaxis - hand-foot syndrome - hyperkalaemia - muscle spasms - paronychia - pruritus - pyrexia - rash (see Cautions) - renal failure - rhinorrhoea - weight loss

**INTERACTIONS** → Appendix 1 (afatinib).

**CONTRAINDICATIONS** See Appendix 1 (afatinib).

**MEXICAN FORMS**

- **Afatinib 50 mg**
- **Afatinib 30 mg**
- **Afatinib 20 mg**

**USEFUL INFORMATION**

- **Afatinib for treating epidermal growth factor receptor mutation-positive locally advanced or metastatic non-small-cell lung cancer (April 2014) NICE TA310**

Afatinib is recommended as an option, within its marketing authorisation, for treating locally advanced or metastatic non-small-cell lung cancer in adults:

- whose tumour tests positive for the epidermal growth factor receptor tyrosine kinase (EGFR-TK) mutation, and
- who have not previously had an EGFR-TK inhibitor, and
- if the manufacturer provides afatinib with the discount agreed in the patient access scheme. www.nice.org.uk/TA310

**MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Afatinib 50 mg**

**Afatinib 20 mg**

**Afatinib 30 mg**

**Afatinib 20 mg**

**Afatinib 30 mg**

**Afatinib 50 mg**

**Afatinib 50 mg**

---

Axitinib

**DRUG ACTION** Axitinib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**

Treatment of advanced renal cell carcinoma following failure of previous treatment with sunitinib or a cytokine (aldesleukin or interferon alfa)

**BY MOUTH**
- Adult: (consult product literature)

**SIDE-EFFECTS**

**INTERACTIONS** → Appendix 1 (axitinib).
Targeted therapy responsive malignancy 803

**BNF 70**

- **Uncommon** Hypertensive crisis • polycythaemia • posterior reversible encephalopathy syndrome
- **Frequency not known** Alopecia • bone-marrow suppression • hyperuricaemia • nausea • oral mucositis • thromboembolism • tumour lysis syndrome • vomiting
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for up to 1 week after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk (toxicity in animal studies). See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.
- **HEPATIC IMPAIRMENT** Reduce starting dose in moderate impairment. Avoid in severe impairment—no information available.
- **MONITORING REQUIREMENTS**
  - Monitor for symptoms of fistula.
  - Monitor for symptoms of gastro-intestinal perforation.
  - Monitor for signs and symptoms of fluid retention.
  - Monitor liver function before treatment initiation, then monthly for the first 3 months and thereafter as clinically indicated.
  - Monitor hepatic function.
  - Monitor for thyroid dysfunction.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - **NICE technology appraisals (TAs)**
    - **Axitinib for treating advanced renal cell carcinoma after failure of prior systemic treatment (February 2015)**
      - **NICE TA333**
      - Axitinib is recommended as an option for treating adults with advanced renal cell carcinoma after failure of treatment with a first-line tyrosine kinase inhibitor or a cytokine, only if the company provides axitinib with the discount agreed in the patient access scheme. [www.nice.org.uk/TA333](http://www.nice.org.uk/TA333)
- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Tablet**
    - **CAUTIONARY AND ADVISORY LABELS 25**
      - Inlyta (Pfizer Ltd) ▼
        - Axitinib 1 mg Inlyta 1mg tablets | 56 tablet [PDR] £703.40 (Hospital only)
        - Axitinib 3 mg Inlyta 3mg tablets | 56 tablet [PDR] £2,110.20 (Hospital only)
        - Axitinib 5 mg Inlyta 5mg tablets | 56 tablet [PDR] £3,517.00 (Hospital only)
        - Axitinib 7 mg Inlyta 7mg tablets | 56 tablet [PDR] £4,923.80 (Hospital only)

**Bosutinib**

**INDICATIONS AND DOSE**

Treatment of chronic, accelerated and blast phase Philadelphia chromosome-positive chronic myeloid leukaemia, in those previously treated with one or more tyrosine kinase inhibitor, and for whom imatinib, nilotinib and dasatinib are not clinically appropriate

- Adult: 500 mg once daily, consult product literature for dose adjustment due to side effects, or incomplete haematologic response by week 8, or incomplete cytogenetic response by week 12

- **CAUTIONS** Cardiac disease • history of pancreatitis— withhold treatment if lipase elevated and abdominal symptoms occur • history of QT prolongation—monitor ECG and correct hypokalaemia and hypomagnesaemia before and during treatment • significant gastrointestinal disorder

- **INTERACTIONS** → Appendix 1 (bosutinib).

- **SIDE-EFFECTS**
  - **Common or very common** Abdominal pain • abnormal liver function • acne • arthralgia • biochemical disturbances • cough • decreased appetite • dehydration • diarrhoea • dizziness • dysgeusia • dysphonia • electrolyte disturbances • gastritis • headache • hepatotoxicity • infection • malaise • myalgia • oedema • pericardial effusion • pleural effusion • pruritus • pyrexia • QT prolongation • rash • renal failure • renal impairment • urticaria
  - **Uncommon** Gastric haemorrhage • pancreatitis • pericarditis • pulmonary hypertension • pulmonary oedema • respiratory failure • tinnitus
  - **Frequency not known** Alopecia • bone-marrow suppression • hyperuricaemia • nausea • oral mucositis • thromboembolism • tumour lysis syndrome • vomiting

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment in women.
- **PREGNANCY** Avoid—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Avoid—no information available.
- **MONITORING REQUIREMENTS**
  - Monitor liver function before treatment initiation, then monthly for the first 3 months and thereafter as clinically indicated—consult product literature for management of raised transaminases.
  - Monitor full blood count weekly for the first month and then monthly thereafter or as clinically indicated.
  - Monitor for signs and symptoms of fluid retention (including pericardial effusion, pleural effusion and pulmonary oedema).

- **NATIONAL FUNDING/ACCESS DECISIONS**
  - **NICE technology appraisals (TAs)**
    - **Bosutinib for previously treated chronic myeloid leukaemia (November 2013)**
      - **NICE TA299**
      - Bosutinib is not recommended within its marketing authorisation for treating Philadelphia-chromosompositive chronic myeloid leukaemia. [www.nice.org.uk/TA299](http://www.nice.org.uk/TA299)

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Tablet**
    - **CAUTIONARY AND ADVISORY LABELS 21**
      - Bosulif (Pfizer Ltd) ▼
        - Bosutinib 100 mg Bosulif 100mg tablets | 28 tablet [PDR] £859.17 (Hospital only)

**804 Malignant disease**

**Cabozaatnib**

- **Drug Action** Cabozantinib is an inhibitor of several protein kinases.

**Indications and Dose**

Treatment of progressive, unresectable locally advanced or metastatic medullary thyroid carcinoma

**By Mouth**

- Adult: 140 mg once daily, for dose adjustment or treatment interruption due to side effects, consult product literature (closely monitor for first 8 weeks of therapy).

**Important Safety Information**

**Risks of Incorrect Dosing of Oral Anti-Cancer Medicines**, see p. 745

**Contra-Indications** Reversible Posterior Leukoencephalopathy Syndrome

**Caution** Hypertension—discontinue treatment if uncontrolled despite medical intervention—palmar-planter erythrodysaesthesia syndrome—consider treatment interruption if severe and restart at a lower dose when resolved to grade 1—patients at increased risk of fistulas—consult product literature—patients at increased risk of gastro-intestinal perforation—consult product literature—patients at increased risk of intra-abdominal abscess—consult product literature—patients at risk of haemorrhage (including tumour involvement of the trachea or bronchi)—discontinue if symptoms develop—patients at risk of thromboembolic events including myocardial infarction—discontinue if symptoms develop—risk of osteonecrosis of the jaw—susceptibility to QT-interval prolongation (e.g. cardiac disease, electrolyte disturbances, bradycardia, concomitant use of drugs that prolong the QT interval)—monitor ECG and electrolytes periodically

**Caution, Further Information**

**Elective Surgery** Withhold treatment for at least 28 days before elective surgery and restart only if adequate wound healing—discontinue in patients with wound healing complications requiring medical intervention.

**Risk of Osteonecrosis of the Jaw** Discontinue treatment at least 28 days before elective invasive dental procedures—monitor for symptoms before and during treatment and discontinue if osteonecrosis develops.

**Interactions**

- Appendix 1 (cabozantinib).

Caution with concomitant use of drugs which increase the risk of osteonecrosis of the jaw e.g. bisphosphonates. Caution with concomitant use of drugs that prolong the QT interval.

**Side-Effects**

- Common or very common: Abdominal pain, abnormal hair growth, abscess, acne, alopecia, anal fissure, anxiety, arthralgia, aspiration, atrial fibrillation, blurred vision, chelitis, chills, cholelithiasis, constipation, decreased appetite, dehydration, depression, diarrhoea, dizziness, dry skin, dysgeusia, dyspepsia, dysphagia, dysphonia, dysuria, erythema, face oedema, folliculitis, fungal infection, gastro-intestinal perforation, gastrointestinal haemorrhage, glossodynia, haematuria, haemorrhoids, hair colour changes, headache, hyperbilirubinaemia, hyperkeratosis, hypertension, hypoalbuninaemia, hypocalcaemia, hypokalaemia, hypophosphataemia, hypotension, hypothyroidism, impaired wound healing, lymphopenia, mucosal inflammation, muscle spasms, musculoskeletal chest pain, nausea, neutropenia, non-gastro-intestinal fistula, oropharyngeal pain, osteonecrosis of jaw, pallor, palmar-planter erythrodysaesthesia syndrome, pancreatitis, paraesthesia, peripheral coldness, peripheral neuropathy, platelet disorders, pneumonia, proteinuria, pulmonary embolism, rash, respiratory tract haemorrhage, skin exfoliation, skin hypopigmentation, stomatitis, tinnitus, tremor, venous thrombosis, vomiting.

**Uncommon**

- Acute renal failure, amnorrhoaea, angina, arterial thrombosis, aspergillosis, ataxia, atelectasis, cataract, conjunctivitis, cyst, delirium, facial pain, gastro-intestinal fistula, hepatic encephalopathy, hypocalcaemia, loss of consciousness, oesophagitis, pharyngeal oedema, pneumonitis, posterior reversible encephalopathy syndrome, rhabdomyolysis, skin ulcer, speech disorder, supraventricular tachycardia, telangiectasia, transient ischaemic attack, vaginal haemorrhage.

**Frequency Not Known**

- Bone-marrow suppression, hyperuricaemia, oral mucositis, thromboembolism, tumour lysis syndrome.

**Conception and Contraception**

Patients and their sexual partners must use effective contraception (in addition to barrier method) during treatment and for at least 4 months after the last dose.

**Pregnancy**

Manufacturer advises avoid unless potential benefit outweighs risk—tobacco use in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

**Breast Feeding**

Manufacturer advises discontinue breast-feeding during treatment and for at least 4 months after the last dose.

**Renal Impairment**

Manufacturer advises avoid.

**Hepatic Impairment**

Manufacturer advises avoid.

**Monitoring Requirements**

Monitor liver function regularly and discontinue if nephrotic syndrome develops.

**Patient and Carer Advice**

Fatigue and weakness may affect performance of skilled tasks e.g. driving. Food should not be consumed for at least 2 hours before and at least 1 hour after each dose.

**Medicinal Forms**

There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

**Cautionary and Advisory Labels** 25

- **Cometriq** (Swedish Orphan Biovitrum Ltd). ▼

**Crizotinib**

- **Drug Action** Crizotinib is a tyrosine kinase inhibitor.

**Indications and Dose**

Treatment of previously treated anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer

**By Mouth**

- Adult: 250 mg twice daily, for dose adjustments due to side-effect, consult product literature

**Important Safety Information**

**Risks of Incorrect Dosing of Oral Anti-Cancer Medicines**, see p. 745

**Caution** History of diverticulitis (risk of gastrointestinal perforation—discontinue treatment if
Targeted therapy responsive malignancy

Dabrafenib

**INDICATIONS AND DOSE**
Monotherapy for the treatment of unresectable or metastatic melanoma with BRAF V600 mutation

**BY MOUTH**
- Adult: 150 mg every 12 hours, for dose adjustments due to side effects consult product literature

**SIDE-EFFECTS**
- **Common or very common** Bradycardia, constipation, decreased appetite, diarrhoea, dizziness, dyspepsia, fatigue, hyperuricaemia, interstitial lung disease, oedema, pneumonia, QT-interval prolongation, rash, syncope, taste disturbance
- **Uncommon** Gastrointestinal perforation, hepatotoxicity
- **Frequency not known** Alopecia, bone-marrow suppression, hyperkalaemia, nausea, oral mucositis, thromboembolism, tumour lysis syndrome

**CONCESSION AND CONTRA-INDICATIONS**
Ensure effective contraception during and for at least 90 days after treatment.

**PREGNANCY**
Avoid (toxicity in animal studies).

**BREAST FEEDING**
Avoid—no information available.

**HEPATIC IMPAIRMENT**
Manufacturer advises caution in mild to moderate impairment. Avoid in severe impairment.

**RENAL IMPAIRMENT**
Reduce dose to 250 mg once daily in severe impairment not requiring peritoneal dialysis or hemodialysis. May be increased to 200 mg twice daily after at least 4 weeks, based on individual assessment of safety and tolerability.

**MONITORING REQUIREMENTS**
- Monitor liver function once a week during the first 2 months of treatment, then at least monthly thereafter and as clinically indicated.
- Monitor ECG and electrolytes (correct if abnormal) in all patients before starting treatment, then periodically and as clinically indicated thereafter.
- Monitor for signs and symptoms of treatment emergent bradycardia (including syncope, dizziness and hypotension)—monitor blood pressure and heart rate regularly.

**PATIENT AND CARER ADVICE**
Counsel all patients on the early signs and symptoms of gastrointestinal perforation—advice to seek immediate medical attention.

**Driving and skilled tasks**
Symptomatic bradycardia (including syncope, dizziness and hypotension), vision disorder and fatigue may affect performance of skilled tasks (e.g. driving or operating machinery).

**CONTRA-INDICATIONS**
BRAF wild-type melanoma, long QT syndrome, uncorrectable electrolyte abnormalities (including magnesium)

**CAUTIONS**
Pyrexia (interrupt treatment if $>38.5^\circ\text{C}$ and assess for signs and symptoms of infection—consult product literature)

**INTERACTIONS**
Appendix 1 (dabrafenib).

**SIDE-EFFECTS, FURTHER INFORMATION**
Important safety information

**BNF 70**
8
Malignant disease
Malignant disease

806 Malignant disease

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk (toxicity in animal studies). See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment. Additional monitoring of ECG and electrolytes required in hepatic impairment—consult product literature.
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—no information available.

- **MONITORING REQUIREMENTS**
  - Assess for cutaneous squamous cell carcinoma and new primary melanoma before treatment, monthly during treatment, and for 6 months after discontinuation or until initiation of alternative treatment.
  - Assess and monitor for non-cutaneous secondary or recurrent malignancy before, during, and for 6 months after discontinuation or until initiation of alternative treatment—consult product literature.
  - Monitor serum creatinine and other signs of renal failure—consult product literature and interrupt dose as appropriate.
  - Monitor for ophthalmologic reactions including uveitis and iritis.
  - Monitor ECG and electrolytes (including magnesium) before and one month after treatment initiation and after each dose modification—consult product literature if abnormalities occur.

- **PATIENT AND CARER ADVICE** Ocular adverse reactions and fatigue may affect performance of skilled tasks e.g. driving.

- **NATIONAL FUNDING/ACCESS DECISIONS**
  - NICE technology appraisals (TAs)
    - Dabrafenib for treating unresectable or metastatic BRAF V600 mutation-positive melanoma (October 2014) NICE TA321 Dabrafenib is recommended, within its marketing authorisation, as an option for treating unresectable or metastatic BRAF V600 mutation-positive melanoma only if the manufacturer provides dabrafenib with the discount agreed in the patient access scheme. [www.nice.org.uk/TA321](http://www.nice.org.uk/TA321)
  - Scottish Medicines Consortium (SMC) Decisions
    - The Scottish Medicines Consortium has advised (February 2015) that dabrafenib (Tafinlar®) is accepted for restricted use within NHS Scotland for the treatment of unresectable or metastatic BRAFV600 mutation-positive melanoma in patients who have received no prior therapy.

- **MEDICINAL FORMS**

Dasatinib

- **DRUG ACTION** Dasatinib is a tyrosine kinase inhibitor.

### INDICATIONS AND DOSE

#### Chronic phase chronic myeloid leukaemia (consult product literature for details)

**BY MOUTH**

- Adult: 100 mg once daily, then increased if necessary up to 140 mg once daily

### Important safety information

- **CAUTIONS** Risk of cardiac dysfunction (monitor closely) - susceptibility to QT-interval prolongation (correct hypokalaemia or hypomagnesaemia before starting treatment)

### CAUTIONS, FURTHER INFORMATION

- **Pulmonary arterial hypertension** Patients should be evaluated for signs and symptoms of underlying cardiopulmonary disease before starting treatment; echocardiography should be performed at the start of treatment in patients with symptoms of cardiac disease and considered for patients with risk factors for cardiac or pulmonary disease. Treatment should be interrupted or the dose reduced in patients who develop dyspnoea or fatigue, while they are evaluated for common aetiologies (e.g. pleural effusion, pulmonary oedema, anaemia or lung infiltration); pulmonary arterial hypertension should be considered in the absence of these conditions, and if there is no improvement following dose reduction or interruption. If pulmonary arterial hypertension is confirmed, dasatinib should be permanently discontinued.

### INTERACTIONS

- Appendix 1 (dasatinib).

### SIDE-EFFECTS

- **Common or very common** Abdominal pain · acne · anorexia · arrhythmias · chest pain · CNS haemorrhage · colitis · congestive heart failure · constipation · cough · depression · dermatitis · diarrhoea · dizziness · dry skin · dyspepsia · dysphagia · flushing · gastritis · gastro-intestinal haemorrhage · haemorrhage · headache · hypertension · influenza-like symptoms · insomnia · musculoskeletal pain · neuropathy · oedema (more common in patients over 65 years old) · palpitation · pleural effusion · pruritus · pulmonary hypertension · sweating · taste disturbance · tinnitus · urticaria · visual disturbances · weight changes
- **Uncommon** Anemia · asthma · cholecystitis · cholestasis · drowsiness · erythema nodosum · gynaecomastia · hepatitis · hypersensitivity reactions · hypocalcaemia · hypotension · irregular menstruation · nail disorders · oesophagitis · pancreatitis · photosensitivity · pigmentation · proteinuria · rhabdomyolysis · seizures · syncope · thrombophlebitis · transient ischaemic attack · tremor · urinary frequency
- **Rare** Cor pulmonale · Frequency not known Alopecia · bone-marrow suppression · hyperuricaemia · interstitial lung disease · nausea · oral mucositis · thromboembolism · thrombosis · tumour lysis syndrome · vomiting

### CONCEPTION AND CONTRACEPTION

- Effective contraception required during treatment.

### PREGNANCY

- Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

### BREAST FEEDING

- Discontinue breast-feeding.

### HEPATIC IMPAIRMENT

- Manufacturer advises caution in hepatic impairment.

### Monitor for ophthalmologic reactions including uveitis

- Monitor serum creatinine and other signs of renal failure—consult product literature and interrupt dose as appropriate.
- Monitor for ophthalmologic reactions including uveitis and iritis.
- Monitor ECG and electrolytes (including magnesium) before and one month after treatment initiation and after each dose modification—consult product literature if abnormalities occur.

### Frequency not known

- **Common or very common** Abdominal pain · acne · anorexia · arrhythmias · chest pain · CNS haemorrhage · colitis · congestive heart failure · constipation · cough · depression · dermatitis · diarrhoea · dizziness · dry skin · dyspepsia · dysphagia · flushing · gastritis · gastro-intestinal haemorrhage · haemorrhage · headache · hypertension · influenza-like symptoms · insomnia · musculoskeletal pain · neuropathy · oedema (more common in patients over 65 years old) · palpitation · pleural effusion · pruritus · pulmonary hypertension · sweating · taste disturbance · tinnitus · urticaria · visual disturbances · weight changes
- **Uncommon** Anemia · asthma · cholecystitis · cholestasis · drowsiness · erythema nodosum · gynaecomastia · hepatitis · hypersensitivity reactions · hypocalcaemia · hypotension · irregular menstruation · nail disorders · oesophagitis · pancreatitis · photosensitivity · pigmentation · proteinuria · rhabdomyolysis · seizures · syncope · thrombophlebitis · transient ischaemic attack · tremor · urinary frequency
- **Rare** Cor pulmonale · Frequency not known Alopecia · bone-marrow suppression · hyperuricaemia · interstitial lung disease · nausea · oral mucositis · thromboembolism · thrombosis · tumour lysis syndrome · vomiting

### CONCEPTION AND CONTRACEPTION

- Effective contraception required during treatment.

### PREGNANCY

- Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

### BREAST FEEDING

- Discontinue breast-feeding.

### HEPATIC IMPAIRMENT

- Manufacturer advises caution in hepatic impairment.
**Erlotinib**

**DRUG ACTION** Erlotinib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**

- **Treatment of locally advanced or metastatic non-small cell lung cancer after failure of previous chemotherapy**
- **Monotherapy for maintenance treatment of locally advanced or metastatic non-small cell lung cancer with stable disease after four cycles of platinum-based chemotherapy**

**BY MOUTH**

- **Adult:** 150 mg once daily

**Treatment of metastatic pancreatic cancer (in combination with gemcitabine)**

**BY MOUTH**

- **Adult:** 100 mg once daily

---

**Important safety information**

**EPIDERMAL GROWTH FACTOR RECEPTOR (EGFR) INHIBITORS: SERIOUS CASES OF KERATITIS AND ULCERATIVE KERATITIS (MAY 2012)**

Keratitis and ulcerative keratitis have been reported following treatment with epidermal growth factor receptor (EGFR) inhibitors for cancer (cetuximab, erlotinib, gefitinib and panitumumab). In rare cases, this has resulted in corneal perforation and blindness.

Patients undergoing treatment with EGFR inhibitors who present with acute or worsening signs and symptoms suggestive of keratitis should be referred promptly to an ophthalmology specialist. Treatment should be interrupted or discontinued if ulcerative keratitis is diagnosed.

---

**ERLOTINIB FOR THE FIRST-LINE TREATMENT OF LOCALLY ADVANCED OR METASTATIC EGFR-TK MUTATION-POSITIVE NON- small-cell LUNG CANCER (JUNE 2012) NICE TA227**

Erlotinib is recommended as an option for the first-line treatment of locally advanced or metastatic non-small-cell lung cancer if:

- they test positive for the epidermal growth factor tyrosine kinase (EGFR-TK) mutation
- the manufacturer provides erlotinib at the discounted price agreed under the patient access scheme (as revised in 2012).

---

**ERLOTINIB FOR THE FIRST-LINE TREATMENT OF LOCALLY ADVANCED OR METASTATIC EGFR-TK MUTATION-POSITIVE NON-SMALL-CELL LUNG CANCER (JUNE 2012) NICE TA258**

Erlotinib is recommended as an option for the first-line treatment of locally advanced or metastatic non-small-cell lung cancer if:

- they test positive for the epidermal growth factor tyrosine kinase (EGFR-TK) mutation
- the manufacturer provides erlotinib at the discounted price agreed under the patient access scheme (as revised in 2012).
Everolimus

**Drug Action**

Everolimus is a protein kinase inhibitor.

**Indications and Dose**

**Votubia®**

Subependymal giant cell astrocytoma associated with tuberous sclerosis complex

By mouth

- Adult: (consult product literature)

Renal angiomyolipoma associated with tuberous sclerosis complex

By mouth

- Adult: (consult product literature)

**Afinitor®**

Treatment of advanced renal cell carcinoma when the disease has progressed despite treatment with vascular endothelial growth factor-targeted therapy | Treatment of unresectable or metastatic, well- or moderately-differentiated neuroendocrine tumours of pancreatic origin | Treatment of hormone-receptor-positive, human epidermal growth factor-2 (HER-2) negative advanced breast cancer, in combination with exemestane, in postmenopausal women without symptomatic visceral disease after recurrence or progression following a non-stereoidal aromatase inhibitor

By mouth

- Adult: 10 mg once daily

**Important safety information**

**Risks of incorrect dosing of oral anti-cancer medicines**, see p. 745

**Caution**

- History of bleeding disorders

**Interactions** → Appendix 1 (everolimus).

Caution with concomitant use of drugs that increase risk of bleeding.

**Side-effects**

- **Common or very common** Abdominal pain | anorexia | arthralgia | asthenia | chest pain | convulsions | dehydration | diarrhoea | dry mouth | dysphagia | electrolyte disturbance | epistaxis | eyelid oedema | fatigue | hand-foot syndrome | headache | hypercholesterolaemia | hyperglycaemia | hyperlipidaemia | hypertension | hypoglycaemia | increased susceptibility to aspergillosis | increased susceptibility to candidiasis | increased susceptibility to infections | increased susceptibility to pneumonia | insomnia | interstitial lung disease | irritability | nail disorders | peripheral oedema | pneumonitis | renal failure | skin disorders | taste disturbance

- **Uncommon** Aggression | agitation | congestive heart failure | flushing | impaired wound healing | rhabdomyolysis

- **Frequency not known** Alopecia | bone-marrow suppression | haemorrhage | hepatitis B reactivation | hyperuricaemia | nausea | oral mucositis | thromboembolism | tumour lysis syndrome | vomiting

**Side-effects, Further Information**

Reduce dose or discontinue if severe side-effects occur—consult product literature.

**Conception and Contraception**

Effective contraception must be used during and for up to 8 weeks after treatment.

**Pregnancy**

Manufacturer advises avoid.

**Hepatic Impairment**

Consult product literature.

**Monitoring Requirements**

- Monitor blood-glucose concentration, serum-triglycerides and serum-cholesterol before treatment and periodically thereafter.

- Monitor renal function before treatment and periodically thereafter.

**Directions for Administration**

**Votubia®** Tablets may be dispersed in approximately 30 mL of water by gently stirring, immediately before drinking. After solution has been swallowed, any residue must be re-dispersed in the same volume of water and swallowed.

**Patient and Carer Advice**

Pneumonitis Non-infectious pneumonitis reported. Patients should be advised to seek urgent medical advice if new or worsening respiratory symptoms occur.

**National Funding/Access Decisions**

**NICE Technology Appraisals (TAs)**

- Everolimus for the second-line treatment of advanced renal cell carcinoma (April 2011) **NICE TA219**
  
  Everolimus is not recommended for the second-line treatment of advanced renal cell carcinoma. [www.nice.org.uk/TA219](http://www.nice.org.uk/TA219)

- Everolimus in combination with exemestane for treating advanced HER2-negative hormone-receptor-positive breast cancer after endocrine therapy (August 2013) **NICE TA295**
  
  Everolimus, in combination with exemestane, is not recommended within its marketing authorisation for treating postmenopausal women with advanced human epidermal growth factor receptor 2 (HER2) negative hormone-receptor-positive breast cancer that has recurred or progressed following treatment with a non-stereoidal aromatase inhibitor. [www.nice.org.uk/TA295](http://www.nice.org.uk/TA295)

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium has advised (April 2012) that everolimus (Afinitor®) is accepted for restricted use within NHS Scotland for the treatment of unresectable or metastatic, well- or moderately-differentiated neuroendocrine tumours of pancreatic origin (pNET) in adults with progressive disease.

**Medicinal Forms**

There can be variation in the licensing of different medicines containing the same drug.
Targeted therapy responsive malignancy 809

Gefitinib

**DRUG ACTION** Gefitinib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**

Treatment of locally advanced or metastatic non-small cell lung cancer with activating mutations of epidermal growth factor receptor

*BY MOUTH*

- Adult: 250 mg once daily

**INTERACTIONS** → Appendix 1 (gefitinib).

**SIDE-EFFECTS**

- Common or very common Acne, anorexia, asthenia, blepharitis, conjunctivitis, diarrhoea, dry eye, dry mouth, dry skin, epistaxis, haematuria, interstitial lung disease—discontinue if confirmed, nail disorder, proteinuria, pruritus, pyrexia, rash, skin reactions
- Uncommon Cornal erosion, pancreatitis
- Rare Hepatitis, toxic epidermal necrolysis
- Frequency not known Alopecia, bone-marrow suppression, hyperuricaemia, nausea, oral mucositis, thromboembolism, tumour lysis syndrome—vomiting

**PREGNANCY**

- Manufacturer advises avoid unless essential—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

**BREAST FEEDING**

- Discontinue breast-feeding.

**HEPATIC IMPAIRMENT**

- Manufacturer advises caution in moderate to severe impairment due to cirrhosis.

**RENAL IMPAIRMENT**

- Manufacturer advises caution if creatinine clearance less than 20 mL/minute.

**MONITORING REQUIREMENTS**

- Monitor for worsening of dyspnoea, cough and fever—discontinue if interstitial lung disease confirmed.
- Monitor liver function—consider discontinuing if severe changes in liver function occur.

**NICE technology appraisals (TAs)**

- Gefitinib for the first-line treatment of locally advanced or metastatic non-small-cell lung cancer (July 2010) NICE TA192

**Medicinal forms**

- Gefitinib 250 mg Iressa 250 mg tablets | 30 tablet | £2,167.71

Ibrutinib

**DRUG ACTION** Ibrutinib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**

Treatment of relapsed or refractory mantle cell lymphoma

*BY MOUTH*

- Adult: 560 mg once daily, for dose adjustments due to side effects consult product literature

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

- Adult: 420 mg once daily, for dose adjustments due to side effects consult product literature

**TREATMENT OF CHRONIC LYMPHOCYTIC LEUKAEMIA**

- Treatment of chronic lymphocytic leukaemia, in patients who have received at least one prior therapy, or as first-line treatment in patients with 17p deletion or TP53 mutation who are unsuitable for chemo-immunotherapy

**MEDICATION FORMS**

- Iressa (AstraZeneca UK Ltd)

**Important safety information**

- Avoid concomitant use of drugs that increase risk of bleeding.

**CAUTIONS**

- Family history of congenital short QT syndrome—increased risk of leuokastosis, consider withholding treatment temporarily and monitor closely. Patients at risk from further shortening of QTC interval—personal history of congenital short QT syndrome—risk of haemorrhagic events—withdraw ibrutinib treatment for at least 5 to 7 days before and after surgery depending on risk of bleeding.

**INTERACTIONS** → Appendix 1 (ibrutinib).

- Avoid concomitant use of drugs that increase risk of bleeding.
810 Malignant disease

- **SIDE-EFFECTS**
  - Common or very common: Arthralgia, atrial fibrillation, blurred vision, bruising, constipation, dehydration, diarrhoea, dizziness, dry mouth, epistaxis, haemorrhage, headache, musculoskeletal pain, peripheral oedema, petechiae, pyrexia, rash, respiratory tract infection, sepsis, sinusitis, skin infection, subdural haematoma, urinary tract infection
  - Uncommon: Leukostasis
  - Frequency not known: Alopecia, bone-marrow suppression, hyperuricaemia, nausea, oral mucositis, thromboembolism, tumour lysis syndrome, vomiting

- **CONCESSION AND CONTRACEPTION**
  - Highly effective contraception (must include a non-hormonal method) required during and for 3 months after stopping treatment.

- **PREGNANCY**
  - Manufacturer advises avoid—毒性 in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- **BREAST FEEDING**
  - Manufacturer advises discontinue breastfeeding—no information available.

- **HEPATIC IMPAIRMENT**
  - Reduce dose to 140 mg daily in moderate impairment—monitor for toxicity and adjust dose if necessary (consult product literature).

- **RENAL IMPAIRMENT**
  - Use in severe impairment only if benefit outweighs risk and with close monitoring for toxicity. Maintain hydration and monitor serum creatinine periodically in mild to moderate renal impairment.

- **MONITORING REQUIREMENTS**
  - Monitor full blood count once a month.
  - Monitor for atrial fibrillation (increased risk in cardiac risk factors, acute infections and history of atrial fibrillation), monitor all patients periodically and complete ECG if arrhythmic symptoms or dyspnoea develop—consult product literature in severe impairment.

- **MEDICATION FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.

- **CAPSULE**
  - CAUTIONARY AND ADVISORY LABELS 25
  - Imbruvica (Janssen-Cilag Ltd) ▼
  - Idelalisib 140 mg Imbruvica 140 mg capsules | 90 capsule £4,599.00 | 120 capsule £6,132.00

### Idelalisib

- **DRUG ACTION**
  - Idelalisib is a protein kinase inhibitor.

#### INDICATIONS AND DOSE

- Treatment of chronic lymphocytic leukaemia in patients who have received at least one previous therapy, or as first-line treatment in the presence of 17p deletion or TP53 mutation in patients unsuitable for chemoinmunotherapy (in combination with rituximab). Treatment of follicular lymphoma refractory to two lines of treatment (monotherapy)

  BY MOUTH
  - Adult: 150 mg twice daily, for dose adjustment due to side effects, consult product literature

#### Important safety information

- **RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**, see p. 745

- **CAUTIONS**
  - Active hepatitis, diarrhoea—symptomatic management recommended (consult product literature)
  - Pneumonitis— withhold treatment (consult product literature)

#### INTERACTIONS

- ▶ Appendix 1 (idelalisib)

#### SIDE-EFFECTS

- Alopecia, bone-marrow suppression, diarrhoea, hyperuricaemia, infections, nausea, neutropenia, oral mucositis, pneumonitis, pyrexia, rash, thromboembolism, tumour lysis syndrome, vomiting

#### CONCESSION AND CONTRACEPTION

- Highly effective contraception (in addition to barrier method) required during and for one month after treatment.

#### PREGNANCY

- Manufacturer advises avoid (toxicity in animal studies). See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- **BREAST FEEDING**
  - Manufacturer advises avoid—no information available.

#### HEPACTIC IMPAIRMENT

- Manufacturer advises caution in hepatic impairment.

#### MONITORING REQUIREMENTS

- Monitor liver function—consult product literature.

#### NATIONAL FUNDING/ACCESS DECISIONS

- Scottish Medicines Consortium (SMC) Decisions
  - The Scottish Medicines Consortium has advised (March 2015) that idelalisib (Zydelig®) is accepted for restricted use within NHS Scotland for the treatment of relapsed chronic lymphocytic leukaemia in patients who are unsuitable for chemotherapy and treatment naive patients with 17p deletion or TP53 mutation who are unsuitable for chemo-immunotherapy.

#### MEDICATION FORMS

- There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- CAUTIONARY AND ADVISORY LABELS 25

  - Idelalisib 100 mg Zydelig 100 mg tablets | 60 tablet £3,114.75 (Hospital only)
  - Idelalisib 150 mg Zydelig 150 mg tablets | 60 tablet £3,114.75 (Hospital only)

### Imatinib

- **DRUG ACTION**
  - Imatinib is a tyrosine kinase inhibitor.

#### INDICATIONS AND DOSE

- Treatment of chronic myeloid leukaemia in chronic phase after failure with interferon alfa

  BY MOUTH
  - Adult: 400 mg once daily, increased if necessary up to 800 mg daily in 2 divided doses

- Treatment of chronic myeloid leukaemia in accelerated phase, or in blast crisis

  BY MOUTH
  - Adult: 600 mg once daily, then increased if necessary up to 800 mg daily in 2 divided doses

- Treatment of newly diagnosed acute lymphoblastic leukaemia (in combination with other chemotherapy) | Monotherapy for relapsed or refractory acute lymphoblastic leukaemia

  BY MOUTH
  - Adult: 600 mg once daily
Targeted therapy responsive malignancy 811

Treatment of c-kit (CD117)-positive unresectable or metastatic malignant gastro-intestinal stromal tumours (GIST) | Adjuvant treatment following resection of c-kit (CD117)-positive GIST, in patients at significant risk of relapse | Treatment of myelodysplastic/myeloproliferative diseases associated with platelet-derived growth factor receptor gene rearrangement | BY MOUTH

- Adult: 400 mg once daily

Treatment of unresectable dermatofibrosarcoma protuberans | Recurrent or metastatic dermatofibrosarcoma protuberans, in patients who cannot have surgery | BY MOUTH

- Adult: 800 mg daily in 2 divided doses

Treatment of advanced hyper eosinophilic syndrome and chronic eosinophilic leukaemia

- Adult: 100–400 mg once daily

Important safety information

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES, see p. 745

- CAUTIONS Cardiac disease · history of renal failure · risk factors for heart failure
- INTERACTIONS Common or very common Abdominal pain · appetite changes · arthralgia · ascert · conjunctivitis · constipation · cough · cramps · diarrhoea · dizziness · dry eyes · dry mouth · dry skin · dyspnoea · epistaxis · fatigue · flatulence · flushing · gastro-oesophageal reflex · haemorrhage · headache · hypoaesthesia · increased lacrimation · influenza-like symptoms · insomnia · oedema · paraesthesia · photosensitivity · pleural effusion · pruritus · pulmonary oedema · rash · sweating · taste disturbance · visual disturbances · weight changes
- SIDE-EFFECTS Uncommon Acute respiratory failure · anxiety · cold extremities · cough · depression · drowsiness · dysphagia · electrolyte disturbances · gastric ulceration · gout · gynaecomastia · haematoma · hearing loss · heart failure · hepatic dysfunction · hypertension · hypotension · impaired memory · irregular menstruation · menorrhagia · migraine · palpitation · pancreatitis · peripheral neuropathy · renal failure · sexual dysfunction · skin hyperpigmentation · syncope · tachycardia · tinnitus · tremor · urinary frequency · vertigo
- Rare Angina · angioedema · arrhythmia · aseptic necrosis of bone · atrial fibrillation · catarrh · confusion · convulsions · exfoliative dermatitis · gastro-intestinal perforation · glaucoma · haemolytic anaemia · hepatic failure · hepatic necrosis · increased intracranial pressure · inflammatory bowel disease · intestinal obstruction · myocardial infarction · myopathy · pulmonary fibrosis · pulmonary hypertension · rhabdomyolysis · Stevens-Johnson syndrome
- Frequency not known Alopecia · bone-marrow suppression · drug rash with eosinophilia and systemic symptoms (DRESS) · growth retardation in children · hyperuricaemia · nausea · oral mucositis · thromboembolism · tumour lysis syndrome · vomiting
- CONCEPTION AND CONTRACEPTION Effective contraception required during treatment.
- PREGNANCY Manufacturer advises avoid unless potential benefit outweighs risk. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.
- BREAST FEEDING Discontinue breast-feeding.
- HEPATIC IMPAIRMENT Max. 400 mg daily; reduce dose further if not tolerated.

- RENAL IMPAIRMENT Maximum starting dose 400 mg daily if creatinine clearance less than 60 mL/minute; reduce dose further if not tolerated.

- MONITORING REQUIREMENTS
  - Monitor for gastrointestinal haemorrhage.
  - Monitor complete blood counts regularly.
  - Monitor for fluid retention.
  - Monitor liver function.
  - Monitor growth in children (may cause growth retardation).

- DIRECTIONS FOR ADMINISTRATION Tablets may be dispersed in water or apple juice.

- PATIENT AND CARER ADVICE Patients or carers should be given advice on how to administer imatinib tablets.

- NATIONAL FUNDING/ACCESS DECISIONS

  NICE technology appraisals (TAs) NICE TA70
  - Imatinib for chronic myeloid leukaemia (October 2003)
  - Imatinib is recommended as first-line treatment for Philadelphia-chromosome-positive chronic myeloid leukaemia in the chronic phase and as an option for patients presenting in the accelerated phase or with blast crisis, provided that imatinib has not been used previously: www.nice.org.uk/TA70
  - Imatinib for the treatment of unresectable and/or metastatic gastro-intestinal stromal tumours (October 2004) NICE TA86
  - Imatinib 400 mg daily is recommended as first-line management of KIT (CD117)-positive unresectable or metastatic, or both, gastro-intestinal stromal tumours. Continued therapy is recommended only if a response to initial treatment (as defined by Southwest Oncology Group criteria available at www.nice.org.uk/TA86) is achieved within 12 weeks. Patients who have responded should be assessed at 12-week intervals. Discontinue if tumour ceases to respond. www.nice.org.uk/TA86
  - Imatinib for the treatment of unresectable and/or metastatic gastro-intestinal stromal tumours (November 2010) NICE TA209
  - Imatinib 600 mg daily or 800 mg daily is not recommended for unresectable or metastatic, or both, gastro-intestinal stromal tumours whose disease has progressed after treatment with imatinib 400 mg daily. www.nice.org.uk/TA209
  - Dasatinib, high-dose imatinib and nilotinib for the treatment of imatinib-resistant chronic myeloid leukaemia (CML), and dasatinib and nilotinib for people with CML for whom treatment with imatinib has failed because of intolerance (January 2012) NICE TA241
  - High-dose imatinib is not recommended for the treatment of chronic, accelerated or blast-crisis phase Philadelphia-chromosome-positive CML that is resistant to standard-dose imatinib. www.nice.org.uk/TA241
  - Dasatinib, nilotinib and standard-dose imatinib for the first-line treatment of chronic myeloid leukaemia (April 2012) NICE TA251
  - Standard-dose imatinib is recommended as an option for the first-line treatment of adults with chronic phase Philadelphia-chromosome-positive chronic myeloid leukaemia (CML). www.nice.org.uk/TA251
  - Imatinib for the adjuvant treatment of gastro-intestinal stromal tumours (November 2014) NICE TA326
  - Imatinib is recommended as an option for adjuvant treatment of adult patients who are at high risk of relapse after surgery for KIT (CD117)-positive gastro-intestinal stromal tumours, as defined by the Miettinen 2006 criteria (based on tumour size, location, and mitotic rate), for up to 3 years. Patients currently receiving treatment initiated within the NHS with imatinib that is not recommended for them by NICE in this guidance should be able to continue treatment until they and their NHS clinician consider it appropriate to stop. www.nice.org.uk/TA326
Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (March 2002) that imatinib (Glivec®) should be used for chronic myeloid leukaemia only under specialist supervision in accordance with British Society of Haematology guidelines (November 2001).

The Scottish Medicines Consortium has also advised (February 2012) that imatinib (Glivec®) is accepted for restricted use within NHS Scotland for the treatment of adult patients who are at significant risk of relapse following resection of a KIT (CD117) positive gastrointestinal stromal tumour (GIST) and who are at high risk of recurrence following complete resection (according to the Armed Forces Institute of Pathology (AFIP) risk criteria).

● MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Tablet

CAUTIONARY AND ADVISORY LABELS 21, 27

- Glivec (Novartis Pharmaceuticals UK Ltd)

  Imatinib (as imatinib mesilate) 100 mg Glivec 100mg tablets | 60 tablet (P) £19.18.23
  Imatinib (as imatinib mesilate) 400 mg Glivec 400mg tablets | 30 tablet (P) £1,836.48

Lapatinib

● DRUG ACTION
Lapatinib is a tyrosine kinase inhibitor.

INDICATIONS AND DOSE

Treatment of advanced or metastatic breast cancer in patients with tumours that overexpress human epidermal growth factor receptor-2 (HER2) with hormone-receptor-negative disease who have had previous treatment with trastuzumab in combination with chemotherapy (in combination with trastuzumab)

BY MOUTH

- Adult: 1 g once daily

Treatment of advanced or metastatic breast cancer in patients with tumours that overexpress human epidermal growth factor receptor-2 (HER2), for patients who have had previous treatment with an anthracycline, a taxane, and trastuzumab (in combination with capecitabine)

BY MOUTH

- Adult: 1.25 g once daily

Treatment of advanced or metastatic breast cancer with tumours that overexpress human epidermal growth factor receptor-2 (HER2), for postmenopausal women with hormone-receptor-positive disease (in combination with an aromatase inhibitor)

BY MOUTH

- Adult: 1.5 g once daily

Important safety information

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES, see p. 745

● CAUTIONS
Diarrhoea—withdraw treatment if severe (consult product literature) - low gastric pH (reduced absorption) - susceptibility to QT-interval prolongation (including electrolyte disturbances)

● INTERACTIONS
Appendix 2 (lapatinib).
Caution with concomitant use of drugs that prolong QT-interval.

● SIDE-EFFECTS

- Common or very common
  Anorexia • cardiac failure (fatal cases reported) • decreased left ventricular ejection fraction • diarrhoea (treat promptly) • hepatotoxicity

(National Institute for Health and Care Excellence) recommend (January 2016) lapatinib/trastuzumab in combination with an aromatase inhibitor for the first-line treatment of metastatic hormone-receptor-positive breast cancer that overexpresses HER2 (NICE TA257).

Lapatinib or trastuzumab in combination with an aromatase inhibitor is not recommended for first-line treatment in postmenopausal women of metastatic hormone-receptor-positive breast cancer that overexpresses human epidermal growth factor receptor 2 (HER2).

Postmenopausal women currently receiving lapatinib or trastuzumab in combination with an aromatase inhibitor for this indication should have the option to continue treatment until they and their clinician consider it appropriate to stop. www.nice.org.uk/TA257

● MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Tablet

Tyverb (Novartis Pharmaceuticals UK Ltd)

Lapatinib ditosylate monohydrate 250 mg Tyverb 250mg tablets | 84 tablet (P) £96.16 | 105 tablet (P) £1,206.45

Nilotinib

● DRUG ACTION
Nilotinib is a tyrosine kinase inhibitor.

INDICATIONS AND DOSE

Treatment of newly diagnosed chronic myeloid leukaemia in the chronic phase

BY MOUTH

- Adult: 300 mg twice daily
Targeted therapy responsive malignancy

Treatment of chronic and accelerated phase chronic myeloid leukaemia in patients who have resistance to or intolerance of previous therapy, including imatinib

BY MOUTH
- Adult: 400 mg twice daily

Important safety information
RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES, see p. 745

- **CAUTIONS** History of pancreatitis - susceptibility to QT-interval prolongation (including electrolyte disturbances)
- **INTERACTIONS** Appendix 1 (nilotinib).
  - Caution with concomitant use of drugs that prolong QT interval.
- **SIDE-EFFECTS**
  - **Frequency not known** Alopecia - bone-marrow suppression - hyperuricaemia - nausea - oral mucositis - thromboembolism - tumour lysis syndrome - vomiting
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment.
- **PREGNANCY** Manufacturer advises caution.
  - **INTERACTIONS** Appendix 1 (nilotinib).
  - Caution with concomitant use of drugs that prolong QT interval.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - **NICE technology appraisals (TAs)**
    - Dasatinib, high-dose imatinib and nilotinib for the treatment of imatinib-resistant chronic myeloid leukaemia (CML), and dasatinib and nilotinib for people with CML for whom treatment with imatinib has failed because of intolerance (January 2012) NICE TA241
      - Nilotinib is recommended for the treatment of chronic or accelerated phase Philadelphia-chromosone-positive chronic myeloid leukaemia (CML) in adults:
        - whose CML is resistant to treatment with standard dose imatinib, or
        - who have imatinib intolerance, and
      - if the manufacturer makes nilotinib available with the discount agreed as part of the patient access scheme. www.nice.org.uk/TA241
    - Dasatinib, nilotinib and standard-dose imatinib for the first-line treatment of chronic myeloid leukaemia (April 2012) NICE TA251
      - Nilotinib is recommended as an option for the first-line treatment of adults with chronic phase Philadelphia-
chromosome-positive CML if the manufacturer makes nilotinib available with the discount agreed as part of the patient access scheme. www.nice.org.uk/TA251
- **Scottish Medicines Consortium (SMC) Decisions**
  - The Scottish Medicines Consortium has advised (February 2008) that nilotinib (Tasigna®) is accepted for restricted use within NHS Scotland for the treatment of chronic phase chronic myeloid leukaemia in adults resistant to or intolerant of at least one previous therapy, including imatinib, and (July 2011) for the treatment of adults with newly diagnosed chronic myeloid leukaemia in the chronic phase.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Capsule** CAUTIONARY AND ADVISORY LABELS 23, 25, 27
    - Tasigna (Novartis Pharmaceuticals UK Ltd)
      - Nilotinib (as Nilotinib hydrochloride monohydrate)
        - 150 mg Tasigna 150mg capsules | 112 capsule pack £2,432.85
        - 200 mg Tasigna 200mg capsules | 112 capsule pack £2,432.85

**Pazopanib**

- **DRUG ACTION** Pazopanib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**
- First-line treatment of advanced renal cell carcinoma
- Treatment of advanced renal cell carcinoma in patients who have had previous treatment with cytokine therapy

BY MOUTH
- Adult: 800 mg daily, adjust dose in steps of 200 mg according to tolerability; maximum 800 mg per day

**Treatment of selective subtypes of advanced soft tissue sarcoma**

BY MOUTH
- Adult: (consult product literature)

Important safety information
RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES, see p. 745

- **CONTRA-INDICATIONS** Cerebral haemorrhage - clinically significant gastro-intestinal haemorrhage - haemoptysis in the past 6 months
- **CAUTIONS** Cardiac disease - increased risk of gastro-intestinal fistulas - increased risk of gastro-intestinal perforation - increased risk of haemorrhage - increased risk of thrombotic microangiopathy—permanently discontinue if symptoms develop - ischaemic stroke - myocardial infarction - risk of thrombotic events - susceptibility to QT-interval prolongation (including electrolyte disturbances) - transient ischaemic attack

**ELECTIVE SURGERY**
- Discontinue treatment 7 days before elective surgery and restart only if adequate wound healing.

**Blood pressure**
- Blood pressure must be controlled before initiating treatment.

- **INTERACTIONS** Appendix 1 (pazopanib).
  - Caution with concomitant use of drugs that prolong QT-interval.

- **SIDE-EFFECTS**
  - **Common or very common** Abdominal distension - abdominal pain - anorexia - blood disorders - blurred vision - chest pain - cough - dehydration - diarrhoea - dizziness - dry mouth - dry skin - dyspepsia - dyspnnea - epistaxis - flatulence - flushing - hair discoloration - headache - hepatic dysfunction - hiccups - hyperalbuminaemia -
hyperhilitrubinaemia • hypertension • hypothyroidism • increased amylase • insomnia • malaise • muscle spasm • myalgia • nail disorders • oedema • paraesthesia • pneumothorax • proteinuria (discontinue if grade 4) • skin discoloration • skin reactions • sweating • taste disturbance • thrombocytopenia • venous thromboembolic events • voice changes • weight loss

Malignant disease

Pazopanib for the first-line treatment of advanced renal cell carcinoma (updated August 2013) NICE TA215

Pazopanib is recommended as a first-line treatment option for people with advanced renal cell carcinoma:

• who have not received prior cytokine therapy and have an Eastern Cooperative Oncology Group performance status of 0 or 1

• if the manufacturer provides pazopanib at the discounted price agreed under the patient access scheme. www.nice.org.uk/TA215

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (February 2011) that pazopanib (Votrient®) is accepted for restricted use within NHS Scotland for the first-line treatment of advanced renal cell carcinoma and (December 2012) is not recommended for use within NHS Scotland for the treatment of selective subtypes of advanced soft tissue sarcoma in patients who have received prior chemotherapy for metastatic disease, or who have progressed within 12 months after neoadjuvant therapy.

Malignant disease

Pazopanib

INDICATIONS AND DOSE

Treatment of chronic, accelerated, or blast phase chronic myeloid leukaemia in patients who have the T315I mutation or who have resistance to or intolerance of dasatinib or nilotinib, and for whom subsequent treatment with imatinib is not clinically appropriate.

Treatment of Philadelphia chromosome-positive acute lymphoblastic leukaemia in patients who have the T315I mutation or who have resistance to or intolerance of dasatinib, and for whom subsequent treatment with imatinib is not clinically appropriate.

BY MOUTH

Adult: 45 mg once daily, for dose adjustment due side effects—consult product literature.

Dose adjustments due to interactions

Consider reducing the initial dose to 30 mg once daily with concomitant use of potent inhibitors of cytochrome P450 enzyme CYP3A4 (e.g. clarithromycin, indinavir, ritonavir, saquinavir, telithromycin or voriconazole).

Important safety information

MHRA/CHM ADVICE: PONATINIB: RISK OF VASCULAR OCCLUSIVE EVENTS (NOVEMBER 2014)

The benefits and risks of ponatinib have been reviewed by the European Medicines Agency’s Committee on Medicinal Products for Human Use, which has recommended that strengthened warnings should be added to the product information aimed at minimising the risk of blood clots and blockages in the arteries. The review concluded that available evidence shows that the risk of blood vessel blockage with ponatinib is likely to be dose-dependent. However, the data is insufficient to recommend reducing the dose of ponatinib, and there is a risk that a lower dose might not be as effective as the current dose in all patients and in long-term treatment. Therefore, no change has been made to the recommended starting dose.

Prescribers may wish to consider reducing the dose in patients with chronic phase chronic myeloid leukaemia who are responding well to treatment, and who might be at high risk of blood vessel blockage. Stop ponatinib if a complete response has not occurred within 3 months of treatment, and monitor patients for high blood pressure or signs of heart problems.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Tablet

CAUTIONARY AND ADVISORY LABELS 23, 25

Votrient (Novartis Pharmaceuticals UK Ltd)
P pazopanib (as Pazopanib hydrochloride) 200 mg

**Regorafenib**

- **DRUG ACTION** Regorafenib is an inhibitor of several protein kinases.

**INDICATIONS AND DOSE**

Treatment of metastatic colorectal cancer in patients who have previously been treated, or who are unsuitable for standard treatment including fluoropyrimidine-based chemotherapy, a vascular endothelial growth factor inhibitor, and an epidermal growth factor receptor inhibitor

**BY MOUTH**

- **Adult:** 160 mg once daily for 21 consecutive days of repeated 28-day cycles, for dose adjustment due to side effects—consult product literature

**Important Safety Information**

- **CAUTIONS** Ensure measures to prevent hand-foot skin reaction - Gilbert’s syndrome—risk of hyperbilirubinaemia - history of ischaemic heart disease—monitor for signs and symptoms of myocardial ischaemia and interrupt treatment if signs of ischaemia or infarction develop - hypertension—control blood pressure before treatment initiation and monitor as clinically indicated during treatment (review dose and consider treatment interruption if severe or persistent hypertension develops; discontinue treatment if hypertensive crisis occurs) - may impair wound healing—withdraw treatment for major surgical procedures - predisposition to bleeding

- **INTERACTIONS** → Appendix 1 (regorafenib).

Caution in concomitant treatment with drugs that may increase the risk of bleeding (increased risk of haemorrhagic events).

- **SIDE-EFFECTS**
  - **Common or very common** Abnormal international normalised ratio - biochemical disturbances - decreased appetite - diarrhoea - dry mouth - dry skin - dysphoria - electrolyte disturbances - epistaxis - erectile dysfunction - exfoliative dermatitis - flushing - gastrointestinal reflux disease - headache - hypertension - infection - insomnia - intermittent claudication - malaise - muscle spasms - musculoskeletal pain - oedema - pancreatitis - pericardial effusion - peripheral neuropathy - pleural effusion - pruritus - pyrexia - rash - thromboembolic events - vascular occlusion - weight loss
  - **Uncommon** Atrial flutter - cerebral artery stenosis - cerebral infarction - gastric haemorrhage - hepatotoxicity - jaundice - retinal vein occlusion - retinal vein thrombosis - visual impairment
  - **Frequency not known** Alopecia - bone-marrow suppression - hyperuricaemia - nausea - oral mucositis - thromboembolism - tumour lysis syndrome - vomiting

**CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women; effectiveness of hormonal contraception unknown—alternative or additional methods of contraception should be used.

- **PREGNANCY** Avoid—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- **BREAST FEEDING** Manufacturer advises discontinue breastfeeding—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.

- **RENAL IMPAIRMENT** No information available—manufacturer advises caution if creatinine clearance less than 50 mL/minute.

- **MONITORING REQUIREMENTS**
  - **Monitor serum lipase every 2 weeks for the first 2 months and periodically thereafter for all patients— withhold treatment if lipase elevated and abdominal symptoms occur.**
  - **Monitor full blood count every 2 weeks for the first 3 months and then monthly thereafter or as clinically indicated.**
  - **Monitor liver function periodically.**
  - **Monitor for vascular occlusion or thromboembolism—interrupt treatment immediately if this occurs.**

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

---

**BNF 70**

**Targeted therapy responsive malignancy** 815

**Malignant disease**
contraindicated during treatment and up to 8 weeks after last dose.

- **Pregnancy** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- **Breast Feeding** Avoid—present in milk in animal studies.

- **Hepatic Impairment** Manufacturer advises caution in moderate impairment. Avoid in severe impairment.

- **Renal Impairment** Caution in severe impairment—no information available.

- **Monitoring Requirements**
  - Monitor blood count and coagulation parameters and consider permanent discontinuation in event of severe bleeding.
  - Monitor hepatic function before treatment, then at least every two weeks for the first 2 months, then at least monthly thereafter and as clinically indicated—consult product literature if changes in liver function observed.
  - Monitor for signs and symptoms of posterior reversible encephalopathy syndrome (including seizure, headache, altered mental status, visual disturbances or cortical blindness, with or without hypertension)—discontinue treatment if symptoms occur.
  - Monitor biochemical, electrolyte and metabolic parameters during treatment; ensure measures to prevent hand-foot skin reaction—consult product literature if signs or symptoms develop.

- **Directions for Administration** Tablets should be taken at the same time each day, swallowed whole with water after a light meal that contains less than 30% fat.

- **Patient and Carer Advice** Counselling advised (administration).

### Medicinal Forms

There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

- **CAUTIONARY AND ADVISORY LABELS** 21
- **Electrolytes:** May contain Sodium
  - Stivarga (Bayer Plc) ▼
    - Regorafenib 40 mg Stivarga 40mg tablets | 84 tablet (£3,744.00 Hospital only)

### Ruxolitinib

- **Drug Action** Ruxolitinib is a selective inhibitor of the Janus-associated tyrosine kinases JAK1 and JAK2.

#### Indications and Dose

Treatment of disease-related splenomegaly or symptoms in patients with primary myelofibrosis, post-polycythaemia vera myelofibrosis, or post-essential thrombocythaemia myelofibrosis

**By Mouth**

- **Adult:** (consult product literature or local protocols)

#### Important Safety Information

**Risks of Incorrect Dosing of Oral Anti-Cancer Medicines**, see p. 745

**Cautions** Assess risk of developing infection before treatment—do not initiate until active serious infections are resolved

**Cautionary and Advisory Labels**

**Tuberculosis** Patients should be evaluated for latent and active tuberculosis before starting treatment and monitored for signs and symptoms of tuberculosis during treatment.

### Interactions

Appendix 1 (ruxolitinib).

### Side-Effects

- **Common or very common** Dizziness · flattulence · headache · hypercholesterolaemia · weight gain
- **Uncommon** Tuberculosis
- **Frequency not known** Alopecia · bone-marrow suppression · hyperuricaemia · nausea · oral mucositis · progressive multifocal leucoencephalopathy · thrombocytopenia · tumour lysis syndrome · vomiting
- **Pregnancy** Avoid—toxicity in animal studies.

### Monitoring Requirements

- Monitor full blood count (including differential white cell count) before treatment, then every 2–4 weeks until dose stabilised, then as clinically indicated.
- Monitor for infection during treatment.
- Monitor for symptoms of progressive multifocal leucoencephalopathy (presenting as new or worsening neurological, cognitive or psychiatric signs or symptoms)—withhold treatment if suspected.

### Renal Impairment

Reduce dose (consult product literature).

### Hepatic Impairment

- Reduce dose (consult product literature).

### Monitoring Requirements

- Monitor for infection during treatment.
- Monitor for symptoms of progressive multifocal leucoencephalopathy (presenting as new or worsening neurological, cognitive or psychiatric signs or symptoms)—withhold treatment if suspected.

### National Funding/Access Decisions

**NICE Technology Appraisals (TAs)**

- **Ruxolitinib for disease-related splenomegaly or symptoms in adults with myelofibrosis (June 2013) NICE TA289**
  - Ruxolitinib is not recommended for the treatment of disease-related splenomegaly or symptoms in adult patients with primary myelofibrosis (also known as chronic idiopathic myelofibrosis), post polycythaemia vera myelofibrosis or post essential thrombocythaemia myelofibrosis. www.nice.org.uk/TA289

### Medicinal Forms

There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

- Jakavi (Novartis Pharmaceuticals UK Ltd) ▼
  - Jakavi 5 mg tablets 56 tablet (£1,680.00) £1,680.00
  - Jakavi 10 mg tablets 56 tablet (£3,600.00) £3,600.00
  - Jakavi 15 mg tablets 56 tablet (£3,600.00) £3,600.00

### Sorafenib

- **Drug Action** Sorafenib is an inhibitor of multiple kinases.

#### Indications and Dose

Treatment of advanced renal cell carcinoma when treatment with interferon alfa or interleukin-2 has failed or is unsuitable | Treatment of progressive, locally advanced, or metastatic, differentiated thyroid carcinoma that is refractory to radioactive iodine | Treatment of hepatocellular carcinoma

**By Mouth**

- **Adult:** 400 mg twice daily, for dose adjustments due to side effects, consult product literature

#### Important Safety Information

**Risks of Incorrect Dosing of Oral Anti-Cancer Medicines**, see p. 745
Sorafenib for the treatment of advanced hepatocellular carcinoma (DTC) and consider permanent withdrawal of sorafenib in any patient that requires medical intervention for bleeding - susceptibility to QT-interval prolongation

> Interactions → Appendix 1 (sorafenib).

> Side-effects

  > Common or very common Acne, anorexia, arthralgia, asthenia, congestive heart failure, constipation, depression, dermatitis, desquamation, diarrhoea, dry skin, dysgeusia, dyspepsia, dysphagia, dysphonia, electrolyte disturbances, erectile dysfunction, exanthema, fatigue, fever, flushing, gastro-oesophageal reflux disease, haemorrhage, hand-foot skin reaction, hoarseness, hyperkeratosis, hypertension, hypophosphataemia, hypophosphataemia, keratoacanthoma, malaise, muscle spasms, myalgia, myocardial infarction, myocardial ischaemia, peripheral neuropathy, proteinuria, pruritus, rash, renal failure, rhinorrhoea, thyroid dysfunction, tinnitus

  > Uncommon Altered INR, altered prothrombin time, cholangitis, cholecytitis, dehydration, eczema, erythema multiforme, gastritis, gastrointestinal perforations, gynaecomastia, hypertensive crisis, interstitial lung disease-like events, pancreatitis, posterior reversible encephalopathy syndrome

  > Rare Hepatitis, leucocytoclastic vasculitis, nephrotic syndrome, QT-interval prolongation, rhabdomyolysis, Stevens-Johnson syndrome, toxic epidermal necrolysis

  > Frequency not known Alopecia, bone-marrow suppression, hyperuricaemia, nausea, oral mucositis, thromboembolism, tumour lysis syndrome, vomiting

> Pregnancy

Manufacturer advises avoid unless essential — toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

> Breast feeding Discontinue breast-feeding.

> Hepatic impairment Manufacturer advises caution in severe impairment — no information available.

> Monitoring requirements

Consider periodic monitoring of ECG and electrolytes in patients susceptible to QT-interval prolongation.

Monitor blood pressure regularly and consider permanent discontinuation of sorafenib if resistant to antihypertensive therapy.

Monitor plasma-calcium concentration (increased risk of hypocalcaemia if history of hypoparathyroidism).

Monitor thyroid stimulating hormone in patients with differentiated thyroid carcinoma.

> National funding/access decisions

NICE technology appraisals (TAs)

  > Bevacizumab (first-line), sorafenib (first- and second-line), sunitinib (second-line) and temsirolimus (first-line) for the treatment of advanced or metastatic renal cell carcinoma (August 2009) NICE TA178

  > Bevacizumab, sorafenib, and temsirolimus are recommended as first-line treatments for people with advanced or metastatic renal cell carcinoma.

Sorafenib and sunitinib are not recommended as second-line treatments for people with advanced or metastatic renal cell carcinoma. www.nice.org.uk/TA178

  > Sorafenib for the treatment of advanced hepatocellular carcinoma (May 2010) NICE TA189

Sorafenib is not recommended for the treatment of advanced hepatocellular carcinoma in patients for whom surgical or locoregional therapies have failed or are unsuitable. www.nice.org.uk/TA189

> Conception and contraception Effective contraception required during treatment.

> Pregnancy

Manufacturer advises avoid unless potential benefit outweighs risk — toxicity in animal studies. See

### Suniatinib

> Drug action

Sunitinib is a tyrosine kinase inhibitor.

#### Indications and dose

- Treatment of unresectable or metastatic malignant gastrointestinal stromal tumours, after failure of imatinib
- Treatment of advanced or metastatic renal cell carcinoma

  > By mouth

    > Adult: 50 mg once daily for 4 weeks, followed by a 2-week treatment-free period to complete 6-week cycle, adjusted in steps of 12.5 mg, doses adjusted according to tolerability; usual dose 25–75 mg daily

- Treatment of unresectable or metastatic pancreatic neuroendocrine tumours

  > By mouth

    > Adult: 37.5 mg once daily without treatment-free period; adjusted in steps of 12.5 mg, doses adjusted according to tolerability; maximum 50 mg per day

**Important safety information**

**Risk of osteonecrosis of the jaw (January 2011)**

Treatment with sunitinib may be a risk factor for the development of osteonecrosis of the jaw.

Patients treated with sunitinib, who have previously received bisphosphonates, or are treated concurrently with bisphosphonates, may be particularly at risk.

Dental examination and appropriate preventive dentistry should be considered before treatment with sunitinib.

If possible, invasive dental procedures should be avoided in patients treated with sunitinib who have previously received, or who are currently receiving, intravenous bisphosphonates.

**Risks of incorrect dosing of oral anti-cancer medicines, see p. 745**

> Conception and contraception Effective contraception required during treatment.

> Pregnancy

Manufacturer advises avoid unless potential benefit outweighs risk — toxicity in animal studies. See

### MEDICAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

**Cautionary and advisory labels**

- Nexavar (Bayer Plc)

  > Sorafenib (as Sorafenib tosylate) 200 mg Nexavar 200mg tablets | 112 tablet pack £2,980.47

### Sunitinib

> Drug action

Sunitinib is a tyrosine kinase inhibitor.

> Indications and dose

- Treatment of unresectable or metastatic malignant gastrointestinal stromal tumours, after failure of imatinib
- Treatment of advanced or metastatic renal cell carcinoma

  > By mouth

    > Adult: 50 mg once daily for 4 weeks, followed by a 2-week treatment-free period to complete 6-week cycle, adjusted in steps of 12.5 mg, doses adjusted according to tolerability; usual dose 25–75 mg daily

- Treatment of unresectable or metastatic pancreatic neuroendocrine tumours

  > By mouth

- BREAST FEEDING Discontinue breast-feeding.
- MONITORING REQUIREMENTS Monitor for thyroid dysfunction.

- NATIONAL FUNDING/ACCESS DECISIONS
  **NICE technology appraisals (TAs)**
  - Sunitinib for advanced or metastatic renal cell carcinoma (March 2009) NICE TA169
    Sunitinib is recommended as first-line treatment for advanced or metastatic renal cell carcinoma in patients who are suitable for immunotherapy and have an Eastern Cooperative Oncology Group performance status of 0 or 1. www.nice.org.uk/TA169
  - Bevacizumab (first-line), sorafenib (first- and second-line), sunitinib (second-line) and temsirolimus (first-line) for the treatment of advanced or metastatic renal cell carcinoma (August 2009) NICE TA178
    Sorafenib and sunitinib are not recommended as second-line treatments for people with advanced or metastatic renal cell carcinoma. www.nice.org.uk/TA178
  - Sunitinib for the treatment of gastrointestinal stromal tumours (September 2009) NICE TA179
    Sunitinib is recommended as an option for treatment in patients with unresectable or metastatic gastrointestinal stromal tumours if imatinib treatment has failed because of resistance or intolerance, and the cost of sunitinib for the first treatment cycle is met by the manufacturer.
    Scottish Medicines Consortium (SMC) Decisions
    The Scottish Medicines Consortium (SMC) has advised (October 2009 and April 2011) that sunitinib (Sutent®) is accepted for restricted use within NHS Scotland for the treatment of unresectable or metastatic malignant gastro-intestinal stromal tumours after failure of imatinib and for unresectable or metastatic pancreatic neuroendocrine tumours.

- MEDICINAL FORMS
  There can be variation in the licensing of different medicines containing the same drug.

  **Capsule**
  CAUTIONARY AND ADVISORY LABELS 14
  - Sutent (Pfizer Ltd)
    - Sunitinib (as Sunitinib maleate) 12.5 mg Sutent 12.5mg capsules | 28 capsule £784.70
    - Sunitinib (as Sunitinib maleate) 25 mg Sutent 25mg capsules | 28 capsule £1569.40
    - Sunitinib (as Sunitinib maleate) 50 mg Sutent 50mg capsules | 28 capsule £3,138.80

Temsnirolimus

- DRUG ACTION Temsirolimus is a protein kinase inhibitor.

- INDICATIONS AND DOSE
  - First-line treatment of advanced renal cell carcinoma | Treatment of relapsed or refractory mantle cell lymphoma
  - BY INTRAVENOUS INFUSION
    - Adult: (consult product literature or local protocols)

- INTERACTIONS → Appendix 1 (temsirolimus).
  The main active metabolite of temsirolimus is sirolimus—see also interactions of sirolimus and consult product literature.

- SIDE-EFFECTS
  - Uncommon  Intracerebral bleeding
  - Frequency not known  Alopecia - bone-marrow suppression - extravasation - hyperuricaemia - nausea - oral mucositis - thromboembolism - tumour lysis syndrome - vomiting

- HYPERSENSIBILITY REACTIONS
  Hypersensitivity reactions, including some life-threatening and rare fatal reactions, are associated with temsirolimus therapy, usually during administration of the first dose. Symptoms include flushing, chest pain, dyspnoea, apnoea, hypotension, loss of consciousness, and anaphylaxis. Where possible, patients should receive an intravenous dose of antihistamine 30 minutes before starting the temsirolimus infusion. The infusion may have to be stopped temporarily for the treatment of infusion-related effects—consult product literature for appropriate management. If adverse reactions are not managed with dose delays, a dose reduction should be considered—consult product literature.

- CONCEPTION AND CONTRACEPTION
  Ensure effective contraception during treatment in men and women.

- PREGNANCY
  Manufacturer advises avoid (toxicity in animal studies). See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- BREAST FEEDING
  Manufacturer advises discontinue breast-feeding.

- HEPATIC IMPAIRMENT
  In renal cell carcinoma, reduce dose in severe impairment (consult product literature). Use with caution. In mantle cell lymphoma, avoid in moderate or severe impairment.

- RENAL IMPAIRMENT
  Manufacturer advises caution in severe impairment—no information available.

- MONITORING REQUIREMENTS
  - Monitor respiratory function.
  - Monitor blood lipids.

- NATIONAL FUNDING/ACCESS DECISIONS
  **NICE technology appraisals (TAs)**
  - Bevacizumab (first-line), sorafenib (first- and second-line), sunitinib (second-line) and temsiroliusm (first-line) for the treatment of advanced or metastatic renal cell carcinoma (August 2009) NICE TA178
    Bevacizumab, sorafenib, and temsirolimus are not recommended as first-line treatments for people with advanced or metastatic renal cell carcinoma. www.nice.org.uk/TA178

**Solution for infusion**
EXCIPIENTS: May contain Ethanol, propylene glycol
- Torisel (Pfizer Ltd)
  Temsirolimus 25 mg per 1 ml Torisel 30mg/1.2ml concentrate for solution for infusion vials and diluent | 1 vial £620.00 (Hospital only)
Targeted therapy responsive malignancy 819

**Vandetanib**

**DRUG ACTION** Vandetanib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**

Treatment of aggressive and symptomatic medullary thyroid cancer in patients with unresectable locally advanced or metastatic disease

**BY MOUTH**

- Adult: 300 mg once daily, for dose adjustment due to side effects—consult product literature

**CONTRA-INDICATIONS** Congenital long QT syndrome • QT interval greater than 480 milliseconds

**CAUTIONS** Brain metastases (intracranial haemorrhage reported) • electrolyte disturbances • history of torsades de pointes • hypertension • photoxicity reactions reported (wear protective clothing and/or sunscreen) • susceptibility to QT-prolongation

**INTERACTIONS** → Appendix 1 (vandetanib). Caution with concomitant use of drugs that prolong QT interval.

**SIDE-EFFECTS**

- Common or very common Abdominal pain • alopecia • anxiety • asthenia • balance disorders • blurred vision • cholelithiasis • colitis • conjunctivitis • constipation • corneal changes (including opacity) • corneal deposits • decreased appetite • dehydration • depression • diarrhoea • dizziness • dry eye • dry mouth • dysaesthesia • dyspepsia • dysphagia • dysuria • electrolyte disturbances • epistaxis • gastritis • gastrointestinal haemorrhage • glaucoma • haematuria • haemoptysis • halo vision • hand-foot syndrome • headache • hyperglycaemia • hypertension • hypothyroidism • insomina • ischaemic cerebrovascular conditions • keratopathy • lethargy • loss of consciousness • micturition urgency • nephrolithiasis • oedema • pain • paraesthesia • photopsia • photosexsitivety reactions • pneumonitis • polymiopathy • proteinuria • pyrexia • QT-interval prolongation • taste disturbance • tremor

- Uncommon Accommodation disorders • anuria • aspiration pneumonia • brain oedema • bullous dermatitis • cardiac arrest • cardiac conduction disorders • cardiac rate disorders • cardiac rhythm disorders • cataract • chromaturia • clonus • conulsions • erythema multiforme • faecal incontinence • heart failure • ileus • impaired healing • increased haemoglobin • interstitial lung disease (sometimes fatal) • intestinal perforation • pancreatitis • peritonitis • posterior reversible encephalopathy syndrome • respiratory failure • Stevens-Johnson syndrome • ventricular arrhythmia

- Frequency not known Alopecia • bone-marrow suppression • hyperuricaemia • nausea • oral mucositis • thromboembolism • tumour lysis syndrome • vomiting

- CONCEPTION AND CONTRACEPTION Effective contraception required during and for at least 4 months after treatment.

- PREGNANCY Manufacturer advises avoid unless potential benefit outweighs risk. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- BREAST FEEDING Avoid—no information available.

- HEPATIC IMPAIRMENT Manufacturer advises avoid in severe impairment (serum bilirubin greater than 1.5 times the upper limit of normal).

- RENAL IMPAIRMENT Reduce dose to 200 mg if creatinine clearance 30–49 mL/minute. Avoid if creatinine clearance less than 30 mL/minute.

**Important safety information**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES, see p. 745**

- Contraindicated in patients with uncorrected QT-interval greater than 480 milliseconds

- Monitor ECG, serum potassium, calcium, magnesium and thyroid stimulating hormone before treatment, then 1, 3, 6 and 12 weeks after starting treatment and following dose adjustment or interruption, then every 3 months for at least 1 year.

**DIRECTIONS FOR ADMINISTRATION** Tablets may be dispersed in half a glass of water by stirring until dispersed (approximately 10 minutes), immediately before drinking (do not crush). After solution has been swallowed, any residue must be re-dispersed in the same volume of water and swallowed. The solution can also be administered via nasogastric or gastrostomy tubes.

**PATIENT AND CARER ADVICE** Alert card should be provided. Patients or carers should be given advice on how to administer vandetanib tablets.

**Phototoxicity reactions Patients should be advised to wear protective clothing and/or sunscreen.**

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

- (AstraZeneca UK Ltd) ▼
  - Vandetanib 100 mg Caprelsa 100mg tablets | 30 tablet [POD] £2,500.00
  - Vandetanib 300 mg Caprelsa 300mg tablets | 30 tablet [POD] £5,000.00

**Vemurafenib**

**DRUG ACTION** Vemurafenib is a BRAF kinase inhibitor.

**INDICATIONS AND DOSE**

Monotherapy for the treatment of BRAF V600 mutation-positive unresectable or metastatic melanoma

**BY MOUTH**

- Adult: 960 mg twice daily, for dose adjustment due to side effects—consult product literature

**Important safety information**

**DRUG RASH WITH EOSINOPHILIA AND SYSTEMIC SYMPTOMS (DRESS SYNDROME)**

DRESS syndrome has been reported in patients taking vemurafenib. DRESS syndrome starts with rash, fever, swollen glands, and increased white cell count, and it can affect the liver, kidneys and lungs; DRESS can also be fatal. Patients should be advised to stop taking vemurafenib and consult their doctor immediately if skin rash develops. Treatment with vemurafenib should not be restarted.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES, see p. 745**

- Wild-type BRAF malignant melanoma

- Contraindicated in patients with uncorrected QT-interval greater than 480 milliseconds

- Monitor ECG, serum potassium, calcium, magnesium and thyroid stimulating hormone before treatment, then 1, 3, 6 and 12 weeks after starting treatment and following dose adjustment or interruption, then every 3 months for at least 1 year.

- Electrolyte disturbances • prior or concurrent cancer associated with RAS mutation—increased risk of tumour progression • susceptibility to QT-prolongation

- → Appendix 1 (vemurafenib). Caution with concomitant use of drugs that prolong QT interval.

**SIDE-EFFECTS**

- Common or very common Actinic keratosis • alopecia • arthralgia • arthritis • asthenia • basal cell carcinoma • Bell’s palsy • constipation • cough • cutaneous squamous cell carcinoma • decreased appetite • diarrhoea • dizziness • dry skin • erythema • erythema nodosum • fatigue • folliculitis • hand-foot syndrome • headache • hyperkeratosis • keratosis pilaris • musculoskeletal pain • myalgia • new primary melanoma • pain in extremities •
Malignant disease

VASCULAR ENDOTHELIAL GROWTH FACTOR INHIBITORS

**Afiblercept**

- **DRUG ACTION** Afiblercept is a recombinant fusion protein that acts as a soluble decoy receptor and binds to vascular endothelial growth factors A and B (VEGF-A, VEGF-B) and placental growth factor (PIGF). Afiblercept inhibits the activation of VEGF receptors and the proliferation of endothelial cells, thereby inhibiting the growth of new vessels that supply tumours with oxygen and nutrients.

**INDICATIONS AND DOSE** In combination with irinotecan, fluorouracil and folinic acid (FOLFIRI) chemotherapy, in metastatic colorectal cancer that is resistant to, or has progressed after, an oxaliplatin-containing regimen.

**BY INTRAVENOUS INFUSION**

- Adult: (consult local protocol)

- **CONTRA-INDICATIONS** Moderate or severe congestive heart failure - uncontrolled hypertension

- **CAUTIONS** Febrile neutropenia - history of cardiovascular disease (may be exacerbated by hypertension) - increased risk of haemorrhage (including fatal events) - increased risk of hypertension - increased risk of thromboembolic events (consult product literature if event occurs) - may impair wound healing—withhold treatment for at least 4 weeks before elective surgery and for at least 4 weeks after major surgery, or until wound fully healed - neutropenic infection - risk of fistula formation (discontinue if fistula develops) - risk of neutropenia - risk of thrombocytopenia

- **SIDE-EFFECTS**
  - **Common or very common** Abdominal pain - aphthous stomatitis - decreased appetite - dehydration - diarrhoea - dysphonia - dysphagia - erythema - fistula - haemorrhage (including nasal, rectal and gastro-intestinal) - haemorrhoids - hand-foot syndrome - headache - hypertension - infection - leucopenia - malaise - nasopharyngitis - neutropenia (including febrile neutropenia) - ophthalmic pain - proctalgia - proteinuria - rhinorrhoea - sepsis - skin hyperpigmentation - stomatitis - thrombocytopenia - thromboembolic events (arterial and venous) - toothache - urinary tract infection - weight loss
  - **Uncommon** Gastro-intestinal perforation - impaired wound healing - nephrotic syndrome - posterior reversible encephalopathy syndrome - thrombotic microangiopathy

**CONCEPTION AND CONTRACEPTION** Exclude pregnancy before treatment. Effective contraception required during and for at least 6 months after treatment in men and women. Contraceptive advice should be given to men and women before therapy begins (and should cover the duration of contraception required after therapy has ended).

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs, p. 746.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Caution in severe impairment—no information available.

- **RENAL IMPAIRMENT** Caution in severe impairment—no information available.

- **MONITORING REQUIREMENTS**

  - Monitor blood pressure at initiation and at least fortnightly during treatment (do not initiate treatment if pre-existing hypertension is uncontrolled)
product literature if hypertension develops during treatment.

- Monitor for signs of gastro-intestinal perforation (discontinue if perforation develops).
- Monitor full blood count, including differential count and platelets at baseline and before each treatment cycle.
- Monitor for proteinuria before each treatment administration (consult product literature if symptoms develop).
- Monitor for signs and symptoms of diarrhoea and dehydration, particularly in elderly—consult product literature if severe diarrhoea occurs.
- Monitor for posterior reversible encephalopathy syndrome (presenting as seizures, altered mental status, nausea, vomiting, headache, or visual disturbance).

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- Aflibercept in combination with irinotecan and fluorouracil-based therapy for treating metastatic colorectal cancer that has progressed following prior oxaliplatin-based chemotherapy (March 2014) NICE TA307
  
  Aflibercept in combination with irinotecan and fluorouracil-based therapy is **not** recommended within its marketing authorisation for treating metastatic colorectal cancer that is resistant to or has progressed after an oxaliplatin-containing regimen. [www.nice.org.uk/TA307](http://www.nice.org.uk/TA307)

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

  Aflibercept 25 mg per 1 ml Zaltrap 200mg/8ml concentrate for solution for infusion vials | 1 vial [PON] £591.30 (Hospital only)
  
  Zaltrap 100mg/4ml concentrate for solution for infusion vials | 1 vial [PON] £295.65 (Hospital only)
Chapter 9
Blood and nutrition

1 Blood and blood-forming organs

1.1 Anaemias

Anaemias
Before initiating treatment for anaemia it is essential to determine which type is present. Iron salts may be harmful and result in iron overload if given alone to patients with anaemias other than those due to iron deficiency.

Sickle-cell disease
Sickle-cell disease is caused by a structural abnormality of haemoglobin resulting in deformed, less flexible red blood cells. Acute complications in the more severe forms include sickle-cell crisis, where infarction of the microvasculature and blood supply to organs results in severe pain. Sickle-cell crisis requires hospitalisation, intravenous fluids, analgesia and treatment of any concurrent infection. Chronic complications include skin ulceration, renal failure, and increased susceptibility to infection. Pneumococcal vaccine, haemophilus influenzae type b vaccine, an annual influenza vaccine and prophylactic penicillin reduce the risk of infection. Hepatitis B vaccine should be considered if the patient is not immune.

In most forms of sickle-cell disease, varying degrees of haemolytic anaemia are present accompanied by increased erythropoiesis; this may increase folate requirements and folate supplementation may be necessary.

Hydroxycarbamide p. 777 can reduce the frequency of crises and the need for blood transfusions in sickle-cell disease. The beneficial effects of hydroxycarbamide may not become evident for several months.

1.2 Anaemias, G6PD deficiency

G6PD deficiency
Glucose 6-phosphate dehydrogenase (G6PD) deficiency is highly prevalent in individuals originating from most parts of Africa, from most parts of Asia, from Oceania, and from Southern Europe; it can also occur, rarely, in any other individuals. G6PD deficiency is more common in males than it is in females.

Individuals with G6PD deficiency are susceptible to developing acute haemolytic anaemia when they take a number of common drugs. They are also susceptible to developing acute haemolytic anaemia when they eat fava beans (broad beans, Vicia faba); this is termed favism and can be more severe in children or when the fresh fava beans are eaten raw.

When prescribing drugs for patients with G6PD deficiency, the following three points should be kept in mind:

- G6PD deficiency is genetically heterogeneous;
- susceptibility to the haemolytic risk from drugs varies;
Anaemias, hypoplastic, haemolytic, and renal

1.3 Anaemias, hypoplastic, haemolytic, and renal

Anaemias, hypoplastic, haemolytic, and renal

Anabolic steroids, pyridoxine hydrochloride p. 882, antilymphocyte immunoglobulin, and various corticosteroids are used in hypoplastic and haemolytic anaemias.

Antilymphocyte immunoglobulin given intravenously through a central line over 12–18 hours each day for 5 days produces a response in about 50% of cases of acquired aplastic anaemia; the response rate may be increased when ciclosporin p. 717 is given as well. Severe reactions are common in the first 2 days and profound immunosuppression can occur; antilymphocyte immunoglobulin should be given under specialist supervision with appropriate resuscitation facilities. Alternatively, oxymetholone tablets (available from ‘special order’ manufacturers or specialist importing companies) can be used in aplastic anaemia for 3 to 6 months.

It is unlikely that dietary deprivation of pyridoxine hydrochloride produces clinically relevant haematological effects. However, certain forms of sideroblastic anaemia respond to pharmacological doses, possibly reflecting its role as a co-enzyme during haemoglobin synthesis. Pyridoxine hydrochloride is indicated in both idiopathic acquired and hereditary sideroblastic anaemias. Although complete cures have not been reported, some increase in haemoglobin can occur; the dose required is usually high. Reversible sideroblastic anaemias respond to treatment of the underlying cause but in pregnancy, haemolytic anaemias, and alcohol dependence, or during isoniazid treatment, pyridoxine hydrochloride is also indicated.

Corticosteroids have an important place in the management of haematological disorders. They include conditions with an autoimmune haemolytic anaemia, immune thrombocytopenias and neutropenias, and major transfusion reactions. They are also used in chemotherapy schedules for many types of lymphoma, lymphoid leukaemias, and paraproteinaemias, including multiple myeloma.

Erythropoietins (recombinant human erythropoietins) are used to treat the anaemia associated with erythropoietin deficiency in chronic renal failure, to increase the yield of autologous blood in normal individuals and to shorten the period of symptomatic anaemia in patients receiving cytotoxic chemotherapy.

Epoetin beta p. 828 is also used for the prevention of anaemia in perterm neonates of low birth-weight; only unpreserved formulations should be used in neonates because other preparations may contain benzyl alcohol. Darbepoetin alfa p. 825 is a hyperglycosylated derivative of epoetin; it has a longer half life and can be administered less frequently than epoetin.

Methoxy polyethylene glycol-epoetin beta p. 824 is a continuous erythropoietin receptor activator that is licensed for the treatment of symptomatic anaemia associated with chronic kidney disease. It has a longer duration of action than epoetin.

ANDROSTAN DERIVATIVES

Oxymetholone

**INDICATIONS AND DOSE**

Aplastic anaemia

**BY MOUTH**

- Adult: 1–5 mg/kg daily for 3 to 6 months

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

**Capsule**

- **OXYMETHOLONE (Non-proprietary)**
  - Oxymetholone 50 mg (Oxymetholone 50mg capsules) 50 capsule blister pack £395.00 Schedule 4 (CD Anab)
CONTINUOUS ERYTHROPOIETIN RECEPTOR ACTIVATORS

Methoxy polyethylene glycol-epoetin beta

INDICATIONS AND DOSE
Symptomatic anaemia associated with chronic kidney disease in patients on dialysis and not currently treated with erythropoietins

BY SUBCUTANEOUS INJECTION OR BY INTRAVENOUS INJECTION

Adult: Initially 600 nanograms/kg every 2 weeks, dose to be adjusted according to response at intervals of at least 4 weeks, maintenance dose of double the previous fortnightly dose may be given every 4 weeks, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks; or if haemoglobin concentration approaches or exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Symptomatic anaemia associated with chronic kidney disease in patients not on dialysis and not currently treated with erythropoietins

INITIALLY BY SUBCUTANEOUS INJECTION

Adult: Initially 1.2 micrograms/kg every 4 weeks, alternatively (by subcutaneous injection or by intravenous injection) initially 600 nanograms/kg every 2 weeks, dose to be adjusted according to response at intervals of at least 4 weeks, patients treated once every 2 weeks may be given a maintenance dose of double the previous fortnightly dose every 4 weeks, subcutaneous route preferred in patients not on haemodialysis. Reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks; or if haemoglobin concentration approaches or exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Symptomatic anaemia associated with chronic kidney disease in patients currently treated with erythropoietins

BY SUBCUTANEOUS INJECTION OR BY INTRAVENOUS INJECTION

Adult: (consult product literature)

SIDE-EFFECTS
Hot flushes

PREGNANCY
No evidence of harm in animal studies—manufacturer advises caution.

BREAST FEEDING
Manufacturer advises use only if potential benefit outweighs risk—present in milk in animal studies.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

Mircea (Roche Products Ltd)
Methoxy polyethylene glycol-epoetin beta 100 microgram per 1 ml Mircea 30micrograms/0.3ml solution for injection pre-filled syringes | 1 pre-filled disposable injection £146.81
Methoxy polyethylene glycol-epoetin beta 166.667 microgram per 1 ml Mircea 50micrograms/0.3ml solution for injection pre-filled syringes | 1 pre-filled disposable injection £73.41
Methoxy polyethylene glycol-epoetin beta 250 microgram per 1 ml Mircea 75micrograms/0.3ml solution for injection pre-filled syringes | 1 pre-filled disposable injection £110.11

EPOETINS

Important safety information
MHRA/CHM ADVICE (DECEMBER 2007) ERYTHROPOIETINS—HAEMOGLOBIN CONCENTRATION
Overcorrection of haemoglobin concentration in patients with chronic kidney disease may increase the risk of death and serious cardiovascular events, and in patients with cancer may increase the risk of thrombosis and related complications:

• patients should not be treated with erythropoietins for the licensed indications in chronic kidney disease or cancer in patients receiving chemotherapy unless symptoms of anaemia are present

• the haemoglobin concentration should be maintained within the range 10–12 g/100 mL

• haemoglobin concentrations higher than 12 g/100 mL should be avoided

• the aim of treatment is to relieve symptoms of anaemia, and in patients with chronic kidney disease to avoid the need for blood transfusion; the haemoglobin concentration should not be increased beyond that which provides adequate control of symptoms of anaemia (in some patients, this may be achieved at concentrations lower than the recommended range)

MHRA/CHM ADVICE (DECEMBER 2007 AND JULY 2008) ERYTHROPOIETINS—TUMOUR PROGRESSION AND SURVIVAL IN PATIENTS WITH CANCER

Clinical trial data show an unexplained excess mortality and increased risk of tumour progression in patients with anaemia associated with cancer who have been treated with erythropoietins. Many of these trials used erythropoietins outside of the licensed indications (i.e. overcorrected haemoglobin concentration or given to patients who have not received chemotherapy):

• erythropoietins licensed for the treatment of symptomatic anaemia associated with cancer, are licensed only for patients who are receiving chemotherapy

• the decision to use erythropoietins should be based on an assessment of the benefits and risks for individual patients; blood transfusion may be the preferred treatment for anaemia associated with cancer chemotherapy, particularly in those with a good cancer prognosis

CONTRA-INDICATIONS
Patients unable to receive thromboprophylaxis, pure red cell aplasia following erythropoietin therapy, uncontrolled hypertension
Other factors, such as iron or folate deficiency, that contribute to the anaemia of chronic renal failure, such as iron or folate deficiency, before treatment. During dialysis (increase in unfractuated or low molecular weight heparin dose may be needed) - epilepsy - inadequately treated or poorly controlled blood pressure - interrupt treatment if blood pressure uncontrolled - ischaemic vascular disease - malignant disease - other inflammatory disease (can impair the response to erythropoietin) - risk of thrombosis may be increased when used for anaemia before orthopaedic surgery - avoid in cardiovascular disease including recent myocardial infarction or cerebrovascular accident - risk of thrombosis may be increased when used for anaemia in adults receiving cancer chemotherapy - sickle-cell disease (lower target haemoglobin concentration may be appropriate) - sudden stabbing migraine-like pain (warning of a hypertensive crisis) - thrombocytosis (monitor platelet count for first 8 weeks)

**SIDE-EFFECTS**

- **Common or very common** Aggravation of hypertension (dose-dependent) - cardiovascular events - diarrhoea - dose-dependent increase in platelet count regressing during treatment (but thrombocytosis rare) - headache - hypertensive crisis (in isolated patients with normal or low blood pressure) - increase in blood pressure (dose-dependent) - influenza-like symptoms (may be reduced if intravenous injection given over 5 minutes) - nausea - shunt thrombosis especially if tendency to hypotension or arteriovenous shunt complications - vomiting
- **Very rare** Sudden loss of efficacy because of pure red cell aplasia, particularly following subcutaneous administration in patients with chronic renal failure
- **Frequency not known** Anaaphylaxis - angioedema - hyperkalaemia - hypersensitivity reactions - injection-site reactions - peripheral oedema - skin reactions

**SIDE-EFFECTS, FURTHER INFORMATION**

**Hypertensive crisis** In isolated patients with normal or low blood pressure, hypertensive crisis with encephalopathy-like symptoms and generalised tonic-clonic seizures requiring immediate medical attention has occurred with epoetin.

**Pure red cell aplasia** There have been very rare reports of pure red cell aplasia in patients treated with erythropoietins. In patients who develop a lack of efficacy with erythropoietin therapy and with a diagnosis of pure red cell aplasia, treatment with erythropoietins must be discontinued and testing for erythropoietin antibodies considered. Patients who develop pure red cell aplasia should not be switched to another form of erythropoietin.

**MONITORING REQUIREMENTS**

- Monitor closely blood pressure, reticulocyte counts, haemoglobin, and electrolytes - interrupt treatment if blood pressure uncontrolled.
- Other factors, such as iron or folate deficiency, that contribute to the anaemia of chronic renal failure should be corrected before treatment and monitored during therapy. Supplemental iron may improve the response in resistant patients.

---

**Darbepoetin alfa**

**INDICATIONS AND DOSE**

Symptomatic anaemia associated with chronic renal failure in patients on dialysis

**BY SUBCUTANEOUS INJECTION OR BY INTRAVENOUS INJECTION**

- **Adult:** Initially 450 nanograms/kg once weekly, dose to be adjusted according to response by approximately 25% at intervals of at least 4 weeks, maintenance dose to be given once weekly or once every 2 weeks, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, when changing route give same dose then adjust according to weekly or fortnightly haemoglobin measurements, adjust doses not more frequently than every 2 weeks during maintenance treatment

Symptomatic anaemia associated with chronic renal failure in patients not on dialysis

**BY SUBCUTANEOUS INJECTION**

- **Adult:** Initially 450 nanograms/kg once weekly, alternatively initially 750 nanograms/kg every 2 weeks, dose to be adjusted according to response by approximately 25% at intervals of at least 4 weeks, maintenance dose can be given once weekly, every 2 weeks, or once a month, subcutaneous route preferred in patients not on haemodialysis, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, when changing route give same dose then adjust according to weekly or fortnightly haemoglobin measurements, adjust doses not more frequently than every 2 weeks during maintenance treatment

**BY INTRAVENOUS INJECTION**

- **Adult:** Initially 450 nanograms/kg once weekly, dose to be adjusted according to response by approximately 25% at intervals of at least 4 weeks, maintenance dose given once weekly, subcutaneous route preferred in patients not on haemodialysis, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, when changing route give same dose then adjust according to weekly or fortnightly haemoglobin measurements, adjust doses not more frequently than every 2 weeks during maintenance treatment

Symptomatic anaemia in adults with non-myeloid malignancies receiving chemotherapy

**BY SUBCUTANEOUS INJECTION**

- **Adult:** Initially 6.75 micrograms/kg every 3 weeks, alternatively initially 2.25 micrograms/kg once weekly, if response inadequate after 9 weeks further treatment may not be effective; if adequate response obtained then reduce dose by 25–50%, reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy

**SIDE-EFFECTS** Injection-site pain - oedema

**PREGNANCY** No evidence of harm in animal studies - manufacturer advises caution.
Epoetin alfa

INDICATIONS AND DOSE

EPREX® PRE-FILLED SYRINGES

Symptomatic anaemia associated with chronic renal failure in patients on haemodialysis

- Adult: Initially 50 units/kg twice weekly, adjusted in steps of 25 units/kg 3 times a week, according to response. Dose to be increased at intervals of at least 4 weeks; if haemoglobin concentration exceeds 12 g/100 mL, dose to be reduced by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration increases 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Severe symptomatic anaemia of renal origin in adults with renal insufficiency not yet on dialysis

- Adult: Initially 50 units/kg 3 times a week, adjusted in steps of 25 units/kg 3 times a week, increased according to response. Dose to be increased at intervals of at least 4 weeks; maintenance 17–33 units/kg 3 times a week (max. per dose 200 units/kg 3 times a week), intravenous route preferred, intravenous injection to be given over 1–5 minutes, subcutaneous injection, maximum 1 mL per injection site, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration increases 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Symptomatic anaemia in adults receiving cancer chemotherapy

- Adult: Initially 150 units/kg 3 times a week, alternatively initially 450 units/kg once weekly, increased to 300 units/kg 3 times a week, increased if appropriate rise in haemoglobin (or reticulocyte count) not achieved after 4 weeks; discontinue if inadequate response after 4 weeks at higher dose, subcutaneous injection maximum 1 mL per injection site, reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration increases 12 g/100 mL; if haemoglobin concentration continues

to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy.

To increase yield of autologous blood (to avoid homologous blood) in predonation programme in moderate anaemia either when large volume of blood required or when sufficient blood cannot be saved for elective major surgery

BY INTRAVENOUS INJECTION

- Adult: 600 units/kg twice weekly for 3 weeks before surgery, consult product literature for details and advice on ensuring high iron stores, intravenous injection to be given over 1–5 minutes

Moderate anaemia (haemoglobin concentration 10–13 g/100 mL) before elective orthopaedic surgery in adults with expected moderate blood loss to reduce exposure to allogeneic blood transfusion or if autologous transfusion unavailable

BY SUBCUTANEOUS INJECTION

- Adult: 600 units/kg once weekly for 3 weeks before surgery and on day of surgery, alternatively 300 units/kg daily for 15 days starting 10 days before surgery, consult product literature for details, subcutaneous injection maximum 1 mL per injection site

BINOCRIT® PRE-FILLED SYRINGES

Symptomatic anaemia associated with chronic renal failure in patients on haemodialysis

BY INTRAVENOUS INJECTION

- Adult: Initially 50 units/kg 3 times a week, adjusted in steps of 25 units/kg 3 times a week, dose adjusted according to response at intervals of at least 4 weeks; maintenance 25–100 units/kg 3 times a week, intravenous injection to be given over 1–5 minutes, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Symptomatic anaemia associated with chronic renal failure in adults on peritoneal dialysis

BY INTRAVENOUS INJECTION

- Adult: Initially 50 units/kg twice weekly; maintenance 25–50 units/kg twice weekly, intravenous injection to be given over 1–5 minutes, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Severe symptomatic anaemia of renal origin in adults with renal insufficiency not yet on dialysis

BY INTRAVENOUS INJECTION

- Adult: Initially 50 units/kg 3 times a week, increased in steps of 25 units/kg 3 times a week, adjusted according to response, dose to be increased at intervals of at least 4 weeks; maintenance 17–33 units/kg 3 times a week (max. per dose 200 units/kg 3 times a week), intravenous injection to be given over 1–5 minutes, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

Symptomatic anaemia in adults receiving cancer chemotherapy

BY SUBCUTANEOUS INJECTION

- Adult: Initially 150 units/kg 3 times a week, alternatively initially 450 units/kg once weekly, increased to 300 units/kg 3 times a week, increase if appropriate rise in haemoglobin (or reticulocyte count) not achieved after 4 weeks; discontinue if inadequate response after 4 weeks at higher dose, subcutaneous injection maximum 1 mL per injection site, reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy.

To increase yield of autologous blood (to avoid homologous blood) in predonation programme in moderate anaemia either when large volume of blood required or when sufficient blood cannot be saved for elective major surgery

BY SUBCUTANEOUS INJECTION

- Adult: 600 units/kg once weekly for 3 weeks before surgery and on day of surgery, alternatively 300 units/kg daily for 15 days starting 10 days before surgery, consult product literature for details, subcutaneous injection maximum 1 mL per injection site

PREGNANCY

No evidence of harm. Benefits probably outweigh risk of anaemia and of blood transfusion in pregnancy.

BREAST FEEDING

Unlikely to be present in milk. Minimal effect on infant.

HEPATIC IMPAIRMENT

Manufacturers advise caution in chronic hepatic failure.

PRESCRIBING AND DISPENSING INFORMATION

Products containing epoetin alfa are not identical and although there should be no important differences in terms of safety and efficacy, when prescribing biological products it is good practice to use the brand name.

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

- Erythropoiesis-stimulating agents (epoetin and darbepoetin) for treating anaemia in people with cancer having chemotherapy (November 2014) NICE TA323

Erythropoiesis-stimulating agents (epoetin alfa, beta, theta and zeta, and darbepoetin alfa) are recommended, within their marketing authorisations, as options for treating anaemia in people with cancer who are having chemotherapy.

If different erythropoiesis-stimulating agents are equally suitable, the product with the lowest acquisition cost for the course of treatment should be used. www.nice.org.uk/TA323
BY SUBCUTANEOUS INJECTION

Adult: Initially 40 units/kg 3 times a week for 4 weeks, then increased to 80 units/kg 3 times a week, then increased in steps of 20 units/kg 3 times a week if required, dose to be increased at intervals of 4 weeks; maintenance, initially reduce dose by half, subsequent dose adjusted according to response at intervals of 1–2 weeks, intravenous injection to be administered over 2 minutes, subcutaneous route preferred in patients not on haemodialysis. Reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration approaches or exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose; maximum 720 units/kg per week.

Symptomatic anaemia in adults with non-myeloid malignancies receiving chemotherapy

BY SUBCUTANEOUS INJECTION

Adult: Initially 450 units/kg once weekly for 4 weeks, dose to be given weekly as a single dose or in 3–7 divided doses, increase dose after 4 weeks (if a rise in haemoglobin of at least 1 g/100 mL not achieved), increased to 900 units/kg once weekly, dose to be given weekly as a single dose or in 3–7 divided doses, if adequate response obtained reduce dose by 25–50%, discontinue treatment if haemoglobin concentration does not increase by at least 1 g/100 mL after 8 weeks of therapy (response unlikely). Reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy; maximum 60 000 units per week.

To increase yield of autologous blood (to avoid homologous blood) in predonation programme in moderate anaemia when blood-conserving procedures are insufficient or unavailable

BY INTRAVENOUS INJECTION OR BY SUBCUTANEOUS INJECTION

Adult: (consult product literature)

Pregnancy

No evidence of harm. Benefits probably outweigh risk of anaemia and of blood transfusion in pregnancy.

Breast feeding

Unlikely to be present in milk. Minimal effect on infant.

NICE technology appraisals (TAs)

Erythropoiesis-stimulating agents (epoetin and darbepoetin) for treating anaemia in people with cancer having chemotherapy (November 2014) NICE TA323

Erythropoiesis-stimulating agents (epoetin alfa, beta, theta and zeta, and darbepoetin alfa) are recommended, within their marketing authorisations, as options for treating anaemia in people with cancer who are having chemotherapy. If different erythropoiesis-stimulating agents are equally suitable, the product with the lowest acquisition cost for the course of treatment should be used. www.nice.org.uk/TA323

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

EXCIPIENTS: May contain Phenylalanine

> Retacrit (Hospira UK Ltd)

Epoetin zeta 3333 unit per 1 mL Retacrit 2,000 units/0.6 mL solution for injection pre-filled syringes | 6 pre-filled disposable injection (POD) £67.88 (Hospital only)
MONOCLONAL ANTIBODIES

Eculizumab

- **DRUG ACTION** Eculizumab, a recombinant monoclonal antibody, inhibits terminal complement activation at the C5 protein and thereby reduces haemolysis and thrombotic microangiopathy.

**INDICATIONS AND DOSE**

Reduce haemolysis in paroxysmal nocturnal haemoglobinuria (PNH), in those with a history of bone transfusions (under expert supervision)

**BY INTRAVENOUS infusion**

- Adult: Initially 600 mg once weekly for 4 weeks, then increased to 900 mg once weekly for 1 week; maintenance 900 mg every 12–16 days

Reduce thrombotic microangiopathy in atypical haemolytic uraemic syndrome (aHUS) (specialist use only)

**BY INTRAVENOUS infusion**

- Adult: Initially 900 mg once weekly for 4 weeks, then increased to 1.2 g once weekly for 1 week; maintenance 1.2 g every 12–16 days

**CONTRA-INDICATIONS** Patients unvaccinated against *Neisseria meningitidis* - unresolved *Neisseria meningitidis* infection

**CAUTIONS** Active systemic infection

**CAUTIONS, FURTHER INFORMATION**

Meningococcal infection Vaccine against *Neisseria meningitidis* at least 2 weeks before treatment (tetravalent vaccine against serotypes A, C, W135 and Y recommended); revaccinate according to current medical guidelines. Patients receiving eculizumab less than 2 weeks after receiving meningococcal vaccine must be given prophylactic antibiotics until 2 weeks after vaccination. Advise patient to report promptly any signs of meningococcal infection. Other immunisations should also be up to date.

**SIDE-EFFECTS**

- **Common or very common** Alopecia · arthralgia · blood disorders · cough · dizziness · dysgeusia · dysuria · fatigue · gastro-intestinal disturbances · headache · infection (including meningococcal infection) · influenza-like symptoms · infusion-related reactions · leucopenia · myalgia · nasopharyngitis · oedema · paraesthesia · pruritus · rash · spontaneous erection · thrombocytopenia · vertigo

- **Uncommon** Anorexia · anxiety · chest pain · depression · epistaxis · gingival pain · Graves’ disease · haematemesis · hot flushing · hyperhidrosis · hypotension · jaundice · malignant melanoma · menstrual disorders · mood changes · muscle spasms · myelodysplastic syndrome · palpitation · petechiae · renal impairment · skin depigmentation · sleep disturbances · syncope · tinnitus · tremor · visual disturbances

- **CONCEPTION AND CONCEPTION** Manufacturer advises effective contraception during and for 5 months after treatment.

- **PREGNANCY** No information available—use only if potential benefit outweighs risk. Human IgG antibodies known to cross placenta.

- **BREAST FEEDING** No information available—manufacturer advises avoid breast-feeding during and for 5 months after treatment.

- **MONITORING REQUIREMENTS**

  - Monitor for 1 hour after infusion.

  - For paroxysmal nocturnal haemoglobinuria, monitor for intravascular haemolysis (including serum-lactate dehydrogenase concentration) during treatment and for at least 8 weeks after discontinuation.

  - For atypical haemolytic uraemic syndrome, monitor for thrombotic microangiopathy (measure platelet count, serum-lactate dehydrogenase concentration, and serum creatinine) during treatment and for at least 12 weeks after discontinuation.

- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Soliris®), give intravenously in Glucose 5% or Sodium chloride 0.9%. Dilute requisite dose to a concentration of 5 mg/ml and mix gently; give over 25–45 minutes (infusion time may be increased to 2 hours if infusion-related reactions occur).

- **PRESCRIBING AND DISPENSING INFORMATION** Consult product literature for details of supplemental doses with concomitant plasmapheresis, plasma exchange, or plasma infusion.

- **PATIENT AND CARER ADVICE** A patient information card should be provided. Patient or carers should be advised to report promptly any signs of meningococcal infection.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

**ELECTROLYTES**: May contain Sodium

- **Soliris** (Alexion Pharma UK Ltd)

  - Eculizumab 10 mg per 1 ml

    - Soliris 300mg/30ml concentrate for solution for infusion vials | 1 vial (BNF) £135.00 (Hospital only)

### 1.4 Anaemias, iron deficiency

**Anaemias, iron-deficiency**

*Treatment* with an iron preparation is justified only in the presence of a demonstrable iron-deficiency state. Before starting treatment, it is important to exclude any serious underlying cause of the anaemia (e.g. gastric erosion, gastro-intestinal cancer).

Prophylaxis with an iron preparation may be appropriate in malabsorption, menstruation, pregnancy, after subtotal or total gastrectomy, in haemodialysis patients, and in the management of low birth-weight infants such as preterm neonates.

**Oral iron**

Iron salts should be given by mouth unless there are good reasons for using another route.

Ferrous salts show only marginal differences between one another in efficiency of absorption of iron. Haemoglobin regeneration rate is little affected by the type of salt used provided sufficient iron is given, and in most patients the
speed of response is not critical. Choice of preparation is thus usually decided by the incidence of side-effects and cost.

The oral dose of elemental iron for iron-deficiency anaemia should be 100 to 200 mg daily. It is customary to give this as dried ferrous sulfate; for prophylaxis of iron-deficiency anaemia, ferrous sulfate may be effective.

#### Compound preparations

Preparations containing iron and folic acid p. 836 are used during pregnancy in women who are at high risk of developing iron and folic acid deficiency; they should be distinguished from those used for the prevention of neural tube defects in women planning a pregnancy.

It is important to note that the small doses of folic acid p. 836 contained in these preparations are inadequate for the treatment of megaloblastic anaemias.

Some oral preparations contain ascorbic acid p. 884 to aid absorption of the iron but the therapeutic advantage of such preparations is minimal and cost may be increased.

There is no justification for the inclusion of other ingredients, such as the B group of vitamins (except folic acid for pregnant women).

#### Modified-release preparations

Modified-release preparations of iron are licensed for once-daily dosage, but have no therapeutic advantage and should not be used. These preparations are formulated to release iron gradually; the low incidence of side-effects may reflect the small amounts of iron available for absorption as the iron is carried past the first part of the duodenum into an area of the gut where absorption may be poor.

#### Parenteral iron

Iron can be administered parenterally as iron dextran p. 832, iron sucrose p. 832, ferric carboxymaltose below, or iron isomaltoside 1000 p. 832. Parenteral iron is generally reserved for use when oral therapy is unsuccessful because the patient cannot tolerate oral iron, or does not take it reliably, or if there is continuing blood loss, or in malabsorption. Parenteral iron may also have a role in the management of chemotherapy-induced anaemia, when given with erythropoietins, in specific patient groups (see NICE guidance).

Many patients with chronic renal failure who are receiving haemodialysis (and some who are receiving peritoneal dialysis) also require iron by the intravenous route on a regular basis.

With the exception of patients with severe renal failure receiving haemodialysis, parenteral iron does not produce a faster haemoglobin response than oral iron provided that the oral iron preparation is taken reliably and is absorbed adequately. If parenteral iron is necessary, the dose should be calculated according to the patient’s body-weight and total iron deficit. Depending on the preparation used, parenteral iron is given as a total dose or in divided doses. Further treatment should be guided by monitoring haemoglobin and serum iron concentrations.

## Anaemias, iron deficiency

### Iron (injectable)

#### Important safety information

MHRA/CHM Advice: Serious hypersensitivity reactions

**Reactions with intravenous iron (August 2013)**

Serious hypersensitivity reactions, including life-threatening and fatal anaphylactic reactions, have been reported in patients receiving intravenous iron. These reactions can occur even when a previous administration has been tolerated (including a negative test dose). Test doses are no longer recommended and caution is needed with every dose of intravenous iron. Intravenous iron products should only be administered when appropriately trained staff and resuscitation facilities are immediately available; patients should be closely monitored for signs of hypersensitivity during and for at least 30 minutes after every administration. In the event of a hypersensitivity reaction, treatment should be stopped immediately and appropriate management initiated.

The risk of hypersensitivity is increased in patients with known allergies, immune or inflammatory conditions, or those with a history of severe asthma, eczema, or other atopic allergy; in these patients, intravenous iron should only be used if the benefits outweigh the risks. Intravenous iron should be avoided in the first trimester of pregnancy and used in the second or third trimesters only if the benefit outweighs the potential risks for both mother and fetus.

#### Side-effects

- **Hypersensitivity reactions**

#### Side-effects, Further information

**Anaphylactic reactions** Anaphylactic reactions can occur with parenteral administration of iron complexes and facilities for cardiopulmonary resuscitation must be available.

**Overdose** For details on the management of poisoning, see Iron salts, under Emergency treatment of poisoning p. 1123.

### Ferric carboxymaltose

#### Indications and dose

**Iron-deficiency anaemia**

**By slow intravenous injection or by intravenous infusion**

- Adult: Dose calculated according to body-weight and iron deficit (consult product literature)

#### Caution

- **Allergic disorders • asthma • eczema • hypersensitivity** can occur with parenteral iron and facilities for cardiopulmonary resuscitation must be available.

#### Side-effects

- **Common or very common** Dizziness • gastro-intestinal disturbances • headache • injection-site reactions • rash

- **Uncommon** Anaphylaxis • arthralgia • back pain • chest pain • fatigue • flushing • hypertension • hypotension • malaise • myalgia • paraesthesia • peripheral oedema • pruritus • pyrexia • rigors • urticaria

- **Rare** Dyspnoea

#### Pregnancy

Avoid in first trimester; crosses the placenta in animal studies. May influence skeletal development.

#### Hepatic impairment

Use with caution. Avoid in conditions where iron overload increases risk of impairment.
Iron dextran

**INDICATIONS AND DOSE**

- **Iron-deficiency anaemia**
  
  **BY DEEP INTRAMUSCULAR INJECTION**
  
  - Adult: Intramuscular injection to be administered into the gluteal muscle, doses calculated according to body-weight and iron deficit (consult product literature).

  **BY SLOW INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION**
  
  - Adult: Doses calculated according to body-weight and iron deficit (consult product literature).

- **CONTRA-INDICATIONS** Active rheumatoid arthritis - asthma - eczema - history of allergic disorders

- **CAUTIONS** Hypersensitivity can occur with parenteral iron and facilities for cardiopulmonary resuscitation must be available - infection (discontinue if ongoing bacteraemia) - oral iron should not be given until 5 days after last injection

- **SIDE-EFFECTS**
  
  - **Uncommon** Abdominal pain - anaphylaxis - blurred vision - cramps - dyspnoea - flushing - nausea - numbness - pruritus - rash - vomiting
  
  - **Rare** Angioedema - arthralgia - chest pain - diarrhoea - dizziness - fatigue - hypotension - impaired consciousness - injection-site reactions - malaise - myalgia - numbness - seizures - sweating - tachycardia - tremor
  
  - **Very rare** Bradycardia - delirium - flushing - haemolysis - headache - hypothermia - palpitation - paraesthesia - transient deafness

- **PREGNANCY** Avoid in first trimester.

- **HEPATIC IMPAIRMENT** Avoid in decompensated liver disease and hepatitis.

- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Ferinject®), give intermittently in Sodium chloride 0.9%, dilute 200–500 mg in up to 100 mL infusion fluid and give over at least 6 minutes; dilute 0.5–1 g in up to 250 mL infusion fluid and give over at least 15 minutes.

- **PRESCRIBING AND DISPENSING INFORMATION** A ferric carboxymaltose complex containing 5% (50 mg/mL) of iron.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

---

**Iron isomaltoside 1000**

**INDICATIONS AND DOSE**

**Iron-deficiency anaemia**

**BY SLOW INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION**

- Adult: Doses calculated according to body-weight and iron deficit (consult product literature)

- **CONTRA-INDICATIONS** Active rheumatoid arthritis - asthma - eczema - history of allergic disorders

- **CAUTIONS** Hypersensitivity can occur with parenteral iron and facilities for cardiopulmonary resuscitation must be available - infection (discontinue if ongoing bacteraemia) - oral iron should not be given until 5 days after last injection

**SIDE-EFFECTS**

- **Uncommon** Abdominal pain - anaphylaxis - blurred vision - constipation - cramps - dyspnoea - fever - flushing - injection-site reactions - nausea - numbness - pruritus - rash - vomiting

- **Rare** Altered mental status - angioedema - arthralgia - chest pain - diarrhoea - dizziness - hypotension - loss of consciousness - malaise - myalgia - restless - seizures - sweating - tachycardia - tremor

- **Very rare** Foetal bradycardia - haemolysis - headache - hypertension - palpitation - paraesthesia - transient deafness

**PREGNANCY** Avoid in first trimester.

**HEPATIC IMPAIRMENT** Avoid in decompensated liver disease and hepatitis.

**DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Monofer®), give intermittently in Sodium chloride 0.9%. For details consult product literature.

**PRESCRIBING AND DISPENSING INFORMATION** A complex of ferric iron and isomaltosides containing 10% (100 mg/mL) of iron.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **Cosmofer** (Pharmacosmos UK Ltd)
  
  Iron (as iron dextran) 50 mg per 1 mL

  - Solution for injection ampoules | 2 ampoule [P] £79.70
  
  Cosmofer 100 mg/2 mL solution for injection ampoules | 5 ampoule [P] £38.85

---

**Iron sucrose**

**INDICATIONS AND DOSE**

**Iron-deficiency anaemia**

**BY SLOW INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION**

- Adult: Doses calculated according to body-weight and iron deficit (consult product literature)

- **CONTRA-INDICATIONS** Anaphylaxis - asthma - eczema - history of allergic disorders
Iron (oral)

- **SIDE-EFFECTS** Constipation, diarrhoea, epigastric pain (dose related), faecal impaction, gastro-intestinal irritation, nausea (dose related)

**SIDE-EFFECTS, FURTHER INFORMATION**

- **Managing side-effects** If side-effects occur, the dose may be reduced; alternatively, another iron salt may be used, but an improvement in tolerance may simply be a result of a lower content of elemental iron. The incidence of side-effects due to ferrous sulfate is no greater than with other iron salts when compared on the basis of equivalent amounts of elemental iron.

- **Altered bowel habit** Iron preparations taken orally can be constipating and occasionally lead to faecal impaction. Oral iron, particularly modified-release preparations, can exacerbate diarrhoea in patients with inflammatory bowel disease; care is also needed in patients with intestinal strictures and diverticular disease. The relationship between dose and altered bowel habit (constipation or diarrhoea) is less clear than for nausea and epigastric pain.

- **Overdose** For details on the management of poisoning, see iron salts, under Emergency treatment of poisoning p. 1123.

- **MONITORING REQUIREMENTS** The haemoglobin concentration should rise by about 100–200 mg/100 mL (1–2 g/litre) per day or 2 g/100 mL (20 g/litre) over 3–4 weeks. When the haemoglobin is in the normal range, treatment should be continued for a further 3 months to replenish the iron stores. Epithelial tissue changes such as atrophic glossitis and koilonychia are usually improved, but the response is often slow.

- **CAUTIONS** Hypersensitivity reactions can occur with parenteral iron and facilities for cardiopulmonary resuscitation must be available. Infection (discontinue if ongoing bacteraemia) or oral iron should not be given until 5 days after last injection.

**HEPATIC IMPAIRMENT** Use with caution. Avoid in conditions where iron overload increases risk of impairment.

**DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Venofer®), give intermittently in Sodium chloride 0.9%, dilute 100 mg in up to 100 mL infusion fluid; give 25 mg over 15 minutes initially, then give at a rate not exceeding 3.33 mg/minute.

**PRESCRIBING AND DISPENSING INFORMATION** A complex of ferric hydroxide with sucrose containing 2% (20 mg/mL) of iron.

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- Venofer® (Vifor Pharma UK Ltd®)
  - Iron (as iron sucrose) 20 mg per 1 mL Venofer 100mg/5ml solution for injection vials | 5 vial pack £43.52

Iron-deficiency anaemia (prophylactic)

**INDICATIONS AND DOSE**

**BY MOUTH USING TABLETS**
- Child 12–17 years: 210 mg 1–2 times a day
- Adult: 210 mg 1–2 times a day

**BY MOUTH USING SYRUP**
- Child 12–17 years: 140 mg twice daily
- Adult: 140 mg twice daily

Iron-deficiency anaemia (therapeutic)

**BY MOUTH USING TABLETS**
- Child 12–17 years: 210 mg 2–3 times a day
- Adult: 210 mg 2–3 times a day

**BY MOUTH USING SYRUP**
- Child 12–17 years: 280 mg twice daily
- Adult: 280 mg twice daily

FERSADAY®

- **Iron-deficiency anaemia (prophylactic)**
  - BY MOUTH
    - Adult: 322 mg daily
  - **Iron-deficiency anaemia (therapeutic)**
    - BY MOUTH
      - Adult: 322 mg twice daily

Blood and nutrition

malabsorption of vitamin B12 resulting from an autoimmune gastritis causes pernicious anaemia not be instituted until the results of tests are available. Sometimes necessary to administer both substances after injection. In emergencies, when delay might be dangerous, it is usually advisable to administer vitamin B12 first. Once the deficiency is known, maintenance treatment, which is usually for life, can be instituted with frequent administration of intramuscular injections to replenish the depleted body stores. Thereafter, maintenance treatment, which is usually for life, can be instituted. There is no evidence that doses larger than those recommended provide any additional benefit in vitamin B12 neuropathy.

Folic acid below has few indications for long-term therapy since most causes of folate deficiency are self-limiting or will yield to a short course of treatment. It should not be used in undiagnosed megaloblastic anaemia unless vitamin B12 is administered concurrently otherwise neuropathy may be precipitated.

1.5 Anaemias, megaloblastic

Anaemias, megaloblastic

Most megaloblastic anaemias result from a lack of either vitamin B12 or folate, and it is essential to establish in every case which deficiency is present and the underlying cause. In emergencies, when delay might be dangerous, it is sometimes necessary to administer both substances after the bone marrow test while plasma assay results are awaited. Normally, however, appropriate treatment should not be instituted until the results of tests are available.

One cause of megaloblastic anaemia in the UK is pernicious anaemia in which lack of gastric intrinsic factor resulting from an autoimmune gastritis causes malabsorption of vitamin B12. Vitamin B12 is also needed in the treatment of megaloblastosis caused by prolonged nitrous oxide anaesthesia, which inactivates the vitamin, and in the rare syndrome of congenital transcobalamin II deficiency.

Vitamin B12 should be given prophylactically after total gastrectomy or total ileal resection (or partial gastrectomy if a vitamin B12 absorption test shows vitamin B12 malabsorption).

Apart from dietary deficiency, all other causes of vitamin B12 deficiency are attributable to malabsorption. There is little place for the use of low-dose vitamin B12 orally and none for vitamin B12 intrinsic factor complexes given by mouth. Vitamin B12 in larger oral doses [unlicensed] may be effective.

Hydroxocobalamin p. 837 has completely replaced cyanocobalamin p. 837 as the form of vitamin B12 of choice for therapy; it is retained in the body longer than cyanocobalamin and thus for maintenance therapy can be given at intervals of up to 3 months. Treatment is generally initiated with frequent administration of intramuscular injections to replenish the depleted body stores. Thereafter, maintenance treatment, which is usually for life, can be instituted. There is no evidence that doses larger than those recommended provide any additional benefit in vitamin B12 neuropathy.

Folic acid below has few indications for long-term therapy since most causes of folate deficiency are self-limiting or will yield to a short course of treatment. It should not be used in undiagnosed megaloblastic anaemia unless vitamin B12 is administered concurrently otherwise neuropathy may be precipitated.

In folate-deficient megaloblastic anaemia (e.g. because of poor nutrition, pregnancy, or antiepileptic drugs), daily folic acid supplementation for 4 months brings about haematological remission and replenishes body stores. For prophylaxis in chronic haemolytic states, malabsorption, or in renal dialysis, folic acid is given daily or sometimes weekly, depending on the diet and the rate of haemolysis.

Folic acid is also used for the prevention of methotrexate-induced side-effects in severe Crohn’s disease, rheumatic disease, and severe psoriasis.

Folic acid p. 781 is also effective in the treatment of folate deficient megaloblastic anaemia but it is generally used in association with cytotoxic drugs; it is given as calcium folinate.

There is no justification for prescribing multiple ingredient vitamin preparations containing vitamin B12 or folic acid.

FOLATES

Folic acid

INDICATIONS AND DOSE

Folate-deficient megaloblastic anaemia

BY MOUTH

Child 1-11 months: Initially 500 micrograms/kg once daily (max. per dose 5 mg) for up to 4 months, in malabsorption states, doses up to 10 mg daily may be required

Child 1-17 years: 5 mg daily for 4 months (until term in pregnant women), in malabsorption states, doses up to 15 mg daily may be required

Adult: 5 mg daily for 4 months (until term in pregnant women), in malabsorption states, doses up to 15 mg daily may be required

Prevention of neural tube defects (women at a low risk of conceiving a child with a neural tube defect)

BY MOUTH

Adult: 400 micrograms daily, to be taken before conception and until week 12 of pregnancy

Prevention of neural tube defects (women at low risk who have not been taking folic acid and who suspect they are pregnant)

BY MOUTH

Adult: 400 micrograms daily, to be taken at once and continued until week 12 of pregnancy

Prevention of neural tube defects (women in the high-risk group who wish to become pregnant or who are at risk of becoming pregnant)

BY MOUTH

Adult: 5 mg daily until week 12 of pregnancy

Prevention of neural tube defects (women with sickle-cell disease)

BY MOUTH

Adult: 5 mg daily, patient should continue taking their normal dose of folic acid 5 mg daily (or to increase the dose to 5 mg daily) and continue this throughout pregnancy

Prevention of methotrexate-induced side-effects in rheumatic disease

BY MOUTH

Adult: 5 mg once weekly, dose to be taken on a different day to methotrexate dose

Prevention of methotrexate side-effects in severe Crohn’s disease

BY MOUTH

Adult: 5 mg once weekly, dose to be taken on a different day to methotrexate dose
Anaemias, megaloblastic 837

Hydroxocobalamin

INDICATIONS AND DOSE
Prophylaxis of macrocytic anaemias associated with vitamin B12 deficiency
BY INTRAMUSCULAR INJECTION
- Adult: 1 mg every 2–3 months
Pernicious anaemia and other macrocytic anaemias without neurological involvement
BY INTRAMUSCULAR INJECTION
- Adult: Initially 1 mg 3 times a week for 2 weeks, then 1 mg every 3 months
Pernicious anaemia and other macrocytic anaemias with neurological involvement
BY INTRAMUSCULAR INJECTION
- Adult: Initially 1 mg once daily on alternate days until no further improvement, then 1 mg every 2 months
Tobacco amblyopia
BY INTRAMUSCULAR INJECTION
- Adult: Initially 1 mg daily for 2 weeks, then 1 mg twice weekly until no further improvement, then 1 mg every 1–3 months
Leber’s optic atrophy
BY INTRAMUSCULAR INJECTION
- Adult: Initially 1 mg daily for 2 weeks, then 1 mg twice weekly until no further improvement, then 1 mg every 1–3 months

Cyanocobalamin

INDICATIONS AND DOSE
Vitamin B12 deficiency of dietary origin
BY MOUTH
- Adult: 50–150 micrograms daily, dose to be taken between meals.
- Adult: Initially 1 mg every 2–3 days for 10 doses; maintenance 1 mg every 1 month

PRESCRIBING AND DISPENSING INFORMATION
- The British Association of Pharmacists directs that when vitamin B12 injection is prescribed or demanded hydroxocobalamin injection shall be dispensed or supplied. Currently available brands of the tablet may not be suitable for vegans.

NATIONAL FUNDING/ACCESS DECISIONS
- NHS restrictions: Cyanocobalamin liquid, Cytacon® tablets and Cytacon® injection not available on prescription under the NHS.

LESS SUITABLE FOR PRESCRIBING
- Cyanocobalamin is less suitable for prescribing.

MEDIcular FORMS
- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: modified-release tablet, tablet solution for injection

- CYANOCOBALAMIN (Non-proprietary)
  - Cyanocobalamin 50 microgram
  - Tablet £2.00 DT price £2.00
  - Tablet £2.00 DT price £2.00

- CYANOCOBALAMIN (Non-proprietary)
  - Cyanocobalamin 35 microgram/5ml oral solution
  - 200 ml £8.75

Solution for injection
- Cytacon (Focus Pharmaceuticals Ltd)
- Cyanocobalamin 1 mg per 1 ml
- Cytacon 1000 micrograms/1ml solution for injection ampoules | 5 ampoule (Pfizer) £14.50 DT price £14.50

VITAMIN B GROUP

Cyanocobalamin

PRESCRIBING AND DISPENSING INFORMATION
- The BP directs that when vitamin B12 injection is prescribed or demanded hydroxocobalamin injection shall be dispensed or supplied. Currently available brands of the tablet may not be suitable for vegans.

NATIONAL FUNDING/ACCESS DECISIONS
- NHS restrictions: Cyanocobalamin liquid, Cytacon® tablets and Cytacon® injection not available on prescription under the NHS.

LESS SUITABLE FOR PRESCRIBING

Blood and nutrition

Iron overload

Severe tissue iron overload can occur in aplastic and other refractory anaemias, mainly as the result of repeated blood transfusions. It is a particular problem in refractory anaemias with hyperplastic bone marrow, especially thalassaemia major, where excessive iron absorption from the gut and inappropriate iron therapy can add to the tissue siderosis.

Iron overload associated with haemochromatosis can be treated with repeated venesection. Venesection may also be used for patients who have received multiple transfusions and whose bone marrow has recovered. Where venesection is contra-indicated, the long-term administration of the iron chelating compound desferrioxamine mesilate p. 839 is useful. Desferrioxamine mesilate (up to 2 g per unit of blood) may also be given at the time of blood transfusion, provided that the desferrioxamine mesilate is not given through the same line as the blood (but the two may be given through the same cannula).

Iron excretion induced by desferrioxamine mesilate is enhanced by administration of ascorbic acid p. 884 (vitamin C) daily by mouth; it should be given separately from food since it also enhances iron absorption. Ascorbic acid should not be given to patients with cardiac dysfunction; in patients with normal cardiac function ascorbic acid should be introduced 1 month after starting desferrioxamine mesilate.

Desferrioxamine mesilate infusion can be used to treat aluminium overload in dialysis patients; theoretically 100 mg of desferrioxamine binds with 4.1 mg of aluminium.

IRON CHELATORS

Deferasirox

DRUG ACTION Deferasirox, is an oral iron chelator.

INDICATIONS AND DOSE

Transfusion-related chronic iron overload when desferrioxamine is contra-indicated or inadequate in children aged 2–5 years with thalassaemia major who receive frequent blood transfusions. Transfusion-related chronic iron overload when desferrioxamine is contra-indicated or inadequate in patients with thalassaemia major who receive infrequent blood transfusions (less than 7 ml/kg/month of packed red blood cells).

Transfusion-related chronic iron overload when desferrioxamine is contra-indicated or inadequate in patients with other anaemias. Treatment of chronic iron overload in patients with thalassaemia major who receive frequent blood transfusions (more than 7 ml/kg/month of packed red blood cells).

BY MOUTH

Adult: Initially 10–30 mg/kg once daily, dose adjusted according to serum-ferritin concentration and amount of transfused blood—consult product literature; adjusted in steps of 5–10 mg/kg every 3–6 months, dose adjusted for maintenance according to serum-ferritin concentration; usual dose up to 30 mg/kg daily, increased if necessary up to 40 mg/kg daily and reduced in steps of 5–10 mg/kg, dose to be reduced once control achieved.

Treatment of chronic iron overload when desferrioxamine is contra-indicated or inadequate (with non-transfusion-dependent thalassaemia syndromes)

BY MOUTH

Adult: Initially 10 mg/kg once daily; adjusted in steps of 5–10 mg/kg every 3–6 months, dose adjusted for maintenance according to serum-ferritin concentration and liver-iron concentration (consult product literature); maximum 20 mg/kg per day.
Iron overload 839

**INDICATIONS AND DOSE**
Treatment of iron overload in patients with thalassaemia major in whom desferrioxamine is contraindicated or is inadequate

**BY MOUTH**
- Adult: 25 mg/kg 3 times a day; maximum 100 mg/kg per day

**CONTRA-INDICATIONS** History of agranulocytosis or recurrent neutropenia

**SIDE-EFFECTS** Agranulocytosis - arthropathy - blood dyscrasias - gastro-intestinal disturbances (reducing dose and increasing gradually may improve tolerance) - headache - increased appetite - neutropenia - red-brown urine discoloration - zinc deficiency

**CONCEPTION AND CONTRACEPTION** Manufacturer advises avoid before intended conception—teratogenic and embryotoxic in animal studies. Contraception advised in females of child-bearing potential.

**PREGNANCY** Manufacturer advises avoid during pregnancy—teratogenic and embryotoxic in animal studies.

**BREAST FEEDING** Manufacturer advises avoid unless information available.

**HEPATIC IMPAIRMENT** Use with caution in moderate impairment, reduce dose considerably then gradually increase to max. 50% of normal dose. Avoid if severe impairment.

**RENAL IMPAIRMENT** Reduce dose by 10 mg/kg if eGFR 60–90 mL/minute/1.73 m² and if serum creatinine increased by more than 33% of baseline measurement on 2 consecutive occasions—interrupt treatment if deterioration in renal function persists after dose reduction. Avoid if eGFR less than 60 mL/minute/1.73 m².

**MONITORING REQUIREMENTS**
- Eye and ear examinations required before treatment and annually during treatment.
- Monitor body-weight, height, and sexual development in children annually.
- Monitor serum-ferritin concentration monthly.
- Test liver function before treatment, then every 2
- Test liver function after treatment, then every 2 weeks during the first month, and then monthly.
- Measure baseline serum creatinine and monitor renal function weekly during the first month of treatment and monthly thereafter.
- Test for proteinuria monthly.

**DIRECTIONS FOR ADMINISTRATION** Tablets should be dispersed in water, orange juice, or apple juice; if necessary resuspend residue.

**PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer deferasirox dispersible tablets.

**NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) Decisions**
The Scottish Medicines Consortium (SMC) has advised (January 2007) that deferasirox is accepted for restricted use within NHS Scotland for the treatment of chronic iron overload associated with the treatment of rare acquired or inherited anaemias requiring recurrent blood transfusions. It is not recommended for patients with myelodysplastic syndromes.

**MEDICAL FORMS**
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, oral suspension, capsule

**Tablet**

| Deferiprone 500 mg per 1 ml | £152.39 |

**Deferiprone**

**DRUG ACTION** Deferiprone, is an oral iron chelator.

**INDICATIONS AND DOSE**
Iron poisoning

**BY CONTINUOUS INTRAVENOUS INFUSION**
- Adult: Initially up to 15 mg/kg/hour, dose to be reduced after 4–6 hours, in severe cases, higher doses may be given on advice from the National Poisons Information Service; maximum 80 mg/kg per day

**Aluminium overload in dialysis patients**

**BY INTRAVENOUS INFUSION**
- Adult: (consult product literature or local protocols)

**Chronic iron overload (low iron overload)**

**BY SUBCUTANEOUS INFUSION**
- Adult: The dose should reflect the degree of iron overload

**Chronic iron overload (established overload)**

**BY SUBCUTANEOUS INFUSION**
- Adult: 20–50 mg/kg daily
1.7 Neutropenia and stem cell mobilisation

Neutropenia

Recombinant human granulocyte-colony stimulating factor (rhG-CSF) stimulates the production of neutrophils and may reduce the duration of chemotherapy-induced neutropenia and thereby reduce the incidence of associated sepsis; there is as yet no evidence that it improves overall survival. Filgrastim (glycosylated rhG-CSF) and lenograstim p. 842 (glycosylated rhG-CSF) have similar effects; both have been used in a variety of clinical settings, but they do not have any clear-cut routine indications. In congenital neutropenia filgrastim p. 841 usually increases the neutrophil count with an appropriate clinical response. Pegfilgrastim p. 842 is a polyethylene glycol-conjugated (‘pegylated’) derivative of filgrastim; pegylation increases the duration of filgrastim activity. Lipegfilgrastim p. 842 is a polyethylene glycol-conjugated via a glycine linker derivative of filgrastim. Granulocyte-colony stimulating factors should only be prescribed by those experienced in their use.

CHEMOKINE RECEPTOR ANTAGONISTS

Plerixafor

**DRUG ACTION** Plerixafor is a chemokine receptor antagonist.

**INDICATIONS AND DOSE**

Mobilise haematopoietic stem cells to peripheral blood for collection and subsequent autologous transplantation in patients with lymphoma or multiple myeloma (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- Adult: 240 micrograms/kg daily usually for 2–4 days (max 7 days), to be administered 6–11 hours before initiation of apheresis, dose to be given following 4 days treatment with a granulocyte-colony stimulating factor

**SIDE-EFFECTS**

- **Common or very common** Arthralgia · dizziness · dry mouth · erythema · fatigue · gastrointestinal disturbances · headache · injection-site reactions · insomnia · musculoskeletal pain · oral hypoaesthesia · sweating
- **Uncommon** Dyspnoea · hypersensitivity reactions · periorbital swelling
- **Rare** Anaphylaxis · pyrexia · rash · retinopathy · thrombocytopenia · visual disturbances · Yersinia and mucormycosis infections
- **Very rare** Acute respiratory distress syndrome · bone disorders · disturbance of coagulation · disturbances of immunity · infections · thromboembolism · visual disturbances · Yersinia and mucormycosis infections
- **Frequency not known** Muscle spasms
- **RENAL IMPAIRMENT** Use with caution.

**MONITORING REQUIREMENTS**

- Eye and ear examinations before treatment and at 3-month intervals during treatment.
- Monitor body-weight and height in children at 3-month intervals—risk of growth retardation with excessive doses.
- For full details and warnings relating to administration, consult product literature.
- For intravenous infusion (Desferal®), give continuously or intermittently in Glucose 5% or Sodium chloride 0.9%. Reconstitute with water for injections to a concentration of 100 mg/mL; dilute with infusion fluid.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**

- **DESFERROXAMINE MESILATE (Non-proprietary)**
  - Desferrioxamine mesilate 500 mg Desferrioxamine 500mg powder for solution for injection vials | 10 vial [Post] £39.90–£50.00
  - Desferrioxamine mesilate 2 gram Desferrioxamine 2g powder for solution for injection vials | 1 vial [Post] £17.65–£20.00
- **Desferal** (Novartis Pharmaceuticals UK Ltd)
  - Desferrioxamine mesilate 500 mg Desferal 500mg powder for solution for injection vials | 10 vial [Post] £46.63
  - Desferrioxamine mesilate 2 gram Desferal 2g powder for solution for injection vials | 1 vial [Post] £18.66

**GRANULOCYTE-COLONY STIMULATING FACTORS**

**Granulocyte-colony stimulating factors**

**DRUG ACTION** Recombinant human granulocyte-colony stimulating factor (rhG-CSF) stimulates the production of neutrophils.

**CAUTIONS** Malignant myeloid conditions · pre-malignant myeloid conditions · risk of splenomegaly and rupture—spleen size should be monitored · sickle-cell disease

**CAUTIONS, FURTHER INFORMATION**

Acute respiratory distress syndrome There have been reports of pulmonary infiltrates leading to acute respiratory distress syndrome—patients with a recent
history of pulmonary infiltrates or pneumonia may be at higher risk.

**SIDE-EFFECTS**

- **Common or very common** Alopecia, anorexia, asthenia, bone pain, chest pain, fever, gastrointestinal disturbances, headache, injection-site reactions, leukocytosis, musculoskeletal pain, rash, thrombocytopenia
- **Rare** Acute febrile neutrophilic dermatosis, cutaneous vasculitis, pulmonary side-effects (particularly interstitial pneumonia)

**SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be withdrawn in patients who develop signs of pulmonary infiltration.

**PREGNANCY** There have been reports of toxicity in animal studies and manufacturers advise not to use granulocyte-colony stimulating factors during pregnancy unless the potential benefit outweighs the risk.

**BREAST FEEDING** There is no evidence for the use of granulocyte-colony stimulating factors during breast-feeding and manufacturers advise avoiding their use.

**MONITORING REQUIREMENTS**

- Full blood counts including differential white cell and platelet counts should be monitored.
- Spleen size should be monitored during treatment—risk of splenomegaly and rupture.

---

**INDICATIONS AND DOSE**

Reduction in duration of neutropenia and incidence of febrile neutropenia in cytotoxic chemotherapy for malignancy (except chronic myeloid leukaemia and myelodysplastic syndromes) (specialist use only)

**BY SUBCUTANEOUS INJECTION OR BY INTRAVENOUS INFUSION**

- **Adult**: 5 micrograms/kg daily until neutrophil count in normal range, to be started the day after completing chemotherapy, for timing of leucopheresis, consult product literature
- **BY SUBCUTANEOUS INJECTION**
  - **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

**MOBILISATION OF PERIPHERAL BLOOD PROGENITOR CELLS (SPECIALIST USE ONLY)**

Reduction in duration of neutropenia and mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

Mobilisation of peripheral blood progenitor cells for autologous transplantation (specialist use only)

**BY INTRAVENOUS INFUSION OR SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

Mobilisation of peripheral blood progenitor cells for autologous transplantation, following adjunctive myelosuppressive chemotherapy—to improve yield (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 5 micrograms/kg daily until neutrophil count in normal range, to be started the day after completing chemotherapy, for timing of leucopheresis, consult product literature

Mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

Mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

Mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

Mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

Mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

**BY SUBCUTANEOUS INJECTION**

- **Adult**: 10 micrograms/kg/day for 5–7 days, to be administered by subcutaneous infusion over 24 hours if given

---

**CONTRA-INDICATIONS** Severe congenital neutropenia (Kostmann’s syndrome) with abnormal cytogenetics

**CAUTIONS** Osteoporotic bone disease (monitor bone density if given for more than 6 months) · secondary acute myeloid leukaemia

**INTERACTIONS** 

- **Appendix 1 (filgrastim).**

**SIDE-EFFECTS**

- **Common or very common** Anaemia, dysuria, epistaxis, exacerbation of rheumatoid arthritis, haematuria, hepatomegaly, mucositis, osteoporosis, proteinuria, pseudogout, raised uric acid, splenic enlargement, transient decrease in blood glucose, transient hypotension, urinary abnormalities
- **Uncommon** Capillary leak syndrome (including fatal cases)
- **Rare** Splenic rupture

**MONITORING REQUIREMENTS**

- Regular morphological and cytogenetic bone-marrow examinations recommended in severe congenital neutropenia (possible risk of myelodysplastic syndromes or leukaemia).

**DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Neupogen®; Nivestim®; Ratiogran®; Zarzio®) give continuously or intermittently in Glucose 5% for a filgrastim concentration of less than 1 500 000 units/mL (15 micrograms/mL) albumin solution (human albumin solution) is added to produce a final albumin concentration of 2 mg/mL; should not be diluted to a filgrastim concentration of less than 200 000 units/mL (2 micrograms/mL) and should not be diluted with sodium chloride solution.

**PRESCRIBING AND DISPENSING INFORMATION**

Products containing filgrastim are not identical and although theoretically there should be no important differences in terms of safety and efficacy, when prescribing biological products it is good practice to use the brand name.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.
Blood and blood-forming organs

Solution for injection

- **Accofil** (Accord Healthcare Ltd)
  - Filgrastim 60 mega u per 1 ml Accofil 30 million units/0.5 ml solution for injection pre-filled syringes | 5 pre-filled disposable injection (£) £284.20
  - Filgrastim 96 mega u per 1 ml Accofil 48 million units/0.5 ml solution for injection pre-filled syringes | 5 pre-filled disposable injection (£) £384.40

- **Neupogen** (Amgen Ltd)

  - Filgrastim 96 mega u per 1 ml Zarzio 48 million units/0.5 ml solution for injection pre-filled syringes | 5 pre-filled disposable injection (£) £702.75

- **Lonquex** (Teva UK Ltd)
  - Lonquex 6 mg for each chemotherapy cycle, to be given approximately 24 hours after chemotherapy, dose expressed as filgrastim

Lenograstim
(Recombinant human granulocyte-colony stimulating factor, rHuG-CSF)

**INDICATIONS AND DOSE**

Reduction in the duration of neutropenia and associated complications following bone-marrow transplantation for non-myeloid malignancy (specialist use only). Reduction in the duration of neutropenia and associated complications following peripheral stem cells transplantation for non-myeloid malignancy (specialist use only) by intravenous infusion or by subcutaneous injection.

- Adult: 150 micrograms/m² daily until neutrophil count stable in acceptable range (max. 28 days), to be started the day after transplantation. Intravenous infusion to be given over 30 minutes.

Reduction in the duration of neutropenia and associated complications following treatment with cytokine-induced neutropenia associated with a significant incidence of febrile neutropenia (specialist use only)

- By subcutaneous injection.
  - Adult: 150 micrograms/m² daily until neutrophil count stable in acceptable range (max. 28 days), to be started on the day after completion of chemotherapy.

Mobilisation of peripheral blood progenitor cells for harvesting and subsequent infusion, used alone (specialist use only)

- By subcutaneous injection.
  - Adult: 10 micrograms/kg daily for 4–6 days (5–6 days in healthy donors).

Mobilisation of peripheral blood progenitor cells, used following adjunctive myelosuppressive chemotherapy (to improve yield) (specialist use only)

- By subcutaneous injection.
  - Adult: 150 micrograms/m² daily until neutrophil count stable in acceptable range, to be started 1–5 days after completion of chemotherapy. For timing of leucopheresis, consult product literature.

**SIDE-EFFECTS**

- Mucositis, splenic rupture, toxic epidermal necrolysis

**DIRECTIONS FOR ADMINISTRATION**

- For intravenous infusion (Granocyte-34), give intermittently in Sodium chloride 0.9%; initially reconstitute with 1 ml water for injection provided (do not shake vigorously) then dilute with up to 50 ml infusion fluid for each vial of Granocyte-13 or up to 100 ml infusion fluid for Granocyte-34; give over 30 minutes.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- Granocyte (Chugai Pharma UK Ltd)
  - Lenograstim 6.4 mega u Granocyte-13 powder and solvent for solution for injection vials | 1 vial (£) £60.11 | 5 vial (£) £200.55

- Lenograstim 3.6 mega u Granocyte-34 powder and solvent for solution for injection vials | 1 vial (£) £62.54 | 5 vial (£) £312.69

**Lipegfilgrastim**
(Glycopegylated recombinant methionyl human granulocyte-colony stimulating factor)

**INDICATIONS AND DOSE**

Reduction in duration of neutropenia and incidence of febrile neutropenia in cytotoxic chemotherapy for malignancy (except chronic myeloid leukaemia and myelodysplastic syndromes)

- By subcutaneous injection.
  - Adult: 5 mg, for each chemotherapy cycle, given approximately 24 hours after chemotherapy, dose expressed as filgrastim.

**SIDE-EFFECTS**

- Hypokalaemia

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**SOLUTION FOR INJECTION**

- Lonquex (Teva UK Ltd)
  - Lipegfilgrastim 10 mg per 1 ml Lonquex 6 mg/0.6 ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (£) £652.06

**Pegfilgrastim**
(Pegylated recombinant methionyl human granulocyte-colony stimulating factor)

**INDICATIONS AND DOSE**

Reduction in duration of neutropenia and incidence of febrile neutropenia in cytotoxic chemotherapy for malignancy (except chronic myeloid leukaemia and myelodysplastic syndromes) (specialist use only)

- By subcutaneous injection.
  - Adult: 6 mg for each chemotherapy cycle, to be given at least 24 hours after chemotherapy, dose is expressed as filgrastim.

**SIDE-EFFECTS**

- Acute leukaemia, myelosuppressive chemotherapy

- Rare: Capillary leak syndrome (including fatal cases)
1.8 Platelet disorders, essential thrombocythaemia

Essential thrombocythaemia

Anagrelide below inhibits platelet formation. It is licensed for essential thrombocythaemia in patients at risk of thrombo-haemorrhagic events who have not responded adequately to other drugs or who cannot tolerate other drugs. At risk patient is defined by one or more of the following features: over 60 years of age, or a platelet count greater than 1000 x 10^9/L or a history of thrombo-haemorrhagic events. Anagrelide should be initiated under specialist supervision.

Cyclic AMP Phosphodiesterase III Inhibitors

Anagrelide

**INDICATIONS AND DOSE**

Essential thrombocythaemia in patients at risk of thrombo-haemorrhagic events who have not responded adequately to other drugs or who cannot tolerate other drugs (initiated under specialist supervision)

**BY MOUTH**

- Adult: Initially 500 micrograms twice daily, dose to be adjusted at weekly intervals according to response, increased in steps of 500 micrograms daily; usual dose 1–3 mg daily in divided doses (max. per dose 2.5 mg); maximum 10 mg per day

**CAUTIONS**

Cardiovascular disease—assess cardiac function before and regularly during treatment—concomitant use of drugs that prolong QT-interval—assess cardiac function before and regularly during treatment—risk factors for QT-interval prolongation—assess cardiac function before and regularly during treatment

**INTERACTIONS**

Appendix 1 (anagrelide). Caution with concomitant aspirin in patients at risk of haemorrhage.

**SIDE-EFFECTS**

- **Common or very common** Anaemia · dizziness · fatigue · fluid retention · gastro-intestinal disturbances · headache · palpitation · rash · tachycardia
- **Uncommon** Alopecia · amnesia · anorexia · arthralgias · arthralgia · back pain · blood disorders · chest pain · confusion · congestive heart failure · depression · dry mouth · dyspnoea · ecchymosis · epistaxis · fever · gastro-intestinal haemorrhage · haemorrhage · hypertension · hypoaesthesia · impotence · malaise · myalgia · nervousness · oedema · pancreatitis · paraesthesia · pneumonia pleural effusion · pruritus · skin discoloration · sleep disturbances · syncope · weight changes
- **Rare** Angina · asthenia · cardiomegaly · cardiomyopathy · colitis · dry skin · dysarthria · gastritis · gingival bleeding · impaired coordination · migraine · myocardial infarction · nocturia · pericardial effusion · postural hypotension · pulmonary hypertension · pulmonary infiltrates · renal failure · somnolence · tinnitus · vasodilatation · visual disturbances

**Frequency not known** Hepatitis · interstitial lung disease · Torsade de pointes · tubulointerstitial nephritis

**CONCEPTION AND CONTRACEPTION**

Effective contraception required during treatment.

**PREGNANCY**

Manufacturer advises avoid (toxicity in animal studies).

**BREAST FEEDING**

Manufacturer advises avoid—present in milk in animal studies.

**HEPATIC IMPAIRMENT**

Manufacturer advises caution in mild impairment. Avoid in moderate to severe impairment.

**RENAI IMPAIRMENT**

Manufacturer advises avoid if eGFR less than 50 mL/minute/1.73 m².

**MONITORING REQUIREMENTS**

- Monitor full blood count (monitor platelet count every 2 days for 1 week, then weekly until maintenance dose established).
- Monitor liver function.
- Monitor serum creatinine.
- Monitor ura.
- Monitor ura and electrolytes (including potassium, magnesium and calcium) before and during treatment.

**PATIENT AND CARER ADVICE**

Dizziness may affect performance of skilled tasks (e.g. cycling, driving).

1.9 Platelet disorders, idiopathic thrombocytopenic purpura

Idiopathic thrombocytopenic purpura

Acute idiopathic thrombocytopenic purpura is usually self-limiting in children. In adults, idiopathic thrombocytopenic purpura can be treated with a corticosteroid, e.g. prednisolone p. 585, gradually reducing the dose over several weeks. Splenectomy is considered if a satisfactory platelet count is not achieved or if there is a relapse on reducing the dose of corticosteroid or withdrawing it. Immunoglobulin preparations, are also used in idiopathic thrombocytopenic purpura or where a temporary rapid rise in platelets is needed, as in pregnancy or pre-operatively; they are also used for children often in preference to a corticosteroid. Anti-D (rh) immunoglobulin p. 1061 is effective in raising the platelet count in about 80% of unsplenectomised rhesus-positive individuals; its effects may last longer than normal immunoglobulin p. 1063 for intravenous use, but further doses are usually required.

Other therapy that has been tried in refractory idiopathic thrombocytopenic purpura includes azathioprine p. 716, cyclophosphamide p. 750, vincristine sulfate p. 773, ciclosporin p. 717, and danazol p. 636. Rituuximab p. 734 may also be effective and in some cases induces prolonged remission. For patients with chronic severe
thrombocytopenia refractory to other therapy, tranexamic acid p. 95 may be given to reduce the severity of haemorrhage.

Eltrombopag below and romiplostim p. 845 are thrombopoietin receptor agonists licensed for the treatment of chronic idiopathic thrombocytopenic purpura in splenectomised patients refractory to other treatments, such as corticosteroids or immunoglobulins, or as a second-line treatment in non-splenectomised patients when surgery is contra-indicated (see also NICE guidance).

Eltrombopag is an oral preparation and romiplostim is an injection which is made biosynthetically by recombinant DNA technology; they should both be used under the supervision of a specialist.

THROMBOPOIETIN RECEPTOR AGONISTS

Eltrombopag

INDICATIONS AND DOSE

Treatment of chronic idiopathic thrombocytopenic purpura in splenectomised patients refractory to other treatments (such as corticosteroids or immunoglobulins) (under expert supervision) | Second-line treatment of chronic idiopathic thrombocytopenic purpura in non-splenectomised patients when surgery is contra-indicated (under expert supervision)

BY MOUTH

- Adult: Initially 50 mg once daily, dose to be adjusted to achieve a platelet count of 50 × 10^9/litre or more—consult product literature for dose adjustments, discontinue if inadequate response after 4 weeks treatment at maximum dose; maximum 75 mg per day
- Adult (patients of East Asian origin): Initially 25 mg once daily, dose to be adjusted to achieve a platelet count of 50 × 10^9/litre or more—consult product literature for dose adjustments, discontinue if inadequate response after 4 weeks treatment at maximum dose; maximum 75 mg per day.

Treatment of thrombocytopenia associated with chronic hepatitis C infection, where the degree of thrombocytopenia is the main factor preventing the initiation or limiting the ability to maintain optimal interferon-based therapy (under expert supervision)

BY MOUTH

- Adult: Initially 25 mg once daily, dose to be adjusted to achieve a platelet count sufficient to initiate antiviral therapy then a platelet count of 50–75 × 10^9/litre during antiviral therapy—consult product literature for dose adjustments, discontinue if inadequate response after 2 weeks treatment at maximum dose; maximum 100 mg per day.

CAUTIONS

- Patients of East Asian origin—risk factors for thromboembolism
- INTERACTIONS — Appendix 1 (eltrombopag)
- SIDE-EFFECTS
  - Common or very common Abdominal pain · alopecia · arthralgia · bone pain · cataract · constipation · diarrhoea · dry eye · fatigue · gastro-intestinal disturbances · headache · insomnia · myalgia · nausea · paraesthesia · peripheral oedema · pruritus · rash
  - Uncommon Acute myocardial infarction · anaemia · anorexia · anxiety · bone disorders · changes in appetite · cholestasis · cough · deep vein thrombosis · depression · dizziness · dry mouth · ecchymosis · eosinophilia · epistaxis · eye disorders · flushing · gingival bleeding · gout · haemolysis · haemorrhoids · hemiparesis · hepatitis · hypertension · migraine · mood changes · myelocytosis · nocturia · palpititation · peripheral neuropathy · pulmonary embolism · QT-interval prolongation · rectosigmoid cancer · renal failure · respiratory infections · skin reactions · sleep disorders · sweating · tachycardia · taste disturbances · thromboembolic events · tremor · urinary tract infections · vertigo · weight gain

CONCEPTION AND CONTRACEPTION

Ensure effective contraception during treatment.

PREGNANCY

Avoid—toxicity in animal studies.

BREAST FEEDING

Manufacturer advises avoid.

HEPATIC IMPAIRMENT

For idiopathic thrombocytopenic purpura, avoid unless potential benefit outweighs risk—reduce initial dose to 25 mg once daily. For thrombocytopenia associated with chronic hepatitis C infection, in severe hepatic impairment use only if potential benefit outweighs risk and monitor closely—increased risk of hepatic decompensation and thromboembolic events

- RENAL IMPAIRMENT
- Use with caution.

MONITORING REQUIREMENTS

- Monitor liver function before treatment, every two weeks when adjusting the dose, and monthly thereafter.
- Regular ophthalmological examinations for cataract formation recommended.
- For idiopathic thrombocytopenic purpura, monitor full blood count including platelet count and peripheral blood smears every week during treatment until a stable platelet count is reached (50 × 10^9/litre or more for at least 4 weeks), then monthly thereafter.
- For thrombocytopenia associated with chronic hepatitis C infection, monitor platelet count every week before and during antiviral treatment until a stable platelet count is reached (50–75 × 10^9/litre), then monitor full blood count including platelet count and peripheral blood smears monthly thereafter.

DIRECTIONS FOR ADMINISTRATION

Each dose should be taken at least 4 hours before or after any dairy products (or foods containing calcium), indigestion remedies, or medicines containing aluminium, calcium, iron, magnesium, zinc, or selenium to reduce possible interference with absorption.

PATIENT AND CARER ADVICE

Patient counselling is advised on how to administer eltrombopag tablets.

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

- Eltrombopag for treating chronic immune (idiopathic) thrombocytopenic purpura (July 2013) NICE TA293

Eltrombopag is recommended for the treatment of chronic immune (idiopathic) thrombocytopenic purpura in splenectomised adults refractory to other treatments, or as a second-line treatment in non-splenectomised adults when surgery is contraindicated, only if:

- the manufacturer provides eltrombopag at the agreed discount as part of the patient access scheme and
- their condition is refractory to standard active treatments and rescue therapies or
- they have severe disease and a high risk of bleeding that needs frequent courses of rescue therapies.

Patients currently receiving eltrombopag whose disease does not meet these criteria should have the option to continue treatment until they and their clinician consider it appropriate to stop. www.nice.org.uk/TA293

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (July 2010) that eltrombopag (Revolade®) is accepted for restricted use within NHS Scotland for the treatment of both splenectomised and non-splenectomised patients with severe symptomatic immune (idiopathic) thrombocytopenic purpura or a high risk of bleeding.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.
Romiplostim

INDICATIONS AND DOSE
Treatment of chronic idiopathic thrombocytopenic purpura in splenectomised patients refractory to other treatments (such as corticosteroids or immunoglobulins) (under expert supervision) – Second-line treatment of chronic idiopathic thrombocytopenic purpura in non-splenectomised patients when surgery is contra-indicated (under expert supervision)

BY SUBCUTANEOUS INJECTION

Adult: Initially 1 microgram/kg once weekly, adjusted in steps of 1 microgram/kg once weekly (max. per dose 10 micrograms/kg once weekly) until a stable platelet count of 50 x 10^9/litre or more is reached, discontinue treatment if inadequate response after 4 weeks at maximum dose, consult product literature for dose adjustments.

SIDE-EFFECTS
- Arthralgia
- Asthenia
- Bone pain
- Dizziness
- Ecchymosis
- Fatigue
- Flushing
- Gastro-intestinal disturbances
- Increased bone marrow reticulin
- Influenza-like symptoms
- Injection site reactions
- Insomnia
- Migraine
- Muscle spasm
- Myalgia
- Oedema
- Parasthesia
- Rash

PREGNANCY
Manufacturer advises use only if essential – toxicity in animal studies.

BREAST FEEDING
Manufacturer advises avoid – no information available.

HEPATIC IMPAIRMENT
Avoid in moderate or severe impairment unless potential benefit outweighs risk (e.g. of portal vein thrombosis).

RENAL IMPAIRMENT
Manufacturer advises caution – no information available.

MONITORING REQUIREMENTS
- Monitor full blood count and peripheral blood smears for morphological abnormalities before and during treatment.
- Monitor platelet count weekly until platelet count reaches
  50 x 10^9 /litre or more for at least 4 weeks without dose adjustment, then monthly thereafter.

PATIENT AND CARER ADVICE
- Dizziness may affect performance of skilled tasks (e.g. driving).

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)
- Romiplostim for the treatment of chronic immune (idiopathic) thrombocytopenic purpura (April 2011)

NICE TA221
Romiplostim is recommended for the treatment of chronic immune (idiopathic) thrombocytopenic purpura in adults:
- if the manufacturer provides romiplostim at the agreed discount as part of the patient access scheme and
- whose condition is refractory to standard active treatments and rescue therapies or
- who have severe disease and a high risk of bleeding that needs frequent courses of rescue therapies.

www.nice.org.uk/TA221

Scottish Medicines Consortium (SMC) Decisions
The Scottish Medicines Consortium has advised (September 2009) that romiplostim (Nplate®) is accepted for restricted use within NHS Scotland for patients with severe symptomatic idiopathic thrombocytopenic purpura or those at high risk of bleeding.

2 Fluid and electrolyte imbalances

Fluids and electrolytes

The electrolyte concentrations (intravenous fluid) table and the electrolyte content (gastro-intestinal secretions) table may be helpful in planning replacement electrolyte therapy; faeces, vomit, or aspiration should be saved and analysed where possible if abnormal losses are suspected.

Oral preparations for fluid and electrolyte imbalance
Sodium and potassium salts, may be given by mouth to prevent deficiencies or to treat established deficiencies of mild or moderate degree.

Oral potassium
Compensation for potassium loss is especially necessary:
- in those taking digoxin or anti-arrhythmic drugs, where potassium depletion may induce arrhythmias;
- in patients in whom secondary hyperaldosteronism occurs, e.g. renal artery stenosis, cirrhosis of the liver, the nephrotic syndrome, and severe heart failure;
- in patients with excessive losses of potassium in the faeces, e.g. chronic diarrhoea associated with intestinal malabsorption or laxative abuse.

Measures to compensate for potassium loss may also be required in the elderly since they frequently take inadequate amounts of potassium in the diet (but see warning on renal insufficiency). Measures may also be required during long-term administration of drugs known to induce potassium loss (e.g. corticosteroids). Potassium supplements are seldom required with the small doses of diuretics given to treat hypertension; potassium-sparing diuretics (rather than potassium supplements) are recommended for prevention of hypokalaemia due to diuretics such as furosemide p. 201 or the thiazides when these are given to eliminate oedema.

If potassium salts are used for the prevention of hypokalaemia, then doses of potassium chloride daily (in divided doses) by mouth are suitable in patients taking a normal diet. Smaller doses must be used if there is renal insufficiency (common in the elderly) to reduce the risk of hyperkalaemia.

Potassium salts cause nausea and vomiting and poor compliance is a major limitation to their effectiveness; when appropriate, potassium-sparing diuretics are preferable.

When there is established potassium depletion larger doses may be necessary, the quantity depending on the severity of any continuing potassium loss (monitoring of plasma-potassium concentration and specialist advice would be required). Potassium depletion is frequently associated with chloride depletion and with metabolic alkalosis, and these disorders require correction.

Management of hypokalaemia
Acute severe hypokalaemia (plasma-potassium concentration above 6.5 mmol/litre or in the presence of ECG changes) calls for urgent treatment with calcium...
glucose 10% p. 587 by slow intravenous injection, titrated and adjusted to ECG improvement, to temporarily protect against myocardial excitability. An intravenous injection of soluble insulin (5–10 units) with 50 mL glucose 50% p. 852, reduces serum-potassium concentration; this is repeated if necessary or a continuous infusion instituted. Salbutamol p. 222 [unlicensed indication], by nebulisation or slow intravenous injection may also reduce plasma-potassium concentration; it should be used with caution in patients with cardiovascular disease. The correction of causal or compounding acidosis with sodium bicarbonate p. 848 infusion should be considered (important: preparations of sodium bicarbonate and calcium salts should not be administered in the same line—risk of precipitation). Drugs exacerbating hyperkalaemia should be reviewed and stopped as appropriate; occasionally haemodialysis is needed. Ion-exchange resins may be used to remove excess potassium in mild hyperkalaemia or in moderate hyperkalaemia when there are no ECG changes.

**Oral sodium and water**

Sodium chloride p. 851 is indicated in states of sodium depletion and usually needs to be given intravenously. In chronic conditions associated with mild or moderate degrees of sodium depletion, e.g. in salt-losing bowel or renal disease, oral supplements of sodium chloride or sodium bicarbonate, according to the acid-base status of the patient, may be sufficient.

**Oral rehydration therapy (ORT)**

As a worldwide problem diarrhoea is by far the most important indication for fluid and electrolyte replacement. Intestinal absorption of sodium and water is enhanced by glucose (and other carbohydrates). Replacement of fluid and electrolytes lost through diarrhoea can therefore be achieved by oral solutions containing sodium, potassium, and glucose or another carbohydrate such as rice starch. Oral rehydration solutions should:

- enhance the absorption of water and electrolytes;
- replace the electrolyte deficit adequately and safely;
- contain an alkalinising agent to counter acidosis;
- be slightly hypo-osmolar (about 250 mmol/litre) to prevent the possible induction of osmotic diarrhoea;
- be simple to use in hospital and at home;
- be palatable and acceptable, especially to children;
- be readily available.

It is the policy of the World Health Organization (WHO) to promote a single oral rehydration solution but to use it flexibly (e.g. by giving extra water between drinks of oral rehydration solution to moderately dehydrated infants).

The WHO oral rehydration salts formulation contains sodium chloride 2.6 g, potassium chloride 1.5 g, sodium citrate 2.9 g, anhydrous glucose 13.5 g. Its is dissolved in sufficient water to produce 1 litre (providing Na⁺ 75 mmol, K⁺ 20 mmol, Cl⁻ 65 mmol, citrate 10 mmol, glucose 75 mmol/litre). This formulation is recommended by the WHO and the United Nations Children’s fund, but it is not commonly used in the UK. Oral rehydration solutions used in the UK are lower in sodium (50–60 mmol/litre) than the WHO formulation since, in general, patients suffer less severe sodium loss.

Rehydration should be rapid over 3 to 4 hours (except in hypernatraemic dehydration in which case rehydration should occur more slowly over 12 hours). The patient should be reassessed after initial rehydration and if still dehydrated rapid fluid replacement should continue.

Once rehydration is complete further dehydration is prevented by encouraging the patient to drink normal volumes of an appropriate fluid and by replacing continuing losses with an oral rehydration solution; in infants, breast-feeding or formula feeds should be offered between oral rehydration drinks.

---

**Fluid and electrolyte imbalances**

**Oral bicarbonate**

Sodium bicarbonate p. 848 is given by mouth for **chronic acidotic states** such as uremic acidosis or renal tubular acidosis. The dose for correction of metabolic acidosis is not predictable and the response must be assessed. For severe metabolic acidosis, sodium bicarbonate can be given intravenously.

Sodium bicarbonate may also be used to increase the pH of the urine; it is also used in dyspepsia.

Sodium supplements may increase blood pressure or cause fluid retention and pulmonary oedema in those at risk; hypokalaemia may be exacerbated.

Where **hyperchloremic acidosis** is associated with potassium deficiency, as in some renal tubular and gastrointestinal disorders it may be appropriate to give oral **potassium bicarbonate**, although acute or severe deficiency should be managed by intravenous therapy.

**Parenteral preparations for fluid and electrolyte imbalance**

**Electrolytes and water**

Solutions of electrolytes are given intravenously, to meet normal fluid and electrolyte requirements or to replenish major deficits or continuing losses, when the patient is nauseated or vomiting and is unable to take adequate amounts by mouth. When intravenous administration is not possible, fluid (as sodium chloride 0.9% p. 851 or glucose 5% p. 852) can also be given by subcutaneous infusion (hypodermoclysis).

The nature and severity of the electrolyte imbalance must be assessed from the history and clinical and biochemical investigations. Sodium, potassium, chloride, magnesium, phosphate, and water depletion can occur singly and in combination with or without disturbances of acid-base balance.

Isotonic solutions may be infused safely into a peripheral vein. Solutions more concentrated than plasma, e.g. 20% glucose p. 852, are best given through an indwelling catheter positioned in a large vein.

**Intravenous sodium**

Sodium chloride in isotonic solution provides the most important extracellular ions in near physiological concentrations and is indicated in **sodium depletion**, which can arise from such conditions as gastro-enteritis, diabetic ketoacidosis, ileus, and ascites. In a severe deficit of 4 to 8 litres, 2 to 3 litres of isotonic sodium chloride may be given over 2 to 3 hours; thereafter the infusion can usually be at a slower rate.

**Chronic hyponatraemia** arising from inappropriate secretion of antidiuretic hormone should ideally be corrected by fluid restriction. However, if sodium chloride is required for acute or chronic hyponatraemia, regardless of the cause, the deficit should be corrected slowly to avoid the risk of osmotic demyelination syndrome and the rise in plasma-sodium concentration should not exceed 10 mmol/litre in 24 hours. In severe hyponatraemia, sodium chloride 1.8% may be used cautiously.

**Compound sodium lactate** (Hartmann’s solution) can be used instead of isotonic sodium chloride solution during or after surgery, or in the initial management of the injured or wounded; it may reduce the risk of hyperchloremic acidosis.

Glucose with sodium chloride solutions are indicated when there is combined **water and sodium depletion**. A 1:1 mixture of isotonic sodium chloride and 5% glucose allows some of the water (free of sodium) to enter body cells which suffer most from dehydration while the sodium salt with a volume of water determined by the normal plasma Na⁺ remains extracellular.

Combined sodium, potassium, chloride, and water depletion may occur, for example, with severe diarrhoea or persistent vomiting; replacement is carried out with sodium...

chloride p. 851 intravenous infusion 0.9% and glucose p. 852 intravenous infusion 5% with potassium as appropriate.

**Intravenous glucose**
Glucose solutions (5%) are used mainly to replace water deficit. Average water requirements in a healthy adult are 1.5 to 2.5 litres daily and this is needed to balance unavoidable losses of water through the skin and lungs and to provide sufficient for urinary excretion. Water depletion (dehydration) tends to occur when these losses are not matched by a comparable intake, as may occur in coma or dysphagia or in the elderly or apathetic who may not drink enough water on their own initiative.

Excessive loss of water without loss of electrolytes is uncommon, occurring in fevers, hyperthyroidism, and in uncommon water-losing renal states such as diabetes insipidus or hypercalcaemia. The volume of glucose p. 852 solution needed to replace deficits varies with the severity of the disorder, but usually lies within the range of 2 to 6 litres.

Glucose solutions are also used to correct and prevent hypoglycaemia and to provide a source of energy in those too ill to be fed adequately by mouth; glucose solutions are a key component of parenteral nutrition.

Glucose solutions are given in regimens with calcium and insulin for the emergency management of hyperkalaemia. They are also given, after correction of hyperglycaemia, during treatment of diabetic ketoacidosis, when they must be accompanied by continuing insulin infusion.

**Intravenous potassium**
Potassium chloride with sodium chloride intravenous infusion is the initial treatment for the correction of severe hypokalaemia and when sufficient potassium cannot be taken by mouth.

Repeated measurement of plasma-potassium concentration is necessary to determine whether further infusions are required and to avoid the development of hyperkalaemia, which is especially likely in renal impairment.

Initial potassium replacement therapy should not involve glucose infusions, because glucose may cause a further decrease in the plasma-potassium concentration.

**Bicarbonate and lactate**
Sodium bicarbonate p. 848 is used to control severe metabolic acidosis (pH<7.1) particularly that caused by loss of bicarbonate (as in renal tubular acidosis or from excessive gastro-intestinal losses). Mild metabolic acidosis associated with volume depletion should first be managed by appropriate fluid replacement because acidosis usually resolves as tissue and renal perfusion are restored. In more severe metabolic acidosis or when the acidosis remains unresponsive to correction of anoxia or hypovolaemia, sodium bicarbonate (1.26%) can be infused over 3–4 hours with plasma-pH and electrolyte monitoring. In severe shock, for example in cardiac arrest, metabolic acidosis can develop without sodium or volume depletion; in these circumstances sodium bicarbonate is best given as a small volume of hypertonic solution, such as 50 mL of 8.4% solution intravenously.

Sodium lactate intravenous infusion is no longer used in metabolic acidosis because of the risk of producing lactic acidosis, particularly in seriously ill patients with poor tissue perfusion or impaired hepatic function.

For chronic acidotic states, sodium bicarbonate can be given by mouth.

**Plasma and plasma substitutes**
Plasma and plasma substitutes (‘colloids’) contain large molecules that do not readily leave the intravascular space where they exert osmotic pressure to maintain circulatory volume. Compared to fluids containing electrolytes such as sodium chloride p. 851 and glucose p. 852 (‘crystalloids’), a smaller volume of colloid is required to produce the same expansion of blood volume, thereby shifting salt and water from the extravascular space. If resuscitation requires a volume of fluid that exceeds the maximum dose of the colloid then crystalloids can be given; packed red cells may also be required.

Albumin solution p. 853, prepared from whole blood, contains soluble proteins and electrolytes but no clotting factors, blood group antibodies, or plasma cholinesterases; they may be given without regard to the recipient’s blood group.

Albumin is usually used after the acute phase of illness, to correct a plasma-volume deficit; hypoalbuminaemia itself is
not an appropriate indication. The use of albumin solution in acute plasma or blood loss may be wasteful; plasma substitutes are more appropriate. Concentrated albumin solution (20%) can be used under specialist supervision in patients with an intravascular fluid deficit and oedema because of interstitial fluid overload, to restore intravascular plasma volume with less exacerbation of the salt and water overload than isotonic solutions. Concentrated albumin solution may also be used to obtain a diuresis in hypoalbuminaemic patients (e.g. in hepatic cirrhosis).

Recent evidence does not support the previous view that the use of albumin increases mortality.

**Plasma substitutes**

Dextran, gelatin p. 854, and the hydroxyethyl starch, tetrasarach, are macromolecular substances which are metabolised slowly. Dextran and gelatin may be used at the outset to expand and maintain blood volume in shock arising from conditions such as burns or septicemia; they may also be used as an immediate short-term measure to treat haemorrhage until blood is available. Dextran and gelatin are rarely needed when shock is due to sodium and water depletion because, in these circumstances, the shock responds to water and electrolyte repletion.

Hydroxyethyl starches should only be used for the treatment of hypovolaemia due to acute blood loss when crystalloids alone are not sufficient; they should be used at the lowest effective dose for the first 24 hours of fluid resuscitation.

Plasma substitutes should not be used to maintain plasma volume in conditions such as burns or peritonitis where there is loss of plasma protein, water, and electrolytes over periods of several days or weeks. In these situations, plasma or plasma protein fractions containing large amounts of albumin should be given.

Large volumes of some plasma substitutes can increase the risk of bleeding through depletion of coagulation factors.

### BICARBONATE

**Sodium bicarbonate**

**INDICATIONS AND DOSE**

**Chronic acidotic states such as uraemic acidosis or renal tubular acidosis**

**BY MOUTH**

- Adult: 4.8 g daily, (57 mmol each of Na⁺ and HCO₃⁻), higher doses may be required and should be adjusted according to response

**Severe metabolic acidosis**

**BY SLOW INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION**

- Adult: Administer an amount appropriate to the body base deficit, to be given by slow intravenous injection of a strong solution (up to 8.4%), or by continuous intravenous infusion of a weaker solution (usually 1.26%)

**Alkalisation of urine | Relief of discomfort in mild urinary-tract infections**

**BY MOUTH**

- Adult: 3 g every 2 hours until urinary pH exceeds 7, to be dissolved in water

**Maintenance of alkaline urine**

**BY MOUTH**

- Adult: 5–10 g daily, to be dissolved in water

**CONTRA-INDICATIONS** Salt restricted diet

**CAUTIONS** Avoid prolonged use in urinary conditions - cardiac disease - elderly - patients on sodium-restricted diet - respiratory acidosis

**INTERACTIONS** → Appendix 1 (antacids).

**SIDE-EFFECTS**

- When used for chronic acidotic states such as uraemic acidosis or renal tubular acidosis, and for maintenance of alkaline urine fluid retention (in those at risk) - hypokalaemia may be exacerbated - increase blood pressure - pulmonary oedema (in those at risk)

- When used for alkalisation of urine, and for relief of discomfort in mild urinary-tract infections alkalosis on prolonged use - eruption

**PREGNANCY** Use with caution in urinary conditions.

**HEPATIC IMPAIRMENT** In patients with fluid retention, avoid large amounts of sodium.

**RENAL IMPAIRMENT** Avoid (except for specialised role in some forms of renal disease).

**MONITORING REQUIREMENTS**

- With intravenous use Plasma pH and electrolytes should be monitored.

**DIRECTIONS FOR ADMINISTRATION**

- With intravenous use For slow intravenous injection use a small volume of hypertonic solution (such as 50 mL of 8.4%). For continuous intravenous infusion a weaker solution of 1.26% can be infused over 3–4 hours.

- With oral use Sodium bicarbonate may affect the stability or absorption of other drugs if administered at the same time. If possible, allow 1–2 hours before administering other drugs orally.

**PRESCRIBING AND DISPENSING INFORMATION** Oral solutions of sodium bicarbonate are required occasionally; these are available from ‘special-order’ manufacturers or specialist importing companies; the strength of sodium bicarbonate should be stated on the prescription.

**PATIENT AND CARER ADVICE** Patients or carers should be given advice on the administration of sodium bicarbonate oral medicines.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, oral suspension, oral solution, powder, capsule, liquid, mouthwash

**Tablet**

- SODIUM BICARBONATE (Non-proprietary) Sodium bicarbonate 600 mg Sodium bicarbonate 600mg tablets

**Capsule**

- SODIUM BICARBONATE (Non-proprietary) Sodium bicarbonate 500 mg Sodium bicarbonate 500mg capsules 56 capsule (no price available DT price = £2.88) 100 capsule (no price available)

**Solution for injection**

- SODIUM BICARBONATE (Non-proprietary) Sodium bicarbonate 84 mg per 1 ml Sodium bicarbonate 8.4% (1mmol/ml) solution for injection 10ml ampoules 10 ampoule £67.01 Sodium bicarbonate 8.4% solution for injection 10ml Minijet pre-filled syringes 11 pre-filled disposable inject (no price available) £9.71 Sodium bicarbonate 8.4% (1mmol/ml) solution for injection 250ml bottles 10 bottle £105.34 Sodium bicarbonate 8.4% (1mmol/ml) solution for injection 100ml bottles 10 bottle £62.04

**Infusion**

- SODIUM BICARBONATE (Non-proprietary) Sodium bicarbonate 12.6 mg per 1 ml Polyfusor BC sodium bicarbonate 1.26% infusion 500ml bottles 1 bottle £8.94 12 bottle (no price available) Sodium bicarbonate 14 mg per 1 ml Polyfusor BD sodium bicarbonate 1.4% infusion 500ml bottles 1 bottle £9.54 12 bottle (no price available) Sodium bicarbonate 27.4 mg per 1 ml Polyfusor V sodium bicarbonate 2.74% infusion 500ml bottles 1 bottle £15.94 12 bottle (no price available) Sodium bicarbonate 42 mg per 1 ml Polyfusor E sodium bicarbonate 4.2% infusion 500ml bottles 1 bottle £19.94 12 bottle (no price available)
**ORAL REHYDRATION SALTS**

**Disodium hydrogen citrate with glucose, potassium chloride and sodium chloride**

**INDICATIONS AND DOSE**

**Fluid and electrolyte loss in diarrhoea**

- **BY MOUTH**
  - Adult: 200–400 mL, to be given after every loose motion, dose according to fluid loss

- **INDICATIONS AND DOSE**
  - Fluid and electrolyte loss in diarrhoea

**DIRECTIONS FOR ADMINISTRATION**

Reconstitute 1 sachet with 200 mL of water (freshly boiled and cooled for infants); 5 sachets reconstituted with 1 litre of water provide Na⁺ 60 mmol, K⁺ 20 mmol, Cl⁻ 60 mmol, citrate 10 mmol, and glucose 90 mmol.

**PRESCRIBING AND DISPENSING INFORMATION**

Flavours of oral powder formulations may include black currant, citrus, or natural.

**PATIENT AND CARER ADVICE**

Medicines for Children leaflet: Oral rehydration salts www.medicinesforchildren.org.uk/oral-rehydration-salts

After reconstitution any unused solution should be discarded no later than 1 hour after preparation unless stored in a refrigerator when it may be kept for up to 24 hours.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder**

- **Dioralyte** (Sanofi)
  - Potassium chloride 300 mg, Rice powder pre-cooked 6 gram, Sodium chloride 350 mg, Sodium citrate 580 mg Dioralyte relief oral powder sachets blackcurrant (sugar-free) | 20 sachet £7.13

**Potassium chloride with glucose, sodium bicarbonate and sodium chloride**

**INDICATIONS AND DOSE**

**Fluid and electrolyte loss in diarrhoea**

- **BY MOUTH**
  - Adult: 200–400 mL, to be given after every loose motion, dose according to fluid loss

**DIRECTIONS FOR ADMINISTRATION**

Reconstitute 1 sachet with 200 mL of water (freshly boiled and cooled for infants); 5 sachets when reconstituted with 1 litre of water provide Na⁺ 50 mmol, K⁺ 20 mmol, Cl⁻ 40 mmol, HCO₃⁻ 30 mmol, and glucose 111 mmol.

**PRESCRIBING AND DISPENSING INFORMATION**

Flavours of oral powder formulations may include banana, orange, black current, lemon and lime, plain, or multi-flavoured.

**PATIENT AND CARER ADVICE**

Patients and carers should be advised how to reconstitute *Electrolyte*® oral powder.

After reconstitution any unused solution should be discarded no later than 1 hour after preparation unless stored in a refrigerator when it may be kept for up to 24 hours.

**Potassium chloride with calcium chloride dihydrate, and sodium chloride**

(Ringer’s solution)

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 863, sodium chloride p. 851.

**INDICATIONS AND DOSE**

**Electrolyte imbalance**

- **BY INTRAVENOUS INFUSION**
  - Adult: Dosed according to the deficit or daily maintenance requirements (consult product literature)

**DIRECTIONS FOR ADMINISTRATION**

Reconstitute 1 sachet with 200 mL of water (freshly boiled and cooled for infants); 5 sachets when reconstituted with 1 litre of water provide Na⁺ 60 mmol, K⁺ 20 mmol, Cl⁻ 50 mmol and citrate 10 mmol.

**PRESCRIBING AND DISPENSING INFORMATION**

Flavours of oral powder formulations may include apricot, black currant, or raspberry.

**PATIENT AND CARER ADVICE**

Patients and carers should be advised how to reconstitute Dioralyte® Relief oral powder.

After reconstitution any unused solution should be discarded no later than 1 hour after preparation unless stored in a refrigerator when it may be kept for up to 24 hours.
### Potassium chloride with calcium chloride, sodium chloride and sodium lactate

(Sodium Lactate Intravenous Infusion, Compound; Hartmann’s Solution for Injection; Ringer-Lactate Solution for Injection)

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 863, sodium chloride p. 851, calcium chloride p. 857.

#### Indications and Dose

For prophylaxis, and replacement therapy, requiring the use of sodium chloride and lactate, with minimal amounts of calcium and potassium.

**By Intravenous Infusion**
- Adult: (consult product literature)

#### Prescribing and Dispensing Information

Compound sodium lactate intravenous infusion contains Na+ 131 mmol, K+ 5 mmol, Ca2+ 2 mmol, HCO3− (as lactate) 29 mmol, Cl− 111 mmol/litre.

#### Medicinal Forms

There can be variation in the licensing of different medicines containing the same drug.

**Infusion**
- **Calcium Chloride with Potassium Chloride and Sodium Chloride and Sodium Lactate** (Non-proprietary)
  - Calcium chloride 270 microgram per 1 ml, Potassium chloride 400 microgram per 1 ml, Sodium chloride 6 mg per 1 ml, Sodium lactate 3.17 mg per 1 ml
- Sodium lactate compound infusion 1 litre (1 bag £0.67 / 10 bag £6.70 no price available)

### Potassium chloride with glucose

The properties listed below are those particular to the combination only. For the properties of the components please consider, glucose p. 852, potassium chloride p. 863.

#### Indications and Dose

Electrolyte imbalance.

**By Intravenous Infusion**
- Adult: Dosed according to the deficit or daily maintenance requirements

#### Prescribing and Dispensing Information

Concentration of potassium chloride to be specified by the prescriber (usually K+ 10–40 mmol/litre).

#### Medicinal Forms

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

Potassium chloride with sodium chloride

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 863, sodium chloride below.

**INDICATIONS AND DOSE**

**Electrolyte imbalance**

**BY INTRAVENOUS INFUSION**

- Adult: Depending on the deficit or the daily maintenance requirements (consult product literature)

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion, infusion

**INFUSION**

- POTASSIUM CHLORIDE WITH SODIUM CHLORIDE (Non-proprietary)

Potassium chloride 3 mg per 1 ml, Sodium chloride 9 mg per 1 ml Potassium chloride 0.3% (potassium 20mmol/500ml) / sodium chloride 0.9% infusion 500ml bags | 1 bag (POM) £1.42

Potassium chloride 3% (potassium 40mmol/1litre) / Sodium chloride 0.9% infusion 1 litre bags | 1 bag (POM) £1.79

Potassium chloride 1.5 mg per 1 ml, Sodium chloride 9 mg per 1 ml Potassium chloride 0.19% (potassium 10mmol/500ml) / sodium chloride 0.9% infusion 500ml bags | 1 bag (POM) £1.67

Potassium chloride 0.15% (potassium 20mmol/1litre) / sodium chloride 0.9% infusion 1litre bags | 1 bag (POM) £2.20 | 10 bag (POM) £22.00

Potassium chloride 2 mg per 1 ml, Sodium chloride 9 mg per 1 ml Potassium chloride 0.2% (potassium 13.3mmol/500ml) / sodium chloride 0.9% infusion 500ml bags | 1 bag (POM) £1.67

Potassium chloride 0.2% (potassium 27mmol/1litre) / sodium chloride 0.9% infusion 1litre bags | 1 bag (POM) £2.20

**SIDE-EFFECTS**

With intravenous use administration of large doses may give rise to sodium accumulation, hyperchloremic acidosis, oedema

**MONITORING REQUIREMENTS**

- Adult: Management of diabetic ketoacidosis (if systolic blood pressure is below 90 mmHg and adjusted for age, sex, and medication as appropriate)

**BY INTRAVENOUS INFUSION**

- Adult: 500 ml, sodium chloride 0.9% to be given over 10–15 minutes, repeat if blood pressure remains below 90 mmHg and seek senior medical advice, when blood pressure is over 90 mmHg, sodium chloride 0.9% should be given by intravenous infusion at a rate that replaces deficit and provides maintenance, management regimen also includes administration of potassium chloride, soluble insulin, long acting insulin analogues and glucose 10% solution

**Diluent for instillation of drugs to the bladder**

**BY INTRAVESICAL INSTILLATION**

- Adult: (consult product literature)

**CAUTIONS**

**GENERAL CAUTIONS:**

- Dilutional hyponatraemia especially in children and the elderly

**SPECIFIC CAUTIONS:**

- With intravenous use avoid excessive administration, cardiac failure, hypertension, peripheral oedema, pulmonary oedema, restrict intake in impaired renal function, toxaemia of pregnancy

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, solution for injection, irrigation, solution for infusion, oral solution, capsule, eye ointment, nebuliser liquid, infusion

**Modified-release tablet**

**CAUTIONARY AND ADVISORY LABELS 25**

- Slow Sodium (Hikpharma Ltd)

Sodium chloride 600 mg Slow Sodium 600mg tablets | 100 tablet (GEL) £6.05 DT price + £6.05

**Solution for injection**

- SODIUM CHLORIDE (Non-proprietary)

Sodium chloride 9 mg per 1 ml Sodium chloride 0.9% solution for injection 2ml ampoules | 10 ampoule (POM) £1.80–£2.57 DT price + £2.07

Sodium chloride 0.9% solution for injection 20ml ampoules | 20 ampoule (POM) £15.75–£16.75

Sodium chloride 0.9% solution for injection 50ml vials | 1 vial (POM) £3.41 | 25 vial (POM) £75.00–£85.00

Sodium chloride 300 mg per 1 ml Sodium chloride 30% solution for injection 10ml ampoules | 10 ampoule (POM) £64.25

Sodium chloride 30% solution for injection 50ml vials | 1 vial (POM) £10.67

**Infusion**

- SODIUM CHLORIDE (Non-proprietary)

Sodium chloride 1.8 mg per 1 ml Sodium chloride 0.18% infusion 500ml bottles | 1 bottle (POM) £3.28

Sodium chloride 4.5 mg per 1 ml Sodium chloride 0.45% infusion 500ml bottles | 1 bottle (POM) £3.28

Sodium chloride 0.45% infusion 500ml bags | 1 bag (POM) £1.38

Sodium chloride 9 mg per 1 ml Sodium chloride 0.9% infusion 50ml bags | 1 bag (POM) £1.49

Sodium chloride 0.9% infusion 100ml bags | 1 bag (POM) £1.27

Sodium chloride 0.9% infusion 250ml bags | 1 bag (POM) £1.61

Sodium chloride 0.9% infusion 500ml bags | 1 bag (POM) £1.61

Sodium chloride 0.9% infusion 1litre bags | 1 bag (POM) no price available

Sodium chloride 0.9% infusion 2litre bags | 1 bag (POM) £3.01

Sodium chloride 0.9% infusion 100ml polyethylene bottles | 1 bottle (POM) £0.55 | 20 bottle (POM) £11.00

Sodium chloride 18 mg per 1 ml Sodium chloride 1.8% infusion 500ml bottles | 1 bottle (POM) £3.28

Sodium chloride 27 mg per 1 ml Sodium chloride 2.7% infusion 500ml bottles | 1 bottle (POM) £3.28

Sodium chloride 50 mg per 1 ml Sodium chloride 5% infusion 500ml bottles | 1 bottle (POM) £3.28

**SIDE-EFFECTS**

- Adult: The jugular venous pressure should be assessed, the bases of the lungs should be examined for crepitations, and in elderly or seriously ill patients it is often helpful to monitor the right atrial (central) venous pressure.

**PRESCRIBING AND DISPENSING INFORMATION**

- Adult: With intravenous use The term ‘normal saline’ should not be used to describe sodium chloride intravenous infusion 0.9%; the term ‘physiological saline’ is acceptable but it is preferable to give the composition (i.e. sodium chloride intravenous infusion 0.9%).

**SODIUM**

Sodium chloride

**INDICATIONS AND DOSE**

**Prophylaxis of sodium chloride deficiency**

**BY MOUTH USING MODIFIED-RELEASE MEDICINES**

- Adult: 4–8 tablets daily, to be taken with water, up to maximum 20 tablets daily in severe depletion

**Chronic renal salt wasting**

**BY MOUTH USING MODIFIED-RELEASE MEDICINES**

- Adult: Up to 20 tablets daily, to be taken with appropriate fluid intake

**Management of diabetic ketoacidosis (if systolic blood pressure is below 90 mmHg and adjusted for age, sex, and medication as appropriate)**

**BY INTRAVENOUS INFUSION**

- Adult: 500 ml, sodium chloride 0.9% to be given over 10–15 minutes, repeat if blood pressure remains below 90 mmHg and seek senior medical advice, when blood pressure is over 90 mmHg, sodium chloride 0.9% should be given by intravenous infusion at a rate that replaces deficit and provides maintenance, management regimen also includes administration of potassium chloride, soluble insulin, long acting insulin analogues and glucose 10% solution

**Blood and nutrition**
Intravesical solution
▶ SODIUM CHLORIDE (Non-proprietary)
Sodium chloride 9 mg per 1 ml Sodium chloride 0.9% intravesical solution 50ml bags | 1 bag £0.66

Sodium chloride with glucose
The properties listed below are those particular to the combination only. For the properties of the components please consider, glucose below, sodium chloride p. 851.

INDICATIONS AND DOSE
Combined water and sodium depletion
BY INTRAVENOUS INFUSION
▶ Adult: (consult product literature)

Monitoring requirements
Maintenance fluid should accurately reflect daily requirements and close monitoring is required to avoid fluid and electrolyte imbalance.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

Infusion
▶ GLUCOSE WITH SODIUM CHLORIDE (Non-proprietary)
Glucose anhydrous 25 mg per 1 ml, Sodium chloride 4.5 mg per 1 ml Sodium chloride 0.45% / glucose 2.5% infusion 500ml bags | 1 bag no price available
Sodium chloride 0.45% / glucose 2.5% infusion 500ml bags | 1 bag no price available
Glucose anhydrous 40 mg per 1 ml, Sodium chloride 1.8 mg per 1 ml Sodium chloride 0.18% / glucose 4% infusion 1litre bags | 1 bag no price available
Glucose anhydrous 50 mg per 1 ml, Sodium chloride 0.9% glucose BP 9% / sodium chloride 0.9% infusion 50ml bags | 1 bag £0.92
Glucose 50 mg per 1 ml, Sodium chloride 9 mg per 1 ml Sodium chloride 0.9% / glucose 5% infusion 500ml bags | 1 bag £0.27
Glucose 5% / sodium chloride 0.9% infusion 1litre bags | 1 bag £2.10 | 10 bag £21.00
Glucose anhydrous 50 mg per 1 ml, Sodium chloride 4.5 mg per 1 ml Sodium chloride 0.18% / glucose 4% infusion 500ml bags | 1 bag £1.10
Glucose anhydrous 100 mg per 1 ml, Sodium chloride 1.8 mg per 1 ml Sodium chloride 0.18% / glucose anhydrous 500ml bags | 1 bag £0.67

SUGARS
Glucose
(Dextrose Monohydrate)

INDICATIONS AND DOSE
Energy source
BY INTRAVENOUS INFUSION
▶ Adult: 1–3 litres daily, solution concentration of 20–50% to be administered

Water replacement
BY INTRAVENOUS INFUSION
▶ Adult: The volume of glucose solution needed to replace deficits may vary (consult product literature)

Hypoglycaemia
BY INTRAVENOUS INFUSION
▶ Child: 500 mg/kg, to be administered as Glucose 10% intravenous infusion into a large vein through a large-gauge needle; care is required since this concentration is irritant especially if extravasation occurs
▶ Adult: 10 g, to be administered as Glucose 20% intravenous infusion into a large vein through a large-gauge needle; care is required since this concentration is irritant especially if extravasation occurs

Management of diabetic ketoacidosis
BY INTRAVENOUS INFUSION
▶ Child: Glucose 5% or 10% should be added to replacement fluid once blood-glucose concentration falls below 14 mmol/litre
▶ Adult: Glucose 10% should be given once blood-glucose concentration falls below 14 mmol/litre, to be administered into a large vein through a large-gauge needle at a rate of 125 mL/hour, in addition to the sodium chloride 0.9% infusion

Oral glucose tolerance test
BY MOUTH
▶ Adult: Test dose 75 g, anhydrous glucose to be given to the fasting patient and blood-glucose concentrations measured at intervals, to be given with 200–300 mL fluid

Establish presence of gestational diabetes
BY MOUTH
▶ Adult: Test dose 75 g, anhydrous glucose to be given to the fasting patient and blood-glucose concentrations measured at intervals, to be given with 200–300 mL fluid

Persistent cyanosis (in combination with propranolol) when blood glucose less than 3 mmol/litre (followed by morphine)
BY INTRAVENOUS INFUSION
▶ Child: 200 mg/kg, to be administered as Glucose 10% intravenous infusion over 10 minutes

Dose equivalence and conversion
75 g anhydrous glucose is equivalent to Glucose BP 82.5 g.

CAUTIONS
Do not give alone except when there is no significant loss of electrolytes - prolonged administration of glucose solutions without electrolytes can lead to hyponatraemia and other electrolyte disturbances

CAUTIONS, FURTHER INFORMATION
▶ With intravenous use in children Glucose 4% intravenous infusion fluid should not be used for fluid replacement in children aged 16 years or less because of the risk of hyponatraemia; availability of this infusion should be restricted to high dependency and intensive care units, and specialist wards, such as renal, liver, and cardiac units. Local guidelines on intravenous fluids should be consulted.

SIDE-EFFECTS
Glucose injections especially if hypertonic may have a low pH and may cause venous irritation and thrombophlebitis

DIRECTIONS FOR ADMINISTRATION
▶ With intravenous use in children Injections containing more than 10% glucose can be irritant and should be given into a central venous line; however, solutions containing up to 12.5% can be administered for a short period into a peripheral line.

PRESCRIBING AND DISPENSING INFORMATION
Glucose BP is the monohydrate but Glucose Intravenous Infusion BP is a sterile solution of anhydrous glucose or glucose monohydrate, potency being expressed in terms of anhydrous glucose.

EXCEPTIONS TO LEGAL CATEGORY
▶ With intravenous use Prescription only medicine restriction does not apply to 50% solution where administration is for saving life in emergency.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, solution for infusion

## 2.1 Low blood volume

### COLLOIDS

#### Albumin solution

*Human albumin solution*

**INDICATIONS AND DOSE**

Acute or sub-acute loss of plasma volume e.g. in burns, pancreatitis, trauma, and complications of surgery (with isotonic solutions) | Plasma exchange (with isotonic solutions) | Severe hypoaalbuminaemia associated with low plasma volume and generalised oedema where salt and water restriction with plasma volume expansion are required (with concentrated solutions 20%) | Adjunct in the treatment of hyperbilirubinaemia by exchange transfusion in the newborn (with concentrated solutions 20%) | Paracentesis of large volume ascites associated with portal hypertension (with concentrated solutions 20%)

**BY INTRAVENOUS INFUSION**

- Adult: (consult product literature)

#### CONTRA-INDICATIONS

- Cardiac failure - severe anaemia

#### CAUTIONS

- Correct dehydration when administering concentrated solution - history of cardiac disease (administer slowly to avoid rapid rise in blood pressure and cardiac failure, and monitor cardiovascular and respiratory function) - history of circulatory disease (administer slowly to avoid rapid rise in blood pressure and cardiac failure, and monitor cardiovascular and respiratory function) - increased capillary permeability

#### SIDE-EFFECTS

- Anaphylaxis - chills - fever - hypersensitivity reactions - hypotension - increased salivation - nausea - tachycardia - vomiting

#### MONITORING REQUIREMENTS

- Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient’s condition at all times.

**PRESCRIBING AND DISPENSING INFORMATION**

A solution containing protein derived from plasma, serum, or normal placenta; at least 95% of the protein is albumin. The solution may be isotonic (containing 3.5–5% protein) or concentrated (containing 15–25% protein).

#### MEDICINAL FORMS

- There can be variation in the licensing of different medicines containing the same drug.

**Infusion**

- **Flexbumin** (Baxter Healthcare Ltd)

  Albumin solution human 200 gram per 1 litre Flexbumin 20% infusion 100ml bags | 1 bag | no price available | 12 bag | no price available
  Flexbumin 20% infusion 50ml bags | 1 bag | no price available | 24 bag | no price available

**Solution for infusion**

- **ALBUMIN SOLUTION (Non-proprietary)**

  Albumin solution human 50 mg per 1 ml Human albumin Grifols 5% solution for infusion 500ml bottles | 1 bottle | £9.50 | 6 bottle | no price available
  Human Albumin Biostat 5% solution for infusion 250ml vials | 1 vial | no price available
  Human albumin Grifols 5% solution for infusion 275ml bottles | 1 bottle | £4.75 | 10 bottle | no price available
  Human albumin Biostat 5% solution for infusion 100ml bottles | 1 bottle | £9.50 | 10 bottle | no price available

  Albumin solution human 200 mg per 1 ml Human Albumin Biotest 20% solution for infusion 50ml vials | 1 vial | no price available
  Human Albumin Biotest 20% solution for infusion 100ml vials | 1 vial | no price available
  Albumin solution human 45 mg per 1 ml Zenalb 4.5% solution for infusion 250ml bottles | 1 bottle | £36.31 | 10 bottle | no price available
  Zenalb 4.5% solution for infusion 50ml bottles | 1 bottle | £52.61 | 20 bottle | no price available

- Brands may include Albunorm; Alburex; Albutein; Zenalb

### PLASMA SUBSTITUTES

#### Dextran 70 with sodium chloride

**INDICATIONS AND DOSE**

Initial treatment of hypovolaemia with hypotension induced by traumatic injury

**BY INTRAVENOUS INFUSION**

- Adult: 250 ml, to be given over 2–5 minutes, followed immediately by administration of isotonic fluids, using RescueFlow®.

#### CAUTIONS

- Cardiac disease - hypoversomolality - severe hypoglycaemia - severe liver disease

#### SIDE-EFFECTS

- Rare
  - Severe anaphylactic reactions
  - Frequency not known
  - Hypersensitivity reactions - transient increase in bleeding time

#### PREGNANCY

Avoid — reports of anaphylaxis in mother causing fetal anoxia, neurological damage and death.

#### HEPATIC IMPAIRMENT

Use with caution in severe impairment.

#### RENAL IMPAIRMENT

Use with caution.

**MONITORING REQUIREMENTS**

- Where possible, monitor central venous pressure.
  - Urine output should be monitored. Care should be taken to avoid haemocrit concentration from falling below 25–30% and the patient should be monitored for hypersensitivity reactions.

- Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient’s condition at all times.
PRESCRIBING AND DISPENSING INFORMATION

Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient’s condition at all times.

CAUTIONS
Cardiac disease • severe liver disease

SIDE-EFFECTS
Rare Severe anaphylactic reactions
Frequency not known Hypersensitivity reactions • transient increase in bleeding time

PREGNANCY
Manufacturer of Geloplasma® advises avoid at the end of pregnancy.

HEPATIC IMPAIRMENT
Use with caution in severe impairment.

RENAL IMPAIRMENT
Use with caution in renal impairment.

MONITORING REQUIREMENTS
Urine output should be monitored. Care should be taken to avoid haemorrhagic concentration from falling below 25–30% and the patient should be monitored for hypersensitivity reactions.

Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient’s condition at all times.

PRESCRIBING AND DISPENSING INFORMATION
The gelatin is partially degraded.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Tetrastarch

INDICATIONS AND DOSE

VOLULYTE® INFUSION
Treatment of hypovolaemia due to acute blood loss when crystalloids alone are not sufficient

BY INTRAVENOUS INFUSION
Adult: Initially 10–20 mL, then increased to up to 30 mL/kg daily for a maximum duration of treatment of 24 hours, the initial dose must be given slowly and with careful monitoring of the patient to allow any anaphylactic reaction to be detected as early as possible

VOLUMEN® INFUSION
Treatment of hypovolaemia due to acute blood loss when crystalloids alone are not sufficient

BY INTRAVENOUS INFUSION
Adult: Initially 10–20 mL, then increased to up to 30 mL/kg daily for a maximum duration of treatment of 24 hours, the initial dose must be given slowly and with careful monitoring of the patient to allow any anaphylactic reaction to be detected as early as possible

CONTRA-INDICATIONS
Burns • cerebral haemorrhage • critically ill patients • dehydration • hyperhydration • intracranial haemorrhage • pulmonary oedema • sepsis • severe coagulopathy

CAUTIONS
Cardiac disease • care should be taken to avoid haemorrhagic concentration from falling below 25–30% • children • renal impairment • severe liver disease • surgery • trauma

SIDE-EFFECTS
Rare Severe anaphylactic reactions
Frequency not known Hypersensitivity reactions • pruritus • raised serum amylase • transient increase in bleeding time

HEPATIC IMPAIRMENT
Avoid in severe impairment.

RENAL IMPAIRMENT
Avoid.

MONITORING REQUIREMENTS
Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient’s condition at all times. Treatment with hydroxyethyl starches should be guided by continuous haemodynamic monitoring so that the infusion is stopped as soon as appropriate haemodynamic goals have been achieved.

Monitor renal function.
Monitor for hypersensitivity reactions.
Urine output should be monitored.

PRESCRIBING AND DISPENSING INFORMATION
A starch composed of more than 90% of amylopectin that has been etherified with hydroxyethyl groups; the term tetrastarch reflects the degree of etherification. Hydroxyethyl starches should only be used for the treatment of hypovolaemia due to acute blood loss when crystalloids alone are not sufficient; they should be used at the lowest effective dose for the first 24 hours of fluid resuscitation.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Infusion

Volulyte (Fresenius Kabi Ltd)
Magnesium chloride hexahydrate 300 mg per 1 litre, Potassium chloride 300 mg per 1 litre, Sodium acetate trihydrate 4.63 gram per 1 litre, Sodium chloride 6.02 gram per 1 litre, Tetrastarch 60 gram per 1 litre Volulyte 6% infusion 500ml Freeflex bags | 15 bag £229.60
2.2 Calcium imbalance

**Calcium**

**Calcium supplement**

Calcium supplements are usually only required where dietary calcium intake is deficient. This dietary requirement varies with age and is relatively greater in childhood, pregnancy, and lactation, due to an increased demand, and in old age, due to impaired absorption. In osteoporosis, a calcium intake which is double the recommended amount reduces the rate of bone loss. If the actual dietary intake is less than the recommended amount, a supplement of as much as 40 mmol is appropriate.

In severe acute hypocalcaemia or hypocalcaemic tetany, an initial slow intravenous injection of calcium gluconate p. 857 injection 10% should be given, with plasma-calcium and ECG monitoring (risk of arrhythmias if given too rapidly), and either repeated as required or, if only temporary improvement, followed by a continuous intravenous infusion to prevent recurrence. Calcium chloride p. 857 injection is also available, but is more irritant; care should be taken to prevent extravasation. Oral supplements of calcium and vitamin D may also be required in persistent hypocalcaemia. Concurrent hypomagnesaemia should be corrected with magnesium sulfate p. 858.

See the role of calcium gluconate in temporarily reducing the toxic effects of hypercalcaemia.

**Severe hypercalcaemia**

Severe hypercalcaemia calls for urgent treatment before detailed investigation of the cause. Dehydration should be corrected first with intravenous infusion of sodium chloride 0.9% p. 851. Drugs (such as thiazides and vitamin D compounds) which promote hypercalcaemia, should be discontinued and dietary calcium should be restricted.

If severe hypercalcaemia persists drugs which inhibit mobilisation of calcium from the skeleton may be required. The bisphosphonates are useful and pamidronate disodium p. 623 is probably the most effective.

**Corticosteroids** are widely given, but may only be useful where hypercalcaemia is due to sarcoidosis or vitamin D intoxication; they often take several days to achieve the desired effect.

Calcitonin (salmon)/salcatonin p. 627 can be used for the treatment of hypercalcaemia associated with malignancy; it is rarely effective where bisphosphonates have failed to reduce serum calcium adequately.

After treatment of severe hypercalcaemia the underlying cause must be established. Further treatment is governed by the same principles as for initial therapy. Salt and water depletion and drugs promoting hypercalcaemia should be avoided; oral administration of a bisphosphonate may be useful.

**Hyperparathyroidism**

Paricalcitol p. 888 is licensed for the prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure. Parathyroidectomy may be indicated for hyperparathyroidism.

---

**Hypercalciuria**

Hypercalciuria should be investigated for an underlying cause, which should be treated. Where a cause is not identified (idiopathic hypercalciuria), the condition is managed by increasing fluid intake and giving bendroflumethiazide p. 159. Reducing dietary calcium intake may be beneficial but severe restriction of calcium intake has not proved beneficial and may even be harmful.

2.3 Hypercalcaemia and hypercalciuria

**CALCIMIMETIC AGENTS**

**Cinacalcet**

- **DRUG ACTION** Cinacalcet reduces parathyroid hormone which leads to a decrease in serum calcium concentrations.

<table>

  **TREATMENT OF HYPERCALCEMIA IN PARATHYROID CARCINOMA**

  **BY MOUTH**

  Adult: Initially 30 mg twice daily (max. per dose 90 mg 4 times a day), dose to be adjusted every 2–4 weeks according to response

  **Dose adjustments due to interactions**

  Dose adjustment may be necessary if smoking started or stopped during treatment.

- **CAUTIONS** Treatment should not be initiated in patients with hyperparathyroidism

- **INTERACTIONS** → Appendix 1 (cinacalcet).

- **SIDE-EFFECTS**

  - **Common or very common** Anorexia - asthenia - dizziness - myalgia - nausea - paraesthesia - rash - reduced testosterone concentrations - vomiting

  - **Uncommon** Diarrhoea - dyspepsia - seizures

  - **Frequency not known** Allergic reactions - angioedema - heart failure - hypotension

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment. Monitor closely in hepatic impairment especially when increasing dose.

- **MONITORING REQUIREMENTS**

  - Measure serum–calcium concentration before initiation of treatment and within 1 week after starting treatment or adjusting dose, then monthly for secondary hyperparathyroidism, and every 2–3 months for primary hyperparathyroidism and parathyroid carcinoma.

  - In secondary hyperparathyroidism measure parathyroid hormone concentration 1–4 weeks after starting treatment or adjusting dose, then every 1–3 months.

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

Cinacalcet for the treatment of secondary hyperparathyroidism in patients with end-stage renal disease on maintenance dialysis therapy (January 2007) NICE TA117

Cinacalcet is not recommended for the routine treatment of secondary hyperparathyroidism in patients with end-stage renal disease on maintenance dialysis therapy. Cinacalcet is recommended for the treatment of refractory secondary hyperparathyroidism in patients with end-stage renal disease (including those with calciphylaxis) only in those:

- who have ‘very uncontrolled’ plasma concentration of intact parathyroid hormone (defined as greater than 85 picomol/litre) refractory to standard therapy, and a normal or high adjusted serum calcium concentration, and
- in whom surgical parathyroidectomy is contraindicated, and in that the risks of surgery outweigh the benefits.

Response to treatment should be monitored regularly and treatment should be continued only if a reduction in the plasma concentration of intact parathyroid hormone of 30% or greater is seen within 4 months of treatment.

INDICATIONS AND DOSE

Phosphate binding in renal failure and hyper-phosphataemia

BY MOUTH

- Adult: (consult product literature)

Calcium deficiency

BY MOUTH

- Adult: (consult product literature)
### Calcium chloride

**INDICATIONS AND DOSE**

Severe acute hypocalcaemia or hypocalcaemic tetany

**BY INTRAVENOUS INJECTION**

- **Adult:** Dose according to requirements

#### CAUTIONS

- Avoid in respiratory acidosis - avoid in respiratory failure
- **DIRECTIONS FOR ADMINISTRATION** Care should be taken to avoid extravasation.

#### MEDICINAL FORMS

- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

##### Solution for injection

- calcium chloride dihydrate 100 mg per 1 ml calcium chloride 10% solution for injection 10ml ampoules | 10 ampoule

- calcium chloride dihydrate 100 mg per 1 ml calcium chloride 14.7% solution for injection 5ml ampoules | 10 ampoule

- calcium chloride 14.7% solution for injection 10ml ampoules | 10 ampoule

#### Calcium gluconate

**INDICATIONS AND DOSE**

Severe acute hypocalcaemia or hypocalcaemic tetany

**INITIALLY BY SLOW INTRAVENOUS INJECTION**

- **Adult:** Initially 10–20 ml, calcium gluconate injection 10% (providing approximately 2.25–4.5 mmol of calcium) should be administered with plasma-calcium and ECG monitoring, and either repeated as required or, if only temporary improvement, followed by a continuous intravenous infusion to prevent recurrence; (by continuous intravenous infusion) 100 ml, adjusted according to response, dose to be diluted, calcium gluconate 10% should be administered

##### Acute severe hyperkalaemia (plasma-potassium concentration above 6.5 mmol/litre or in the presence of ECG changes)

**BY SLOW INTRAVENOUS INJECTION**

- **Adult:** Dose according to requirements

**Dose equivalence and conversion**

- 0.11 mmol/kg is equivalent to 0.5 ml/kg of calcium gluconate 10%.

### Important safety information

The MHRA has advised that repeated or prolonged administration of calcium gluconate injection packaged in 10 ml glass containers is contra-indicated in children under 18 years and in patients with renal impairment owing to the risk of aluminium accumulation; in these patients the use of calcium gluconate injection packaged in plastic containers is recommended.

### Monitoring requirements

- Plasma-calcium and ECG monitoring required for administration by slow intravenous injection (risk of arrhythmias if given too rapidly).

#### DIRECTIONS FOR ADMINISTRATION

- For continuous intravenous infusion, dilute 100 ml of calcium gluconate 10% in 1 litre of glucose 5% or sodium chloride 0.9% and give at an initial rate of 50 ml/hour adjusted according to response. Avoid bicarbonates, phosphates, or sulfates.

#### MEDICINAL FORMS

- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, solution for infusion, oral solution, capsule

##### Effervescent tablet

**CAUTIONARY AND ADVISORY LABELS**

- ELECTROLYTES: May contain Sodium

- **CALCIC gluconate (Non-proprietary)**

- Calcium gluconate 1 gram calcium gluconate effervescent tablets | 28 tablet

- **SOLUTION FOR INJECTION**

- **CALCIC gluconate (Non-proprietary)**

- Calcium gluconate 100 mg per 1 ml calcium gluconate 10% solution for injection 10ml ampoules | 10 ampoule

2.5 **Hypomagnesaemia**

### Magnesium

Magnesium is an essential constituent of many enzyme systems, particularly those involved in energy generation; the largest stores are in the skeleton. Magnesium salts are not well absorbed from the gastrointestinal tract, which explains the use of magnesium sulfate p. 858 as an osmotic laxative. Magnesium is excreted mainly by the kidneys and is therefore retained in renal failure, but significant hypomagnesaemia (causing muscle weakness and arrhythmias) is rare.

#### Hypomagnesaemia

Since magnesium is secreted in large amounts in the gastrointestinal fluid, excessive losses in diarrhoea, stoma or fistula are the most common causes of hypomagnesaemia; deficiency may also occur in alcoholism or as a result of treatment with certain drugs. Hypomagnesaemia often causes secondary hypocalcaemia, and also hypokalaemia and hyponatraemia.

Symptomatic hypomagnesaemia is associated with a deficit of 0.5–1 mmol/kg; up to 160 mmol Mg²⁺ over up to 5 days may be required to replace the deficit (allowing for urinary losses). Magnesium is given initially by intravenous infusion or by intramuscular injection of magnesium sulfate; the intramuscular injection is painful. Plasma magnesium concentration should be measured to determine the rate
and duration of infusion and the dose should be reduced in renal impairment. To prevent recurrence of the deficit, magnesium may be given by mouth, but there is limited evidence of benefit; magnesium glycerophosphate below tablets and liquid [unlicensed] are available from ‘special-order’ manufacturers or specialist importing companies.

**Arrhythmias**
Magnesium sulfate injection has also been recommended for the emergency treatment of serious arrhythmias, especially in the presence of hypokalaemia (when hypomagnesaemia may also be present) and when salvos of rapid ventricular tachycardia show the characteristic twisting wave front known as *torsade de pointes*.

**Myocardial infarction**
Limited evidence that magnesium sulfate below prevents arrhythmias and reperfusion injury in patients with suspected myocardial infarction has not been confirmed by large studies. Routine use of magnesium sulfate for this purpose is not recommended.

**Eclampsia and pre-eclampsia**
Magnesium sulfate injection is the drug of choice for the treatment of seizures and the prevention of recurrent seizures in women with *eclampsia*. Regimens may vary between hospitals. Calcium gluconate p. 857 injection is used for the management of magnesium toxicity.

Magnesium sulfate injection is also of benefit in women in whom there is concern about suspected myocardial infarction in whom there is concern about developing eclampsia. The patient should be monitored carefully.

**MAGNESIUM**

**Magnesium glycerophosphate**

### INDICATIONS AND DOSE

**Prevent recurrence of magnesium deficit**

**BY MOUTH**
- Adult: 6 g daily in divided doses

**Dose equivalence and conversion**
Magnesium glycerophosphate 1 g is equivalent to Mg$^{2+}$ 4 mmol.

- **UNLICENSED USE** Not licensed.

- **INTERACTIONS** → Appendix 1 (magnesium salts, oral).

- **SIDE-EFFECTS** Arrhythmias - colic - coma - confusion - diarrhoea - drowsiness - flushing of skin - hypermagnesaemia associated side-effects - hypotension - loss of tendon reflexes - muscle weakness - nausea - respiratory depression - thirst - vomiting

- **RENAL IMPAIRMENT** Avoid or reduce dose. Increased risk of toxicity.

- **MONITORING REQUIREMENTS** Monitor blood pressure, respiratory rate, urinary output and for signs of overdosage (loss of patellar reflexes, weakness, nausea, sensation of warmth, flushing, drowsiness, double vision, and slurred speech).

- **DIRECTIONS FOR ADMINISTRATION** Tablets may be dispersed in water.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, oral solution, chewable tablet, powder, capsule

**Magnesium sulfate**

### INDICATIONS AND DOSE

**Severe acute asthma | Continuing respiratory deterioration in anaphylaxis**

**BY INTRAVENOUS INFUSION**
- Child 2-17 years: 40 mg/kg (max. per dose 2 g), to be given over 20 minutes
- Adult: 1.2–2 g, to be given over 20 minutes

### Prevention of seizures in *pre-eclampsia* **INITIALLY BY INTRAVENOUS INJECTION**
- Adult: Initially 4 g, to be given over 5–15 minutes, followed by (by intravenous infusion) 1 gram/hour for 24 hours, if seizure occurs, additional dose of 2 g by intravenous injection to be administered

### Treatment of seizures and prevention of seizure recurrence **INITIALLY BY INTRAVENOUS INJECTION**
- Adult: Initially 4 g, to be given over 5–15 minutes, followed by (by intravenous infusion) 1 gram/hour for 24 hours after seizure or delivery (whichever is later), if seizure recurs, increase the infusion rate to 1.5–2 g/hour or give an additional dose of 2 g by intravenous injection

### Hypomagnesaemia **BY INTRAVENOUS INFUSION OR BY INTRAMUSCULAR INJECTION**
- Adult: Up to 40 g, dose given over up to 5 days may be required to replace the deficit (allowing for urinary losses)

**Hypomagnesaemia maintenance (e.g. in intravenous nutrition)**
- **BY INTRAVENOUS INFUSION OR BY INTRAMUSCULAR INJECTION**
  - Adult: 2.5–5 g daily, usual dose 3 g daily

### Emergency treatment of serious arrhythmias **BY INTRAVENOUS INJECTION**
- Adult: 2 g, to be given over 10–15 minutes, dose may be repeated once if necessary

### Rapid bowel evacuation (acts in 2–4 hours) **BY MOUTH**
- Adult: 5–10 g, dose to be mixed in a glass of water, taken preferably before breakfast

**Dose equivalence and conversion**
Magnesium sulfate heptahydrate 1 g equivalent to Mg$^{2+}$ approx. 4 mmol.
Hyperphosphataemia

Solution for infusion
- **MAGNESIUM SULFATE (Non-proprietary)**
  - Magnesium sulfate heptahydrate 100 mg per 1 ml
  - Magnesium sulfate 10% (magnesium 0.4mmol/ml) solution for injection 10ml ampoules | 10 ampoule (PO) £0.46

**Powder**
- **MAGNESIUM SULFATE (Non-proprietary)**
  - Magnesium sulfate dried 1 mg per 1 mg
  - Numark Epsom Salts | 200 gram (GSL) £1.00
  - Magnesium sulfate powder | 300 gram (GSL) £1.91 | 500 gram (GSL) £3.20 DT price = £3.20 | 2000 gram (GSL) £5.60 | 5000 gram (GSL) £11.49
  - Epsom Salts | 200 gram (GSL) £0.91

2.6 Phosphate imbalance

**Phosphorus**

**Phosphate supplements**
Oral phosphate p. 861 supplements may be required in addition to vitamin D in a small minority of patients with hypophosphataemic vitamin D-resistant rickets. Phosphate infusion is occasionally needed in alcohol dependence or in phosphate deficiency arising from use of parenteral nutrition deficient in phosphate supplements; phosphate depletion also occurs in severe diabetic ketoacidosis.

For phosphate requirements in total parenteral nutrition regimens, see Intravenous nutrition p. 873.

**Phosphate-binding agents**
Calcium-containing preparations are used as phosphate-binding agents in the management of hyperphosphataemia complicating renal failure. Aluminum-containing preparations are rarely used as phosphate binding agents and can cause aluminum accumulation.

Sevelamer p. 861 is licensed for the treatment of hyperphosphataemia in patients on haemodialysis or peritoneal dialysis. Sevelamer carbonate is also licensed for the treatment of patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more.

Lanthanum p. 860 is licensed for the control of hyperphosphataemia in patients with chronic renal failure on haemodialysis or continuous ambulatory peritoneal dialysis (CAPD), and in patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more that cannot be controlled by a low-phosphate diet.

2.7 Hyperphosphataemia

**ALUMINIUM**

**Aluminium hydroxide**

**INDICATIONS AND DOSE**

**Hyperphosphataemia in renal failure**

**BY MOUTH USING CAPSULES**
- Adult: 4–20 capsules daily in divided doses, to be taken with meals

**Antacid**

**INITIALLY BY MOUTH USING CAPSULES**
- Adult: 1 capsule 4 times a day and (by mouth) 1 capsule, to be taken at bedtime
Patients or carers should be given advice on how to administer Phosex® tablets, Renacet® tablets, and PhosLo® tablets.

**MEDICINAL FORMS**

**PHOSPHATE BINDERS**

### Lanthanum

**INDICATIONS AND DOSE**
Hyperphosphataemia in patients with chronic renal failure on haemodialysis or continuous ambulatory peritoneal dialysis (CAPD) Hyperphosphataemia in patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more that cannot be controlled by a low-phosphate diet

**BY MOUTH**

- Adult: 1.5–3 g daily in divided doses, dose to be adjusted according to serum-phosphate concentration every 2–3 weeks, to be taken with or immediately after meals

**CAUTIONS**
Acute peptic ulcer - bowel obstruction - Crohn’s disease - ulcerative colitis

**INTERACTIONS → Appendix 1 (lanthanum).**

**SIDE-EFFECTS**

- Common Gastro-intestinal disturbances - headache - hypocalcaemia
- Frequency not known Accumulation of lanthanum in bone - transient changes in QT interval

**PREGNANCY**
Manufacturer advises avoid—toxicity in animal studies.

**BREAST FEEDING**
Manufacturer advises caution—no information available.

**HEPATIC IMPAIRMENT**
Lanthanum excreted in bile—possible accumulation in obstructive jaundice.

**DIRECTIONS FOR ADMINISTRATION**
Tablets are to be chewed. Each sachet of powder to be mixed with soft food and consumed within 30 minutes.

**PATIENT AND CARER ADVICE**
Patient and carers should be given advice on how to administer lanthanum tablets and powder.

**NATIONAL FUNDING/ACCESS DECISIONS**
Scottish Medicines Consortium (SMC) Decisions

Sevelamer

INDICATIONS AND DOSE

RENVELA®

Hyperphosphataemia in patients on haemodialysis or peritoneal dialysis / Hyperphosphataemia in patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more

BY MOUTH

- Adult: Initially 2.4–4.8 g daily in 3 divided doses, dose to be taken with meals and adjusted according to serum-phosphate concentration; usual dose 6 g daily in 3 divided doses

RENAGEL®

Hyperphosphataemia in patients on haemodialysis or peritoneal dialysis

BY MOUTH

- Adult: Initially 2.4–4.8 g daily in 3 divided doses, dose to be given with meals and adjusted according to serum-phosphate concentration; usual dose 4–12 g daily in 3 divided doses

CONTRA-INDICATIONS Bowel obstruction

CAUTIONS Gastro-intestinal disorders

INTERACTIONS → Appendix 1 (sevelamer).

SIDE-EFFECTS

GENERAL SIDE-EFFECTS

- Common or very common Abdominal pain · constipation · diarrhoea · dyspepsia · flatulence · nausea · vomiting
- Frequency not known Ileus · intestinal obstruction (higher incidence with sevelamer hydrochloride salt) · intestinal perforation · pruritus · rash

RENAGEL®

- Frequency not known Diverticulitis

PREGNANCY Manufacturer advises use only if potential benefit outweighs risk.

BREAST FEEDING

RENAGEL®

Unlikely to be present in milk (however, manufacturer advises avoid).

RENAGEL®

Manufacturer advises use only if potential benefit outweighs risk.

DIRECTIONS FOR ADMINISTRATION

RENVELA®

For powder for oral suspension, each sachet to be dispersed in 60 mL water.

PATIENT AND CARER ADVICE

RENVELA®

Patients and carers should be advised on how to administer Renvela® powder for oral suspension.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Tablet

CAUTIONARY AND ADVISORY LABELS 21

- Exipients: May contain Propylene glycol

RENAGEL®

Fosrenol 800 mg tablets | 180 tablet

DT price = £167.04

RENVELA®

Sevelamer hydrochloride 800 mg tablets | 180 tablet

DT price = £167.04

RENVELA®

Sevelamer hydrochloride 1000 mg tablets | 180 tablet

DT price = £167.04

RENAGEL®

Sevelamer hydrochloride 1200 mg tablets | 180 tablet

DT price = £167.04

INDICATIONS AND DOSE

Phosphate

INDICATIONS AND DOSE

Treatment of moderate to severe hypophosphataemia

BY INTRAVENOUS INFUSION

- Adult: (consult product literature)

For established hypophosphataemia (with monobasic potassium phosphate)

BY INTRAVENOUS INFUSION

- Adult: 9 mmol every 12 hours, increased if necessary up to 0.5 mmol/kg (max. per dose 50 mmol), dose only increased in critically ill patients; dose is approximately equivalent to 30 mmol in adults, dose to be infused over 6–12 hours, according to severity of hypophosphataemia

Vitamin D-resistant hypophosphataemic osteomalacia

BY MOUTH USING EFFERVESCENT TABLETS

- Adult: 4–6 tablets daily

SIDE-EFFECTS

- Common or very common Diarrhoea

FREQUENCY NOT KNOWN Acute renal failure · hypocalcaemia · hypotension · metastatic calcification · nausea · oedema · phlebitis · tissue necrosis on extravasation

SIDE-EFFECTS, FURTHER INFORMATION

Diarrhoea is a common side-effect and should prompt a reduction in dosage.

RENAL IMPAIRMENT Reduce dose. Monitor closely in renal impairment.

MONITORING REQUIREMENTS It is essential to monitor closely plasma concentrations of calcium, phosphate, potassium, and other electrolytes—excessive doses of phosphates may cause hypocalcaemia and metastatic calcification.

2.8 Hypophosphataemia
2.9 Hyperkalaemia

Drugs used for Hyperkalaemia not listed below; Calcium gluconate, p. 857 • Insulin, p. 603

CATION-EXCHANGE RESINS

Calcium polystyrene sulfonate

INDICATIONS AND DOSE

CALCIUM RESONIUM®

Hyperkalaemia associated with anuria or severe oliguria, and in dialysis patients

BY MOUTH

Adult: 15 g 3–4 times a day

BY RECTUM

Adult: 30 g, retained for 9 hours followed by irrigation to remove resin from colon

SORBISTERIT® POWDER

Hyperkalaemia associated with anuria or severe oliguria, and in dialysis patients

BY MOUTH

Adult: 20 g 1–3 times a day

BY RECTUM

Adult: 40 g 1–3 times a day, retained for 6 hours followed by irrigation to remove resin from colon

CONTRA-INDICATIONS Hyperparathyroidism • metastatic carcinoma • multiple myeloma • obstructive bowel disease • sarcoidosis

INTERACTIONS → Appendix 1 (polystyrene sulfonate resins).

SIDE-EFFECTS

GENERAL SIDE-EFFECTS

Anorexia • constipation (discontinue treatment—avoid magnesium-containing laxatives) • diarrhoea • gastric irritation • gastro-intestinal obstruction • hypercalcaemia (including in dialysed patients and occasionally in those with renal impairment) • hypomagnesaemia • intestinal necrosis (reported with concomitant use of sorbitol) • ischaemic colitis • nausea • necrosis • ulceration • vomiting

SPECIFIC SIDE-EFFECTS

With oral use gastro-intestinal concretions

With rectal use faecal impaction

PREGNANCY Manufacturers advise use only if potential benefit outweighs risk—no information available.

BREAST FEEDING Manufacturers advise use only if potential benefit outweighs risk—no information available.

MONITORING REQUIREMENTS Monitor for electrolyte disturbances (stop if plasma-potassium concentration below 5 mmol/litre).

Sodium polystyrene sulfonate

INDICATIONS AND DOSE

Hyperkalaemia associated with anuria or severe oliguria, and in dialysis patients

BY MOUTH

Adult: 15 g 3–4 times a day

BY RECTUM

Adult: 30 g, retain for 9 hours followed by irrigation to remove resin from colon

CONTRA-INDICATIONS Obstructive bowel disease

CAUTIONS Congestive heart failure • hypertension • oedema

INTERACTIONS → Appendix 1 (polystyrene sulfonate resins).

SIDE-EFFECTS

GENERAL SIDE-EFFECTS

Anorexia • constipation (discontinue treatment—avoid magnesium-containing laxatives) • diarrhoea • gastric irritation • gastro-intestinal obstruction • hypercalcaemia • hypomagnesaemia • intestinal necrosis (reported with concomitant use of sorbitol) • ischaemic colitis • nausea • necrosis • sodium retention • ulceration • vomiting

SPECIFIC SIDE-EFFECTS

With oral use gastro-intestinal concretions

With rectal use faecal impaction

PREGNANCY Manufacturers advise use only if potential benefit outweighs risk—no information available.

BREAST FEEDING Manufacturers advise use only if potential benefit outweighs risk—no information available.

MONITORING REQUIREMENTS Monitor for electrolyte disturbances (stop if plasma-potassium concentration below 5 mmol/litre).
2.10 Hypokalaemia

POTASSIUM

Potassium bicarbonate with potassium acid tartrate

**INDICATIONS AND DOSE**
Hyperchloraemic acidosis associated with potassium deficiency (as in some renal tubular and gastro-intestinal disorders)

**BY MOUTH**
- Adult: consult product literature

**CONTRA-INDICATIONS**
- Hypochloraemia
- Plasma-potassium concentration above 5 mmol/litre

**CAUTIONS**
- Cardiac disease
- Elderly

**INTERACTIONS**
- Appendix 1 (potassium salts)

**SIDE-EFFECTS**
- Abdominal pain
- Diarrhoea
- Flatulence
- Nausea
- Vomiting

**RENAL IMPAIRMENT**
- Avoid in severe impairment. Close monitoring required in renal impairment—high risk of hyperkalaemia.

**DIRECTIONS FOR ADMINISTRATION**
- To be dissolved in water before administration.

**PRESCRIBING AND DISPENSING INFORMATION**
- Tablets do not contain chloride.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug.

**Effervescent tablet**

**CAUTIONARY AND ADVISORY LABELS**

**Potassium bicarbonate with potassium acid tartrate**
- 300 mg, 500 mg

**Potassium acid tartrate**
- 56 tablet

**DIRECTIONS FOR ADMINISTRATION**
- To be dissolved in water before administration.

**PRESCRIBING AND DISPENSING INFORMATION**
- Tablets do not contain chloride.

**Potassium chloride**

**INDICATIONS AND DOSE**
Prevention of hypokalaemia (patients with normal diet)

**BY MOUTH**
- Adult: 2–4 g daily in divided doses

**CONTRA-INDICATIONS**
- Plasma-potassium concentration above 5 mmol/litre

**CAUTIONS**
- With intravenous use: Seek specialist advice in very severe potassium depletion or difficult cases
- With oral use: Cardiac disease; elderly

**INTERACTIONS**
- Appendix 1 (potassium salts)

**SIDE-EFFECTS**
- Common or very common
- Abdominal pain, diarrhoea, flatulence, nausea, vomiting
- Frequency not known
- With intravenous use: heart toxicity (with rapid infusion)

**RENAI IMPAIRMENT**
- Smaller doses must be used in the prevention of hypokalaemia, to reduce the risk of hyperkalaemia. Avoid in severe impairment. Close monitoring required in renal impairment—high risk of hyperkalaemia.

**MONITORING REQUIREMENTS**
- Regular monitoring of plasma-potassium concentration is essential in those taking potassium supplements.
- With intravenous use: ECG monitoring should be performed in difficult cases.

**DIRECTIONS FOR ADMINISTRATION**
- With intravenous use: Potassium chloride concentrate must be diluted with not less than 50 times its volume of sodium chloride intravenous infusion 0.9% or other suitable diluent and mixed well. Ready-mixed infusion solutions should be used where possible; alternatively, potassium chloride concentrate as ampoules containing 1.5 g (K+ 20 mmol) in 10 mL, is thoroughly mixed with 500 mL of sodium chloride 0.9% intravenous infusion and given slowly over 2 to 3 hours with specialist advice and ECG monitoring in difficult cases. For peripheral intravenous infusion, the concentration of potassium should not usually exceed 40 mmol/L. Higher concentrations of potassium chloride may be given in very severe depletion, but require specialist advice.
- With oral use: Potassium salts are preferably given as a liquid (or effervescent) preparation, they should be given as the chloride (the use of effervescent potassium tablets BPC 1968 should be restricted to hyperchloraemic states).

**PRESCRIBING AND DISPENSING INFORMATION**
- Potassium Tablets Do not confuse Effervescent Potassium Tablets BPC 1968 with effervescent potassium chloride tablets. Effervescent Potassium Tablets BPC 1968 do not contain chloride ions and their use should be restricted to hyperchloraemic states. Kay-Cee-L contains 1mmol/1ml of each potassium and chloride.

**PATIENT AND CARER ADVICE**
- Salt substitutes: A number of salt substitutes which contain significant amounts of potassium chloride are readily available as health food products (e.g. LoSalt® and Ruthmol®). These should not be used by patients with renal failure as potassium intoxication may result.
3 Metabolic disorders

3.1 Acute porphyrías

Acute porphyrías

The acute porphyrías (acute intermittent porphyria, variegate porphyria, hereditary coproporphyria, and 5-aminolevulinic acid dehydratase deficiency porphyria) are hereditary disorders of haem biosynthesis; they have a prevalence of about 1 in 10,000 of the population.

Great care must be taken when prescribing for patients with acute porphyria, since certain drugs can induce acute porphyrinic crises. Since acute porphyrías are hereditary, relatives of affected individuals should be screened and advised about the potential danger of certain drugs.

Treatment of serious or life-threatening conditions should not be withheld from patients with acute porphyria. When there is no safe alternative, treatment should be started and urinary porphobilinogen excretion should be measured regularly; if it increases or symptoms occur, the drug can be withdrawn and the acute attack treated. If an acute attack of porphyria occurs during pregnancy, contact an expert porphyria service for further advice.

Haem arginate p. 865 is administered by short intravenous infusion as haem replacement in moderate, severe, or unremitting acute porphyria crises.

In the United Kingdom the National Acute Porphyria Service (NAPS) provides clinical support and treatment with haem arginate from three centres (University Hospital of Wales, Addenbrooke’s Hospital, and King’s College Hospital). To access the service telephone (029) 2074 7747 and ask for the Acute Porphyria Service.

Drugs unsafe for use in acute porphyrías

The following list contains drugs on the UK market that have been classified as ‘unsafe’ in porphyria because they have been shown to be porphyrinogenic in animals or in vitro, or have been associated with acute attacks in patients. Absence of a drug from the following lists does not necessarily imply that the drug is safe. For many drugs no information about porphyria is available.

An up-to-date list of drugs considered safe in acute porphyrías is available at www.wmic.wales.nhs.uk/porphyria_info.php. Further information may be obtained from www.porphyria-europe.org and also from:

Welsh Medicines Information Centre

University Hospital of Wales
Cardiff
(029) 2074 2979/3877

Quite modest changes in chemical structure can lead to changes in porphyrinogenicity but where possible general statements have been made about groups of drugs; these should be checked first.

Unsafe Drug Groups (check first)

- Alkylating drugs (contact Welsh Medicines Information Centre for further advice)
- Anabolic steroids
- Antidepressants (includes tricyclic (and related) antidepressants and MAOIs; fluoxetine, duloxetine, venlafaxine, and trazadone thought to be safe)
- Antihistamines (alimemazine, chlorphenamine, desloratadine, fexofenadine, ketotifen, loratadine, and promethazine thought to be safe)
- Barbiturates (includes primidone and thiopental)
- Calcium channel blockers (amlodipine, felodipine, and nifedipine thought to be safe)
- Contraceptives, hormonal (progestogens are more porphyrinogenic than oestradiols; oestradiols may be safe at least in replacement doses. Progestogens should be avoided whenever possible by all women susceptible to acute porphyria; however, when non-hormonal contraception is inappropriate, progestogens may be used with extreme caution if the potential benefit outweighs risk. The risk of an acute attack is greatest in women who have had a previous attack or are aged under 30 years. Long-acting progestogen preparations should never be used in those at risk of acute porphyria.)
- Ergot derivatives (includes ergometrine (oxytocin probably safe) and pergolide)
- Hormone replacement therapy (progestogens are more porphyrinogenic than oestradiols; oestradiols may be safe at least in replacement doses. Progestogens should be avoided whenever possible by all women susceptible to acute porphyria; however, when non-hormonal contraception is inappropriate, progestogens may be used with extreme caution if the potential benefit outweighs risk. The risk of an acute attack is greatest in women who have had a previous attack or are aged under 30 years. Long-acting progestogen preparations should never be used in those at risk of acute porphyria.)
- Imidazole antifungals (applies to oral and intravenous use; topical antifungals are thought to be safe due to low systemic exposure)
- Non-nucleoside reverse transcriptase inhibitors (contact Welsh Medicines Information Centre for further advice)
- Progestogens (progestogens are more porphyrinogenic than oestradiols; oestradiols may be safe at least in replacement doses. Progestogens should be avoided whenever possible by all women susceptible to acute porphyria; however, when non-hormonal contraception is inappropriate, progestogens may be used with extreme caution if the potential benefit outweighs risk. The risk of an acute attack is greatest in women who have had a previous attack or are aged under 30 years. Long-acting progestogen preparations should never be used in those at risk of acute porphyria.)
- Sulphonamides (includes co-trimoxazole and sulphasalazine)
- Sulfonamides (includes co-trimoxazole and sulphasalazine)
- Sulfonylureas (glipizide and glimepiride are thought to be safe)
- Taxanes (contact Welsh Medicines Information Centre for further advice)
Thiazolidinediones (contact Welsh Medicines Information Centre for further advice)

Triazole antifungals (applies to oral and intravenous use; topical antifungals are thought to be safe due to low systemic exposure)

Unsafe Drugs (check groups above first)

- Aceclofenac
- Alcohol
- Amiodarone
- Aprepitant (contact Welsh Medicines Information Centre for further advice)
- Artemether with lumefantrine
- Bexarotene
- Bosentan
- Bromocriptine
- Buspirone
- Cabergoline
- Carbamazepine
- Chloramphenicol
- Chloroform (small amounts in medicines probably safe)
- Clindamycin
- Cocaine
- Colistimethate sodium
- Danazol
- Dapsone
- Disopyramide
- Disulfiram
- Erythromycin
- Ethosuximide
- Ethylmorphine
- Flupentixol
- Flutamide
- Fosaprepitant (contact Welsh Medicines Information Centre for further advice)
- Fosphenytoin
- Griseofulvin
- Hydralazine
- Indapamide
- Isomethyptene mucate
- Isoniazid (safety uncertain, contact Welsh Medicines Information Centre for further advice)
- Ketamine
- Mefenamic acid (may be used with caution if safer alternative not available)
- Meprobamate
- Methyldopa
- Metolazone
- Metoclopramide
- Milipristone
- Minoxidil (may be used with caution if safer alternative not available)
- Mitotane
- Mouldidic acid
- Nitrazepam
- Nitrofurantoin
- Orphenadrine
- Oxcarbazepine
- Oxysbutynin
- Pentazocine (buprenorphine, codeine, diamorphine, dihydrocodeine, fentanyl, methadone, morphine, oxycodone, pethidine, and tramadol are thought to be safe)
- Pentoxifylline
- Phenoxybenzamine
- Phenytoin
- Pimelidilimil
- Porfimer
- Raloxifene
- Rifabutin (safety uncertain, contact Welsh Medicines Information Centre for further advice)
- Rifampicin
- Rituxole
- Risperidone
- Selegiline
- Spiranolactone
- Sulfapyrazine
- Tamoxifen
- Telithromycin
- Temoporfin
- Tiagabine
- Tibolone
- Tinidazole
- Topiramate
- Toremifene
- Trimethoprim
- Valproate
- Zidovudine (contact Welsh Medicines Information Centre for further advice)

Zuclopenthixol

HAEM DERIVATIVES

Haem arginate

(Human hemin)

INDICATIONS AND DOSE

Acute porphyrias | Acute intermittent porphyria | Porphyria variegata | Hereditary coproporphyria

BY INTRAVENOUS INFUSION

- Adult: Initially 3 mg/kg once daily for 4 days, if response inadequate, repeat 4-day course with close biochemical monitoring; maximum 250 mg per day

SIDE-EFFECTS

- Common or very common pain at injection site – thrombophlebitis at injection site
- Rare Fever - hypersensitivity reactions
- Frequency not known Headache

PREGNANCY

Manufacturer advises avoid unless essential.

BREAST FEEDING

Manufacturer advises avoid unless essential—no information available.

DIRECTIONS FOR ADMINISTRATION For intravenous infusion (Normosang®), give intermittently in Sodium chloride 0.9%; dilute requisite dose in 100 mL infusion fluid in glass bottle and give over at least 30 minutes through a filter via large antecubital or central vein; administer within 1 hour after dilution.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for infusion

- Normosang (Orphan Europe (UK) Ltd)

Haem arginate 25 mg per 1 ml Normosang 250mg/10ml solution for infusion ampoules | 4 ampoule (pak) £1,737.00
3.2 Carnitine deficiency

CARNITINE DERIVATIVES

Levocarnitine (Carnitine)

INDICATIONS AND DOSE
Primary carnitine deficiency due to inborn errors of metabolism

BY MOUTH
- Adult: Up to 200 mg/kg daily in 2–4 divided doses; maximum 3 g per day
- Adult: Up to 100 mg/kg daily in 2–4 divided doses, to be administered over 2–3 minutes

Secondary carnitine deficiency in haemodialysis patients initially by slow intravenous injection
- Adult: 20 mg/kg, to be administered over 2–3 minutes, after each dialysis session, dosage adjusted according to plasma-carnitine concentration, then (by mouth) maintenance 1 g daily, administered if benefit is gained from first intravenous course

CAUTIONS
- Diabetes mellitus
- Abdominal pain · body odour · diarrhoea · nausea · vomiting

SIDE-EFFECTS
- Appropriate to use; no evidence of during first week and after any dose increase. Side-effects may be dose-related.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances
- Rash
- Rhinorrhoea
- Sleep disturbances
- Syncope
- Tachycardia
- Taste disturbances
- Tinnitus
- Tremor
- Urticaria

INDICATIONS AND DOSE

RENAL IMPAIRMENT
- Appropriate to use; no evidence of during first week and after any dose increase.
- Some side-effects may be dose-related.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances

SIDE-EFFECTS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances
- Rash
- Rhinorrhoea
- Sleep disturbances
- Syncope
- Tachycardia
- Taste disturbances
- Tinnitus
- Tremor
- Urticaria

INTERACTIONS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances

SIDE-EFFECTS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances
- Rash
- Rhinorrhoea
- Sleep disturbances
- Syncope
- Tachycardia
- Taste disturbances
- Tinnitus
- Tremor
- Urticaria

DRUG ACTION
- Agalsidase alfa, an enzyme produced by recombinant DNA technology are licensed for long-term enzyme replacement therapy in Fabry’s disease (a lysosomal storage disorder caused by deficiency of alpha-galactosidase A).

INDICATIONS AND DOSE

Fabry’s disease (specialist use only)
- Adult: 200 micrograms/kg every 2 weeks

INTERACTIONS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances

SIDE-EFFECTS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances
- Rash
- Rhinorrhoea
- Sleep disturbances
- Syncope
- Tachycardia
- Taste disturbances
- Tinnitus
- Tremor
- Urticaria

Fabry’s disease (specialist use only)
- Adult: 200 micrograms/kg every 2 weeks

INTERACTIONS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances

SIDE-EFFECTS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances
- Rash
- Rhinorrhoea
- Sleep disturbances
- Syncope
- Tachycardia
- Taste disturbances
- Tinnitus
- Tremor
- Urticaria

Agalsidase beta

ENZYMES

Agalsidase alfa

- Drug action: Agalsidase alfa, an enzyme produced by recombinant DNA technology are licensed for long-term enzyme replacement therapy in Fabry’s disease (a lysosomal storage disorder caused by deficiency of alpha-galactosidase A).

INDICATIONS AND DOSE

Fabry’s disease (specialist use only)
- Adult: 200 micrograms/kg every 2 weeks

INTERACTIONS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances

SIDE-EFFECTS
- Appropriate to use; no evidence of during first week and after any dose increase.
- Nausea
- Abdominal pain
- Diabetes mellitus
- Intestinal disturbances
- Rash
- Rhinorrhoea
- Sleep disturbances
- Syncope
- Tachycardia
- Taste disturbances
- Tinnitus
- Tremor
- Urticaria

Agalsidase beta

- Drug action: Agalsidase beta, an enzyme produced by recombinant DNA technology are licensed for long-term enzyme replacement therapy in Fabry’s disease (a lysosomal storage disorder caused by deficiency of alpha-galactosidase A).
Gaucher’s disease 867

3.4 Gaucher’s disease

Drugs used for Gaucher’s disease not listed below; Miglustat, p. 870

ENZYMES

Imiglucerase

DRUG ACTION Imiglucerase is an enzyme produced by recombinant DNA technology that is administered as enzyme replacement therapy for non-neurological manifestations of type I or type III Gaucher’s disease, a familial disorder affecting principally the liver, spleen, bone marrow, and lymph nodes.

INDICATIONS AND DOSE

Non-neurological manifestations of type I Gaucher’s disease (specialist use only) | Non-neurological manifestations of type III Gaucher’s disease (specialist use only)

BY INTRAVENOUS INFUSION

Adult: Initially 60 units/kg every 2 weeks; maintenance, adjusted according to response, doses as low as 15 units/kg once every 2 weeks may improve haematological parameters and organomegaly

SIDE-EFFECTS

Common or very common Angioedema · backache · cyanosis · flushing · hypersensitivity reactions · hypotension · paraesthesia · pruritus · rash · rhinorrhea · sleep disturbances · syncope · tachycardia · taste disturbances · tinnitus · tremor · urticaria

Uncommon Abdominal cramps · arthralgia · diarrhoea · dizziness · fatigue · fever · headache · injection-site reactions · nausea · vomiting

PREGNANCY Manufacturer advises use with caution—limited information available.

BREAST FEEDING No information available.

MONITORING REQUIREMENTS

Monitor for immunoglobulin G (IgG) antibodies to imiglucerase.

When stabilised, monitor all parameters and response to treatment at intervals of 6–12 months.

DIRECTIONS FOR ADMINISTRATION For intravenous infusion (Cerezyme®), give intermittently in Sodium chloride 0.9%; initially reconstitute with water for injections (200 units in 5.1 mL, 400 units in 10.2 mL) to give 40 units/mL solution; dilute requisite dose with infusion fluid to a final volume of 100–200 mL and give initial dose at a rate not exceeding 0.5 units/kg/minute, subsequent doses to be given at a rate not exceeding 1 unit/kg/minute; administer within 3 hours after reconstitution.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for infusion

ELECTROLYTES: May contain Sodium

Cerezyme (Genzyme Therapeutics Ltd) Imiglucerase 400 unit Cerezyme 400 unit powder for solution for infusion vials | 1 vial | £1,071.29

Velaglucerase alfa

DRUG ACTION Velaglucerase alfa is an enzyme produced by recombinant DNA technology that is administered as enzyme replacement therapy for the treatment of type I Gaucher’s disease.

INDICATIONS AND DOSE

Type I Gaucher’s disease (specialist use only) BY INTRAVENOUS INFUSION

Adult: Initially 60 units/kg every 2 weeks; adjusted according to response to 15–60 units/kg every 2 weeks

SIDE-EFFECTS Abdominal pain · arthralgia · back pain · bone pain · dizziness · flushing · headache · hypersensitivity reactions · hypotension · paraesthesia · pruritus · rash · tachycardia · taste disturbances · tinnitus · tremor · urticaria

MONITORING REQUIREMENTS Monitor immunoglobulin G (IgG) antibody concentration in severe infusion-related reactions or if there is a lack or loss of effect with velaglucerase alfa.

DIRECTIONS FOR ADMINISTRATION For intravenous infusion (VPRIV®), give intermittently in Sodium chloride 0.9%; reconstitute each 400-unit vial with 4.3 mL water for injections to produce a 100 units/mL solution; dilute requisite dose in 100 mL infusion fluid; give over 60
3.6 **Mucopolysaccharidosis**

### Galsulfase

**DRUG ACTION**
Galsulfase is a recombinant form of human N-acetylgalactosamine-4-sulfatase.

**INDICATIONS AND DOSE**

- **Mucopolysaccharidosis VI** (specialist use only)
  - **BY INTRAVENOUS INFUSION**
    - Adult: 1 mg/kg once weekly

**SIDE-EFFECTS, FURTHER INFORMATION**

Infusion-related reactions
Infusion-related reactions often occur, they can be managed by slowing the infusion rate or interrupting the infusion, and can be minimised by pre-treatment with an antihistamine and an antipyretic. Recurrent infusion-related reactions may require pre-treatment with a corticosteroid—consult product literature for details.

- **PREGNANCY**
  - Manufacturer advises avoid unless essential.

- **BREAST FEEDING**
  - Manufacturer advises avoid—no information available.

**DIRECTIONS FOR ADMINISTRATION**
For intravenous infusion (Naglazyme®), give intermittently in Sodium chloride 0.9%; dilute requisite dose with infusion fluid to final volume of 250 mL and mix gently; infuse through a 0.2 micron in-line filter; give approx. 2.5% of the total volume over 1 hour, then infuse remaining volume over next 3 hours; if body-weight under 20 kg and at risk of fluid overload, dilute requisite dose in 100 mL infusion fluid and give over at least 4 hours.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**
- Naglazyme (BioMarin Europe Ltd)
  - Galsulfase 1 mg per 1 ml Naglazyme 5mg/5ml solution for infusion vials | 1 vial no price available

### Idursulfase

**DRUG ACTION**
Idursulfase is an enzyme produced by recombinant DNA technology licensed for long-term replacement therapy in mucopolysaccharidosis II (Hunter syndrome), a lysosomal storage disorder caused by deficiency of idurionate-2-sulfatase.

**INDICATIONS AND DOSE**

- **Mucopolysaccharidosis II** (specialist use only)
  - **BY INTRAVENOUS INFUSION**
    - Adult: 500 micrograms/kg once weekly

**CAUTIONS**
Acute febrile respiratory illness (consider delaying treatment) - infusion-related reactions can occur - severe respiratory disease
Laronidase

**DRUG ACTION** Laronidase is an enzyme produced by recombinant DNA technology licensed for long-term replacement therapy in the treatment of non-neuropathological manifestations of mucopolysaccharidosis I, a lysosomal storage disorder caused by deficiency of alpha-L-iduronidase.

**INDICATIONS AND DOSE**

Non-neuropathological manifestations of mucopolysaccharidosis I (specialist use only)

**BY INTRAVENOUS INFUSION**

- Adult: 100 units/kg once weekly

**CAUTIONS** Infusion-related reactions can occur

**INTERACTIONS** → Appendix 1 (laronidase).

**SIDE-EFFECTS**

- Common or very common Abdominal pain, abdominal distension, diarrhoea, dyspepsia, headache, rash, flushing, pruritus, tachycardia, vomiting.
- Less common Abdominal distension, breathlessness, dyspnoea, flushing, hypotension, hypovolaemia, hypothermia, hypertension, pruritus, rash.
- Frequency not known Alcoholic hepatitis, anaemia, angioedema, asthma, allergic reactions, angina, anaphylaxis, anaphylactoid reactions, angina, arrhythmia, arthralgia, chest pain, diarrhea, dyspepsia, dyspnoea, dysuria, eczema, erythema, fever, flushing, hypotension, hypertension, hypovolaemia, hypothermia, pruritus, rash, urticaria.

**SIDE-EFFECTS, FURTHER INFORMATION**

Infusion-related reactions may occur, can be managed by slowing the infusion rate or interrupting the infusion, and can be minimised by pre-treatment with an antihistamine and an antipyretic. Recurrent infusion-related reactions may require pre-treatment with a corticosteroid—consult product literature for details.

**CONCESSION AND CONTRACEPTION** Contra-indicated in women of child-bearing potential.

**PREGNANCY** Manufacturer advises avoid.

**BREAST FEEDING** Manufacturer advises avoid—no information available.

**MONITORING REQUIREMENTS** Monitor immunoglobulin G (IgG) antibody concentration.

**DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Aldurazyme®), give intermittently in Sodium chloride 0.9%; body-weight under 20 kg, use 100 mL infusion fluid; body-weight over 20 kg use 250 mL infusion fluid; withdraw volume of infusion fluid equivalent to volume of laronidase concentrate being added; give through in-line filter (0.22 micron) initially at a rate of 2 units/kg/hour then increase gradually every 15 minutes to max. 45 units/kg/hour.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

- Elaprase (Shire Pharmaceuticals Ltd) ▼
  - Idursulfase 2 mg per 1 mL Elaprase 6mg/3ml concentrate for solution for infusion vials | 1 vial (£35) 1,985.00

**3.7 Nephropathic cystinosis**

**AMINO ACIDS AND DERIVATIVES**

**Mercaptamine**

**(Cysteamine)**

**INDICATIONS AND DOSE**

Nephropathic cystinosis (specialist use only)

**BY MOUTH**

- Adult (body-weight 50 kg and above): Initially one-sixth to one-quarter of the expected maintenance dose, increased gradually over 4–6 weeks to avoid intolerance, maintenance 2 g daily in 4 divided doses

**SAFE PRACTICE**

Mercaptamine has been confused with mercaptoacetamide; care must be taken to ensure the correct drug is prescribed and dispensed.

**CAUTIONS**

Dose of phosphate supplement may need to be adjusted if transferring from phoshocysteamine to mercaptamine

**SIDE-EFFECTS**

- Common or very common Abdominal pain, anorexia, breathlessness, body odour, diarrhoea, dyspepsia, encephalopathy, fever, gastroenteritis, headache, malaise, nausea, rash, vomiting.
- Uncommon Drowsiness, gastro-intestinal ulcer, hallucinations, leucopenia, nephrotic syndrome, nervousness, seizures.

**ALLERGY AND CROSS-SENSITIVITY**

Contraindicated if history of hypersensitivity to penicillamine.

**PREGNANCY** Avoid—teratogenic and toxic in animal studies.

**BREAST FEEDING** Avoid.

**MONITORING REQUIREMENTS** Leucocyte-cystine concentration and haematological monitoring required—consult product literature.
3.8 Niemann-Pick type C disease

GLUCOSYLCERAMIDE SYNTHASE INHIBITORS

Miglustat

**DRUG ACTION** Miglustat is an inhibitor of glucosylceramide synthase.

**INDICATIONS AND DOSE**

Mild to moderate type I Gaucher’s disease for whom enzyme replacement therapy is unsuitable (under expert supervision)

*BY MOUTH*

- **Adult:** 100 mg 3 times a day, reduced if not tolerated to 100 mg 1–2 times a day

Treatment of progressive neurological manifestations of Niemann-Pick type C disease (under expert supervision)

*BY MOUTH*

- **Adult:** 200 mg 3 times a day

**SIDE-EFFECTS** Abdominal pain · anemia · anorexia · ataxia · chills · constipation · decreased libido · depression · diarrhoea · dizziness · dyspepsia · flatulence · headache · hypoesthesia · insomnia · malaise · muscle spasm · muscle weakness · nausea · paraesthesia · peripheral neuropathy · thrombocytopenia · tremor · vomiting · weight changes

**CONCEPTION AND CONTRACEPTION** Effective contraception must be used during treatment. Men should avoid fathering a child during and for 3 months after treatment.

**PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

**BREAST FEEDING** Manufacturer advises avoid—no information available.

**HEPATIC IMPAIRMENT** No information available—manufacturer advises caution.

**RENAL IMPAIRMENT** For Gaucher’s disease initially 100 mg twice daily if eGFR 50–70 mL/minute/1.73 m². Initially 100 mg once daily if eGFR 30–50 mL/minute/1.73 m². For Niemann-Pick type C disease, initially 200 mg twice daily if eGFR 50–70 mL/minute/1.73 m². Initially 100 mg twice daily if eGFR 30–50 mL/minute/1.73 m². Avoid if eGFR less than 30 mL/minute/1.73 m².

**MONITORING REQUIREMENTS**

- Monitor cognitive and neurological function.
- Monitor growth and platelet count in Niemann-Pick type C disease.

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug.

---

870 Metabolic disorders

- PRESCRIBING AND DISPENSING INFORMATION

  Miglustat has a very unpleasant taste and smell, which can affect compliance.

- MEDICINAL FORMS

  There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

  **Capsule**

  - **Cautions and Advisory Labels 21**

    - **Cystagon (Orphan Europe (UK) Ltd)**
      - **Miglustat (as Miglustat bitartrate) 50 mg**
        - Cystagon 50mg capsules | 100 capsule (£3.00) £70.00
      - **Miglustat (as Miglustat bitartrate) 150 mg**
        - Cystagon 150mg capsules | 100 capsule (£3.00) £190.00

---

3.9 Pompe disease

**ENZYMES**

**Alglucosidase alfa**

**DRUG ACTION** Alglucosidase alfa is an enzyme produced by recombinant DNA technology licensed for long-term replacement therapy in Pompe disease, a lysosomal storage disorder caused by deficiency of acid alpha-glucosidase.

**INDICATIONS AND DOSE**

Pompe disease (specialist use only)

- **BY INTRAVENOUS INFUSION**

  - **Adult:** 20 mg/kg every 2 weeks

**CAUTIONS**

- Cardiac dysfunction · infusion-related reactions—consult product literature · respiratory dysfunction

**SIDE-EFFECTS**

- Common or very common Agitation · anaphylaxis · antibody formation · blood pressure changes · bronchospasm · chest discomfort · cold extremities · cough · cyanosis · diarrhoea · dizziness · facial oedema · fatigue · flushing · headache · hypersensitivity reactions · injection-site reactions · irritability · muscle spasm · myalgia · nausea · paraesthesia · pruritus · pyrexia · rash · restlessness · sweating · tachycardia · tachypnoea · tremor · urticaria · vomiting

- **Frequency not known** Infusion-related reactions · necrotising skin lesions · severe skin reactions · ulcerative skin lesions

**SIDE-EFFECTS, FURTHER INFORMATION**

Infusion-related reactions Infusion-related reactions very common, calling for use of anti-histamine, antipyretic, or corticosteroid; consult product literature for details.

**PREGNANCY**

- Toxicity in animal studies, but treatment should not be withheld.

**BREAST FEEDING**

- Manufacturer advises avoid—no information available.

**MONITORING REQUIREMENTS**

- Monitor closely if cardiac dysfunction.
- Monitor closely if respiratory dysfunction.
- Monitor immunoglobulin G (IgG) antibody concentration.

**DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Myozyme®), give intermittently in Sodium chloride 0.9%; reconstitute 50 mg with 10.3 mL water for injections to produce 5 mg/mL solution; gently rotate vial without shaking; dilute requisite dose with infusion fluid to give a final concentration of 0.5–4 mg/mL; give through a low protein-binding in-line filter (0.2 micron) at an initial rate of 1 mg/kg/hour increased by 2 mg/kg/hour every 30 minutes to max. 7 mg/kg/hour.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**

- **Myozyme (Genzyme Therapeutics Ltd)**
  
  Alglucosidase alfa 50 mg Myozyme 50mg powder for concentrate for solution for infusion vials | 1 vial (£3.56) £156.06 (Hospital only)
3.10 Tyrosinaemia type I

4-HYDROXYPHENYLPYRUVATE DIOXYGENASE INHIBITORS

Nitisinone (NTBC)

INDICATIONS AND DOSE

Hereditary tyrosinaemia type I (in combination with dietary restriction of tyrosine and phenylalanine) (specialist use only)

BY MOUTH

- Adult: Initially 500 micrograms/kg twice daily, adjusted according to response; maximum 2 mg/kg per day

- SIDE-EFFECTS
  - Common or very common Conjunctivitis - corneal opacity - eye pain - granulocytopenia - keratitis - leucopenia - photophobia - thrombocytopenia
  - Uncommon Blepharitis - erythematous rash - exfoliative dermatitis - leucocytosis - pruritus

- PREGNANCY
  - Manufacturer advises avoid unless potential benefit outweighs risks—no information available.

- BREAST FEEDING
  - Manufacturer advises avoid—present in milk in animal studies.

- MEDICINAL FORMS
  - There can be variation in the licensing of different medicines containing the same drug.

  **Capsule**
  - Orfadin (Swedish Orphan Biovitrum Ltd)
  - Nitisinone 2 mg Orfadin 2mg capsules | 60 capsule PON £564.00
  - Nitisinone 5 mg Orfadin 5mg capsules | 60 capsule PON £1,127.00
  - Nitisinone 10 mg Orfadin 10mg capsules | 60 capsule PON £2,062.00

3.11 Urea cycle disorders

AMINO ACIDS AND DERIVATIVES

Carglumic acid

INDICATIONS AND DOSE

Hyperammonaemia due to N-acetylglutamate synthase deficiency (under expert supervision)

BY MOUTH

- Adult: Initially 50–125 mg/kg twice daily, to be taken immediately before food, dose adjusted according to plasma-ammonia concentration; maintenance 5–50 mg/kg twice daily, the total daily dose may alternatively be given in 3–4 divided doses

Hyperammonaemia due to organic acidemia (under expert supervision)

BY MOUTH

- Adult: Initially 50–125 mg/kg twice daily, to be taken immediately before food, dose adjusted according to plasma-ammonia concentration, the total daily dose may alternatively be given in 3–4 divided doses

Important safety information

EMERGENCY MANAGEMENT OF UREA CYCLE DISORDERS

For further information on the emergency management of urea cycle disorders consult the British Inherited Metabolic Disease Group (BIMDG) website at www.bimdg.org.uk.

- SIDE-EFFECTS
  - Common or very common Sweating
  - Uncommon Bradycardia - diarrhoea - pyrexia - vomiting

- PREGNANCY
  - Manufacturer advises avoid unless essential—no information available.

- BREAST FEEDING
  - Manufacturer advises avoid—present in milk in animal studies.

- DIRECTIONS FOR ADMINISTRATION
  - Dispersible tablets must be dispersed in at least 5–10 mL of water and taken orally immediately, or administered via a nasogastric tube.

- MEDICINAL FORMS
  - There can be variation in the licensing of different medicines containing the same drug.

**Dispersible tablet**

CAUTIONARY AND ADVISORY LABELS 13

- Carbaglu (Orphan Europe (UK) Ltd)
  - Carglumic acid 200 mg Carbaglu 200mg dispersible tablets (sugar-free) | 5 tablet PON £299.00 (sugar-free) | 60 tablet PON £3,499.00

AMMONIA LOWERING DRUGS

Sodium phenylbutyrate

INDICATIONS AND DOSE

Long-term treatment of urea cycle disorders (as adjunctive therapy in all patients with neonatal-onset disease and in those with late-onset disease who have a history of hyperammonaemic encephalopathy) (under expert supervision)

BY MOUTH

- Adult: 9.9–13 g/m² daily in divided doses, with meals; maximum 20 g per day

Important safety information

EMERGENCY MANAGEMENT OF UREA CYCLE DISORDERS

For further information on the emergency management of urea cycle disorders consult the British Inherited Metabolic Disease Group (BIMDG) website at www.bimdg.org.uk.

- CAUTIONS
  - Congestive heart failure (preparations contain significant amounts of sodium)

- INTERACTIONS
  - Appendix 1 (sodium phenylbutyrate).

- SIDE-EFFECTS
  - Common or very common Alkalosis - blood disorders - body odour - decreased appetite - depression - gastro-intestinal disturbances - headache - irritability - menstrual disorders - metabolic acidosis - oedema - rash - renal tubular acidosis - syncope - taste disturbance - weight gain
  - Uncommon Arrhythmias - pancreatitis - peptic ulcer - rectal bleeding

SIDE-EFFECTS, FURTHER INFORMATION

Gastro-intestinal side-effects may be reduced by giving smaller doses more frequently.

- CONCEPTION AND CONTRACEPTION
  - Manufacturer advises adequate contraception during administration in women of child-bearing potential.

- PREGNANCY
  - Avoid—toxicity in animal studies.
3.12 Wilson’s disease

Drugs used for Wilson’s disease not listed below; Penicillamine, p. 896

COPPER ABSORPTION INHIBITORS

Zinc acetate

**Drug Action**  Zinc prevents the absorption of copper in Wilson’s disease.

**INDICATIONS AND DOSE**

**Wilson’s disease (initiated under specialist supervision)**

*BY MOUTH*

- Adult: 50 mg 3 times a day (max. per dose 50 mg 5 times a day), adjusted according to response

*Dose equivalence and conversion*

Doses expressed as elemental zinc.

**Pharmacokinetics**

Symptomatic Wilson’s disease patients should be treated initially with a chelating agent because zinc has a slow onset of action. When transferring from chelating treatment to zinc maintenance therapy, chelating treatment should be co-administered for 2–3 weeks until zinc produces its maximal effect.

**Caution** Portal hypertension (risk of hepatic decompensation when switching from chelating agent)

**Interactions** → Appendix 1 (zinc).

**Side-effects**

- Common or very common  Gastric irritation (usually transient)
- Uncommon  Leucopenia - sideroblastic anaemia

**Further Information**

Transient gastric irritation may be reduced if first dose is taken mid-morning or with a little protein.

**Pregnancy**

Reduce dose to 25 mg 3 times daily adjusted according to plasma-copper concentration and urinary copper excretion.

**Breast-feeding**

Manufacturer advises avoid; present in milk—may cause zinc-induced copper deficiency in infant.

372 Trace element deficiencies

**Blood and nutrition**

- **Breast-feeding**  Manufacturer advises avoid—no information available.
- **Hepatic Impairment**  Manufacturer advises use with caution.
- **Renal Impairment**  Manufacturer advises use with caution (preparations contain significant amounts of sodium).
- **Directions for Administration**  Granules should be mixed with food before taking. Pheburane granules must not be administered by nasogastric or gastrostomy tubes.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, capsule, tablet.

**Tablet**

- **Amnomaps** (Swedish Orphan Biovitrum Ltd) Sodium phenylbutyrate 500 mg Amnomaps 500mg tablets 250 tablet £493.00
- **Pheburane** (Lucane Pharma Ltd) Sodium phenylbutyrate 483 mg per 1 gram Pheburane 483mg/g granules 174 gram £331.00

**Granules**

- **Amnomaps** (Swedish Orphan Biovitrum Ltd) Sodium phenylbutyrate 940 mg per 1 gram Amnomaps 940mg/g granules (sugar-free) 266 gram £660.00
- **Pheburane** (Lucane Pharma Ltd) Sodium phenylbutyrate 483 mg per 1 gram Pheburane 483mg/g granules 174 gram £331.00

**Pharmacokinetics**

When transferring from chelating agent because zinc has a slow onset of action. When transferring from chelating to zinc maintenance therapy, chelating on treatment to zinc maintenance therapy, chelating treatment should be co-administered for 2–3 weeks until zinc produces its maximal effect.

**Caution** Portal hypertension (risk of hepatic decompensation when switching from chelating agent)

**Interactions** → Appendix 1 (zinc).

**Side-effects**

- Common or very common  Gastric irritation (usually transient)
- Uncommon  Leucopenia - sideroblastic anaemia

**Further Information**

Transient gastric irritation may be reduced if first dose is taken mid-morning or with a little protein.

**Pregnancy**

Reduce dose to 25 mg 3 times daily adjusted according to plasma-copper concentration and urinary copper excretion.

**Breast-feeding**  Manufacturer advises avoid; present in milk—may cause zinc-induced copper deficiency in infant.

**Monitoring requirements**

Monitor full blood count and serum cholesterol.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 23

- **Wilzin** (Orphan Europe (UK) Ltd) Zinc (as Zinc acetate) 25 mg Wilzin 25mg capsules 250 capsule £132.00
- Zinc (as Zinc acetate) 50 mg Wilzin 50mg capsules 250 capsule £242.00

**Copper Chelators**

**Trientine dihydrochloride**

**Indications and dose**

Wilson’s disease in patients intolerant of penicillamine

*By mouth*

- Adult: 1.2–2.4 g daily in 2–4 divided doses, adjusted according to response, to be taken before food

**Interactions**

- Common or very common  Nausea - rash
- Very rare  Anaemia
- Frequency not known  Colitis - duodenitis

**Pregnancy**

Teratogenic in animal studies—use only if benefit outweighs risk. Monitor maternal and neonatal serum-copper concentrations.

**Prescribing and dispensing information**

Trientine is not an alternative to penicillamine for rheumatoid arthritis or cystinuria. Penicillamine-induced systemic lupus erythematosus may not resolve on transfer to trientine.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 6, 22

- **Trientine Dihydrochloride** (Non-proprietary)
  - Trientine dihydrochloride 300 mg Trientine dihydrochloride 300mg capsules 100 capsule no price available

4 Trace element deficiencies

**Trace elements**

**Selenium**

Selenium deficiency can occur as a result of inadequate diet or prolonged parenteral nutrition. A selenium supplement should not be given unless there is good evidence of deficiency.

**Zinc**

Zinc supplements should not be given unless there is good evidence of deficiency (hypoproteinaemia spuriously lowers plasma-zinc concentration) or in zinc-losing conditions. Zinc deficiency can occur as a result of inadequate diet or malabsorption; excessive loss of zinc can occur in trauma, burns, and protein-losing conditions. A zinc supplement is given until clinical improvement occurs, but it may need to be continued in severe malabsorption, metabolic disorders p. 864, or in zinc-losing states.
Zinc is used in the treatment of Wilson’s disease and acrodermatitis enteropathica, a rare inherited abnormality of zinc absorption.

Parenteral nutrition regimens usually include trace amounts of zinc. If necessary, further zinc can be added to intravenous feeding regimens.

4.1 Selenium deficiency

SELENIUM

INDICATIONS AND DOSE

Selenium deficiency

BY MOUTH OR BY INTRAMUSCULAR INJECTION OR BY INTRAVENOUS INJECTION

Adult: 100–500 micrograms daily

INTERACTIONS Appendix 1 (selenium).

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Tablet

➤ SELENIUM (Non-proprietary)
Selenium (selenite) 10 micrograms per 1 ml
Solgar Selenium 100microgram tablets | 100 tablet no price available
L-Selenomethionine 200 micrograms
Selenase 200 micrograms tablets | 30 tablet £8.60
Solgar Selenium 200 micrograms tablets | 50 tablet no price available | 250 tablet no price available
HealthAid Selenium 200 micrograms tablets | 60 tablet £3.90
Lamberts Selenium 200 micrograms tablets | 60 tablet £4.08
SelenoPrecise (Pharma Nord (UK) Ltd)
Selenium (as L-Selenomethionine) 100 micrograms
SelenoPrecise 100 microgram tablets | 60 tablet £6.75
L-Selenomethionine 200 micrograms
SelenoPrecise 200 microgram tablets | 60 tablet £4.02

Capsule

➤ SELENIUM (Non-proprietary)
SelenoPrecise 100 microgram capsules | 30 capsule £2.98 | 60 capsule £5.39

Oral solution

➤ Selense (Baxter Healthcare Ltd)
Selenium (sodium selenite) 50 micrograms per 1 ml
Selense 50 micrograms/2ml oral solution 2ml unit dose ampoules | 20 unit dose PLC no price available
Selense 500 micrograms/10ml oral solution unit dose vials | 10 unit dose PLC no price available

Solution for injection

➤ Selense (Baxter Healthcare Ltd)
Selenium (sodium selenite) 50 micrograms per 1 ml
Selense 100 micrograms/2ml solution for injection ampoules | 10 ampoule PLC no price available
Selense 500 micrograms/10ml solution for injection vials | 10 vial PLC no price available

Solution for infusion

➤ SELENIUM (Non-proprietary)
Selenium (sodium selenite) 10 micrograms per 1 ml
SelenoPrecise 10 micrograms/10mg solution for infusion vials | 10 vial PLC no price available

4.2 Zinc deficiency

ZINC

INDICATIONS AND DOSE

Zinc deficiency or supplementation in zinc-losing conditions

BY MOUTH USING EFFERVESCENT TABLETS

➤ Child (body-weight up to 10 kg): 22.5 mg daily, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

➤ Child (body-weight 10–30 kg): 22.5 mg 1–3 times a day, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

➤ Child (body-weight 30 kg and above): 45 mg 1–3 times a day, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

➤ Adult (body-weight 30 kg and above): 45 mg 1–3 times a day, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

Additional elemental zinc for intravenous nutrition

BY INTRAVENOUS INJECTION

Adult: 6.5 mg daily (Zn ²⁺ 100 micromol)

UNLICENSED USE Solvazine® is not licensed for use in acrodermatitis enteropathica.

INTERACTIONS ➤ Appendix 1 (zinc).

SIDE-EFFECTS Abdominal pain · diarrhoea · dyspepsia · gastric irritation · gastritis · headache · irritability · lethargy · nausea · vomiting

PREGNANCY Crosses placenta; risk theoretically minimal, but no information available.

BREAST FEEDING Present in milk; risk theoretically minimal, but no information available.

RENAL IMPAIRMENT Accumulation may occur in acute renal failure.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, oral solution, capsule, liquid

Effervescent tablet

CAUTIONARY AND ADVISORY LABELS 13, 21

➤ Solvazine (Galen Ltd)
Zinc sulfate monohydrate 125 mg Solvazine 125mg effervescent tablets (sugar-free) | 90 tablet £14.95 DT price = £14.95

5 Nutrition

5.1 Nutrition (intravenous)

Intravenous nutrition

When adequate feeding through the alimentary tract is not possible, nutrients may be given by intravenous infusion. This may be in addition to ordinary oral or tube feeding—supplemental parenteral nutrition, or may be the sole source of nutrition—total parenteral nutrition (TPN). Indications for this method include preparation of undernourished patients for surgery, chemotherapy, or radiation therapy; severe or prolonged disorders of the gastro-intestinal tract; major surgery, trauma, or burns;
Proprietary Infusion Fluids for Parenteral Feeding

2 Excludes protein- or amino acid-derived energy

Prolonged coma or refusal to eat; and some patients with renal or hepatic failure. The composition of proprietary preparations available is given under Proprietary Infusion Fluids for Parenteral Feeding p. 874.

Parenteral nutrition requires the use of a solution containing amino acids, glucose, fat, electrolytes, trace elements, and vitamins. This is now commonly provided by the pharmacy in the form of a 3-litre bag. A single dose of vitamin B₁₂, as hydroxocobalamin p. 837, is given by intramuscular injection; regular vitamin B₂ injections are not usually required unless total parenteral nutrition continues for many months. Folic acid p. 836 is given in a dose of 15 mg once or twice each week, usually in the nutrition solution. Other vitamins are usually given daily; they are generally introduced in the parenteral nutrition solution. Alternatively, if the patient is able to take small amounts by mouth, vitamins may be given orally.

The nutrition solution is infused through a central venous catheter inserted under full surgical precautions. Alternatively, infusion through a peripheral vein may be used for supplementary as well as total parenteral nutrition for periods of up to a month, depending on the availability of peripheral veins; factors prolonging cannula life and preventing thrombophlebitis include the use of soft polyurethane paediatric cannulas and use of feeds of low osmolality and neutral pH. Only nutritional fluids should be given by the dedicated intravenous line.

Before starting, the patient should be well oxygenated with a near normal circulating blood volume and attention should be given to renal function and acid-base status. Appropriate biochemical tests should have been carried out beforehand and serious deficits corrected. Nutritional and electrolyte status must be monitored throughout treatment.

Complications of long-term parenteral nutrition include gall bladder sludging, gall stones, cholestasis and abnormal osmolality.
liver function tests. For details of the prevention and management of parenteral nutrition complications, specialist literature should be consulted.

**Protein** is given as mixtures of essential and non-essential synthetic L-amino acids. Ideally, all essential amino acids should be included with a wide variety of nonessential ones to provide sufficient nitrogen together with electrolytes. Solutions vary in their composition of amino acids; they often contain an energy source (usually glucose p. 852) and electrolytes.

**Energy** is provided in a ratio of 0.6 to 1.1 megajoules (150–250 kcal) per gram of protein nitrogen. Energy requirements must be met if amino acids are to be utilised for tissue maintenance. A mixture of carbohydrate and fat energy sources (usually 30–50% as fat) gives better utilisation of amino acids than glucose alone.

Glucose p. 852 is the preferred source of carbohydrate, but if more than 180 g is given per day frequent monitoring of blood glucose is required, and insulin may be necessary. Glucose p. 852 in various strengths from 10 to 50% must be infused through a central venous catheter to avoid thrombosis.

In parenteral nutrition regimens, it is necessary to provide adequate phosphate in order to allow phosphorylation of glucose and to prevent hypophosphataemia; between 20 and 30 mmol of phosphate is required daily.

Fructose and sorbitol have been used in an attempt to avoid the problem of hyperosmolar hyperglycaemic nonketotic acidosis but other metabolic problems may occur, as with xylitol and ethanol which are now rarely used.

**Fat** emulsions have the advantages of a high energy to fluid volume ratio, neutral pH, and iso-osmolarity with plasma, and provide essential fatty acids. Several days of adaptation may be required to attain maximal utilisation. Reactions include occasional febrile episodes (usually only with 20% emulsions) and rare anaphylactic responses. Interference with biochemical measurements such as those for blood gases and calcium may occur if samples are taken before fat has been cleared. Daily checks are necessary to ensure complete clearance from the plasma in conditions where fat metabolism may be disturbed. **Additives should not be mixed with fat emulsions unless compatibility is known.**

**Administration**

Because of the complex requirements relating to parenteral nutrition full details relating to administration have been omitted. In all cases **product literature and other specialist literature should be consulted.**

### PARENTERAL NUTRITION

**Parenteral nutrition supplements**

| DIRECTIONS FOR ADMINISTRATION | Because of the complex requirements relating to parenteral nutrition, full details relating to administration have been omitted. In all cases **specialist pharmacy advice, product literature, and other specialist literature should be consulted.** Compatibility with the infusion solution must be ascertained before adding supplementary preparations. **Additives should not be mixed with fat emulsions unless compatibility is known.**
| **DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES** | For addition to infusion solutions containing amino acids.
| **PEDITRACE®** | For addition to Vaminolact®, Vamin® 14 Electrolyte-Free solutions, and glucose intravenous infusions.
| **DECAN®** | For addition to infusion solutions.
| **ADDITRACE®** | For addition to Vamin® solutions and glucose intravenous infusions.
| **TRACUTIL®** | For addition to infusion solutions.
| **GLYCOPHOS®** | For addition to Vamin® and Vaminolact® solutions, and glucose intravenous infusions.
| **ADDIPHOS®** | For addition to Vamin® solutions and glucose intravenous infusions.
| **CERNEVIT®** | Dissolve in 5mL water for injection.
| **VITLIPID N INFANT** | For addition to Intralipid®.
| **VITLIPID®** | For addition to Intralipid®.
| **SOLIVITO®** | Dissolve in water for injections or glucose intravenous infusion for adding to glucose intravenous infusion or Intralipid®; dissolve in Vitlipid N® or Intralipid® for adding to Intralipid® only.
| **PRESCRIBING AND DISPENSING INFORMATION** | **DIPEPTIVEN®** Dipeptiven® solution contains N(2)-L-alanyl-glutamine 200mg/mL (providing L-alanine 82 mg, L-glutamine 134.6mg)
| **PEDITRACE®** | For use in neonates (when kidney function established, usually second day of life), infants, and children.
| **DECAN®** | For patients over 40kg.
| **ADDITRACE®** | For patients over 40kg.
| **TRACUTIL®** | For adults.
| **GLYCOPHOS®** | Glycophos® Sterile Concentration solution contains phosphate 20mmol, Na⁺ 40mmol/20mL
| **ADDIPHOS®** | Addiphos sterile solution contains phosphate 40mmol, K⁺ 30mmol, Na⁺ 30 mmol/20mL.
| **VITLIPID N ADULT®** | For adults and children over 11 years.
Enteral nutrition

The body’s reserves of protein rapidly become exhausted in severely ill patients, especially during chronic illness or in those with severe burns, extensive trauma, pancreatitis, or intestinal fistula. Much can be achieved by frequent meals and by persuading the patient to take supplementary snacks of ordinary food between the meals. However, extra calories, proteins, vitamin, other nutrients, and vitamins are often best given by supplementing ordinary meals with enteral sip or tube feeds.

When patients cannot feed normally, for example, patients with severe facial injury, oesophageal obstruction, or coma, a nutritionally complete diet of enteral feeds must be given. The advice of a dietitian should be sought to determine the protein and total energy requirement of the patient and the form and relative contribution of carbohydrate and fat to the energy requirements.

Most enteral feeds contain protein derived from cows' milk or soya. Elemental feeds containing protein hydrolysates or free amino acids can be used for patients who have diminished ability to break down protein, for example in inflammatory bowel disease or pancreatic insufficiency.

Even when nutritionally complete feeds are given, water and electrolyte balance should be monitored. Haematological and biochemical parameters should also be monitored, particularly in clinically unstable patients. Extra minerals (e.g. magnesium and zinc) may be needed in patients where gastro-intestinal secretions are being lost. Additional vitamins may also be needed.

Enteral nutrition in children

Children have special requirements and in most situations liquid feeds prepared for adults are totally unsuitable—the advice of a paediatric dietitian should be sought.

5.3 Phenylketonuria

Phenylketonuria

Phenylketonuria (hyperphenylalaninaemia, PKU), which results from the inability to metabolise phenylalanine, is managed by restricting dietary intake of phenylalanine to a small amount sufficient for tissue building and repair. Sapropterin dihydrochloride p. 880, a synthetic form of tetrahydrobiopterin, is licensed as an adjunct to dietary restriction of phenylalanine in the management of patients with phenylketonuria and tetrahydrobiopterin deficiency.
5.4 Special diets

Nutrition in special diets

These are preparations that have been modified to eliminate a particular constituent from a food or that are nutrient mixtures formulated as food substitutes for patients who either cannot tolerate or cannot metabolise certain common constituents of food. In certain clinical conditions, some food preparations are regarded as drugs and can be prescribed within the NHS if they have been approved by the Advisory Committee on Borderline Substances (ACBS).

Aspartame (used as a sweetener in some foods and medicines) contributes to the phenylalanine intake and may affect control of phenylketonuria. Where the presence of aspartame is specified in the product literature this is indicated in the BNF against the preparation; the patient should be informed of this.

Coeliac disease

Intolerance to gluten in coeliac disease is managed by completely eliminating gluten from the diet. A range of gluten-free products is available for prescription.

6 Vitamin deficiencies

Vitamins

Vitamins are used for the prevention and treatment of specific deficiency states or where the diet is known to be inadequate; they may be prescribed in the NHS to prevent or treat deficiency but not as dietary supplements.

Their use as general ‘pick-me-ups’ is of unproven value and, in the case of preparations containing vitamin A or D, may actually be harmful if patients take more than the prescribed dose. The 'fad' for mega-vitamin therapy with water-soluble vitamins, such as ascorbic acid p. 884 and pyridoxine hydrochloride p. 882, is unscientific and can be harmful.

Dietary reference values for vitamins are available in the Department of Health publication:

Dental patients

It is unjustifiable to treat stomatitis or glossitis with mixtures of vitamin preparations; this delays diagnosis and correct treatment.

Most patients who develop a nutritional deficiency despite an adequate intake of vitamins have malabsorption and if this is suspected the patient should be referred to a medical practitioner.

Vitamin A

Deficiency of vitamin A (retinol) is associated with ocular defects (particularly xerophthalmia) and an increased susceptibility to infections, but deficiency is rare in the UK (even in disorders of fat absorption).

Vitamin B group

Deficiency of the B vitamins, other than vitamin B₆, is rare in the UK and is usually treated by preparations containing thiamine p. 882 (B₁), riboflavin (B₂), and nicotinamide, which is used in preference to nicotinic acid, as it does not cause vasodilatation. Other members (or substances traditionally classified as members) of the vitamin B complex such as aminobenzoic acid, biotin, choline, inositol nicotinate p. 206, and pantothentic acid or panthenol may be included in vitamin B preparations but there is no evidence of their value.

The severe deficiency states Wernicke’s encephalopathy and Korsakoff’s psychosis, especially as seen in chronic alcoholism, are best treated initially by the parenteral administration of B vitamins (Pabrinex®), followed by oral...
administration of thiamine p. 882 in the longer term. Anaphylaxis has been reported with parenteral B vitamins.

As with other vitamins of the B group, pyridoxine hydrochloride p. 882 (B₆) deficiency is rare, but it may occur during isoniazid therapy or penicillamine treatment in Wilson’s disease and is characterised by peripheral neuritis. High doses of pyridoxine hydrochloride p. 882 are given in some metabolic disorders, such as hyperoxaluria, and it is also used in sideroblastic anaemia. There is evidence to suggest that pyridoxine hydrochloride may provide some benefit in premenstrual syndrome. It has been tried for a wide variety of other disorders, but there is little sound evidence to support the claims of efficacy.

Nicotinic acid p. 177 inhibits the synthesis of cholesterol and triglyceride. Folic acid p. 836 and vitamin B₁₂ are used in the treatment of megaloblastic anaemia. Folic acid p. 781 (available as calcium folinate) is used in association with cytotoxic therapy.

**Vitamin C**

Vitamin C (ascorbic acid p. 884) therapy is essential in scurvy, but less florid manifestations of vitamin C deficiency are commonly found, especially in the elderly. Severe scurvy causes gingival swelling and bleeding margins as well as petechiae on the skin. This is, however, exceedingly rare and a patient with these signs is more likely to have leukaemia. Investigation should not be delayed by a trial period of vitamin treatment.

Claims that vitamin C ameliorates colds or promotes treatment of various disorders associated with excessive fibrosis such as scleroderma and Peyronie’s disease. In Peyronie’s disease there is some evidence to support efficacy in reducing progression when given early in the disease; however, there is no evidence for reversal of the condition. The therapeutic value of potassium aminobenzoate in scleroderma is doubtful.

**Vitamin D**

The term Vitamin D is used for a range of compounds which possess the property of preventing or curing rickets. They include ergocalciferol p. 887 (calciferol, vitamin D₂), colecalciferol (vitamin D₃) p. 886, dihydrocholesterol p. 887, alfalcacidol (1α-hydroxycholecalciferol) p. 885, and calcitriol (1,25-dihydroxycholecalciferol) p. 885. Simple vitamin D deficiency can be prevented by taking an oral supplement of ergocalciferol (calciferol, vitamin D₂) or colecalciferol (vitamin D₃) daily. Vitamin D deficiency can occur in people whose exposure to sunlight is limited and in those whose diet is deficient in vitamin D. In these individuals, ergocalciferol orcolecalciferol daily by mouth may be given to treat vitamin D deficiency; higher doses may be necessary for severe deficiency. Patients who do not respond should be referred to a specialist.

Preparations containing calcium carbonate with colecalciferol p. 886 are available for the management of combined calcium and vitamin D deficiency, or for those at high risk of deficiency. Vitamin D deficiency caused by intestinal malabsorption or chronic liver disease usually requires vitamin D in pharmacological doses.

Vitamin D requires hydroxylation by the kidney to its active form, therefore the hydroxylated derivatives alfalcacidol p. 885 or calcitriol p. 885 should be prescribed if patients with severe renal impairment require vitamin D therapy. Calcitriol is also licensed for the management of postmenopausal osteoporosis.

Paricalcitol p. 888, a synthetic vitamin D analogue, is licensed for the prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure.

**Vitamin E**

The daily requirement of vitamin E (tocopherol) has not been well defined but is probably 3 to 15 mg daily. There is little evidence that oral supplements of vitamin E are essential in adults, even where there is fat malabsorption secondary to cholestasis. In young children with congenital cholestasis, abnormally low vitamin E concentrations may be found in association with neuromuscular abnormalities, which usually respond only to the parenteral administration of vitamin E. Vitamin E has been tried for various other conditions but there is little scientific evidence of its value.

**Vitamin K**

Vitamin K is necessary for the production of blood clotting factors and proteins necessary for the normal calcification of bone.

Because vitamin K is fat soluble, patients with fat malabsorption, especially in biliary obstruction or hepatic disease, may become deficient. Menadione sodium phosphate p. 889 is a water-soluble synthetic vitamin K derivative that can be given orally to prevent vitamin K deficiency in malabsorption syndromes.

Oral coumarin anticoagulants act by interfering with vitamin K metabolism in the hepatic cells and their effects can be antagonised by giving vitamin K.

**Other compounds**

Potassium aminobenzoate p. 882 has been used in the treatment of various disorders associated with excessive fibrosis such as scleroderma and Peyronie’s disease. In Peyronie’s disease there is some evidence to support efficacy in reducing progression when given early in the disease; however, there is no evidence for reversal of the condition. The therapeutic value of potassium aminobenzoate in scleroderma is doubtful.

**MULTIVITAMINS**

**Vitamins A and D**

**INDICATIONS AND DOSE**

Prevention of vitamin A and D deficiency

- **BY MOUTH**
  - Child: 1 capsule daily, 1 capsule contains 4000 units vitamin A and 400 units (10 micrograms) vitamin D
  - Adult: (consult product literature)

- **UNLICENSED USE** Not licensed in children under 6 months of age.

- **INTERACTIONS** → Appendix 1 (vitamins).

- **SIDE-EFFECTS**
  - Overdose Prolonged excessive ingestion of vitamins A and D can lead to hypervitaminosis.
  - PRESCRIBING AND DISPENSING INFORMATION This drug contains vitamin D; consult individual vitamin D monographs.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

- **VITAMINS A AND D (Non-proprietary)**
  - Vitamin A 4000 unit, Vitamin D 400 unit
  - Vitamins A and D capsules BPC 1973 | 28 capsule G55 £2.81 | 84 capsule £8.42 DT price = £8.42

**Vitamins A, C and D**

The properties listed below are those particular to the combination only. For the properties of the components please consider, ascorbic acid p. 884, vitamin D p. 884.
882 Vitamin deficiencies

*PRESCRIBING AND DISPENSING INFORMATION* This drug contains vitamin D; consult individual vitamin D monographs. Available free of charge to children under 4 years in families on the Healthy Start Scheme, or alternatively may be available direct to the public—further information for healthcare professionals can be accessed at www.healthystart.nhs.uk. Beneficiaries can contact their midwife or health visitor for further information on where to obtain supplies.

*Health Start Vitamins for women* (containing ascorbic acid, vitamin D, and folic acid) are also available free of charge to women on the Healthy Start Scheme during pregnancy and until their baby is one year old, or alternatively may be available direct to the public—further information for healthcare professionals can be accessed at www.healthystart.nhs.uk. Beneficiaries can contact their midwife or health visitor for further information on where to obtain supplies.

**VITAMIN B GROUP**

Potassium aminobenzoate

*INDICATIONS AND DOSE*

Peyronie’s disease | Scleroderma

**BY MOUTH**

▶ Adult: 12 g daily in divided doses, to be taken after food

**INTERACTIONS** → Appendix 1 (potassium aminobenzoate).

**M EDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 21

▶ Potaba (Cheplapharm Arzneimittel GmbH)

Potassium aminobenzoate 500 mg | Potaba 500mg capsules | 240 capsule £44.75

**Powder**

CAUTIONARY AND ADVISORY LABELS 13, 21

▶ Potaba (Cheplapharm Arzneimittel GmbH)

Potassium aminobenzoate 3 gram | Potaba 3g sachets | 40 sachet £34.31

Pyridoxine hydrochloride

(Vitamin B₆)

*INDICATIONS AND DOSE*

Deficiency states

**BY MOUTH**

▶ Adult: 20–50 mg 1–3 times a day

Isoniazid-induced neuropathy (prophylaxis)

**BY MOUTH**

▶ Adult: 10–20 mg daily

Isoniazid-induced neuropathy (treatment)

**BY MOUTH**

▶ Adult: 50 mg 3 times a day

**INTERACTIONS**

→ Appendix 1 (vitamins).

**SIDE-EFFECTS** Sensory neuropathy (with high doses when given for extended periods)

**Overdose**

Overdosage induces toxic effects.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, oral suspension, oral solution, capsule

**Tablet**

▶ PYRIDOXINE HYDROCHLORIDE (Non-proprietary)

Pyridoxine hydrochloride 10 mg | Pyridoxine 10mg tablets | 28 tablet £12.95 | 30 tablet £16.65 no price available | 60 tablet £24.85 no price available | 500 tablet £8.63

Pyridoxine (as Pyridoxine hydrochloride) 20 mg | Pyridoxine 20mg tablets | 500 tablet £8.53

Pyridoxine hydrochloride 50 mg | Pyridoxine 50mg tablets | 28 tablet no price available DT price = £4.33

▶ Brands may include Pyrid

**Capsule**

▶ PYRIDOXINE HYDROCHLORIDE (Non-proprietary)

Pyridoxine (as Pyridoxine hydrochloride) 100 mg | Pyridoxine 100mg capsules | 100 capsule no price available

Thiamine

(Vitamin B₁)

**INDICATIONS AND DOSE**

Mild deficiency

**BY MOUTH**

▶ Adult: 25–100 mg daily

Severe deficiency

**BY MOUTH**

▶ Adult: 200–300 mg daily in divided doses

**INTERACTIONS**

→ Appendix 1 (vitamins).

**SIDE-EFFECTS**

Although potentially serious allergic adverse reactions may rarely occur during, or shortly after, parenteral administration, the CHM has recommended that:

▶ This should not preclude the use of parenteral thiamine in patients where this route of administration is required, particularly in patients at risk of Wernicke-Korsakoff syndrome where treatment with thiamine is essential.

**UNLICENSED USE**

Not licensed for prophylaxis of pyridoxine in a dose of 10 mg daily is considered safe but the long-term use of pyridoxine in a dose of 200 mg or more daily has been associated with neuropathy. The safety of long-term pyridoxine supplementation with doses above 10 mg daily has not been established.

**Important safety information**

Prolonged use of pyridoxine in a dose of 10 mg daily is considered safe but the long-term use of pyridoxine in a dose of 200 mg or more daily has been associated with neuropathy. The safety of long-term pyridoxine supplementation with doses above 10 mg daily has not been established.
● Intravenous administration should be by infusion over 30 minutes;
● Facilities for treating anaphylaxis (including resuscitation facilities) should be available when parenteral thiamine is administered.

● CAUTIONS Anaphylaxis may occasionally follow injection
● BREAST FEEDING Severely thiamine-deficient mothers should avoid breast-feeding as toxic methyl-glyoxal present in milk.

● MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

Tablet

- THIAMINE (Non-proprietary)
  - Thiamine hydrochloride 50 mg Thiamine 50mg tablets  
    100 tablet £ no price available DT price = £7.13 | 100 tablet £7.13
  - Thiamine hydrochloride 100 mg Thiamine 100mg tablets  
    100 tablet £9.18 DT price = £11.55 | 100 tablet £ no price available DT price = £11.55
  - Benerva (Bayer Pic)
    Thiamine hydrochloride 50 mg Benerva 50mg tablets  
    100 tablet £3.98 DT price = £7.13
  - Thiamine hydrochloride 100 mg Benerva 100mg tablets  
    100 tablet £6.16 DT price = £11.55
  - Tyvera (Teva UK Ltd, Almus Pharmaceuticals Ltd)
    Thiamine hydrochloride 50 mg Tyvera 50mg tablets  
    100 tablet £5.46-£5.72 DT price = £7.13
  - Thiamine hydrochloride 100 mg Tyvera 100mg tablets  
    100 tablet £8.46-£8.18 DT price = £11.55

Modified-release tablet

- THIAMINE (Non-proprietary)
  - Thiamine hydrochloride 100 mg HealthAid Vitamin B1 100mg modified-release tablets  
    90 tablet £4.18

Vitamin B complex

INDICATIONS AND DOSE

Prophylaxis of deficiency
BY MOUTH USING TABLETS

- Adult: 1–2 tablets daily, this dose is for vitamin B compound tablets

Treatment of deficiency
BY MOUTH USING TABLETS

- Adult: 1–2 tablets 3 times daily as a single dose, this dose is for vitamin B compound strong tablets

LESS SUITABLE FOR PRESCRIBING Vitamin B compound tablets are less suitable for prescribing. Vitamin B compound strong tablets are less suitable for prescribing.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Tablet

- VITAMIN B COMPLEX (Non-proprietary)
  - Nicotinamide 15 mg, Riboflavin 1 mg, Thiamine hydrochloride 1 mg Vitamin B compound tablets | 28 tablet £ no price available DT price = £26.62 | 1000 tablet £10.50
  - Nicotinamide 20 mg, Pyridoxine hydrochloride 2 mg, Riboflavin 2 mg, Thiamine hydrochloride 5 mg Vitamin B compound strong tablets | 28 tablet £ no price available DT price = £1.95 | 1000 tablet £ no price available | 1000 tablet £ no price available

Psychosis following narcosis or electroconvulsive therapy
Toxicity from acute infections
BY INTRAVENOUS INFUSION OR BY DEEP INTRAMUSCULAR INJECTION

- Adult: 1 pair twice daily for up to 7 days, give deep intramuscular injection into the gluteal muscle

Haemodialysis
BY INTRAVENOUS INFUSION

- Adult: 1 pair every 2 weeks

UNLICENSED USE Pabrinex® doses in BNF may differ from those in product literature.

DIRECTIONS FOR ADMINISTRATION Give (Pabrinex® I/V High Potency) intermittently or via drip tubing in Glucose 5% or Sodium chloride 0.9%. Ampoules contents should be mixed, diluted, and administered without delay, give over 30 minutes.

PRESCRIBING AND DISPENSING INFORMATION Some formulations of Pabrinex® may contain benzyl alcohol (avoid in neonates). Pabrinex® I/M High Potency injection is for intramuscular use only.

Pabrinex® I/V High Potency injection is for intravenous use only.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Not applicable
EXCipients: May contain Benzyl alcohol

- Pabrinex Intramuscular High Potency (Archimedes Pharma UK Ltd) Pabrinex Intramuscular High Potency solution for injection 5ml and 2ml ampoules | 20 ampoule £53 £22.53 DT price = £22.53
- Pabrinex Intravenous High Potency (Archimedes Pharma UK Ltd) Pabrinex Intravenous High Potency solution for injection 5ml and 5ml ampoules | 20 ampoule £53 £22.53 DT price = £22.53

Blood and nutrition
Vitamin deficiencies

Vitamins with minerals and trace elements

**INDICATIONS AND DOSE**

**KETOVITE® TABLETS**
Prevention of vitamin deficiency in disorders of carbohydrate or amino-acid metabolism / Adjunct in restricted, specialised, or synthetic diets

**BY MOUTH**
- Adult: 1 tablet 3 times a day, use with Ketrovite® Liquid for complete vitamin supplementation.

**FORCEVAL® CAPSULES**
Vitamin and mineral deficiency and as adjunct in synthetic diets

**BY MOUTH**
- Adult: 1 capsule daily, one hour after a meal

**PRESCRIBING AND DISPENSING INFORMATION**
To avoid potential toxicity, the content of all vitamin preparations, particularly vitamin A, should be considered when used together with other supplements.

**PATIENT AND CARER ADVICE**
**KETOVITE® TABLETS** Tablets may be crushed immediately before use.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Tablet**
- **VITAMINS WITH MINERALS AND TRACE ELEMENTS (Non-proprietary)**
  - Ascorbic acid 500 mg, Biotin 15 mg, Calcium 60 mg, Copper 3 mg, Cyanocobalamin 25 microgram, Folic acid 250 microgram, Iron 12 mg, Iodine 140 microgram, Iodine 120 microgram, Iron 12 mg, Manganese 30 mg, Molybdenum 25 microgram, Nickel 250 microgram, Phosphorus 77 mg, Potassium 4 mg, Pyridoxine 2 mg, Riboflavin 1.6 mg, Selenium 50 microgram, Thiamine 1.2 mg, Tocopherol 10 mg, Vitamin A 2500 unit, Zinc 15 mg
- **Ascorbic acid 60 mg, Biotin 15 mg, Calcium 60 mg, Copper 3 mg, Cyanocobalamin 25 microgram, Folic acid 250 microgram, Iron 12 mg, Iodine 140 microgram, Iodine 120 microgram, Iron 12 mg, Manganese 30 mg, Molybdenum 25 microgram, Nickel 250 microgram, Phosphorus 77 mg, Potassium 4 mg, Pyridoxine 2 mg, Riboflavin 1.6 mg, Selenium 50 microgram, Thiamine 1.2 mg, Tocopherol 10 mg, Vitamin A 2500 unit, Zinc 15 mg

**Capsule**
- **Forceval** (Alliance Pharmaceuticals Ltd)
  - Ascorbic acid 60 mg, Biotin 100 microgram, Calcium 100 mg, Chromium 200 microgram, Copper 2 mg, Cyanocobalamin 3 microgram, Ergocalciferol 400 unit, Folic acid 400 microgram, Iodine 140 microgram, Iron 12 mg, Magnesium 30 mg, Manganese 3 mg, Molybdenum 250 microgram, Nicotinamide 18 mg, Pantothenic acid 4 mg, Phosphorus 77 mg, Potassium 4 mg, Pyridoxine 2 mg, Riboflavin 1.6 mg, Selenium 50 microgram, Thiamine 1.2 mg, Tocopherol 10 mg, Vitamin A 2500 unit, Zinc 15 mg

**VITAMIN C**
Ascorbic acid (Vitamin C)

**INDICATIONS AND DOSE**

**Prevention of scurvy**

**BY MOUTH**
- Adult: 25–75 mg daily

**Treatment of scurvy**

**BY MOUTH**
- Adult: Not less than 250 mg daily in divided doses

**PRESCRIBING AND DISPENSING INFORMATION**
- It is rarely necessary to prescribe more than 100 mg daily except early in the treatment of scurvy.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, oral suspension, solution for infusion, oral solution

**Tablet**
- **EXCIPIENTS:** May contain Aspartame
  - **ASCORBIC ACID (Non-proprietary)**
    - Ascorbic acid 50 mg Ascorbic acid 50mg tablets £12.42 DT price = £12.33 | 100 tablet [**GSS**] £4.32
      - 500 tablet [**GSS**] no price available
    - Ascorbic acid 100 mg Ascorbic acid 100mg tablets
      - 28 tablet [**GSS**] £14.30 DT price = £14.19
    - Ascorbic acid 200 mg Ascorbic acid 200mg tablets
      - 28 tablet [**GSS**] £18.60 DT price = £18.47 | 100 tablet [**GSS**] no price available
    - Ascorbic acid 500 mg Ascorbic acid 500mg tablets
      - 28 tablet [**GSS**] £26.87 DT price = £26.67 | 100 tablet [**GSS**] £11.53

**Chewable tablet**
- **CAUTIONARY AND ADVISORY LABELS 24**
- **EXCIPIENTS:** May contain Aspartame
  - **ASCORBIC ACID (Non-proprietary)**
    - Ascorbic acid 60 mg Ascorbic acid 60mg chewable tablets £60 no price available | 180 tablet no price available
    - Ascorbic acid (as Sodium ascorbate) 500 mg Ascorbic acid 500mg chewable tablets (sugar-free) | 60 tablet no price available
    - Ascorbic acid 500 mg Ascorbic acid 500mg chewable tablets
      - 60 tablet £3.90 | 100 tablet £5.58
  - **Brands may include Ascur and Halliborange Hallibonbons**

**Capsule**
- **ASCORBIC ACID (Non-proprietary)**
  - Ascorbic acid 500 mg Ascorbic acid 500mg capsules £100 no price available
  - **Also available in combination with vitamin B substances, p. 883.**

**VITAMIN D AND ANALOGUES**

**Vitamin D and analogues (systemic)**

**CONTRA-INDICATIONS**
- Hypercalcaemia - metastatic calcification

**INTERACTIONS**
- Appendix 1 (vitamins).

**SIDE-EFFECTS**

**Overdose**
- Symptoms of overdosage include anorexia, lassitude, nausea and vomiting, diarrhoea, constipation, weight loss, polypusia, sweating, headache, thirst, vertigo, and raised concentrations of calcium and phosphate in plasma and urine.

**PREGNANCY**
- High doses teratogenic in animals but therapeutic doses unlikely to be harmful.

**BREAST FEEDING**
- Caution with high doses; may cause hypercalcaemia in infant—monitor serum-calcium concentration.

**MONITORING REQUIREMENTS**
- **Important:** All patients receiving pharmacological doses of vitamin D should have their plasma-calcium concentration checked at intervals (initially once or twice weekly) and whenever nausea or vomiting occur.
Vitamin deficiencies 885

Alfacalcidol
(1α-Hydroxycholecalciferol)

**INDICATIONS AND DOSE**

Patients with severe renal impairment requiring vitamin D therapy

BY MOUTH OR BY INTRAVENOUS INJECTION

- Adult: Initially 1 microgram daily, dose to be adjusted to avoid hypercalcaemia; maintenance 0.25–1 microgram daily
- Elderly: Initially 500 nanograms daily, dose adjusted to avoid hypercalcaemia; maintenance 0.25–1 microgram daily

**SIDE-EFFECTS**

- Rare: Nephrolithiasis, pruritus, rash, urticaria

**RENAL IMPAIRMENT**

Monitor plasma-calcium concentration in renal impairment.

**MONITORING REQUIREMENTS**

Monitor plasma-calcium concentration in patients receiving high doses.

**DIRECTIONS FOR ADMINISTRATION**

- With intravenous use For injection, shake ampoule for at least 30 seconds.

**PRESCRIBING AND DISPENSING INFORMATION**

The concentration of alfacalcidol in One-Alpha® drops is 10 times greater than that of the former preparation One-Alpha® solution.

- **CAUTIONS**
  - Nephrolithiasis - take care to ensure correct dose in infants

- **SIDE-EFFECTS**
  - Rare: Nephrolithiasis - pruritus - rash - urticaria

- **EXCIPIENTS**
  - May contain Sesame oil

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

**Capsule**

- **EXCIPIENTS**: May contain Sesame oil
- **alfa-calcidol (non-proprietary)**
  - Alfacalcidol 250 nanogram One-Alpha 250nanogram capsules | 30 capsule [PoS] £6.33 DT price = £2.51
  - Alfacalcidol 500 nanogram One-Alpha 500nanogram capsules | 30 capsule [PoS] £11.25 DT price = £5.18
  - Alfacalcidol 1 microgram One-Alpha 1microgram capsules | 30 capsule no price available DT price = £5.74 | 30 capsule [PoS] £15.25 DT price = £5.74
  - One-Alpha (Leo Pharma)
  - Alfacalcidol 250 nanogram One-Alpha 250nanogram capsules | 30 capsule [PoS] £3.37 DT price = £2.51
  - Alfacalcidol 500 nanogram One-Alpha 0.5microgram capsules | 30 capsule [PoS] £6.27 DT price = £5.18

Calcitriol
(1,25-Dihydroxycholecalciferol)

**INDICATIONS AND DOSE**

**Renal osteodystrophy**

**BY MOUTH**

- Adult: Initially 250 nanograms daily, adjusted in steps of 250 nanograms every 2–4 weeks if required; usual dose 0.5–1 microgram daily

**Renal osteodystrophy (in patients with normal or only slightly reduced plasma-calcium concentration)**

**BY MOUTH**

- Adult: Initially 250 nanograms once daily on alternate days, adjusted in steps of 250 nanograms every 2–4 weeks if required; usual dose 0.5–1 microgram daily

**Established postmenopausal osteoporosis**

**BY MOUTH**

- Adult: 250 nanograms twice daily, plasma-calcium concentration and creatinine to be monitored (consult product literature)

**MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, oral suspension

**Capsule**

- **Calcitriol (non-proprietary)**
  - Calcitriol 250 nanogram Calcitriol 250nanogram capsules | 30 capsule [PoS] £18.04 | 100 capsule [PoS] no price available DT price = £34.08
  - Calcitriol 500 nanogram Calcitriol 500nanogram capsules | 30 capsule [PoS] £32.25 | 100 capsule [PoS] no price available DT price = £73.25
  - Rocaltrol (Roche Products Ltd)
  - Calcitriol 250 nanogram Rocaltrol 250nanogram capsules | 100 capsule [PoS] £18.04 DT price = £6.04
  - Calcitriol 500 nanogram Rocaltrol 500nanogram capsules | 100 capsule [PoS] £32.25 DT price = £32.25
Colecalciferol
(Cholecalciferol; Vitamin D₃)

INDICATIONS AND DOSE
Prevention of vitamin D deficiency
BY MOUTH
- Adult: 400 units daily
Treatment of vitamin D deficiency
BY MOUTH
- Adult: 800 units daily, higher doses may be necessary for severe deficiency

- RENAL IMPAIRMENT
  Monitor plasma-calcium concentration in renal impairment.
- MONITORING REQUIREMENTS
  Monitor plasma-calcium concentration in patients receiving high doses.
- DIRECTIONS FOR ADMINISTRATION
  INVITA D₃
  - May be mixed with a small amount of cold or lukewarm food immediately before administration.

- MEDICINAL FORMS
  There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, oral drops, oral solution, capsule

- Tablet
  - COLECALCIFEROL (Non-proprietary)
    Colecalciferol 400 unit Colecalciferol 400unit tablets | 120 tablet £3.21
    Colecalciferol 1000 unit Colecalciferol 1,000unit tablets | 28 tablet £20.95 | 90 tablet £34.50 | 180 tablet no price available
    Colecalciferol 5000 unit Colecalciferol 5,000unit tablets | 60 tablet £5.00 | 100 tablet £9.99 | 200 tablet £18.66
    Colecalciferol 20000 unit Colecalciferol 20,000unit tablets | 30 tablet no price available
  - Brands may include Aciferol D, Cucibole D3, Desunin, E-D3, Iso D3, Stexerol-D3, and SunVit D3

- Chewable tablet
  - COLECALCIFEROL (Non-proprietary)
    Colecalciferol 280 unit Colecalciferol 280unit chewable tablets | 180 tablet £5.00

Colecalciferol with calcium carbonate

The properties listed below are those particular to the combination only. For the properties of the components please consider, colecaldierol above, calcium carbonate p. 856.

INDICATIONS AND DOSE
Prevention and treatment of vitamin D and calcium deficiency
BY MOUTH
- Adult: Dosed according to the deficit or daily maintenance requirements (consult product literature)

- MEDICINAL FORMS
  There can be variation in the licensing of different medicines containing the same drug.

- Tablet
  EXCIPIENTS: May contain Propylene glycol
  - CALCIUM CARBONATE WITH COLECALCIFEROL (Non-proprietary)
    Calcium carbonate 400 mg, Colecalciferol 100 unit Calcium & Vitamin D tablets | 30 tablet £0.59
    - Accrete D3 (Internis Pharmaceuticals Ltd)
      Calcium carbonate 1.5 gram, Colecalciferol 400 unit Accrete D3 tablets | 60 tablet £2.95 DT price + £2.95
    - Adcal-D3 (Prostrakan Ltd)
      Calcium carbonate 750 mg, Colecalciferol 200 unit Adcal-D3 750mg/200unit caplets | 112 tablet £3.65 DT price + £3.65
    - Calcichew D3 (Forum Health Products Ltd)
      Calcium carbonate 1.25 gram, Colecalciferol 400 unit Calcichew D3 500mg/400unit caplets | 100 tablet £7.43 DT price + £7.43
    - Kalcips-D (Media Pharmaceuticals Ltd)
      Calcium carbonate 1.25 gram, Colecalciferol 800 unit Kalcips-D 500mg/800unit tablets | 30 tablet £4.21 DT price + £4.21

- Chewable tablet
  CAUTIONARY AND ADVISORY LABELS 24
  EXCIPIENTS: May contain Aspartame
  - CALCIUM CARBONATE WITH COLECALCIFEROL (Non-proprietary)
    Calcium carbonate 400 mg, Colecalciferol 100 unit Seven Seas Calcium and Vitamin D chewable tablets | 30 tablet £1.76
    Calcium carbonate 1.25 gram, Colecalciferol 400 unit Colecalciferol 400unit / Calcium carbonate 1.25g chewable tablets | 100 tablet £14.75-£15.69
Colecalfilerol with calcium phosphate

The properties listed below are those particular to the combination only. For the properties of the components please consider, colecalfilerol p. 886, calcium p. 856.

**INDICATIONS AND DOSE**
Calcium and vitamin D deficiency

**BY MOUTH**

- Adult: (consult product literature)

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder**

**CAUTIONARY AND ADVISORY LABELS 13, 21**
- Calfivit D3 (A. Menarini Farmaceutica Internazionale SRL)
- Calfovit D3 (Forum Health Products Ltd)
- Calfovit® Calcium phosphate 1 gram, Colecalciferol 800 unit Califivit D3 oral powder sachets | 30 sachet (P) £4.32 DT price = £4.32

**Dihydrotachysterol**

**INDICATIONS AND DOSE**

Acute, chronic, and latent forms of hypocalcaemic tetany due to hypoparathyroidism

**BY MOUTH**

- Adult: (consult product literature)

**RENAI IMPAIRMENT** Monitor plasma-calcium concentration in renal impairment.

**MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Oral solution**

**EXCIPIENTS:** May contain Arachis (peanut) oil

- AT10 (Intrapharm Laboratories Ltd)
- Dihydrotachysterol 250 microgram per 1 ml AT10
  - 250micrograms/ml oral solution (sugar-free) | 15 ml (P) £22.87

**Ergocalferol**

(Calciferol; Vitamin D₃)

**INDICATIONS AND DOSE**

Vitamin D deficiency caused by intestinal malabsorption or chronic liver disease

**BY MOUTH**

- Adult: Up to 40 000 units daily

Hypocalcaemia of hypoparathyroidism to achieve normocalcaemia

**BY MOUTH**

- Adult: Up to 100 000 units daily

Prevention of vitamin D deficiency

**BY MOUTH**

- Adult: 400 units daily

Treatment of vitamin D deficiency

**BY MOUTH**

- Adult: 800 units daily, higher doses may be necessary for severe deficiency

**CAUTIONS** Take care to ensure correct dose in infants

**RENAI IMPAIRMENT** Monitor plasma-calcium concentration in hepatic impairment.

**MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.

**PRESCRIBING AND DISPENSING INFORMATION** The BP directs that when calciferol is prescribed or demanded, colecalfilerol or ergocalferol should be dispensed or supplied. When the strength of the tablets ordered or prescribed is not clear, the intention of the prescriber with respect to the strength (expressed in micrograms or milligrams per tablet) should be ascertained.**

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, solution for injection, oral suspension, oral solution, capsule

**Tablet**

- **ERGOCALFEROL (Non-proprietary)**
  - Ergocalferol 12.5 microgram Ergocalferol 500unit tablets | 60 tablet £3.74
  - Ergoral (Cubic Pharmaceuticals Ltd)
  - Ergocalferol 125 microgram Ergoral D2 5,000unit tablets | 30 tablet £19.95
  - Ergocalferol 250 microgram Ergoral D2 10,000unit tablets | 30 tablet £23.95

**Capsule**

- **ERGOCALFEROL (Non-proprietary)**
  - Ergocalferol 1.25 mg Ergocalferol 50,000 unit capsules | 30 capsule £6.80 | 100 capsule £11.90
  - Brands may include Eciferol; Ergoral

**Oral solution**

- Eciferol (Disposable Medical Equipment Ltd)
- Ergocalferol 3000 unit per 1 ml Eciferol D2 3,000units/ml liquid | 60 ml £55.00

**Ergocalferol with calcium lactate and calcium phosphate**

The properties listed below are those particular to the combination only. For the properties of the components please consider, ergocalferol above, calcium lactate p. 857.
### Vitamin E

**Alpha tocopherol (Tocopherol)**

**INDICATIONS AND DOSE**

Vitamin E deficiency because of malabsorption in congenital or hereditary chronic cholestasis

BY MOUTH USING ORAL SOLUTION

- Child: 17 mg/kg daily, dose to be adjusted as necessary

**SIDE-EFFECTS**

- Common or very common Diarrhoea
- Uncommon Alopecia, asthenia, disturbances in serum-potassium concentration, disturbances in serum-sodium concentration, headache, pruritus, rash
- PREGNANCY Manufacturer advises caution, no evidence of harm in animal studies.
- BREAST FEEDING Manufacturer advises use only if potential benefit outweighs risk—no information available.
- HEPATIC IMPAIRMENT Manufacturer advises caution—no information available. Manufacturer advises monitor closely in hepatic impairment.
- RENAL IMPAIRMENT Manufacturer advises caution. Risk of renal toxicity due to polyethylene glycol content. Manufacturer advises monitor closely in renal impairment.

**PRESCRIBING AND DISPENSING INFORMATION**

Tocofersolan is a water-soluble form of D-alpha tocopherol.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Oral solution**

- Vedrop (Orphan Europe (UK) Ltd) ▼
  - D-alpha tocopherol (as Tocofersolan) 50 mg per 1 ml Vedrop 50mg/ml oral solution (sugar-free) | 20 ml [POT] £54.55 (sugar-free) | 60 ml [POT] £163.65

### Paricalcitol

**INDICATIONS AND DOSE**

For prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure

BY MOUTH

- Adult: (consult product literature)

**SIDE-EFFECTS**

- Acne, breast tenderness, dyspepsia, pruritus, rash, taste disturbance

**PREGNANCY**

Toxicity in animal studies—manufacturer advises avoid unless potential benefit outweighs risk.

**BREAST FEEDING**

Manufacturer advises caution—no information available.

**MONITORING REQUIREMENTS**

- Monitor plasma calcium and phosphate during dose titration and at least monthly when stabilised.
- Monitor parathyroid hormone concentration.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

- Zemplar (AbbVie Ltd)
  - Paricalcitol 1 microgram Zemplar 1microgram capsules | 28 capsule [POT] £69.28
  - Paricalcitol 2 microgram Zemplar 2microgram capsules | 28 capsule [POT] £138.88

**Solution for injection**

**EXCIPIENTS:** May contain Propylene glycol

- Zemplar (AbbVie Ltd)
  - Paricalcitol 5 microgram per 1 ml Zemplar 5micrograms/1ml solution for injection ampoules | 5 ampoule [POT] £62.00 (Hospital only)

### Alphatocopheryl acetate (Tocopherol)

**INDICATIONS AND DOSE**

Vitamin E deficiency

BY MOUTH

- Child: 2–10 mg/kg daily, increased if necessary up to 20 mg/kg daily

Malabsorption in cystic fibrosis

BY MOUTH

- Child 1–11 months: 50 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- Child 1–11 years: 100 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- Child 12–17 years: 200–200 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- Adult: 100–200 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
MEDICINAL FORMS

INTERACTIONS

CAUTIONS

VITAMIN K

Menadiol sodium phosphate

INDICATIONS AND DOSE

Prevention of Vitamin K deficiency in malabsorption syndromes

BY MOUTH

Adult: 10–40 mg daily, dose to be adjusted as necessary

CONTRA-INDICATIONS

CAUTIONS

G6PD deficiency (risk of haemolysis) - vitamin E deficiency (risk of haemolysis)

INTERACTIONS

PREGNANCY

Avoid in late pregnancy and labour unless benefit outweighs risk of neonatal haemolytic anaemia, hyperbilirubinemia, and kernicterus in neonate.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, oral suspension, tablet

Tablet

Menadiol sodium phosphate (Non-proprietary)

Menadiol phosphate (as Menadiol sodium phosphate)

10 mg

Menadiol 10mg tablets | 100 tablet £128.60 DF price = £128.60

Phytomenadione

(Vitamin K<sub>1</sub>)

INDICATIONS AND DOSE

Major bleeding in patients on warfarin (in combination with dried prothrombin complex or fresh frozen plasma)

BY SLOW INTRAVENOUS INJECTION

Adult: 5 mg for 1 dose, stop warfarin treatment

INR > 8.0 with minor bleeding in patients on warfarin

BY SLOW INTRAVENOUS INJECTION

Adult: 1–3 mg, stop warfarin treatment, dose may be repeated if INR still too high after 24 hours, restart warfarin treatment when INR < 5

INR > 8.0 with no bleeding in patients on warfarin

BY MOUTH

Adult: 1–5 mg, intravenous preparation to be used orally, stop warfarin treatment, repeat dose if INR still too high after 24 hours, restart warfarin treatment when INR < 5

INR 5.0–8.0 with minor bleeding in patients on warfarin

BY SLOW INTRAVENOUS INJECTION

Adult: 1–3 mg, stop warfarin treatment, restart warfarin treatment when INR < 5

Peri-operative anticoagulation (after warfarin stopped)

BY MOUTH

Adult: 1–5 mg, intravenous preparation to be used orally, dose to be given the day before surgery if INR > 1.5

CAUTIONS

Intravenous injections should be given very slowly - risk of vascular collapse

KONAKION® MM

Reduce dose in elderly.

INTERACTIONS

Appendix 1 (vitamins).

SIDE-EFFECTS

KONAKION® MM

Anaphylactoid reactions.

PREGNANCY

Use if potential benefit outweighs risk.

BREAST FEEDING

Present in milk.

HEPATIC IMPAIRMENT

KONAKION® MM

Caution - glycocholic acid may displace bilirubin.

DIRECTIONS FOR ADMINISTRATION

KONAKION® MM

May be administered by slow intravenous injection or by intravenous infusion in glucose 5%: not for intramuscular injection. For intravenous infusion, give intermittently in glucose 5%; dilute with 55ml; may be injected into lower part of infusion apparatus.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, drops, oral solution

Capsule

PHOTOMENADIONE (Non-proprietary)

Phytomenadione 10 mg

Phytomenadione 10mg capsules | 50 capsule £29.00

Neokay (Neoceuticals Ltd)

Phytomenadione 1 mg

NeoKay 1mg capsules | 12 capsule 25p £3.95 DF price + £3.95 | 100 capsule 25p £34.00

Drops

Neookay (Neoceuticals Ltd)

Phytomenadione 200 microgram per 1 ml NeoKay 200micrograms/ml oral drops (sugar-free) | 25 ml £3.95
6.1 Neural tube defects
(prevention in pregnancy)

Neural tube defects (prevention in pregnancy)

Folic acid p. 836 supplements taken before and during pregnancy can reduce the occurrence of neural tube defects. The risk of a neural tube defect occurring in a child should be assessed and folic acid given as follows:

- Women at a low risk of conceiving a child with a neural tube defect should be advised to take folic acid as a medicinal or food supplement daily (at low-risk group dose) before conception and until week 12 of pregnancy. Women who have not been taking folic acid and who suspect they are pregnant should start at once and continue until week 12 of pregnancy.

- Couples are at a high risk of conceiving a child with a neural tube defect if either partner has a neural tube defect (or either partner has a family history of neural tube defects), if they have had a previous pregnancy affected by a neural tube defect, or if the woman has coeliac disease (or other malabsorption state), diabetes mellitus, sickle-cell anaemia, or is taking antiepileptic medicines.

- Women in the high-risk group who wish to become pregnant (or who are at risk of becoming pregnant) should be advised to take folic acid daily (at high-risk group dose) and continue until week 12 of pregnancy (women with Sickle-cell disease p. 820 should continue taking their normal dose of folic acid (or to increase the dose to high-risk group daily dose) and continue this throughout pregnancy).

There is no justification for prescribing multiple-ingredient vitamin preparations containing vitamin B₁₂ or folic acid.

1 Arthritis

Arthritis

Rheumatoid arthritis and other inflammatory disorders

A non-steroidal anti-inflammatory drug (NSAID) is indicated for pain and stiffness resulting from inflammatory rheumatic disease; analgesics such as paracetamol p. 354 or codeine phosphate p. 360 can also be used.

Drugs are also used to influence the rheumatic disease process itself. For rheumatoid arthritis these disease-modifying antirheumatic drugs (DMARDs) include methotrexate p. 762, cyclosporine p. 717, cyclophosphamide p. 750, leflunomide p. 895, penicillamine p. 896, gold, antimalarials (chloroquine p. 536 and hydroxychloroquine sulfate p. 894), and sulfasalazine p. 37. Corticosteroids also have a significant role in the management of rheumatoid arthritis.

Drugs which may affect the disease process in psoriatic arthritis include sulfasalazine, gold, azathioprine, methotrexate, leflunomide, and cytotoxic modulators.

Osteoarthritis and soft-tissue disorders

For pain relief in osteoarthritis and soft-tissue disorders, paracetamol p. 354 should be used first and may need to be taken regularly. A topical NSAID or topical capsaicin p. 37 should also be considered, particularly in knee or hand osteoarthritis. An oral NSAID can be substituted for, or used in addition to, paracetamol. If further pain relief is required in osteoarthritis, then the addition of an opioid analgesic may be considered, but with a substantial risk of adverse effects; however, an opioid analgesic should be considered in patients taking low-dose aspirin.

Intra-articular corticosteroid injections may produce temporary benefit in osteoarthritis, especially if associated with soft-tissue inflammation.

Non-drug measures, such as weight reduction and exercise, should also be encouraged.

Gluconamid p. 893 and rubefacients are not recommended for the treatment of osteoarthritis.

Hyaluronic acid and its derivatives are available for osteoarthritis of the knee, but are not recommended. Sodium hyaluronate (Durolane®, Euflexxa®, Fermlaron®, Hyalgan®, Orthovisc®, Ostenil®, Ostenil Plus®, Renenh Vis®, Suplasytn®, Synocrom®, Synovis®) is also licensed for the relief of pain and optimisation of recovery following ankle sprain, and for the relief of chronic pain and disability associated with tennis elbow.

Rheumatic disease, suppressing drugs

Certain drugs such as those affecting the immune response can suppress the disease process in rheumatoid arthritis and psoriatic arthritis; gold, penicillamine p. 896, hydroxychloroquine sulfate p. 894, chloroquine p. 536, and sulfasalazine p. 37 can also suppress the disease process in rheumatoid arthritis while sulfasalazine p. 37 and possibly gold can suppress the disease process in psoriatic arthritis. Unlike NSAIDs, which are used only for symptom control, disease-modifying anti-rheumatic drugs (DMARDS) can affect the progression of disease but may require 2–6 months of treatment for a full therapeutic response. Response to DMARDs may allow the NSAID dose to be reduced or withdrawn. All patients with suspected inflammatory joint disease should be referred to a specialist as soon as possible to confirm diagnosis and evaluate disease activity; early initiation of DMARDs is recommended to control the signs and symptoms, and to limit joint damage.

Choice

The choice of a disease-modifying antirheumatic drug should take into account co-morbidity and patient preference. Methotrexate p. 762, sulfasalazine p. 37, intramuscular gold, and penicillamine p. 896 are similar in efficacy. However, methotrexate or sulfasalazine may be better tolerated. A combination of DMARDs (including methotrexate and at least one other DMARD) and a short-term corticosteroid, should be given to patients with newly diagnosed active rheumatoid arthritis, ideally within 3 months of the onset of persistent symptoms. If the use of particular DMARDs is contra-indicated and combination therapy is not possible, monotherapy with a suitable DMARD should be given and the dose rapidly increased until clinically effective. In patients with established and stable rheumatoid arthritis, cautiously reduce drug doses to the lowest that are clinically effective. Response to drug treatment often produces a reduction in requirements of both corticosteroids and other drugs.

Gold and penicillamine p. 896 are effective in palindromic rheumatism. Systemic and discoid lupus erythematosus are
sometimes treated with chloroquine p. 536 or hydroxychloroquine sulfate p. 894.

If a disease-modifying anti-rheumatic drug does not lead to an objective benefit within 6 months, it should be replaced by a different one.

**Gold**

Gold can be given as sodium aurothiomalate p. 897 for active progressive rheumatoid arthritis; it must be given by deep intramuscular injection and the area gently massaged. A test dose must be given followed by doses at weekly intervals until there is definite evidence of remission. In patients who do respond, the interval between injections is then gradually increased to 4 weeks and treatment is continued for up to 5 years after complete remission. If relapse occurs the dosage frequency may be immediately increased and only once control has been obtained again should the dosage frequency be decreased; if no response is seen within 2 months, alternative treatment should be sought. It is important to avoid complete relapse since second courses of gold are not usually effective.

**Penicillamine**

Penicillamine p. 896 has a similar action to gold. More patients are able to continue treatment than with gold but side-effects are common.

Patients should be warned not to expect improvement for at least 6 to 12 weeks after treatment is initiated. Penicillamine should be discontinued if there is no improvement within 1 year.

**Sulfasalazine**

Sulfasalazine p. 37 has a beneficial effect in suppressing the inflammatory activity of rheumatoid arthritis. Sulfasalazine may also be used by specialists, in the management of psoriatic arthritis affecting peripheral joints [unlicensed indication]. Haematological abnormalities occur usually in the first 3 to 6 months of treatment and are reversible on cessation of treatment.

**Antimalarials**

The antimalarial hydroxychloroquine sulfate p. 894 is used to treat rheumatoid arthritis of moderate inflammatory activity; chloroquine p. 536 is also licensed for treating inflammatory disorders but is used much less frequently and is generally reserved for use if other drugs have failed.

Chloroquine and hydroxychloroquine sulfate are effective for mild systemic lupus erythematosus, particularly involving the skin and joints. These drugs should not be used for psoriatic arthritis. Chloroquine and hydroxychloroquine sulfate are better tolerated than gold or penicillamine. Retinopathy rarely occurs provided that the recommended doses are not exceeded; in the elderly it is difficult to distinguish drug-induced retinopathy from changes of ageing.

Mepacrine hydrochloride p. 438 is sometimes used in discoid lupus erythematosus [unlicensed].

**Drugs affecting the immune response**

Methotrexate p. 762 is a disease-modifying antirheumatic drug suitable for moderate to severe rheumatoid arthritis. Azathioprine p. 716, ciclosporin p. 717, cyclophosphamide p. 750, leflunomide p. 895, and the cytokine modulators are not considered more toxic and they are used in cases that have not responded to other disease-modifying drugs.

Methotrexate is usually given by mouth once a week, adjusted according to response. In patients who experience mucosal or gastro-intestinal side-effects with methotrexate, folic acid p. 836 given every week [unlicensed indication], on a different day from the methotrexate, may help to reduce the frequency of such side-effects.

Leflunomide acts on the immune system as a disease-modifying antirheumatic drug. Its therapeutic effect starts after 4–6 weeks and improvement may continue for a further 4–6 months. Leflunomide, which is similar in efficacy to sulfasalazine p. 37 and methotrexate p. 762, may be chosen when these drugs cannot be used.

Ciclosporin p. 717 is licensed for severe active rheumatoid arthritis when conventional second-line therapy is inappropriate or ineffective. There is some evidence that ciclosporin may retard the rate of erosive progression and improve symptom control in those who respond only partially to methotrexate.

Cyclophosphamide can also be given for severe systemic rheumatoid arthritis and for other connective tissue diseases (especially with active vasculitis).

Drugs that affect the immune response are also used in the management of severe cases of systemic lupus erythematosus and other connective tissue disorders. They are often given in conjunction with corticosteroids for patients with severe or progressive renal disease. They may be used in cases of polymyositis that are resistant to corticosteroids. They are used for their corticosteroid-sparing effect in patients whose corticosteroid requirements are excessive. Azathioprine p. 716 is usually used.

In the specialist management of psoriatic arthritis affecting peripheral joints, leflunomide p. 895, methotrexate p. 762, or azathioprine p. 716 [unlicensed indication] may be used.

**Juvenile idiopathic arthritis**

Many children with juvenile idiopathic arthritis (juvenile chronic arthritis) do not require disease-modifying antirheumatic drugs. Methotrexate p. 762 is effective; sulfasalazine p. 37 is an alternative [unlicensed indication] but it should be avoided in systemic-onset juvenile idiopathic arthritis. Gold and penicillamine p. 896 are no longer used.

Cytokine modulators have a role in juvenile idiopathic arthritis.

**Cytokine modulators**

Cytokine modulators should be used under specialist supervision.

Adalimumab p. 901, certolizumab pegol p. 902, etanercept p. 903, golimumab p. 904, and infliximab p. 906 inhibit the activity of tumour necrosis factor alpha (TNF-α).

Adalimumab is licensed for moderate to severe active rheumatoid arthritis when response to other disease modifying antirheumatic drugs (including methotrexate p. 762) has been inadequate; it is also licensed for severe, active, and progressive disease in adults not previously treated with methotrexate. In the treatment of rheumatoid arthritis, adalimumab should be used in combination with methotrexate, but it can be given alone if methotrexate is inappropriate. Adalimumab is also licensed for the treatment of active and progressive psoriatic arthritis and severe active ankylosing spondylitis that have not responded adequately to other disease-modifying antirheumatic drugs. It is also licensed for the treatment of severe axial spondyloarthritis without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs. Adalimumab also has a role in inflammatory bowel disease and plaque psoriasis.

Certolizumab pegol is licensed for use in patients with moderate to severe active rheumatoid arthritis when response to disease-modifying antirheumatic drugs (including methotrexate p. 762) has been inadequate.

Certolizumab pegol can be used in combination with
methotrexate, or as a monotherapy if methotrexate is not tolerated or is contra-indicated. Certolizumab pegol is also licensed for the treatment of severe active ankylosing spondylitis in patients who have had an inadequate response to, or are intolerant of NSAIDs. It is also licensed for the treatment of severe active axial spondylarthritis, without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs.

Etanercept p. 903 is licensed for the treatment of moderate to severe active rheumatoid arthritis either alone or in combination with methotrexate p. 762 when the response to other disease-modifying antirheumatic drugs is inadequate and in severe, active and progressive rheumatoid arthritis in patients not previously treated with methotrexate. It is also licensed for the treatment of active and progressive psoriatic arthritis inadequately responsive to other disease-modifying antirheumatic drugs, and for severe ankylosing spondylitis inadequately responsive to conventional therapy. Etanercept also has a role in plaque psoriasis.

Golimumab p. 904 is licensed in combination with methotrexate for the treatment of moderate to severe active rheumatoid arthritis when response to disease-modifying antirheumatic drug (DMARD) therapy (including methotrexate) has been inadequate; it is also licensed in combination with methotrexate for patients with severe, active, and progressive rheumatoid arthritis not previously treated with methotrexate. Golimumab is also licensed for the treatment of active and progressive psoriatic arthritis, as monotherapy or in combination with methotrexate, when response to DMARD therapy has been inadequate; it is also licensed for the treatment of severe active ankylosing spondylitis when there is an inadequate response to conventional treatment.

Infliximab p. 906 is licensed for the treatment of active rheumatoid arthritis in combination with methotrexate when the response to other disease-modifying antirheumatic drugs, including methotrexate, is inadequate; it is also licensed in combination with methotrexate for patients not previously treated with methotrexate or other DMARDs who have severe, active, and progressive rheumatoid arthritis. Infliximab is also licensed for the treatment of ankylosing spondylitis, in patients with severe axial symptoms who have not responded adequately to conventional therapy, and in combination with methotrexate (or alone if methotrexate is not tolerated or is contra-indicated) for the treatment of active and progressive psoriatic arthritis which has not responded adequately to disease-modifying antirheumatic drugs.

Rituximab p. 734 is licensed in combination with methotrexate for the treatment of severe active rheumatoid arthritis in patients whose condition has not responded adequately to other disease-modifying antirheumatic drugs (including one or more tumour necrosis factor inhibitors) or who are intolerant of them. Rituximab has a role in malignant disease.

Abatacept p. 900 prevents the full activation of T-lymphocytes. It is licensed for moderate to severe active rheumatoid arthritis in combination with methotrexate, in patients unresponsive to other disease-modifying antirheumatic drugs (including methotrexate or a tumour necrosis factor (TNF) inhibitor). Abatacept is not recommended for use in combination with TNF inhibitors.

Anakinra p. 897 inhibits the activity of interleukin-1. Anakinra (in combination with methotrexate) is licensed for the treatment of rheumatoid arthritis which has not responded to methotrexate alone. Anakinra is not recommended for the treatment of rheumatoid arthritis except when used in a controlled long-term clinical study. Patients who are already receiving anakinra for rheumatoid arthritis should continue treatment until they and their specialist consider it appropriate to stop.

Belimumab p. 725 inhibits the activity of B-lymphocyte stimulator. Belimumab is licensed as adjunctive therapy in patients with active, autoantibody-positive systemic lupus erythematosus with a high degree of disease activity despite standard therapy.

Tocilizumab p. 898 antagonises the actions of interleukin-6. Tocilizumab is licensed for use in patients with moderate to severe active rheumatoid arthritis when response to at least one disease-modifying antirheumatic drug or tumour necrosis factor inhibitor has been inadequate, or in those who are intolerant of these drugs. Tocilizumab can be used in combination with methotrexate, or as monotherapy if methotrexate is not tolerated or is contra-indicated.

Ustekinumab p. 899 inhibits the activity of interleukins 12 and 23. It is licensed for the treatment of active psoriatic arthritis (in combination with methotrexate or alone) in patients who have had an inadequate response to one or more disease-modifying antirheumatic drugs.

CHONDROPROTECTIVE DRUGS

**Glucosamine**

- **DRUG ACTION** Glucosamine is a natural substance found in mucopolysaccharides, mucoproteins, and chitin.

**INDICATIONS AND DOSE**

**ALATERIS®**

Symptomatic relief of mild to moderate osteoarthritis of the knee

- Adult: 2 tablets once daily, review treatment if no benefit after 2–3 months

**DOLENO®**

Symptomatic relief of mild to moderate osteoarthritis of the knee

- Adult: 1 tablet once daily, review treatment if no benefit after 2–3 months

**GLUSARTEL®**

Symptomatic relief of mild to moderate osteoarthritis of the knee

- Adult: 1 sachet once daily, dose to be dissolved in at least 250 mL of water, review treatment if no benefit after 2–3 months

- **CAUTIONS** Asthma · impaired glucose tolerance · predisposition to cardiovascular disease

- **INTERACTIONS** → Appendix 1 (glucosamine).

- **SIDE-EFFECTS**
  - **Common or very common** Abdominal pain · constipation · diarrhoea · drowsiness · dyspepsia · fatigue · flatulence · headache · nausea
  - **Uncommon** Flushing · pruritus · rash
  - **Frequency not known** Hair loss · visual disturbances

- **ALLERGY AND CROSS-SENSITIVITY** Contraindicated if patient has a shellfish allergy.

- **PREGNANCY** Manufacturers advise avoid—no information available.

- **BREAST FEEDING** Manufacturers advise avoid—no information available.

- **MONITORING REQUIREMENTS**
  - Monitor blood-glucose concentration before treatment and periodically thereafter in patients with impaired glucose tolerance.
  - Monitor cholesterol in patients with predisposition to cardiovascular disease.
DISEASE-MODIFYING ANTI-RHEUMATIC DRUGS

Hydroxychloroquine sulfate

**INDICATIONS AND DOSE**

Active rheumatoid arthritis (including juvenile idiopathic arthritis) (administered on expert advice) / Systemic and discoid lupus erythematosus (administered on expert advice) / Dermatological conditions caused or aggravated by sunlight (administered on expert advice)

**BY MOUTH**

- Adult: 200–400 mg daily, daily maximum dose to be based on ideal body-weight; maximum 6.5 mg/kg per day

**CAUTIONS**

Acute porphyrias p. 864 / elderly - G6PD deficiency - may aggravate myasthenia gravis - may exacerbate psoriasis - neurological disorders (especially in those with a history of epilepsy) - severe gastro-intestinal disorders

**CAUTIONS, FURTHER INFORMATION**

Screening for ocular toxicity: A review group convened by the Royal College of Ophthalmologists has updated guidelines for screening to prevent ocular toxicity on long-term treatment with chloroquine and hydroxychloroquine (Hydroxychloroquine and Ocular Toxicity: Recommendations on Screening 2009).

The following recommendations relate to hydroxychloroquine, which is only rarely associated with toxicity.

**Before treatment:**

- Assess renal and liver function (adjust dose if impaired)
- Ask patient about visual impairment (not corrected by glasses). If impairment or eye disease present, assessment by an optometrist is advised and any abnormality should be referred to an ophthalmologist
- Record near visual acuity of each eye (with glasses where appropriate) using a standard reading chart
- Initiate hydroxychloroquine treatment if no abnormality detected (at a dose not exceeding hydroxychloroquine sulfate 6.5 mg/kg daily)

**During treatment:**

- Ask patient about visual symptoms and monitor visual acuity annually using the standard reading chart
- Refer to ophthalmologist if visual acuity changes or if vision blurred and warn patient to seek prescribing doctor’s advice about stopping treatment
- If long-term treatment is required (more than 5 years), individual arrangement should be agreed with the local ophthalmologist

**INTERACTIONS** → Appendix 1 (chloroquine and hydroxychloroquine). Concurrent use of hepatotoxic drugs should be avoided.

**SIDE-EFFECTS**

- Common or very common / Gastro-intestinal disturbances - headache - pruritus - rashes / skin reactions
- Uncommon / Convulsions - discoloration of skin, nails, and mucous membranes / ECG changes / hair depigmentation / hair loss / keratopathy / otoxicity / retinal damage / visual changes
- Rare / Acute generalised exanthematous pustulosis / agranulocytosis / angioedema / aplastic anaemia / blood disorders / cardiomyopathy / emotional disturbances / exfoliative dermatitis / hepatic damage / mental changes / myopathy / neuromyopathy / photosensitivity / psychosis / Stevens-Johnson syndrome / thrombocytopenia
- Frequency not known / Bronchospasm - diffuse parenchymal lung disease / drug rash with eosinophilia and systemic symptoms

**Overdose** Hydroxychloroquine is very toxic in overdosage; overdosage is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

**PREGNANCY** It is not necessary to withdraw an antimalarial drug during pregnancy if the rheumatic disease is well controlled; however, the manufacturer of hydroxychloroquine advises avoiding use.

**BREAST FEEDING** Avoid - risk of toxicity in infant.

**HEPATIC IMPAIRMENT** Caution in moderate to severe hepatic impairment.

**RENAL IMPAIRMENT** Manufacturer advises caution. Monitor plasma-hydroxychloroquine concentration in severe renal impairment.

**MONITORING REQUIREMENTS** Manufacturers recommend regular ophthalmological examination but the evidence of practical value is unsatisfactory (see advice of the Royal College of Ophthalmologists, above).

**PRESCRIBING AND DISPENSING INFORMATION** To avoid excessive dosage in obese patients, the dose of hydroxychloroquine should be calculated on the basis of ideal body-weight.

**PATIENT AND CARER ADVICE** Do not take antacids for at least 4 hours before or after hydroxychloroquine to reduce absorption.

**NATIONAL FUNDING/ACCESS DECISIONS**

Scottish Medicines Consortium (SMC) Decisions

- The Scottish Medicines Consortium has advised (May 2008) that glucosamine (Alateris®) and (July 2011) glucosamine (Glusartel®) are not recommended for use within NHS Scotland for the symptomatic relief of mild to moderate osteoarthritis of the knee.

**LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing - the mechanism of action is not understood and there is limited evidence to show it is effective.
Leflunomide

INDICATIONS AND DOSE
Moderate to severe active rheumatoid arthritis (specialist use only)

BY MOUTH
- Adult: Initially 100 mg once daily for 3 days, then reduced to 10–20 mg once daily

Active psoriatic arthritis

BY MOUTH
- Adult: Initially 100 mg once daily for 3 days, then reduced to 20 mg once daily

CONTRA-INDICATIONS
Serious infection - severe hypoproteinaemia - severe immunodeficiency

CAUTIONS
Anaemia (avoid if significant and due to causes other than rheumatoid arthritis) - history of tuberculosis - impaired bone-marrow function (avoid if significant and due to causes other than rheumatoid arthritis) - leucopenia (avoid if significant and due to causes other than rheumatoid arthritis) - thrombocytopenia (avoid if significant and due to causes other than rheumatoid arthritis)

INTERACTIONS
Appendix 1 (leflunomide).

Increased risk of toxicity with other haematotoxic and hepatotoxic drugs. Caution if recent treatment with other hepatotoxic disease-modifying anti-rheumatic drugs. Caution if recent treatment with other myelotoxic disease-modifying anti-rheumatic drugs. Caution—washout procedures recommended before switching to other disease-modifying antirheumatic drugs (consult product literature).

SIDE-EFFECTS
- Common or very common Abdominal pain - alopecia - anorexia - arthralgia - diarrhoea - dizziness - dry skin - headache - increased blood pressure - leucopenia - nausea - oral mucosal disorders - paraesthesia - pruritus - rash - tenosynovitis - vomiting
- Uncommon Anaemia - anxiety - hyperlipidaemia - hypokalaemia - hypophosphataemia - taste disturbance - tendon rupture - thrombocytopenia
- Rare Eosinophilia - hepatitis - interstitial lung disease - jaundice - pancytopenia - severe infection
- Very rare Hepatic failure - pancreatitis - peripheral neuropathy - progressive multifocal leucoencephalopathy - Stevens-Johnson syndrome - toxic epidermal necrolysis - vasculitis
- Frequency not known Bone-marrow toxicity - hypouricaemia - malignancy - reduced sperm count - renal failure

SIDE-EFFECTS, FURTHER INFORMATION
Discontinue treatment and institute washout procedure in case of serious side-effect (consult product literature).

Hepatotoxicity
Potentially life-threatening hepatotoxicity reported usually in the first 6 months. Discontinue treatment (and institute washout procedure—consult product literature) or reduce dose according to liver-function abnormality; if liver-function abnormality persists after dose reduction, discontinue treatment and institute washout procedure.

CONCEPTION AND CONTRACEPTION
Effective contraception essential during treatment and for at least 2 years after treatment in women and at least 3 months after treatment in men (plasma concentration monitoring required; waiting time before conception may be reduced with washout procedure). The concentration of the active metabolite after washout should be less than 20 micrograms/litre (measured on 2 occasions 14 days apart) in men or women before conception—consult product literature.

PREGNANCY
Avoid—active metabolite teratogenic in animal studies.

BREAST FEEDING
Present in milk in animal studies—manufacturer advises avoid.

HEPATIC IMPAIRMENT
Avoid—active metabolite may accumulate.

RENAL IMPAIRMENT
Manufacturer advises avoid in moderate or severe impairment—no information available.

PRE-TREATMENT SCREENING
Exclude pregnancy before treatment.

MONITORING REQUIREMENTS
- Monitor full blood count (including differential white cell count and platelet count) before treatment and every 2 weeks for 6 months then every 8 weeks.
- Monitor liver function before treatment and every 2 weeks for first 6 months then every 8 weeks.
- Monitor blood pressure.

TREATMENT CESSATION
Washout Procedure The active metabolite persists for a long period; to aid drug elimination in case of serious adverse effect, or before starting another disease-modifying antirheumatic drug, or before conception, stop treatment and give either colestyramine p. 173 or charcoal, activated p. 1130. Procedure may be repeated as necessary.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Tablet

Penicillamine

**DRUG ACTION** Penicillamine aids the elimination of copper ions in Wilson’s disease (hepatolenticular degeneration).

**INDICATIONS AND DOSE**

Severe active rheumatoid arthritis (administered on expert advice)

**BY MOUTH**

- **Adult:** Initially 125–250 mg daily for 1 month, then increased in steps of 125–250 mg, at intervals of not less than 4 weeks; maintenance 500–750 mg daily in divided doses, then reduced in steps of 125–250 mg every 12 weeks, dose reduction attempted only if remission sustained for 6 months; maximum 1.5 g per day
- **Elderly:** Initially up to 125 mg daily for 1 month, then increased in steps of up to 125 mg, at intervals of at least 4 weeks; maximum 1 g per day

Wilson’s disease

**BY MOUTH**

- **Adult:** 1.5–2 g daily in divided doses, to be taken before food; maintenance 0.75–1 g daily for 1 year; maximum 2 g per day
- **Elderly:** 20 mg/kg daily in divided doses, adjusted according to response; maximum 2 g per day

Autoimmune hepatitis (used rarely; after disease controlled with corticosteroids)

**BY MOUTH**

- **Adult:** Initially 500 mg daily in divided doses, to be increased slowly over 3 months; maintenance 1.25 g daily

Cystinuria, therapeutic

**BY MOUTH**

- **Adult:** 1–3 g daily in divided doses, to be adjusted to maintain urinary cystine below 200 mg/litre, to be taken before food

Cystinuria, prophylactic

**BY MOUTH**

- **Adult:** 0.5–1 g daily, maintain urinary cystine below 300 mg/litre and adequate fluid intake (at least 3 litres daily), to be taken at bedtime
- **Elderly:** Minimum dose to maintain urinary cystine below 200 mg/litre is recommended

**CONTRA-INDICATIONS** Lupus erythematosus

**CAUTIONS** Neurological involvement in Wilson’s disease

**INTERACTIONS** Appendix 1 (penicillamine). Caution with gold treatment (avoid concomitant use if adverse reactions to gold). Caution with concomitant nephrotoxic drugs (increased risk of toxicity).

**SIDE-EFFECTS**

- **Common or very common** Anorexia · fever · nausea · proteinuria · rash · thrombocytopenia
- **Rare** Alopecia · breast enlargement (male and female) · elastosis perforans · haematuria (withdraw immediately if cause unknown) · mouth ulceration · pseudoxanthoma elasticum · skin laxity · stomatitis
- **Frequency not known** Agranulocytosis · aplastic anaemia · blood disorders · bronchiolitis · cholestatic jaundice · dermatomyositis · glomerulonephritis · Goodpasture's syndrome · haemolytic anaemia · haemolytic uropoenopha - late rashes (consider dose reduction) · lupus erythematosus · myasthenia gravis · nephrotic syndrome · neuropathy (especially if neurological involvement in Wilson’s disease—prophylactic pyridoxine recommended) · neutropenia · pancreatitis · pemphigus · pneumonitis · polymyositis · pulmonary haemorrhage · rheumatoid arthritis · septic arthritis (in patients with rheumatoid arthritis) · Stevens-Johnson syndrome · taste loss (mineral supplements not recommended) · urticaria · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION**

Proteinuria Proteinuria, associated with immune complex nephritis, occurs in up to 30% of patients, but may resolve despite continuation of treatment; treatment may be continued provided that renal function tests remain normal, oedema is absent, and the 24-hour urinary excretion of protein does not exceed 2 g.

Rash Rash is a common side-effect. Those that occur in the first few months of treatment disappear when the drug is stopped and treatment may then be re-introduced at a lower dose level and gradually increased.

Taste loss Loss of taste can occur about 6 weeks after treatment is started but usually returns 6 weeks later irrespective of whether treatment is discontinued.

Nausea Nausea may occur but is not usually a problem provided that penicillamine is taken before food or on retiring and that low initial doses are used and only gradually increased.

**ALLERGY AND CROSS-SENSITIVITY** Patients who are hypersensitive to penicillin may react rarely to penicillamine.

**PREGNANCY** Fetal abnormalities reported rarely; avoid if possible.

**BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.

**RENAI IMPAIRMENT** Reduce dose and monitor renal function or avoid (consult product literature).

**MONITORING REQUIREMENTS**

- Blood counts, including platelets, and urine examinations should be carried out before starting treatment and then every 1 or 2 weeks for the first 2 months then every 4 weeks to detect blood disorders and proteinuria (they should also be carried out in the week after any dose increase).
- A reduction in platelet count calls for discontinuation with subsequent re-introduction at a lower dosage and then, if possible, gradual increase.
- Longer intervals may be adequate in cystinuria and Wilson’s disease.
- Consider withdrawal if platelet count falls below 120 000/mm³ or white blood cells below 2000/mm³ or if 3 successive falls within reference range (can restart at reduced dose when counts return to within reference range but permanent withdrawal necessary if recurrence of leucopenia or thrombocytopenia).

**PATIENT AND CARER ADVICE** Counselling on the symptoms of blood disorders is advised. Warn patient and carers to tell doctor immediately if sore throat, fever, infection, non-specific illness, unexplained bleeding and bruising, purpura, mouth ulcers, or rashes develop.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

**Tablet**

Sodium aurothiomalate

**INDICATIONS AND DOSE**
Active progressive rheumatoid arthritis (administered on expert advice)

**BY DEEP INTRAMUSCULAR INJECTION**
- Adult: Test dose 10 mg, followed by 50 mg once weekly. If there is definite evidence of remission, then gradually reduced to 50 mg every 4 weeks for up to 5 years after complete remission. Benefit is not expected until 300–500 mg has been given; it should be discontinued if there is no remission after 1 g has been given.
- Relapse in patients who have previously received sodium aurothiomalate therapy for active progressive rheumatoid arthritis (administered on expert advice)

**BY DEEP INTRAMUSCULAR INJECTION**
- Adult: 50 mg once weekly until control has been obtained again, then reduced to 50 mg every 4 weeks continued for up to 5 years after complete remission, if no response is seen within 2 months, alternative treatment should be sought.

**CONTRA-INDICATIONS**
- Exfoliative dermatitis
- History of blood disorders
- History of bone marrow aplasia
- Necrotising enterocolitis
- Pulmonary fibrosis
- Systemic lupus erythematosus

**CAUTIONS**
- Colitis
- Eczema
- Elderly
- History of urticaria

**CAUTIONS, FURTHER INFORMATION**
Sodium aurothiomalate should be discontinued in the presence of blood disorders, gastrointestinal bleeding (associated with ulcerative enterocolitis), or unexplained proteinuria (associated with immune complex nephritis) which is repeatedly above 300 mg/litre.

**INTERACTIONS** → Appendix 1 (sodium aurothiomalate).

**SIDE-EFFECTS**
- Alopecia
- Blood disorders (sometimes sudden and fatal)
- Colitis
- Gold deposits in eye
- Hepatotoxicity with cholestatic jaundice
- Irreversible pigmentation in sun-exposed areas
- Muscle wasting
- Neutropenia reported commonly
- Peripheral neuropathy
- Proteinuria
- Pulmonary fibrosis
- Severe anaphylactic reactions
- Skin reactions
- Stomatitis
- Taste disturbances

**SIDE-EFFECTS, FURTHER INFORMATION**
Rashes with pruritus often occur after 2 to 6 months of treatment and may necessitate discontinuation.

**PREGNANCY**
Consider reducing dose and frequency. Manufacturer advises avoid but limited data suggests usually not necessary to withdraw if condition well controlled.

**BREAST FEEDING**
Manufacturer advises avoid—present in milk; theoretical possibility of rashes and idiosyncratic reactions.

**HEPATIC IMPAIRMENT**
Caution in mild to moderate impairment. Avoid in severe impairment.

**RENAL IMPAIRMENT**
Caution in mild to moderate impairment. Avoid in severe impairment.

**MONITORING REQUIREMENTS**
- Urine tests and full blood counts (including total and differential white cell and platelet counts) must be performed before starting treatment and before each intramuscular injection.
- Monitor for pulmonary fibrosis with annual chest X-ray.

**PATIENT AND CARER ADVICE**
Patients should be advised to seek prompt medical attention if diarrhoea, sore throat, fever, infection, non-specific illness, unexplained bleeding and bruising, purpura, mouth ulcers, metallic taste, rash, breathlessness, or cough develop.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

**INTERLEUKIN INHIBITORS**

### Anakinra

**INDICATIONS AND DOSE**
Treatment of rheumatoid arthritis (in combination with methotrexate) which has not responded to methotrexate alone

**BY SUBCUTANEOUS INJECTION**
- Adult: 100 mg once daily

**CONTRA-INDICATIONS**
- Neutropenia

**CAUTIONS**
- History of asthma (risk of serious infection)
- Predisposition to infection

**INTERACTIONS** → Appendix 1 (anakinra).

**SIDE-EFFECTS**
- Common or very common
  - Neutropenia
- Frequency not known
  - Antibody formation
  - Headache
  - Infections
  - Injection-site reactions
  - Malignancy

**SIDE-EFFECTS, FURTHER INFORMATION**

**Blood disorders**
- Neutropenia reported commonly—discontinue if neutropenia develops.

**CONCEPTION AND CONTRACEPTION**
Effective contraception must be used during treatment.

**PREGNANCY**
Manufacturer advises avoid.

**BREAST FEEDING**
Manufacturer advises avoid—no information available.

**RENAL IMPAIRMENT**
Caution if eGFR less than 30 mL/minute/1.73 m². Avoid if eGFR less than 30 mL/minute/1.73 m².

**MONITORING REQUIREMENTS**
Monitor neutrophil count before treatment, then every month for 6 months, then every 3 months.

**PATIENT AND CARER ADVICE**
Blood disorders. Patients should be instructed to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat, bruising or bleeding) develop.

**NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) Decisions**
The Scottish Medicines Consortium has advised (July 2002) that anakinra is not recommended for the treatment of rheumatoid arthritis within NHS Scotland.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

Tocilizumab

**INDICATIONS AND DOSE**
Moderate to severe active rheumatoid arthritis (in combination with methotrexate or alone if methotrexate inappropriate) when response to at least one disease-modifying antirheumatic drug or tumour necrosis factor inhibitor has been inadequate, or in those who are intolerant of these drugs.

**BY INTRAVENOUS INFUSION**
- Adult: 8 mg/kg every 4 weeks (max. per dose 800 mg); for dose adjustment in patients with liver enzyme abnormalities, or low absolute neutrophil or platelet count, consult product literature.

**CONTRA-INDICATIONS**
- Do not initiate if absolute neutrophil count less than 2 x 10^9/litre · severe active infection.

**CAUTIONS**
- History of diverticulitis · history of intestinal ulceration · history of recurrent or chronic infection (interrupt treatment if serious infection occurs) · low absolute neutrophil count · low platelet count · predisposition to infection (interrupt treatment if serious infection occurs).

**CAUTIONS, FURTHER INFORMATION**
- **Tuberculosis** Patients with latent tuberculosis should be treated with standard therapy before starting tocilizumab.
- **INTERACTIONS** → Appendix 1 (tocilizumab).
- **SIDE-EFFECTS**
  - Common or very common · Abdominal pain · antibody formation · dizziness · gastritis · headache · hypercholesterolaemia · hypersensitivity · hypertension · infection · leucopenia · mouth ulceration · neutropenia · peripheral oedema · pruritus · raised hepatic transaminases · rash · upper respiratory-tract infection.
  - Uncommon · Anaphylaxis · gastric ulcer · gastro-intestinal perforation · hypertriglyceridaemia · hypothyroidism · infection related reactions · nephrolithiasis.
  - Frequency not known · Thrombocytopenia.

**SIDE-EFFECTS, FURTHER INFORMATION**
- **Neutrophil and platelet counts** Discontinue if absolute neutrophil count less than 0.5 x 10^9/litre or platelet count less than 50 x 10^9/microlitre.
- **CONCEPTION AND CONTRACEPTION**
  - Effective contraception required during and for 3 months after treatment.
- **PREGNANCY**
  - Manufacturer advises avoid unless essential—xicity in animal studies.
- **BREAST FEEDING**
  - Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **HEPATIC IMPAIRMENT**
  - Manufacturer advises caution—consult product literature.
- **RENAL IMPAIRMENT**
  - Manufacturer advises monitor renal function closely in moderate or severe impairment.
- **PRE-TREATMENT SCREENING**
  - Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
  - Monitor hepatic transaminases every 4–8 weeks for first 6 months, then every 12 weeks.
  - Monitor neutrophil and platelet counts 4–8 weeks after starting treatment and then as indicated.
  - Monitor lipoprotein 4–8 weeks after starting treatment and then as indicated.
  - Monitor for demyelinating disorders.
- **DIRECTIONS FOR ADMINISTRATION**
  - For intravenous infusion (RoActemra®), give intermittently in Sodium chloride 0.9%; dilute requisite dose to a volume of 100 mL with infusion fluid and give over 1 hour.

**PATIENT AND CARER ADVICE**
- An alert card should be provided. Patients and their carers should be advised to seek immediate medical attention if symptoms of infection occur, or if symptoms of diverticular perforation such as abdominal pain, haemorrhage, or fever accompanying change in bowel habits occur.

**NATIONAL FUNDING/ACCESS DECISIONS**
- **NICE technology appraisals (TAs)**
  - **Tocilizumab for the treatment of rheumatoid arthritis (February 2012) NICE TA247**
  - Tocilizumab, in combination with methotrexate, is recommended as an option for the treatment of rheumatoid arthritis in adults if:
    - the disease has responded inadequately to disease-modifying anti-rheumatic drugs (DMARDs) and is used as described for tumour necrosis factor (TNF) inhibitor treatments (specifically the recommendations on disease activity and treatment) in the NICE guidance (October 2007) Adalimumab, etanercept and infliximab for the treatment of rheumatoid arthritis, or
    - the disease has responded inadequately to DMARDs and a TNF inhibitor and the patient cannot receive rituximab because of contra-indications or intolerance, and tocilizumab is used as described for TNF inhibitor treatments (specifically the recommendations on disease activity) in the NICE guidance (August 2010) Adalimumab, etanercept, infliximab, rituximab and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor, or
    - the disease has responded inadequately to one or more TNF inhibitor treatments and to rituximab
  - and the manufacturer provides tocilizumab with the discount agreed as part of the patient access scheme.
  - Patients currently receiving tocilizumab for the treatment of rheumatoid arthritis who do not meet these criteria should have the option to continue treatment until they and their clinicians consider it appropriate to stop.
  - www.nice.org.uk/TA247

**Scottish Medicines Consortium (SMC) Decisions**
The Scottish Medicines Consortium has advised (August 2012) that tocilizumab (RoActemra®) is accepted for restricted use within NHS Scotland as monotherapy in patients who are intolerant to methotrexate or where continued treatment with methotrexate is inappropriate, for the treatment of moderate to severe active rheumatoid arthritis in adults who have either responded inadequately to, or who were intolerant to, previous therapy with one or more disease-modifying antirheumatic drugs or tumour necrosis factor inhibitors, in accordance with the British Society for Rheumatology guidance on prescribing TNF-α blockers in adults with rheumatoid arthritis (2005).

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**
- **RoActemra** (Roche Products Ltd)
  - Tocilizumab 180 mg per 1 ml RoActemra 162mg/0.9ml solution for injection pre-filled syringes | 4 pre-filled disposable injection £913.12 (Hospital only).

**Solution for infusion**
- **RoActemra** (Roche Products Ltd)
  - Tocilizumab 20 mg per 1 ml RoActemra 400mg/20ml concentrate for solution for infusion vials | 1 vial £512.00 (Hospital only).
  - RoActemra 200mg/10ml concentrate for solution for infusion vials | 1 vial £256.00 (Hospital only).
  - RoActemra 80mg/4ml concentrate for solution for infusion vials | 1 vial £102.40 (Hospital only).
**Ustekinumab**

**INDICATIONS AND DOSE**
Severe plaque psoriasis that has not responded to at least 2 standard systemic treatments and photochemotherapy, or when these treatments cannot be used because of intolerance or contra-indications.

**BY SUBCUTANEOUS INJECTION**
- Adult (body-weight up to 100 kg): Initially 45 mg, then 45 mg after 4 weeks, then 45 mg every 12 weeks, discontinue if no response within 16 weeks.
- Adult (body-weight 100 kg and above): Initially 45–90 mg, then 45–90 mg after 4 weeks, then 45–90 mg every 12 weeks, discontinue if no response within 16 weeks.

**Active psoriatic arthritis (in combination with methotrexate or alone) in patients who have had an inadequate response to one or more disease-modifying antirheumatic drugs**

**CONTRA-INDICATIONS**
- Active infection
- CAUTIONS: Development of malignancy - elderly; history of malignancy; predisposition to infection - start appropriate treatment if widespread erythema and skin exfoliation develop, and stop ustekinumab treatment if exfoliative dermatitis suspected

**CAUTIONS, FURTHER INFORMATION**

**Tuberculosis**
Active tuberculosis should be treated with standard treatment for at least 2 months before starting ustekinumab. Patients who have previously received adequate treatment for tuberculosis can start ustekinumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting ustekinumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with ustekinumab.

**INTERACTIONS**
- Appendix 1 (ustekinumab).

**SIDE-EFFECTS**
- Common or very common: Arthralgia, diarrhoea, dizziness, headache, infections (sometimes severe), injection-site reactions, malaise, myalgia, nausea, opharyngitis, pain, pruritus.
- Uncommon: Depression, facial palsy, hypersensitivity reactions (possibly delayed onset), nasal congestion, pustular psoriasis.
- Rare: Exfoliative dermatitis.

**CONCEPTION AND CONTRACEPTION**
Manufacturer advises effective contraception during treatment and for 15 weeks after stopping treatment.

**PREGNANCY**
Avoid.

**BREAST FEEDING**
Manufacturer advises avoid—present in milk in animal studies.

**PRE-TREATMENT SCREENING**
Tuberculosis Patients should be evaluated for tuberculosis before treatment.

**MONITORING REQUIREMENTS**
- Monitor for non-melanoma skin cancer, especially in patients with a history of PUVA treatment or prolonged immunosuppressant therapy, or those over 60 years of age.
- Monitor for signs and symptoms of exfoliative dermatitis or erythrodermic psoriasis.

**PATIENT AND CARER ADVICE**
Exfoliative dermatitis Patients should be advised to seek prompt medical attention if symptoms suggestive of exfoliative dermatitis or erythrodermic psoriasis (such as increased redness and shedding of skin over a larger area of the body) develop.

Tuberculosis Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**
- Ustekinumab for plaque psoriasis in adults (September 2009)
- Ustekinumab for treating active psoriatic arthritis (June 2015)

Ustekinumab is recommended for the treatment of severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) and to photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Ustekinumab should be withdrawn if the response is not adequate after 16 weeks.

For patients weighing over 100 kg, the manufacturer should provide the 90-mg dose of ustekinumab at the same price as the 45 mg dose. [www.nice.org.uk/TA180](http://www.nice.org.uk/TA180)

**Ustekinumab for treating active psoriatic arthritis (June 2015)**

NICE TA340

Ustekinumab is an option, alone or in combination with methotrexate, for the treatment of active psoriatic arthritis in adults only when:
- treatment with tumour necrosis factor (TNF) alpha inhibitors is contraindicated but would otherwise be considered (as described in the NICE guidance on etanercept, infliximab and adalimumab for the treatment of psoriatic arthritis (August 2010) and golimumab for the treatment of psoriatic arthritis (April 2011)) or
- the patient has had treatment with 1 or more TNF-alpha inhibitors.

Ustekinumab is recommended only if the manufacturer provides the 90 mg dose of ustekinumab for patients who weigh more than 100 kg at the same cost as the 45 mg dose, as agreed in the patient access scheme.

Ustekinumab treatment should be stopped if the patient’s psoriatic arthritis has not shown an adequate response using the Psoriatic Arthritis Response Criteria (PsARC) at 24 weeks.

Patients currently receiving ustekinumab whose disease does not meet the above criteria should have the option to continue treatment until they and their clinic consider it appropriate to stop. [www.nice.org.uk/TA340](http://www.nice.org.uk/TA340)

**Scottish Medicines Consortium (SMC) Decisions**
The Scottish Medicines Consortium has advised (February 2014) that ustekinumab (Stelara®) is accepted for restricted use within NHS Scotland either alone or in combination with methotrexate, for the treatment of active psoriatic arthritis in adults who have responded inadequately to previous therapy with a non-biological disease-modifying anti-rheumatic drug, and failed on, or are unsuitable for, treatment with a TNF inhibitor.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**
 CAUTIONARY AND ADVISORY LABELS 10
- Stelara (Janssen-Cilag Ltd)
  - Ustekinumab 90 mg per 1 ml
  - Stelara 45mg/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection
  - £2,147/100
T-CELL ACTIVATION INHIBITORS

Abatacept

INDICATIONS AND DOSE
Moderate to severe active rheumatoid arthritis (in combination with methotrexate) in patients unresponsive to other disease-modifying antirheumatic drugs (including methotrexate or a tumour necrosis factor (TNF) inhibitor)

INITIALLY BY INTRAVENOUS INFUSION
- Adult (body-weight up to 60 kg): 500 mg every 2 weeks for 3 doses (loading dose), then (by intravenous infusion) 500 mg every 4 weeks, alternatively (by subcutaneous injection) 125 mg once weekly, first subcutaneous dose to be given within 1 day of the intravenous loading dose; patients who are unable to receive an infusion may initiate subcutaneous abatacept without receiving an intravenous loading dose
- Adult (body-weight 60-100 kg): 750 mg every 2 weeks for 3 doses (loading dose), then (by intravenous infusion) 750 mg every 4 weeks, alternatively (by subcutaneous injection) 125 mg once weekly, first subcutaneous dose to be given within 1 day of the intravenous loading dose; patients who are unable to receive an infusion may initiate subcutaneous abatacept without receiving an intravenous loading dose
- Adult (body-weight 101 kg and above): 1 g every 2 weeks for 3 doses (loading dose), then (by intravenous infusion) 1 g every 4 weeks, alternatively (by subcutaneous injection) 125 mg once weekly, first subcutaneous dose to be given within 1 day of the intravenous loading dose; patients who are unable to receive an infusion may initiate subcutaneous abatacept without receiving an intravenous loading dose

CONTRA-INDICATIONS
Severe infection

CAUTIONS Do not initiate until active infections are controlled. Elderly (increased risk of side-effects)
- Predisposition to infection (screen for latent tuberculosis and viral hepatitis)
- Progressive multifocal leucoencephalopathy (discontinue treatment if neurological symptoms present)

INTERACTIONS 

SIDE-EFFECTS

Common or very common
- Abdominal pain
- Conjunctivitis
- Cough
- Diarrhoea
- Dizziness
- Dyspepsia
- Fatigue
- Flushing
- Headache
- Hypertension
- Infection
- Leucopenia
- Nausea
- Pain in extremities
- Paraesthesia
- Stomatitis
- Vomiting

Uncommon
- Alopecia
- Anxiety
- Arthralgia
- Basal and squamous cell carcinoma
- Bradycardia
- Bronchospasm
- Bruising
- Depression
- Dry eye
- Dry skin
- Dysphonia
- Gastritis
- Hyperhidrosis
- Hypotension
- Menstrual disturbances
- Palpitation
- Psoriasis
- Skin papilloma
- Sleep disorder
- Tachycardia
- Thrombocytopenia
- Visual disturbance
- Weight gain

Frequency not known
- Lung cancer

CONCEPTION AND CONTRACEPTION 
Effective contraception required during treatment and for 14 weeks after last dose.

PREGNANCY 
Manufacturer advises avoid unless essential.

BREAST FEEDING 
Present in milk in animal studies—manufacturer advises avoid breast-feeding during treatment and for 14 weeks after last dose.

DIRECTIONS FOR ADMINISTRATION
For intravenous infusion, reconstitute each vial with 10 mL water for injections using the silicone-free syringe provided; dilute requisite dose in Sodium Chloride 0.9% to 100 mL (using the same silicone-free syringe); give over 30 minutes through a low protein-binding filter (pore size 0.2-1.2 micron).

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)
- Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010) NICE TA195
- Rituximab, in combination with methotrexate, is an option for the treatment of severe active rheumatoid arthritis in adults who have had an inadequate response to, or are intolerant of, other disease-modifying antirheumatic drugs (DMARDs), including at least 1 tumour necrosis factor (TNF) inhibitor. Repeat courses of rituximab should be given no more frequently than every 6 months, and should only be continued if an adequate response is achieved and maintained.
- Adalimumab, etanercept, infliximab, or abatacept, in combination with methotrexate, are options for the treatment of severe active rheumatoid arthritis in adults who have had an inadequate response to, or have an intolerance of, other DMARDs including at least 1 TNF inhibitor, and who cannot use rituximab because of contra-indications or intolerance. In patients who cannot use methotrexate because of intolerance or contra-indications, adalimumab or etanercept can be given as monotherapy. Treatment should be continued only if there is adequate response. Patients should be monitored at least every 6 months. www.nice.org.uk/TA195
- Abatacept for the treatment of rheumatoid arthritis after the failure of conventional disease-modifying antirheumatic drugs (April 2013) NICE TA280
- Abatacept, in combination with methotrexate, is an option for the treatment of highly active rheumatoid arthritis in adults who have had an inadequate response to at least two conventional disease-modifying antirheumatic drugs, including methotrexate, if:
  - abatacept is used as described in the NICE guidance (October 2007) for other tumour necrosis factor (TNF) inhibitors (see Adalimumab, etanercept, and infliximab for the treatment of rheumatoid arthritis, and
  - the manufacturer provides abatacept with the discount agreed in the patient access scheme
- Patients already receiving abatacept for this indication, who do not fulfil the criteria for treatment should continue treatment until they and their specialist consider it appropriate to stop.
- The Scottish Medicines Consortium (SMC) Decision
The Scottish Medicines Consortium has advised (July 2013) that abatacept (Orencia®) is accepted for restricted use within NHS Scotland for adults with severe active rheumatoid arthritis, confirmed on at least two occasions, one month apart. This advice is contingent upon continuing availability of abatacept at the price agreed in the patient access scheme.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Solution for injection
- ABATACEPT (Non-proprietary)
  - Abatacept 125 mg per 1 ml Orencia ClickJet 125mg/1ml solution for injection pre-filled pen
  - Pre-filled disposable injection
  - £1,209.60
- Orencia (Bristol-Myers Squibb Pharmaceuticals Ltd)
  - Abatacept 125 mg per 1 ml Orencia 125mg/1ml solution for injection pre-filled syringes
  - Pre-filled disposable injection
  - £1,209.60 (Hospital only)

Powder for solution for infusion
- ELECTROLYTES: May contain Sodium
  - Orencia (Bristol-Myers Squibb Pharmaceuticals Ltd)
  - Abatacept 250 mg Orencia 250mg powder for concentrate for solution for infusion vials
  - £302.40 (Hospital only)
Adalimumab

INDICATIONS AND DOSE

Severe plaque psoriasis either refractory to at least 2 standard systemic treatments or phototherapy, or when standard treatments cannot be used because of intolerance or contra-indications

BY SUBCUTANEOUS INJECTION

Adult: Initially 80 mg, then 40 mg every 2 weeks, to be started 1 week after initial dose; discontinue treatment if no response within 16 weeks

Moderate to severe active rheumatoid arthritis (in combination with methotrexate or alone if methotrexate inappropriate) when response to other disease-modifying drugs (including methotrexate) has been inadequate

Severe, active, and progressive rheumatoid arthritis (in combination with methotrexate or alone if methotrexate inappropriate) not previously treated with methotrexate

Adult: 40 mg every 2 weeks, then increased if necessary to 40 mg once weekly, dose to be increased only in patients receiving adalimumab alone, review treatment if no response within 12 weeks

Active and progressive psoriatic arthritis that has not responded adequately to other disease-modifying antirheumatic drugs. Severe active ankylosing spondylitis that has not responded adequately to other disease-modifying antirheumatic drugs. Severe axial spondyloarthritis without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of, NSAIDs

Adult: 40 mg every 2 weeks, discontinue treatment if no response within 12 weeks

Severe active Crohn’s disease

BY SUBCUTANEOUS INJECTION

Adult: Initially 80 mg, then 40 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, maximum 40 mg administered at a single site, review treatment if no response within 12 weeks of initial dose

Severe active Crohn’s disease (accelerated regimen)

BY SUBCUTANEOUS INJECTION

Adult: Initially 160 mg, dose can alternatively be given as divided injections over 2 days, then 80 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, maximum 40 mg administered at a single site, review treatment if no response within 12 weeks of initial dose

Severe active ulcerative colitis

BY SUBCUTANEOUS INJECTION

Adult: Initially 160 mg, dose can alternatively be given as divided injections over 2 days, then 80 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, maximum 40 mg administered at a single site, review treatment if no response within 8 weeks of initial dose

CONTRA-INDICATIONS

Moderate or severe heart failure - severe infection

CAUTIONS

Children should be brought up to date with current immunisation schedule before initiating therapy - demyelinating disorders (risk of exacerbation) - development of malignancy - do not initiate until active infections are controlled (discontinue if new serious infection develops) - hepatitis B virus—monitor for active infection - history of malignancy - mild heart failure (discontinue if symptoms develop or worsen) - predisposition to infection

CAUTIONS, FURTHER INFORMATION

Tuberculosis

Active tuberculosis should be treated with standard treatment for at least 2 months before starting adalimumab. Patients who have previously received adequate treatment for tuberculosis can start adalimumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting adalimumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with adalimumab.

INTERACTIONS

Appendix 1 (adalimumab).

SIDE-EFFECTS

Rare Autoimmune hepatitis - demyelinating disorders - myocardial infarction

SIDE-EFFECTS, FURTHER INFORMATION

Associated with infections, sometimes severe, including tuberculosis, septicemia, and hepatitis B reactivation.

CONCEPTION AND CONTRACEPTION

Manufacturer advises effective contraception required during treatment and for at least 5 months after last dose.

PREGNANCY

Avoid.

BREAST FEEDING

Avoid; manufacturer advises avoid for at least 5 months after last dose.

PRE-TREATMENT SCREENING

Tuberculosis

Patients should be evaluated for tuberculosis before treatment.

MONITORING REQUIREMENTS

Monitor for infection before, during, and for 4 months after treatment.

Monitor for non-melanoma skin cancer before and during treatment, especially in patients with a history of PUVA treatment for psoriasis or extensive immunosuppressant therapy.

PATIENT AND CARER ADVICE

An alert card should be provided.

Tuberculosis

Patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.
Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- Adalimumab, etanercept, and infliximab for the treatment of rheumatoid arthritis (October 2007) [NICE TA130]

  The tumour necrosis factor alpha (TNF-α) inhibitors adalimumab, etanercept, and infliximab are options for the treatment of adults with active rheumatoid arthritis who have failed to respond to at least 2 disease-modifying antirheumatic drugs (DMARDs), including methotrexate (unless contra-indicated). TNF-α inhibitors should be given in combination with methotrexate; however, when methotrexate cannot be used because of intolerance or contra-indications, adalimumab or etanercept can be given as monotherapy. Adalimumab, etanercept, and infliximab should be withdrawn if response is not adequate within 6 months. Response to treatment should be monitored at least every 6 months in patients who respond initially; treatment should be withdrawn if response is not maintained. An alternative TNF-α inhibitor may be considered for patients in whom treatment is withdrawn because of intolerance before the initial 6-month assessment of efficacy. Use of TNF-α inhibitors for the treatment of severe, active, and progressive rheumatoid arthritis in adults not previously treated with methotrexate or other DMARDs is not recommended. [www.nice.org.uk/TA130](www.nice.org.uk/TA130)

- Adalimumab, etanercept, and infliximab for the treatment of ankylosing spondylitis (May 2008) [NICE TA143]

  Adalimumab or etanercept are treatment options for adults with severe active ankylosing spondylitis whose disease satisfies specific criteria for diagnosis where there is confirmation of sustained active spinal disease, and where treatment with two or more NSAIDs taken sequentially at maximum tolerated or recommended doses for 4 weeks has failed to control symptoms. Response to adalimumab or etanercept treatment should be assessed at 12-week intervals and continued only if response is adequate. If response to treatment is not maintained, a repeat assessment should be made after a further 6 weeks and treatment discontinued if there is an inadequate response. Patients who are intolerant of adalimumab or etanercept during the initial 12 weeks may receive the alternative TNF-α inhibitor (adalimumab or etanercept). However an alternative TNF-α inhibitor is not recommended in patients who fail to respond initially or fail to maintain an adequate response. Infliximab is not recommended for the treatment of ankylosing spondylitis. Patients who are already receiving infliximab for the treatment of ankylosing spondylitis can continue treatment until they and their specialist consider it appropriate to stop. See full NICE guidance for specific criteria to diagnose severe active ankylosing spondylitis, confirm sustained active spinal disease, and assess response to treatment. [www.nice.org.uk/TA143](www.nice.org.uk/TA143)

- Adalimumab for plaque psoriasis in adults (June 2008) [NICE TA146]

  Adalimumab is recommended for the treatment of severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) and phototherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Adalimumab should be withdrawn if the response is not adequate after 16 weeks. [www.nice.org.uk/TA146](www.nice.org.uk/TA146)

- Infliximab and adalimumab for Crohn’s disease (May 2010) [NICE TA187]

- Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010) [NICE TA195]

- Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010) [NICE TA199]

- Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015) NICE TA239

  NICE recommended. See Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015) TA239 [www.nice.org.uk/TA239](www.nice.org.uk/TA239) p. 907

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium issued similar advice for plaque psoriasis to NICE TA146 in May 2008.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

**CAUTIONARY AND ADVISORY LABELS**

- **Humira (AbbVie Ltd)**
  - Adalimumab 50 mg per 1 ml Humira 40mg/0.8ml solution for injection pre-filled syringes | 2 pre-filled disposable injection £704.28
  - Humira 40mg/0.8ml solution for injection vials | 2 vial £704.28
  - Humira 40mg/0.8ml solution for injection pre-filled disposable devices | 2 pre-filled disposable injection £704.28

**Certolizumab pegol**

**INDICATIONS AND DOSE**

Moderate to severe active rheumatoid arthritis when response to disease-modifying antirheumatic drugs (including methotrexate) has been inadequate (as monotherapy or in combination with methotrexate)

**BY SUBCUTANEOUS INJECTION**

- Adult: 400 mg every 2 weeks for 3 doses, then 200 mg every 2 weeks, review treatment if no response within 12 weeks

**Treatment of severe active ankylosing spondylitis**

- **Adult**: 400 mg every 2 weeks for 3 doses, then 200 mg every 2 weeks, alternately 400 mg every 4 weeks, review treatment if no response within 12 weeks

**CONTRA-INDICATIONS**

- Moderate to severe heart failure - severe active infection

**CAUTIONS**

- Demyelinating CNS disorders (risk of exacerbation) - do not initiate until active infections are controlled (discontinue if new serious infection develops and until infection controlled) - hepatitis B virus (monitor for active infection) - history or development of
malignancy • mild heart failure (discontinue if symptoms develop or worsen) • predisposition to infection

CAUTIONS, FURTHER INFORMATION

Tuberculosis Active tuberculosis should be treated with standard treatment for at least 2 months before starting certolizumab pegol. Patients who have previously received adequate treatment for tuberculosis can start certolizumab pegol but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting certolizumab pegol. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with certolizumab pegol.

INTERACTIONS ▶ Appendix 1 (certolizumab pegol).

SIDE-EFFECTS

Common or very common Hypertension • rash • sensory abnormalities

Uncommon Acne • alopecia • anxiety • appetite disorders • arrhythmias • ascites • asthma • benign tumours • cardiomyopathies • cholesterol • cough • dermatitis • dizziness • dyslipidaemia • ecchymosis • electrolyte disorders • gastro-intestinal disorders • gastro-intestinal perforation • gastro-intestinal ulcer • haematuria • haemorrhage • heart failure • hepatic disorders • impaired healing • influenza-like illness • ischaemic coronary artery disorders • leukaemia • lymphoma • malignancy • menstrual disorders • mood disorders • muscle disorders • nail disorders • new onset or worsening psoriasis • ocular inflammation • oedema • peripheral neuropathy • photosensitivity • pleural effusion • renal impairment • skin cancer • skin discoloration • solid tumours • syncope • tinnitus • tremor • visual disturbance

Rare Atrioventricular block • cerebrovascular accident • cholelithiasis • impaired coordination • interstitial lung disease • nephropathy • Raynaud’s phenomenon • seizures • sexual dysfunction • splenomegaly • thyroid disorders • trigeminal neuralgia

Frequency not known Abdominal pain • anaemia • antibody formation • aplastic anaemia • blood disorders • depression • fever • headache • hypersensitivity reactions • infections • injection-site reactions • leucopenia • lupus erythematosus-like syndrome • multiple sclerosis • nausea • pancytopenia • pruritus • thrombocytopenia • worsening heart failure

SIDE-EFFECTS, FURTHER INFORMATION

Infection Associated with infections, sometimes severe, including tuberculosis, septicemia, and hepatitis B reactivation.

CONCEPTION AND CONTRACEPTION Manufacturer advises adequate contraception during treatment and for at least 5 months after last dose.

PREGNANCY Avoid.

BREAST FEEDING Manufacturer advises use only if potential benefit outweighs risk—no information available.

PRE-TREATMENT SCREENING

Tuberculosis Patients should be evaluated for tuberculosis before treatment.

MONITORING REQUIREMENTS Monitor for infection before, during, and for 5 months after treatment.

PATIENT AND CARER ADVICE An alert card should be provided.

Blood disorders Patients should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

Tuberculosis Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g., persistent cough, weight loss and fever) develop.

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

Certolizumab pegol for the treatment of rheumatoid arthritis (February 2010) NICE TA186

Certolizumab pegol is an option for the treatment of patients with rheumatoid arthritis only if:

• certolizumab pegol is used as described in the NICE guidance (October 2007) for other tumour necrosis factor (TNF) inhibitors (see Adalimumab, Etanercept and Infliximab for the treatment of Rheumatoid Arthritis), and

• the manufacturer provides the first 12 weeks of certolizumab pegol (10 prefilled 200-mg syringes) free of charge to all patients starting treatment. www.nice.org.uk/TA186

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

CAUTIONARY AND ADVISORY LABELS 10

Cimzia (UCB Pharma Ltd)

Certolizumab pegol 200 mg per 1 ml Cimzia 200mg/1ml solution for injection pre-filled syringes | 2 syringe £715.00

Etanercept

INDICATIONS AND DOSE

Moderate to severe active rheumatoid arthritis (alone or in combination with methotrexate) when the response to other disease-modifying antirheumatic drugs is inadequate | Severe, active, and progressive rheumatoid arthritis not previously treated with methotrexate | Active and progressive psoriatic arthritis inadequately responsive to other disease-modifying antirheumatic drugs | Severe ankylosing spondylitis inadequately responsive to conventional therapy

BY SUBCUTANEOUS INJECTION

Adult: 25 mg twice weekly, alternatively 50 mg once weekly

Severe plaque psoriasis either refractory to at least 2 standard systemic treatments and photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications

BY SUBCUTANEOUS INJECTION

Adult: 25 mg twice weekly for up to 24 weeks, alternatively 50 mg once weekly for up to 24 weeks, discontinue if no response after 12 weeks

CONTRA-INDICATIONS Active infection

CAUTIONS Children should be brought up to date with current immunisation schedule before initiating therapy • development of malignancy • diabetes mellitus • heart failure (risk of exacerbation) • hepatitis B virus—monitor for active infection • hepatitis C infection (monitor for worsening infection) • history of blood disorders • history of malignancy • history or increased risk of demyelinating disorders • predisposition to infection (avoid if predisposition to septicaemia) • significant exposure to herpes zoster virus—interrupt treatment and consider varicella–zoster immunoglobulin

CAUTIONS, FURTHER INFORMATION

Tuberculosis Active tuberculosis should be treated with standard treatment for at least 2 months before starting etanercept. Patients who have previously received adequate treatment for tuberculosis can start etanercept but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting etanercept. In patients at high risk of tuberculosis...
who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with etanercept.

- **INTERACTIONS** → Appendix 1 (etanercept).
- **SIDE-EFFECTS**
  - **Uncommon** Interstitial lung disease, new onset or worsening psoriasis, rash, skin cancer, uveitis
  - **Rare** Demyelinating disorders, lymphoma, seizures, Stevens-Johnson syndrome, vasculitis
  - **Very rare** Toxic epidermal necrolysis
  - **Frequency not known** Abdominal pain, anaemia, antibody formation, aplastic anaemia, appendicitis, blood disorders, cutaneous ulcer, depression, diabetes mellitus, fever, gastritis, headache, hypersensitivity reactions, inflammatory bowel disease, injection-site reactions, leucopenia, leukaemia, lupus erythematosus-like syndrome, macrophage activation syndrome, malignancy, nausea, oesophagitis, pancytopenia, pruritus, solid tumours, thrombocytopenia, vomiting, worsening heart failure

**SIDE-EFFECTS, FURTHER INFORMATION**

Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception required during treatment and for 3 weeks after last dose.
- **PREGNANCY** Avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Use with caution in moderate to severe alcoholic hepatitis.
- **PRE-TREATMENT SCREENING** Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS** Monitor for skin cancer before and during treatment, particularly in those at risk (including patients with psoriasis or a history of PUVA treatment).
- **PATIENT AND CARER ADVICE** An alert card should be provided.

Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

Tuberculosis Patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- **Etanercept and efalizumab for plaque psoriasis in adults (July 2006)** NICE TA103
  Etanercept is recommended for severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) and to phototherapy, or when standard treatments cannot be used because of intolerance or contraindications. Etanercept should be withdrawn if the response is not adequate after 12 weeks. www.nice.org.uk/TA103

- **Adalimumab, etanercept, and infliximab for the treatment of rheumatoid arthritis (October 2007)** NICE TA130
  NICE recommended. See Adalimumab, etanercept, and infliximab for the treatment of rheumatoid arthritis (October 2007) TA130 www.nice.org.uk/TA130 p. 902

- **Adalimumab, etanercept, and infliximab for the treatment of ankylosing spondylitis (May 2008)** NICE TA141
  NICE recommended. See Adalimumab, etanercept, and infliximab for the treatment of ankylosing spondylitis (May 2008) TA143 www.nice.org.uk/TA143 p. 902

- **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195

- **Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010)** NICE TA199
  Etanercept, infliximab, or adalimumab are recommended for the treatment of active and progressive psoriatic arthritis in adults who have peripheral arthritis with at least 3 tender joints and at least 3 swollen joints, and who have not responded adequately to at least 2 standard disease-modifying anti-rheumatic drugs (used alone or in combination).

Etanercept, infliximab, and adalimumab should be discontinued if there is an inadequate response at 12 weeks. www.nice.org.uk/TA199

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium issued similar advice to NICE TA103 on the use of etanercept for severe plaque psoriasis in adults (August 2009) and children over 6 years old (April 2012).

- **MEDICINAL FORMS**
  There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **CAUTIONARY AND ADVISORY LABELS**
  - **Enbrel** (Pfizer Ltd)
    - Etanercept 50 mg per 1 ml Enbrel 50mg/1ml solution for injection pre-filled disposable injection £171.00
    - Enbrel 25mg/0.5ml solution for injection pre-filled syringes £135.75
    - Brands may include Enbrel MyClic

- **Powder and solvent for solution for injection**

  - **CAUTIONARY AND ADVISORY LABELS**
  - **Excipients**: May contain Benzyl alcohol
  - **Enbrel** (Pfizer Ltd)
    - Etanercept 10 mg Enbrel Paediatric 10mg powder and solvent for solution for injection vials | 4 vial £357.50
    - Etanercept 25 mg Enbrel Paediatric 25mg powder and solvent for solution for injection vials | 4 vial £357.50

**Golimumab**

**INDICATIONS AND DOSE**

Treatment of severe ulcerative colitis in patients whose condition has not responded adequately to conventional therapy, or who are intolerant of it

- **BY SUBCUTANEOUS INJECTION**
  - **Adult (body-weight up to 80 kg)**: Initially 200 mg, then 100 mg after 2 weeks; maintenance 50 mg every 4 weeks, review treatment if no response after 4 doses
  - **Adult (body-weight 80 kg and above)**: Initially 200 mg, then 100 mg after 2 weeks; maintenance 100 mg every 4 weeks, review treatment if no response after 4 doses
Treatment of moderate to severe active rheumatoid arthritis (in combination with methotrexate) when response to disease-modifying antirheumatic drug (DMARD) therapy (including methotrexate) has been inadequate | Treatment of severe, active, and progressive rheumatoid arthritis (in combination with methotrexate) in patients not previously treated with methotrexate | Treatment of active and progressive psoriatic arthritis as monotherapy or in combination with methotrexate when response to DMARD therapy has been inadequate | Treatment of severe active anklyosing spondylitis when there is inadequate response to conventional treatment

**CONTRA-INDICATIONS** Moderate or severe heart failure - severe active infection

**CAUTIONS** Active infection (do not initiate until active infections are controlled; discontinue if new serious infection develops until infection controlled) - demyelinating disorders (risk of exacerbation) - hepatitis B virus - monitor for active infection - history or development of malignancy - mild heart failure (discontinue if symptoms develop or worsen) - predisposition to infection - risk factors for dysplasia or carcinoma of the colon - screen for dysplasia regularly

**Tuberculosis** Active tuberculosis should be treated with standard treatment for at least 2 months before starting golimumab. Patients who have previously received adequate treatment for tuberculosis can start golimumab but should be monitored every 2 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting golimumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with golimumab. Patients who have tested negative for latent tuberculosis who cannot be assessed by tuberculin skin test after treatment should be reevaluated for tuberculosis 3 months after last dose. Patients who have previously received treatment for latent tuberculosis, and those who are receiving or who have completed treatment for latent tuberculosis, should be monitored closely for symptoms of active infection.

**INTERACTIONS** Appendix 1 (golimumab).

**SIDE-EFFECTS**

- **Common or very common** Asthenia - dizziness - dyspepsia - hypertension
- **Rare** Impaired wound healing

**SIDE-EFFECTS, FURTHER INFORMATION**

Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

**CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during treatment and for at least 6 months after last dose.

**PREGNANCY** Use only if essential.

**BREAST FEEDING** Manufacturer advises avoid during and for at least 6 months after treatment—present in milk in animal studies.

**HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available.

**PRE-TREATMENT SCREENING**

Tuberculosis Patients should be evaluated for tuberculosis before treatment.

**MONITORING REQUIREMENTS** Monitor for infection before, during, and for 5 months after treatment.

**DIRECTIONS FOR ADMINISTRATION** For doses requiring multiple injections, each injection should be administered at a different site. Missed dose If dose administered more than 2 weeks late, subsequent doses should be administered on the next monthly due date.

**PATIENT AND CARER ADVICE** An alert card should be provided.

Tuberculosis All patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g., persistent cough, weight loss, and fever) develop.

Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- **Golimumab for the treatment of psoriatic arthritis (April 2011) NICE TA220**
  - Golimumab is an option for the treatment of active and progressive psoriatic arthritis in adults only if:
    - golimumab is used as described in the NICE guidance (August 2010) for other tumour necrosis factor (TNF) inhibitors, and
    - the manufacturer provides the 100-mg dose of golimumab at the same price as the 50-mg dose.
    - www.nice.org.uk/TA220

- **Golimumab for the treatment of rheumatoid arthritis after the failure of previous disease-modifying antirheumatic drugs (June 2011) NICE TA225**
  - Golimumab, in combination with methotrexate, is an option for the treatment of rheumatoid arthritis in adults who have had an inadequate response to conventional disease-modifying antirheumatic drugs (DMARDs) only, including methotrexate, if:
    - golimumab is used as described in the NICE guidance (October 2007) for other tumour necrosis factor (TNF) inhibitors, and
    - the manufacturer provides the 100-mg dose of golimumab at the same price as the 50-mg dose.
  - Alternatively, golimumab, in combination with methotrexate, is an option for the treatment of rheumatoid arthritis in adults who have had an inadequate response to DMARDs including a TNF inhibitor, if:
    - golimumab is used as described in the NICE guidance (August 2010) for other TNF inhibitors, and
    - the manufacturer provides the 100-mg dose of golimumab at the same price as the 50-mg dose.
    - www.nice.org.uk/TA225

*BNF 70*  |  *Arthritis 905*
**Golimumab for the treatment of ankylosing spondylitis**

(August 2011) NICE TA233

Golimumab is an option for the treatment of severe, active ankylosing spondylitis in adults only if:

- Golimumab is used as described in the NICE guidance (May 2008) for adalimumab and etanercept, and
- the manufacturer provides the 100-mg dose of golimumab at the same price as the 50-mg dose.

Patients who are already receiving golimumab for the treatment of severe, active ankylosing spondylitis who do not fulfil the criteria for treatment with adalimumab and etanercept, described in the NICE guidance (May 2008), can continue treatment until they and their specialist consider it appropriate to stop. [www.nice.org.uk/TA233](www.nice.org.uk/TA233)

**Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy** (February 2015) NICE TA329

NICE recommended. See Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015) TA329 [www.nice.org.uk/TA329](www.nice.org.uk/TA329) p. 907

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium has advised (June 2012) that golimumab (Simponi®) is accepted for restricted use within NHS Scotland at a dose of 50 mg, alone or in combination with methotrexate, for the treatment of active and progressive psoriatic arthritis in adults whose disease has not responded to adequate trials of at least two standard DMARDs, administered either individually or in combination.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

**CAUTIONARY AND ADVISORY LABELS 10**

- Simponi (Merck Sharp & Dohme Ltd)

Golimumab 100 mg per 1 ml Simponi 50 mg/0.5 ml solution for injection pre-filled disposable devices | 1 pre-filled disposable injection [P] £762.97 Simponi 100 mg/1 ml solution for injection pre-filled pen | 1 pre-filled disposable injection [P] £1,525.94

Simponi 50 mg/0.5 ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [P] £762.97

**Infliximab**

**INDICATIONS AND DOSE**

**Severe active Crohn’s disease**

**BY INTRAVENOUS INFUSION**

- Adult: Initially 5 mg/kg, then 5 mg/kg after 2 weeks, then 5 mg/kg after 4 weeks, if condition has responded, then maintenance 5 mg/kg every 8 weeks

**Fistulating Crohn’s disease**

**BY INTRAVENOUS INFUSION**

- Adult: Initially 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, if condition has responded consult product literature for guidance on further doses

**Severe active ulcerative colitis**

**BY INTRAVENOUS INFUSION**

- Adult: Initially 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, then 5 mg/kg every 8 weeks, discontinue if no response 14 weeks after initial dose

**Rheumatoid arthritis (in combination with methotrexate)**

**BY INTRAVENOUS INFUSION**

- Adult: Initially 3 mg/kg, then 3 mg/kg after 2 weeks, followed by 3 mg/kg after 4 weeks, then 3 mg/kg every 8 weeks, dose to be increased only if response is inadequate after 12 weeks of initial treatment; increased in steps of 1.5 mg/kg every 8 weeks, increased if necessary up to 7.5 mg/kg every 8 weeks, alternatively increased if necessary to 3 mg/kg every 4 weeks, discontinue if no response by 12 weeks of initial infusion or after dose adjustment

**Ankylosing spondylitis**

**BY INTRAVENOUS INFUSION**

- Adult: 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, then 5 mg/kg every 6–8 weeks, discontinue if no response by 6 weeks of initial infusion

**Psoriatic arthritis (in combination with methotrexate)**

**BY INTRAVENOUS INFUSION**

- Adult: 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, followed by 5 mg/kg every 8 weeks

**Plaque psoriasis**

**BY INTRAVENOUS INFUSION**

- Adult: 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, then 5 mg/kg every 8 weeks, discontinue if no response within 14 weeks of initial infusion

**Important safety information**

Adequate resuscitation facilities must be available when infliximab is used.

**CONTRA-INDICATIONS**

Moderate or severe heart failure - severe infections

**CAUTIONS**

Demyelinating disorders (risk of exacerbation) - development of malignancy - hepatitis B virus - monitor for active infection - history of colon carcinoma (in inflammatory bowel disease) - history of dysplasia (in inflammatory bowel disease) - history of malignancy - history of prolonged immunosuppressant or PUVA treatment in patients with psoriasis - mild heart failure (discontinue if symptoms develop or worsen) - predisposition to infection (discontinue if new serious infection develops) - risk of delayed hypersensitivity reactions if drug-free interval exceeds 16 weeks

**CAUTIONS, FURTHER INFORMATION**

**Tuberculosis**

Active tuberculosis should be treated with standard treatment for at least 2 months before starting infliximab. Patients who have previously received adequate treatment for tuberculosis can start infliximab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting infliximab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with infliximab.

**Hypersensitivity reactions**

Hypersensitivity reactions (including fever, chest pain, hypotension, hypertension, dyspnoea, transient visual loss, pruritus, urticaria, serum sickness-like reactions, angioedema, anaphylaxis) reported during or within 1–2 hours after infusion (risk greatest during first or second infusion or in patients who discontinue other immunosuppressants). Prophylactic antipyretics, antihistamines, or hydrocortisone may be administered.

**INTERACTIONS** → Appendix 1 (infliximab).

**SIDE-EFFECTS**

- **Common or very common**

- **Common**

- **Uncommon**

- **Rare**

- **Very rare**

- **Unlikely**

- **Unknown**
Arthritis 907

National funding/access decisions

NICE technology appraisals (TAs)

- Adalimumab, etanercept, and infliximab for the treatment of rheumatoid arthritis (October 2007) NICE TA130
NICE recommended. See Adalimumab, etanercept, and infliximab for the treatment of rheumatoid arthritis (October 2007) TA130 www.nice.org.uk/TA130 p. 902

- Infliximab for plaque psoriasis in adults (January 2008) NICE TA134
Infliximab is recommended for the treatment of very severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) or to photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Infliximab should be withdrawn if the response is not adequate after 10 weeks. www.nice.org.uk/TA134

- Adalimumab, etanercept, and infliximab for the treatment of ankylosing spondylitis (May 2008) NICE TA143
NICE recommended. See Adalimumab, etanercept, and infliximab for the treatment of ankylosing spondylitis (May 2008)TA143 www.nice.org.uk/TA143 p. 902

- Infliximab for acute exacerbations of ulcerative colitis (December 2008) NICE TA163
Infliximab is recommended as an option for the treatment of acute exacerbations of severe ulcerative colitis when treatment with ciclosporin is contra-indicated or inappropriate. www.nice.org.uk/TA163

- Infliximab and adalimumab for Crohn’s disease (May 2010) NICE TA187
Infliximab or adalimumab is recommended for the treatment of severe active Crohn’s disease that has not responded to conventional therapy (including corticosteroids and other drugs affecting the immune response) or when conventional therapy cannot be used because of intolerance or contra-indications; infliximab can also be used in a similar way in children over 6 years of age. In adults over 18 years of age, infliximab is recommended for the treatment of fistulating Crohn’s disease that has not responded to conventional therapy (including antibacterials, drainage, and other drugs affecting the immune response) when conventional therapy cannot be used because of intolerance or contra-indications. Infliximab or adalimumab should be given as a planned course of treatment for 12 months or until treatment failure, whichever is shorter. Treatment should be continued beyond 12 months only if there is evidence of active disease—in these cases the need for treatment should be reviewed at least annually. If the disease relapses after stopping treatment, adalimumab or infliximab can be restarted [but see Hypersensitivity Reactions under Infliximab)]. www.nice.org.uk/TA187

- Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010) NICE TA195

- Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010) NICE TA199

- Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015) NICE TA329
Infliximab, adalimumab and golimumab are options for treating moderately to severely active ulcerative colitis in adults whose disease has responded inadequately to conventional therapy including corticosteroids and...
2 Hyperuricaemia and gout

Gout

It is important to distinguish drugs used for the treatment of acute attacks of gout from those used in the long-term control of the disease. The latter exacerbate and prolong the acute manifestations if started during an attack. The management of gout in adolescents requires specialist supervision.

Acute attacks of gout

Acute attacks of gout are usually treated with high doses of NSAIDs such as diclofenac sodium p. 921, diclofenac potassium p. 920, etoricoxib p. 925, indomethacin p. 929, ketoprofen p. 930, naproxen p. 934 or sulindac p. 937. Colchicine below is an alternative in patients in whom NSAIDs such as diclofenac sodium p. 921, etoricoxib p. 925, indomethacin p. 929, ketoprofen p. 930, naproxen p. 934 or sulindac p. 937 are contra-indicated. Aspirin p. 909 and other salicylates antagonise the uricosuric effects of these drugs.

Colchicine

Colchicine below is an alternative in patients in whom NSAIDs such as diclofenac sodium p. 921, etoricoxib p. 925, indomethacin p. 929, ketoprofen p. 930, naproxen p. 934 or sulindac p. 937 are contra-indicated. Aspirin p. 909 and other salicylates antagonise the uricosuric effects of these drugs.

Long-term control of gout

Frequent recurrence of acute attacks of gout, the presence of tophi, or signs of chronic gouty arthritis may call for the initiation of long-term (‘interval’) treatment. For long-term control of gout the formation of uric acid from purines may be reduced with the xanthine-oxidase inhibitors allopurinol p. 909 or febuxostat p. 910 alternatively the uricosuric drug sulfinpyrazone p. 909 may be used to increase the excretion of uric acid in the urine. Treatment should be continued indefinitely to prevent further attacks of gout by correcting the hyperuricaemia. These drugs should never be started during an acute attack; they are usually started 1–2 weeks after the attack has settled. The initiation of treatment may precipitate an acute attack, and therefore an anti-inflammatory analgesic or colchicine below should be used as a prophylactic and continued for at least one month after the hyperuricaemia has been corrected. However, if an acute attack develops during treatment, then the treatment should continue at the same dosage and the acute attack treated in its own right.

Allopurinol is widely used and is especially useful in patients with renal impairment or urate stones when uricosuric drugs cannot be used; it is not indicated for the treatment of asymptomatic hyperuricaemia. It can cause rashes.

Febuxostat is licensed for the treatment of chronic hyperuricaemia where urate deposition has already occurred; it is not indicated for patients in whom the rate of urate formation is greatly increased, such as in malignant disease or in Lesch-Nyhan syndrome.

Sulfinpyrazone p. 909 can be used instead of allopurinol or in conjunction with it in cases that are resistant to treatment.

Benzbromarone (available from ‘special-order’ manufacturers or specialist importing companies) is a uricosuric drug that can be used in patients with mild renal impairment. Crystallisation of urate in the urine can occur with the uricosuric drugs and it is important to ensure an adequate urine output especially in the first few weeks of treatment. As an additional precaution the urine may be rendered alkaline.

Aspirin and other salicylates antagonise the uricosuric drugs; they do not antagonise allopurinol but are nevertheless not indicated in gout.
### Cautionary and Advisory Labels

**SULFINPYRAZONE (Non-proprietary)**

### Xanthine Oxidase Inhibitors

#### Allopurinol

**Indications and Dose**

Prophylaxis of gout and of uric acid and calcium oxalate renal stones

**By Mouth**

- Adult: Initially 100 mg daily, adjust dose according to plasma or urinary uric acid concentration, dose to be taken preferably after food
- Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in mild conditions)
- Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in mild conditions)
- Adult: 100–200 mg daily, dose to be taken preferably after food
- Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in moderately severe conditions)
- Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in moderately severe conditions)
- Adult: 700–900 mg daily in divided doses (max. per dose 300 mg), dose to be taken preferably after food

**Contra-Indications**

- Not a treatment for acute gout but continue if attack develops when already receiving allopurinol, and treat attack separately
- Ensure adequate fluid intake (2–3 litres/day)

**Caution**

- For hyperuricaemia associated with cancer therapy, allopurinol treatment should be started before cancer therapy

**Contraindications, Further Information**

Administer prophylactic NSAID (not aspirin or salicylates) or colchicine until at least 1 month after hyperuricaemia corrected (usually for first 3 months) to avoid precipitating an acute attack.

**Cautions, Further Information**

Administer prophylactic NSAID (not aspirin or salicylates) or colchicine until at least 1 month after hyperuricaemia corrected (usually for first 3 months) to avoid precipitating an acute attack.

**Side-Effects**

- **Common or very common** Gastro-intestinal disorders - rashes (withdraw therapy); if rash mild re-introduce cautiously but discontinue promptly if recurrence
- Rare Alopecia, aplastic anaemia, arthralgia, blood disorders, drowsiness, eosinophilia resembling Stevens-Johnson syndrome, eosinophilia resembling toxic epidermal necrolysis, exfoliation, fever, gynaecomastia, haemolytic anaemia, headache, hepatitis, hepatotoxicity, hypersensitivity reactions, hypertension, leucopenia, lymphadenopathy, malaise, neuropathy, paraesthesia, renal impairment, taste disturbances, thrombocytopenia, vasculitis, vertigo, visual disturbances
- Very rare Seizures

**Frequency not known**

- Excessive doses may cause profuse diarrhoea, gastrointestinal haemorrhage, hepatic damage, rash, renal damage

**Pregnancy**

- Avoid—teratogenicity in animal studies.

**Breast Feeding**

- Present in milk but no adverse effects reported. Manufacturers advise caution.

**Hepatic Impairment**

- Use with caution.

**Renal Impairment**

- Reduce dose or increase dosage interval if eGFR less than 10 mL/minute/1.73m². Avoid if eGFR less than 10 mL/minute/1.73m².

**Medicinal Forms**

- There can be variation in the licensing of different medicines containing the same drug.
Febuxostat

**INDICATIONS AND DOSE**

Treatment of chronic hyperuricaemia in gout

**BY MOUTH**

- Adult: Initially 80 mg once daily, if after 2–4 weeks of initial dose, serum uric acid greater than 6 mg/100 mL, then increase dose; increased if necessary to 120 mg daily

**Important safety information**

**MHRA/CHM ADVICE: SERIOUS HYPERSENSITIVITY REACTIONS (JUNE 2012)**

There have been rare but serious reports of hypersensitivity reactions, including Stevens-Johnson syndrome and acute anaphylactic shock with febuxostat. Patients should be advised of the signs and symptoms of severe hypersensitivity; febuxostat must be stopped immediately if these occur (early withdrawal is associated with a better prognosis), and must not be restarted in patients who have ever developed a hypersensitivity reaction to febuxostat. Most cases occur during the first month of treatment; a prior history of hypersensitivity to allopurinol and/or renal disease may indicate potential hypersensitivity to febuxostat.

**CONTRA-INDICATIONS**

Not a treatment for acute gout but continue if attack develops when already receiving febuxostat, and treat attack separately

**CAUTIONS**

Congestive heart failure - ischaemic heart disease - thyroid disorders - transplant recipients

**CAUTIONS, FURTHER INFORMATION**

Administer prophylactic NSAID (not aspirin or salicylates) or colchicine for at least 6 months after starting febuxostat to avoid precipitating an acute attack.

**INTERACTIONS**

- Appendix 1 (febuxostat).

**SIDE-EFFECTS**

- Common or very common Abnormal liver function tests - gastro-intestinal disturbances - headache - oedema - rash

**PREGNANCY**

Manufacturer advises avoid – limited information available.

**BREAST FEEDING**

Manufacturer advises avoid – present in milk in animal studies.

**HEPATIC IMPAIRMENT**

Max. 80 mg daily in mild impairment. No dose information available in moderate or severe impairment.

**RENAL IMPAIRMENT**

Use with caution if eGFR less than 30 mL/minute/1.73 m² – no information available.

**PRE-TREATMENT SCREENING**

Monitor liver function tests before treatment as indicated.

**MONITORING REQUIREMENTS**

Monitor liver function tests periodically during treatment as indicated.

**NATIONAL FUNDING/ACCESS DECISIONS**

NICE technology appraisals (TAs)

- Febuxostat for the management of hyperuricaemia in patients with gout (December 2008) NICE TA164
- Febuxostat is recommended as an option for the management of chronic hyperuricaemia in gout only for patients who are intolerant of allopurinol or for whom allopurinol is contra-indicated.

For the purposes of this guidance, intolerance of allopurinol is defined as adverse effects that are sufficiently severe to warrant discontinuation, or to prevent full dose escalation for optimal effectiveness.

[www.nice.org.uk/TA164](http://www.nice.org.uk/TA164)

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium issued similar advice to NICE guidance: Febuxostat for the management of hyperuricaemia in patients with gout (December 2008), in August 2010.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, oral suspension.
immunosuppressant such as azathioprine p. 716 is frequently used to reduce the dose of corticosteroid. Plasmapheresis or infusion of intravenous immunoglobulin [unlicensed indication] may induce temporary remission in severe relapses, particularly where bulbar or respiratory function is compromised or before thymectomy. 

Anticholinesterases
Anticholinesterase drugs enhance neuromuscular transmission in voluntary and involuntary muscle in myasthenia gravis. Excessive dosage of these drugs can impair neuromuscular transmission and precipitate cholinergic crises by causing a depolarising block. This may be difficult to distinguish from a worsening myasthenic state.

Muscarinic side-effects of anticholinesterases include increased sweating, increased salivary and gastric secretions, increased gastro-intestinal and uterine motility, and bradycardia. These parasympathomimetic effects are antagonised by atropine sulfate p. 1099.

Neostigmine p. 912 produces a therapeutic effect for up to 4 hours. Its pronounced muscarinic action is a disadvantage, and simultaneous administration of an antimuscarinic drug such as atropine sulfate or propantheline bromide p. 74 may be required to prevent colic, excessive salivation, or diarrhoea. In severe disease neostigmine can be given every 2 hours. The maximum that most patients can tolerate is 180 mg daily.

Pyridostigmine bromide p. 912 is less powerful and slower in action than neostigmine but it has a longer duration of action. It is preferable to neostigmine because of its smoother action and the need for less frequent dosage. It is particularly preferred in patients whose muscles are weak on waking. It has a comparatively mild gastrointestinal effect but an antimuscarinic drug may still be required.

Neostigmine is also used to reverse the actions of the non-depolarising neuromuscular blocking drugs.

Immunosuppressant therapy
Corticosteroids are established as treatment for myasthenia gravis; although they are commonly given on alternate days there is little evidence of benefit over daily administration. Corticosteroid treatment is usually initiated under in-patient supervision and all patients should receive osteoporosis prophylaxis.

In generalised myasthenia gravis prednisolone p. 585 is given. About 10% of patients experience a transient but very serious worsening of symptoms in the first 2–3 weeks, especially if the corticosteroid is started at a high dose. Smaller doses of corticosteroid are usually required in ocular myasthenia. Once clinical remission has occurred (usually after 2–6 months), the dose of prednisolone should be reduced slowly to the minimum effective dose.

In generalised myasthenia gravis azathioprine p. 716 is usually started at the same time as the corticosteroid and it allows a lower maintenance dose of the corticosteroid to be used. Ciclosporin p. 717, methotrexate p. 762, or mycophenolate mofetil p. 725 can be used in patients unresponsive or intolerant to other treatments [unlicensed indications].

Acetylcholine-release enhancers
Amifampridine below is licensed for the symptomatic treatment of Lambert-Eaton myasthenic syndrome (LEMS), a rare disorder of neuromuscular transmission.

Fampridine p. 726 is licensed for the improvement of walking in patients with multiple sclerosis who have a walking disability.

Skeletal muscle relaxants
The drugs described are used for the relief of chronic muscle spasm or spasticity associated with multiple sclerosis or other neurological damage; they are not indicated for spasm associated with minor injuries. Baclofen, diazepam, and tizanidine act principally on the central nervous system. Dantrolene has a peripheral site of action; cannabis extract has both a central and a peripheral action. Skeletal muscle relaxants differ in action from the muscle relaxants used in anaesthesia, which block transmission at the neuromuscular junction.

The underlying cause of spasticity should be treated and any aggravating factors (e.g. pressure sores, infection) remedied. Skeletal muscle relaxants are effective in most forms of spasticity except the rare alpha variety. The major disadvantage of treatment with these drugs is that reduction in muscle tone can cause a loss of splinting action of the spastic leg and trunk muscles and sometimes lead to an increase in disability.

Baclofen p. 914 inhibits transmission at spinal level and also depresses the central nervous system. The dose should be increased slowly to avoid the major side-effects of sedation and muscular hypotonia (other adverse events are uncommon).

A cannabis extract p. 913 containing dronabinol (delta-9-tetrahydrocannabinol) and cannabidiol is licensed as an adjunct treatment for moderate to severe spasticity associated with multiple sclerosis in patients who have not responded adequately to other skeletal muscle relaxants. The dose should be titrated over 2 weeks; response to treatment should be reviewed after 4 weeks and treatment stopped if an adequate response is not achieved.

Dantrolene sodium p. 1101 acts directly on skeletal muscle and produces fewer central adverse effects making it a drug of choice. The dose should be increased slowly. Diazepam p. 267 can also be used. Sedation and occasionally extensor hypotonus are disadvantages. Other benzodiazepines also have muscle-relaxant properties. Muscle-relaxant doses of benzodiazepines are similar to antispastic agents.

Tizanidine p. 913 is an alpha-2-adrenoceptor agonist indicated for spasticity associated with multiple sclerosis or spinal cord injury.

Other muscle relaxants
The clinical efficacy of methocarbamol p. 915 and meprobamate p. 265 as muscle relaxants is not well established, although they have been included in compound analgesic preparations.

3.1 Myasthenia gravis and Lambert-Eaton myasthenic syndrome

ACETYLCHELORINE-RELEASE ENHANCERS

Amifampridine

**INDICATIONS AND DOSE**
Symptomatic treatment of Lambert-Eaton myasthenic syndrome (specialist use only)

**BY MOUTH**
- **Adult:** Initially 15 mg daily in 3 divided doses, then increased in steps of 5 mg every 4–5 days, increased to up to 60 mg daily in 3–4 divided doses (max. per dose 20 mg); maximum 60 mg per day

- **CONTRA-INDICATIONS** Congenital QT syndromes • epilepsy • uncontrolled asthma
- **CAUTIONS** Non-paraneoplastic form of Lambert-Eaton myasthenic syndrome
Pyridostigmine bromide

**INDICATIONS AND DOSE**

Myasthenia gravis

**BY MOUTH**

- Adult: 30–120 mg, dose to be given at suitable intervals throughout the day; usual dose 0.3–1.2 g daily in divided doses, it is advisable to exceed a total daily dose of 450 mg in order to avoid acetylcholine receptor downregulation; patients requiring doses exceeding 450 mg daily will usually require input from a specialised neuromuscular service. Immunosuppressant therapy is usually considered if the dose of pyridostigmine exceeds 360 mg daily.

**Neostigmine**

*(Neostigmine methylsulfate)*

**INDICATIONS AND DOSE**

Treatment of myasthenia gravis

**BY MOUTH**

- Adult: Initially 15–30 mg, dose repeated at suitable intervals throughout the day, total daily dose 75–300 mg, the maximum that most patients can tolerate is 180 mg daily

**BY SUBCUTANEOUS INJECTION OR BY INTRAMUSCULAR INJECTION**

- Adult: 1–2.5 mg, dose repeated at suitable intervals throughout the day (usual total daily dose 5–20 mg)

**Reversal of non-depolarising (competitive) neuromuscular blockade**

**BY INTRAVENOUS INJECTION**

- Adult: 2.5 mg (max. per dose 5 mg), repeated if necessary after or with glycopyrronium or atropine, to be given over 1 minute

**UNLICENSED USE**

Dose for treatment of myasthenia gravis by subcutaneous or intramuscular injection in neonate is unlicensed.

**CAUTIONS**

- With intravenous use glycopyrronium or atropine should also be given when reversing neuromuscular blockade

**INTERACTIONS**

→ Appendix 1 (parasympathomimetics).

**RENAL IMPAIRMENT**

May need dose reduction.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

Tablet

NEOSTIGMINE (Non-proprietary)

Neostigmine bromide 15 mg Neostigmine 15mg tablets | 140 tablet | £9.60

Solution for injection

NEOSTIGMINE (Non-proprietary)

Neostigmine methylsulfate 2.5 mg per 1 ml Neostigmine 2.5mg/1ml solution for injection ampoules | 10 ampoule | £4.95-15.06

**Pyridostigmine bromide**

**DRUG ACTION**

Pyridostigmine bromide has weaker muscarinic action than neostigmine.

**INDICATIONS AND DOSE**

Myasthenia gravis

**BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

- Adult: 30–120 mg, dose to be given at suitable intervals throughout the day; usual dose 0.3–1.2 g daily in divided doses, it is advisable to exceed a total daily dose of 450 mg in order to avoid acetylcholine receptor downregulation; patients requiring doses exceeding 450 mg daily will usually require input from a specialised neuromuscular service. Immunosuppressant therapy is usually considered if the dose of pyridostigmine exceeds 360 mg daily.
3.2 Nocturnal leg cramps

Nocturnal leg cramps
Quinine salts, such as quinine sulfate are effective in reducing the frequency of nocturnal leg cramps by about 25% in ambulatory patients; however, because of potential toxicity, quinine is not recommended for routine treatment and should not be used unless cramps cause regular disruption to sleep. Quinine p. 540 should only be considered when cramps are very painful or frequent; when other treatable causes of cramp have been excluded; and when non-pharmacological treatments have not worked (e.g. passive stretching exercises). It may take up to 4 weeks for improvement to become apparent; if there is benefit, quinine treatment can be continued. Treatment should be interrupted at intervals of approximately 3 months to assess the need for further quinine treatment. In patients taking quinine long term, a trial discontinuation may be considered. Quinine is toxic in overdose and accidental fatalities have occurred.

3.3 Spasticity

Drugs used for Spasticity not listed below; Dantrolene sodium, p. 1101 · Diazepam, p. 267

Alpha₂-adrenoceptor agonists
Tizanidine

INDICATIONS AND DOSE
Spasticity associated with multiple sclerosis or spinal cord injury or disease

BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

> Adult: Initially 2 mg for 1 dose, then increased in steps of 2 mg/24 hours every 3–4 days in divided doses, adjusted according to response; usual dose up to 24 mg daily in 3–4 divided doses; maximum 36 mg per day

> CAUTIONS Elderly

> INTERACTIONS → Appendix 1 (muscle relaxants).

> SIDE-EFFECTS

> Common or very common Altered liver enzymes (discontinue if persistently raised—consult product literature) · dizziness · drowsiness · dry mouth · fatigue · gastro-intestinal disturbance · hypotension · nausea

> Uncommon Bradycardia · Frequency not known Asthenia · blurred vision · confusion · convulsions · hallucinations · hepatitis · insomnia · liver failure · syncope

> PREGNANCY Avoid (toxicity in animal studies).

> BREAST FEEDING Avoid (present in milk in animal studies).

> HEPATIC IMPAIRMENT Avoid in severe impairment; use in moderate impairment only if potential benefit outweighs risk.

> RENAL IMPAIRMENT Manufacturer advises caution.

> MONITORING REQUIREMENTS Monitor liver function monthly for first 4 months and in those who develop unexplained nausea, anorexia or fatigue.

> TREATMENT CESSATION Avoid abrupt withdrawal (risk of rebound hypertension and tachycardia); to minimise risk, discontinue gradually and monitor blood pressure.

> PATIENT AND CARER ADVICE Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

Cannabis extract

INDICATIONS AND DOSE
Adjunct in moderate to severe spasticity in multiple sclerosis (specialist use only)

BY BUCCAL ADMINISTRATION

> Adult: (consult product literature)

> CONTRA-INDICATIONS Family history of psychosis · history of other severe psychiatric disorder · personal history of psychosis

> CAUTIONS History of epilepsy · significant cardiovascular disease

> INTERACTIONS → Appendix 1 (cannabis extract).

> SIDE-EFFECTS

> Common or very common Amnesia · blurred vision · constipation · depression · diarrhoea · disorientation · dissociation · dizziness · drowsiness · dry mouth · dystarhria · impaired attention · increased or decreased appetite · malaise · mood disturbance · mouth ulcers · nausea · oral pain · taste disturbance · vertigo · vomiting

> Uncommon Abdominal pain · delusions · hallucinations · hypertension · oromucosal discolouration · palpititation · paraesthesia · pharyngitis · stomatitis · suicidal thoughts · syncope · tachycardia · tooth discoloration

> Frequency not known Anxiety · seizures

> CONCEPTION AND CONTRACEPTION Manufacturer recommends effective contraception during and for 3 months after treatment in men and women.

> PREGNANCY Manufacturer advises use only if potential benefit outweighs risks.

> BREAST FEEDING Avoid—present in milk.

> HEPATIC IMPAIRMENT Manufacturer advises more frequent monitoring in significant hepatic impairment—possible risk of prolonged or enhanced effect.
Baclofen

**INDICATIONS AND DOSE**

Pain of muscle spasm in palliative care

**BY MOUTH**

- Adult: 5–10 mg 3 times a day

Hiccup due to gastric distension (in palliative care)

**BY MOUTH**

- Adult: 5 mg twice daily

Chronic severe spasticity resulting from disorders such as multiple sclerosis or traumatic partial section of spinal cord

**BY MOUTH**

- Adult: Initially 5 mg 3 times a day, gradually increased; maintenance up to 60 mg daily in divided doses, review treatment if no benefit within 6 weeks of achieving maximum dose; maximum 100 mg per day

Severe chronic spasticity unresponsive to oral antispastic drugs (or where side-effects of oral therapy unacceptable) or as alternative to ablative neurosurgical procedures (specialist use only)

**BY INTRATHECAL INJECTION**

- Adult: Test dose 25–50 micrograms, to be given over at least 1 minute via catheter or lumbar puncture, then increased in steps of 25 micrograms (max. per dose 100 micrograms), not given more often than every 24 hours to determine appropriate dose, then dose-titration phase, most often using infusion pump (implanted into chest wall or abdominal wall tissues) to establish maintenance dose (ranging from 12 micrograms to 2 mg daily for spasticity of spinal origin or 22 micrograms to 1.4 mg daily for spasticity of cerebral origin) retaining some spasticity to avoid sensation of paralysis

**CONTRA-INDICATIONS**

- With intrathecal use Local infection - systemic infection

**CAUTIONS**

**GENERAL CAUTIONS**

Cerebrovascular disease - diabetes - elderly - epilepsy - history of peptic ulcer - hypertonic bladder sphincter - Parkinson’s disease - psychiatric illness - respiratory impairment

**SPECIFIC CAUTIONS**

- With intrathecal use Coagulation disorders - malnutrition (increased risk of post-surgical complications) - previous spinal fusion procedure

**INTERACTIONS**

- Rare Abdominal pain - changes in hepatic function - dysarthria - erectile dysfunction - paraesthesia - taste disturbances

- Very rare Hypothermia

**PREGNANCY**

Manufacturer advises use only if potential benefit outweighs risk (toxicity in animal studies).

**BREAST FEEDING**

Present in milk—amount probably too small to be harmful.

**HEPATIC IMPAIRMENT**

- With oral use Manufacturer advises use with caution.

**RENAL IMPAIRMENT**

- With oral use Risk of toxicity—use smaller doses (e.g. 5 mg daily by mouth) and if necessary increase dosage interval; if eGFR less than 15 mL/minute/1.73 m² manufacturer advises use by mouth only if potential benefit outweighs risk. Excreted by kidney.

**TREATMENT CESSATION**

Avoid abrupt withdrawal (risk of hypertensive state, may exacerbate spasticity, and precipitate autonomic dysfunction including hyperthermia, psychiatric reactions and convulsions; to minimise risk, discontinue by gradual dose reduction over at least 1–2 weeks (longer if symptoms occur)).

**PRESCRIBING AND DISPENSING INFORMATION**

Flavours of oral liquid formulations may include raspberry.

**PATIENT AND CARER ADVICE**

Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Solvaco solution** 1 mg per 1 mL (sugar-free) price = £4.38
- **Solvaco tablets** 2.5 mg | 5 mg | 10 mg price = £3.02–£3.95
- **Lioresal oral suspension** 5mg | 10mg | 20mg | 40mg price = £3.50–£6.70
- **Solvaco oral suspension** 5mg/5mL | 10mg/10mL price = £3.50–£6.70
- **Solvaco oral solution** 5mg/5mL price = £3.50–£6.70
- **Lioresal oral solution** 5mg/5mL price = £3.50–£6.70
- **Solvaco oral solution** 10mg/10mL price = £5.99–£6.86
- **Lioresal oral solution** 10mg/10mL price = £7.72–£14.24

- **Lioresal tablets** 5 mg price = £4.99–£6.28
- **Solvaco tablets** 10 mg price = £5.49–£8.64
- **Lioresal tablets** 10 mg price = £6.13–£9.29
- **Solvaco tablets** 20 mg price = £11.74
- **Lioresal tablets** 20 mg price = £14.24
- **Lioresal injection** 10 mg/mL price = £2.36

**EXCIPIENTS:** May contain Gluten

- **Solvaco solution** 1 mg per 1 mL, Dronabinol 2.7 mg per 1 dose Sativex oromucosal spray 270 dose price = £375.00

**GAMMA-AMINOBUTYRIC ACID ANALOGUES AND DERIVATIVES**

**Baclofen**

**SIDE-EFFECTS**

- Rare Abdominal pain - changes in hepatic function - dysarthria - erectile dysfunction - paraesthesia - taste disturbances

- Very rare Hypothermia

- **CONTRA-INDICATIONS**

- With intrathecal use Local infection - systemic infection

- With oral use Avoid oral route in active peptic ulceration

**MEDICATIONS**

RENAL IMPAIRMENT

Manufacturer advises more frequent monitoring in significant renal impairment—possible risk of prolonged or enhanced effect.

**MONITORING REQUIREMENTS**

Monitor oral mucosa—interrupt treatment if lesions or persistent soreness.

**PATIENT AND CARER ADVICE**

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including cannabis, see Drugs and Driving under Guidance on prescribing, p. 1

**RARITY**

Rare

**SIDE-EFFECTS**

Abdominal pain - changes in hepatic function - dysarthria - erectile dysfunction - paraesthesia - taste disturbances

**CONTRA-INDICATIONS**

- With intrathecal use Local infection - systemic infection

- With oral use Avoid oral route in active peptic ulceration

**CAUTIONS**

**GENERAL CAUTIONS**

Cerebrovascular disease - diabetes - elderly - epilepsy - history of peptic ulcer - hypertonic bladder sphincter - Parkinson’s disease - psychiatric illness - respiratory impairment

**SPECIFIC CAUTIONS**

- With intrathecal use Coagulation disorders - malnutrition (increased risk of post-surgical complications) - previous spinal fusion procedure

**INTERACTIONS**

- Rare Abdominal pain - changes in hepatic function - dysarthria - erectile dysfunction - paraesthesia - taste disturbances

- Very rare Hypothermia

**PREGNANCY**

Manufacturer advises use only if potential benefit outweighs risk (toxicity in animal studies).

**BREAST FEEDING**

Present in milk—amount probably too small to be harmful.

**HEPATIC IMPAIRMENT**

- With oral use Manufacturer advises use with caution.

**RENAL IMPAIRMENT**

- With oral use Risk of toxicity—use smaller doses (e.g. 5 mg daily by mouth) and if necessary increase dosage interval; if eGFR less than 15 mL/minute/1.73 m² manufacturer advises use by mouth only if potential benefit outweighs risk. Excreted by kidney.

**TREATMENT CESSATION**

Avoid abrupt withdrawal (risk of hypertensive state, may exacerbate spasticity, and precipitate autonomic dysfunction including hyperthermia, psychiatric reactions and convulsions; to minimise risk, discontinue by gradual dose reduction over at least 1–2 weeks (longer if symptoms occur)).

**PRESCRIBING AND DISPENSING INFORMATION**

Flavours of oral liquid formulations may include raspberry.

**PATIENT AND CARER ADVICE**

Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, oral suspension, oral solution

**Tablet**

| CAUTIONARY AND ADVISORY LABELS | 2, 8, 21 |
| EXCIPIENTS: May contain Gluten |
| **BACLOFEN (Non-proprietary)** |
| Baclofen 10 mg Baclofen 10mg tablets | 84 tablet | £9.99 DT price = £1.85 |
| Lioresal (Novartis Pharmaceuticals UK Ltd) |
| Baclofen 10 mg Lioresal 10mg tablets | 100 tablet | £12.38 |

**Oral solution**

| CAUTIONARY AND ADVISORY LABELS | 2, 8, 21 |
| **BACLOFEN (Non-proprietary)** |
| Baclofen 1 mg per 1 mL Baclofen 5mg/5mL oral solution sugar free (sugar-free) | 300 mL | £22.45 DT price = £4.59 |
| Lioresal (Novartis Pharmaceuticals UK Ltd) |
| Baclofen 1 mg per 1 mL Lioresal 5mg/5mL liquid (sugar-free) | 300 mL | £8.59 DT price = £4.59 |
| Brands may include Lyflex |

**Important safety information**

Consult product literature for details on test dose and titration—important to monitor patients closely in appropriately equipped and staffed environment during screening and immediately after pump implantation. Resuscitation equipment must be available for immediate use. Treatment with continuous pump-administered intrathecal baclofen should be initiated within 3 months of a satisfactory response to intrathecal baclofen testing.
Pain and inflammation in musculoskeletal disorders

**Non-steroidal anti-inflammatory drugs**

In single doses non-steroidal anti-inflammatory drugs (NSAIDs) have analgesic activity comparable to that of paracetamol p. 354, but paracetamol is preferred, particularly in the elderly.

In regular full dosage NSAIDs have both a lasting analgesic and an anti-inflammatory effect which makes them particularly useful for the treatment of continuous or regular pain associated with inflammation. Therefore, although paracetamol often gives adequate pain control in osteoarthritis, NSAIDs are more appropriate than paracetamol or the opioid analgesics in the inflammatory arthritides (e.g. rheumatoid arthritis) and in some cases of advanced osteoarthritis. NSAIDs can also be of benefit in the less well defined conditions of back pain and soft-tissue disorders.

**Choice**

Differences in anti-inflammatory activity between NSAIDs are small, but there is considerable variation in individual response and tolerance to these drugs. About 60% of patients will respond to any NSAID; of the others, those who do not respond to one may well respond to another. Pain relief starts soon after taking the first dose and a full analgesic effect should normally be obtained within a week, whereas an anti-inflammatory effect may not be achieved (or may not be clinically assessable) for up to 3 weeks. If appropriate responses are not obtained within these times, another NSAID should be tried.

NSAIDs reduce the production of prostaglandins by inhibiting the enzyme cyclo-oxygenase. They vary in their selectivity for inhibiting different types of cyclo-oxygenase; selective inhibition of cyclo-oxygenase-2 is associated with less gastro-intestinal intolerance. Several other factors also influence susceptibility to gastrointestinal effects, and a NSAID should be chosen on the basis of the incidence of gastro-intestinal and other side-effects.

Ibuprofen p. 927 is a propionic acid derivative with anti-inflammatory, analgesic, and antipyretic properties. It has fewer side-effects than other non-selective NSAIDs but its anti-inflammatory properties are weaker. It is unsuitable for conditions where inflammation is prominent, such as acute gout. DEXIBUPROFEN p. 919 is the active enantiomer of ibuprofen. It has similar properties to ibuprofen and is licensed for the relief of mild to moderate pain and inflammation.

Other propionic acid derivatives:

Naproxen p. 934 is one of the first choices because it combines good efficacy with a low incidence of side-effects (but more than ibuprofen).

Flurbiprofen may be slightly more effective. Both are associated with slightly more gastro-intestinal side-effects than ibuprofen.

**Pain and inflammation in musculoskeletal disorders**

**Solution for injection**

- **BACLOFEN (Non-proprietary)**
  - Baclofen 50 microgram per 1 ml Baclofen 50micrograms/1ml solution for injection ampoules | 1 ampoule (POM) £10.95 | 10 ampoule (POM) £27.60
  - Lioresal (Novartis Pharmaceuticals UK Ltd)
  - Baclofen 50 microgram per 1 ml Lioresal Intrathecal 50micrograms/1ml solution for injection ampoules | 1 ampoule (POM) £2.63

**Solution for infusion**

- **BACLOFEN (Non-proprietary)**
  - Baclofen 500 microgram per 1 ml Baclofen 10mg/20ml solution for infusion ampoules | 1 ampoule (POM) £57.00
  - Baclofen 2 mg per 1 ml Baclofen 10mg/5ml solution for infusion ampoules | 5 ampoule (POM) £243.10 | 10 ampoule (POM) £570.00
  - Lioresal (Novartis Pharmaceuticals UK Ltd)
  - Baclofen 500 microgram per 1 ml Lioresal Intrathecal 10mg/20ml solution for infusion ampoules | 1 ampoule (POM) £58.34
  - Baclofen 2 mg per 1 ml Lioresal Intrathecal 10mg/5ml solution for infusion ampoules | 1 ampoule (POM) £58.34

**MUSCLE RELAXANTS**

**Methocarbamol**

**INDICATIONS AND DOSE**

Short-term symptomatic relief of muscle spasm

**BY MOUTH**

- Adults: 1.5 g 4 times a day; reduced to 750 mg 3 times a day if required
- Elderly: Up to 750 mg 4 times a day, may be sufficient

- **CONTRA-INDICATIONS** Brain damage : coma : epilepsy : myasthenia gravis : pre-coma
- **INTERACTIONS** → Appendix 1 (muscle relaxants).
- **PREGNANCY** Manufacturer advises caution unless potential benefit outweighs risk.
- **BREAST FEEDING** Present in milk in animal studies — manufacturer advises caution.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution; half-life may be prolonged.
- **RENAL IMPAIRMENT** Manufacturer advises caution.
- **PATIENT AND CARER ADVICE** Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.
- **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include:

- **Tablet** CAUTIONARY AND ADVISORY LABELS 2
  - METHOCARBAMOL (Non-proprietary)
  - Methocarbamol 750 mg Methocarbamol 750mg tablets | 100 tablet (POM) £12.65 DT price = £12.65
  - Robaxin (Almirall Ltd)
  - Methocarbamol 750 mg Robaxin 750 tablets | 100 tablet (POM) £12.65 DT price = £12.65
916 Pain and inflammation in musculoskeletal disorders

Drugs with properties similar to those of propionic acid derivatives:

Diclofenac sodium p. 921 and aceclofenac below are similar in efficacy to naproxen.

Etodolac p. 924 is comparable in efficacy to naproxen p. 934; it is licensed for symptomatic relief of osteoarthritis and rheumatoid arthritis.

Indomethacin p. 929 has an action equal to or superior to that of naproxen, but with a higher incidence of side-effects including headache, dizziness, and gastro-intestinal disturbances.

Mefenamic acid p. 932 has minor anti-inflammatory properties. It has occasionally been associated with diarrhoea and haemolytic anaemia which require discontinuation of treatment.

Meloxicam p. 933 is licensed for the short-term relief of pain in osteoarthritis and for long-term treatment of rheumatoid arthritis and ankylosing spondylitis.

Nabumetone p. 934 is comparable in effect to naproxen p. 934.

Phenylbutazone is licensed for ankylosing spondylitis, but is not recommended because it is associated with serious side-effects, in particular haematological reactions; it should be used only by a specialist in severe cases where other treatments have been found unsuitable.

Piroxicam p. 936 is as effective as naproxen and has a long duration of action which permits once-daily administration. However, it has more gastro-intestinal side-effects than most other NSAIDs, and is associated with more frequent serious skin reactions.

Sulindac p. 937 is similar in tolerance to naproxen. Tenoxicam p. 937 is similar in activity and tolerance to naproxen. Its long duration of action allows once-daily administration.

Tolprofen p. 381 is licensed for the treatment of migraine.

Ketorolac trometamol p. 1107 and the selective inhibitor of cyclo-oxygenase-2, parecoxib p. 1108, are licensed for the short-term management of postoperative pain. The selective inhibitors of cyclo-oxygenase-2, etoricoxib p. 925 and celecoxib p. 918, are as effective as non-selective NSAIDs such as diclofenac sodium and naproxen. Although selective inhibitors can cause serious gastro-intestinal events, available evidence appears to indicate that the risk of serious upper gastro-intestinal events is lower with selective inhibitors compared to non-selective NSAIDs; this advantage may be lost in patients who require concomitant low-dose aspirin.

Celecoxib and etoricoxib are licensed for the relief of pain in osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis; etoricoxib is also licensed for the relief of pain from acute gout.

Aspirin p. 104 has been used in high doses to treat rheumatoid arthritis, but other NSAIDs are now preferred.

Dental and orofacial pain

Most mild to moderate dental pain and inflammation is effectively relieved by NSAIDs. Those used for dental pain include ibuprofen p. 927, diclofenac sodium p. 921, and diclofenac potassium p. 920.

Asthma

Any degree of worsening of asthma may be related to the ingestion of NSAIDs, either prescribed or (in the case of ibuprofen and others) purchased over the counter.

NSAIDs and cardiovascular events

All NSAID use (including cyclo-oxygenase-2 selective inhibitors) can, to varying degrees, be associated with a small increased risk of thrombotic events (e.g. myocardial infarction and stroke) independent of baseline cardiovascular risk factors or duration of NSAID use; however, the greatest risk may be in those receiving high doses long term.

Cyclo-oxygenase-2 selective inhibitors, diclofenac (150 mg daily) and ibuprofen (2.4 g daily) are associated with an increased risk of thrombotic events. Although there are limited data regarding the thrombotic effects of aceclofenac, treatment advice has been updated in line with diclofenac, based on aceclofenac’s structural similarity to diclofenac and its metabolism to diclofenac. The increased risk for diclofenac is similar to that of licensed doses of etoricoxib. Naproxen (1 g daily) is associated with a lower thrombotic risk, and low doses of ibuprofen (1.2 g daily or less) have not been associated with an increased risk of myocardial infarction.

The lowest effective dose of NSAID should be prescribed for the shortest period of time to control symptoms and the need for long-term treatment should be reviewed periodically.

NSAIDs and gastro-intestinal events

All NSAIDs are associated with serious gastro-intestinal toxicity; the risk is higher in the elderly. Evidence on the relative safety of non-selective NSAIDs indicates differences in the risks of serious upper gastro-intestinal side-effects—piroxicam, ketoprofen, and ketorolac trometamol are associated with the highest risk; indometacin, diclofenac, and naproxen are associated with intermediate risk, and ibuprofen with the lowest risk (although high doses of ibuprofen have been associated with intermediate risk). Selective inhibitors of cyclo-oxygenase-2 are associated with a lower risk of serious upper gastro-intestinal side-effects than non-selective NSAIDs.

Recommendations are that NSAIDs associated with a low risk e.g. ibuprofen are generally preferred, to start at the lowest recommended dose and not to use more than one oral NSAID at a time.

The combination of a NSAID and low-dose aspirin can increase the risk of gastro-intestinal side-effects; this combination should be used only if absolutely necessary and the patient should be monitored closely.

While it is preferable to avoid NSAIDs in patients with active or previous gastro-intestinal ulceration or bleeding, and to withdraw them if gastro-intestinal lesions develop, nevertheless patients with serious rheumatic diseases (e.g. rheumatoid arthritis) are usually dependent on NSAIDs for effective relief of pain and stiffness.

Patients at risk of gastro-intestinal ulceration (including the elderly), who need NSAID treatment should receive gastroprotective treatment.

Systemic as well as local effects of NSAIDs contribute to gastro-intestinal damage; taking oral formulations with milk or food, or using enteric-coated formulations, or changing the route of administration may only partially reduce symptoms such as dyspepsia.

NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

Aceclofenac

INDICATIONS AND DOSE

Pain and inflammation in rheumatoid arthritis, osteoarthritis and ankylosing spondylitis

BY MOUTH

Adult: 100 mg twice daily

- CONTRA-INDICATIONS Active gastro-intestinal bleeding • active gastro-intestinal ulceration • cerebrovascular disease • history of gastro-intestinal bleeding related to previous NSAID therapy • history of gastro-intestinal perforation related to previous NSAID therapy • history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) • history of recurrent gastro-intestinal
ulceration (two or more distinct episodes) • ischaemic heart disease • mild heart failure • peripheral arterial disease • severe heart failure

- **CAUTIONS** Allergic disorders • avoid in Acute porphyrias p. 864 • cardiac impairment (NSAIDs may impair renal function) • coagulation defects • connective-tissue disorders • Crohn’s disease (may be exacerbated) • elderly (risk of serious side-effects and fatalities) • history of cardiac failure • hypertension • left ventricular dysfunction • oedema • risk factors for cardiovascular events • ulcerative colitis (may be exacerbated)

- **INTERACTIONS** → Appendix 1 (NSAIDs).

- **SIDE-EFFECTS**
  - Rare
  - Alveolitis • aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) • hepatic damage • interstitial fibrosis associated with NSAIDs can lead to renal failure • pancreatitis • papillary necrosis associated with NSAIDs can lead to renal failure • pulmonary eosinophilia • Stevens-Johnson syndrome • toxic epidermal necrolysis • visual disturbances

  - Frequency not known
  - Angioedema • blood disorders • bronchospasm • colitis (induction of or exacerbation of) • Crohn’s disease (induction of or exacerbation of) • depression • diarrhoea • dizziness • drowsiness • fluid retention (rarely precipitating congestive heart failure) • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal ulceration • haematuria • headache • hearing disturbances • hypersensitivity reactions • insomnia • nausea • nervousness • photosensitivity • raised blood pressure • rashes • renal failure (especially in patients with pre-existing renal impairment) • tinnitus • vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- **ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Most manufacturers advise avoiding the use of NSAIDs during pregnancy or avoiding them unless the potential benefit outweighs the risk. NSAIDs should be avoided during the third trimester because use is associated with a risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn. In addition, the onset of labour may be delayed and its duration may be increased.

- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Initially 100 mg daily. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT** Avoid if possible or use with caution; avoid in moderate to severe impairment. The lowest effective dose should be used for the shortest possible duration. In renal impairment, monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- **MEDICAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

---

### Pain and inflammation in musculoskeletal disorders

#### Tablet

**INDICATIONS AND DOSE**

**Pain and inflammation in rheumatic disease**

**INDICATIONS AND DOSE**

**Pain and inflammation in other musculoskeletal disorders**

**Postoperative analgesia**

**BY MOUTH**

- Adult: 120 mg daily in divided doses, then increased if necessary to 180 mg daily in divided doses, dose to be taken with food

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding • active gastro-intestinal ulceration • history of gastro-intestinal bleeding related to previous NSAID therapy • history of gastro-intestinal perforation related to previous NSAID therapy • history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) • history of recurrent gastro-intestinal ulceration (two or more distinct episodes) • severe heart failure

**CAUTIONS** Allergic disorders • cardiac impairment (NSAIDs may impair renal function) • cerebrovascular disease • coagulation defects • connective-tissue disorders • Crohn’s disease (may be exacerbated) • elderly (risk of serious side-effects and fatalities) • epilepsy • heart failure • ischaemic heart disease • parkinsonism • peripheral arterial disease • psychiatric disturbances • risk factors for cardiovascular events • ulcerative colitis (may be exacerbated) • uncontrolled hypertension

**INTERACTIONS** → Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

- Rare
  - Alveolitis • aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) • blood disorders • bronchospasm • colitis (induction of or exacerbation of) • Crohn’s disease (induction of or exacerbation of) • depression • diarrhoea • dizziness • drowsiness • fluid retention (rarely precipitating congestive heart failure) • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal ulceration • haematuria • headache • hearing disturbances • hypersensitivity reactions • insomnia • nausea • nervousness • photosensitivity • raised blood pressure • rashes • renal failure (especially in patients with pre-existing renal impairment) • tinnitus • vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- **ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or...
any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Most manufacturers advise avoiding the use of NSAIDs during pregnancy or avoiding them unless the potential benefit outweighs the risk. NSAIDs should be avoided during the third trimester because use is associated with a risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn. In addition, the onset of labour may be delayed and its duration may be increased.

- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT** Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- **MONITORING REQUIREMENTS** During prolonged therapy ophthalmic and blood examinations particularly advisable.

- **PATIENT AND CARER ADVICE** Dizziness may affect performance of skilled tasks (e.g. driving).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

- **SIDE-EFFECTS, FURTHER INFORMATION** Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- **ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. Contraindicated in patients with sulphonamide sensitivity.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Avoid (teratogenic in animal studies).

- **BREAST FEEDING** Avoid—present in milk in animal studies.

- **HEPATIC IMPAIRMENT** Halve initial dose in moderate impairment. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT** Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. Avoid if eGFR less than 30 mL/minute/1.73 m². In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- **MONITORING REQUIREMENTS** Monitor blood pressure before and during treatment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Celecoxib**

**INDICATIONS AND DOSE**

- **Pain and inflammation in osteoarthritis**
  - **BY MOUTH**
    - Adult: 200 mg daily in 1–2 divided doses, then increased if necessary up to 200 mg twice daily, discontinue if no improvement after 2 weeks on maximum dose

- **Pain and inflammation in rheumatoid arthritis**
  - **BY MOUTH**
    - Adult: 100 mg twice daily, then increased if necessary to 200 mg twice daily, discontinue if no improvement after 2 weeks on maximum dose

- **Ankylosing spondylitis**
  - **BY MOUTH**
    - Adult: 200 mg daily in 1–2 divided doses, then increased if necessary up to 400 mg daily in 1–2 divided doses, discontinue if no improvement after 2 weeks on maximum dose

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding - active gastro-intestinal ulceration - cerebrovascular disease - inflammatory bowel disease - ischaemic heart disease - mild to severe heart failure - peripheral arterial disease

- **CAUTIONS** Allergic disorders - cardiac impairment (NSAIDs may impair renal function) - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - elderly (risk of serious side-effects and fatalities) - history of cardiac failure - hypertension - left ventricular dysfunction - oedema - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated)

- **INTERACTIONS** Appendix 1 (NSAIDs).

- **SIDE-EFFECTS**
  - **Common or very common** Dyspnoea - influenza-like symptoms
  - **Uncommon** Cerebral infarction - fatigue - muscle cramps - palpitation - paraesthesia - stomatitis
  - **Rare** Alopecia - aloilitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - taste disturbance - toxic epidermal necrolysis - visual disturbances

  - **Very rare** Seizures
  - **Frequency not known** Angioedema - blood disorders - bronchospasm - chest pain - colitis (induction of or exacerbation of) - Crohn’s disease (induction of or exacerbation of) - depression - diarrhoea - dizziness - drowsiness - fluid retention (rarely precipitating congestive heart failure) - gastro-intestinal bleeding - gastro-intestinal discomfort - gastro-intestinal disturbances - gastro-intestinal ulceration - haematuria - headache - hearing disturbances - hypersensitivity reactions - insomnia - nausea - nervousness - photosensitivity - raised blood pressure - rashes - renal failure (especially in patients with pre-existing renal impairment) - tinnitus - vertigo

    - raised blood pressure

    - rashes

    - renal failure (especially in patients with pre-existing renal impairment)

    - tinnitus

    - vertigo

- **SIDE-EFFECTS, FURTHER INFORMATION**

  Serious Side-effects

  - For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- **ALLERGY AND CROSS-SENSITIVITY**

  Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION**

  Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY**

  Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING**

  Use with caution during breast-feeding. Present in milk—but risk to infant minimal.

- **HEPATIC IMPAIRMENT**

  Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT**

  Avoid if possible or use with caution. Reduce initial dose. The lowest effective dose should be used for the shortest possible duration. Avoid if eGFR less than 30 mL/minute/1.73 m². In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- **MEDICINAL FORMS**

associated with NSAIDs can lead to renal failure • pulmonary eosinophilia • Stevens-Johnson syndrome • toxic epidermal necrolysis • visual disturbances

**Frequency not known** Angioedema • blood disorders • bronchospasm • colitis (induction of or exacerbation of) • Crohn’s disease (induction of or exacerbation of) • depression • diarrhoea • dizziness • drowsiness • fluid retention (rarely precipitating congestive heart failure) • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal disturbances • gastro-intestinal ulceration • haematuria • headache • hearing disturbances • hypersensitivity reactions • insomnia • nausea • nervousness • photosensitivity • raised blood pressure • rashes • renal failure (especially in patients with pre-existing renal impairment) • tinnitus • vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONTRA-INDICATIONS**

**CAUTIONS**—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid—no information available.

**HEPATIC IMPAIRMENT** Reduce initial dose to max. 50 mg daily in mild to moderate impairment. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid in moderate to severe impairment. Reduce initial dose to 50 mg daily. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

**UNLICENSED USE** Voltarol® Rapid not licensed for use in children under 14 years or in fever.

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding • active gastro-intestinal ulceration • cerebrovascular disease • history of gastro-intestinal bleeding related to previous NSAID therapy • history of gastro-intestinal perforation related to previous NSAID therapy • history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) • history of recurrent gastro-intestinal ulceration (two or more distinct episodes) • ischaemic heart disease • mild to severe heart failure • peripheral arterial disease

**CAUTIONS**

**GENERAL CAUTIONS** Allergic disorders • cardiac impairment (NSAIDs may impair renal function) • coagulation defects • connective-tissue disorders • Crohn’s disease (may be exacerbated) • history of cardiac failure • hypertension • left ventricular dysfunction • oedema • risk factors for cardiovascular events • ulcerative colitis (may be exacerbated)

**SPECIFIC CAUTIONS** Elderly (risk of serious side-effects and fatalities) (in adults)

**INTERACTIONS** → Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

**Rare** Alveolitis • aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) • hepatic damage • interstitial fibrosis associated with NSAIDs can lead to renal failure • pancreatitis • papillary necrosis associated with NSAIDs can lead to renal failure • pulmonary eosinophilia • Stevens-Johnson syndrome • toxic epidermal necrolysis • visual disturbances

**Frequency not known** Angioedema • blood disorders • bronchospasm • colitis (induction of or exacerbation of) • Crohn’s disease (induction of or exacerbation of) • depression • diarrhoea • dizziness • drowsiness • fluid retention (rarely precipitating congestive heart failure) • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal disturbances • gastro-intestinal ulceration • haematuria • headache • hearing disturbances • hypersensitivity reactions • insomnia • nausea • nervousness • photosensitivity • raised blood pressure • rashes • renal failure (especially in patients with pre-existing renal impairment) • tinnitus • vertigo

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

---

**Diclofenac potassium**

**INDICATIONS AND DOSE**

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders**

**BY MOUTH**

- **Child 14-17 years:** 75–100 mg daily in 2–3 divided doses
- **Adult:** 75–150 mg daily in 2–3 divided doses

**Acute gout**

**BY MOUTH**

- **Adult:** 75–150 mg daily in 2–3 divided doses

---

**Postoperative pain**

**BY MOUTH**

- **Child 9–13 years (body-weight 35 kg and above):** Up to 2 mg/kg daily in 3 divided doses; maximum 100 mg per day
- **Child 14–17 years:** 75–100 mg daily in 2–3 divided doses
- **Adult:** 75–150 mg daily in 2–3 divided doses

**Migraine**

**BY MOUTH**

- **Adult:** 50 mg, to be given at onset of migraine, then 50 mg after 2 hours if required, then 50 mg after 4–6 hours; maximum 200 mg per day

**Fever in ear, nose, or throat infection**

**BY MOUTH**

- **Child 9–17 years (body-weight 35 kg and above):** Up to 2 mg/kg daily in 3 divided doses; maximum 100 mg per day
Diclofenac sodium

INDICATIONS AND DOSE

Pain and inflammation in musculoskeletal disorders | Acute gout

BY MOUTH

Adult: 75–150 mg daily in 2–3 divided doses

BY RECTUM

Adult: 75–150 mg daily in divided doses

Pain and inflammation in rheumatic disease including juvenile idiopathic arthritis

BY MOUTH

Adult: 75–150 mg daily in 2–3 divided doses

BY RECTUM

Adult: 75–150 mg daily in divided doses

Postoperative pain

BY MOUTH

Adult: 75–150 mg daily in 2–3 divided doses

BY RECTUM

Adult: 75–150 mg daily in divided doses

VOLTAROL® RETARD

Pain and inflammation in rheumatic disease (including juvenile idiopathic arthritis) and other musculoskeletal disorders | Acute gout | Postoperative pain

BY MOUTH

Adult: 1 tablet once daily

VOLTAROL® 75MG SR TABLETS

Pain and inflammation in rheumatic disease (including juvenile idiopathic arthritis) and other musculoskeletal disorders | Acute gout | Postoperative pain

BY MOUTH

Adult: 1 tablet 1–2 times a day

DICLOMAX SR®

Pain and inflammation in rheumatic disease (including juvenile idiopathic arthritis) and other musculoskeletal disorders | Acute gout | Postoperative pain

BY MOUTH

Adult: 1 capsule 1–2 times a day, alternatively 2 capsules once daily

MOTIFENE®

Pain and inflammation in rheumatic disease (including juvenile idiopathic arthritis) and other musculoskeletal disorders | Acute gout | Postoperative pain

BY MOUTH

Adult: 1 capsule once daily

DYLOJECT®

Acute exacerbations of pain and postoperative pain

BY DEEP INTRAMUSCULAR INJECTION

Adult: 75 mg once daily for maximum 2 days, to be administered into the gluteal muscle

Acute exacerbations of pain and postoperative pain (severe cases)

BY DEEP INTRAMUSCULAR INJECTION

Adult: 75 mg twice daily for maximum 2 days, to be administered into the gluteal muscle

Ureteric colic

BY DEEP INTRAMUSCULAR INJECTION

Adult: 75 mg, then 75 mg after 30 minutes if required

Acute postoperative pain (in supervised settings)

BY INTRAVENOUS INJECTION

Adult: 75 mg every 4–6 hours if required for maximum 2 days; maximum 150 mg per day

Prevention of postoperative pain

BY INTRAVENOUS INJECTION

Adult: 25–50 mg, to be given after surgery; further doses given after 4–6 hours if necessary; maximum 150 mg in 24 hours for 2 days

VOLTAROL® SOLUTION FOR INJECTION

Postoperative pain

BY DEEP INTRAMUSCULAR INJECTION

Adult: 75 mg 1–2 times a day for maximum 2 days, twice daily administration in severe cases, to be injected into the gluteal muscle

Acute exacerbations of pain

BY DEEP INTRAMUSCULAR INJECTION

Adult: 75 mg 1–2 times a day for maximum 2 days, twice daily administration in severe cases, to be injected into the gluteal muscle

Ureteric colic

BY DEEP INTRAMUSCULAR INJECTION

Adult: 75 mg, then 75 mg after 30 minutes if required

Acute postoperative pain (in hospital setting)

BY INTRAVENOUS INFUSION

Adult: 75 mg, then 75 mg after 4–6 hours if required for maximum 2 days; maximum 150 mg per day
Prevention of postoperative pain (in hospital setting)
BY INTRAVENOUS INFUSION
- Adult: Initially 25–50 mg, to be given after surgery over 15–60 minutes, then 5 mg/hour for maximum 2 days; maximum 150 mg per day

VOLTAROL® EMULGEL
Relief of pain in musculoskeletal conditions | Adjunctive treatment in knee or hand osteoarthritis
TO THE SKIN
- Adult: Apply 3–4 times a day, therapy should be reviewed after 14 days (or after 28 days for osteoarthritis)

SOLARAZE®
Actinic keratosis
TO THE SKIN
- Adult: Apply twice daily for 60–90 days, to be applied thinly; maximum 8 g per day

VOLTAROL® GEL PATCH
Ankle sprain
TO THE SKIN
- Adult: Apply 1 patch daily for up to 3 days

Epicondylitis
TO THE SKIN
- Adult: Apply 1 patch twice daily for up to 14 days

CONTRA-INDICATIONS
- With systemic use Active gastro-intestinal bleeding, -active gastro-intestinal ulceration, -avoid suppositories in proctitis, -cerebrovascular disease, -history of gastro-intestinal bleeding related to previous NSAID therapy, -history of gastro-intestinal perforation related to previous NSAID therapy, -history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes), -history of recurrent gastro-intestinal ulceration (two or more distinct episodes), -ischaemic heart disease, -mild to severe heart failure, -peripheral arterial disease
- With intravenous use Dehydration, -history of asthma, -history of confirmed or suspected cerebrovascular bleeding, -history of haemorrhagic diathesis, -hypovolaemia, -operations with high risk of haemorrhage

CAUTIONS
- With systemic use Allergic disorders, -cardiac impairment (NSAIDs may impair renal function), -coagulation defects, -connective-tissue disorders, -Crohn’s disease (may be exacerbated), -elderly (risk of serious side-effects and fatalities), -history of cardiac failure, -hypertension, -left ventricular dysfunction, -oedema, -risk factors for cardiovascular events, -ulcerative colitis (may be exacerbated)
- With topical use Avoid contact with eyes, -avoid contact with inflamed or broken skin, -avoid contact with mucous membranes, -not for use with occlusive dressings, -topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

INTERACTIONS → Appendix 1 (NSAIDs).
- With intravenous use Contra-indicated in concomitant NSAID use. Contra-indicated in concomitant anticoagulant use (including low-dose heparins).
- With topical use Interactions do not generally apply to topical NSAIDs

SIDE-EFFECTS
- Rare
  - With systemic use Alveolitis, aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible), -hepatic damage, -interstitial fibrosis associated with NSAIDs can lead to renal failure, -pancreatitis, -papillary necrosis, -pulmonary eosinophilia, -Stevens-Johnson syndrome, -toxic epidermal necrolysis, -visual disturbances
  - Frequency not known
  - With systemic use Angioedema, -blood disorders, -bronchospasm, -collitis (induction of or exacerbation of), -Crohn’s disease (induction of or exacerbation of), -depression, -diarrhoea, -dizziness, -drowsiness, -fluid retention (rarely precipitating congestive heart failure), -gastro-intestinal bleeding, -gastro-intestinal discomfort, -gastro-intestinal disturbances, -gastro-intestinal ulceration, -haematuria, -headache, -hearing disturbances, -hypersensitivity reactions, -insomnia, -nausea, -nervousness, -photosensitivity, -raised blood pressure, -rashes, -renal failure (especially in patients with pre-existing renal impairment), -tinnitus, -vertigo
  - With parenteral use Injection site reactions
  - With rectal use Suppositories may cause rectal irritation
  - With topical use Paraeesthesia, -photosensitivity, -rash (discontinue use if develops)

SIDE-EFFECTS, FURTHER INFORMATION
- Serious side-effects: For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.
- With topical use Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

ALLERGY AND CROSS-SENSITIVITY
Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

CONCEPTION AND CONTRACEPTION
- With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

PREGNANCY
- With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy

BREAST FEEDING
- With systemic use Use with caution during breast-feeding. Amount in milk too small to be harmful.

HEPATIC IMPAIRMENT
- With systemic use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

RENAL IMPAIRMENT
- With systemic use Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- With intravenous use Avoid intravenous use if serum creatinine greater than 160 micromol/litre. Contra-indicated in moderate or severe renal impairment.

DIRECTIONS FOR ADMINISTRATION: For intravenous infusion (Voltarol®), give continuously or intermittently in Glucose 5% or Sodium chloride 0.9%. Dilute 75 mg with 100–500 mL infusion fluid (previously buffered with 0.5 mL sodium bicarbonate 8.4% solution or with 1 mL sodium bicarbonate 4.2% solution). For intermittent infusion give 25–50 mg over 15–60 minutes or 75 mg over 30–120 minutes. For continuous infusion give at a rate of
**Diclofenac sodium with misoprostol**

The properties listed below are those particular to the combination only. For the properties of the components please consider, diclofenac sodium p. 921, misoprostol p. 709.

**INDICATIONS AND DOSE**

**MISOFEN® 50/200**

Prophylaxis against NSAID-induced gastrointestinal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis

**BY MOUTH**

- Adult: 1 tablet 2–3 times a day, take with food

**MISOFEN® 75/200**

Prophylaxis against NSAID-induced gastrointestinal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis

**BY MOUTH**

- Adult: 1 tablet twice daily, take with food

**ARTHROTEC® 50/200**

Prophylaxis against NSAID-induced gastrointestinal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis

- Adult: 1 tablet 2–3 times a day, take with food

**Diclofenac sodium with misoprostol**

5 mg/hour. For topical preparations, apply with a gentle massage only.

- **PRESCRIBING AND DISPENSING INFORMATION** Voltarol® dispersible tablets are more suitable for short-term use in acute conditions for which treatment required for no more than 3 months (no information on use beyond 3 months). Caution—topical preparations not generally suitable for children.

- **PATIENT AND CARER ADVICE**

  For topical preparations, patients and their carers should be advised to wash hands immediately after use. Photosensitivity: Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

- **PROFESSION SPECIFIC INFORMATION**

  Dental practitioners’ formulary Diclofenac Sodium Tablets may be prescribed.

- **NATIONAL FUNDING/ACCESS DECISIONS**

  Scottish Medicines Consortium (SMC) Decisions

  The Scottish Medicines Consortium has advised (February 2008) that Dylotech® is accepted for restricted use within NHS Scotland for the treatment or prevention of postoperative pain by intravenous injection in supervised healthcare settings.

- **EXCEPTIONS TO LEGAL CATEGORY**

  Various pack sizes of gel preparations may be available on sale to the public.

- **MEDICINAL FORMS**

  There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: dispersible tablet, oral suspension, oral solution.

  **Dispersible tablet**

  CAUTIONARY AND ADVISORY LABELS 13, 21

  Diclofenac sodium 50 mg Voltarol 50mg dispersible tablets (sugar-free) | 21 tablet (PSt) £6.19 DT price = £6.19

  **Modified-release tablet**

  CAUTIONARY AND ADVISORY LABELS 21, 25

  Diclofenac sodium 75 mg Diclofenac sodium 75mg modified-release tablets | 28 tablet (PSt) £6.46 | 56 tablet (PSt) no price available DT price = £12.92

  Diclofenac sodium 100 mg Diclofenac sodium 100mg modified-release tablets | 28 tablet (PSt) £9.47 DT price = £9.47

  Diclofenac sodium 100 mg Voltarol 100mg tablets | 28 tablet (PSt) £9.47 DT price = £9.47

  Diclofenac sodium 100 mg Voltarol Retard 100mg tablets | 28 tablet (PSt) £9.47 DT price = £9.47

  Diclofenac sodium 75 mg Voltarol 75mg SR tablets | 28 tablet (PSt) £6.46 | 56 tablet (PSt) £12.92 DT price = £12.92

  - Brands may include Dicloflex Retard; Dicloflex SR; Econac SR; Econac XL; Enstarel XL; Fenactol Retard; Fenactol SR; Flamraser SR; Volsaid Retard

  **Gastro-resistant tablet**

  CAUTIONARY AND ADVISORY LABELS 5, 25

  Diclofenac sodium 25 mg Diclofenac sodium 25mg gastro-resistant tablets | 28 tablet (PSt) £1.78 DT price = £1.93 | 84 tablet (PSt) £2.93

  Diclofenac sodium 50 mg Diclofenac sodium 50mg gastro-resistant tablets | 28 tablet (PSt) £1.52 DT price = £1.63 | 84 tablet (PSt) £2.99 | 100 tablet (PSt) £3.15

  Diclofenac sodium 75 mg Voltarol 25mg gastro-resistant tablets | 84 tablet (PSt) £2.94

  - Brands may include Dicloflex; Fenactol

  **Modified-release capsule**

  CAUTIONARY AND ADVISORY LABELS 21, 25

  Diclofenac sodium 75 mg Diclofenac sodium 75mg modified-release capsules | 56 capsule (PSt) £3.69 DT price = £3.69

  Diclofenac sodium 100 mg Diclofenac sodium 100mg modified-release capsules | 28 capsule (PSt) no price available DT price = £6.97

  - Brands may include Dicloxam Retard; Dicloxam SR; Motifene; Rhumalgan XL

  **Solution for injection**

  EXCIPENTS: May contain Benzyl alcohol, propylene glycol

  Diclofenac sodium 37.5 mg per 1 ml Diclofenac sodium 37.5mg/ml solution for injection vials | 10 vial (PSt) £0.58 DT price = £0.58

  Diclofenac sodium 25 mg per 1 ml Voltarol 75mg/ml solution for injection ampoules | 10 ampoule (PSt) £0.26 DT price = £0.26

  **Suppository**

  Diclofenac sodium 100 mg Diclofenac sodium 100 suppositories | 10 suppository (PSt) £7.75 DT price = £3.03

  Diclofenac sodium 12.5 mg Voltarol 12.5mg suppositories | 10 suppository (PSt) £0.58 DT price = £0.58

  Diclofenac sodium 25 mg Voltarol 25mg suppositories | 10 suppository (PSt) £1.03 DT price = £1.03

  Diclofenac sodium 50 mg Voltarol 50mg suppositories | 10 suppository (PSt) £1.70 DT price = £1.70

  Diclofenac sodium 100 mg Voltarol 100mg suppositories | 10 suppository (PSt) £3.03 DT price = £3.03

  - Brands may include Econac Gel

  EXCIPENTS: May contain benzyl alcohol, fragrances, propylene glycol

  VOLTAROL 1.16% EMULGEL (Novartis Consumer Health UK Ltd) Diclofenac diethylammonium 11.6 mg per 1 gram | 100 gram (PSt) - NHS indicative price = £5.63 DT price = £5.63

  VOLTAROL 12 HOUR EMULGEL P 3.2% GEL (Novartis Consumer Health UK Ltd) Diclofenac diethylammonium 23.2 mg per 1 gram | 30 gram (PSt) - NHS indicative price = £4.19 | 50 gram (PSt) - NHS indicative price = £5.99 | 100 gram (PSt) - NHS indicative price = £10.79

  SOLARAZE 3%GEL (Almirall Ltd) Diclofenac sodium 30 mg per 1 gram | 50 gram (PSt) - NHS indicative price = £38.30 DT price = £38.30 | 100 gram (PSt) - NHS indicative price = £76.60

**Diclofenac sodium and indomethacin**

For the properties of the component please consider, diclofenac sodium p. 921, indomethacin p. 709.
924 Pain and inflammation in musculoskeletal disorders

Musculoskeletal system

**ARHTROTEC® 75/200**
Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis

**CAUTIONS**
- Adult: 1 tablet twice daily, take with food

- **UNLICENSED USE** The BNF recommends a higher starting dose of misoprostol for prophylaxis against NSAID-induced gastroduodenal ulceration than that provided by the combination preparations of diclofenac and misoprostol.

- **MEDICINAL FORMS**
  There can be variation in the licensing of different medicines containing the same drug.

**Gastro-resistant tablet**

**DICLOFENAC SODIUM WITH MISOPROSTOL (Non-proprietary)**
- Diclofenac sodium 50 mg, Misoprostol 200 microgram
  - Diclofenac sodium 50mg gastro-resistant / Misoprostol 200microgram tablets | 60 tablet (PTD) £11.14 DT price = £11.98
  - Diclofenac sodium 75 mg, Misoprostol 200 microgram
    - Diclofenac sodium 75mg gastro-resistant / Misoprostol 200microgram tablets | 60 tablet (PTD) £15.83 DT price = £15.83
  - Arthrotec (Pfizer Ltd)
  - Diclofenac sodium 50 mg, Misoprostol 200 microgram
    - Arthrotec 50 gastro-resistant tablets | 60 tablet (PTD) £11.98 DT price = £11.98
  - Diclofenac sodium 75 mg, Misoprostol 200 microgram
    - Arthrotec 75 gastro-resistant tablets | 60 tablet (PTD) £15.83 DT price = £15.83
  - Misofen (Morningside Healthcare Ltd)
  - Diclofenac sodium 50 mg, Misoprostol 200 microgram
    - Misofen 50mg/200microgram gastro-resistant tablets | 60 tablet (PTD) £11.98 DT price = £11.98
  - Diclofenac sodium 75 mg, Misoprostol 200 microgram
    - Misofen 75mg/200microgram gastro-resistant tablets | 60 tablet (PTD) £15.83 DT price = £15.83
  - Brands may include Masidemen

**Etodolac**

**INDICATIONS AND DOSE**

Pain and inflammation in rheumatoid arthritis and osteoarthritis

**BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**
- Adult: 300–600 mg daily in 1–2 divided doses

**BY MOUTH USING MODIFIED-RELEASE MEDICINES**
- Adult: 600 mg daily

- **CONTRA-INDICATIONS**
  - Active gastro-intestinal bleeding - active gastro-intestinal ulceration - history of gastro-intestinal bleeding related to previous NSAID therapy - history of gastro-intestinal perforation related to previous NSAID therapy - history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) - history of recurrent gastro-intestinal ulceration (two or more distinct episodes) - severe heart failure

- **CAUTIONS**
  - Allergic disorders - cardiac impairment (NSAIDs may impair renal function) - cerebrovascular disease - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - elderly (risk of serious side-effects and fatalities) - heart failure - ischaemic heart disease - peripheral arterial disease - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated) - uncontrolled hypertension

- **INTERACTIONS**
  - Appendix 1 (NSAIDs).

- **SIDE-EFFECTS**
  - Rare Alveolitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - toxic epidermal necrolysis - visual disturbances

  - **Frequency not known**

---

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects**

For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- **ALLERGY AND CROSS-SENSITIVITY**
  - Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION**
  - Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY**
  - Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING**
  - Use with caution during breast-feeding. Manufacturer advises avoid.

- **HEPATIC IMPAIRMENT**
  - Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT**
  - The lowest effective dose should be used for the shortest possible duration. Avoid if possible or use with caution. Avoid in severe impairment. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

    - Eccoxolac 300mg capsules | 60 capsule (PTD) £8.14 DT price = £8.14
Etoricoxib

**INDICATIONS AND DOSE**

**Pain and inflammation in osteoarthritis**

*BY MOUTH*
- **Child 16–17 years**: 30 mg once daily, then increased if necessary to 60 mg once daily
- **Adult**: 30 mg once daily, then increased if necessary to 60 mg once daily

**Pain and inflammation in rheumatoid arthritis | Ankylosing spondylitis**

*BY MOUTH*
- **Child 16–17 years**: 90 mg once daily
- **Adult**: 90 mg once daily

**Acute gout**

*BY MOUTH*
- **Child 16–17 years**: 120 mg once daily for maximum 8 days
- **Adult**: 120 mg once daily for maximum 8 days

**SIDE-EFFECTS**

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding - active gastro-intestinal ulceration - cerebrovascular disease - inflammatory bowel disease - ischaemic heart disease - mild to severe heart failure - peripheral arterial disease - uncontrolled hypertension (persistently above 140/90 mmHg)

**CAUTIONS**

**GENERAL CAUTIONS** Allergic disorders - cardiac impairment (NSAIDs may impair renal function) - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - dehydration - history of cardiac failure - hypertension - left ventricular dysfunction - oedema - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated)

**SPECIFIC CAUTIONS** Elderly (risk of serious side-effects and fatalities)

**INTERACTIONS** → Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

- **Common or very common** Ecchymosis - fatigue - influenza-like symptoms - palpitation
- **Uncommon** Anxiety - appetite change - arthralgia - atrial fibrillation - chest pain - cough - dry mouth - dyspnoea - electrolyte disturbance - epistaxis - flushing - mental acuity impaired - mouth ulcer - myalgia - paraesthesia - taste disturbance - transient ischaemic attack - weight change
- **Rare** Alveolitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - toxic epidermal necrolysis - visual disturbances
- **Very rare** Confusion - hallucinations
- **Frequency not known** Angioedema - blood disorders - bronchospasm - colitis (induction of or exacerbation of) - depression - diarrhoea - dizziness - drowsiness - fluid retention (rarely precipitating congestive heart failure) - gastro-intestinal bleeding - gastro-intestinal discomfort - gastro-intestinal disturbances - gastro-intestinal ulceration - haematuria - headache - hearing disturbances - hypersensitivity reactions - insomnia - nausea - nervousness - photosensitivity - raised blood pressure - rash - renal failure (especially in patients with pre-existing renal impairment) - tinnitus - vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY** Manufacturer advises avoid (teratogenic in animal studies). Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid—present in milk in animal studies.

**HEPATIC IMPAIRMENT** Max. 60 mg daily in mild impairment. Max. 60 mg on alternate days or 30 mg once daily in moderate impairment. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT** Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- With systemic use in adults Avoid if eGFR less than 30 mL/minute/1.73 m².
- With systemic use in children Avoid if estimated glomerular filtration rate less than 30 mL/minute/1.73 m².

**MONITORING REQUIREMENTS** Monitor blood pressure before treatment, 2 weeks after initiation and periodically during treatment.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

- **Arcoxia** (Grunenthal Ltd)
  - Etoricoxib 30 mg Arcoxia 30mg tablets | 28 tablet DT price = £13.99 DT price = £13.99
  - Etoricoxib 60 mg Arcoxia 60mg tablets | 28 tablet DT price = £20.11 DT price = £20.11
  - Etoricoxib 90 mg Arcoxia 90mg tablets | 5 tablet | £4.10 | 28 tablet DT price = £22.96 DT price = £22.96
  - Etoricoxib 120 mg Arcoxia 120mg tablets | 7 tablet | £6.03 | 28 tablet DT price = £24.11 DT price = £24.11

Felbinac

**DRUG ACTION** Felbinac is an active metabolite of the NSAID fenbufen.

**INDICATIONS AND DOSE**

**Relief of pain in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

**TO THE SKIN**

- **Adult**: Apply 2–4 times a day, therapy should be reviewed after 14 days; maximum 25 g per day

**CAUTIONS** Avoid contact with eyes - avoid contact with inflamed or broken skin - avoid contact with mucous membranes - not for use with occlusive dressings - topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)
Men in white coats, 10 o'clock. Share the latest evidence, discuss the most pressing issues. Engage with experts from the field in an interactive and dynamic environment. Join us at our upcoming conference on the state of the art in pain management.

**Pain and inflammation in musculoskeletal disorders**

---

**INTERACTIONS** → Appendix 1 (NSAIDs). Interactions do not generally apply to topical NSAIDs.

**SIDE-EFFECTS** Rash (discontinue use if develops)

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects.** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**PREGNANCY** Patient packs for topical preparations carry a warning to avoid during pregnancy.

**BREAST FEEDING** Patient packs for topical preparations carry a warning to avoid during breast-feeding.

**RENAI IMPAIRMENT** Deterioration in renal function has also been reported after topical use.

**DIRECTIONS FOR ADMINISTRATION** For topical preparations, apply with gentle massage only.

**PRESCRIBING AND DISPENSING INFORMATION** Caution—topical preparations not generally suitable for children.

**PATIENT AND CARER ADVICE** For topical preparations patients and carers should be advised to wash hands immediately after use. Photosensitivity Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Foam**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

**Fenoprofen**

- Traxam (AMCo) Felbinac 31.7 mg per 1 gram Traxam 3.17% foam | 100 gram £8.41 DT price = £8.41

**Gel**

- Traxam (AMCo) Felbinac 30 mg per 1 gram Traxam 3% gel | 100 gram £8.03 DT price = £8.03

**Fenoprofen**

**INDICATIONS AND DOSE**

- Pain and inflammation in rheumatic disease and other musculoskeletal disease | Mild to moderate pain
- BY MOUTH
  - Adult: 300–600 mg 3–4 times a day; maximum 3 g per day

**CONTRA-INDICATIONS**

Active gastro-intestinal bleeding • active gastro-intestinal ulceration • history of gastro-intestinal bleeding related to previous NSAID therapy • history of gastro-intestinal perforation related to previous NSAID therapy • history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) • history of recurrent gastro-intestinal ulceration (two or more distinct episodes) • severe heart failure

**CAUTIONS**

Allergic disorders • cardiac impairment (NSAIDs may impair renal function) • cerebrovascular disease • coagulation defects • connective-tissue disorders • Crohn’s disease (may be exacerbated) • elderly (risk of serious side-effects and fatalities) • heart failure • ischaemic heart disease • peripheral arterial disease • risk factors for cardiovascular events • ulcerative colitis (may be exacerbated) • uncontrolled hypertension

**INTERACTIONS** → Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

- Rare Alveolitis • aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) • hepatic damage • interstitial fibrosis associated with NSAIDs can lead to renal failure • pancreatitis • papillary necrosis associated with NSAIDs can lead to renal failure • pulmonary eosinophilia • Stevens-Johnson syndrome • toxic epidermal necrolysis • visual disturbances

- Frequency not known Angioedema • blood disorders • bronchoospasm • colitis (induction of or exacerbation of) • Crohn’s disease (induction of or exacerbation of) • cystitis • depression • diarrhoea • dizziness • drowsiness • fluid retention (rarely precipitating congestive heart failure) • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal disturbances • gastro-intestinal ulceration • haematuria • headache • hearing disturbances • hypersensitivity reactions • insomnia • nasopharyngitis • nausea • nervousness • photosensitivity • raised blood pressure • rashes • renal failure (especially in patients with pre-existing renal impairment) • tinnitus • upper respiratory-tract infection • vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONTRACEPTION**

Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY**

Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING**

Use with caution during breast-feeding. Amount too small to be harmful.

**HEPATIC IMPAIRMENT**

Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAI IMPAIRMENT**

Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21

Fenoprofen (Tyrpharm Ltd)

Fenoprofen (as Fenoprofen calcium) 300 mg Fenoprofen 300 tablets | 100 tablet £3.45
Flurbiprofen

**INDICATIONS AND DOSE**

Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Migraine | Postoperative analgesia | Mild to moderate pain

**BY MOUTH**
- Child 12-17 years: 150–200 mg daily in 2–4 divided doses, then increased to 300 mg daily, dose to be increased only in acute conditions
- Adult: 150–200 mg daily in 2–4 divided doses, then increased to 300 mg daily, dose to be increased only in acute conditions

**SIDE-EFFECTS**

- **Dysmenorrhoea**
  - **BY MOUTH**
    - Child 12-17 years: Initially 100 mg, then 50–100 mg every 4–6 hours; maximum 300 mg per day
    - Adult: Initially 100 mg, then 50–100 mg every 4–6 hours; maximum 300 mg per day

**CONTRA-INDICATIONS**

Active gastro-intestinal bleeding | active gastro-intestinal ulceration | history of gastro-intestinal bleeding related to previous NSAID therapy | history of gastro-intestinal perforation related to previous NSAID therapy | history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) | history of recurrent gastro-intestinal ulceration (two or more distinct episodes) | severe heart failure

**CAUTIONS**

Allergic disorders | cardiac impairment (NSAIDs may impair renal function) | cerebrovascular disease | coagulation defects | connective-tissue disorders | Crohn’s disease (may be exacerbated) | elderly (risk of serious side-effects and fatalities) (in adults) | heart failure | ischaemic heart disease | peripheral arterial disease | risk factors for cardiovascular events | ulcerative colitis (may be exacerbated) | uncontrolled hypertension

**INTERACTIONS**

→ Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

- **Common or very common**
  - Stomatitis
- **Uncommon**
  - Confusion | fatigue | hallucinations | paraesthesia
- **Rare**
  - Alveolitis | aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) | hepatic damage | interstitial fibrosis associated with NSAIDs can lead to renal failure | pancreatitis | papillary necrosis associated with NSAIDs can lead to renal failure | pulmonary eosinophilia | Stevens-Johnson syndrome | toxic epidermal necrolysis | visual disturbances
- **Frequency not known**
  - Angioedema | blood disorders | bronchospasm | colitis (induction of or exacerbation of) | Crohn’s disease (induction of or exacerbation of) | depression | diarrhoea | dizziness | drowsiness | fluid retention (rarely precipitating congestive heart failure) | gastro-intestinal bleeding | gastro-intestinal discomfort | gastro-intestinal disturbances | haematuria | headache | hearing disturbances | hypersensitivity reactions | insomnia | nausea | nervousness | photosensitivity | raised blood pressure | rashes | renal failure (especially in patients with pre-existing renal impairment) | tinnitus | vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects**

For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY**

Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

---

Ibuprofen

**INDICATIONS AND DOSE**

Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Mild to moderate pain

**BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**
- Child 10: 3 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day
- Child 12: 5 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 40 mg/kg per day
- Child 15: 10 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 80 mg/kg per day
- Child 17: 15 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 120 mg/kg per day

**BY MOUTH USING MODIFIED-RELEASE MEDICINES**
- Child 7–9: 10 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day
- Child 10: 15 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 40 mg/kg per day
- Child 12: 20 mg times a day; maximum daily dose to be given in 3–4 divided doses; maximum 50 mg/kg per day

---

**CONCEPTION AND CONTRACEPTION**

Caution—Long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY**

Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING**

Use with caution during breast-feeding. Small amount present in milk—manufacturer advises avoid.

**HEPATIC IMPAIRMENT**

Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT**

Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. Avoid in severe impairment. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**IBUGE® FORTE**

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

TO THE SKIN

- Adult: Apply up to 3 times a day

**FENBIO® FORTE**

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

TO THE SKIN

- Adult: Apply up to 4 times a day, therapy should be reviewed after 14 days

**UNLICENSED USE** Not licensed for use in children under 3 months or body weight under 5 kg. Maximum dose for systemic juvenile idiopathic arthritis is unlicensed.

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding - active gastro-intestinal ulceration - history of gastro-intestinal bleeding related to previous NSAID therapy - history of gastro-intestinal perforation related to previous NSAID therapy - history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) - history of recurrent gastro-intestinal ulceration (two or more distinct episodes) - severe heart failure

**CAUTIONS**

- With oral use Allergic disorders - cardiac impairment (NSAIDs may impair renal function) - cerebrovascular disease - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - heart failure - ischaemic heart disease - peripheral arterial disease - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated) - uncontrolled hypertension

- With topical use Avoid contact with eyes - avoid contact with inflamed or broken skin - avoid contact with mucous membranes - not for use with occlusive dressings - topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

**INTERACTIONS** Appendix 1 (NSAIDs). Interactions do not generally apply to topical NSAIDs.

**SIDE-EFFECTS**

- Rare

- **With oral use** Alveolitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - toxic epidermal necrolysis - visual disturbances

- **Frequency not known**

- **With oral use** Angioedema - blood disorders - bronchospasm - colitis (induction of or exacerbation of) - Crohn’s disease (induction of or exacerbation of) - depression - diarrhoea - dizziness - drowsiness - fluid retention (rarely precipitating congestive heart failure) - gastro-intestinal bleeding - gastro-intestinal discomfort - gastro-intestinal disturbances - gastro-intestinal ulceration - haematuria - headache - hearing disturbances - hypersensitivity reactions - insomnia - nausea - nervousness - photosensitivity - raised blood pressure - rashes - renal failure (especially in patients with pre-existing renal impairment) - tinnitus - vertigo

- **With topical use** Photosensitivity - rash (discontinue use if develops)

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- With topical use in adults Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

- **Overdose** Overdosage with ibuprofen may cause nausea, vomiting, epigastric pain, and tinnitus, but more serious toxicity is very uncommon. Charcoal, activated p. 1130 followed by symptomatic measures are indicated if more than 100 mg/kg has been ingested within the preceding hour. For details on the management of poisoning, see Emergency treatment of poisoning p. 1123.

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY**

- With oral use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

**BREAST FEEDING**

- With oral use Use with caution during breast-feeding. Amount too small to be harmful but some manufacturers advise avoid.

- With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

**HEPATIC IMPAIRMENT**

- With oral use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT**

- With oral use Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for
the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- With topical use Deterioration in renal function has also been reported after topical use.

DIRECTIONS FOR ADMINISTRATION For topical preparations, apply with gentle massage only.

PRESCRIBING AND DISPENSING INFORMATION Flavours of syrup may include orange. Caution—topical preparations not generally suitable for children.

PATIENT AND CARER ADVICE Medicines for Children leaflet: Ibuprofen for pain and inflammation www.medicinesforchildren.org.uk/ibuprofen-for-pain-and-inflammation

For topical preparations, patients and their carers should be advised to wash hands immediately after use. Photosensitivity For topical preparations, patients or their carers should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

PROFESSION SPECIFIC INFORMATION Dental practitioners’ formulary Ibuprofen Oral Suspension Sugar-free may be prescribed. Ibuprofen Tablets may be prescribed.

EXCEPTIONS TO LEGAL CATEGORY Smaller pack sizes of gel preparations may be available on sale to the public. Oral preparations can be sold to the public in certain circumstances.

MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

(Indomethacin)

INDICATIONS AND DOSE

Pain and moderate to severe inflammation in rheumatic disease and other musculoskeletal disorders

BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

- Adult: 50–200 mg daily in divided doses

BY RECTUM

- Adult: 100 mg twice daily if required, dose to be administered at night and in the morning, combined oral and rectal treatment, maximum total daily dose 150–200 mg

BY MOUTH USING MODIFIED-RELEASE MEDICINES

- Adult: 75 mg 1–2 times a day

Acute gout

BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

- Adult: 150–200 mg daily in divided doses continued
930 Pain and inflammation in musculoskeletal disorders

**BY MOUTH USING MODIFIED-RELEASE MEDICINES**
- **Adult:** 75 mg 1–2 times a day

*Indometacin*

**CONTRA-INDICATIONS**
- Activity of gastrointestinal bleeding, active gastrointestinal ulceration, history of gastrointestinal ulceration related to previous NSAID therapy, history of recurrent gastrointestinal haemorrhage (two or more distinct episodes), history of recurrent gastrointestinal ulceration (two or more distinct episodes), severe heart failure

**SIDE-EFFECTS**
- **RARE**
  - Headache
  - Dizziness
  - Nausea
  - Vomiting
  - Diarrhoea
  - Rash
  - Fever
  - Urticaria
  - Anaphylaxis
  - Photosensitivity
  - Raised blood pressure
  - Fluid retention
  - Hyperkalaemia
  - Hypersensitivity reactions
  - Insomnia
  - Nervousness
  - Photosensitivity
  - Raised blood pressure
  - Rashes
  - Renal failure
  - Especially in patients with pre-existing renal impairment
  - Tinnitus
  - Vertigo

**SPECIFIC SIDE-EFFECTS**
- **Pre-existing conditions**
  - Active gastro-intestinal ulceration, history of previous gastro-intestinal ulceration related to previous NSAID therapy. In such cases, the use of indometacin is contraindicated.
  - A history of any other NSAID is associated with reduced female fertility. This effect is reversible on stopping treatment.

**MONITORING REQUIREMENTS**
- During prolonged therapy ophthalmic and blood examinations particularly advisable.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include:
  - Oral suspension, oral solution
  - Capsule
    - Indometacin 25 mg
    - Indometacin 50 mg

      - Ketoprofen 100 mg
    - Suppository
      - Ketoprofen 25 mg
      - Ketoprofen 50 mg
      - Ketoprofen 100 mg

**INDICATIONS AND DOSE**
- **Pain and mild inflammation in rheumatic disease**
  - **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**
    - **Adult:** 100–200 mg daily in 2–4 divided doses
  - **BY MOUTH USING MODIFIED-RELEASE MEDICINES**
    - **Adult:** 100–200 mg once daily, to be taken with food
  - **BY RECTUM**
    - **Adult:** 100 mg once daily, to be administered at bedtime, combined oral and rectal treatment, maximum total daily dose 200 mg
  - **Pain in musculoskeletal disorders**
    - **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**
      - **Adult:** 50 mg up to 3 times a day
    - **BY MOUTH USING MODIFIED-RELEASE MEDICINES**
      - **Adult:** 100–200 mg once daily, to be taken with food
Pain and inflammation in musculoskeletal disorders 931

Relief of pain in musculoskeletal disorders | Treatment in knee or hand osteoarthritis (adjunct)

**TO THE SKIN**
- Adult: Apply 2–4 times a day for up to 7 days, ketoprofen 2.5% gel to be administered; maximum 15 g per day

**POWERGEL**
Relief of pain in musculoskeletal conditions | Adjunctive treatment in knee or hand osteoarthritis

**TO THE SKIN**
- Adult: Apply 2–3 times a day for up to max. 10 days

- **CONTRA-INDICATIONS**
  - With systemic use Active gastro-intestinal bleeding - active gastro-intestinal ulceration - history of gastro-intestinal bleeding - history of gastro-intestinal perforation - history of gastro-intestinal ulceration - severe heart failure
  - With topical use Avoid contact with mucous membranes - not for use with occlusive dressings - topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

- **INTERACTIONS**
  - ▶ Appendix 1 (NSAIDs). Interactions do not generally apply to topical NSAIDs.

- **SIDE-EFFECTS**
  - General side-effects Photosensitivity
  - Specific side-effects
    - Rare
      - With systemic use Alveolitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - toxic epidermal necrolysis - visual disturbances
  - Frequency not known
  - With rectal use Suppositories may cause rectal irritation
  - With systemic use Angioedema - blood disorders - bronchospasm - colitis (induction of or exacerbation of) - Crohn’s disease (induction of or exacerbation of) - depression - diarrhoea - dizziness - drowsiness - fluid retention (rarely precipitating congestive heart failure) - gastro-intestinal bleeding - gastro-intestinal discomfort - gastro-intestinal disturbances - gastro-intestinal ulceration - haematuria - headache - hearing disturbances - hypersensitivity reactions - insomnia - nausea - nervousness - raised blood pressure - rashes - renal failure (especially in patients with pre-existing renal impairment) - tinnitus - vertigo
  - With topical use Rash (discontinue use if develops)

**SIDE-EFFECTS, FURTHER INFORMATION**

- Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915. Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

- **ALLERGY AND CROSS-SENSITIVITY**
  - Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION**
  - ▶ With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY**
  - ▶ With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
  - ▶ With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

- **BREAST FEEDING**
  - ▶ With systemic use Use with caution during breast-feeding. Amount probably too small to be harmful but manufacturers advise avoid.
  - ▶ With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

- **HEPATIC IMPAIRMENT**
  - ▶ With systemic use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Should be avoided in severe liver disease.

- **RENAL IMPAIRMENT**
  - ▶ With systemic use Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
  - ▶ With topical use Deterioration in renal function has also been reported after topical use.

- **DIRECTIONS FOR ADMINISTRATION**
  - For topical preparations apply with gentle massage only.

- **PRESCRIBING AND DISPENSING INFORMATION**
  - Caution—topical preparations not generally suitable for children. Flavours of oral liquid formulations may include strawberry.

- **PATIENT AND CARER ADVICE**
  - For topical preparations, patients and their carers should be advised to wash hands immediately after use.
  - ▶ With topical use Photosensitivity Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity. Patients should be advised not to expose area treated to sunbeds or sunlight (even on a bright but cloudy day) during, and for two weeks after stopping treatment; treated areas should be protected with clothing.

- **EXCEPTIONS TO LEGAL CATEGORY**
  - Smaller pack sizes of gel preparations may be available on sale to the public.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.

**Capsule**
- **CAUTIONARY AND ADVISORY LABELS 21**
  - ▶ Tiloket (Tillomed Laboratories Ltd)
    - Ketoprofen 50 mg | Tiloket 50mg capsules | 28 capsule £3.99 | 112 capsule £17.20 DT price = £15.14

**Modified-release capsule**
- **CAUTIONARY AND ADVISORY LABELS 21, 25**
  - ▶ KETOPROFEN (Non-proprietary)
    - Ketoprofen 200 mg | Tiloket CR 200mg capsules | 28 capsule £10.70 DT price = £23.85
    - Ketoprofen 200mg modified-release capsules | 28 capsule £23.85
Mefenamic acid

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding - active gastro-intestinal ulceration - history of gastro-intestinal bleeding related to previous NSAID therapy - history of gastro-intestinal perforation related to previous NSAID therapy - history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) - history of recurrent gastro-intestinal ulceration (two or more distinct episodes) - inflammatory bowel disease - severe heart failure

**CAUTIONS** Acute porphyrias p. 864 - allergic disorders - cardiac impairment (NSAIDs may impair renal function) - cerebrovascular disease - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - elderly (risk of serious side-effects and fatalities) - epilepsy - heart failure - ischaemic heart disease - peripheral arterial disease - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated) - uncontrolled hypertension

**INTERACTIONS** → Appendix 1 (NSAIDs).

**SIDE-EFFECTS**
- **Common or very common** Diarrhoea (withdraw treatment) - rashes (withdraw treatment) - stomatitis
- **Uncommon** Fatigue - paraesthesia
- **Rare** Alveolitis - aplastic anaemia - aspetic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - glucose intolerance - haemolytic anaemia (positive Coombs’ test) - hepatic damage - hypotension - interstitial fibrosis associated with NSAIDs can lead to renal failure - malabsorption - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - thrombocytopenia - toxic epidermal necrolysis - visual disturbances
- **Frequency not known** Angioedema - blood disorders - bronchospasm - colitis (induction of or exacerbation of) - Crohn’s disease (induction of or exacerbation of) - depression - dizziness - drowsiness - fluid retention (rarely precipitating congestive heart failure) - gastro-intestinal bleeding - gastro-intestinal discomfort - gastro-intestinal disturbances - gastro-intestinal ulceration - haematuria - headache - hearing disturbances - hypersensitivity reactions - insomnia - nausea - nervousness - photosensitivity - raised blood pressure - renal failure (especially in patients with pre-existing renal impairment) - tinnitus - vertigo

**SIDE-EFFECTS, FURTHER INFORMATION** Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

Overdose Mefenamic acid has important consequences in overdosage because it can cause convulsions, which if prolonged or recurrent, require treatment. For details on the management of poisoning, see Emergency treatment of poisoning p. 1122, in particular, Convulsions.

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING** Use with caution during breast-feeding. Amount too small to be harmful but manufacturer advises avoid.

**HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT** The lowest effective dose should be used for the shortest possible duration. Avoid if possible or use with caution. Avoid in severe impairment. In renal impairment monitor renal function; sodium and water

---

**Ketoprofen with omeprazole**

The properties listed below are those particular to the combination only. For the properties of the components please consider, ketoprofen p. 930, omeprazole p. 69.

**INDICATIONS AND DOSE**

Patients requiring ketoprofen for osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis, who are at risk of NSAID associated duodenal or gastric ulcer or gastroduodenal erosions.

**BY MOUTH**
- **Adult:** Initially 100/20 mg daily, increased if necessary to 200/20 mg daily, depending on severity of symptoms, dose expressed as x/y mg ketoprofen/omeprazole

**PRESCRIBING AND DISPENSING INFORMATION** Capsules enclose microgranules containing modified-release ketoprofen and gastro-resistant omeprazole.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Modified-release capsule**

**CAUTIONARY AND ADVISORY LABELS** 21, 25

**EXCIPIENTS:** May contain Propylene glycol

**Axorid** (Meda Pharmaceuticals Ltd)

Ketoprofen 100 mg, Omeprazole 20 mg
Ketoprofen 150 mg, Omeprazole 20 mg
Ketoprofen 200 mg, Omeprazole 20 mg

**Brand** may include Larafen Cr; Tilotok Cr; Valket Retard Gel

**Excipients:** May contain Fragrances

**KETOPROFEN (Non-proprietary)**

**Ketoprofen 25 mg per 1 gram** Ketoprofen 2.5% gel
Ketoprofen 50 mg/gram
Ketoprofen 100 mg/gram
Ketoprofen 150 mg/gram
Ketoprofen 200 mg/gram

**Price = £**

**DT price = £**

---

**Mefenamic acid**

**INDICATIONS AND DOSE**

Pain and inflammation in rheumatoid arthritis and osteoarthritis | Postoperative pain | Mild to moderate pain.

**BY MOUTH**
- Adult: 500 mg 3 times a day
- Acute pain including dysmenorrhoea | Menorrhagia
- Child 12-17 years: 500 mg 3 times a day
- Adult: 500 mg 3 times a day

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding - active gastro-intestinal ulceration - history of gastro-intestinal bleeding related to previous NSAID therapy - history of gastro-intestinal perforation related to previous NSAID therapy - history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) - history of recurrent gastro-intestinal ulceration (two or more distinct episodes) - inflammatory bowel disease - severe heart failure

---

**932 Pain and inflammation in musculoskeletal disorders**
Meloxicam

**INDICATIONS AND DOSE**

**Exacerbation of osteoarthritis (short-term)**

**BY MOUTH**

- Child 16-17 years: 7.5 mg once daily, then increased if necessary up to 15 mg once daily
- Adult: 7.5 mg once daily, then increased if necessary up to 15 mg once daily

**Pain and inflammation in rheumatic disease / Ankylosing spondylitis**

**BY MOUTH**

- Child 16-17 years: 15 mg once daily, then reduced to 7.5 mg once daily if required
- Adult: 15 mg once daily, then reduced to 7.5 mg once daily if required
- Elderly: 7.5 mg once daily

**Relief of pain and inflammation in juvenile idiopathic arthritis and other musculoskeletal disorders in children intolerant to other NSAIDs**

**BY MOUTH**

- Child 16-17 years (body-weight up to 50 kg): 7.5 mg once daily
- Child 16-17 years (body-weight 50 kg and above): 15 mg once daily

**CONTRA-INDICATIONS**

- Active gastro-intestinal bleeding
- Active gastro-intestinal ulceration
- History of gastro-intestinal bleeding related to previous NSAID therapy
- History of gastro-intestinal perforation related to previous NSAID therapy
- History of recurrent gastro-intestinal haemorrhage (two or more distinct episodes)
- History of recurrent gastro-intestinal ulceration (two or more distinct episodes)
- Severe heart failure

**CAUTIONS**

- Allergic disorders
- Cardiac impairment (NSAIDs may impair renal function)
- Cerebrovascular disease
- Coagulation defects
- Connective-tissue disorders
- Crohn’s disease (may be exacerbated)
- Elderly (risk of serious side-effects and fatalities)
- Heart failure
- Ischaemic heart disease
- Peripheral arterial disease
- Risk factors for cardiovascular events
- Ulcerative colitis (may be exacerbated)
- Uncontrolled hypertension (in adults)

**INTERACTIONS**

- Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

- Rare
  - Alveolitis
  - Aseptic meningitis
  - Cardiac impairment (NSAIDs may impair renal function)
  - Connective-tissue disorders
  - Hepatic damage
  - Interstitial fibrosis
  - NSAIDs can lead to renal failure
  - Pancreatitis
  - Papillary necrosis
  - Toxic epidermal necrolysis
  - Visual disturbances

- Frequency not known
  - Angioedema
  - Blood disorders
  - Bronchospasm
  - Colitis (induction of or exacerbation of)
  - Crohn’s disease (induction of or exacerbation of)
  - Depression
  - Diarrhoea
  - Dizziness
  - Drowsiness
  - Fluid retention
  - Gastro-intestinal bleeding
  - Gastro-intestinal discomfort
  - Gastro-intestinal disturbances
  - Gastro-intestinal ulceration
  - Haematuria
  - Headache
  - Renal retention
  - Nervousness
  - Photosensitivity
  - Raised blood pressure
  - Rashes
  - Renal failure

**SIDE-EFFECTS, FURTHER INFORMATION**

**Serious side-effects**

For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY**

Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONCEPTION**

Caution—Long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY**

Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING**

Use with caution during breast-feeding. Present in milk in animal studies—manufacturer advises avoid.

**HEPATIC IMPAIRMENT**

Use with caution; there is an associated risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT**

Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

- In adults: Avoid if eGFR less than 25 mL/minute/1.73 m².
- In children: Avoid if estimated glomerular filtration rate less than 25 mL/minute/1.73 m².

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

**Tablet**

**CAUTIONARY AND ADVISORY LABELS**

    - Naproxen 500 mg Naprosyn EC 500mg tablets | 56 tablet [POT] £8.56 DT price = £0.18
  - Brands may include Feminax Ultra

**Naproxen with esomeprazole**

The properties listed below are those particular to the combination only. For the properties of the components please consider, esomeprazole p. 67, naproxen p. 934.

**INDICATIONS AND DOSE**

Patients requiring naproxen for osteoarthritis, rheumatoid arthritis, or ankylosing spondylitis, who are at risk of NSAID-associated duodenal or gastric ulcer and when treatment with lower doses of naproxen or other NSAIDs ineffective

**BY MOUTH**

- Adult: 1 tablet twice daily

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Modified-release tablet**

**CAUTIONARY AND ADVISORY LABELS 22, 25**

- **esomeprazole with naproxen (Non-proprietary)**
  - Esomeprazole (as Esomeprazole magnesium trihydrate) 20 mg, Naproxen 500 mg Naproxen 500mg / Esomeprazole 20mg modified-release tablets | 60 tablet [POT] no price available
  - Vimovo (AstraZeneca UK Ltd)
  - Esomeprazole (as Esomeprazole magnesium trihydrate) 20 mg, Naproxen 500 mg Vimovo 500mg/20mg modified-release tablets | 60 tablet [POT] £14.95

**Naproxen with misoprostol**

The properties listed below are those particular to the combination only. For the properties of the components please consider, misoprostol p. 709, naproxen p. 934.

**INDICATIONS AND DOSE**

Patients requiring naproxen for rheumatoid arthritis, osteoarthritis, or ankylosing spondylitis, with prophylaxis against NSAID-induced gastroduodenal ulceration

**BY MOUTH**

- Adult: 500 mg twice daily, naproxen and 200 micrograms twice daily, misoprostol, taken together with food

**PRESCRIBING AND DISPENSING INFORMATION** The BNF recommends a higher starting dose of misoprostol for prophylaxis against NSAID-induced gastroduodenal ulceration than that provided by the misoprostol with naproxen combination pack.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.
Musculoskeletal system
With systemic use
▶ Rare
SIDE-EFFECTS
INTERACTIONS
With topical use
CAUTIONS
INDICATIONS AND DOSE
Rheumatoid arthritis (initiated by a specialist) | Osteoarthritis (initiated by a specialist) | Ankylosing spondylitis (initiated by a specialist)
BY MOUTH
Adult: Up to 20 mg once daily
Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)
TO THE SKIN
Adult: Apply 3–4 times a day, 0.5% gel to be applied; review treatment after 4 weeks

Important safety information
CHMP ADVICE—PIROXICAM (JUNE 2007)
The CHMP has recommended restrictions on the use of piroxicam because of the increased risk of gastro-intestinal side effects and serious skin reactions. The CHMP has advised that:
- piroxicam should be initiated only by physicians experienced in treating inflammatory or degenerative rheumatic diseases
- piroxicam should not be used as first-line treatment
- in adults, use of piroxicam should be limited to the symptomatic relief of osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis
- piroxicam dose should not exceed 20 mg daily
- piroxicam should no longer be used for the treatment of acute painful and inflammatory conditions
- treatment should be reviewed 2 weeks after initiating piroxicam, and periodically thereafter
- concomitant administration of a gastro-protective agent should be considered.
Topical preparations containing piroxicam are not affected by these restrictions.

CONTRA-INDICATIONS
- With systemic use Active gastro-intestinal bleeding, active gastro-intestinal ulceration, history of gastro-intestinal bleeding, history of gastro-intestinal perforation, history of gastro-intestinal ulceration, inflammatory bowel disease, severe heart failure

CAUTIONS
- With systemic use Allergic disorders, cardiac impairment (NSAIDs may impair renal function), cerebrovascular disease, coagulation defects, connective-tissue disorders, Crohn’s disease (may be exacerbated), elderly (risk of serious side-effects and fatalities), heart failure, ischaemic heart disease, peripheral arterial disease, risk factors for cardiovascular events, ulcerative colitis (may be exacerbated), uncontrolled hypertension
- With topical use Avoid contact with eyes; avoid contact with inflamed or broken skin; avoid contact with mucous membranes; not for use with occlusive dressings; topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

INTERACTIONS → Appendix 1 (NSAIDs). Interactions do not generally apply to topical NSAIDs.

SIDE-EFFECTS
- Rare
- With systemic use Alveolitis, aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible), hepatic damage, interstitial fibrosis associated with NSAIDs can lead to renal failure, pancreatitis, papillary necrosis associated with NSAIDs can lead to renal failure, pulmonary eosinophilia, Stevens-Johnson syndrome, toxic epidermal necrolysis, visual disturbances
- Frequency not known
- With systemic use Angioedema, blood disorders, bronchospasm, colitis (induction of or exacerbation of), Crohn’s disease (induction of or exacerbation of), depression, diarrhoea, dizziness, drowsiness, fluid retention (rarely precipitating congestive heart failure), gastro-intestinal bleeding, gastro-intestinal discomfort, gastro-intestinal disturbances, gastro-intestinal ulceration, haematuria, headache, hearing disturbances, hypersensitivity reactions, insomnia, nausea, nervousness, photosensitivity, raised blood pressure, rashes, renal failure (especially in patients with pre-existing renal impairment), tinnitus, vertigo
- With topical use Photosensitivity; rash (discontinue use if develops)

SIDE-EFFECTS, FURTHER INFORMATION
Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915. Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).
- ALLERGY AND CROSS-SENSITIVITY Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- CONCEPTION AND CONTRACEPTION
- With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- PREGNANCY
- With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.
- BREAST FEEDING
- With systemic use Use with caution during breast-feeding. Amount too small to be harmful.
- With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.
- HEPATIC IMPAIRMENT
- With systemic use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention.
- With topical use Deterioration in renal function has also been reported after topical use.
- DIRECTIONS FOR ADMINISTRATION For topical preparations apply with gentle massage only. Piroxicam orodispersible tablets can be taken by placing on the tongue and allowing to dissolve or by swallowing.
- PRESCRIBING AND DISPENSING INFORMATION Caution—topical preparations not generally suitable for children.
PATIENT AND CARER ADVICE  For topical preparations, patients and their carers should be advised to wash hands immediately after use. Photosensitivity Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

LESS SUITABLE FOR PRESCRIBING  With oral use Piroxicam is less suitable for prescribing.

MEDICINAL FORMS  There can be variation in the licensing of different medicines containing the same drug.

Orodispersible tablet

Sulindac

INDICATIONS AND DOSE
Pain and inflammation in rheumatic disease and other musculoskeletal disorders  Acute gout

BY MOUTH

Adult: 200 mg twice daily for 7–10 days in peri-articular disorders; acute gout should respond within 7 days, dose may be reduced according to response; maximum 400 mg per day

CONTRA-INDICATIONS  Active gastro-intestinal bleeding - active gastro-intestinal ulceration - history of gastro-intestinal bleeding related to previous NSAID therapy - history of gastro-intestinal perforation related to previous NSAID therapy - history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) - history of recurrent gastro-intestinal ulceration (two or more distinct episodes) - severe heart failure

CAUTIONS  Allergic disorders - cardiac impairment (NSAIDs may impair renal function) - cerebrovascular disease - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - elderly (risk of serious side-effects and fatalities) - ensure adequate hydration - heart failure - history of renal stones - ischaemic heart disease - peripheral arterial disease - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated) - uncontrolled hypertension

INTERACTIONS  → Appendix 1 (NSAIDs).

SIDE-EFFECTS

Rare  Alveolitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis

associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - toxic epidermal necrolysis - visual disturbances

SIDE-EFFECTS, FURTHER INFORMATION
Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

ALLERGY AND CROSS-SENSITIVITY  Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

CONCEPTION AND CONTRACEPTION  Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

PREGNANCY  Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

BREAST FEEDING  Use with caution during breast-feeding.

HEPATIC IMPAIRMENT  Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

RENAL IMPAIRMENT  Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

MEDICINAL FORMS  There can be variation in the licensing of different medicines containing the same drug.

Tiaprofenic acid

INDICATIONS AND DOSE

Pain and inflammation in rheumatic disease and other musculoskeletal disorders

BY MOUTH
- Adult: 300 mg twice daily

Important safety information

CSM ADVICE

Following reports of severe cystitis the CSM has recommended that tiaprofenic acid should not be given to patients with urinary-tract disorders and should be stopped if urinary symptoms develop. Patients should be advised to stop taking tiaprofenic acid and to report to their doctor promptly if they develop urinary-tract symptoms (such as increased frequency, nocturia, urgency, pain on urinating, or blood in urine).

- CONTRA-INDICATIONS
  - Active bladder disease (or symptoms)
  - Active gastro-intestinal bleeding
  - Active gastro-intestinal ulceration
  - Active prostate disease (or symptoms)
  - History of gastro-intestinal bleeding related to previous NSAID therapy
  - History of gastro-intestinal perforation related to previous NSAID therapy
  - History of recurrent gastro-intestinal haemorrhage (two or more distinct episodes)
  - History of recurrent gastro-intestinal ulceration (two or more distinct episodes)
  - History of recurrent urinary-tract disorders (if urinary symptoms develop do not discontinue immediately and perform urine tests and culture)
  - Severe heart failure

- CAUTIONS
  - Allergic disorders
  - Cardiac impairment (NSAIDs may impair renal function)
  - Cerebrovascular disease
  - Coagulation defects
  - Connective-tissue disorders
  - Crohn’s disease (may be exacerbated)
  - Elderly (risk of serious side-effects and fatalities)
  - Heart failure
  - Ischaemic heart disease
  - Peripheral arterial disease
  - Risk factors for cardiovascular events
  - Ulcerative colitis (may be exacerbated)
  - Uncontrolled hypertension

INTERACTIONS

- Appendix 1 (NSAIDs).

SIDE-EFFECTS

- Rare: Alveolitis, aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible); hepatic damage; interstitial fibrosis associated with NSAIDs can lead to renal failure; papillary necrosis associated with NSAIDs can lead to renal failure; pulmonary eosinophilia; Stevens-Johnson syndrome; toxic epidermal necrolysis; visual disturbances

- Frequency not known: Angioedema; blood disorders; bronchospasm; colitis (induction of or exacerbation of); Crohn’s disease (induction of or exacerbation of); depression; diarrhoea; dizziness; drowsiness; fluid retention (rarely precipitating congestive heart failure); gastro-intestinal bleeding; gastro-intestinal discomfort; gastro-intestinal disturbances; gastro-intestinal ulceration; haematuria; headache; hearing disturbances; hypersensitivity reactions; insomnia; nausea; nervousness; photosensitivity; raised blood pressure; rashes; renal failure (especially in patients with pre-existing renal impairment); tinnitus; vertigo

SIDE-EFFECTS, FURTHER INFORMATION

Serious side-effects: For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

- ALLERGY AND CROSS-SENSITIVITY
  - Contraindicated in patients with a history of hypersensitivity to aspirin or other NSAIDs—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or other NSAIDs.

- CONCEPTION AND CONTRACEPTION
  - Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- PREGNANCY
  - Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- BREAST FEEDING
  - Use with caution during breast-feeding. Present in milk in animal studies.

- HEPATIC IMPAIRMENT
  - Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
5 Soft tissue and joint disorders

5.1 Local inflammation of joints and soft tissue

Corticosteroids, inflammatory disorders

Systemic corticosteroids

Short-term treatment with corticosteroids can help to rapidly improve symptoms of rheumatoid arthritis. Long-term treatment in rheumatoid arthritis should be considered only after evaluating the risks and all other treatment options have been considered. Corticosteroids can induce osteoporosis, and prophylaxis should be considered on long-term treatment.

In severe, possibly life-threatening, situations a high initial dose of corticosteroid is given to induce remission and the dose is then reduced gradually and discontinued altogether. Relapse may occur as the dose of corticosteroid is reduced, particularly if the reduction is too rapid. The tendency is therefore to increase the maintenance dose and consequently the patient becomes dependent on corticosteroids. For this reason pulse doses of corticosteroids (e.g. methylprednisolone p. 584 up to 1 g intravenously on 3 consecutive days) are used to suppress highly active inflammatory disease while longer-term treatment with a disease-modifying drug is commenced.

Prednisolone p. 585 may reduce the rate of joint destruction in moderate to severe rheumatoid arthritis of less than 2 years’ duration. The reduction in joint destruction must be distinguished from mere symptomatic improvement (which lasts only 6 to 12 months at this dose) and care should be taken to avoid increasing the dose above 7.5 mg daily. Evidence supports maintenance of this anti-erosive dose for 2–4 years only after which treatment should be tapered off to reduce long-term adverse effects. A modified-release preparation of prednisone p. 586 is also available for the treatment of moderate to severe rheumatoid arthritis.

Polymyalgia rheumatica and giant cell (temporal) arteritis

are always treated with corticosteroids. Relapse is common if therapy is stopped prematurely. Many patients require treatment for at least 2 years and in some patients it may be necessary to continue long-term low-dose corticosteroid treatment.

Polyarteritis nodosa and polymyositis

are usually treated with corticosteroids.

Systemic lupus erythematosus

is treated with corticosteroids when necessary using a similar dosage regimen to that for polyarteritis nodosa and polymyositis. Patients with pleurisy, pericarditis, or other systemic manifestations will respond to corticosteroids. It may then be possible to reduce the dosage; alternate-day treatment is sometimes adequate, and the drug may be gradually withdrawn. In some mild cases corticosteroid treatment may be stopped after a few months. Many mild cases of systemic lupus erythematosus do not require corticosteroid treatment. Alternative treatment with anti-inflammatory analgesics, and possibly chloroquine p. 536 or hydroxychloroquine sulfate p. 894, should be considered.

Ankylosing spondylitis

should not be treated with long-term corticosteroids; rarely, pulse doses may be needed and may be useful in extremely active disease that does not respond to conventional treatment.
Local corticosteroid injections
Corticosteroids are injected locally for an anti-inflammatory effect. In inflammatory conditions of the joints, particularly in rheumatoid arthritis, they are given by intra-articular injection to relieve pain, increase mobility, and reduce deformity in one or a few joints; they can also provide symptomatic relief while waiting for DMARDs to take effect. Full aseptic precautions are essential; infected areas should be avoided. Occasionally an acute inflammatory reaction develops after an intra-articular or soft-tissue injection of a corticosteroid. This may be a reaction to the microcrystalline suspension of the corticosteroid used, but must be distinguished from sepsis introduced into the injection site.
Smaller amounts of corticosteroids may also be injected directly into soft tissues for the relief of inflammation in conditions such as tennis or golfer’s elbow or compression neurapathies. In tendinitis, injections should be made into the tendon sheath and not directly into the tendon (due to the absence of a true tendon sheath and a high risk of rupture, the Achilles tendon should not be injected).
Hydrocortisone p. 583 acetate or one of the synthetic analogues is generally used for local injection. Intra-articular corticosteroid injections can cause flushing and may affect the hyaline cartilage. Each joint should not usually be treated more than 4 times in one year.
Corticosteroid injections are also injected into soft tissues for the treatment of skin lesions.

CORTICOSTEROIDS

Methylprednisolone with lidocaine
The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1116, methylprednisolone p. 584.

INDICATIONS AND DOSE
Local inflammation of joints
BY INTRA-ARTICULAR INJECTION
- Adult: 4–80 mg, dose adjusted according to size; where appropriate may be repeated at intervals of 7–35 days, for details consult product literature

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.
Suspension for injection
EXCipients: May contain benzyl alcohol
- TRIAMCINOLONE HEXACETONIDE (Non-proprietary)
Triamcinolone hexacetonide 20 mg per 1 ml Triamcinolone hexacetonide 20mg/1ml suspension for injection ampoules | 10 ampoule | £10.00

5.2 Soft tissue disorders

Soft-tissue disorders

Extravasation
Local guidelines for the management of extravasation should be followed where they exist or specialist advice sought.
Extravasation injury follows leakage of drugs or intravenous fluids from the veins or inadvertently administration into the subcutaneous or subdermal tissue. It must be dealt with promptly to prevent tissue necrosis. Acidic or alkaline preparations and those with an osmolarity greater than that of plasma can cause extravasation injury; excipients including alcohol and polyethylene glycol have also been implicated. Cytotoxic drugs commonly cause extravasation injury. In addition, certain patients such as the very young and the elderly are at increased risk. Those receiving anticoagulants are more likely to lose blood into surrounding tissues if extravasation occurs, while those receiving sedatives or analgesics may not notice the early signs or symptoms of extravasation.

Prevention of extravasation
Precautions should be taken to avoid extravasation; ideally, drugs likely to cause extravasation injury should be given through a central line and patients receiving repeated doses of hazardous drugs peripherally should have the cannula resited at regular intervals. Attention should be paid to the manufacturers’ recommendations for administration. Placing a glyceryl trinitrate p. 190 patch distal to the cannula may improve the patency of the vessel in patients with small veins or in those whose veins are prone to collapse.

Patients should be asked to report any pain or burning at the site of injection immediately.

Management of extravasation
If extravasation is suspected the infusion should be stopped immediately but the cannula should not be removed until after an attempt has been made to aspirate the area (through the cannula) in order to remove as much of the drug as possible. Aspiration is sometimes possible if the extravasation presents with a raised bleb or blister at the injection site and is surrounded by hardened tissue, but it is often unsuccessful if the tissue is soft or soggy.

Corticosteroids are usually given to treat inflammation, although there is little evidence to support their use in extravasation. Hydrocortisone p. 583 or dexamethasone p. 581 can be given either locally by subcutaneous injection or intravenously at a site distant from the injury. Antihistamines and analgesics may be required for symptom relief.
The management of extravasation beyond these measures is not well standardised and calls for specialist advice. Treatment depends on the nature of the offending substance; one approach is to localise and neutralise the substance whereas another is to spread and dilute it.

The first method may be appropriate following extravasation of vesicant drugs and involves administration of an antidote (if available) and the application of cold compresses 3–4 times a day (consult specialist literature for details of specific antidotes). Spreading and diluting the offending substance involves infiltrating the area with physiological saline, applying warm compresses, elevating the affected limb, and administering hyaluronidase below. A saline flush-out technique (involving flushing the subcutaneous tissue with physiological saline) may be effective but requires specialist advice. Hyaluronidase should not be administered following extravasation of vesicant drugs (unless it is either specifically indicated or used in the saline flush-out technique). Dexrazoxane p. 782 is licensed for the treatment of anthracycline-induced extravasation.

**Enzymes**

**Collagenase**

Collagenase below are proteolytic enzymes that are derived from the fermentation of *Clostridium histolyticum* and have the ability to break down collagen. A preparation containing a mixture of two collagenases is licensed for the treatment of Dupuytren’s contracture; the preparation should be injected into a palpable cord with a contracture of a metacarpophalangeal joint or proximal interphalangeal joint.

**Hyaluronidase**

Hyaluronidase is used to render the tissues more readily permeable to injected fluids, e.g. for introduction of fluids by subcutaneous infusion (termed hypodermoclysis).

**Rubefacients, topical NSAIDs, capsaicin, and poultices**

Rubefacients act by counter-irritation. Pain, whether superficial or deep-seated, is relieved by any method that itself produces irritation of the skin. Topical rubefacient preparations may contain nicotinate and salicylate compounds, essential oils, capsaicum, and camphor. The evidence available does not support the use of topical rubefacients in acute or chronic musculoskeletal pain.

**Topical NSAIDs**

The use of a NSAID by mouth is effective for relieving musculoskeletal pain. **Topical NSAIDs** (e.g. felbinac p. 925, ibuprofen p. 927, ketoprofen p. 930, and piroxicam p. 936 may provide some relief of pain in musculoskeletal conditions; they can be considered as an adjunctive treatment in knee or hand osteoarthritis.

**Capsaicin**

A preparation containing capsaicin p. 383 0.025% can be considered as an adjunct in hand or knee osteoarthritis. It may need to be used for 1–2 weeks before pain is relieved.

A capsaicin 0.075% cream is licensed for the symptomatic relief of postherpetic neuralgia after lesions have healed, and for the relief of painful diabetic neuropathy. A self-adhesive patch containing capsaicin 8% is licensed for the treatment of peripheral neuropathic pain in non-diabetic patients.

**Collagenase**

**INDICATIONS AND DOSE**

Dupuytren’s contracture in patients with a palpable cord

**BY INTRALESIONAL INJECTION**

- Adult: 580 micrograms, then 580 micrograms every 4 weeks if required, inject into palpable cord, maximum 3 injections per cord, maximum 8 injections in total and only one cord may be treated at a time

**CONTRA-INDICATIONS** Avoid injecting into other structures containing collagen (e.g. tendons, nerves, and blood vessels)—risk of tendon rupture or ligament damage

**CAUTIONS** Coagulation disorders · use of anticoagulants

**SIDE-EFFECTS**

- Common or very common Arthralgia · burning sensation · ecchymosis · hyperhidrosis · hypoesthesia · injection site reactions · joint swelling · lymphadenopathy · myalgia · paraesthesia

- Uncommon Complex regional pain syndrome · crepitus · ligament injury · monoplegia · muscle spasm · muscle weakness · tendon rupture · tremor · wound dehiscence

**PREGNANCY** Manufacturer advises avoid.

**BREAST FEEDING** Systemic absorption by mother negligible.

**DIRECTIONS FOR ADMINISTRATION** Reconstitution and injected volumes vary with site of injection—consult product literature.

**ENZYMES**

**Hyaluronidase**

**INDICATIONS AND DOSE**

Enhance permeation of subcutaneous or intramuscular injections

**BY SUBCUTANEOUS INJECTION OR BY INTRAMUSCULAR INJECTION**

- Adult: 1500 units, to be dissolved directly into the solution to be injected (ensure compatibility)

Enhance permeation of local anaesthetics TO THE SKIN

- Adult: 1500 units, to be mixed with the local anaesthetic solution continued →
Hypodermoclysis
BY SUBCUTANEOUS INJECTION
- Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride injection, administered before start of 500–1000 mL infusion fluid

Extravasation
BY LOCAL INFILTRATION
- Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride and infiltrated into affected area as soon as possible after extravasation

Haematoma
BY LOCAL INFILTRATION
- Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride and infiltrated into affected area

Enhance permeation of ophthalmic local anaesthetic
TO THE EYE
- Adult: 15 units/mL, to be mixed with the local anaesthetic solution

- UNLICENSED USE Licensed for use in children, but age range not specified by the manufacturer.
- CONTRA-INDICATIONS Avoid sites where infection is present • avoid sites where malignancy is present • do not apply direct to cornea • not for anaesthesia in unexplained premature labour • not for intravenous administration • not to be used to enhance the absorption and dispersion of dopamine and/or alpha-adrenoceptor agonists • not to be used to reduce swelling of bites • not to be used to reduce swelling of stings
- CAUTIONS Elderly (control speed and total volume and avoid overhydration especially in renal impairment) • infants (control speed and total volume and avoid overhydration especially in renal impairment)
- SIDE-EFFECTS
- Common or very common Oedema
- Rare Bleeding • bruising • infection • local irritation
- Frequency not known Anaphylaxis • severe allergy

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for injection
- HYALURONIDASE (Non-proprietary)
  Hyaluronidase 1500 unit Hyaluronidase 1,500 unit powder for solution for injection ampoules | 10 ampoule P+V £104.24

Eye

Administration of drugs to the eye

Drugs are most commonly administered to the eye by topical application as eye drops or eye ointments. When a higher drug concentration is required within the eye, a local injection may be necessary.

Eye-drop dispenser devices are available to aid the instillation of eye drops from plastic bottles and some are prescribable on the NHS. Product-specific devices may be supplied by manufacturers—consult individual manufacturers for information. They are particularly useful for the elderly, visually impaired, arthritic, or otherwise physically limited patients.

Eye drops and eye ointments

Eye drops are generally instilled into the pocket formed by gently pulling down the lower eyelid and keeping the eye closed for as long as possible after application; one drop is all that is needed. Instillation of more than one drop should be discouraged because it may increase systemic side-effects. A small amount of eye ointment is applied similarly; the ointment melts rapidly and blinking helps to spread it.

When two different eye-drop preparations are used at the same time of day, dilution and overflow may occur when one immediately follows the other. The patient should therefore leave an interval of at least 5 minutes between the two; the interval should be extended when eye drops with a prolonged contact time, such as gels and suspensions, are used. Eye ointment should be applied after drops.

Systemic effects may arise from absorption of drugs into the general circulation from conjunctival vessels or from the nasal mucosa after the excess preparation has drained down through the tear ducts. The extent of systemic absorption following ocular administration is highly variable; nasal drainage of drugs is associated with eye drops much more often than with eye ointments. Pressure on the lacrimal punctum for at least a minute after applying eye drops reduces nasolacrimal drainage and therefore decreases systemic absorption from the nasal mucosa.

After using eye drops or eye ointments, patients should be warned not to drive or perform other skilled tasks until vision is clear.

Also see warnings relating to eye drops and contact lenses.

Eye lotions

These are solutions for the irrigation of the conjunctival sac. They act mechanically to flush out irritants or foreign bodies as a first-aid treatment. Sterile sodium chloride 0.9% solution is usually used. Clean water will suffice in an emergency.

Other preparations administered to the eye

Subconjunctival injection may be used to administer anti-infective drugs, mydriatics, or corticosteroids for conditions not responding to topical therapy; intracameral and intravitreal routes can also be used to administer certain drugs, for example antibiotics. These injections should only be used under specialist supervision.

Drugs such as antimicrobials and corticosteroids may be administered systemically to treat susceptible eye conditions.

Ophthalmic Specials

Certain eye drops, e.g. amphotericin, cefazidime, cefuroxime, colistimethate sodium, desferrioxamine mesilate, dexamethasone, gentamicin, and vancomycin can be prepared aseptically from material supplied for injection.

The Royal College of Ophthalmologists and the UK Ophthalmic Pharmacy Group have produced the Ophthalmic Specials Guidance to help prescribers and pharmacists manage and restrict the use of unlicensed eye preparations. ‘Specials’ should only be prescribed in situations where a licensed product is not suitable for a patient’s needs. The Ophthalmic Specials Guidance can be accessed on the Royal College of Ophthalmologists website (www.rcophth.ac.uk). The guidance will be reviewed every six months to ensure the most accurate and up-to-date information is available.

Preservatives and sensitisers

Information on preservatives and substances identified as skin sensitisers is provided under Excipients statements in preparation entries. Very rarely, cases of corneal calcification have been reported with the use of phosphate-containing eye drops in patients with significantly damaged corneas—consult product literature for further information.

Control of microbial contamination

Preparations for the eye should be sterile when issued. Care should be taken to avoid contamination of the contents during use.

Eye drops in multiple-application containers for domiciliary use should not be used for more than 4 weeks after first opening (unless otherwise stated by the manufacturer).

Multiple application eye drops for use in hospital wards are normally discarded 1 week after first opening—local...
practice may vary. Individual containers should be provided for each patient. A separate container should be supplied for each eye only if there are special concerns about contamination. Containers used before an eye operation should be discarded at the time of the operation and fresh containers supplied postoperatively. A fresh supply should also be provided upon discharge from hospital; in specialist ophthalmology units, it may be acceptable to issue containers that have been dispensed to the patient on the day of discharge.

In out-patient departments single-application containers should be used; if multiple-application containers are used, they should be discarded after single patient use within one clinical session.

In eye surgery single-application containers should be used if possible; if a multiple-application container is used, it should be discarded after single use. Preparations used during intra-ocular procedures and others that may penetrate into the anterior chamber must be isotonic and without preservatives and buffered if necessary to a neutral pH. Specially formulated fluids should be used for intra-ocular surgery; intravenous infusion preparations are not usually suitable for this purpose (Hartmann’s solution may be used in some ocular surgery). For all surgical procedures, a previously unopened container is used for each patient.

**Contact lenses**

For cosmetic reasons many people prefer to wear contact lenses rather than spectacles; contact lenses are also sometimes required for medical indications. Visual defects are corrected by either rigid (‘hard’ or gas permeable) lenses or soft (hydrogel or silicone hydrogel—in adults only) lenses; soft lenses are the most popular type, because they are initially the most comfortable, but they may not give the best vision. Lenses should usually be worn for a specified number of hours each day and removed for sleeping. The risk of infectious and non-infectious keratitis is increased by extended continuous contact lens wear, which is not recommended, except when medically indicated.

Contact lenses require meticulous care. Poor compliance with directions for use, and with daily cleaning and disinfection, can result in complications including ulcerative keratitis or conjunctivitis. One-day disposable lenses, which are worn only once and therefore require no disinfection or cleaning, are becoming increasingly popular.

*Acanthamoeba keratitis*, a painful and sight-threatening condition, is associated with ineffective lens cleaning and disinfection, the use of contaminated lens cases, or tap water coming into contact with the lenses. The condition is especially associated with the use of soft lenses (including frequently replaced lenses) and should be treated by specialists.

**Contact lenses and drug treatment**

Special care is required in prescribing eye preparations for contact lens users. Some drugs and preservatives in eye preparations can accumulate in hydrogel lenses and may induce toxic and adverse reactions. Therefore, unless medically indicated, the lenses should be removed before instillation of the eye preparation and not worn during the period of treatment. Alternatively, unpreserved drops can be used. Eye drops may, however, be instilled while patients are wearing rigid corneal contact lenses. Ointment preparations should never be used in conjunction with contact lenses; oily eye drops should also be avoided.

Many drugs given systemically can also have adverse effects on contact lens wear. These include oral contraceptives (particularly those with a higher oestrogen content), drugs which reduce blink rate (e.g. anxiolytics, hypnotics, antihistamines, and muscle relaxants), drugs which reduce lacrimation (e.g. antihistamines, antimuscarinics, phenothiazines and related drugs, some beta-blockers, diuretics, and tricyclic antidepressants), and drugs which increase lacrimation (including ephedrine hydrochloride and hydralazine hydrochloride). Other drugs that may affect contact lens wear are isotretinoin (can cause conjunctival inflammation), aspirin (salicylic acid appears in tears and can be absorbed by contact lenses—leading to irritation), and rifampicin and sulfasalazine (can discolor lenses).

## 1 Allergic and inflammatory eye conditions

### Eye, allergy and inflammation

**Corticosteroids**

Corticosteroids administered locally to the eye or given by mouth are effective for treating anterior segment inflammation, including that which results from surgery. *Topical corticosteroids* are applied frequently for the first 24–48 hours; once inflammation is controlled, the frequency of application is reduced. They should normally only be used under expert supervision; three main dangers are associated with their use:

- a ‘red eye’, when the diagnosis is unconfirmed, may be due to herpes simplex virus, and a corticosteroid may aggravate the condition, leading to corneal ulceration, with possible damage to vision and even loss of the eye.
- Bacterial, fungal, and amoebic infections pose a similar hazard;
- ‘steroid glaucoma’ can follow the use of corticosteroid eye preparations in susceptible individuals;
- a ‘steroid cataract’ can follow prolonged use.

Combination products containing a corticosteroid with an anti-infective drug are sometimes used after ocular surgery to reduce inflammation and prevent infection; use of combination products is otherwise rarely justified.

*Systemic corticosteroids* may be useful for ocular conditions. The risk of producing a ‘steroid cataract’ increases with the dose and duration of corticosteroid use.

**Intravitreal corticosteroids**

An intravitreal implant containing dexamethasone p. 947 *(Ozurdex®)* is licensed for the treatment of adults with macular oedema following either branch retinal vein occlusion or central retinal vein occlusion; it is also licensed for the treatment of adult patients with inflammation of the posterior segment of the eye presenting as non-infectious uveitis.

An intravitreal implant containing fluocinolone acetonide p. 974 *(Iluvien®)* is licensed for the treatment of visual impairment associated with chronic diabetic macular oedema which is insufficiently responsive to available therapies. It should be administered by specialists experienced in the use of intravitreal injections.

**Other anti-inflammatory preparations**

Other preparations used for the topical treatment of inflammation and allergic conjunctivitis include antihistamines, lodoxamide p. 946, and sodium cromoglicate p. 946.

Eye drops containing antihistamines, such as *antazoline* (with xylometazoline hydrochloride p. 983 as *Otrivine- Antistin®*), azelastine hydrochloride p. 945, epinastine hydrochloride p. 945, ketotifen p. 945, and olopatadine p. 946, can be used for allergic conjunctivitis.

Sodium cromoglicate p. 946 (sodium cromoglycate) and nedocromil sodium p. 946 eye drops can be useful for vernal
Allergic conjunctivitis

1.1 Allergic conjunctivitis

ANTIHISTAMINES

Antazoline with xylometazoline

INDICATIONS AND DOSE

Allergic conjunctivitis

TO THE EYE

- Child 12-17 years: Apply 2–3 times a day for maximum 7 days
- Adult: Apply 2–3 times a day for maximum 7 days

SIDE-EFFECTS

- Common or very common: Transient stinging
- Frequency not known: Blurred vision, eye irritation, mydriasis

SIDE-EFFECTS, FURTHER INFORMATION

Absorption of antazoline and xylometazoline may result in the possibility of interaction with other drugs.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

Otrivine Antistin (Spectrum Thea Pharmaceuticals Ltd)

Antazoline sulfate 5 mg per 1 ml, Xylometazoline hydrochloride 500 microgram per 1 ml

10 ml £2.35 DT price = £2.35

Epinastine hydrochloride

INDICATIONS AND DOSE

Seasonal allergic conjunctivitis

TO THE EYE

- Child 3-17 years: Apply twice daily
- Adult: Apply twice daily

SIDE-EFFECTS

- Common or very common: Burning
- Uncommon: Conjunctival hyperaemia, dry eye, eye pain, eye pruritus, headache, increased lacrimation, nasal irritation, rhinitis, taste disturbance, visual disturbance

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

Otrivine Antistin (Spectrum Thea Pharmaceuticals Ltd)

Emadine (as Emadine difumarate) 500 microgram per 1 ml

5 ml £7.31 DT price = £7.31

Ketotifen

INDICATIONS AND DOSE

Seasonal allergic conjunctivitis

TO THE EYE

- Child 3-17 years: Apply twice daily
- Adult: Apply twice daily

INTERACTIONS

- Appendix 1 (antihistamines). Sedative antihistamine interactions apply to a lesser extent to the non-sedating antihistamines. Interactions do not generally apply to antihistamines used for topical action.
### Nedocromil sodium

**INDICATIONS AND DOSE**

**Seasonal and perennial conjunctivitis**

TO THE EYE

- Child 6–17 years: Apply twice daily, increased if necessary to 4 times a day for maximum 12 weeks treatment for seasonal allergic conjunctivitis
- Adult: Apply twice daily, increased if necessary to 4 times a day for maximum 12 weeks treatment for seasonal allergic conjunctivitis

**Seasonal keratoconjunctivitis**

TO THE EYE

- Child 6–17 years: Apply 4 times a day
- Adult: Apply 4 times a day

#### SIDE-EFFECTS

Distinctive taste - transient burning - transient stinging

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

- EXCEPTIENS: May contain Benzalkonium chloride
- **Zaditen** (Spectrum Thea Pharmaceuticals Ltd)
  - Ketotifen (as Ketotifen fumarate) 250 microgram per 1 ml
  - Zaditen 250 micrograms/ml eye drops | 5 ml [POT] £7.80 DT price = £7.80

---

### Sodium cromoglicate

(Sodium cromoglicate)

**INDICATIONS AND DOSE**

**Allergic conjunctivitis | Seasonal keratoconjunctivitis**

TO THE EYE

- Child: Apply 4 times a day
- Adult: Apply 4 times a day

#### SIDE-EFFECTS

Transitory burning - transient stinging

#### EXCEPTIONS TO LEGAL CATEGORY

Sodium cromoglicate 2% eye drops can be sold to the public (in max. pack size of 10 ml) for treatment of acute seasonal and perennial allergic conjunctivitis.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Eye drops**

- **SODIUM CROMOGLICATE (Non-proprietary)**
  - Sodium cromoglicate 20 mg per 1 ml Sodium cromoglicate 2% eye drops | 13.5 ml [POT] £6.30 DT price = £1.86
  - Lloyds pharmacy Allergy 2% eye drops | 10 ml [POT] no price available
  - Numark Allergy 2% eye drops | 10 ml [POT] £1.53
- **Catacrom** (Moorfields Pharmaceuticals)
  - Sodium cromoglicate 20 mg per 1 ml Catacrom 2% eye drops | 30 ml unit dose | 30 unit dose [POT] £8.99 DT price = £8.99
- **Cromolux** (Tubilux Pharma Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Cromolux 2% eye drops | 13.5 ml [POT] £3.20 DT price = £1.86
- **Opticrom** (Sanofi)
  - Sodium cromoglicate 20 mg per 1 ml Opticrom Allergy 2% eye drops | 5 ml [POT] £2.74 | 10 ml [POT] £3.35
  - Opticrom Aqueous 2% eye drops | 13.5 ml [POT] £8.03 DT price = £1.86
- **Optrex Allergy** (Reckitt Benckiser Healthcare (UK) Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Optrex Allergy 2% eye drops | 10 ml [POT] £3.38
- **Pollenase (sodium cromoglicate)** (Peach Ethical Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Pollenase Allergy 2% eye drops | 10 ml [POT] £2.08
- **Vividrin** (Bausch & Lomb UK Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Vividrin 2% eye drops | 13.5 ml [POT] £10.95 DT price = £1.86

---

### Lodoxamide

**INDICATIONS AND DOSE**

Allergic conjunctivitis

TO THE EYE

- Child 4–17 years: Apply 4 times a day, improvement of symptoms may sometimes require treatment for up to 4 weeks
- Adult: Apply 4 times a day, improvement of symptoms may sometimes require treatment for up to 4 weeks

#### SIDE-EFFECTS

- Common or very common: Blurred vision - burning - itching - ocular discomfort - stinging - tear production disturbance
- Uncommon: Blepharitis - dizziness - drowsiness - flushing - headache - keratitis - nasal dryness

#### EXCEPTIONS TO LEGAL CATEGORY

Lodoxamide 0.1% eye drops can be sold to the public for treatment of allergic conjunctivitis in adults and children over 4 years.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

- EXCEPTIENS: May contain Benzalkonium chloride, disodium edetate
- **Alomide** (Alcon Laboratories (UK) Ltd)
  - Lodoxamide (as Lodoxamide trometamol) 1 mg per 1 ml Alomide 0.2% eye drops | 10 ml [POT] £5.21 DT price = £5.21
  - Alomide Allergy 0.1% eye drops | 5 ml [POT] £1.12
- **Optrex Allergy** (Reckitt Benckiser Healthcare (UK) Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Optrex Allergy 2% eye drops | 10 ml [POT] £3.38
- **Pollenase (sodium cromoglicate)** (Peach Ethical Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Pollenase Allergy 2% eye drops | 10 ml [POT] £2.08
- **Vividrin** (Bausch & Lomb UK Ltd)
  - Sodium cromoglicate 20 mg per 1 ml Vividrin 2% eye drops | 13.5 ml [POT] £10.95 DT price = £1.86
1.2 Inflammatory eye conditions

CORTICOSTEROIDS

Betamethasone

**INDICATIONS AND DOSE**
Local treatment of inflammation (short term)
TO THE EYE USING EYE DROP
▶ Child: Apply every 1–2 hours until controlled then reduce frequency
▶ Adult: Apply every 1–2 hours until controlled then reduce frequency
TO THE EYE USING EYE OINTMENT
▶ Child: Apply 2–4 times a day, alternatively apply at night when used in combination with eye drops
▶ Adult: Apply 2–4 times a day, alternatively apply at night when used in combination with eye drops

**SIDE-EFFECTS**
Adrenal suppression following prolonged use in neonates - corneal thinning - scleral thinning

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye/nose drops solution**
**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate
▶ Betamethasone sodium phosphate 1 mg per 1 ml
▶ Betnesol (Focus Pharmaceuticals Ltd)
▶ Betnesol-N (Focus Pharmaceuticals Ltd)
▶ Vistamethasone (Martindale Pharmaceuticals Ltd)

**Eye ointment**
▶ Betnesol (Focus Pharmaceuticals Ltd)
▶ Betnesol sodium phosphate 1 mg per 1 gram

**Betamethasone with neomycin**
The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 947.

**INDICATIONS AND DOSE**
Local treatment of eye inflammation and bacterial infection (short-term)
TO THE EYE USING EYE DROP
▶ Adult: Apply up to 6 times a day

**LESS SUITABLE FOR PRESCRIBING**
Betamethasone with neomycin eye-drops are less suitable for prescribing.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye/nose drops solution**
**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate
▶ Betnesol-N (Focus Pharmaceuticals Ltd)
▶ Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 ml
▶ Neomycin sulfate 5 mg per 1 ml
▶ Betnesol-N ear/eye/nose drops | 10 ml

Dexamethasone

**INDICATIONS AND DOSE**
Local treatment of inflammation (short term)
INITIALLY TO THE EYE USING EYE DROP
▶ Child: Apply 4–6 times a day
▶ Adult: Apply every 30–60 minutes until controlled, then (to the eye) reduced to 4–6 times a day

Short term local treatment of inflammation (severe conditions)
TO THE EYE USING EYE DROP
▶ Child: Apply every 30–60 minutes until controlled, reduce frequency when control achieved

Macular oedema following either branch retinal vein occlusion or central retinal vein occlusion (specialist use only)
Visual impairment due to diabetic macular oedema in adults who are pseudophoric, or who are insufficiently responsive to, or unsuitable for non-corticosteroid therapy (specialist use only)
For the treatment of inflammation of the posterior segment of the eye presenting as non-infectious uveitis (specialist use only)
BY INTRAVITREAL INJECTION
▶ Adult: 700 micrograms, to be administered into the affected eye, concurrent administration to both eyes not recommended. For further information on pre-treatment, administration and repeat dosing, consult product literature

**UNLICENSED USE**

**CONTRA-INDICATIONS**
With intravitreal use active ocular herpes simplex - active or suspected ocular infection - active or suspected periocular infection - rupture of the posterior lens capsule in patients with aphakia, iris or transscleral fixated intra-ocular lens or anterior chamber intra-ocular lens - uncontrolled advanced glaucoma

**CAUTIONS**
With intravitreal use history of ocular viral infection (including herpes simplex) - posterior capsule tear or iris defect (risk of implant migration into the anterior chamber which may cause corneal oedema and, in persistent severe cases, the need for corneal transplantation) - retinal vein occlusion with significant retinal ischaemia

**INTERACTIONS**
With intravitreal use Caution with concomitant administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events

**SIDE-EFFECTS**
With intravitreal use Eyelid pruritus - glaucoma - migraine - necrotising retinitis

**FREQUENCY NOT KNOWN**
When used by eye Adrenal suppression following prolonged use in neonates - corneal thinning - scleral thinning

**PREGNANCY**
With intravitreal use Manufacturer advises avoid unless potential benefit outweighs risk—no information available

**BREAST FEEDING**
With intravitreal use Manufacturer advises avoid unless potential benefit outweighs risk—no information available
Dexamethasone with framycetin sulfate and gramicidin

The properties listed below are those particular to the combination only. For the properties of the components please consider dexamethasone p. 947.

Dexamethasone with tobramycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 947, tobramycin p. 957.
Fluorometholone

**INDICATIONS AND DOSE**
Local treatment of inflammation (short term)

**TO THE EYE**
- Child 2–17 years: Apply every 1 hour for 24–48 hours, then reduced to 2–4 times a day
- Adult: Apply every 1 hour for 24–48 hours, then reduced to 2–4 times a day

**SIDE-EFFECTS**
Adrenal suppression following prolonged use in neonates - corneal thinning - scleral thinning

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate, polysorbates
- **FML Liquifilm** (Allergan Ltd)
  - Fluorometholone 1 mg per 1 ml FML Liquifilm 0.1% ophthalmic suspension | 5 ml (Pod) £1.71 DT price = £1.71 | 10 ml (Pod) £2.95 DT price = £2.95
  - Fluridol 10 mg per 1 ml FLUOROMETHOLONE 10 mg per 1 ml 10% eye drops | 5 ml (Pod) £2.00 DT price = £2.00

Prednisolone

**INDICATIONS AND DOSE**
Local treatment of inflammation (short-term)

**TO THE EYE**
- Child: Apply every 1–2 hours until controlled then reduce frequency
- Adult: Apply every 1–2 hours until controlled then reduce frequency

**LESS SUITABLE FOR PRESCRIBING**
Dexamethasone with tobramycin eye drops are less suitable for prescribing.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate, polysorbates
- **Tobradex** (Allergan Ltd)
  - Tobradex 2mg/ml / 1mg/ml eye drops | 5 ml (Pod) £11.78 DT price = £11.78
- **Pred Forte** (Allergan Ltd)
  - Pred Forte 1% eye drops | 5 ml (Pod) £1.82 DT price = £1.82 | 10 ml (Pod) £3.66 DT price = £3.66

**SIDE-EFFECTS**
Adrenal suppression following prolonged use in neonates - corneal thinning - scleral thinning

**UNLICENSED USE**
*Pred Forte*® not licensed for use in children (age range not specified by manufacturer).

**SIDE-EFFECTS**
Adrenal suppression following prolonged use in neonates - corneal thinning - scleral thinning

**PRESCRIBING AND DISPENSING INFORMATION**
Although multi-dose prednisolone eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Ear/eye drops solution**
**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate
- **Predsol** (Focus Pharmaceuticals Ltd)
  - Predsol 0.5% ear/eye drops | 10 ml (Pod) £2.00 DT price = £2.00

**Antimuscarnicins**

**Antimuscarinic (eye)**

**CAUTIONS**
Darkly pigmented iris is more resistant to pupillary dilatation and caution should be exercised to avoid overdosage - mydriasis can precipitate acute angle-closure glaucoma (usually in those aged over 60 years and hypermetropic (long-sighted), who are predisposed to the condition because of a shallow anterior chamber)

**SIDE-EFFECTS**
Conjunctivitis (on prolonged administration) - contact dermatitis - eye oedema (on prolonged administration) - hyperaemia (on prolonged administration) - local irritation (on prolonged administration)
Dry eye conditions

**Atropine sulfate**

**INDICATIONS AND DOSE**

**Cycloplegia**  
TO THE EYE USING EYE DROP  
- Adult: (consult product literature)
- Child 12–17 years: Apply 1 drop 30–60 minutes before examination, using 0.5% eye drops
- Child 3 months–11 years: Apply 1 drop 30–60 minutes before examination, using 1% eye drops

**Uveitis**  
TO THE EYE  
- Child 3 months–11 years: Apply 1 drop 2–4 times a day, using 0.5% eye drops (1% for deeply pigmented eyes)
- Adult: (consult product literature)

**SIDE-EFFECTS, FURTHER INFORMATION**  
Systemic side-effects can occur, particularly in children and the elderly.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye ointment

- **Eye drops**  
  - ATMOPINE SULFATE (Non-proprietary)
  - Atropine sulfate 10 mg per 1 ml
  - Atropine sulfate 10 mg per 1 ml (Intrapharm Laboratories Ltd)

**Cyclopentolate hydrochloride**

**INDICATIONS AND DOSE**

**Cycloplegia**  
TO THE EYE USING EYE DROP  
- Adult: (consult product literature)
- Child 12–17 years: Apply 1 drop 30–60 minutes before examination, using 1% eye drops
- Child 3 months–11 years: Apply 1 drop 30–60 minutes before examination, using 0.5% eye drops

**Uveitis**  
TO THE EYE  
- Child 3 months–11 years: Apply 1 drop 2–4 times a day, using 0.5% eye drops (1% for deeply pigmented eyes)
- Adult: (consult product literature)

**SIDE-EFFECTS, FURTHER INFORMATION**  
Systemic side-effects can occur, particularly in children and the elderly.

**PRESCRIBING AND DISPENSING INFORMATION**  
Although multi-dose cyclopentolate eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Eye drops**  
  - May contain Benzalkonium chloride
  - CYCLOPENTOLATE HYDROCHLORIDE (Non-proprietary)
  - Cyclopentolate hydrochloride 5 mg per 1 ml
  - Cyclopentolate hydrochloride 10 mg per 1 ml
  - Mydrilate (Intrapharm Laboratories Ltd)
  - Cyclopentolate hydrochloride 5 mg per 1 ml Mydrilate 0.5% solution | 5 ml (Pip) £6.73 DT price = £6.73
  - Cyclopentolate hydrochloride 10 mg per 1 ml Mydrilate 1% solution | 5 ml (Pip) £6.73 DT price = £6.73

**Homatropine hydrobromide**

**INDICATIONS AND DOSE**

**Anterior uveitis**  
TO THE EYE  
- Adult: (consult product literature)

**SIDE-EFFECTS, FURTHER INFORMATION**  
Systemic side-effects can occur, particularly in children and the elderly.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**2 Dry eye conditions**

**Dry eye**

**Tear deficiency, ocular lubricants, and astringents**

Chronic soreness of the eyes associated with reduced or abnormal tear secretion (e.g. in Sjögren’s syndrome) often responds to tear replacement therapy or pilocarpine p. 988 given by mouth in adults. The severity of the condition and patient preference will often guide the choice of preparation.

Hyromellose p. 952 is the traditional choice of treatment for tear deficiency. It may need to be instilled frequently (e.g. hourly) for adequate relief. Ocular surface mucin is often abnormal in tear deficiency and the combination of hyromellose p. 952 with a mucolytic such as acetylcysteine below can be helpful.

The ability of carbomers to cling to the eye surface may help reduce frequency of application to 4 times daily.

Polyvinyl alcohol p. 952 increases the persistence of the tear film and is useful when the ocular surface mucin is reduced.

Sodium hyaluronate p. 953 eye drops are also used in the management of tear deficiency.

Sodium chloride p. 953 0.9% drops are sometimes useful in tear deficiency, and can be used as ‘comfort drops’ by contact lens wearers, and to facilitate lens removal. They are also used to irrigate the eye. Special presentations of sodium chloride p. 953 0.9% and other irrigation solutions are used routinely for intra-ocular surgery. Sodium chloride p. 953 5% eye drops are used for the short-term treatment of corneal oedema in adults.

Eye ointments containing a paraffin can be used to lubricate the eye surface, especially in cases of recurrent corneal epithelial erosion. They may cause temporary visual disturbance and are best suited for application before sleep. Ointments should not be used during contact lens wear.

**OCULAR LUBRICANTS**

**Acetylcysteine**

**INDICATIONS AND DOSE**

**Tear deficiency | Impaired or abnormal mucus production**  
TO THE EYE  
- Adult: Apply 3–4 times a day
**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Eye drops**

**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate

- **Ilube** (Moorfields Pharmaceuticals)
  - Acetylcysteine 50 mg per 1 ml | Ilube 5% eye drops | 10 ml [P32]
  - £14.93 DT price = £10.09

---

### Carbomers (Polyacrylic acid)

**INDICATIONS AND DOSE**

Dry eyes including keratoconjunctivitis sicca, unstable tear film

**TO THE EYE**

- **Child:** Apply 3–4 times a day or when required
- **Adult:** Apply 3–4 times a day or when required

**UNLICENSED USE** Some preparations not licensed for use in children.

**PRESCRIBING AND DISPENSING INFORMATION** Synthetic high molecular weight polymers of acrylic acid cross-linked with either allyl ethers of sucrose or allyl ethers of pentaerythritol.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

- **CARBOMERS (Non-proprietary)**
  - **Carbomer 980 2 mg per 1 gram** | EyeGel 0.2% eye gel | 10 gram £2.80 DT price = £2.80
  - **Carbomer 980 0.2% eye drops** | 10 gram [P] £2.80 DT price = £2.80
  - **Artelac Nighttime** (Bausch & Lomb UK Ltd)
    - **Carbomer 980 2 mg per 1 gram** | Artelac Nighttime 0.2% eye gel | 10 gram £2.96 DT price = £2.80
  - **Clinitas Carboram** (Alcon Ltd)
    - **Carbomer 980 2 mg per 1 gram** | Clinitas Carbomer 0.2% eye gel | 10 gram £1.49 DT price = £2.80
  - **GetTears** (Bausch & Lomb UK Ltd)
    - **Carbomer 980 2 mg per 1 gram** | GetTears 0.2% gel | 10 gram [P] £2.80 DT price = £2.80
  - **Lumecare Long Lasting** (Medicon Healthcare Ltd)
    - **Carbomer 980 2 mg per 1 gram** | Lumecare Carbomer 0.2% eye gel | 10 gram £1.51 DT price = £2.80
  - **Viscoatears** (Alcon Laboratories (UK) Ltd)
    - **Carbomer 980 2 mg per 1 gram** | Viscoatears 2mg/g liquid gel | 10 gram [P] £1.59 DT price = £2.80
  - **Viscoatears 2mg/g eye gel 0.6ml unit dose** | 30 unit dose [P] £5.42
  - **Xailin** (Nicox Pharma)
    - **Carbomer 980 2 mg per 1 gram** | Xailin 0.2% eye gel | 10 gram £3.25 DT price = £2.80

**Eye gel**

**EXCIPIENTS:** May contain Benzalkonium chloride, cetrimide, disodium edetate

- **Blephagel** (Spectrum Thea Pharmaceuticals Ltd)
  - **Carbomer 3.5 mg per 1 gram** | Blephagel 0.35% eye gel | 40 gram £6.66
  - **Carbomer 3.6 mg per 1 gram** | Blephagel 0.36% eye gel preservative free | 30 gram £7.53
  - **Liquivisc** (Spectrum Thea Pharmaceuticals Ltd)
    - **Carbomer 974XP 2.5 mg per 1 gram** | Liquivisc 0.25% eye gel | 10 gram [P] £4.50 DT price = £4.50

### Hyroxyethylcellulose

**INDICATIONS AND DOSE**

Tear deficiency

**TO THE EYE**

- **Child:** Apply as required
- **Adult:** Apply as required

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

- **HYDROXYETHYCELLULOSE (Non-proprietary)**
  - **Hydroxyethylcellulose 4.4 mg per 1 ml** | Minims artificial tears 0.44% eye drops 0.5ml unit dose | 20 unit dose [P] £8.97

---

### Hydroxypropyl guar with polyethylene glycol and propylene glycol

**INDICATIONS AND DOSE**

Dry eye conditions
Hypromellose

INDICATIONS AND DOSE

Tear deficiency

TO THE EYE

Child: Apply as required

Adult: Apply as required

PRESCRIBING AND DISPENSING INFORMATION The Royal Pharmaceutical Society has stated that where it is not possible to ascertain the strength of hypromellose prescribed, the prescriber should be contacted to clarify the strength intended. Although multi-dose hypromellose eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

EXCipients: May contain Benzalkonium chloride, disodium edetate

- HYDROMELLOSE (Non-proprietary)
  - Hypromellose 2.5 mg per 1 ml Hypromellose 0.25% eye drops preservative free | 10 ml £14.16
  - Hypromellose 3 mg per 1 ml Hypromellose 0.3% eye drops preservative free | 10 ml £5.75
  - PF Drops Hypromellose 0.3% eye drops preservative free | 10 ml £5.75
  - Hypromellose 0.3% eye drops | 10 ml £3.00 DT price = £1.17
  - Artelac (Bausch & Lomb UK Ltd)
    - Hypromellose 3.2 mg per 1 ml Artelac Single Dose Unit 0.32% eye drops 0.5ml unit dose | 30 unit dose £16.95 | 60 unit dose £32.85
    - Artelac 0.32% eye drops | 10 ml £4.99
  - Hydromooor (Moorfields Pharmaceutical)
    - Hydromoor 0.3% eye drops 0.4ml unit dose preservative free | 30 unit dose £5.75
  - Hypronol (Enogones Healthcare Ltd)
    - Hypromellose 3 mg per 1 ml Hypronol 0.3% eye drops preservative free | 10 ml £5.75
    - Hypronol 0.3% eye drops preservative free | 10 ml £4.14
  - Isopto Alkaline (Alcon Laboratories (UK) Ltd)
    - Hypromellose 10 mg per 1 ml Isopto Alkaline 1% eye drops | 10 ml £0.94 DT price = £0.94
  - Isopto Plain (Alcon Laboratories (UK) Ltd)
    - Hypromellose 5 mg per 1 ml Isopto Plain 0.5% eye drops | 10 ml £0.81 DT price = £0.81
    - Lumecare Tear Drops (Medicom Healthcare Ltd)
      - Hypromellose 3 mg per 1 ml Lumecare Hypromellose 0.3% eye drops | 10 ml £1.17
  - Mandanol (Hydroxypropyl methylcellulose) (M & A Pharmachem Ltd)
    - Hypromellose 3 mg per 1 ml Mandanol eye drops | 10 ml £1.33 DT price = £1.17
    - SoftDrops (Farmiga S.A.)
      - Hypromellose 3 mg per 1 ml SoftDrops 0.3% eye drops | 10 ml £1.67 DT price = £1.17
      - SoftDrops 0.3% eye drops 0.5ml unit dose preservative free | 30 unit dose £5.75
    - Tear-Lac (Scope Ophthalmics Ltd)
      - Hypromellose 3 mg per 1 ml Tear-Lac 0.3% eye drops preservative free | 10 ml £5.75
      - Xaillin Hydrate (Nicox Pharma)
        - Hypromellose 3 mg per 1 ml Xaillin Hydrate 0.3% eye drops preservative free | 10 ml £4.60

Hypromellose with dextran 70

The properties listed below are those particular to the combination only. For the properties of the components please consider, hypromellose above.

Dry eye conditions
TO THE EYE
▶ Child: Apply up to 4 times a day
▶ Adult: Apply up to 4 times a day

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Eye drops
▶ Emustil (Moorfields Pharmaceuticals)
Emustil eye drops 0.3ml unit dose preservative free | 20 unit dose £6.22

PARAFFINS

Liquid paraffin with white soft paraffin and wool alcohols

INDICATIONS AND DOSE
Dry eye conditions
TO THE EYE
▶ Child: Apply as required, best suited for application before sleep
▶ Adult: Apply as required, best suited for application before sleep

PATIENT AND CARER ADVICE
May cause temporary visual disturbance. Should not be used during contact lens wear.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.
Eye infections

Most acute superficial eye infections can be treated topically. Bacterial conjunctivitis is often caused by staphylococci; keratitis and endophthalmitis may be bacterial, viral, or fungal. Bacterial blepharitis is treated by application of an antibacterial eye ointment to the conjunctival sac or to the lid margins. Systemic treatment may occasionally be required and is usually undertaken after culturing organisms from the lid margin and determining their antimicrobial sensitivity; antibiotics such as the tetracyclines given for 3 months or longer may be appropriate. Most cases of acute bacterial conjunctivitis are self-limiting; where treatment is appropriate, antibacterial eye drops or an eye ointment are used. A poor response might indicate viral or allergic conjunctivitis. Corneal ulcer and keratitis require specialist treatment and may call for hospital admission for intensive therapy. Endophthalmitis is a medical emergency which also calls for specialist management and requires intravitreal administration of antimicrobials; concomitant systemic treatment is required in some cases. Surgical intervention, such as vitrectomy, is sometimes indicated.

Antibacterials
Bacterial eye infections are generally treated topically with eye drops and eye ointments. Systemic administration is sometimes appropriate in blepharitis. Chloramphenicol p. 955 has a broad spectrum of activity and is the drug of choice for superficial eye infections. Chloramphenicol eye drops are well tolerated and the recommendation that chloramphenicol eye drops should be avoided because of an increased risk of aplastic anaemia is not well founded. Other antibacterials with a broad spectrum of activity include the quinolones, ciprofloxacin p. 956, levofloxacin p. 956, moxifloxacin p. 957, and ofloxacin p. 957; the aminoglycosides, gentamicin p. 956 and tobramycin p. 957 are also active against a wide variety of bacteria.

Gentamicin, tobramycin, quinolones (except moxifloxacin), and polymyxin B are effective for infections caused by Pseudomonas aeruginosa.

Ciprofloxacin eye drops are licensed for corneal ulcers; intensive application (especially in the first 2 days) is required throughout the day and night. Azithromycin p. 955 eye drops are licensed for trachomatous conjunctivitis caused by Chlamydia trachomatis and for purulent bacterial conjunctivitis. Trachoma which results from chronic infection with Chlamydia trachomatis can be treated with azithromycin by mouth [unlicensed indication]. Fusidic acid is useful for staphylococcal infections. Propamidine isetionate p. 957 is of little value in bacterial infections but is used by specialists to treat the rare, but potentially sight-threatening, condition of acanthamoeba keratitis [unlicensed indication].

With corticosteroids
Many antibacterial preparations also incorporate a corticosteroid but such mixtures should not be used unless a patient is under close specialist supervision. In particular they should not be prescribed for undiagnosed ‘red eye’ which is sometimes caused by the herpes simplex virus and may be difficult to diagnose.

Administration
Frequency of application depends on the severity of the infection and the potential for irreversible ocular damage; antibacterial eye preparations are usually administered as follows:

- **Eye drops**, apply 1 drop at least every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing.
- **Eye ointment**, apply either at night (if eye drops used during the day) or 3–4 times daily (if eye ointment used alone).

Antifungals
Fungal infections of the cornea are rare but can occur after agricultural injuries, especially in hot and humid climates. Orbital mycosis is rarer, and when it occurs it is usually because of direct spread of infection from the paranasal sinuses. Increasing age, debility, or immunosuppression can encourage fungal proliferation. The spread of infection through blood occasionally produces metastatic endophthalmitis. Many different fungi are capable of producing ocular infection; they can be identified by appropriate laboratory procedures.

Antifungal preparations for the eye are not generally available. Treatment will normally be carried out at specialist centres, but requests for information about supplies of preparations not available commercially should be addressed to the Strategic Health Authority (or equivalent), or to the nearest hospital ophthalmology unit, or to Moorfields Eye Hospital, 162 City Road, London EC1V 2PD (tel. (020) 7253 3411) or www.moorfields.nhs.uk.

**Antivirals**

Herpes simplex infections producing, for example, dendritic corneal ulcers can be treated with aciclovir p. 958 or ganciclovir p. 958. Aciclovir p. 958 eye ointment is used in combination with systemic treatment for ophthalmic zoster. Slow-release ocular implants containing ganciclovir p. 958 (available on a named-patient basis from specialist importing companies) may be inserted surgically to treat immediate sight-threatening CMV retinitis. Local treatments do not protect against systemic infection or infection in the other eye. See systemic treatment of CMV retinitis.
3.1 Bacterial eye infection

**Azithromycin**

**INDICATIONS AND DOSE**
Trachomatous conjunctivitis caused by *Chlamydia trachomatis* | Purulent bacterial conjunctivitis

**TO THE EYE**
- Child: Apply daily, to be applied at night (if eye drops used during the day), alternatively apply 3–4 times a day, if ointment used alone
- Adult: Apply daily, to be applied at night (if eye drops used during the day), alternatively apply 3–4 times a day, if ointment used alone

**SIDE-EFFECTS**
- Common or very common: Blurred vision, ocular burning, ocular discomfort, ocular pruritus
- Uncommon: Conjunctival hyperaemia, eyelid eczema, eyelid erythema, eyelid oedema, keratitis

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **Azyter** (Spectrum Thea Pharmaceuticals Ltd)
  - Azithromycin dihydrate 15 mg per 1 gram
  - Azyter 15mg/g eye drops 0.25g unit dose | 6 unit dose (P) $6.99 DT price = $6.99

**Cefuroxime**

**INDICATIONS AND DOSE**
APROKAM® INTRACAMERAL INJECTION
Prophylaxis of endophthalmitis after cataract surgery

**BY INTRACAMERAL INJECTION**
- Adult: 1 mg, dose to be injected into the anterior chamber of the eye at the end of cataract surgery

**CAUTIONS**
- APROKAM® INTRACAMERAL INJECTION
  - Combined operations with cataract surgery - complicated cataracts - reduced corneal endothelial cells (less than 2000) - severe risk of infection - severe thyroid disease
- PREGNANCY: Not known to be harmful.
- BREAST FEEDING: Present in milk in low concentration, but appropriate to use.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**
- **Aprokan** (Spectrum Thea Pharmaceuticals Ltd)
  - Cefuroxime (as Cefuroxime sodium) 50 mg Aprokan 50mg powder for solution for injection vials | 10 vial (P) $79.50

**Chloramphenicol**

**DRUG ACTION**
Chloramphenicol is a potent broad-spectrum antibiotic.

**INDICATIONS AND DOSE**
Superficial eye infections

**TO THE EYE USING EYE DROP**
- Child: Apply 1 drop every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing, frequency dependent on the severity of the infection. For less severe infection 3–4 times daily is generally sufficient
- Adult: Apply 1 drop every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing, frequency dependent on the severity of the infection. For less severe infection 3–4 times daily is generally sufficient

**UNLICENSED USE**
Oral azithromycin not licensed for trachoma which results from chronic infection with *Chlamydia trachomatis*.

**SIDE-EFFECTS**
- Transient stinging

**PREGNANCY**
Avoid unless essential—no information on topical use but risk of ‘neonatal grey-baby syndrome’ with oral use in third trimester.

**BREAST FEEDING**
Avoid unless essential—theoretical risk of bone-marrow toxicity.

**PRESCRIBING AND DISPENSING INFORMATION**
Although multi-dose chloramphenicol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**EXCEPTIONS TO LEGAL CATEGORY**
Chloramphenicol 0.5% eye drops (in max. pack size 10 mL) and 1% eye ointment (in max. pack size 4 g) can be sold to the public for treatment of acute bacterial conjunctivitis in adults and children over 2 years; max. duration of treatment 5 days.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
EXCIPIENTS: May contain Phenylmercuric acetate
- **CHLORAMPHENICOL (Non-proprietary)**
  - Chloramphenicol 5 mg per 1 mL Chloramphenicol Antibiotic 0.5% eye drops | 10 mL (P) $1.70 DT price = $1.50
  - Golden Eye Antibiotic 0.5% eye drops | 10 mL (P) $3.26 DT price = $1.50
  - Minims chloramphenicol 0.5% eye drops 0.5ml unit dose | 20 unit dose (P) $10.99 DT price = $10.99
  - Chloramphenicol 0.5% eye drops | 10 mL (P) $2.68 DT price = $1.50
  - Tubilux Infected Eyes 0.5% eye drops | 10 mL (P) $2.75 DT price = $1.50
  - **Brochlor** (Sanofi)
    - Chloramphenicol 5 mg per 1 mL Brochlor 0.5% eye drops | 10 mL (P) $2.83 DT price = $1.50
    - Chloramphenicol (AMCo)
    - Chloramphenicol 5 mg per 1 mL Chloramphenicol Reddrops 0.5% | 5 mL (P) $1.65 | 10 mL (P) $0.90 DT price = $1.50
    - **Optrex Infected Eyes** (Reckitt Benckiser Healthcare (UK) Ltd)
      - Chloramphenicol 5 mg per 1 mL Optrex Infected Eyes 0.5% eye drops | 10 mL (P) $3.75 DT price = $1.50

**Eye ointment**
- **CHLORAMPHENICOL (Non-proprietary)**
  - Chloramphenicol 10 mg per 1 gram Chloramphenicol 1% eye ointment | 4 gram (P) $4.26 DT price = $1.95
  - Golden Eye Antibiotic 1% eye ointment | 4 gram (P) $3.49 DT price = $1.95
  - **Brochlor** (Sanofi)
    - Chloramphenicol 10 mg per 1 gram Brochlor 1% eye ointment | 4 gram (P) $2.95 DT price = $1.95
    - Chloramphenicol (AMCo)
    - Chloramphenicol 10 mg per 1 gram Chloramphenicol 1% eye ointment | 4 gram (P) $1.68 DT price = $1.95
    - **Optrex Infected Eyes** (Reckitt Benckiser Healthcare (UK) Ltd)
      - Chloramphenicol 10 mg per 1 gram Optrex Infected Eyes 1% eye ointment | 4 gram (P) $3.88 DT price = $1.95
Ciprofloxacin

INDICATIONS AND DOSE

Superficial bacterial eye infection

TO THE EYE USING EYE DROP
- Child: Apply 4 times a day for maximum duration of treatment 21 days
- Adult: Apply 4 times a day for maximum duration of treatment 21 days

TO THE EYE USING EYE OINTMENT
- Child 1-17 years: Apply 1.25 centimetres 3 times a day for 2 days, then apply 1.25 centimetres twice daily for 5 days
- Adult: Apply 1.25 centimetres 3 times a day for 2 days, then apply 1.25 centimetres twice daily for 5 days

Superficial bacterial eye infection (severe infection)

TO THE EYE USING EYE DROP
- Child: Apply every 2 hours during waking hours for 2 days, then apply 4 times a day for maximum duration of treatment 21 days
- Adult: Apply every 2 hours during waking hours for 2 days, then apply 4 times a day for maximum duration of treatment 21 days

Corneal ulcer

TO THE EYE USING EYE DROP
- Child: Apply every 15 minutes for 6 hours, then apply every 30 minutes for the remainder of day 1, then apply every 1 hour on day 2, then apply every 4 hours on days 3–14, maximum duration of treatment 21 days, to be administered throughout the day and night
- Adult: Apply every 15 minutes for 6 hours, then apply every 30 minutes for the remainder of day 1, then apply every 1 hour on day 2, then apply every 4 hours on days 3–14, maximum duration of treatment 21 days, to be administered throughout the day and night
- Child 1-17 years: Apply 1.25 centimetres every 1–2 hours for 2 days, then apply 1.25 centimetres every 4 hours for the next 12 days, to be administered throughout the day and night
- Adult: Apply 1.25 centimetres every 1–2 hours for 2 days, then apply 1.25 centimetres every 4 hours for the next 12 days, to be administered throughout the day and night.

UNLICENSED USE
Eye ointment not licensed for use in children under 1 year.

SIDE-EFFECTS
- Common or very common: Corneal deposits (reversible after completion of treatment) - ocular discomfort - ocular hyperaemia - taste disturbance
- Rare: Abdominal pain - asthenopia - corneal disorders - corneal epithelium defect - dermatitis - diarrhoea - diplopia - dizziness - ear pain - eye hypoaesthesia - keratitis - paranasal sinus hypersecretion - rhinitis
- PREGNANCY
Manufacturer advises use only if potential benefit outweighs risk.

BREAST FEEDING
Manufacturer advises caution.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

Eye drops
EXCIPIENTS: May contain Benzalkonium chloride
- Ciloxan (Alcon Laboratories (UK) Ltd) Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 ml Ciloxan 0.3% eye drops 5 ml POM £4.70 OT price = £4.70

Eye ointment
- Ciloxan (Alcon Laboratories (UK) Ltd) Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 gram Ciloxan 3 mg/g eye ointment 3.5 gram POM £3.22

Fusidic acid
- DRUG ACTION Fusidic acid and its salts are narrow-spectrum antibiotics used for staphylococcal infections.

INDICATIONS AND DOSE

Staphylococcal eye infections

TO THE EYE
- Child: Apply twice daily
- Adult: Apply twice daily

 MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Medicines not identified.

Gentamicin

INDICATIONS AND DOSE

Bacterial eye infections

TO THE EYE
- Child: Apply 1 drop every 2 hours, reduce frequency as infection is controlled and continue for 48 hours after healing, frequency of eye drops depends on the severity of the infection and the potential for irreversible ocular damage; for less severe infection 3–4 times daily is generally sufficient
- Adult: Apply 1 drop every 2 hours, reduce frequency as infection is controlled and continue for 48 hours after healing, frequency of eye drops depends on the severity of the infection and the potential for irreversible ocular damage; for less severe infection 3–4 times daily is generally sufficient

 MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

Ear/eye drops solution
EXCIPIENTS: May contain Benzalkonium chloride
- GENTAMICIN (Non-proprietary) Gentamicin (as Gentamicin sulphate) 3 mg per 1 ml Gentamicin 0.3% ear/eye drops 10 ml POM £2.13 OT price = £2.13
- Gentamicin 0.3% eye/ear drops 10 ml POM £2.13 OT price = £2.13
- Gentamicin (AMCO) Gentamicin (as Gentamicin sulphate) 3 mg per 1 ml Gentamicin 0.3% eye/ear drops 10 ml POM £2.12 OT price = £2.12

Levofloxacin

INDICATIONS AND DOSE

Local treatment of eye infections

TO THE EYE
- Child 1-17 years: Apply every 2 hours for first 2 days, to be applied maximum 8 times a day, then apply 4 times a day for 3 days
- Adult: Apply every 2 hours for first 2 days, to be applied maximum 8 times a day, then apply 4 times a day for 3 days
**Moxifloxacin**

**INDICATIONS AND DOSE**
Local treatment of infections

**TO THE EYE**
- Child: Apply 3 times a day for 2–3 days after infection improves; review if no improvement within 5 days
- Adult: Apply 3 times a day for 2–3 days after infection improves; review if no improvement within 5 days

**CAUTIONS**
- Not recommended for neonates

**SIDE-EFFECTS**
- **Common or very common**
  - Hyperaemia - ocular discomfort - ocular dryness - ocular irritation - ocular pain - taste disturbances

- **Uncommon**
  - Conjunctival haemorrhage - corneal disorders - corneal erosion - corneal keratitis - corneal staining - eyelid erythema - headache - nasal discomfort - paraesthesia - pharyngolaryngeal pain - visual disturbances - vomiting

- **Frequency not known**
  - Dizziness - dyspnoea - nausea - palpitation - photophobia - pruritus - raised intra-ocular pressure - rash

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride
- Ofloxacin (Santen)
  - Levofloxacin (as Levofloxacin hemihydrate) 5 mg per 1 ml Ofloxacin 5mg/ml eye drops 0.5ml unit dose | 30 unit dose | £17.95
  - Ofloxacin 5mg/ml eye drops | 5 ml | £6.95

---

**Propamidine isetionate**

**INDICATIONS AND DOSE**
**Acanthamoeba keratitis infections (specialist use only)**
Local treatment of eye infections

**TO THE EYE USING EYE OINTMENT**
- Adult: Apply 1–2 times a day

**CAUTIONS**
- Not licensed for *acanthamoeba keratitis* infections.

**SIDE-EFFECTS**
- Eye irritation - eye pain

**PRENANCY**
- Manufacturer advises avoid unless essential—no information available.

**BREAST FEEDING**
- Manufacturer advises avoid unless essential—no information available.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride
- **PROPAMIDINE ISETIONATE (Non-proprietary)**
  - Propamidine isetionate 1 mg per 1 ml Golden Eye 0.1% drops | 10 ml | £3.26
  - Brolene (Propamidine) (Sanofi)
    - Propamidine isetionate 1 mg per 1 ml Brolene 0.1% eye drops | 10 ml | £2.80

**Eye ointment**
- **PROPAMIDINE ISETIONATE (Non-proprietary)**
  - Dibrompropamidine isetionate 1.5 mg per 1 gram Golden Eye 0.15% ointment | 5 gram | £3.49 DT price = £3.49
  - Brolene (Dibrompropamidine) (Sanofi)
    - Dibrompropamidine isetionate 1.5 mg per 1 gram Brolene 0.15% eye ointment | 5 gram | £2.92 DT price = £3.49

---

**Ofloxacin**

**INDICATIONS AND DOSE**
Local treatment of infections

**TO THE EYE**
- Child 1–17 years: Apply every 2–4 hours for the first 2 days, then reduced to 4 times a day for maximum 10 days treatment
- Adult: Apply every 2–4 hours for the first 2 days, then reduced to 4 times a day for maximum 10 days treatment

**CAUTIONS**
- Corneal ulcer (risk of corneal perforation) - epithelial defect (risk of corneal perforation)

**SIDE-EFFECTS**
- **Common or very common**
  - Eye irritation - ocular discomfort

- **Frequency not known**
  - Dry eyes - facial oedema - increased lacrimation - keratitis - ocular hyperaemia - ocular oedema - photophobia - visual disturbances

**PRENANCY**
- Manufacturer advises use only if benefit outweighs risk (systemic quinolones have caused arthropathy in animal studies).

**BREAST FEEDING**
- Manufacturer advises avoid.

**MEDICATIONS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride
- Exocin (Allergan Ltd)
  - Ofloxacin 3 mg per 1 ml Exocin 0.3% eye drops | 5 ml | £2.17
  - DT price = £2.17

---

**Tobramycin**

**INDICATIONS AND DOSE**
Local treatment of infections

**TO THE EYE**
- Child 1–17 years: Apply twice daily for 6–8 days
- Adult: Apply twice daily for 6–8 days

**Local treatment of infections (severe infection)**

**TO THE EYE**
- Child 1–17 years: Apply 4 times a day for first day, then apply twice daily for 5–7 days
- Adult: Apply 4 times a day for first day, then apply twice daily for 5–7 days
3.2 Herpes simplex infection

Aciclovir (Acyclovir)

**INDICATIONS AND DOSE**

Herpes simplex infection (local treatment) TO THE EYE USING EYE OINTMENT
- Child: Apply 1 centimetre 5 times a day continue for at least 3 days after complete healing
- Adult: Apply 1 centimetre 5 times a day continue for at least 3 days after complete healing

**SIDE-EFFECTS**
- Common or very common Local inflammation - local irritation - superficial punctate keratopathy
- Rare Blepharitis
- Very rare Angioedema - hypersensitivity reactions

**PATIENT AND CARER ADVICE**

Medicines for Children leaflet: Aciclovir eye ointment for herpes simplex infections www.medicinesforchildren.org.uk/aciclovir-eye-ointment-for-herpes-simplex-infection

**MEDICINAL FORMS**
- Zovirax (GlaxoSmithKline UK Ltd)
  - Aciclovir 30 mg per 1 gram Zovirax 3% ophthalmic ointment | 4.5 gram BD price = £9.34

Ganciclovir

**INDICATIONS AND DOSE**

Local treatment of herpes simplex infections TO THE EYE
- Adult: Apply 5 times a day until healing complete, then apply 3 times a day for a further 7 days

**SIDE-EFFECTS**
- Burning sensation - superficial punctate keratitis - tingling

**ALLERGY AND CROSS-SENSITIVITY**
- Contra-indicated in patients hypersensitive to valganciclovir, aciclovir, or valaciclovir.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug.
- Tropicamide 5 mg per 1 ml Tropicamide 5% eye drops | 0.5ml unit dose | 20 unit dose BD price = £10.75
- Tropicamide 10 mg per 1 ml Tropicamide 1% eye drops | 0.5ml unit dose | 20 unit dose BD price = £10.77
- Mydriacyl (Alcon Laboratories (UK) Ltd)
- Tropicamide 5 mg per 1 ml Mydriacyl 0.5% eye drops | 5 ml BD price = £1.29
- Tropicamide 10 mg per 1 ml Mydriacyl 1% eye drops | 5 ml BD price = £1.60

**PRESCRIBING AND DISPENSING INFORMATION**
- Although multi-dose tropicamide eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug.
- Ganciclovir 1.5 mg per 1 gram Ganciclovir 0.15% eye gel | 5 gram BD price = £19.99

4 Eye procedures

**Mydriatics and cycloplegics**

Antimuscarinics dilate the pupil and paralyse the ciliary muscle; they vary in potency and duration of action.

Short-acting, relatively weak mydriatics, such as tropicamide below 0.5% (action lasts for 4–6 hours), facilitate the examination of the fundus of the eye. Longer-acting options include cyclopentolate hydrochloride p. 950 1% (action up to 24 hours) or atropine sulfate p. 950 (action up to 7 days).

Phenylephrine hydrochloride p. 959 is used for mydriasis in diagnostic or therapeutic procedures; mydriasis occurs within 60–90 minutes and lasts up to 5–7 hours.

Mydriatics and cycloplegics are used in the treatment of anterior uveitis, usually as an adjunct to corticosteroids. Atropine sulfate p. 950 is used in anterior uveitis mainly to prevent posterior synechiae and to relieve ciliary spasm; cyclopentolate hydrochloride p. 950 or homatropine hydrobromide p. 950 (action up to 3 days) can also be used and may be preferred because they have a shorter duration of action.

**Drugs used for Eye procedures not listed below; Fluorescein with lidocaine, p. 960**

**ANTIMUSCARINICS**

**Tropicamide**

The properties listed below are those particular to the drug only. For the properties common to the class, see Antimuscarinics (eye) p. 949.

**INDICATIONS AND DOSE**

Funduscropy TO THE EYE
- Child: 0.5% eye drops to be applied 20 minutes before examination
- Adult: (consult product literature)

**Phenylephrine with tropicamide**

The properties listed below are those particular to the combination only. For the properties of the components please consider, phenylephrine hydrochloride p. 959, tropicamide above.
**INDICATIONS AND DOSE**

Pre-operative mydriasis | Diagnostic procedures when monotherapy insufficient

**TO THE EYE**

- **Adult:** One insert to be applied into the lower conjunctival sac up to max. 2 hours before procedure; remove insert within 30 minutes of satisfactory mydriasis, and within 2 hours of application

**DIRECTIONS FOR ADMINISTRATION**

Patients with severe dry eyes may require a drop of saline to improve insert tolerance.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Ophthalmic insert**

  - **Mydriaser (Spectrum Thea Pharmaceuticals Ltd)**
  - Phenylephrine hydrochloride 5.4 mg, Tropicamide 0.28 mg
  - Mydriaser 5.4mg / 0.28mg ophthalmic inserts | 20 insert | £84.00

**SIDE-EFFECTS**

- Bradycardia
- Hypertension
- Extrasystoles
- Palpitation
- Photophobia
- Raised intraocular pressure
- Arterial oedema on prolonged administration
- Local irritation on prolonged administration
- Conjunctivitis
- Transient stinging
- Hypersensitivity
- Local reactions
- Phototoxicity

**CAUTIONS**

- Asthma
- Gastro-intestinal spasm
- Heart failure
- Hyperthyroidism
- Parkinsonism
- Peptic ulcer
- Urinary tract obstruction
- Mydriasis can precipitate acute angle-closure glaucoma in a few patients, usually 60 years and hypermetropic (long-sighted) or pre-disposed to the condition because of a shallow anterior chamber.

**INTERACTIONS**

Use only if potential benefit outweighs risk.

**PREGNANCY**

Use only if potential benefit outweighs risk.

**BREAST FEEDING**

Use only if potential benefit outweighs risk—no information available.

**PRESERVING AND DISPENSING INFORMATION**

Although multi-dose phenylephrine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**PATIENT AND CARER ADVICE**

Patients should be warned not to undertake skilled tasks (e.g. driving) until vision clears after mydriasis.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Excipients:** May contain Disodium edetate, Sodium metabisulfite

- **Phenylephrine hydrochloride (Non-proprietary)**
  - Phenylephrine hydrochloride 25 mg per 1 ml | 10 minutes phenylephrine hydrochloride 2.5% eye drops 0.5% unit dose | 20 unit dose | £11.41
  - Phenylephrine hydrochloride 100 mg per 1 ml | 10 minutes phenylephrine hydrochloride 10% eye drops 0.5% unit dose | 20 unit dose | £11.41

**DIAGNOSTIC DYES**

**Fluorescein sodium**

**INDICATIONS AND DOSE**

Detection of lesions and foreign bodies TO THE EYE USING EYE DROP

- **Adult:** Use sufficient amount to stain damaged areas

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Eye drops**

  - FLUORESCEIN SODIUM (Non-proprietary)
    - Fluorescein sodium 10 mg per 1 ml | Minims fluorescein sodium 1% eye drops 0.5ml unit dose | 20 unit dose | £8.89
    - Fluorescein sodium 20 mg per 1 ml | Minims fluorescein sodium 2% eye drops 0.5ml unit dose | 20 unit dose | £18.89

**SIDE-EFFECTS**

- Photophobia
- Raised intraocular pressure
- Conjunctivitis
- Transient stinging

**CAUTIONS**

- Asthma
- Cerebral arteriosclerosis (in adults)
- Corneal epithelial damage
- Darkly pigmented iris is more resistant to pupillary dilatation and caution should be exercised to avoid overdosage.
- Diabetes (avoid eye drops in long standing diabetes)
- Mydriasis can precipitate acute angle-closure glaucoma in a few patients, usually over 60 years and hypermetropic (long-sighted) or pre-disposed to the condition because of a shallow anterior chamber.

**INTERACTIONS**

Use only if potential benefit outweighs risk.

**PREGNANCY**

Avoid unless potential benefit outweighs risk—no information available.

**BREAST FEEDING**

Avoid unless potential benefit outweighs risk—no information available.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Irrigation**

  - Miochol-E (Bausch & Lomb UK Ltd)
  - Acetylcholine chloride 20 mg | Miochol-E 20mg powder and solvent for solution for intracocular irrigation vials | 1 vial (vials) | £7.28
  - Miphell (Alan Pharmaceuticals)
  - Acetylcholine chloride 20 mg | Miphell 20mg powder and solvent for solution for intracocular irrigation ampoules | 6 ampoule (ampoule) | £6.55 (Hospital only)

**SYMPATHOMIMETICS (VASOCONSTRICTOR)**

**Phenylephrine hydrochloride**

**INDICATIONS AND DOSE**

Mydriasis TO THE EYE

- **Adult:** Apply 1 drop, to be administered before procedure, a drop of proxymetacaine topical anaesthetic may be applied to the eye a few minutes before using phenylephrine to prevent stinging
- **Adult:** Apply 1 drop, to be administered before procedure, then apply 1 drop after 60 minutes if required, a drop of topical anaesthetic may be applied to the eye a few minutes before using phenylephrine to prevent stinging

**CONTRA-INDICATIONS**

Hypertension · 10% strength eye drops in neonates, children and the elderly · Aneurysms · Cardiovascular disease · Thyrotoxicosis

**CAUTIONS**

- Asthma · Cerebral arteriosclerosis (in adults) · Corneal epithelial damage · Darkly pigmented iris is more resistant to pupillary dilatation and caution should be exercised to avoid overdosage · Diabetes (avoid eye drops in long standing diabetes) · Mydriasis can precipitate acute angle-closure glaucoma in a few patients, usually over 60 years and hypermetropic (long-sighted) or pre-disposed to the condition because of a shallow anterior chamber · Mydriasis can precipitate acute angle-closure glaucoma in the very few children who are predisposed to the condition because of a shallow anterior chamber · Ocular hyperaemia · Susceptibility to angle-closure glaucoma

**INTERACTIONS**

Appendix 1 (sympathomimetics).

Phenylephrine may interact with systemically administered monoamine-oxidase inhibitors.

**SIDE-EFFECTS**

Arrhythmias · Blurred vision · Conjunctivitis on prolonged administration · Coronary artery spasm · Extrasystoles · Hyperaemia on prolonged administration · Hypertension · Local irritation on prolonged administration · Myocardial infarction (usually after use of 10% strength in patients with pre-existing cardiovascular disease) · Oedema on prolonged administration · Palpitation · Photophobia · Raised intraocular pressure · Tachycardia · Transient stinging

**PREGNANCY**

Use only if potential benefit outweighs risk.

**BREAST FEEDING**

Use only if potential benefit outweighs risk—no information available.

**PRESCRIBING AND DISPENSING INFORMATION**

Although multi-dose phenylephrine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**PATIENT AND CARER ADVICE**

Patients should be warned not to undertake skilled tasks (e.g. driving) until vision clears after mydriasis.
4.1 Post-operative pain and inflammation

Eye, surgical and peri-operative drug use

Ocular peri-operative drugs

Drugs used to prepare the eye for surgery, drugs that are injected into the anterior chamber at the time of surgery, and those used after eye surgery, are included here.

Cefuroxime p. 955, administered by intra-ocular injection into the anterior chamber of the eye (intra-cameral use), is used for the prophylaxis of endophthalmitis after cataract surgery.

Non-steroidal anti-inflammatory eye drops such as diclofenac sodium p. 961, flurbiprofen p. 961, ketorolac trometamol p. 961, and nepafenac p. 961, are used for the prophylaxis and treatment of inflammation, pain, and other symptoms associated with ocular surgery or laser treatment of the eye. Bromfenac p. 961 is used for the treatment of postoperative inflammation following cataract surgery. Diclofenac sodium p. 961 and flurbiprofen are also used to prevent miosis during ocular surgery.

Apraclonidine p. 963, an alpha-, adrenoreceptor agonist, reduces intra-ocular pressure possibly by reducing the production of aqueous humour. It is used to control increases in intra-ocular pressure associated with ocular surgery and as short-term treatment to reduce intraocular pressure prior to surgery.

Acetycholine chloride p. 959, administered into the anterior chamber of the eye during surgery, rapidly produces miosis which lasts approximately 20 minutes. If prolonged miosis is required, it can be applied again.

Intra-ocular sodium hyaluronate p. 953 and balanced salt solution are used during surgical procedures on the eye.

Povidone-iodine is used for peri-ocular and conjunctival antisepsis before ocular surgery to support postoperative infection control.

Local anaesthetics

Oxybuprocaine hydrochloride below and tetracaine p. 961 are widely used topical local anaesthetics. Proxymetacaine hydrochloride below causes less initial stinging and is useful in children. Oxybuprocaine hydrochloride below or a combined preparation of lidocaine hydrochloride and fluorescein sodium p. 984 is used for tonometry. Tetracaine produces a more profound anaesthesia and is suitable for use before minor surgical procedures, such as the removal of corneal sutures. It has a temporary disruptive effect on the corneal epithelium. Lidocaine hydrochloride, with or without adrenaline/epinephrine p. 196, is injected into the eyelids for minor surgery. Local anaesthetics should never be used for the management of ocular symptoms.

CORTICOSTEROIDS

Loteprednol etabonate

Indications and dose

Treatment of post-operative inflammation following ocular surgery TO THE EYE

Adult: Apply 4 times a day for maximum duration of treatment of 14 days, to be started 24 hours after surgery

Side-effects

Corneal thinning, scleral thinning

Local anaesthetics

Fluorescein with lidocaine

Oxybuprocaine hydrochloride (Benoxinate hydrochloride)

Indications and dose

Local anaesthetic TO THE EYE

Adult: As required

Prescribing and dispensing information

Although multi-dose oxybuprocaine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

Local anaesthetics

Fluorescein with lidocaine

Programmed text can be used for peri-ocular and conjunctival antisepsis before ocular surgery to support postoperative infection control.
**Tetracaine**  
(Anethocaine)

### INDICATIONS AND DOSE
- **Local anaesthetic**
- **TO THE EYE**
  - **Adult:** Apply as required

### PRESCRIBING AND DISPENSING INFORMATION
Although multi-dose tetracaine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **TETRACAINE (Non-proprietary)**
  - Tetracaine hydrochloride 5 mg per 1 ml Minims tetracaine hydrochloride 0.5% eye drops 0.5ml unit dose | 20 unit dose £10.16
  - Tetracaine hydrochloride 10 mg per 1 ml Minims tetracaine hydrochloride 1% eye drops 0.5ml unit dose | 20 unit dose £10.16

**NON-STERoidal ANti-INFLAMMATORY drugs**

**Bromfenac**

### INDICATIONS AND DOSE
**Postoperative inflammation following cataract surgery**

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate, sulfates
  - **Yellow (Bausch & Lomb UK Ltd)**
    - Tetracaine (as Bromfenac sodium sesquihydrate) 900 microgram per 1 ml Yellow 900micrograms/ml eye drops | 5 ml £18.50

**Diclofenac sodium**

### INDICATIONS AND DOSE
- **Inhibition of intra-operative miosis during cataract surgery**
- **Postoperative inflammation in cataract surgery, strabismus surgery or argon laser trabecuoplasty**
- **Pain in corneal epithelial defects after photorefractive keratectomy, radial keratotomy or accidental trauma**
- **Seasonal allergic conjunctivitis**

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate, propylene glycol
  - **Voltarol Ophtha (Spectrum Thea Pharmaceuticals Ltd)**
    - Diclofenac sodium 1 mg per 1 ml Voltarol Ophtha 0.1% eye drops 0.3ml unit dose | 5 unit dose £4.00 | 40 unit dose £32.00

### SIDE-EFFECTS
- **Common or very common**: Punctate keratitis
- **Uncommon**: Allergic conjunctivitis, blurred vision, choroidal effusion, conjunctival hyperaemia, corneal deposits, corneal epithelium defect, dry eye, eye pruritus, headache, increased lacrimation, iritis, keratitis, nausea, ocular discomfort, photophobia
- **Frequency not known**: Corneal opacity, dermatographia, difficulty in accommodation, dryness, eye swelling, impaired corneal healing, reduced visual acuity

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

**Flurbiprofen**

### INDICATIONS AND DOSE
**Inhibition of intra-operative miosis (but does not possess intrinsic mydriatic properties)**

**TO THE EYE**
- **Adult:** (consult product literature)

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **Ocufen (Allergan Ltd)**
  - Flurbiprofen sodium 300 microgram per 1 ml Ocufen 0.03% eye drops 0.4ml unit dose | 40 unit dose £37.15

**Ketorolac trometamol**

### INDICATIONS AND DOSE
**Prophylaxis and reduction of inflammation and associated symptoms following ocular surgery**

**TO THE EYE**
- **Adult:** (consult product literature)

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate
  - **Acular (Allergan Ltd)**
    - Ketorolac trometamol 5 mg per 1 ml Acular 0.5% eye drops | 5 ml £3.00 DT price = £3.00

**Nepafenac**

### INDICATIONS AND DOSE
**Prophylaxis and treatment of postoperative pain and inflammation associated with cataract surgery**

**Reduction in the risk of postoperative macular oedema associated with cataract surgery in diabetic patients**

**TO THE EYE**
- **Adult:** (consult product literature)

### CAUTIONS
Avoid sunlight, corneal epithelial breakdown (if evidence of, then discontinue immediately)

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

- **Common or very common**: Punctate keratitis
- **Uncommon**: Allergic conjunctivitis, blurred vision, choroidal effusion, conjunctival hyperaemia, corneal deposits, corneal epithelium defect, dry eye, eye pruritus, headache, increased lacrimation, iritis, keratitis, nausea, ocular discomfort, photophobia
- **Frequency not known**:
  - Corneal opacity, dermatographia, difficulty in accommodation, dryness, eye swelling, impaired corneal healing, reduced visual acuity
Glucoma and ocular hypertension

**Glucoma**

Glucoma describes a group of disorders characterised by a loss of visual field associated with cupping of the optic disc and optic nerve damage. While glucoma is generally associated with raised intra-ocular pressure, it can occur when the intra-ocular pressure is within the normal range.

The most common form of glucoma is primary open-angle glucoma (chronic open-angle glucoma), where drainage of the aqueous humour through the trabecular meshwork is restricted. The condition is often asymptomatic, but the patient may present with significant loss of visual field. Patients with ocular hypertension are at high risk of developing primary open-angle glucoma.

Drugs that reduce intra-ocular pressure by different mechanisms are available for managing ocular hypertension and glucoma. A topical beta-blocker or a prostaglandin analogue is usually the drug of first choice for the treatment of ocular hypertension. A prostaglandin analogue should be used to manage patients with early or moderate primary open-angle glucoma. After checking compliance and eye drop instillation technique, it may be necessary to combine these drugs or add others, such as sympathomimetics, carbonic anhydrase inhibitors, or miotics to control intra-ocular pressure.

**Acute angle-closure glucoma**

Acute angle-closure glucoma occurs when the outflow of aqueous humour from the eye is obstructed by bowing of the iris against the trabecular meshwork; it is a medical emergency that requires urgent reduction of intra-ocular pressure to prevent loss of vision. Patients with acute angle-closure glucoma should be referred immediately for specialist ophthalmology assessment and treatment.

Standard antiglucoma therapy is used if supplementary treatment is required after iridotomy, iridectomy, laser treatment, or drainage surgery in either primary open-angle or acute angle-closure glucoma.

**Beta-blockers**

Topical application of a beta-blocker to the eye reduces intra-ocular pressure effectively in primary open-angle glucoma, probably by reducing the rate of production of aqueous humour. Administration by mouth also reduces intra-ocular pressure but this route is not used since side-effects may be troublesome.

Beta-blockers used as eye drops include betaxolol p. 964, carteol hydrochloride p. 964, levobunolol hydrochloride p. 964, and timolol maleate p. 965.

**Prostaglandin analogues and prostanides**

The prostaglandin analogues latanoprost p. 969, tafluprost p. 969 and travoprost p. 970, and the synthetic prostanamide, bimatoprost p. 968, increase uveoscleral outflow and subsequently reduce intra-ocular pressure. They are used to reduce intra-ocular pressure in ocular hypertension or open-angle glucoma.

**Sympathomimetics**

Brimonidine tartrate p. 963, a selective alpha₂-adrenoceptor agonist, is thought to lower intra-ocular pressure by reducing aqueous humour formation and increasing uveoscleral outflow. It is licensed for the reduction of intra-ocular pressure in open-angle glucoma or ocular hypertension in patients for whom beta-blockers are inappropriate; it may also be used as adjunctive therapy when intra-ocular pressure is inadequately controlled by other anti-glucoma therapy.

Apraclonidine p. 963 is another alpha₂-adrenoceptor agonist that lowers intra-ocular pressure by reducing aqueous humour formation. Eye drops containing apraclonidine p. 963 0.5% are used short-term to delay laser treatment or surgery in patients with glucoma not adequately controlled by another drug; eye drops containing 1% are used for control of intra-ocular pressure after anterior segment laser surgery.

Apraclonidine may not provide additional benefit in patients already using two drugs that suppress the production of aqueous humour.

**Carbonic anhydrase inhibitors and systemic drugs**

The *carbonic anhydrase inhibitors*, acetazolamide p. 965, brinzolamide p. 966, and dorzolamide p. 967, reduce intra-ocular pressure by reducing aqueous humour production. Systemic use of acetazolamide also produces weak diuresis.

Acetazolamide is given by mouth or by intravenous injection (intramuscular injections are painful because of the alkaline pH of the solution). It is used as an adjunct to other treatment for reducing intra-ocular pressure.

Acetazolamide is not generally recommended for long-term use.

Dorzolamide and brinzolamide are topical carbonic anhydrase inhibitors. They are licensed for use in patients resistant to beta-blockers or those in whom beta-blockers are contra-indicated. They are used alone or as an adjunct to a topical beta-blocker. Brinzolamide can also be used as an adjunct to a prostaglandin analogue. Systemic
absorption can rarely cause sulfonamide-like side-effects and may require discontinuation if severe.

The osmotic diuretics, intravenous hypertonic mannitol p. 202 or glycerol by mouth are useful short-term ocular hypotensive drugs.

**Miotics**

Miotics act by opening the inefficient drainage channels in the trabecular meshwork.

Pilocarpine p. 967, a miotic, is not commonly used for the treatment of primary open-angle glaucoma because side-effects are poorly tolerated. It is used mainly in the treatment of primary angle-closure glaucoma and in some secondary glaucomas.

### ALPHA₂-ADRENOCEPTOR AGONISTS

**Apraclonidine**

- **DRUG ACTION** Apraclonidine is an alpha₂-adrenoceptor agonist that lowers intra-ocular pressure by reducing aqueous humour formation. It is a derivative of clonidine.

- **INDICATIONS AND DOSE**
  - Control or prevention of postoperative elevation of intraocular pressure after anterior segment laser surgery
  - TO THE EYE
    - Adult: Apply 1 drop 1 hour before laser procedure, then 1 drop immediately after completion of procedure, 1% eye drops to be administered
  - Short-term adjunctive treatment of chronic glaucoma in patients not adequately controlled by another drug
  - TO THE EYE
    - Adult: Apply 1 drop 3 times a day usually for maximum 1 month, 0.5% eye drops to be administered, may not provide additional benefit if patient already using two drugs that suppress the production of aqueous humour

- **CONTRA-INDICATIONS** History of severe or unstable and uncontrolled cardiovascular disease
- **CAUTIONS** Cerebrovascular disease - depression - heart failure - history of angina - hypertension - loss of effect may occur over time - Parkinson’s syndrome - Raynaud’s syndrome - recent myocardial infarction - reduction in vision in end-stage glaucoma (suspend treatment) - severe corneal insufficiency - thromboangiitis obliterans - vasovagal attack

- **SIDE-EFFECTS**
  - Common or very common Conjunctivitis - dry eye - ocular intolerance - rhinitis - taste disturbance

- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Ocular intolerance: Withdraw if eye pruritus, ocular hyperaemia, increased lacrimation, or oedema of the eyelids and conjunctiva occur.
  - Systemic effects: Since absorption may follow topical application, see clonidine hydrochloride p. 137.

- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.

- **RENAL IMPAIRMENT** Use with caution in chronic renal failure.

- **MONITORING REQUIREMENTS**
  - Monitor intra-ocular pressure and visual fields.
  - Monitor for excessive reduction in intra-ocular pressure following peri-operative use.

- **PATIENT AND CARER ADVICE**
  - Drowsiness may affect performance of skilled tasks (e.g. driving).

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.

  **Eye drops**
  - EXCipients: May contain Benzalkonium chloride
  - Iopidine (Alcon Laboratories (UK) Ltd)
    - Apraclonidine (as Apraclonidine hydrochloride) 5 mg per 1 ml
      - 5 ml (£10.88 OT price = £10.88)
    - Apraclonidine (as Apraclonidine hydrochloride) 10 mg per 1 ml
      - 2% eye drops 0.25ml unit dose | 24 unit dose (£17.85 OT price = £17.85)

### Brimonidine tartrate

- **DRUG ACTION** Brimonidine, an alpha₂-adrenoceptor agonist, is thought to lower intra-ocular pressure by reducing aqueous humour formation and increasing uveoscleral outflow.

- **INDICATIONS AND DOSE**
  - Raised intra-ocular pressure in open-angle glaucoma in patients for whom beta-blockers are inappropriate | Ocular hypertension in patients for whom beta-blockers are inappropriate | Adjunctive therapy when intra-ocular pressure is inadequately controlled by other antiglaucoma therapy
  - TO THE EYE
    - Adult: Apply twice daily

- **CONTRA-INDICATIONS** Neonates and children under 2 years (risk of severe systemic side-effects)

- **CAUTIONS** Cerebral insufficiency - children 2–12 years (increased risk of drowsiness) - coronary insufficiency - depression - postural hypotension - Raynaud’s syndrome - severe cardiovascular disease - thromboangiitis obliterans

- **INTERACTIONS:** Appendix 1 (brimonidine).

- **SIDE-EFFECTS**
  - Common or very common: Burning sensation at application site - conjunctival blanching - conjunctival disturbances - conjunctival follicles - conjunctival infection - corneal erosion - corneal staining - dizziness - drowsiness - dry mouth - eyelid inflammation - gastro-intestinal disturbances - headache - malaise - ocular disturbances - ocular dryness - ocular hyperaemia - ocular pain - ocular pruritus - photophobia - stinging at application site - taste disturbances - upper respiratory symptoms - visual disturbances
  - Uncommon: Arrhythmia - bradycardia - depression - nasal dryness - palpititation - tachycardia
  - Rare: Dysphoria
  - Very rare: Hypertension - hypotension - insomnia - irritis - miosis - syncope

- **PREGNANCY** Limited information available; manufacturer advises use only if benefit outweighs risk (eye drops).

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution.

- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
Brimonidine with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, brimonidine tartrate p. 963, timolol maleate p. 965.

**INDICATIONS AND DOSE**
Raised intraocular pressure in open-angle glaucoma and for ocular hypertension when beta-blocker alone not adequate
**TO THE EYE**
- Adult: Apply twice daily

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCipients:** May contain Benzalkonium chloride
- **BRIMONIDINE TARTRATE** (Non-proprietary)
  - Brimonidine tartrate 2 mg per 1 ml Brimonidine 0.2% eye drops | 5 ml (Pos) £6.85 DT price = £2.32
- **Alphagan** (Allergan Ltd)
  - Brimonidine tartrate 2 mg per 1 ml Alphagan 0.2% eye drops | 5 ml (Pos) £6.85 DT price = £2.32
- **Brymont** (Blumont Pharma Ltd)
  - Brimonidine tartrate 2 mg per 1 ml Brymont 2mg/ml eye drops | 5 ml (Pos) £6.55 DT price = £2.32

**SIDE-EFFECTS**
- **BETA-ADRENOCEPTOR BLOCKERS**
  - **CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers - bradycardia - heart block
  - **CAUTIONS** Patients with corneal disease
  - **INTERACTIONS** → Appendix 1 (beta-blockers).
  - Since systemic absorption may follow topical application the possibility of interactions, in particular, with drugs such as verapamil should be borne in mind.
  - **SIDE-EFFECTS** Anaphylaxis - blepharoconjunctivitis - burning - corneal disorders - dry eyes - erythema - itching - ocular stinging - pain
  - **SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.
  - **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose bex tremol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCipients:** May contain Benzalkonium chloride, disodium edetate
  - **BETAXOLOL** (as Betaxolol hydrochloride) 5 mg per 1 ml Betaxolol 0.5% eye drops | 5 ml (Pos) £1.90 DT price = £1.90
  - **Betoptic** (Alcon Laboratories (UK) Ltd)
    - Betaxolol (as Betaxolol hydrochloride) 2.5 mg per 1 ml Betoptic 0.25% suspension eye drops | 5 ml (Pos) £2.66 DT price = £2.66
    - Betoptic 0.25% eye drops suspension 0.25ml unit dose | 50 unit dose (Pos) £11.77
    - Betaxolol (as Betaxolol hydrochloride) 5 mg per 1 ml Betoptic 0.5% eye drops | 5 ml (Pos) £1.90 DT price = £1.90

**Carteolol hydrochloride**

**INDICATIONS AND DOSE**
Primary open-angle glaucoma
**TO THE EYE**
- Adult: Apply twice daily

**CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers - bradycardia - heart block

**CAUTIONS** Patients with corneal disease

**INTERACTIONS** → Appendix 1 (beta-blockers).
Since systemic absorption may follow topical application the possibility of interactions, in particular, with drugs such as verapamil should be borne in mind.

**SIDE-EFFECTS** Anaphylaxis - blepharoconjunctivitis - burning - corneal disorders - dry eyes - erythema - itching - ocular stinging - pain

**SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

**MEDIcINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCipients:** May contain Benzalkonium chloride
  - **Teoptic** (Spectrum Thea Pharmaceuticals Ltd)
    - Carteolol hydrochloride 10 mg per 1 ml Teoptic 1% eye drops | 5 ml (Pos) £7.60 DT price = £7.60
    - Carteolol hydrochloride 20 mg per 1 ml Teoptic 2% eye drops | 5 ml (Pos) £8.40 DT price = £8.40

**Levobunolol hydrochloride**

**INDICATIONS AND DOSE**
Primary open-angle glaucoma
**TO THE EYE**
- Adult: Apply 1–2 times a day

**CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers - bradycardia - heart block

**CAUTIONS** Patients with corneal disease
CAUTIONS, FURTHER INFORMATION
Systemic absorption can follow topical application to the eyes; consider cautions listed for systemically administered beta blockers.

**INTERACTIONS** → Appendix 1 (beta-blockers).
Since systemic absorption may follow topical application the possibility of interactions, in particular, with drugs such as verapamil should be borne in mind.

**SIDE-EFFECTS**
Anaphylaxis - anterior uveitis - blepharoconjunctivitis - burning - corneal disorders - dry eyes - erythema - itching - ocular stinging - pain

**FURTHER INFORMATION**
Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

**PRESCRIBING AND DISPENSING INFORMATION**
Although multi-dose timolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**EYEdrops**
**EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate, sodium metabisulphite

- **Betagan** (Allergan Ltd)
  Levobunolol hydrochloride 5 mg per 1 ml
  Betagan 0.5% eye drops | 5 ml (PvP) £1.85 DT price = £1.85
  Betagan Unit Dose 0.5% eye drops 0.4ml unit dose | 30 unit dose (PvP) £9.98

Timolol maleate

**INDICATIONS AND DOSE**
Reduction of intra-ocular pressure in primary open-angle glaucoma

- TO THE EYE
  - **Adult:** Apply twice daily

**TIMOPTOL-LA**
Reduction of intra-ocular pressure in primary open-angle glaucoma

- TO THE EYE
  - **Adult:** Apply once daily

**TIOPLEX**
Reduction of intra-ocular pressure in primary open-angle glaucoma

- TO THE EYE
  - **Adult:** Apply once daily, to be applied in the morning

**CONTRA-INDICATIONS**
Also consider contra-indications listed for systemically administered beta blockers - bradycardia - heart block

**CAUTIONS**
Also consider cautions listed for systemically administered beta blockers - patients with corneal disease

**INTERACTIONS** → Appendix 1 (beta-blockers).
Since systemic absorption may follow topical application the possibility of interactions, in particular, with drugs such as verapamil should be borne in mind.

**SIDE-EFFECTS**
Anaphylaxis - blepharoconjunctivitis - burning - corneal disorders - dry eyes - erythema - itching - ocular stinging - pain

**FURTHER INFORMATION**
Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

**PRESCRIBING AND DISPENSING INFORMATION**
Although multi-dose timolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**NATIONAL FUNDING/ACCESS DECISIONS**
**Scottish Medicines Consortium (SMC) Decisions**
The Scottish Medicines Consortium has advised (February 2014) that timolol gel eye drops (Tiopex) are accepted for restricted use within NHS Scotland for the reduction of elevated intraocular pressure in patients with ocular hypertension or chronic open angle glaucoma who have proven sensitivity to preservatives.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**EYEdrops**
**EXCIPIENTS:** May contain Benzalkonium chloride

- **TIMOLOL MALEATE (Non-proprietary)**
  - **Timolol (as Timolol maleate) 2.5 mg per 1 ml**
  - **Timolol (as Timolol maleate) 5 mg per 1 ml**

- **Timoptol** (Merck Sharp & Dohme Ltd)
  - **Timolol (as Timolol maleate) 2.5 mg per 1 ml**
  - **Timolol (as Timolol maleate) 5 mg per 1 ml**

- **Tiopex** (Thea Pharmaceuticals Ltd)
  - **Timolol (as Timolol maleate) 1 mg per 1 gram**

Also available in combination with Bimatoprost, p. 968 - Brimonidine, p. 964 - Brinzolamide, p. 966 - Dorzolamide, p. 967 - Latanoprost, p. 969 - Traroprost, p. 970

**CARBONIC ANHYDRASE INHIBITORS**

**Acetazolamide**

**INDICATIONS AND DOSE**
Reduction of intra-ocular pressure in open-angle glaucoma | Reduction of intra-ocular pressure in secondary glaucoma | Reduction of intra-ocular pressure in angle-closure glaucoma

- **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES OR BY INTRAVENOUS INJECTION OR BY INTRAMUSCULAR INJECTION**
  - **Adult:** 0.25–1 g daily in divided doses, intramuscular injection preferably avoided because of alkalinity

**Glaucma**

- **BY MOUTH USING MODIFIED-RELEASE MEDICINES**
  - **Adult:** 1–2 capsules daily

**CONTRA-INDICATIONS**
Adrenocortical insufficiency - hyperchloreaemic acidosis - hypokalaemia - hyponatraemia - long-term administration in chronic angle-closure glaucoma

**CAUTIONS**
Avoid extravasation at injection site (risk of necrosis) - diabetes mellitus - elderly - impaired alveolar ventilation (risk of acidosis) - not generally recommended for long-term use - pulmonary obstruction (risk of acidosis) - renal calculi

**INTERACTIONS** → Appendix 1 (diuretics).

**SIDE-EFFECTS**
- Common or very common Ataxia - depression - diarrhoea - dizziness - excitement - fatigue - flushing - headache - irritability - loss of appetite - nausea - paraesthesia -
polyuria · reduced libido · taste disturbance · thirst · vomiting

▸ **Uncommon** Blood disorders · bone marrow suppression · confusion · crystalluria · drowsiness · electrolyte disturbances on long-term therapy · fever · glycosuria · haematuria · hearing disturbances · melaena · metabolic acidosis · rash · renal calculi · renal colic · renal failure · renal lesions · Stevens-Johnson syndrome · toxic epidermal necrosis · ureretic colic

▸ **Rare** Cholestatic jaundice · convulsions · flaccid paralysis · fulminant hepatic necrosis · hepatic · photosensitivity

▸ **Frequency not known** Transient myopia

**SIDE-EFFECTS, FURTHER INFORMATION**

Acetazolamide is a sulfonamide derivative; blood disorders, rashes, and other sulfonamide-related side-effects occur occasionally—patients should be told to report any unusual skin rash. If electrolyte disturbances and metabolic acidosis occur, these can be corrected by administering potassium bicarbonate (as effervescent potassium tablets).

**ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if history of sulfonamide hypersensitivity.

**PREGNANCY** Manufacturer advises avoid, especially in first trimester (toxicity in animal studies).

**BREAST FEEDING** Amount too small to be harmful.

**HEPATIC IMPAIRMENT** Manufacturer advises avoid.

**RENAL IMPAIRMENT** Avoid—risk of metabolic acidosis.

**MONITORING REQUIREMENTS** Monitor blood count and plasma electrolyte concentrations with prolonged use.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution.

Dorzolamide

INDICATIONS AND DOSE
Raised intra-ocular pressure in ocular hypertension used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated | Open-angle glaucoma used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated
TO THE EYE
Adult: Apply up to 4 times a day

Raised intra-ocular pressure in ocular hypertension as adjunct to beta-blocker | Open-angle glaucoma as adjunct to beta-blocker | Pseudo-exfoliative glaucoma as adjunct to beta-blocker
TO THE EYE
Adult: Apply twice daily

CONTRA-INDICATIONS
Hyperchloraemic acidosis

CAUTIONS
Chronic corneal defects - history of intra-ocular surgery - history of renal calculi - low endothelial cell count - systemic absorption follows topical application

INTERACTIONS
Since systemic absorption may follow topical application of dorzolamide to the eye, the possibility of interactions should be borne in mind.

SIDE-EFFECTS

Common or very common
- Asthenia - bitter taste - blurred vision - conjunctivitis - eye redness - headache - lacrimation - nausea - ocular irritation - superficial punctate keratitis

Uncommon
- Iridocyclitis

Rare
- Contact dermatitis - corneal oedema - dizziness - dry mouth - epistaxis - eyelid crusting - paraesthesia - Stevens-Johnson syndrome - throat irritation - toxic epidermal necrolysis - transient myopia - urolithiasis

SIDE-EFFECTS, FURTHER INFORMATION
Systemic absorption can rarely cause sulfonamide-like side-effects and may require discontinuation if severe.

ALLERGY AND CROSS-SENSITIVITY
Contra-indicated if history of sulfonamide hypersensitivity

PREGNANCY
Manufacturer advises avoid—toxicity in animal studies.

BREAST FEEDING
Manufacturer advises avoid—no information available.

HEPATIC IMPAIRMENT
Manufacturer advises caution—no information available.

RENAL IMPAIRMENT
Avoid if eGFR less than 30 ml/minute/1.73 m².

PRESCRIBING AND DISPENSING INFORMATION
Although multi-dose dorzolamide eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

MEDICINAL FORMS
Available as 0.02% and 0.04% solutions.

EXCIPIENTS: May contain Benzalkonium chloride

Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml
Dorzolamide 2% eye drops | 5 ml (PoS) £6.33 DT price = £2.33
Trusopt (Merck Sharp & Dohme Ltd)
Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml
Trusopt 2% eye drops | 5 ml (PoS) £6.33 DT price = £2.33
Trusopt 2% eye drops 0.2ml unit dose preservative free | 60 unit dose (PoS) £24.18 DT price = £24.18

Dorzolamide with timolol
The properties listed below are those particular to the combination only. For the properties of the components please consider, timolol maleate p. 965, dorzolamide above.

INDICATIONS AND DOSE
Raised intra-ocular pressure in ocular hypertension when beta-blockers alone not adequate | Raised intra-ocular pressure in open-angle glaucoma when beta-blockers alone not adequate | Raised intra-ocular pressure in pseudo-exfoliative glaucoma when beta-blockers alone not adequate
TO THE EYE
Adult: Apply twice daily

PRESCRIBING AND DISPENSING INFORMATION
Although multi-dose dorzolamide with timolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

PARASYMPATHOMIMETICS

Pilocarpine

DRUG ACTION
Pilocarpine acts by opening the inefficient drainage channels in the trabecular meshwork.

INDICATIONS AND DOSE
Primary angle-closure glaucoma | Some secondary glaucomas
TO THE EYE
Adult: Apply up to 4 times a day

CONTRA-INDICATIONS
Acute inflammatory disease of the anterior segment - acute iritis - anterior uveitis - conditions where pupillary constriction is undesirable - some forms of secondary glaucoma (where pupillary constriction is undesirable)

CAUTIONS
A darkly pigmented iris may require a higher concentration of the miotic or more frequent administration and care should be taken to avoid overdosage - asthma - cardiac disease - care in conjunctival damage - care in corneal damage - epilepsy - gastro-intestinal spasm - hypertension - hypothyroidism - hypotension - marked vasomotor instability - Parkinson's disease - peptic ulceration - retinal detachment has occurred in susceptible individuals and those with retinal disease - urinary-tract obstruction

INTERACTIONS
Since systemic absorption follows topical application to the eye.

SIDE-EFFECTS

Rare
- Parasympathomimetics systemic side effects

Frequency not known
- Blurred vision - ciliary spasm (leads to headache and brouache which may be more severe in
the initial 2–4 weeks of treatment—a particular disadvantage in patients under 40 years of age). conjunctival vascular congestion, lens changes (with chronic use), myopia, ocular burning, ocular itching, pupillary block, smarting, vitreous haemorrhage.

- **PREGNANCY** Avoid unless the potential benefit outweighs risk—limited information available.
- **BREAST FEEDING** Avoid unless the potential benefit outweighs risk—no information available.
- **PRE-TREATMENT SCREENING** Fundus examination is advised before starting treatment with a miotic (retinal detachment has occurred).
- **MONITORING REQUIREMENTS** Intra-ocular pressure and visual fields should be monitored in those with chronic simple glaucoma and those receiving long-term treatment with a miotic.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose pilocarpine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE** Blurred vision may affect performance of skilled tasks (e.g. driving) particularly at night or in reduced lighting.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Eye drops**

- **EXCIPIENTS:** May contain Benzalkonium chloride

- **PILOCARPINE (Non-proprietary)**
  - Pilocarpine hydrochloride 10 mg per 1 ml
  - Pilocarpine hydrochloride 1% eye drops | 10 ml (POD) £3.15 DT price = £2.92
  - Pilocarpine hydrochloride 20 mg per 1 ml
  - Pilocarpine hydrochloride 2% eye drops | 10 ml (POD) £3.63 DT price = £3.63
  - Pilocarpine nitrate 20 mg per 1 ml Minims pilocarpine nitrate 2% eye drops 0.5ml unit dose | 20 unit dose (POD) £11.99
  - Pilocarpine hydrochloride 40 mg per 1 ml
  - Pilocarpine hydrochloride 4% eye drops | 10 ml (POD) £5.40 DT price = £4.35

- **PROSTAGLANDIN ANALOGUES AND PROSTAMIDES**

**Bimatoprost**

**INDICATIONS AND DOSE**

Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension to the eye

- Adult: Apply once daily, to be administered preferably in the evening

- **CAUTIONS** Angle-closure glaucoma (no experience of use), aphakia - asthmatic - chronic obstructive pulmonary disease - compromised respiratory function - congenital glaucoma (no experience of use), contact lens wearers, history of significant ocular viral infections, inflammatory ocular conditions (no experience of use), narrow-angle glaucoma (no experience of use), neovascular glaucoma (no experience of use), predisposition to bradycardia, predisposition to hypotension, pseudophakia with torn posterior lens capsule or anterior chamber lenses, risk factors for cystoid macular oedema, risk factors for iritis, risk factors for uveitis

- **SIDE-EFFECTS**

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Use with caution in moderate to severe impairment—no information available.
- **RENAL IMPAIRMENT** Use with caution—no information available.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose bimatoprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE** Changes to eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

- **NATIONAL FUNDING/ACCESS DECISIONS**

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (March 2013) that bimatoprost 300 micrograms/ml preservative-free eye drops (Lumigan® single-dose eye drops) are accepted for restricted use within NHS Scotland for the reduction of elevated intra-ocular pressure in chronic open-angle glaucoma and ocular hypertension (as monotherapy or as adjunctive therapy to beta-blockers) in adults who have proven sensitivity to benzalkonium chloride.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

- **EXCIPIENTS:** May contain Benzalkonium chloride

- **Lumigan (Allergan Ltd)**
  - **Bimatoprost 100 microgram per 1 ml**
    - Lumigan 100micrograms/ml eye drops | 3 ml (POD) £11.71 DT price = £11.71 | 9 ml (POD) £35.13
  - **Bimatoprost 300 microgram per 1 ml**
    - Lumigan 300micrograms/ml eye drops | 3 ml (POD) £10.30 DT price = £10.30 | 9 ml (POD) £30.90
    - Lumigan 300micrograms/ml unit dose 0.4ml unit dose | 30 unit dose (POD) £13.75 DT price = £13.75

**Bimatoprost with timolol**

The properties listed below are those particular to the combination only. For the properties of the components please consider, bimatoprost above, timolol maleate p. 965.

**INDICATIONS AND DOSE**

Raised intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate to the eye

- Adult: Apply once daily
Glucoma and ocular hypertension

**PATIENT AND CARER ADVICE**
Changes in eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

**NATIONAL FUNDING/ACCESS DECISIONS**
Scottish Medicines Consortium (SMC) Decisions The Scottish Medicines Consortium has advised (October 2013) that Ganfort 5 unit dose eye drops are accepted for restricted use within NHS Scotland for the reduction of intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension insufficiently responsive to topical beta-blockers or prostaglandin analogues who have proven sensitivity to preservatives.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride
  - **Bimatoprost 300 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Ganfort 0.3mg/ml / 5mg/ml eye drops | 3 ml (PBM) £13.95 DT price = £13.95 | 9 ml (PBM) £37.59
  - **Ganfort 0.3mg/ml / 5mg/ml eye drops 0.4ml unit dose | 30 unit dose (PBM) £17.50**

### Latanoprost

#### INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma**

**TO THE EYE**
- **Adult:** Apply daily, to be administered preferably in the evening
  - **CONTRA-INDICATIONS** Active herpes simplex keratitis - history of recurrent herpetic keratitis associated with prostaglandin analogues
  - **CAUTIONS** Angle-closure glaucoma (no experience of use) - aphakia - asthmatic - chronic obstructive pulmonary disease - compromised respiratory function - congenital glaucoma (no experience of use) - contact lens wearers - do not use within 5 minutes of thiomersal-containing preparations - history of significant ocular viral infections - inflammatory ocular conditions (no experience of use) - narrow-angle glaucoma (no experience of use) - neovascular glaucoma (no experience of use) - peri-operative period of cataract surgery - pseudophakia with torn posterior lens capsule or anterior chamber lenses - risk factors for cystoid macular oedema - risk factors for iritis - risk factors for uveitis
  - **SIDE-EFFECTS**
    - **Common or very common** Blepharitis - blood pressure changes - brown pigmentation particularly in those with mixed-colour irides - conjunctival disorders - corneal erosion - darkening, thickening and lengthening of eye lashes - eyelash and vellus hair changes - headache - ocular discomfort - photophobia - pigmentation of periorcular skin - punctate keratitis - reduced visual acuity - transient punctate epithelial erosion
    - **Uncommon** Asthenopia - dizziness - skin rash
    - **Rare** Arthralgia - darkening of palpebral skin - facial oedema - iritis - macular oedema - myalgia - uveitis
    - **Very rare** Chest pain - exacerbation of angina - palpitation - periorbital changes resulting in deepening of the eyelid sulcus
    - **Frequency not known** Asthma - dyspnoea - exacerbation of asthma - exacerbation of COPD - iris cyst - nasopharyngitis - pyrexia
  - **PREGNANCY** Manufacturer advises avoid.
  - **BREAST FEEDING** May be present in milk—manufacturer advises avoid.
  - **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose latanoprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available

### Latanoprost with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, latanoprost above, timolol maleate p. 965.

#### INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma and ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

**TO THE EYE**
- **Adult:** Apply once daily

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**
- **EXCIPIENTS:** May contain Benzalkonium chloride
  - **LATA NOPROST (Non-proprietary)**
    - **Latanoprost 50 microgram per 1 ml** Latanoprost 50 micrograms/ml eye drops | 2.5 ml (PBM) £12.48 DT price = £12.16
    - **Monopost (Pfizer Ltd)**
      - **Latanoprost 50 microgram per 1 ml** Monopost 50 micrograms/ml eye drops 0.2ml unit dose | 30 unit dose (PBM) £8.49 DT price = £8.49 | 90 unit dose (PBM) £25.47 DT price = £25.47
  - **Xalatan (Pfizer Ltd)**
    - **Latanoprost 50 microgram per 1 ml** Xalatan 50 micrograms/ml eye drops | 2.5 ml (PBM) £12.48 DT price = £12.16

### Tafluprost

#### INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma**

**TO THE EYE**
- **Adult:** Apply daily, to be administered preferably in the evening
**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Disodium edetate

- **Saflutan** (Merck Sharp & Dohme Ltd)
- **Tafluprost 15 microgram per 1 ml** Saflutan 15micrograms/ml eye drops 0.3ml unit dose | 30 unit dose (£95) £12.20 DT price = £12.20

**Travoprost**

**INDICATIONS AND DOSE**

Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension

TO THE EYE

- Adult: Apply daily, to be administered preferably in the evening

**Side-effects**

- **Rare** Mydriasis
- **Uncommon** Angle-closure glaucoma (no experience of use)

**PATIENT AND CARER ADVICE**

Changes to eye colour

Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

**MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Propylene glycol

- **Travatan (Alcon Laboratories (UK) Ltd)** Travoprost 40 microgram per 1 ml Travatan 40micrograms/ml eye drops | 2.5 ml (£95) £10.95 DT price = £10.95

Timolol with travoprost

The properties listed below are those particular to the combination only. For the properties of the components please consider, timolol maleate p. 965, travoprost above.

**INDICATIONS AND DOSE**

Raised intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate

TO THE EYE

- Adult: Apply once daily
Retinal disorders

6.1 Macular degeneration

Subfoveal choroidal neovascularisation

Aflibercept below, pegaptanib sodium p. 972 and ranibizumab p. 973 are vascular endothelial growth factor inhibitors licensed for the treatment of neovascular (wet) age-related macular degeneration. Aflibercept is also licensed for the treatment of macular oedema secondary to central retinal vein occlusion, and diabetic macular oedema; ranibizumab is also licensed for the treatment of visual impairment due to diabetic macular oedema, macular oedema secondary to branch or central retinal vein occlusion, and choroidal neovascularisation secondary to pathologic myopia. Ranibizumab can be administered concomitantly with laser photocoagulation for the treatment of diabetic macular oedema and for macular oedema secondary to branch retinal vein occlusion.

PHOTOSENSITISERS

Verteporfin

DRUG ACTION Following intravenous infusion, verteporfin is activated by local irradiation using non-thermal red light to produce cytotoxic derivatives.

INDICATIONS AND DOSE

Photodynamic treatment of age-related macular degeneration associated with predominantly classic subfoveal choroidal neovascularisation or with pathological myopia (specialist use only)

BY INTRAVENOUS INFUSION

▶ Adult: 6 mg/m², dose to be given over 10 minutes

CONTRA-INDICATIONS Acute porphyria

CAUTIONS Avoid extravasation · biliary obstruction · photosensitivity

INTERACTIONS Caution on concomitant use with other photosensitising drugs.

SIDE-EFFECTS

▶ Common or very common Back pain · flashing lights · hypercholesterolaemia · malaise · nausea · photosensitivity · reduced visual acuity · visual disturbances · visual-field defects

▶ Uncommon Hypoaesthesia · hypertension · pyrexia · retinal detachment · subretinal, retinal or vitreous haemorrhage

▶ Rare Retinal or choroidal vessel non-perfusion

▶ Frequency not known Chest pain · macular oedema · myocardial infarction · retinal oedema · vasovagal reactions

PREGNANCY Manufacturer advises use only if potential benefit outweighs risk (teratogenic in animal studies).

VESTED INTERESTS

Aflibercept is a recombinant fusion protein that acts as a soluble decoy receptor and binds to vascular endothelial growth factors A and B (VEGF-A, VEGF-B) and placental growth factor (PIGF). Aflibercept inhibits the activation of VEGF receptors and the proliferation of endothelial cells, thereby inhibiting the growth of new vessels that supply tumours with oxygen and nutrients.

INDICATIONS AND DOSE

Neovascular (wet) age-related macular degeneration (specialist use only)

BY INTRAVITREAL INJECTION

▶ Adult: Initially 2 mg once a month for 3 months, to be injected into the affected eye, then 2 mg every 2 months, review treatment frequency after 12 months

Macular oedema secondary to central retinal vein occlusion (specialist use only)

BY INTRAVITREAL INJECTION

▶ Adult: Initially 2 mg once a month, to be injected into the affected eye, monitor visual and anatomic outcomes monthly; continue treatment until visual and anatomic outcomes are stable for 3 monthly assessments (discontinue treatment if no improvement in visual and anatomic outcomes after initial 3 injections); if necessary subsequent doses may be given at least 1 month apart continued →

BREAST FEEDING No information available—manufacturer advises avoid breast-feeding for 48 hours after administration.

HEPATIC IMPAIRMENT Use with caution in moderate hepatic impairment. Avoid in severe hepatic impairment.

DIRECTIONS FOR ADMINISTRATION For information on administration and light activation, consult product literature. For intravenous infusion (Visudyne®), give intermittently in Glucose 5%; reconstitute each 15 mg with 7 ml water for injections to produce a 2 mg/ml solution then dilute requisite dose with infusion fluid to a final volume of 30 ml and give over 10 minutes; protect infusion from light and administer within 4 hours of reconstitution. Incompatible with sodium chloride infusion.

PATIENT AND CARER ADVICE Photosensitivity—avoid exposure of unprotected skin and eyes to bright light during infusion and for 48 hours afterwards.

NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

▶ Verteporfin photodynamic therapy for wet age-related macular degeneration (September 2003) NICE TA68

Photodynamic therapy is recommended for wet age-related macular degeneration with a confirmed diagnosis of classic (no occult) subfoveal choroidal neovascularisation and best-corrected visual acuity of 6/60 or better.

Photodynamic therapy is not recommended for wet age-related macular degeneration with predominantly classic but partly occult subfoveal choroidal neovascularisation except in clinical studies. www.nice.org.uk/TA68
Diabetic macular oedema (specialist use only)

**BY INTRAVITREAL INJECTION**
- Adult: Initially 2 mg once a month for 5 months, then maintenance 2 mg every 2 months, to be injected into the affected eye, review treatment frequency after 12 months (discontinue treatment if no improvement in visual and anatomic outcomes)

**CONTRA-INDICATIONS** Clinical signs of irreversible ischaemic visual function loss - ocular or periorcular infection - severe intra-ocular inflammation

**CAUTIONS** Active systemic infection - diabetic patients with uncontrolled hypertension - discontinue treatment if stage 3 or 4 macular holes develop—consult product literature for full details - discontinue treatment in the event of a retinal break—consult product literature for full details - discontinue treatment in the event of rhegmatogenous retinal detachment—consult product literature for full details - patients at risk of retinal pigment epithelial tear - poorly controlled glaucoma - recent history of myocardial infarction - recent history of stroke - recent history of transient ischaemic attack

**SIDE-EFFECTS**

**SPECIFIC SIDE-EFFECTS**
- Common or very common
  - With intravitreal use anterior chamber flare - blindness - corneal epithelial defect - eyelid irritation - iridocyclitis - iritis - lenticular opacities - retinal detachment - retinal tear - uveitis
- Rare
  - With intravitreal use hypopyon - vitritis
- **CONCEPTION AND CONTRACEPTION** Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **MONITORING REQUIREMENTS** Monitor intra-ocular pressure following injection.
- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - **NICE technology appraisals (TAs)**
    - Aflibercept solution for injection for treating wet age-related macular degeneration (July 2013) NICE TA294

It is used in accordance with the recommendations for ranibizumab in NICE TA 155 and

the manufacturer provides aflibercept solution for injection with the discount agreed in the patient access scheme www.nice.org.uk/TA294

Aflibercept for treating visual impairment caused by macular oedema secondary to central retinal vein occlusion (February 2014) NICE TA305

Aflibercept solution for injection is recommended as an option for treating visual impairment caused by macular oedema secondary to central retinal vein occlusion only if the manufacturer provides aflibercept solution for injection with the discount agreed in the patient access scheme. www.nice.org.uk/TA305

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **Eylea (Bayer Plc)**
  - Aflibercept 40 mg per 1 ml Eylea 2mg/microlitres solution for injection vials | 1 vial £816.00

**Pegaptanib sodium**

**INDICATIONS AND DOSE**

Treatment of neovascular (wet) age-related macular degeneration (specialist use only)

**BY INTRAVITREAL INJECTION**
- Adult: 300 micrograms every 6 weeks, to be administered into the affected eye, review treatment if no benefit after 2 consecutive injections

**CONTRA-INDICATIONS** Ocular or periorcular infection

**CAUTIONS**

**CAUTIONS, FURTHER INFORMATION**

Pegaptanib is given by intravitreal injection by specialists experienced in the management of this condition. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors. Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.

**SIDE-EFFECTS**

- **Common or very common** Anterior chamber inflammation - cataract - conjunctival haemorrhage - conjunctival hyperaemia - corneal abrasion or oedema - corneal erosion - eye pain - eyelid oedema - foreign body sensation in eye - increased lacrimation - injection-site haemorrhage - injection-site pain - ocular hyperaemia - punctate keratitis - raised intra-ocular pressure - reduced visual acuity - retinal degeneration - retinal pigment epithelium detachment - retinal pigment epithelium tear - vitreous detachment - vitreous floaters - vitreous haemorrhage
- **Uncommon**
- **Rare**
- **With intravitreal use** hypopyon - vitritis
- **CONCEPTION AND CONTRACEPTION** Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **MONITORING REQUIREMENTS** Monitor intra-ocular pressure following injection.
- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - **NICE technology appraisals (TAs)**
    - Pegaptanib sodium 2mg/microlitres solution for injection vials | 1 vial £305
    - Pegaptanib sodium 2mg/microlitres solution for injection vials | 1 vial £155

Changes in vision - eye pain - injection-site reactions - increased intra-ocular pressure - vitreous haemorrhage - vitreous disorders - vitreous floaters

**PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.

**BREAST FEEDING** Manufacturer advises avoid—no information available.

**MONITORING REQUIREMENTS**

Monitor intra-ocular pressure (transient increase may occur following injection, and small, sustained increases reported after repeated dosing).
- Monitor for vitreous haemorrhage and for signs of ocular infection for 2 weeks following injection.
- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS**

  **NICE technology appraisals (TAs)**

  Ranibizumab and pegaptanib for the treatment of age-related macular degeneration (updated May 2012) NICE TA155

  Pegaptanib is not recommended for the treatment of wet age-related macular degeneration; patients currently receiving pegaptanib for any lesion type can continue therapy until they and their specialist consider it appropriate to stop. [www.nice.org.uk/TA155](http://www.nice.org.uk/TA155)

- **MEDICINAL FORMS**

  There can be variation in the licensing of different medicines containing the same drug.

  **Solution for injection**

  - Macugen (Pfizer Ltd)
  - Pegaptanib oligonucleotide (as Pegaptanib sodium) 3.33 mg per 1 ml Macugen 300micrograms/0.9ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (PFS) £514.00 (Hospital only)

### Ranibizumab

**INDICATIONS AND DOSE**

**Neovascular (wet) age-related macular degeneration (specialist use only)**

**BY INTRAVITREAL INJECTION**

- **Adult:** 500 micrograms once a month, to be administered into the affected eye, monitor visual acuity monthly, continue treatment until visual acuity is stable for 3 consecutive months, thereafter monitor visual acuity monthly, if necessary subsequent doses may be given at least 1 month apart

  **Diabetic macular oedema** | **Macular oedema secondary to retinal vein occlusion (specialist use only)**

  **BY INTRAVITREAL INJECTION**

  - **Adult:** Initially 500 micrograms once a month, to be administered into the affected eye, monitor visual acuity monthly, continue treatment until visual acuity is stable for 3 consecutive months (discontinue treatment if no improvement in visual acuity after initial 3 injections), thereafter monitor visual acuity monthly, if necessary subsequent doses may be given at least 1 month apart

  **Choroidal neovascularisation secondary to pathologic myopia (specialist use only)**

  **BY INTRAVITREAL INJECTION**

  - **Adult:** Initially 500 micrograms, to be administered as a single injection into the affected eye, monitor for disease activity monthly for first 2 months, then at least every 3 months thereafter during the first year, then as required, if necessary subsequent doses may be given at least 1 month apart

  **Concomitant treatment of diabetic macular oedema, or macular oedema secondary to branch retinal vein occlusion, with laser photocoagulation (specialist use only)**

  **BY INTRAVITREAL INJECTION**

  - **Adult:** 500 micrograms, to be administered at least 30 minutes after laser photocoagulation

- **CONTRA-INDICATIONS**

  - Ocular or periocular infection
  - Severe intra-ocular inflammation
  - Signs of irreversible ischaemic visual function loss in patients with retinal vein occlusion

- **CAUTIONS**

  - Active systemic infection
  - Diabetic macular oedema due to type 1 diabetes (limited information available)
  - Diabetic patients with HbA1c over 12%
  - History of stroke
  - History of transient ischaemic attack
  - Patients at risk of retinal pigment epithelial tear
  - Previous intravitreal injections
  - Proliferative diabetic retinopathy
  - Retinal detachment or macular hole
  - Uncontrolled hypertension

  The manufacturer provides ranibizumab with the discount agreed in the patient access scheme (as revised in 2012).

**SIDE-EFFECTS**

- **Common or very common**

  - Allergic skin reactions
  - Anaemia
  - Anterior chamber flare
  - Anxiety
  - Arthralgia
  - Blepharitis
  - Cataract
  - Conjunctival disorders
  - Conjunctivitis
  - Cough
  - Eyelid oedema
  - Headache
  - Iridocyclitis
  - Iritis
  - Nasopharyngitis
  - Nausea
  - Ocular discomfort
  - Photophobia
  - Photopsia
  - Posterior capsule opacification
  - Punctuate keratitis
  - Raised intra-ocular pressure
  - Retinal disorders
  - Urinary tract infection
  - Uveitis
  - Visual disturbance
  - Vitreous disorders

- **Uncommon**

  - Blindness
  - Corneal disorders
  - Hypertension
  - Hypopyon
  - Iris adhesion
  - Keratopathy

- **CONCEPTION AND CONTRACEPTION**

  Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.

- **PREGNANCY**

  Manufacturer advises avoid unless potential benefit outweighs risk.

- **BREAST FEEDING**

  Manufacturer advises avoid—no information available.

- **MONITORING REQUIREMENTS**

  - Monitor intra-ocular pressure, perfusion of the optic nerve head, and for signs of ocular infection following injection.
  - Monitor visual acuity, see individual indications and dose for frequency.

- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.

- **NATIONAL FUNDING/ACCESS DECISIONS**

  **NICE technology appraisals (TAs)**

  Ranibizumab and pegaptanib for the treatment of age-related macular degeneration (updated May 2012) NICE TA155

  Ranibizumab is recommended for the treatment of wet age-related macular degeneration if all of the following apply:

  - The best corrected visual acuity is between 6/12 and 6/96;
  - There is no permanent structural damage to the central fovea;
  - The lesion size is less than or equal to 12 disc areas in greatest linear dimension;
  - There is evidence of recent disease progression;
  - The manufacturer provides ranibizumab with the discount agreed in the patient access scheme (as revised in 2012).

  Ranibizumab should only be continued in patients who maintain adequate response to therapy. [www.nice.org.uk/TA155](http://www.nice.org.uk/TA155)

- **Ranibizumab for the treatment of diabetic macular oedema (February 2013) NICE TA274**

  Ranibizumab is recommended as an option for the treatment of visual impairment due to diabetic macular oedema only if:

  - The eye has a central retinal thickness of 400 micrometres or more at the start of treatment and
  - The manufacturer provides ranibizumab with the discount agreed in the patient access scheme (as revised in 2012).
Patients currently receiving ranibizumab for treating visual impairment due to diabetic macular oedema whose disease does not meet the criteria should be able to continue treatment until they and their clinician consider it appropriate to stop. www.nice.org.uk/TA274

- Ranibizumab for the treatment of visual impairment caused by macular oedema secondary to retinal vein occlusion (May 2013) NICE TA283

Ranibizumab is recommended as an option for treating visual impairment caused by macular oedema:
- following central retinal vein occlusion or
- following branch retinal vein occlusion only if treatment with laser photocoagulation has not been beneficial, or when laser photocoagulation is not suitable because of the extent of macular haemorrhage and
- only if the manufacturer provides ranibizumab with the discount agreed in the patient access scheme revised in the context of NICE technology appraisal guidance 274. www.nice.org.uk/TA283

- Ranibizumab for treating choroidal neovascularisation associated with pathological myopia (November 2013) NICE TA298

Ranibizumab is recommended as an option for treating visual impairment due to choroidal neovascularisation secondary to pathological myopia when the manufacturer provides ranibizumab with the discount agreed in the patient access scheme. www.nice.org.uk/TA298

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (May 2007) that ranibizumab (Lucentis®) is accepted for use within NHS Scotland for the treatment of neovascular (wet) age-related macular degeneration. The Scottish Medicines Consortium has advised (October 2011 and April 2013) that ranibizumab (Lucentis®) is accepted for use within NHS Scotland for the treatment of macular oedema secondary to branch or central retinal vein occlusion, and (November 2012) for restricted use for the treatment of visual impairment due to diabetic macular oedema in adults with best corrected visual acuity 75 Early Treatment Diabetic Retinopathy Study letters or less at baseline, and (October 2013) for the treatment of visual impairment due to choroidal neovascularisation secondary to pathologic myopia in adults; SMC advice is contingent upon the continuing availability of ranibizumab at the price agreed in the patient access scheme.

- MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Solution for injection
- Lucentis (Novartis Pharmaceuticals UK Ltd) Ranibizumab 10 mg per 1 ml Lucentis 2.3mg/0.23ml solution for injection vials | 1 vial (£74.00 (Hospital only)
Lucentis 1.65mg/0.165ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (£74.00

6.2 Macular oedema

Drugs used for Macular oedema not listed below; Aflibercept, p. 971; Ranibizumab, p. 973

Fluocinolone acetonide

INDICATIONS AND DOSE
Treatment of visual impairment associated with chronic diabetic macular oedema which is insufficiently responsive to available therapies (specialist use only)

BY INTRAVITREAL INJECTION
- Adults: 190 micrograms, to be administered into the affected eye

- CONTRA-INDICATIONS Active or suspected ocular infection · active or suspected peri-ocular infection · pre-existing glaucoma
- CAUTIONS Raised baseline intra-ocular pressure
- INTERACTIONS Caution with concomitant administration of antiocoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).
- SIDE-EFFECTS
- Common or very common Blurred vision · cataract · conjunctival haemorrhage · glaucoma · ocular discomfort · raised intra-ocular pressure · reduced visual acuity · vitreous floaters · vitreous haemorrhage
- Uncommon Conjunctival ulcer · endophthalmitis · eye discharge · eye pruritus · headache · iris adhesions · iris neovascularisation · maculopathy · ocular hyperaemia · optic atrophy · optic nerve disorder · posterior capsule opacification · retinal exudates · retinal vascular occlusion · sclera thinning · vitreous degeneration · vitreous detachment
- PREGNANCY Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- BREAST FEEDING Manufacturer advises avoid unless essential.
- MONITORING REQUIREMENTS
- Monitor for raised intra-ocular pressure (particularly if raised at baseline), retinal detachment, endophthalmitis, vitreous haemorrhage or detachment within 2–7 days following the procedure.
- Monitor intra-ocular pressure at least every 3 months thereafter (for approximately 36 months).
- DIRECTIONS FOR ADMINISTRATION Concurrent administration to both eyes not recommended. For further information on administration and repeat dosing, consult product literature.
- NATIONAL FUNDING/ACCESS DECISIONS
NICE technology appraisals (TAs)
- Fluocinolone acetonide intravitreal implant for treating chronic diabetic macular oedema after an inadequate response to prior therapy (November 2013) NICE TA301

Fluocinolone acetonide intravitreal implant is recommended as an option for treating chronic diabetic macular oedema that is insufficiently responsive to available therapies only if:
- the implant is to be used in an eye with an intra-ocular (pseudophakic lens) and
- the manufacturer provides fluocinolone acetonide intravitreal implant with the discount agreed in the patient access scheme. www.nice.org.uk/TA301

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (February 2014) that fluocinolone acetonide intravitreal implant (Iluvien®) is recommended for restricted use within NHS Scotland for the treatment of vision impairment associated with chronic diabetic macular oedema, considered insufficiently responsive to available therapies, only in patients in whom the affected eye is pseudophakic (has an artificial lens after cataract surgery), and retreatment would take place only if the patient had previously responded to treatment with
fluocinolone acetonide and subsequently best corrected visual acuity had deteriorated to less than 20/32.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Implant**
- Iluvien (Alimera Sciences Ltd)
  Fluocinolone acetonide 190 microgram intravitreal implant in applicator | 1 device | £5,500.00

---

### 6.3 Vitreomacular traction

**RECOMBINANT PROTEOLYTIC ENZYMES**

**Ocriplasmin**

**INDICATIONS AND DOSE**
Treatment of vitreomacular traction, including when associated with a macular hole of diameter less than or equal to 400 microns (specialist use only)

**BY INTRAVITREAL INJECTION**
- Adult: 125 micrograms for 1 dose, to be administered into the affected eye, concurrent administration to both eyes is not recommended

**CONTRA-INDICATIONS**
Active or suspected ocular or periocular infection - aphakia - exudative age-related macular degeneration - high myopia - history of rhegmatogenous retinal detachment - ischaemic retinopathies - large diameter macular hole (> 400 microns) - lens zonule instability - proliferative diabetic retinopathy - recent intra-ocular injection (including laser therapy) - recent ocular surgery - retinal vein occlusions - vitreous haemorrhage

**CAUTIONS**
History of uveitis (including severe active inflammation) - non-proliferative diabetic retinopathy - significant eye trauma

**SIDE-EFFECTS**
- Common or very common  Abnormal retinograph - anterior chamber cell or flare - chromatopsia - conjunctival disorders - eyelid oedema - iritis - macular degeneration - macular hole - macular oedema - metamorphopsia - ocular discomfit - ocular hyperaemia - photophobia - photopsia - raised intra-ocular pressure - reduced visual acuity - retinal disorders - retinal pigment epitheliopathy - vitreous disorders
- Uncommon  Anterior chamber inflammation - corneal abrasion - diplopia - eye inflammation - hyphaema - lens subluxation - miosis - scotoma - transient blindness - unequal pupils - visual field defect

**PREGNANCY**
Manufacturer advises use only if potential benefit outweighs risk—no information available.

**BREAST FEEDING**
Manufacturer advises use only if potential benefit outweighs risk—no information available.

**MONITORING REQUIREMENTS**
Monitor intra-ocular pressure, visual acuity, and for signs of intra-ocular inflammation or infection following injection.

**DIRECTIONS FOR ADMINISTRATION**
For further information on administration, consult product literature.

**NATIONAL FUNDING/ACCESS DECISIONS**
**NICE technology appraisals (TAs)**
- Ocriplasmin for treating vitreomacular traction (October 2013) NICE TA297
  Ocriplasmin is recommended as an option for treating vitreomacular traction in adults, only if:
  - they have a stage II full-thickness macular hole with a diameter of 400 microns or less and/or
  - they have severe symptoms. [www.nice.org.uk/TA297](http://www.nice.org.uk/TA297)

**Scottish Medicines Consortium (SMC) Decisions**
The [Scottish Medicines Consortium](http://www.scottishmedicines.org.uk) has advised (July 2014) that ocriplasmin (Jetrea®) is accepted for restricted use within NHS Scotland for the treatment of patients with vitreomacular traction plus macular hole, regardless of whether they have epiretinal membrane formation, and in patients with vitreomacular traction alone (no epiretinal membrane and no macular hole).

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**
- Jetrea (Alcon Laboratories (UK) Ltd)
  Ocriplasmin 2.5 mg per 1 ml Jetrea 0.5mg/0.2ml concentrate for solution for injection vials | 1 vial | £2,500.00

---

1 Ear

Otitis externa

Otitis externa is an inflammatory reaction of the meatal skin. It is important to exclude an underlying chronic otitis media before treatment is commenced. Many cases recover after thorough cleansing of the external ear canal by suction or dry mopping. A frequent problem in resistant cases is the difficulty in applying lotions and ointments satisfactorily to the relatively inaccessible affected skin. The most effective method is to introduce a ribbon gauze dressing or sponge wick soaked with corticosteroid ear drops or with an astringent such as aluminium acetate solution p. 451. When this is not practical, the ear should be gently cleansed with a probe covered in cotton wool and the patient encouraged to lie with the affected ear uppermost for ten minutes after the canal has been filled with a liberal quantity of the appropriate solution. If infection is present, a topical anti-infective which is not used systemically (such as neomycin sulfate p. 451 or clioquinol) may be used, but for only about a week as excessive use may result in fungal infections; these may be difficult to treat and require expert advice. Sensitivity to the anti-infective or solvent may occur and resistance to antibacterials is a possibility with prolonged use. Aluminium acetate p. 979 ear drops are also effective against bacterial infection and inflammation of the ear. Chloramphenicol p. 955 may be used but the ear drops contain propylene glycol and cause hypersensitivity reactions in about 10% of patients. Solutions containing an anti-infective and a corticosteroid are used for treating cases where infection is present with inflammation and eczema.

In view of reports of ototoxicity, manufacturers contraindicate treatment with topical aminoglycosides or polymyxins in patients with a perforated tympanic membrane (eardrum) or patent grommet. However, some specialists do use these drops cautiously in the presence of a perforation or patent grommet in patients with chronic suppurative otitis media and when other measures have failed for otitis externa; treatment should be considered only by specialists in the following circumstances:

- patients should be counselled on the risk of ototoxicity and given justification for the use of these topical antibiotics;
- baseline audiometry should be performed, if possible, before treatment is commenced.

Clinical expertise and judgement should be used to assess the risk of treatment versus the benefit to the patient in such circumstances.

A solution of acetic acid 2% acts as an antifungal and antibacterial in the external ear canal. It may be used to treat mild otitis externa but in severe cases an antiinflammatory preparation with or without an anti-infective drug is required. A proprietary preparation containing acetic acid 2% (EarCalm® spray) is on sale to the public.

For severe pain associated with otitis externa, a simple analgesic, such as paracetamol p. 354 or ibuprofen p. 927, can be used. A systemic antibacterial can be used if there is spreading cellulitis or if the patient is systemically unwell. When a resistant staphylococcal infection (a boil) is present spreading cellulitis or if the patient is systemically unwell. When a resistant staphylococcal infection (a boil) is present ciprofloxacin p. 956 (or an aminoglycoside) may be needed in pseudomonal infections which may occur if the patient has diabetes or is immunocompromised.

The skin of the pinna adjacent to the ear canal is often affected by eczema. A topical corticosteroid cream or ointment is then required, but prolonged use should be avoided.

Otitis media

Acute otitis media

Acute otitis media is the commonest cause of severe aural pain in small children. Many infections, especially those accompanying coryza, are caused by viruses. Most uncomplicated cases resolve without antibacterial treatment and a simple analgesic, such as paracetamol p. 354, may be sufficient. In children without systemic features, a systemic antibacterial may be started after 72 hours if there is no improvement, or earlier if there is deterioration, if the patient is systemically unwell, if the patient is at high risk of serious complications (e.g. in immunosuppression, cystic fibrosis), if mastoiditis is present, or in children under 2 years of age with bilateral otitis media. Perforation of the tympanic membrane in patients with acute otitis media usually heals spontaneously without treatment; if there is no improvement, e.g. pain or discharge persists, a systemic antibacterial can be given. Topical treatment of acute otitis media is ineffective and there is no place for drops containing a local anaesthetic.
Otitis media with effusion

Otitis media with effusion (glue ear) occurs in about 10% of children and in 90% of children with cleft palates. Systemic antibacterials are not usually required. If glue ear persists for more than a month or two, the child should be referred for assessment and follow up because of the risk of long-term hearing impairment which can delay language development. Untreated or resistant glue ear may be responsible for some types of chronic otitis media.

Chronic otitis media

Opportunistic organisms are often present in the debris, keratin, and necrotic bone of the middle ear and mastoid in patients with chronic otitis media. The mainstay of treatment is thorough cleansing with aural microsuction which may completely resolve long-standing infection. Local cleansing of the meatal and middle ear may be followed by treatment with a sponge wick or ribbon gauze containing the same drug. There can be variation in the licensing of different medicines containing the same drug.

Removal of ear wax

Ear wax (cerumen) is a normal bodily secretion which provides a protective film on the meatal skin and need only be removed if it causes hearing loss or interferes with a proper view of the ear drum. Ear wax can be softened using simple remedies such as olive oil ear drops or almond oil ear drops; sodium bicarbonate p. 579 ear drops are also effective, but may cause dryness of the ear canal. If the wax is hard and impacted, the drops can be used twice daily for several days and this may reduce the need for mechanical removal of the wax. The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear. Some proprietary preparations containing organic solvents can irritate the meatal skin, and in most cases the simple remedies indicated above are just as effective and less likely to cause irritation. Docosate sodium p. 980 or urea hydrogen peroxide p. 980 are ingredients in a number of proprietary preparations for softening ear wax.

If necessary, wax may be removed by irrigation with water (warmed to body temperature). Ear irrigation is generally best avoided in young children, in patients unable to cooperate with the procedure, in those with otitis media in the last six weeks, in otitis externa, in patients with cleft palate, a history of ear drum perforation, or previous ear surgery. A person who has hearing in one ear only should not have that ear irrigated because even a very slight risk of damage is unacceptable in this situation.

1.1 Otitis externa

ANTI-INFECTIVES

Chloramphenicol

• DRUG ACTION Chloramphenicol is a potent broad-spectrum antibiotic.

INDICATIONS AND DOSE

Bacterial infection in otitis externa

TO THE EAR

• Child: Apply 2–3 drops 2–3 times a day
• Adult: Apply 2–3 drops 2–3 times a day

• CAUTIONS Avoid prolonged use

• SIDE-EFFECTS

• Common or very common High incidence of sensitivity reactions to vehicle

• PATIENT AND CARER ADVICE

Medicines for children leaflet: Chloramphenicol ear drops for ear infections (otitis externa)

www.medicinesforchildren.org.uk/chloramphenicoleardroppersinfectionsotitisexterna

• LESS SUITABLE FOR PRESCRIBING Chloramphenicol ear drops are less suitable for prescribing.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Ear drops

EXCIPIENTS: May contain Propylene glycol

• CHLORAMPHENICOL (Non-proprietary)

Chloramphenicol 50 mg per 1 ml Chloramphenicol 5% ear drops | 10 ml (P) £5.14 DT price = £5.14

Chloramphenicol 100 mg per 1 ml Chloramphenicol 10% ear drops | 10 ml (P) £27.36

Clioquinol with flumetasone pivalate

INDICATIONS AND DOSE

Eczematous inflammation in otitis externa | Mild bacterial or fungal infections in otitis externa

TO THE EAR

• Child 2-17 years: 2–3 drops twice daily for 7–10 days, to be instilled into the ear
• Adult: 2–3 drops twice daily for 7–10 days, to be instilled into the ear

• CONTRA-INDICATIONS Iodine sensitivity

• CAUTIONS Avoid prolonged use - manufacturer advises avoid in perforated tympanic membrane (but used by specialists for short periods)

• SIDE-EFFECTS Local sensitivity

• PATIENT AND CARER ADVICE Clioquinol stains skin and clothing
Ear, nose and oropharynx

Gentamicin

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Ear drops
- CLOQUINOL WITH FLUMETASONE PIVALATE (Non-proprietary)
  Cloquinol 10 mg per 1 ml, Flumetasone pivalate 200 microgram per 1 ml
  Flumetasone 0.02% / Cloquinol 1% ear drops
  7.5 ml [POD] £6.04 DT price = £6.04 | 10 ml [POD] £8.05 DT price = £8.05

SIDE-EFFECTS
Local irritation - local sensitivity

CAUTIONS
Avoid prolonged use

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, oral suspension, oral solution, cream.

Ear/eye drops solution
EXCIPIENTS: May contain Benzalkonium chloride
- GENTAMICIN (Non-proprietary)
  Gentamicin (as Gentamicin sulfate) 3 mg per 1 ml
  Gentamicin 0.3% ear/eye drops
  10 ml [POD] £2.13 DT price = £2.13

- Gentamicin (AMCo)
  Gentamicin (as Gentamicin sulfate) 3 mg per 1 ml
  Gentamicin 0.3% eye/ear drops
  10 ml [POD] £2.13 DT price = £2.13

Clotrimazole

INDICATIONS AND DOSE
Fungal infection in otitis externa

TO THE EAR
- Child: Apply 2–3 times a day continue for at least 14 days after disappearance of infection
- Adult: Apply 2–3 times a day continue for at least 14 days after disappearance of infection

SIDE-EFFECTS
Local irritation

CAUTIONS
Avoid prolonged use

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops containing the same drug.

Liquid
- Canesten (clotrimazole) (Bayer Plc)
  Clotrimazole 10 mg per 1 ml
  Canesten 1% solution
  20 ml [P] £2.30 DT price = £2.30

Framycetin sulfate with dexamethasone and gramicidin

INDICATIONS AND DOSE
Eczematous inflammation in otitis externa

TO THE EAR
- Child: 2–3 drops 3–4 times a day
- Adult: 2–3 drops 3–4 times a day

CONTRA-INDICATIONS
Perforated tympanic membrane

CAUTIONS
Avoid prolonged use

SIDE-EFFECTS
Local sensitivity

LESS SUITABLE FOR PRESCRIBING
Sofradex® is less suitable for prescribing.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Ear drops solution
EXCIPIENTS: May contain Polysorbates
- Sofradex (Sanoﬁ)
  Dexamethasone (as Dexamethasone sodium metasulphobenzoate) 500 microgram per 1 ml, Framycetin sulfate 5 mg per 1 ml, Gramicidin 50 microgram per 1 ml
  Sofradex ear/eye drops
  10 ml [POD] £6.25

Gentamicin

INDICATIONS AND DOSE
Bacterial infection in otitis externa

TO THE EAR
- Child: Apply 2–3 drops 4–5 times a day (including a dose at bedtime)
- Adult: Apply 2–3 drops 4–5 times a day (including a dose at bedtime)

CONTRA-INDICATIONS
Patent grommet (although may be used by specialists, see Ear p. 976) - perforated tympanic membrane

CAUTIONS
Avoid prolonged use

SIDE-EFFECTS
Local sensitivity

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.
Neomycin sulfate with dexamethasone and glacial acetic acid

**INDICATIONS AND DOSE**

Eczematous inflammation in otitis externa

**TO THE EAR**

- **Child 2–17 years:** Apply 1 spray 3 times a day
- **Adult:** Apply 1 spray 3 times a day

- **CONTRA-INDICATIONS**
  - Patient grommet (although may be used by specialists, see Ear p. 976) • perforated tympanic membrane (although may be used by specialists, see Ear p. 976)

- **CAUTIONS**
  - Avoid prolonged use

- **SIDE-EFFECTS**
  - Local sensitivity

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Spray**

- **EXCIPIENTS:** May contain Hydroxybenzoates (parabens)
  - Otozine (Forest Laboratories UK Ltd)
  - Acetic acid glacial 20 mg per 1 gram, Dexamethasone 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram Otozine ear spray 1 ml, Neomycin sulfate 5 mg per 1 ml Otozine ear/spray containing the same drug. Forms available from special-order

**ASTRINGENTS**

Aluminium acetate

**INDICATIONS AND DOSE**

Inflammation in otitis externa

**TO THE EAR**

- **Adult:** To be inserted into meatus or apply on a ribbon gauze dressing or sponge wick which should be kept saturated with the ear drops

- **DIRECTIONS FOR ADMINISTRATION**
  - For ear drops 8%—dilute 8 parts aluminium acetate ear drops (13%) with 5 parts purified water. Must be freshly prepared.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops

CORTICOSTEROIDS

Betamethasone

**INDICATIONS AND DOSE**

**BETNESOL®**

Eczematous inflammation in otitis externa

**TO THE EAR**

- **Adult:** Apply 2–3 drops every 2–3 hours, reduce frequency when relief obtained

**VISTAMETHASONE®**

Eczematous inflammation in otitis externa

**TO THE EAR**

- **Adult:** Apply 2–3 drops every 3–4 hours, reduce frequency when relief obtained

- **CONTRA-INDICATIONS**
  - Avoid alone in the presence of untreated infection (combine with suitable anti-infective)

**MEDICATIONS**

There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye drops solution**

- **BETAMETHASONE (Non-proprietary)**
  - Betamethasone sodium phosphate 1 mg per 1 ml Betamethasone 0.1% ear/eye/nose drops 10 ml (no price available)
  - Betnesol (Focus Pharmaceuticals Ltd)
  - Betamethasone sodium phosphate 1 mg per 1 ml Betnesol 0.1% eye/ear/nose drops 10 ml (no price available)
  - Vistamethasone (Martindale Pharmaceuticals Ltd)
  - Betamethasone sodium phosphate 1 mg per 1 ml Vistamethasone 0.1% ear/eye/nose drops 5 ml (no price available)

**INDICATIONS AND DOSE**

**TO THE EAR**

- **Child:** Apply 2–3 drops every 2–3 hours, frequency to be reduced when relief obtained
- **Adult:** Apply 2–3 drops every 2–3 hours, frequency to be reduced when relief obtained

**CAUTIONS**

- Avoid alone in the presence of untreated infection (combine with suitable anti-infective)

**SIDE-EFFECTS**

- Local sensitivity reactions

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops

**Ear/eye drops solution**

- **EXCIPIENTS:** May contain Benzalkonium chloride, disodium edetate
  - Predsol (Focus Pharmaceuticals Ltd)
  - Prednisolone sodium phosphate 5 mg per 1 ml Predsol 0.5% ear/eye drops 10 ml (no price available)

**1.2 Removal of ear wax**

**BICARBONATE**

**Sodium bicarbonate**

**INDICATIONS AND DOSE**

Removal of ear wax (with 5% ear drop solution)

**TO THE EAR**

- **Child:** (consult product literature)
- **Adult:** (consult product literature)

**SIDE-EFFECTS**

- Dryness of the ear canal

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ear drops**

- **SODIUM BICARBONATE (Non-proprietary)**
  - Sodium bicarbonate 50 mg per 1 ml Sodium bicarbonate 5% ear drops 10 ml £1.25
SOFTENING DRUGS

Almond oil

**INDICATIONS AND DOSE**
Removal of ear wax

**TO THE EAR**
- Adult: Allow drops to warm to room temperature before use (consult product literature)
- Child: Allow drops to warm to room temperature before use (consult product literature)

**DIRECTIONS FOR ADMINISTRATION** The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops

- **Liquid**
  - **ALMOND OIL (Non-proprietary)**
    - Almond oil 1 ml per 1 ml Almond oil liquid | 50 ml £0.76 DT price = £0.76 | 70 ml £0.73 | 200 ml £2.01 | 500 ml £11.56–£11.67 | 2000 ml £19.56 | 200 ml £20.18–£20.38

Arachis oil with chlorobutanol

**INDICATIONS AND DOSE**
Removal of ear wax

**TO THE EAR**

**LESS SUITABLE FOR PRESCRIBING** Arachis (peanut) oil with chlorobutanol ear drops are less suitable for prescribing.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **Ear drops**
  - Cerumol (Thornton & Ross Ltd)
    - Arachis oil 573 mg per 1 ml, Chlorobutanol 50 mg per 1 ml Cerumol ear drops | 11 ml | $2.05
  - Exterol (Dermal Laboratories Ltd)
    - Arachis oil 573 mg per 1 ml, Chlorobutanol 50 mg per 1 ml Exterol ear drops | 11 ml | $2.05

Docusate sodium

(Diociyl sodium sulphosuccinate)

**INDICATIONS AND DOSE**
Removal of ear wax

**TO THE EAR**
- Adult: (consult product literature)

**LESS SUITABLE FOR PRESCRIBING** Ear drops less suitable for prescribing.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **Ear drops**
  - Molcer (Wallace Manufacturing Chemists Ltd)
    - Docusate sodium 50 mg per 1 ml Molcer ear drops | 15 ml | $0.18
  - Waxsol (Meda Pharmaceuticals Ltd)
    - Docusate sodium 5 mg per 1 ml Waxsol ear drops | 10 ml | $1.95

Olive oil

**INDICATIONS AND DOSE**
Removal of ear wax

**TO THE EAR**
- Adult: Apply twice daily for several days (if wax is hard and impacted)
- Child: Apply twice daily for several days (if wax is hard and impacted)

**DIRECTIONS FOR ADMINISTRATION** The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear. Allow ear drops to warm to room temperature before use.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **Ear drops**
  - OLIVE OIL (Non-proprietary)
    - Care olive oil ear drops | 10 ml £1.42
    - Olive oil ear drops | 10 ml £1.42 | 20 ml £2.70
    - Arjun ear drops | 10 ml £1.25
  - Cerumol (olive oil) (Thornton & Ross Ltd)
    - Cerumol olive oil ear drops | 10 ml no price available

- **Spray**
  - Earol (HL Healthcare Ltd)
    - Earol olive oil ear spray | 10 ml no price available

Urea hydrogen peroxide

**INDICATIONS AND DOSE**
Softening and removal of ear wax

**TO THE EAR**
- Adult: (consult product literature)

**PATIENT AND CARER ADVICE** The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear.

**LESS SUITABLE FOR PRESCRIBING** Urea-hydrogen peroxide ear drops are less suitable for prescribing.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **Ear drops**
  - Exterol (Dermal Laboratories Ltd)
    - Urea hydrogen peroxide 50 mg per 1 gram Exterol 5% ear drops | 8 ml | $1.75
  - Otex (Dendron Ltd)
    - Urea hydrogen peroxide 50 mg per 1 gram Otex 5% ear drops | 8 ml | $2.89

2 **Nose**

**Nose**

Rhinitis is often self-limiting but bacterial sinusitis may require treatment with antibacterials. There are few indications for nasal sprays and drops except in allergic rhinitis and perennial rhinitis. Many nasal preparations contain sympathomimetic drugs which may damage the nasal cilia. Sodium chloride 0.9% solution may be used as a douche or ‘sniff’ following endonasal surgery.
**Drugs used in nasal allergy**

Mild allergic rhinitis is controlled by antihistamines (see under Antihistamines, allergen immunotherapy and allergic emergencies p. 241) or topical nasal corticosteroids; systemic nasal decongestants are of doubtful value. Topical nasal decongestants can be used for a short period to relieve congestion and allow penetration of a topical nasal corticosteroid.

More persistent symptoms and nasal congestion can be relieved by topical nasal corticosteroids. The topical antihistamine azelastine hydrochloride p. 945 is useful for controlling breakthrough symptoms in allergic rhinitis. Topical antihistamines are considered less effective than topical corticosteroids but probably more effective than cromoglicate. In seasonal allergic rhinitis (e.g. hay fever), treatment should begin 2 to 3 weeks before the season commences and may have to be continued for several months; continuous treatment may be required for years in perennial rhinitis.

Montelukast p. 233 is less effective than topical nasal corticosteroids; montelukast can be used in patients with seasonal allergic rhinitis and concomitant asthma. Sometimes allergic rhinitis is accompanied by vasomotor rhinitis. In this situation, the addition of topical nasal ipratropium bromide can reduce watery rhinorrhea.

Very disabling symptoms occasionally justify the use of systemic corticosteroids for short periods, for example, in students taking important examinations. They may also be used at the beginning of a course of treatment with a corticosteroid spray to relieve severe mucosal oedema and allow the spray to penetrate the nasal cavity.

**Corticosteroids**

Corticosteroid nasal preparations should be avoided in the presence of untreated nasal infections, after nasal surgery (until healing has occurred), and in pulmonary tuberculosis. Patients transferred from systemic corticosteroids may experience exacerbation of some symptoms. Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged; for cautions and side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays. The height of children receiving prolonged treatment with nasal corticosteroids should be monitored; if growth is slowed, referral to a paediatrician should be considered.

**Nasal polyps**

Short-term use of corticosteroid nasal drops helps to shrink nasal polyps; to be effective, the drops must be administered with the patient in the 'head down' position. A short course of a systemic corticosteroid may be required initially to shrink large polyps. A corticosteroid nasal spray can be used to maintain the reduction in swelling and also for the initial treatment of small polyps.

**Pregnancy**

If a pregnant woman cannot tolerate the symptoms of allergic rhinitis, treatment with nasal beclometasone dipropionate p. 984, budesonide p. 984, or fluticasone p. 985 may be considered.

**Topical nasal decongestants**

The nasal mucosa is sensitive to changes in atmospheric temperature and humidity and these alone may cause slight nasal congestion. The nose and nasal sinuses produce a litre of mucus in 24 hours and much of this finds its way silently into the stomach via the nasopharynx. Slight changes in the nasal airway, accompanied by an awareness of mucus passing along the nasopharynx causes some patients to be inaccurately diagnosed as suffering from chronic sinusitis. These symptoms are particularly noticeable in the later stages of the common cold. Sodium chloride 0.9% given as nasal drops or spray may relieve nasal congestion by helping to liquefy mucus secretions.

Inhalation of warm moist air is useful in the treatment of symptoms of acute infective conditions. The addition of volatile substances such as menthol and eucalyptus may encourage the use of warm moist air (see under Aromatic inhalations, cough preparations and systemic nasal decongestants p. 258).

Symptoms of nasal congestion associated with vasomotor rhinitis and the common cold can be relieved by the short-term use (usually not longer than 7 days) of decongestant nasal drops and sprays. These all contain sympathomimetic drugs which exert their effect by vasconstriction of the mucosal blood vessels which in turn reduces oedema of the nasal mucosa. They are of limited value because they can give rise to a rebound congestion (rhinitis medicamentosa) on withdrawal, due to a secondary vasodilatation with a subsequent temporary increase in nasal congestion. This in turn tempts the further use of the decongestant, leading to a vicious cycle of events. Ephedrine hydrochloride p. 982 nasal drops is the safest sympathomimetic preparation and can give relief for several hours. The more potent sympathomimetic drugs oxymetazoline and xylometazoline hydrochloride p. 983 are more likely to cause a rebound effect.

Non-allergic watery rhinorrhea often responds well to treatment with the antimuscarinic ipratropium bromide p. 983.

**Sinusitis and oral pain**

Sinusitis affecting the maxillary antrum can cause pain in the upper jaw. Where this is associated with blockage of the opening from the sinus into the nasal cavity, it may be helpful to relieve the congestion with inhalation of warm moist air or with ephedrine hydrochloride p. 982 nasal drops.

Systemic antibacterials may sometimes be required for sinusitis (see under Nose infections, bacterial p. 446).

**Nasal preparations for infection**

There is no evidence that topical anti-infective nasal preparations have any therapeutic value in rhinitis or sinusitis; see elimination of nasal staphylococci.

**Nasal staphylococci**

Elimination of organisms such as staphylococci from the nasal vestibule can be achieved by the use of a cream containing chlorhexidine and neomycin (Noseptin®), but re-colonisation frequently occurs. Coagulase-positive staphylococci are present in the noses of 40% of the population. A nasal ointment containing mupirocin p. 987 is also available; it should probably be held in reserve for resistant infections. In hospitals or in care establishments, mupirocin nasal ointment should be reserved for the eradication (in both patients and staff) of nasal carriage of meticillin-resistant Staphylococcus aureus (MRSA). A sample should be taken 2 days after treatment to confirm eradication. The course may be repeated if the sample is positive (and the throat is not colonised). To avoid the development of resistance, the treatment course should not exceed 7 days and the course should not be repeated on more than one occasion. If the MRSA strain is mupirocin-resistant or does not respond after 2 courses, consider alternative products such as chlorhexidine and neomycin cream.
2.1 Nasal congestion

**SYMPATHOMIMETICS (VASOCONSTRICTOR)**

**Ephedrine hydrochloride**

**INDICATIONS AND DOSE**

Nasal congestion | Sinusitis affecting the maxillary antrum

- **BY INTRanasAL ADMINISTRATION**
  - Child 12-17 years: Apply 1–2 drops up to 4 times a day as required for a maximum of 7 days, to be instilled into each nostril, administer ephedrine 0.5% nasal drops
  - Adult: Apply 1–2 drops up to 4 times a day as required for a maximum of 7 days, to be instilled into each nostril

- **INTERACTIONS** → Appendix 1 (sympathomimetics).

- **SIDE-EFFECTS**
  - Common or very common | Headache · nausea
  - Frequency not known | After excessive use tolerance with diminished effect · cardiovascular effect · local irritation · rebound congestion

- **PREGNANCY** | Manufacturer advises avoid.

- **BREAST FEEDING** | Present in milk; manufacturer advises avoid—irritability and disturbed sleep reported.

- **PRESCRIBING AND DISPENSING INFORMATION** | For nasal drops, the BP directs that if no strength is specified 0.5% drops should be supplied.

- **PROFESSION SPECIFIC INFORMATION**
  - Dental practitioners’ formulary | Ephedrine nasal drops may be prescribed.
  - EXCEPTIONS TO LEGAL CATEGORY | Ephedrine nasal drops can be sold to the public provided no more than 180 mg of ephedrine base (or salts) are supplied at one time, and pseudoephedrine salts are not supplied at the same time; for conditions that apply to supplies made at the request of a patient, see Medicines, Ethics and Practice, London, Pharmaceutical Press (always consult latest edition).

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: spray, nasal drops
  - Nasal drops
    - **EPHEDRINE HYDROCHLORIDE (Non-proprietary)**
      - Ephedrine hydrochloride 5 mg per 1 ml Ephedrine 0.9% nasal drops | 10 ml £1.53 DT price = £1.53
      - Ephedrine hydrochloride 10 mg per 1 ml Ephedrine 1% nasal drops | 10 ml £1.58 DT price = £1.58

**Pseudoephedrine hydrochloride**

**INDICATIONS AND DOSE**

Congestion of mucous membranes of upper respiratory tract

- **BY MOUTH**
  - Child 6-11 years: 30 mg 3–4 times a day
  - Child 12-17 years: 60 mg 3–4 times a day

**INTERACTIONS**

- **CAUTIONS** | Diabetes · heart disease · hypertension · hyperthyroidism · ischaemic heart disease (in adults) · prostatic hypertrophy (in adults) · raised intra-ocular pressure (in children) · susceptibility to angle-closure glaucoma (in adults)

- **SIDE-EFFECTS**
  - Very rare | Angle-closure glaucoma
  - Rare | Urinary retention

- **PREGNANCY** | Defective closure of the abdominal wall (gastrochisis) reported very rarely in newborns after first trimester exposure.

- **BREAST FEEDING** | May suppress lactation; avoid if lactation not well established or if milk production insufficient.

- **HEPATIC IMPAIRMENT** | Manufacturer advises use with caution in severe impairment.

- **RENAL IMPAIRMENT** | Use with caution in mild to moderate renal impairment. Manufacturer advises avoid in severe renal impairment.

**LESS SUITABLE FOR PRESCRIBING** | Pseudoephedrine hydrochloride is less suitable for prescribing.

**EXCEPTIONS TO LEGAL CATEGORY**

Galpseud® and Sudafed® can be sold to the public provided no more than 720 mg of pseudoephedrine salts are supplied, and ephedrine base (or salts) are not supplied at the same time; for details see Medicines, Ethics and Practice, London, Pharmaceutical Press (always consult latest edition).
**Xylometazoline hydrochloride**

**DRUG ACTION** Xylometazoline is a sympathomimetic.

**INDICATIONS AND DOSE**

**Nasal congestion**

**BY INTRanasal ADMINISTRATION USING NASAL DROPS**
- Child 6-11 years: 1–2 drops 1–2 times a day as required for maximum duration of 5 days, 0.05% solution to be administered into each nostril
- Child 12-17 years: 2–3 drops 2–3 times a day as required for maximum duration of 7 days, 0.1% solution to be administered into each nostril
- Adult: 2–3 drops 2–3 times a day as required for maximum duration of 7 days, 0.1% solution to be administered into each nostril

**BY INTRanasal ADMINISTRATION USING NASAL SPRAY**
- Child 12-17 years: 1 spray 1–3 times a day as required for maximum duration of 7 days, to be administered into each nostril
- Adult: 1 spray 1–3 times a day as required for maximum duration of 7 days, to be administered into each nostril

**Important safety information**

The CHM/MHRA has stated that non-prescription cough and cold medicines containing ephedrine, oxymetazoline, or xylometalzoline can be considered for up to 5 days’ treatment in children aged 6–12 years after basic principles of best care have been tried; these medicines should not be used in children under 6 years of age.

**CAUTIONS**

- Angle-closure glaucoma - avoid excessive or prolonged use - cardiovascular disease (in children) - diabetes mellitus - elderly - hypertension - hyperthyroidism - ischaemic heart disease (in adults) - prostatic hypertrophy (risk of acute retention) (in adults) - rebound congestion

**SIDE-EFFECTS**

Cardiovascular effects - hallucinations in small children - headache - local irritation - nausea - rebound congestion - restlessness in small children - sleep disturbances in small children - tolerance with diminished effect (after excessive use) - transient visual disturbances

**SIDE-EFFECTS, FURTHER INFORMATION**

Hallucinations (in small children) - Discontinue treatment if the hallucinations occur.

**PREGNANCY**

Manufacturer advises avoid.

**BREAST FEEDING**

Manufacturer advises caution - no information available.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Spray**
- Otrivine (Novartis Consumer Health UK Ltd)
  - Xylometazoline hydrochloride 1 mg per 1 ml Otrivine Congestion Relief 0.1% nasal spray | 10 ml (£5) £2.93 DT price = £2.10
  - Otrivine Adult Measured Dose Sinusitis spray | 10 ml (£5) £2.55 DT price = £2.10
  - Otrivine Allergy Relief 0.1% nasal spray | 10 ml (£5) £2.55 DT price = £2.10
  - Otrivine Adult nasal spray | 10 ml (£5) £2.10 DT price = £2.10

**Corticosteroids (intranasal)**

**CAUTIONS**

- Avoid after nasal surgery (until healing has occurred) - avoid in pulmonary tuberculosis - avoid in the presence of untreated nasal infections - patients transferred from systemic corticosteroids may experience exacerbation of some symptoms

---

**2.2 Nasal inflammation, nasal polyps and rhinitis**

**Drugs used for Nasal inflammation, nasal polyps and rhinitis not listed below:** Desloratadine, p. 247 - Fexofenadine hydrochloride, p. 247 - Ketotifen, p. 249

**Antimuscarinics**

**Ipratropium bromide**

**INDICATIONS AND DOSE**

Rhinorrhoea associated with allergic and non-allergic rhinitis

**BY INTRanasal ADMINISTRATION**
- Child 12-17 years: 2 sprays 2–3 times a day, dose to be sprayed into each nostril
- Adult: 2 sprays 2–3 times a day, dose to be sprayed into each nostril

**Dose equivalence and conversion**

1 metered spray of nasal spray = 21 micrograms.
**CAUTIONS, FURTHER INFORMATION**

**Systemic absorption** Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged; therefore also consider the cautions and side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays.

- **SIDE-EFFECTS**
  - Rare Glaucoma - raised intra-ocular pressure
  - Very rare Nasal septal perforation (usually following nasal surgery)
  - Frequency not known Aggregation (particularly in children) - anxiety (particularly in children) - bronchospasm - depression (particularly in children) - dryness - epistaxis - headache - hyperactivity (particularly in children) - hypersensitivity reactions - nasal irritation - nasal ulceration - sleep disturbances (particularly in children) - smell disturbances - taste disturbances - throat irritation

**SIDE-EFFECTS, FURTHER INFORMATION**

**Systemic absorption** Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged. Therefore also consider the side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays.

### Beclometasone dipropionate (Beclometasone dipropionate)

#### INDICATIONS AND DOSE

**Prophylaxis and treatment of allergic and vasomotor rhinitis**

**BY INTRANASAL ADMINISTRATION**

- Child 6-17 years: 100 micrograms twice daily, dose to be administered into each nostril, reduced to 50 micrograms twice daily, dose to be administered into each nostril, dose to be reduced when symptoms controlled; maximum 400 micrograms per day
- Adult: 100 micrograms twice daily, dose to be administered into each nostril, reduced to 50 micrograms twice daily, dose to be administered into each nostril, dose to be reduced when symptoms controlled; maximum 400 micrograms per day

- **EXCEPTIONS TO LEGAL CATEGORY** Preparations of beclometasone dipropionate can be sold to the public for nasal administration as a nasal spray if supplied for the prevention and treatment of allergic rhinitis in adults over 18 years subject to max. single dose of 100 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. 3 months, and a pack size of 20 mg.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Spray**
    - **EXCIPIENTS:** May contain Benzalkonium chloride, polysorbates
    - **Beclometasone dipropionate 50 microgram per 1 dose** Numark Hayfever Relief 50micrograms/dose nasal spray | 100 dose | 0.50 | £2.04 | 200 dose | 0.33 | £2.33 DT price = £2.30
    - **Beclometasone Hayfever Relief 50micrograms/dose nasal spray** | 200 dose | 0.56 | £2.56 DT price = £2.30
    - **Beclometasone 50micrograms/dose nasal spray** | 180 dose | no price available | 200 dose | 0.50 | no price available DT price = £2.30 | 200 dose | 0.55 | £1.95 DT price = £2.30

- **Betamethasone**
  - **INDICATIONS AND DOSE**
  - **VISTAMETHASONE®**
  - **Non-infected inflammatory conditions of nose**
  - **BY INTRANASAL ADMINISTRATION**
    - Adult: Apply 2–3 drops twice daily, dose to be applied into each nostril

- **Budesonide**
  - **INDICATIONS AND DOSE**
  - **Rhinitis**
    - **BY INTRANASAL ADMINISTRATION**
      - Adult: 128 micrograms once daily, dose to be administered into each nostril in the morning,
Fluticasone

EXCEPTIONS TO LEGAL CATEGORY
Preparations of budesonide can be sold to the public for nasal administration as a nasal spray if supplied for the prevention and treatment of seasonal allergic rhinitis in adults over 18 years subject to max. single dose of 200 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. period of 3 months, and a pack size of 10 mg.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Spray
EXCIPENTS: May contain Dismodium edetate, polysorbates, potassium sorbate

Budesonide (Non-proprietary)
Budesonide 64 microgram per 1 dose
Budesonide 64 micrograms/dose nasal spray | 120 dose | £4.77 DT price = £4.76

Rhinocort (AstraZeneca UK Ltd)
Budesonide 64 microgram per 1 dose
Rhinocort Aqua 64 nasal spray | 120 dose | £3.49 DT price = £4.76

Fluticasone with azelastine

INDICATIONS AND DOSE
Prophylaxis and treatment of allergic rhinitis and perennial rhinitis

BY INTRANASAL ADMINISTRATION USING NASAL SPRAY

Adult: 64 micrograms once daily when control achieved. Use for maximum 3 months, doses to be administered into each nostril

Nasal polyps
BY INTRANASAL ADMINISTRATION USING NASAL DROPS

Child 12-17 years: 200 micrograms 1–2 times a day, to be administered into each nostril, dose of 200 micrograms approximately 6 drops, alternative treatment should be considered if no improvement after 4–6 weeks

Adult: 200 micrograms 1–2 times a day, to be administered into each nostril, dose of 200 micrograms approximately 6 drops, alternative treatment should be considered if no improvement after 4–6 weeks

AVAMYS® SPRAY

Prophylaxis and treatment of allergic rhinitis
BY INTRANASAL ADMINISTRATION

Adult: 55 micrograms once daily, dose to be sprayed into each nostril, reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose

Dose equivalence and conversion
1 spray equivalent to 27.5 micrograms.

SIDE-EFFECTS

SIDE-EFFECTS, FURTHER INFORMATION

Nasal ulceration Nasal ulceration occurs commonly with nasal preparations containing fluticasone furoate.

EXCEPTIONS TO LEGAL CATEGORY
Preparations of fluticasone propionate can be sold to the public for nasal administration (other than by pressurised nasal spray) if supplied for the prevention and treatment of allergic rhinitis in adults over 18 years, subject to max. single dose of 100 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. 3 months, and a pack size of 3 mg.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Spray
EXCIPENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

FLUTICASONE (Non-proprietary)
Fluticasone propionate 50 microgram per 1 dose
Fluticasone propionate 50 micrograms/dose nasal spray | 60 dose | no price available
Fluticasone propionate 50 micrograms/dose nasal spray | 150 dose | £29.50 DT price = £11.01

Avamys (GlaxoSmithKline UK Ltd)
Fluticasone furoate 27.5 microgram per 1 dose
Fluticasone furoate 27.5 micrograms/dose nasal spray | 120 dose | £6.44 DT price = £6.44

Flixonase (GlaxoSmithKline UK Ltd)
Flixonase (Non-proprietary)
Flixonase propionate 50 microgram per 1 dose
Flixonase propionate 50 micrograms/dose nasal spray | 150 dose | £11.01 DT price = £11.01

Flixonase Nasule

Fluticasone propionate 400 microgram
Fluticasone Nasule 400 micrograms/dose nasal drops | 28 unit dose | £12.99 DT price = £12.99

Fluticasone with azelastine

The properties listed below are those particular to the combination only. For the properties of the components please consider, azelastine hydrochloride p. 945, fluticasone above.

INDICATIONS AND DOSE

Moderate to severe seasonal and perennial allergic rhinitis, if monotherapy with antihistamine or corticosteroid is inadequate

BY INTRANASAL ADMINISTRATION

Child 12-17 years: 1 spray twice daily, dose to be administered into each nostril

Adult: 1 spray twice daily, dose to be administered into each nostril

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Spray
EXCIPENTS: May contain Benzalkonium chloride, polysorbates

Dymista (Meda Pharmaceuticals Ltd)
Azelastine hydrochloride 137 microgram per 1 actuation,

Mometasone furoate

**INDICATIONS AND DOSE**

**Prophylaxis and treatment of allergic rhinitis by intranasal administration**

- Child 6–11 years: 50 micrograms daily, dose to be sprayed into each nostril
- Child 12–17 years: 100 micrograms daily, increased if necessary up to 200 micrograms daily, dose to be sprayed into each nostril; reduced to 50 micrograms daily, dose to be reduced when control achieved, dose to be sprayed into each nostril
- Adult: 100 micrograms daily, increased if necessary up to 200 micrograms daily, dose to be sprayed into each nostril; reduced to 50 micrograms daily, dose to be reduced when control achieved, dose to be sprayed into each nostril

**Nasal polyps by intranasal administration**

- Adult: Initially 100 micrograms daily for 5–6 weeks, dose to be sprayed into each nostril, then increased if necessary to 100 micrograms twice daily, dose to be sprayed into each nostril, consider alternative treatment if no improvement after further 5–6 weeks, reduce to the lowest effective dose when control achieved

**SIDE-EFFECTS**

**SIDE-EFFECTS, FURTHER INFORMATION**

- **Nasal ulceration**: Nasal ulceration occurs commonly with preparations containing mometasone furoate.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Spray**
  - **EXCIPIENTS**: May contain Benzalkonium chloride, polysorbates
  - **MOMETASONE Furoate (Non-proprietary)**
    - Mometasone furoate 50 microgram per 1 dose Nasonex
    - Mometasone 50 micrograms/dose nasal spray | 140 dose price = £7.39
  - **Nasacort (Sanofi)**
    - Triamcinolone acetonide 55 microgram per 1 dose Nasacort
    - Allergy 55 micrograms/dose nasal spray | 30 dose price = £3.01
    - Nasacort 55 micrograms/dose nasal spray | 120 dose price = £7.39

**MAST CELL STABILISERS**

**Sodium cromoglicate**

(Sodium cromoglicate)

**INDICATIONS AND DOSE**

**Prophylaxis of allergic rhinitis by intranasal administration**

- Child: 1 spray 2–4 times a day, to be administered into each nostril
- Adult: 1 spray 2–4 times a day, to be administered into each nostril

**SIDE-EFFECTS**

- **RARE**: Transient bronchospasm
- **Frequency not known**: Local irritation
- **PREGNANCY**: Not known to be harmful.
- **BREAST FEEDING**: Unlikely to be present in milk.

**MEDICINAL FORMS**

- Medicines not identified.

### 2.3 Nasal staphylococcal infection

**ANTI-INFECTIVES**

**Betamethasone with neomycin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 984, neomycin sulfate p. 451.

**INDICATIONS AND DOSE**

**Nasal infection by intranasal administration using nasal drops**

- Child: Apply 2–3 drops 2–3 times a day, to be applied into each nostril
- Adult: Apply 2–3 drops 2–3 times a day, to be applied into each nostril

**LESS SUITABLE FOR PRESCRIBING**

Betamethasone with neomycin nasal-drops are less suitable for prescribing; there is no evidence that topical anti-infective nasal preparations have any therapeutic value in rhinitis or sinusitis.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Drops solution**
  - **EXCIPIENTS**: May contain Benzalkonium chloride, disodium edetate
  - **Betnesol-N ear/eye/nose drops** (Focus Pharmaceuticals)
    - Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 mL, Neomycin sulfate 5 mg per 1 mL | 10 mL price = £2.39
Chlorhexidine with neomycin

**INDICATIONS AND DOSE**

**Eradication of nasal carriage of staphylococci**

**BY INTRanasAL ADMINISTRATION**

- Child: Apply 4 times a day for 10 days
- Adult: Apply 4 times a day for 10 days

**Preventing nasal carriage of staphylococci**

**BY INTRanasAL ADMINISTRATION**

- Child: Apply twice daily
- Adult: Apply twice daily

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Arachis (peanut) oil, cetostearyl alcohol (including cetyl and stearyl alcohol)

- **Naseptin** (Alliance Pharmaceuticals Ltd)
  - Chlorhexidine hydrochloride 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram
  - Naseptin nasal cream | 15 gram (£1.90 DT price = £3.90)

Mupirocin

**INDICATIONS AND DOSE**

**BACTROBAN NASAL®**

For eradication of nasal carriage of staphylococci, including meticillin-resistant *Staphylococcus aureus* (MRSA)

**BY INTRanasAL ADMINISTRATION**

- Child: Apply 2–3 times a day for 5 days; a sample should be taken 2 days after treatment to confirm eradication. Course may be repeated if sample positive (and throat not colonised), dose to be applied to the inner surface of each nostril
- Adult: Apply 2–3 times a day for 5 days; a sample should be taken 2 days after treatment to confirm eradication. Course may be repeated if sample positive (and throat not colonised), dose to be applied to the inner surface of each nostril

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Nasal ointment**

- **Bactroban** (GlaxoSmithKline Ltd)
- **Mupirocin (as Mupirocin calcium) 20 mg per 1 gram** Bactroban 2% nasal ointment | 3 gram (£3.89 DT price = £3.89

3 Oropharynx

3.1 Dry mouth

**Treatment of dry mouth**

Dry mouth (xerostomia) may be caused by drugs with antimuscarinic (anticholinergic) side-effects (e.g. antispasmodics, tricyclic antidepressants, and some antipsychotics), by diuretics, by irradiation of the head and neck region or by damage to or disease of the salivary glands. Patients with a persistently dry mouth may develop a burning or scalded sensation and have poor oral hygiene; they may develop increased dental caries, periodontal disease, intolerance of dentures, and oral infections (particularly candidiasis). Dry mouth may be relieved in many patients by simple measures such as frequent sips of cool drinks or sucking pieces of ice or sugar-free fruit pastilles. Sugar-free chewing gum stimulates salivation in patients with residual salivary function.

**Artificial saliva** can provide useful relief of dry mouth. A properly balanced artificial saliva should be of a neutral pH and contain electrolytes (including fluoride) to correspond approximately to the composition of saliva. The acidic pH of some artificial saliva products may be inappropriate. Of the proprietary preparations, *Aquoral®*, *Biotène Oralbalance®* gel or *Xerolin®* can be used for any condition giving rise to a dry mouth. *BioXtra®, Glandsosane®, Saliva Orthana®,* and *Saliveze®,* have ACBS approval for dry mouth associated only with radiotherapy or sicca syndrome. *Salivex®* pastilles, which act locally as salivary stimulants, are also available for any condition leading to a dry mouth and SST tablets may be prescribed for dry mouth in patients with salivary gland impairment (and patent salivary ducts). Pilocarpine p. 988 tablets are licensed for the treatment of xerostomia following irradiation for head and neck cancer and for dry mouth and dry eyes (xerophthalmia) in Sjögren’s syndrome. They are effective only in patients who have some residual salivary gland function, and therefore should be withdrawn if there is no response.

**Artificial saliva products**

- **ARTIFICIAL SALIVA PRODUCTS**
  - **AS SALIVA ORTHANA® LOZENGES**
    - Mucin 65 mg, xylitol 59 mg, in a sorbitol basis, pH neutral
  - **AS SALIVA ORTHANA® SPRAY**
    - Gastric mucin (porcine) 3.5%, xylitol 2%, sodium fluoride 4.2 mg/litre, with preservatives and flavouring agents, pH neutral

**INDICATIONS AND DOSE**

Dry mouth as a result of having (or having undergone) radiotherapy | Sicca syndrome

**BY MOUTH**

- Adult: 1 lozenge as required, allow to dissolve slowly in the mouth

**PRESCRIBING AND DISPENSING INFORMATION**

Lozenges do not contain fluoride.

- **AS Saliva Orthana lozenges (A S Pharma Ltd)**
  - 30 lozenge (ACBS) • NHS indicative price = £3.50

**ARTIFICIAL SALIVA ORTHANA® GEL**

Lactoperoxidase, lactoferrin, lysozyme, whey colostrum, and pharyngeal mucosa

**INDICATIONS AND DOSE**

Symptomatic treatment of dry mouth

**BY MOUTH**

- Adult: Apply 2–3 sprays as required, spray onto oral and pharyngeal mucosa

**PROFESSION SPECIFIC INFORMATION**

Dental practitioners’ formulation

*AS Saliva Orthana® Oral Spray* may be prescribed.

**BIOXTRA GEL**

Lactoperoxidase, lactoferrin, lysozyme, whey colostrum, xylitol and other ingredients.

**INDICATIONS AND DOSE**

Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)

**BY MOUTH**

- Adult: Apply as required, apply to oral mucosa

**PROFESSION SPECIFIC INFORMATION**

Dental practitioners’ formulation

*BioXtra®* Gel may be prescribed.
Ear, nose and oropharynx

- BioXtra moisturising gel for dry mouths (R.L.S. Products Ltd)
  40 ml (ACBS) • NHS indicative price = £3.94

**BIOTENE ORALBALANCE**
Lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis.

**INDICATIONS AND DOSE**
Symptomatic treatment of dry mouth
- Adult: As required, apply to gums and tongue

**PATIENT AND CARER ADVICE**
Avoid use with toothpastes containing detergents (including foaming agents).

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary
- Biotene Oralbalance® Saliva Replacement Gel may be prescribed as Artificial Saliva Gel.
- Biotene Oralbalance dry mouth saliva replacement gel (GlaxoSmithKline Consumer Healthcare)
  - Glucose oxidase 12000 unit, Lactoferrin 12 mg, Lactoperoxidase 12000 unit, Muramidase 12 mg | 50 gram • NHS indicative price = £4.46

**GLANDOSANE**
Carmellose sodium 500 mg, sorbitol 1.5 g, potassium chloride 60 mg, sodium chloride 42.2 g, magnesium chloride 2.6 g, calcium chloride 7.3 mg, and dipotassium hydrogen phosphate 17.1 g/50 g, pH 5.75.

**INDICATIONS AND DOSE**
Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Sicca syndrome (ACBS)
- Adult: As required, apply to gums and tongue

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary
- Glandosane® Aerosol spray may be prescribed.
- Glandosane synthetic saliva spray lemon (Fresenius Kabi Ltd)
  50 ml (ACBS) • NHS indicative price = £5.52
- Glandosane synthetic saliva spray natural (Fresenius Kabi Ltd)
  50 ml (ACBS) • NHS indicative price = £5.52
- Glandosane synthetic saliva spray peppermint (Fresenius Kabi Ltd)
  50 ml (ACBS) • NHS indicative price = £5.52

**SS7**
Sugar-free, citric acid, malic acid and other ingredients in a sorbitol base.

**INDICATIONS AND DOSE**
Symptomatic treatment of dry mouth in patients with impaired salivary gland function and patent salivary ducts
- Adult: 1 tablet as required, allow tablet to dissolve slowly in the mouth

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary
- May be prescribed as Saliva Stimulating Tablets.
- SS7 saliva stimulating tablets (Sinclair IS Pharma Plc)
  100 tablet • NHS indicative price = £4.86

**SALIVEZE**
Carmellose sodium (sodium carboxymethylcellulose), calcium chloride, magnesium chloride, potassium chloride, sodium chloride, and dibasic sodium phosphate, pH neutral

**INDICATIONS AND DOSE**
Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Sicca syndrome (ACBS)
- Adult: Apply 1 spray as required, spray onto oral mucosa

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary
- Saliveze® Oral spray may be prescribed.
- Saliveze mouth spray (Wyvern Medical Ltd)
  50 ml (ACBS) • NHS indicative price = £3.50

**SALIVIX**
Sugar-free, reddish-amber, acacia, malic acid and other ingredients.

**INDICATIONS AND DOSE**
Symptomatic treatment of dry mouth
- Adult: 1 unit as required, suck pastille

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary
- Salivix® Pastilles may be prescribed as Artificial Saliva Pastilles.
- Salivix pastilles (Galen Ltd)
  50 pastille • NHS indicative price = £3.55

**XEROTIN**
Sugar-free, water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral.

**INDICATIONS AND DOSE**
Symptomatic treatment of dry mouth
- Adult: 1 spray as required

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary
- Xerotin® Oral Spray may be prescribed as Artificial Saliva Oral Spray.
- Xerotin spray (SpePharm UK Ltd)
  100 ml • NHS indicative price = £6.86

**PARASYMPATHOMIMETICS**

**Pilocarpine**

**INDICATIONS AND DOSE**
Xerostomia following irradiation for head and neck cancer
- Adult: 5 mg 3 times a day for 4 weeks, then increased if tolerated to up to 30 mg daily in divided doses if required, dose to be taken with or immediately after meals (last dose always with evening meal), maximum therapeutic effect normally within 4–8 weeks; discontinue if no improvement after 2–3 months

**Dry mouth and dry eyes in Sjögren’s syndrome**
- Adult: 5 mg 4 times a day; increased if tolerated to up to 30 mg daily in divided doses if required, dose to be taken with meals and at bedtime, discontinue if no improvement after 2–3 months

**CONTRA-INDICATIONS**
Acute iritis • chronic obstructive pulmonary disease (increased bronchial secretions and increased airways resistance) • uncontrolled asthma (increased bronchial secretions and increased airways resistance) • uncontrolled cardiac failure
CAUTIONS Asthma (avoid if uncontrolled) - biliary-tract disease - cardiovascular disease (avoid if uncontrolled) - cholelithiasis - chronic obstructive pulmonary disease (avoid if uncontrolled) - cognitive disturbances - maintain adequate fluid intake to avoid dehydration associated with excessive sweating - pepsic ulceration - psychiatric disturbances - risk of increased renal colic - risk of increased urethral smooth muscle tone - susceptibility to angle-closure glaucoma

INTERACTIONS Appendix 1 (parasympathomimetics).

SIDE-EFFECTS

Common or very common Influenza-like symptoms - abdominal pain - asthena - conjunctivitis - constipation - diarrhoea - dizziness - dyspepsia - flushing - headache - hypertension - increased urinary frequency - lacrimation - nausea - ocular pain - palpitation - pruritis - rash - rhinitis - sweating - visual disturbances - vomiting

Uncommon Flatulence - urinary urgency

PREGNANCY Avoid – smooth muscle stimulant; toxicity in animal studies.

BREAST FEEDING Manufacturer advises avoid – present in milk in animal studies.

HEPATIC IMPAIRMENT Reduce initial oral dose in moderate or severe cirrhosis.

RENAL IMPAIRMENT Manufacturer advises caution with tablets.

PATIENT AND CARER ADVICE Blurred vision may affect performance of skilled tasks (e.g. driving) particularly at night or in reduced lighting.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

Tablet

CAUTIONARY AND ADVISORY LABELS 21, 27

> Salagen (Novartis Pharmaceudicals UK Ltd)

Pilocarpine hydrochloride 5 mg Salagen 5mg tablets 84 tablet 141.14 07 price 141.14

3.2 Oral hygiene

Mouthwashes and other preparations for oropharyngeal use

Lozenges and sprays

There is no convincing evidence that antiseptic lozenges and sprays have a beneficial action and they sometimes irritate and cause sore tongue and sore lips. Some of these preparations also contain local anaesthetics which relieve pain but may cause sensitisation.

Mouthwashes, gargles, and dentifrices

Superficial infections of the mouth are often helped by warm mouthwashes which have a mechanical cleansing effect and cause some local hyperaemia. However, to be effective, they must be used frequently and vigorously. A warm saline mouthwash is ideal and can be prepared either by dissolving half a teaspoonful of salt in a glassful of warm water or by diluting compound sodium chloride mouthwash with an equal volume of warm water.

Mouthwashes containing an oxidising agent, such as hydrogen peroxide p. 990, may be useful in the treatment of acute ulcerative gingivitis (Vincent’s infection) since the organisms involved are anaerobes. It also has a mechanical cleansing effect arising from frothing when in contact with oral debris.

Chlorhexidine is an effective antiseptic which has the advantage of inhibiting plaque formation on the teeth. It does not, however, completely control plaque deposition and is not a substitute for effective toothbrushing. Moreover, chlorhexidine preparations do not penetrate significantly into stagnation areas and are therefore of little value in the control of dental caries or of periodontal disease once pocketing has developed.

Chlorhexidine mouthwash is used in the treatment of denture stomatitis. It is also used in the prevention of oral candidiasis in immunocompromised patients. Chlorhexidine mouthwash reduces the incidence of alveolar osteitis following tooth extraction. Chlorhexidine mouthwash should not be used for the prevention of endocarditis in patients undergoing dental procedures.

Chlorhexidine can be used as a mouthwash, spray or gel for secondary infection in mucosal ulceration and for controlling gingivitis, as an adjunct to other oral hygiene measures. These preparations may also be used instead of toothbrushing where there is a painful periodontal condition (e.g. primary herpetic stomatitis) or if the patient has a haemorrhagic disorder, or is disabled.

Chlorhexidine preparations are of little value in the control of acute nercotising ulcerative gingivitis. With prolonged use, chlorhexidine causes reversible brown staining of teeth and tongue. Chlorhexidine may be incompatible with some ingredients in toothpaste, causing an unpleasant taste in the mouth; rinse the mouth thoroughly with water between using toothpaste and chlorhexidine-containing products.

There is no convincing evidence that gargles are effective in adults.

Chlorhexidine

INDICATIONS AND DOSE

Oral hygiene and plaque inhibition | Oral candidiasis | Gingivitis | Management of apthous ulcers

BY MOUTH USING MOUTHWASH

> Child: Rinse or gargle 10 mL twice daily (rinse or gargle for about 1 minute)
> Adult: Rinse or gargle 10 mL twice daily (rinse or gargle for about 1 minute)

Denture stomatitis

MOUTHWASH

> Adult: Cleanse and soak dentures in mouthwash solution for 15 minutes twice daily

Oral hygiene and plaque inhibition and gingivitis

BY MOUTH USING DENTAL GEL

> Child: Apply 1–2 times a day, to be brushed on the teeth
> Adult: Apply 1–2 times a day, to be brushed on the teeth

Oral candidiasis | Management of apthous ulcers

BY MOUTH USING DENTAL GEL

> Child: Apply 1–2 times a day, to affected areas
> Adult: Apply 1–2 times a day, to affected areas

Oral hygiene and plaque inhibition | Oral candidiasis | Gingivitis | Management of apthous ulcers

BY MOUTH USING OROMUCOSAL SPRAY

> Child: Apply up to 12 sprays twice daily as required, to be applied to tooth, gingival, or ulcer surfaces
> Adult: Apply up to 12 sprays twice daily as required, to be applied to tooth, gingival, or ulcer surfaces

SIDE-EFFECTS Anaphylaxis - hypersensitivity - mucosal irritation - parotid gland swelling - reversible brown staining of composite restorations - reversible brown
Chlorhexidine with chlorobutanol

**Indications and dose**

**Adult:**
- Rinse or gargle 15 ml 2-3 times a day.

**Child:**
- Rinse or gargle 10-15 ml 2-3 times a day.

**SIDE EFFECTS**

- Very rare: Taste disturbance.
- Frequency not known: Local irritation.

**Test results**

- Chlorhexidine gluconate 2 mg per 1 ml (GlaxoSmithKline Consumer Healthcare) DT price = £48.06
- Chlorhexidine gluconate 2 mg per 1 ml (GlaxoSmithKline Consumer Healthcare) DT price = £46.46
- Chlorhexidine gluconate 10 mg per 1 gram (sugar-free) DT price = £28.28
- Chlorhexidine gluconate 10 mg per 1 gram (sugar-free) DT price = £28.43

**Handing and storage**

- Chlorhexidine Oral Spray may be prescribed as Chlorhexidine Gluconate Gel; Corsodyl.

**Prescription specific information**

- Adult: Rinse or gargle 15 ml 2-3 times a day.

**Local irritation**

- There can be variation in the licensing of different medicines containing the same drug.

**Indications and dose**

**Adult:**
- Rinse or gargle 15 ml 2-3 times a day.

**Child:**
- Rinse or gargle 10-15 ml 2-3 times a day.

**SIDE EFFECTS**

- Very rare: Taste disturbance.
- Frequency not known: Local irritation.

**Test results**

- Chlorhexidine gluconate 10 mg per 1 gram (Colgate Pro Gum Health) DT price = £1.50
- Chlorhexidine gluconate 2 mg per 1 ml (Colgate Pro Gum Health) DT price = £1.00
- Chlorhexidine gluconate 2 mg per 1 ml (GlaxoSmithKline Consumer Healthcare) DT price = £0.99
- Chlorhexidine gluconate 10 mg per 1 gram (McNeil Products Ltd) DT price = £0.09

**Handing and storage**

**Handing and storage**

- Chlorhexidine Oral Spray may be prescribed as Chlorhexidine Gluconate Gel; Corsodyl.

**Prescription specific information**

- Adult: Rinse or gargle 15 ml 2-3 times a day.

**Local irritation**

- There can be variation in the licensing of different medicines containing the same drug.
Sodium bicarbonate with sodium chloride

**INDICATIONS AND DOSE**
- Oral hygiene
  - Adult: (consult product literature)

**DIRECTIONS FOR ADMINISTRATION** For mouthwash, extemporaneous preparations should be prepared according to the following formula: sodium chloride 1.5 g, sodium bicarbonate 1 g, concentrated peppermint emulsion 2.5 mL, double-strength chloroform water 50 mL, water to 100 mL. To be diluted with an equal volume of warm water prior to administration.

**PRESCRIBING AND DISPENSING INFORMATION** Flavours of mouthwash may include peppermint.

**PROFESSION SPECIFIC INFORMATION**
- Dental practitioners' formulary
  - Compound sodium chloride mouthwash may be prescribed.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: mouthwash
  - Peroxyl (Colgate-Palmolive (UK) Ltd)
  - Hydrogen peroxide 15 mg per 1 ml Peroxyl 1.5% mouthwash (sugar-free) | 300 ml [SSL] £2.94

3.3 Oral hygiene, dental caries

**Dental caries**

**Fluoride**

Availability of adequate fluoride confers significant resistance to dental caries. It is now considered that the topical action of fluoride on enamel and plaque is more important than the systemic effect.

When the fluoride content of drinking water is less than 700 micrograms per litre (0.7 parts per million), daily administration of fluoride tablets or drops provides suitable supplementation. Systemic fluoride supplements should not be prescribed without reference to the fluoride content of the local water supply. Infants need not receive fluoride supplementation. Systemic fluoride supplements should not be prescribed without reference to the fluoride content of the local water supply. Infants need not receive fluoride supplementation.

Clinical advice and expert opinion are required to prevent children from swallowing any excess. Less concentrated gels are available for home use. Varnishes are also available and are particularly valuable for young or disabled children since they adhere to the teeth and set in the presence of moisture.

**Fluoride**

**Sodium fluoride**

**INDICATIONS AND DOSE**
- Prophylaxis of dental caries for water content less than 300 micrograms/litre (0.3 parts per million) of fluoride ion
  - BY MOUTH USING TABLETS
    - Child 6 months–2 years: 250 micrograms daily, doses expressed as fluoride ion (F–)
    - Child 3–5 years: 500 micrograms daily, doses expressed as fluoride ion (F–)
    - Child 6–17 years: 1 mg daily, doses expressed as fluoride ion (F–)
    - Adult: 1 mg daily, doses expressed as fluoride ion (F–)

- Prophylaxis of dental caries for water content between 300 and 700 micrograms/litre (0.3–0.7 parts per million) of fluoride ion
  - BY MOUTH USING TABLETS
    - Child 3–5 years: 250 micrograms daily, doses expressed as fluoride ion (F–)
    - Child 6–17 years: 500 micrograms daily, doses expressed as fluoride ion (F–)
    - Adult: 500 micrograms daily, doses expressed as fluoride ion (F–)

- Prophylaxis of dental caries for water content above 700 micrograms/litre (0.7 parts per million) of fluoride ion
  - Child 6 months–7 years: Supplements not advised
  - Adult: Supplements not advised

**PROPHYLAXIS OF DENTAL CARRIES FOR INDIVIDUALS WHO ARE CARRIES PRONE OR MEDICALLY COMPROMISED**
- BY MOUTH USING MOUTHWASH
  - Child 6–17 years: Rinse or gargle 10 mL daily
  - Adult: Rinse or gargle 10 mL daily

**Dose equivalence and conversion**
- Sodium fluoride 2.2 mg provides approx. 1 mg fluoride ion.

- These doses reflect the recommendations of the British Dental Association, the British Society of Paediatric Dentistry and the British Association for the Study of Community Dentistry (Br Dent J 1997; 182: 6–7).

**COLGATE DURAPHAT® 2800PPM FLUORIDE TOOTHPASTE**
- Prophylaxis of dental caries
  - BY MOUTH USING PASTE
    - Child 10–17 years: Apply 1 centimetre twice daily, to be applied using a toothbrush
    - Adult: Apply 1 centimetre twice daily, to be applied using a toothbrush

**COLGATE DURAPHAT® 5000PPM FLUORIDE TOOTHPASTE**
- Prophylaxis of dental caries
  - BY MOUTH USING PASTE
    - Child 16–17 years: Apply 2 centimetres 3 times a day, to be applied after meals using a toothbrush
    - Adult: Apply 2 centimetres 3 times a day, to be applied after meals using a toothbrush

**EN-DE-KAY® FLORINSE**
- Prophylaxis of dental caries for individuals who are caries prone or medically compromised
  - INITIALLY BY MOUTH USING MOUTHWASH
    - Adult: 5 drops daily, dilute 5 drops to 10 mL of water, alternatively (by mouth) 20 drops once daily, dilute 20 drops to 10 mL

**CONTRA-INDICATIONS**
- Not for areas where drinking water is fluoridated

**SIDE-EFFECTS**
- **Uncommon** Occasional white flecks on teeth with recommended doses
- **Rare** Yellowish-brown discoloration if recommended doses are exceeded
PROFESSION SPECIFIC INFORMATION

Flavours of oral tablet formulations may include orange.

PATIENT AND CARER ADVICE

3.4 Oral ulceration and inflammation

Oral ulceration and inflammation

Ulceration and inflammation

Oral ulceration and inflammation

Ulceration of the oral mucosa may be caused by trauma (physical or chemical), recurrent aphthae, infections, carcinoma, dermatological disorders, nutritional deficiencies, gastro-intestinal disease, haematopoietic disorders, and drug therapy (see also Chemotherapy induced mucositis and myelosuppression under Cytotoxic drugs p. 744). It is important to establish the diagnosis in each case as the majority of these lesions require specific management in addition to local treatment. Local treatment aims to protect the ulcerated area, to relieve pain, to reduce inflammation, or to control secondary infection. Patients with an unexplained mouth ulcer of more than 3 weeks’ duration require urgent referral to hospital to exclude oral cancer.

Simple mouthwashes

A saline mouthwash may relieve the pain of traumatic ulceration. The mouthwash is made up with warm water and used at frequent intervals until the discomfort and swelling subside.

Antiseptic mouthwashes

Secondary bacterial infection may be a feature of any mucosal ulceration; it can increase discomfort and delay healing. Use of a chlorhexidine mouthwash p. 989 is often beneficial and may accelerate healing of recurrent aphthae.

Corticosteroids

Topical corticosteroid therapy may be used for some forms of oral ulceration. In the case of aphthous ulcers it is most effective if applied in the ‘prodromal’ phase.

Thrush or other types of candidiasis are recognised complications of corticosteroid treatment.

Hydrocortisone oromucosal tablets p. 993 are allowed to dissolve next to an ulcer and are useful in recurrent aphthae and erosive lichenoid lesions.

Beclometasone dipropionate inhaler p. 993 sprayed on the oral mucosa is used to manage oral ulceration [unlicensed indication]. Alternatively, betamethasone soluble tablets p. 993 dissolved in water can be used as a mouthwash to treat oral ulceration [unlicensed indication].

Systemic corticosteroid therapy (see under Corticosteroids, inflammatory disorders p. 939), is reserved for severe conditions such as pemphigus vulgaris.

Local analgesics

Local analgesics have a limited role in the management of oral ulceration. When applied topically their action is of a relatively short duration so that analgesia cannot be maintained continuously throughout the day. The main indication for a topical local analgesic is to relieve the pain of otherwise intractable oral ulceration particularly when it is due to major aphthae. For this purpose lidocaine hydrochloride 5% p. 994 ointment or lozenges containing a local anaesthetic are applied to the ulcer. Lidocaine hydrochloride 10% p. 994 solution as spray can be applied
thinly to the ulcer [unlicensed indication] using a cotton bud. When local anaesthetics are used in the mouth care must be taken not to produce anaesthesia of the pharynx before meals as this might lead to choking.

Preparations on sale to the public: many mouth ulcer preparations, throat lozenges, and throat sprays on sale to the public contain a local anaesthetic. To identify the active ingredients in such preparations, consult the product literature of the manufacturer—the correct proprietary name should be ascertained as many products have very similar names but different active ingredients.

Benzydamine hydrochloride below and flurbiprofen p. 994 are non-steroidal anti-inflammatory drugs (NSAIDs). Benzydamine hydrochloride below mouthwash or spray may be useful in reducing the discomfort associated with a variety of ulcerative conditions. It has also been found to be effective in reducing the discomfort of tonsillectomy and post-irradiation mucositis. Some patients find the full-strength mouthwash causes some stinging and, for them, it should be diluted with an equal volume of water. Flurbiprofen lozenges are licensed for the relief of sore throat.

Choline salicylate p. 994 is a derivative of salicylic acid and has some analgesic action. The dental gel may provide relief for recurrent aphthae, but excessive application or confinement under a denture irritates the mucosa and can itself cause ulceration.

Other preparations

Doxycycline p. 995 rinsed in the mouth may be of value for recurrent aphthous ulceration.

Periodontitis

Low-dose doxycycline p. 995 (Periostat®) is licensed as an adjunct to scaling and root planing for the treatment of periodontitis; a low dose of doxycycline reduces collagenase activity without inhibiting bacteria associated with periodontitis.

For anti-infectives used in the treatment of destructive (refractory) forms of periodontal disease, see under Oropharynx infections, bacterial p. 995. See also Mouthwashes and other preparations for oropharyngeal use p. 989 for mouthwashes used for oral hygiene and plaque inhibition.

CORTICOSTEROIDS

Beclometasone dipropionate (Beclohexasone dipropionate)

INDICATIONS AND DOSE
Management of oral ulceration

BY BUCCAL ADMINISTRATION

> Adult: 50–100 micrograms twice daily, use inhaler device to spray dose on to the oral mucosa

> UNLICENSED USE Use of soluble tablets and inhaler unlicensed in oral ulceration.

> MEDICINAL FORMS

For preparations see inhaled beclomethasone p. 228.

Betamethasone

INDICATIONS AND DOSE
Oral ulceration

BY MOUTH USING SOLUBLE TABLETS

> Child 12–17 years: 500 micrograms 4 times a day, to be dissolved in 20 mL water and rinsed around the mouth; not to be swallowed

> Adult: 500 micrograms 4 times a day, to be dissolved in 20 mL water and rinsed around the mouth; not to be swallowed

> UNLICENSED USE Betamethasone soluble tablets not licensed for use as mouthwash or in oral ulceration.

> CONTRA-INDICATIONS Untreated local infection

> SIDE-EFFECTS Candidial infection • exacerbation of local infection

> PATIENT AND CARER ADVICE Patient counselling is advised for betamethasone soluble tablets (administration).

> PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulation
Betamethasone Soluble Tablets 500 micrograms may be prescribed for oral ulceration.

> MEDICINAL FORMS

Soluble tablet

Hydrocortisone (as Hydrocortisone sodium succinate) 2.5 mg Hydrocortisone2.5 mg muco-adhesive buccal tablets sugar free (sugar-free) | 20 tablet (PDR) £4.55 DT price = £4.55

NON-STERoidal ANTI-INFLAMMATORY DRUGS

Benzydamine hydrochloride

INDICATIONS AND DOSE

Painful inflammatory conditions of oropharynx

BY MOUTH USING MOUTHWASH

> Child 13–17 years: Rinse or gargle 15 mL every 1.5–3 hours as required usually for not more than 7 days, dilute with an equal volume of water if stinging occurs

> Adult: Rinse or gargle 15 mL every 1.5–3 hours as required usually for not more than 7 days, dilute with an equal volume of water if stinging occurs Continued →
BY MOUTH USING OROMUCOSAL SPRAY
- Child 1 month-5 years: 1 spray every 1.5–3 hours (max. per dose 4 sprays every 1.5–3 hours), one spray per 4 kg body-weight. To be administered to the affected area
- Child 6–11 years: 4 sprays every 1.5–3 hours, to be administered onto affected area
- Child 12–17 years: 4–8 sprays every 1.5–3 hours, to be administered onto affected area
- Adult: 4–8 sprays every 1.5–3 hours, to be administered onto affected area

**SIDE-EFFECTS**
- **Rare** Hypersensitivity reactions
- **Frequency not known** Occasional numbness or stinging

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Spray**
- BENZAMINE HYDROCHLORIDE (Non-proprietary)
  Benzydamine hydrochloride 1.5 mg per 1 ml
  Benzydamine 150 mg oral solution
  Benzydamine mouthwash 1.5 mg per 1 ml

**Mouthwash**
- BENZAMINE HYDROCHLORIDE (Non-proprietary)
  Benzydamine hydrochloride 1.5 mg per 1 ml
  Benzydamine mouthwash 1.5 mg per 1 ml

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary

**Renal Impairment**
Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**renal impairment**
Deterioration in renal function has also been reported after topical use.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Lozenge**
- STRENGTH (Reckitt Benckiser Healthcare (UK) Ltd)
  Flurbiprofen 8.75 mg

**Benzydamine mouthwash**
May be prescribed as
- STREFEN containing the same drug.

**Flurbiprofen**
Relief of sore throat

**INDICATIONS AND DOSE**
Relief of sore throat
BY MOUTH USING LOZENGES
- Child 12–17 years: 1 lozenge every 3–6 hours for maximum 3 days, allow lozenge to dissolve slowly in the mouth; maximum 5 lozenges per day
- Adult: 1 lozenge every 3–6 hours for maximum 3 days, allow lozenge to dissolve slowly in the mouth; maximum 5 lozenges per day

**INTERACTIONS** → Appendix 1 (NSAIDs).
**SIDE-EFFECTS**
Mouth ulcers (move lozenge around mouth) - taste disturbance
**ALLERGY AND CROSS-SENSITIVITY**
Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**SALICYLATES**
Choline salicylate

**INDICATIONS AND DOSE**
Mild oral and perioral lesions
TO THE LESION
- Child 16–17 years: Apply 0.5 inch, apply with gentle massage, not more often than every 3 hours
- Adult: Apply 0.5 inch, apply with gentle massage, not more often than every 3 hours

**CONTRA-INDICATIONS**
Children under 16 years

**REYE’S SYNDROME**
The CHM has advised that topical oral pain relief products containing salicylate salts should not be used in children under 16 years, as a cautionary measure due to the theoretical risk of Reye’s syndrome.
Salicylic acid with rhubarb extract

**INDICATIONS AND DOSE**
Mild oral and perioral lesions

**BY MOUTH**
- Child 16–17 years: Apply 3–4 times a day maximum duration 7 days
- Adult: Apply 3–4 times a day maximum duration 7 days

**CONTRA-INDICATIONS**
Children under 16 years

**CONTRA-INDICATIONS, FURTHER INFORMATION**
Reye’s syndrome: The CHM has advised that topical oral pain relief products containing salicylate salts should not be used in children under 16 years, as a cautionary measure due to the theoretical risk of Reye’s syndrome.

**CAUTIONS**
**GENERAL CAUTIONS**
Frequent application, especially in children, may give rise to salicylate poisoning

**SPECIFIC CAUTIONS**
Not to be applied to dentures—leave at least 30 minutes before re-insertion of dentures

**SIDE-EFFECTS**
Transient local burning sensation

**PATIENT AND CARER ADVICE**
May cause temporary discolouration of teeth and oral mucosa.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **See below for indications and dosages.**

### SIDE-EFFECTS
- Transient local burning sensation
- Temporary discolouration of oral mucosa

### CONTRA-INDICATIONS
- **Children under 16 years**

### CAUTIONS
**GENERAL CAUTIONS**
Frequent application, especially in children, may give rise to salicylate poisoning

**SPECIFIC CAUTIONS**
Not to be applied to dentures—leave at least 30 minutes before re-insertion of dentures

**SIDE-EFFECTS**
Temporary discolouration of oral mucosa.

**PATIENT AND CARER ADVICE**
May cause temporary discolouration of teeth and oral mucosa.

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

### Paint
- **EXCIPIENTS: May contain Ethanol**
- **Rhubarb extract** 50 mg per 1 ml, **Salicylic acid** 10 mg per 1 ml
- **Pyralvex solution** | 10 ml £3.25

### Acne vulgaris

### TREATMENT OPTIONS
- **Antibacterial therapy**

#### Acne vulgaris

### Doxycycline

**INDICATIONS AND DOSE**
Treatment of recurrent aphthous ulceration

**BY MOUTH USING SOLUBLE TABLETS**
- **Child 12–17 years:** 100 mg 4 times a day usually for 3 days, dispersible tablet can be stirred into a small amount of water then rinsed and swallowed for 2–3 minutes, it should preferably not be swallowed
- **Adult:** 100 mg 4 times a day usually for 3 days, dispersible tablet can be stirred into a small amount of water then rinsed and swallowed for 2–3 minutes, it should preferably not be swallowed

### Antibacterial therapy

#### Pericoronitis
- **Antibacterial required only in presence of systemic features of infection, or of trismus, or persistent swelling despite local treatment.**
  - **Metronidazole p. 475, or alternatively, amoxicillin**
    - **Suggested duration of treatment** 3 days or until symptoms resolve.

#### Gingivitis: acute necrotising ulcerative
- **Antibacterial required only if systemic features of infection.**
  - **Metronidazole p. 475, or alternatively, amoxicillin**
    - **Suggested duration of treatment** 3 days or until symptoms resolve.

#### Periapical or periodontal abscess
- **Antibacterial required only in severe disease with cellulitis or if systemic features of infection.**
  - **Amoxicillin p. 482, or alternatively, metronidazole**
    - **Suggested duration of treatment** 5 days.

#### Pierodontitis
- **Antibacterial used as an adjunct to debridement in severe disease or disease unresponsive to local treatment alone.**
  - **Metronidazole p. 475, or alternatively in adults and children over 12 years, doxycycline below**

#### Throat infections
Most throat infections are caused by viruses and many do not require antibacterial therapy. Consider antibacterial, if history of valvular heart disease, if marked systemic upset, if peritonsillar cellulitis or abscess, or if at increased risk from acute infection (e.g. in immunosuppression, cystic fibrosis); prescribe antibacterial for beta-haemolytic streptococcal pharyngitis.

- **Phenoxybenzamidopenicillin**
  - In severe infection, initial parenteral therapy with benzylpenicillin sodium p. 480, then oral therapy with phenoxybenzamidopenicillin p. 481 or amoxicillin p. 482 (or ampicillin p. 483). **Avoid** amoxicillin if possibility of glandular fever.
    - **Suggested duration of treatment** 10 days.

- **If penicillin-allergic, clarithromycin p. 470 or azithromycin p. 469 or erythromycin p. 471**
  - **Suggested duration of treatment** 10 days
Ear, nose and oropharynx

Unlicensed use
Not licensed for severe recurrent aphthous ulceration.

Cautions
Alcohol dependence

Interactions
The metabolism of doxycycline may be influenced by antiepileptics.

Side-effects
Anorexia - anxiety - dry mouth - flushing - fungal superinfection (when used for periodontitis) - tinnitus

Renal impairment
Use with caution (avoid excessive doses).

Monitoring requirements
When used for periodontitis, monitor for superficial fungal infection, particularly if predisposition to oral candidiasis.

Patient and carer advice
Photophobia - Patients should be advised to avoid exposure to sunlight or sunlamps.

Professional specific information
Dental practitioners' formulary
Dispersible tablets may be prescribed as Dispersible Doxycycline Tablets.
Tablets may be prescribed as Doxycycline Tablets 20 mg.

Medicinal forms
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

Tablet

Cautionary and Advisory Labels 6, 11, 27

Doxycycline (as Doxycycline hyclate) 20 mg Periostat 20mg tablets 56 tablet (PMS) £17.30 DT price = £17.30

Dispersible tablet

Cautionary and Advisory Labels 6, 9, 11, 13

Vibramycin-D (Pfizer Ltd)

Doxycycline (as Doxycycline monohydrate) 100 mg Vibramycin-D 100mg dispersible tablets (sugar-free) 8 tablet (PMS) £4.91 DT price = £4.91

3.6 Oropharyngeal fungal infections

Oropharyngeal fungal infections
Fungal infections of the mouth are usually caused by Candida spp. (candidiasis or candidosis). Different types of oropharyngeal candidiasis are managed as follows:

Thrush
Acute pseudemembranous candidiasis (thrush), is usually an acute infection but it may persist for months in patients receiving inhaled corticosteroids, cytotoxics or broad-spectrum antibacterials. Thrush also occurs in patients with serious systemic disease associated with reduced immunity such as leukaemia, other malignancies, and HIV infection. Any predisposing condition should be managed appropriately. When thrush is associated with corticosteroid inhalers, rinsing the mouth with water (or cleaning a child's teeth) immediately after using the inhaler may avoid the problem. Treatment with nystatin p. 997 or miconazole p. 1011 may be needed. Fluconazole p. 518 is effective for unresponsive infections or if a topical antifungal drug cannot be used or if the patient has dry mouth. Topical therapy may not be adequate in immunocompromised patients and an oral triazole antifungal is preferred.

Acute erythematous candidiasis
Acute erythematous (atrophic) candidiasis is a relatively uncommon condition associated with corticosteroid and broad-spectrum antibacterial use and with HIV disease. It is usually treated with fluconazole p. 518.

Denture stomatitis
Patients with denture stomatitis (chronic atrophic candidiasis), should cleanse their dentures thoroughly and leave them out as often as possible during the treatment period. To prevent recurrence of the problem, dentures should not normally be worn at night. New dentures may be required if these measures fail despite good compliance.

Miconazole p. 1011 oral gel can be applied to the fitting surface of the denture before insertion (for short periods only). Denture stomatitis is not always associated with candidiasis and other factors such as mechanical or chemical irritation, bacterial infection, or rarely allergy to the dental base material, may be the cause.

Chronic hyperplastic candidiasis
Chronic hyperplastic candidiasis (candidal leucoplakia) carries an increased risk of malignancy; biopsy is essential—this type of candidiasis may be associated with varying degrees of dysplasia, with oral cancer present in a high proportion of cases. Chronic hyperplastic candidiasis is treated with a systemic antifungal such as fluconazole p. 518 to eliminate candidal overgrowth. Patients should avoid the use of tobacco.

Angular cheilitis
Angular cheilitis (angular stomatitis) is characterised by soreness, erythema and fissuring at the angles of the mouth. It is commonly associated with denture stomatitis but may represent a nutritional deficiency or it may be related to oro-facial granulomatosis or HIV infection. Both yeasts (Candida spp.) and bacteria (Staphylococcus aureus and beta-haemolytic streptococci) are commonly involved as interacting, infective factors. A reduction in facial height related to ageing and tooth loss with maceration in the deep occlusive folds that may subsequently arise, predisposes to such infection. While the underlying cause is being identified and treated, it is often helpful to apply miconazole p. 1011 cream or fusidic acid p. 1008 ointment; if the angular cheilitis is unresponsive to treatment, hydrocortisone with miconazole p. 1011 cream or ointment can be used.

Immune compromised patients
See advice on prevention of fungal infections in Immune Compromised patients under Antifungals, systemic use p. 512.

Drugs used in oropharyngeal candidiasis
Nystatin p. 997 is not absorbed from the gastro-intestinal tract and is applied locally (as a suspension) to the mouth for treating local fungal infections. Miconazole p. 1011 is applied locally (as an oral gel) to the mouth but it is absorbed to the extent that potential interactions need to be considered. Miconazole also has some activity against Gram-positive bacteria including streptococci and staphylococci. Fluconazole p. 518 is given by mouth for infections that do not respond to topical therapy or when topical therapy cannot be used. It is reliably absorbed and effective. Itraconazole p. 519 can be used for fluconazole-resistant infections.

If candidal infection fails to respond to 1 to 2 weeks of treatment with antifungal drugs the patient should be sent for investigation to eliminate the possibility of underlying disease. Persistent infection may also be caused by reinfection from the genito-urinary or gastro-intestinal tract. Infection can be eliminated from these sources by appropriate anti-candidal therapy; the patient's partner may also require treatment to prevent reinfection.

Antiseptic mouthwashes are used in the prevention of oral candidiasis in immunocompromised patients and in the treatment of denture stomatitis.
Miconazole

**INDICATIONS AND DOSE**
Prevention and treatment of oral candidiasis

**BY MOUTH USING ORAL GEL**
- Child 2-17 years: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)
- Adult: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)

**Prevention and treatment of intestinal candidiasis**

- Child 4 months-17 years: 5 mg/kg 4 times a day (max. per dose 250 mg (10 mL) 4 times a day), treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared
- Adult: 5 mg/kg 4 times a day (max. per dose 250 mg (10 mL) 4 times a day), treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared

**SIDE-EFFECTS**
- Very rare diarrhoea (usually on long term treatment) - hepatitis - rash (in children) - Stevens-Johnson syndrome - toxic epidermal necrolysis

**PREGNANCY**
Manufacturer advises caution—toxicity at high doses in animal studies.

**BREAST FEEDING**
Manufacturer advises avoid if possible—no information available.

**HEPATIC IMPAIRMENT**
Avoid.

**DIRECTIONS FOR ADMINISTRATION**
Oral gel should be held in mouth, after food.

**PRESCRIBING AND DISPENSING INFORMATION**
Flavours of oral gel may include orange.

**PATIENT AND CARER ADVICE**
Patients or carers should be given advice on how to administer miconazole oromucosal gel.

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary

**CONTRA-INDICATIONS**
Infants with impaired swallowing reflex

**CAUTIONS**
Avoid in Acute porphyrias p. 864

**INTERACTIONS**
- Appendix 1 (antifungals, imidazole).

**CONTRA-INDICATIONS**
Infants with impaired swallowing reflex

**CAUTIONS**
Avoid in Acute porphyrias p. 864

**INTERACTIONS**
- Appendix 1 (antifungals, imidazole).

**SIDE-EFFECTS**
- Local irritation - local sensitisation - nausea

**PATIENT AND CARER ADVICE**
Medicines for Children leaflet: Nystatin for Candida infection www.medicinesforchildren.org.uk/
nystatin-for-candida-infection

Counselling advised with oral suspension (use of pipette, hold in mouth, after food).

**PROFESSION SPECIFIC INFORMATION**
Dental practitioners’ formulary

**MEDICAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Oropharyngeal viral infections**

Viral infections are the most common cause of a sore throat. They do not benefit from anti-infective treatment. The management of primary herpetic gingivostomatitis is a soft diet, adequate fluid intake, and analgesics as required, including local use of benzoylamine hydrochloride p. 993. The use of chlorhexidine p. 989 mouthwash will control plaque accumulation if toothbrushing is painful and will also help to control secondary infection in general.

In the case of severe herpetic stomatitis, a systemic antiviral such as aciclovir p. 550 is required. Valaciclovir p. 552 and famciclovir p. 552 are suitable alternatives for oral lesions associated with herpes zoster. Aciclovir and valaciclovir are also used for the prevention of frequently recurring herpes simplex lesions of the mouth, particularly when implicated in the initiation of erythema multiforme.
Chapter 13
Skin

Skin conditions, management

Vehicles
The British Association of Dermatologists list of preferred unlicensed dermatological preparations (specials) is available at www.bad.org.uk/specials.

Both vehicle and active ingredients are important in the treatment of skin conditions; the vehicle alone may have more than a mere placebo effect. The vehicle affects the degree of hydration of the skin, has a mild anti-inflammatory effect, and aids the penetration of active drug.

Applications are usually viscous solutions, emulsions, or suspensions for application to the skin (including the scalp) or nails.

Collodions are painted on the skin and allowed to dry to leave a flexible film over the site of application.

Creams are emulsions of oil and water and are generally well absorbed into the skin. They may contain an antimicrobial preservative unless the active ingredient or basis is intrinsically bactericidal and fungicidal. Generally, creams are cosmetically more acceptable than ointments because they are less greasy and easier to apply.

Gels consist of active ingredients in suitable hydrophilic or hydrophobic bases; they generally have a high water content. Gels are particularly suitable for application to the face and scalp.

Lotions have a cooling effect and may be preferred to ointments or creams for application over a hairy area. Lotions in alcoholic basis can sting if used on broken skin. Shake lotions (such as calamine lotion) contain insoluble powders which leave a deposit on the skin surface.

Ointments are greasy preparations which are normally anhydrous and insoluble in water, and are more occlusive than creams. They are particularly suitable for chronic, dry lesions. The most commonly used ointment bases consist of soft paraffin or a combination of soft, liquid, and hard paraffin. Some ointment bases have both hydrophilic and lipophilic properties; they may have occlusive properties on the skin surface, encourage hydration, and also be miscible with water; they often have a mild anti-inflammatory effect.

Water-soluble ointments contain macrogols which are freely soluble in water and are therefore readily washed off; they have a limited but useful role where ready removal is desirable.

Pastes are stiff preparations containing a high proportion of finely powdered solids such as zinc oxide and starch suspended in an ointment. They are used for circumscribed lesions such as those which occur in lichen simplex, chronic eczema, or psoriasis. They are less occlusive than ointments and can be used to protect inflamed, lichenified, or excoriated skin.

Dusting powders are used only rarely. They reduce friction between opposing skin surfaces. Dusting powders should not be applied to moist areas because they can cake and abrade the skin. Talc is a lubricant but it does not absorb moisture; it can cause respiratory irritation. Starch is less lubricant but absorbs water.

Dilution
The BP directs that creams and ointments should not normally be diluted but that should dilution be necessary care should be taken, in particular, to prevent microbial contamination. The appropriate diluent should be used and heating should be avoided during mixing; excessive dilution may affect the stability of some creams. Diluted creams should normally be used within 2 weeks of preparation.

Suitable quantities of dermatological preparations to be prescribed for specific areas of the body

<table>
<thead>
<tr>
<th>Area of body</th>
<th>Creams and Ointments</th>
<th>Lotions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Face</td>
<td>15–30 g</td>
<td>100 ml</td>
</tr>
<tr>
<td>Both hands</td>
<td>25–50 g</td>
<td>200 ml</td>
</tr>
<tr>
<td>Scalp</td>
<td>50–100 g</td>
<td>200 ml</td>
</tr>
<tr>
<td>Both arms or both legs</td>
<td>100–200 g</td>
<td>200 ml</td>
</tr>

<td>400 g</td>
<td>500 ml</td>
</tr>
<tr>
<td>Groins and genitalia</td>
<td>15–25 g</td>
<td>100 ml</td>
</tr>
</tbody>
</table>

These amounts are usually suitable for an adult for twice daily application for 1 week. The recommendations do not apply to corticosteroid preparations. For suitable quantities of corticosteroid preparations, see relevant table on p. 1021.
Dry and scaling skin disorders

Emollient and barrier preparations

Borderline substances

The preparations marked ‘ACBS’ are regarded as drugs when prescribed in accordance with the advice of the Advisory Committee on Borderline Substances for the clinical conditions listed. Prescriptions issued in accordance with this advice and endorsed ‘ACBS’ will normally not be investigated.

Emollients

Emollients soothe, smooth and hydrate the skin and are indicated for all dry or scaling disorders. Their effects are short lived and they should be applied frequently even after improvement occurs. They are useful in dry and eczematous disorders, and to a lesser extent in psoriasis. The choice of an appropriate emollient will depend on the severity of the condition, patient preference, and the site of application. Some ingredients rarely cause sensitisation and this should be suspected if an eczematous reaction occurs. The use of aqueous cream as a leave-on emollient may increase the risk of skin reactions, particularly in eczema.

Preparations such as aqueous cream and emulsifying ointment can be used as soap substitutes for hand washing and in the bath; the preparation is rubbed on the skin before rinsing off completely. The addition of a bath oil may also be helpful.

Urea is occasionally used with other topical agents such as corticosteroids to enhance penetration of the skin.

Emollient bath and shower preparations

Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. In dry skin conditions soap should be avoided.

Barrier preparations

Barrier preparations often contain water-repellent substances such as dimethicone p. 1014 or other silicones. They are used on the skin around stomas, bedsores, and pressure areas in the elderly where the skin is intact. Where the skin has broken down, barrier preparations have a limited role in protecting adjacent skin. Barrier preparations are not a substitute for adequate nursing care.

Nappy rash

The first line of treatment is to ensure that nappies are changed frequently and that tightly fitting water-proof pants are avoided. The rash may clear when left exposed to the air and a barrier preparation, applied with each nappy change, can be helpful. A mild corticosteroid such as hydrocortisone 0.5% or 1% can be used if inflammation is causing discomfort, but it should be avoided in neonates. The barrier preparation should be applied after the corticosteroid preparation to prevent further damage. Preparations containing hydrocortisone should be applied for no more than a week; the hydrocortisone should be discontinued as soon as the inflammation subsides. The occlusive effect of nappies and waterproof pants may increase absorption of corticosteroids. If the rash is associated with candidal infection, a topical antifungal such as clotrimazole p. 1010 cream can be used. Topical antibacterial preparations can be used if bacterial infection is present; treatment with an oral antibacterial may occasionally be required in severe or recurrent infection. Hydrocortisone can be used in combination with antimicrobial preparations if there is considerable inflammation, erosion, and infection.

BARRIER PREPARATIONS

Barrier creams and ointments

INDICATIONS AND DOSE

For use as a barrier preparation

**TO THE SKIN**

- Child: (consult product literature)
- Adult: (consult product literature)

**PREScribing AND DISPensing INFORMATION** When prepared extemporaneously, the BP states Zinc and Castor Oil Ointment, BP consists of zinc oxide 7.5%, castor oil 50%, arachis (peanut) oil 30.5%, white beeswax 10% and cetostearyl alcohol 2%.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Cream

**EXCIPIENTS:** May contain Beeswax, butylated hydroxyanisole, butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, fragrances, hydroxybenzoates (parabens), propylene glycol, wool fat and related substances including lanolin

- **Conotrane** (Astellas Pharma Ltd)
  - Benzalkonium chloride 1 mg per 1 gram, Dimeticone 220 mg per 1 gram Conotrane cream | 100 gram £3.51
  - Drapolene (Omega Pharma Ltd)
  - Benzalkonium chloride 100 microgram per 1 gram, Cetrimide 2 mg per 1 gram Drapolene cream | 100 gram £1.76
  - **Siopel** (Derma UK Ltd)
  - Cetrimide 3 mg per 1 gram, Dimeticone 1000 100 mg per 1 gram Siopel cream | 50 gram £2.15
Sudocrem (Forest Laboratories UK Ltd)
Benzy alcohol 3.9 mg per 1 gram, Benzy benzoate 10.1 mg per 1 gram, Benzy cinnamate 1.5 mg per 1 gram, Wool fat hydroxys 40 mg per 1 gram, Zinc oxide 152.5 mg per 1 gram Sudocrem antiseptic healing cream | 60 gram | £1.45 | 125 gram | £2.15 | 250 gram | £3.67 | 400 gram | £5.25

Ointment
EXCIPIENTS: May contain Wool fat and related substances including lanolin.

• BARRIER CREAMS AND OINTMENTS (Non-proprietary)
Titanium dioxide 200 mg per 1 gram, Titanium peroxide 50 mg per 1 gram | 30 gram | £2.24
Castor oil 500 mg per 1 gram, Zinc Oxide 75 mg per 1 gram, Arachis oil 305 mg per 1 gram | 500 gram | £4.99

• Brands may include Metanium ointment

Spray
CAUTIONARY AND ADVISORY LABELS | 15
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), wool fat and related substances including lanolin.

• Sprilon (Ayrton Saunders Ltd)
Dimeticone 10.4 mg per 1 gram, Zinc oxide 125 mg per 1 gram
Sprilon aerosol spray | 115 gram | £8.90 DT price = £8.90

EMOLLIENTS

Emollient bath and shower products, antimicrobial-containing

INDICATIONS AND DOSE
DERMOL® 200 SHOWER EMOLLIENT
Dry and pruritic skin conditions including eczema and dermatitis
TO THE SKIN
Adult: To be applied to the skin or used as a soap substitute
DERMOL® 600® BATH EMOLLIENT
Dry and pruritic skin conditions including eczema and dermatitis
TO THE SKIN
Child 1–23 months: 5–15 mL/bath, not to be used undiluted
Adult: 15–30 mL/bath, not to be used undiluted
DERMOL® WASH EMULSION
Dry and pruritic skin conditions including eczema and dermatitis
TO THE SKIN
Adult: To be applied to the skin or used as a soap substitute
EMULSIDERM®
Dry skin conditions including eczema and ichthyosis
TO THE SKIN
Adult: 7–30 mL/bath, alternatively, to be rubbed into dry skin until absorbed
OILATUM® PLUS
Topical treatment of eczema, including eczema at risk from infection
TO THE SKIN
Child 6–11 months: 1 mL/bath, not to be used undiluted
Adult: 1–2 capfuls/bath, not to be used undiluted

Important safety information
FIRE HAZARD WITH PARAFFIN-BASED EMOLLIENTS
Emulsifying ointment or 50% Liquid Paraffin and 50% White Soft Paraffin Ointment in contact with dressings and clothing is easily ignited by a naked flame. The risk is greater when these preparations are applied to large areas of the body, and clothing or dressings become soaked with the ointment. Patients should be told to keep away from fire or flames, and not to smoke when using these preparations. The risk of fire should be considered when using large quantities of any paraffin-based emollient. These preparations make skin and surfaces slippery—particular care is needed when bathing.

DIRECTIONS FOR ADMINISTRATION
Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

PRESCRIBING AND DISPENSING INFORMATION
Preparations containing an antibacterial should be avoided unless infection is present or is a frequent complication. When prepared extemporaneously, the BP states Aqueous Cream, BP consists of emulsifying ointment 30%, phenoxyethanol 1% in freshly boiled and cooled purified water. Hydrous Ointment, BP consists of dried magnesium sulphate 0.5%, phenoxyethanol 1%, wool alcohols ointment 50%, in freshly boiled and cooled purified water.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Liquid
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

• Dermol 200 (Dermal Laboratories Ltd)
Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram, Liquid paraffin 25 mg per 1 gram Dermol 200 shower emollient | 200 ml | £3.55

• Dermol Wash (Dermal Laboratories Ltd)
Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram, Liquid paraffin 25 mg per 1 gram Dermol Wash cutaneous emulsion | 200 ml | £3.55

Bath additive
EXCIPIENTS: May contain Acetylated lanolin alcohols, isopropyl palmitate, polyisobutylene

• Dermol 600 (Dermal Laboratories Ltd)
Benzalkonium chloride 5 mg per 1 gram, Isopropyl myristate 250 mg per 1 gram, Liquid paraffin 250 mg per 1 gram Dermol 600 bath emollient | 600 ml | £7.55

• Emulsiderm (Dermal Laboratories Ltd)
Benzalkonium chloride 5 mg per 1 gram, Isopropyl myristate 250 mg per 1 gram, Liquid paraffin 250 mg per 1 gram Emulsiderm emollient | 300 ml | £3.85 | 1000 ml | £12.00

• Oiatum Plus (GlaxoSmithKline Consumer Healthcare)
Benzalkonium chloride 60 mg per 1 gram, Liquid paraffin light 525 mg per 1 gram, Tricosanol 20 mg per 1 gram Oiatum Plus bath additive | 500 ml | £6.98

Emollient bath and shower products, colloidal oatmeal-containing

INDICATIONS AND DOSE
Endogenous and exogenous eczema | Xeroderma | Ichthyosis
TO THE SKIN
Child 2–17 years: 20–30 mL/bath, alternatively apply to wet skin and rinse
Adult: 20–30 mL/bath, alternatively apply to wet skin and rinse

BNF 70
Pruritus of the elderly associated with dry skin

**TO THE SKIN**
- Elderly: 20–30 mL/bath, alternatively apply to wet skin and rinse

**Important safety information**
These preparations make skin and surfaces slippery—particular care is needed when bathing.

**DIRECTIONS FOR ADMINISTRATION**
Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

EMOLLIENT BATH AND SHOWER PRODUCTS, PARAFFIN-CONTAINING (Non-proprietary)

- **Liquid paraffin light 700 mg per 1 gram** | 150 gram (GSL) £1.15 | 150 gram (GSL) £1.25
- **Doublebase** (Dermal Laboratories Ltd)
  - Isopropyl myristate 150 mg per 1 gram, Liquid paraffin 150 mg per 1 gram
  - Doublebase emollient wash gel | 200 gram (GSL) £3.21
  - Doublebase emollient bath gel | 100 gram (GSL) £2.25
- **E45 emollient bath** (Forum Health Products Ltd)
  - E45 emollient bath oil | 250 ml (ACBS) £3.19 | 500 ml (ACBS) £5.11
- **Zerodouble** (Thornton & Ross Ltd)
  - Isopropyl myristate 150 mg per 1 gram, Liquid paraffin 150 mg per 1 gram
  - Zerodouble gel | 100 gram £2.25, DT price = £2.65 | 475 gram £4.71
- Brands may include Oilatum gel, Oilatum shower gel

**Bath additive**

- **EMOLLIENT BATH AND SHOWER PRODUCTS, PARAFFIN-CONTAINING (Non-proprietary)**
  - Liquid paraffin light 828 mg per 1 gram | 500 ml (GSL) £5.75
  - Liquid paraffin light 634 mg per 1 ml | 150 ml (GSL) £2.82 | 250 ml (GSL) £3.25 | 300 ml (GSL) £3.50 | 600 ml (GSL) £3.89 | 500 ml £3.10
  - Liquid paraffin light 850.9 mg per 1 gram | 250 ml £2.88 | 500 ml £4.71
  - Isopropyl myristate 130 mg per 1 ml, Liquid paraffin light 378 mg per 1 ml | 350 ml £3.88 | 500 ml £4.42 | 1000 ml £8.80
- **Zerolatum** (Dermal Laboratories Ltd)
  - Acetylated wool alcohols 50 mg per 1 gram, Liquid paraffin 650 mg per 1 gram
  - Doublebase emollient bath (Dermal Laboratories Ltd)
  - Doublebase emollient bath additive | 500 ml (GSL) £5.45
  - Zerolatum (Thornton & Ross Ltd)
  - Acetylated wool alcohols 50 mg per 1 gram, Liquid paraffin 650 mg per 1 gram
  - Zerolatum Emollient bath additive | 500 ml £4.79
- Brands may include Ceratrol, Hydromol, LPL, Oilatum, QV

**Wash**

- **EMOLLIENT BATH AND SHOWER PRODUCTS, PARAFFIN-CONTAINING (Non-proprietary)**
  - Liquid paraffin 650 mg per 1 gram
  - Doublebase emollient bath additive | 500 ml (GSL) £5.45
  - Zerolatum (Thornton & Ross Ltd)
  - Acetylated wool alcohols 50 mg per 1 gram, Liquid paraffin 650 mg per 1 gram
  - Zerolatum Emollient bath additive | 500 ml £4.79
- Brands may include Aquamax wash, QV Gentle wash
Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Bath additive**
EXCIPIENTS: May contain Isopropyl palmitate, polysorbates

- **EMOLLIENT BATH AND SHOWER PRODUCTS, TAR-CONTAINING (Proprietary)**
  - Coal tar distilled 400 mg per 1 ml | 200 ml £2.74
  - Polytar (GlaxoSmithKline Consumer Healthcare)
    - Arachis oil extract of crude coal tar 75 mg per 1 gram, Cade oil 75 mg per 1 gram, Coal tar solution 25 mg per 1 gram. Liquid paraffin light 350 mg per 1 gram, Pine tar 75 mg per 1 gram Polytar Emollient | 500 ml £5.78
  - Brands may include Psoriderm Emulsion 40% bath additive

**Emollient creams and ointments, antimicrobial-containing**

**INDICATIONS AND DOSE**
Dry and pruritic skin conditions including eczema and dermatitis

**TO THE SKIN**
- Child: To be applied to the skin or used as a soap substitute
- Adult: To be applied to the skin or used as a soap substitute

**DIRECTIONS FOR ADMINISTRATION** Emollients should be applied immediately after washing or bathing to maximise the effect of skin hydration. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

**PRESCRIBING AND DISPENSING INFORMATION**
Preparations containing an antibacterial should be avoided unless infection is present or a frequent complication.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Liquid**
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

- Dermol 500 (Dermal Laboratories Ltd)
  - Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram. Liquid paraffin 25 mg per 1 gram Dermol 500 lotion | 500 ml £6.04

*Fire hazard with paraffin-based emollients*
Emollients, urea-containing

**DRUG ACTION** Urea is a keratin softener and hydrating agent used in the treatment of dry, scaling conditions (including ichthyosis) and may be useful in elderly patients.

**INDICATIONS AND DOSE**

**AQUADRAT®**

Dry, scaling and itching skin

TO THE SKIN

- Child: Apply twice daily, to be applied thinly
- Adult: Apply twice daily

**BALNEUM® CREAM**

Dry skin conditions

TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

**BALNEUM® PLUS CREAM**

Dry, scaling and itching skin

TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

**CALMURID®**

Dry, scaling and itching skin

TO THE SKIN

- Child: Apply twice daily, daily to a thick layer for 3–5 minutes, massage into area, and remove excess. Can be diluted with aqueous cream (life of diluted cream is 14 days). Half-strength cream can be used for 1 week if stinging occurs
- Adult: Apply twice daily, apply a thick layer for 3–5 minutes, massage into area, and remove excess. Can be diluted with aqueous cream (life of diluted cream is 14 days). Half-strength cream can be used for 1 week if stinging occurs

**DERMATONICS ONCE HEEL BALM®**

Dry skin on soles of feet

TO THE SKIN

- Child 12-17 years: Apply daily
- Adult: Apply daily

**E45® ITCH RELIEF CREAM**

Dry, scaling, and itching skin

TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

**EUCERIN® INTENSIVE CREAM**

Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis

TO THE SKIN

- Child: Apply twice daily, to be applied thinly and rubbed into area
- Adult: Apply twice daily, to be applied thinly and rubbed into area

**EUCERIN® INTENSIVE LOTION**

Dry skin conditions including eczema, ichthyosis, xeroderma and hyperkeratosis

TO THE SKIN

- Child: Apply twice daily, to be applied sparingly and rubbed into area
- Adult: Apply twice daily, to be applied sparingly and rubbed into area

**FLEXITOL®**

Dry skin on soles of feet and heels

TO THE SKIN

- Child 12-17 years: Apply 1–2 times a day
- Adult: Apply 1–2 times a day

**HYDROMOL® INTENSIVE**

Dry, scaling and itching skin

TO THE SKIN

- Child: Apply twice daily, to be applied thinly
- Adult: Apply twice daily, to be applied thinly

**NUTRAPLUS®**

Dry, scaling and itching skin

TO THE SKIN

- Child: Apply 2–3 times a day
- Adult: Apply 2–3 times a day

**DIRECTIONS FOR ADMINISTRATION**

Emollients should be applied immediately after washing or bathing to maximise the effect of skin hydration. Emollient preparations contained in tubes should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

Skin Infections

Antibacterial preparations

Cellulitis, a rapidly spreading deeply seated inflammation of the skin and subcutaneous tissue, requires systemic antibacterial treatment. Lower leg infections or infections spreading around wounds are almost always cellulitis.

Erysipelas, a superficial infection with clearly defined edges (and often affecting the face), is also treated with a systemic antibacterial.

In the community, acute impetigo on small areas of the skin may be treated by short-term topical application of fusidic acid p. 1008; mupirocin p. 1009 should be used only to treat meticillin-resistant Staphylococcus aureus. If the impetigo is extensive or longstanding, an oral antibacterial such as flucloxacillin p. 486 (or clarithromycin p. 487) in penicillin allergy should be used. Mild antiseptics can be used to soften crusts.

Although many antibacterial drugs are available in topical preparations, some are potentially hazardous and frequently their use is not necessary if adequate hygienic measures can be taken. Moreover, not all skin conditions that are oozing, crusted, or characterised by pus/tules are actually infected. Topical antibacterials should be avoided on leg ulcers unless used in short courses for defined infections; treatment of bacterial colonisation is generally inappropriate.

To minimise the development of resistant organisms it is advisable to limit the choice of antibacterials applied topically to those not used systemically. Unfortunately some of these, for example neomycin sulfate p. 1009, may cause sensitisation, and there is cross-sensitivity with other aminoglycoside antibiotics, such as gentamicin p. 450. If large areas of skin are being treated, ototoxicity may also be a hazard with aminoglycoside antibiotics (and also with polymyxins), particularly in children, in the elderly, and in those with renal impairment. Resistant organisms are more common in hospitals, and whenever possible swabs should be taken for bacteriological examination before beginning treatment.

Mupirocin p. 1009 is not related to any other antibacterial in use; it is effective for skin infections, particularly those due to Gram-positive organisms but it is not indicated for pseudomonal infection. Although Staphylococcus aureus strains with low-level resistance to mupirocin are emerging, it is generally useful in infections resistant to other antibacterials. To avoid the development of resistance, mupirocin or fusidic acid p. 1008 should not be used for longer than 10 days and local microbiology advice should be sought before using it in hospital. In the presence of mupirocin-resistant MRSA infection, a topical antiseptic such as povidone-iodine p. 1053, chlorhexidine p. 1051 p. 989, or alcohol can be used; their use should be discussed with the local microbiologist.

Retapamulin p. 1009 can be used for impetigo and other superficial bacterial skin infections caused by Staphylococcus aureus and Streptococcus pyogenes that are resistant to first-line topical antibacterials. However, it is not effective against MRSA.

Silver sulfadiazine p. 1010 is used in the treatment of infected burns.

Antibacterial preparations also used systemically

Fusidic acid p. 1008 is a narrow-spectrum antibacterial used for staphylococcal infections. Fusidic acid has a role in the treatment of impetigo.

An ointment containing fusidic acid is used in the fissures of angular chelitis when associated with staphylococcal infection. See Oropharynx infections, fungal p. 596 for further information on angular chelitis.

Metronidazole p. 1008 is used topically for rosacea and to reduce the odour associated with anaerobic infections; oral metronidazole is used to treat wounds infected with anaerobic bacteria.

Antifungal preparations

Most localised fungal infections are treated with topical preparations. To prevent relapse, local antifungal treatment should be continued for 1–2 weeks after the disappearance of all signs of infection. Systemic therapy is necessary for scalp infection or if the skin infection is widespread, disseminated, or intractable; although topical therapy may be used to treat some nail infections, systemic therapy is more effective. Skin scrapings should be examined if systemic therapy is being considered or where there is doubt about the diagnosis.

Dermatophytes

Ringworm infection can affect the scalp (tinea capitis), body (tinea corporis), groin (tinea cruris), hand (tinea manuum), foot (tinea pedis, athlete’s foot), or nail (tinea unguium). Scalp infection requires systemic treatment; additional application of a topical antifungal, during the early stages of treatment, may reduce the risk of transmission. A topical antifungal can also be used to treat asymptomatic carriers of scalp ringworm. Most other local ringworm infections can be treated adequately with topical antifungal preparations (including shampoos). The imidazole antifungals clotrimazole p. 1010, econazole nitrate p. 1011, ketoconazole p. 1011, and miconazole p. 1011 are all effective. Terbinafine p. 1013 cream is also effective but it is more expensive. Other topical antifungals include griseofulvin p. 1012 and the undecenoates. Compound benzoic acid ointment (Whitfield’s ointment) has been used for ringworm infections but it is cosmetically less acceptable than proprietary preparations. Topical preparations for athlete’s foot containing tolnaflate are on sale to the public.

Antifungal dusting powders are of little therapeutic value in the treatment of fungal skin infections and may cause skin irritation; they may have some role in preventing re-infection.

Antifungal treatment may not be necessary in asymptomatic patients with tinea infection of the nails. If treatment is necessary, a systemic antifungal is more effective than topical therapy. However, topical application of amorolfine p. 1012 or tioconazole p. 1012 may be useful for treating early onychomycosis when involvement is limited to mild distal disease, or for superficial white onychomycosis, or where there are contra-indications to systemic therapy.
Pityriasis versicolor

Pityriasis (tinea) versicolor can be treated with ketoconazole shampoo p. 1011. Alternatively, selenium sulphide shampoo (unlicensed indication) can be used as a lotion (diluting with a small amount of water can reduce irritation) and left on the affected area for 10 minutes before rinsing off; it should be applied once daily for 7 days, and the course repeated if necessary.

Topical imidazole antifungals such as clotrimazole p. 1010, econazone nitrate p. 1011, ketoconazole p. 1011, and miconazole p. 997, or topical terbinafine p. 514 are alternatives, but large quantities may be required.

If topical therapy fails, or if the infection is widespread, pityriasis versicolor is treated systemically with a triazole antifungal. Relapse is common, especially in the immunocompromised.

Candidiasis

Candidal skin infections can be treated with a topical imidazole antifungal, such as clotrimazole p. 1010, econazone nitrate p. 1011, ketoconazole p. 1011, or miconazole p. 1011; topical terbinafine p. 1013 is an alternative. Topical application of nystatin p. 997 is also effective for candidiasis but it is ineffective against dermatophytosis. Refractory candidiasis requires systemic treatment generally with a triazole such as fluconazole p. 518; systemic treatment with terbinafine is not appropriate for refractory candidiasis.

Angular cheilitis

Miconazole p. 1011 cream is used in the fissures of angular cheilitis when associated with Candida.

Compound topical preparations

Combination of an imidazole and a mild corticosteroid (such as hydrocortisone 1% p. 993) may be of value in the treatment of eczematous intertrigo and, in the first few days only, of a severely inflamed patch of ringworm.

Combination of a mild corticosteroid with either an imidazole or nystatin p. 997 may be of use in the treatment of intertrigo associated with candida.

Antiviral preparations

Aciclovir cream p. 1016 is licensed for the treatment of initial and recurrent labial and genital herpes simplex infections; treatment should begin as early as possible. Systemic treatment is necessary for buccal or vaginal infections and for herpes zoster (shingles).

Herpes labialis

Aciclovir cream can be used for the treatment of initial and recurrent labial herpes simplex infections (cold sores). It is best applied at the earliest possible stage, usually when prodromal changes of sensation are felt in the lip and before vesicles appear.

Penciclovir cream is also licensed for the treatment of herpes labialis; it needs to be applied more frequently than aciclovir cream.

Systemic treatment is necessary if cold sores recur frequently or for infections in the mouth.

Parasiticidal preparations

Suitable quantities of parasiticidal preparations

</tr>
</tbody>
</table>

These amounts are usually suitable for an adult for single application.

Scabies

Permethrin p. 1015 is used for the treatment of scabies (Sarcoptes scabiei); malathion p. 1015 can be used if permethrin is inappropriate.

Benzyl benzoate p. 1014 is an irritant and should be avoided in children; it is less effective than malathion and permethrin.

Ivermectin p. 1015 (available on a named patient basis from ‘special-order’ manufacturers or specialist importing companies) by mouth has been used, in combination with topical drugs, for the treatment of hyperkeratotic (crusted or ‘Norwegian’) scabies that does not respond to topical treatment alone; further doses may be required.

Application

Although acaricides have traditionally been applied after a hot bath, this is not necessary and there is even evidence that a hot bath may increase absorption into the blood, removing them from their site of action on the skin.

All members of the affected household should be treated simultaneously. Treatment should be applied to the whole body including the scalp, neck, face, and ears. Particular attention should be paid to the webs of the fingers and toes and lotion brushed under the ends of nails. It is now recommended that malathion and permethrin should be applied twice, one week apart; in the case of benzyl benzoate in adults, up to 3 applications on consecutive days may be needed. It is important to warn users to reapply treatment to the hands if they are washed. Patients with hyperkeratotic scabies may require 2 or 3 applications of acaricide on consecutive days to ensure that enough penetrates the skin crusts to kill all the mites.

Itching

The itch and eczema of scabies persists for some weeks after the infestation has been eliminated and treatment for pruritus and eczema may be required. Application of crotamiton p. 1040 can be used to control itching after treatment with more effective acaricides. A topical corticosteroid may help to reduce itch and inflammation after scabies has been treated successfully; however, persistent symptoms suggest that scabies eradication was not successful. Oral administration of a sedating antihistamine at night may also be useful.

Head lice

Dimeticone p. 1014 is effective against head lice (Pediculus humanus capitis). It coats head lice and interferes with water balance in lice by preventing the excretion of water; it is less active against eggs and treatment should be repeated after 7 days. Malathion p. 1015, an organophosphorus insecticide, is an alternative, but resistance has been reported. Benzyl benzoate p. 1014 is licensed for the treatment of head lice but it is less effective than other drugs and not recommended for use in children. Permethrin is active against head lice but the formulation and licensed methods of application of the current products make them unsuitable for the treatment of head lice.

Head lice infestation (pediculosis) should be treated using lotion or liquid formulations only if live lice are present. Shampoos are diluted too much in use to be effective. A contact time of 8–12 hours or overnight treatment is recommended for lotions and liquids; a 2-hour treatment is not sufficient to kill eggs.

In general, a course of treatment for head lice should be 2 applications of product 7 days apart to kill lice emerging from any eggs that survive the first application. All affected household members should be treated simultaneously.

Wet combing methods

Head lice can be mechanically removed by combing wet hair meticulously with a plastic detection comb (probably for at least 30 minutes each time) over the whole scalp at 4-day intervals for a minimum of 2 weeks, and continued until no
lice are found on 3 consecutive sessions; hair conditioner or vegetable oil can be used to facilitate the process. Several devices for the removal of head lice such as combs and topical solutions, are available and some are prescribable on the NHS.

The Drug Tariffs can be accessed online at:
- National Health Service Drug Tariff for England and Wales: www.ppa.org.uk/ppa/edt_intro.htm
- Health and Personal Social Services for Northern Ireland Drug Tariff: www.dhsspsni.gov.uk/pas-tariff
- Scottish Drug Tariff: www.idscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Crab lice
Permethrin p. 1015 and malathion p. 1015 are used to eliminate crab lice (Phthirus pubis). An aqueous preparation should be applied, allowed to dry naturally and washed off after 12 hours; a second treatment is needed after 7 days to kill lice emerging from surviving eggs. All surfaces of the body should be treated, including the scalp, neck, and face (paying particular attention to the eyebrow and other facial hair). A different insecticide should be used if a course of treatment fails.

2.1 Bacterial skin infections

Bacitracin with polymyxin B

**INDICATIONS AND DOSE**

**Bacterial skin infections**

**TO THE SKIN**
- **Child:** Apply twice daily, can be applied more frequently if required
- **Adult:** Apply twice daily, can be applied more frequently if required

**CAUTIONS** Nephrotoxicity - neurotoxicity  
**CAUTIONS, FURTHER INFORMATION**

If large areas of skin are being treated nephrotoxicity and neurotoxicity may be a hazard, particularly in children with renal impairment.

**SIDE-EFFECTS**
- **Frequency not known** Contact sensitisation

**RENAI IMPAIRMENT** Renal impairment increases the risk of nephrotoxicity and neurotoxicity.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ointment**
- **Polyfax (Teva UK Ltd)**
  - Bacitracin zinc 500 unit per 1 gram, Polymyxin B sulfate 10000 unit per 1 gram Polyfax ointment | 4 gram £2.23 | 20 gram £4.62 DT price = £4.62

Fusidic acid

**DRUG ACTION** Fusidic acid and its salts are narrow-spectrum antibiotics used for staphylococcal infections.

**INDICATIONS AND DOSE**

**Staphylococcal skin infection**

**TO THE SKIN**
- **Child:** Apply 3–4 times a day usually for 7 days
- **Adult:** Apply 3–4 times a day

**CAUTIONS** Avoid contact of cream or ointment with eyes

Metronidazole

**DRUG ACTION** Metronidazole is an antimicrobial drug with high activity against anaerobic bacteria and protozoa.

**INDICATIONS AND DOSE**

ACEA®

**Acute inflammatory exacerbation of rosacea**

**TO THE SKIN**
- **Adult:** Apply twice daily for 8 weeks, to be applied thinly

ANABACT®

**Malodorous fungating tumours and malodorous gravitational and decubitus ulcers**

**TO THE SKIN**
- **Adult:** Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

METROGEL®

**Acute inflammatory exacerbation of rosacea**

**TO THE SKIN**
- **Adult:** Apply twice daily for 8–9 weeks, to be applied thinly

**Malodorous fungating tumours**

**TO THE SKIN**
- **Adult:** Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

METROSA®

**Acute exacerbation of rosacea**

**TO THE SKIN**
- **Adult:** Apply twice daily for up to 8 weeks, to be applied thinly

ROSICED®

**Inflammatory papules and pustules of rosacea**

**TO THE SKIN**
- **Adult:** Apply twice daily for 6 weeks (longer if necessary)
Neomycin sulfate

**INDICATIONS AND DOSE**

**Bacterial skin infections**

TO THE SKIN

- **Adult:** Apply up to 3 times a day, for short-term use only
- **Child:** Apply up to 3 times a day, for short-term use only

**CONTRA-INDICATIONS**

Neonates

**CAUTIONS**

Large areas If large areas of skin are being treated otoxicity may be a hazard, particularly in children and the elderly, and in those with renal impairment.

**SIDE-EFFECTS**

Sensitisation (cross sensitivity with other aminoglycosides may occur)

**LESS SUITABLE FOR PRESCRIBING**

Neomycin sulfate cream is less suitable for prescribing.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, gel

**Cream**

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol, propylene glycol

- Rosiced (Pierre Fabre Dermo-Cosmetique)
- Metronidazole 7.5 mg per 1 gram Rosiced 0.75% cream | 30 gram (£15.50 DT price = £6.60)
- Rozex (Galdemen (UK) Ltd)
- Metronidazole 7.5 mg per 1 gram Rozex 0.75% cream | 30 gram (£6.60 DT price = £6.60) + 40 gram (£9.88 DT price = £9.88)

**Gel**

EXCIPIENTS: May contain Benzyl alcohol, disodium edetate, hydroxybenzoates (parabens), propylene glycol

- METRONIDAZOLE (Non-proprietary)
  - Metronidazole 7.5 mg per 1 gram Metronidazole 0.75% gel | 15 gram no price available | 30 gram (£12.00) + 40 gram (£19.90)
- Acea (Ferndale Pharmaceuticals Ltd)
  - Metronidazole 7.5 mg per 1 gram Acea 0.75% gel | 40 gram (£9.95)
- Anabact (Cambridge Healthcare Supplies Ltd)
  - Metronidazole 7.5 mg per 1 gram Anabact 0.75% gel | 15 gram (£4.47) + 30 gram (£7.89)
- Metrogel (Galdemen (UK) Ltd)
  - Metronidazole 7.5 mg per 1 gram Metrogel 0.75% gel | 40 gram (£22.63)
- Metrox (Lindnera Ltd)
  - Metronidazole 7.5 mg per 1 gram Metrox 0.75% gel | 30 gram (£12.00) + 40 gram (£19.90)
- Rozex (Galdemen (UK) Ltd)
  - Metronidazole 7.5 mg per 1 gram Rozex 0.75% gel | 30 gram (£6.60) + 40 gram (£9.88)
- Zyomet (AMCo)
  - Metronidazole 7.5 mg per 1 gram Zyomet 0.75% gel | 30 gram (£12.00)

**Retapamulin**

**INDICATIONS AND DOSE**

Superficial bacterial skin infection caused by Staphylococcus aureus and Streptococcus pyogenes (if resistant to first line topical antibiotics)

TO THE SKIN

- **Child:** 9 months-17 years: Apply twice daily for 5 days, to be applied thinly, maximum area of skin treated 2% of body surface area, review treatment if no response within 2–3 days
- **Adult:** Apply twice daily for 5 days, to be applied thinly, maximum area of skin treated 100 cm² or lesion length 10 cm, review treatment if no response within 2–3 days

**CONTRA-INDICATIONS**

Contact with eyes - contact with mucous membranes

**SIDE-EFFECTS**

Contact dermatitis - localised erythema - localised irritation - localised pain - pruritus

**NATIONAL FUNDING/ACCESS DECISIONS**

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (March 2008) that retapamulin (Altargo®) is not recommended
for use within NHS Scotland for the treatment of superficial skin infections.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

- **CAUTIONARY AND ADVISORY LABELS**
- 28
- **EXCIPIENTS:** May contain Butylated hydroxytoluene
- 4
- **Altargo** (GlaxoSmithKline UK Ltd)

**Silver sulfadiazine**

**INDICATIONS AND DOSE**

- **Prophylaxis and treatment of infection in burn wounds**
  - **TO THE SKIN**
    - **Child:** Apply daily, may be applied more frequently if very exudative
    - **Adult:** Apply daily, may be applied more frequently if very exudative

- **For conservative management of finger-tip injuries**
  - **TO THE SKIN**
    - **Child:** Apply every 2–3 days, consult product literature for details
    - **Adult:** Apply every 2–3 days, consult product literature for details

- **Adjunct to prophylaxis of infection in skin graft donor sites and extensive abrasions**
  - **TO THE SKIN**
    - **Adult:** (consult product literature)

- **Adjunct to short-term treatment of infection in pressure sores**
  - **TO THE SKIN**
    - **Adult:** Apply once daily or on alternate days

As an adjunct to short-term treatment of infection in leg ulcers

- **TO THE SKIN**
  - **Adult:** Apply once daily or on alternate days, not recommended if ulcer is very exudative

**CONTRA-INDICATIONS**
Not recommended for neonates

**CAUTIONS**

- **G6PD deficiency**
- **CAUTIONS, FURTHER INFORMATION**
- **Large areas** Plasma-sulfadiazine concentrations may approach therapeutic levels with *side-effects* and *interactions* as for sulfonamides if large areas of skin are treated.

**INTERACTIONS**

- Appendix 1 (sulfonamides)—if large amounts given.
- May inactivate enzymatic debriding agents—concomitant use may be inappropriate.

**SIDE-EFFECTS**

- Allergic reactions - argyria (following treatment of large areas of skin or prolonged use)
- Burning - itching - leucopenia - rashes

**SIDE-EFFECTS, FURTHER INFORMATION**

- **Severe blood and skin disorders**
  - Owing to the association of sulfonamides with severe blood and skin disorders, treatment should be stopped immediately if blood disorders or rashes develop. Leucopenia developing 2–3 days after starting treatment of burns patients is reported usually to be self-limiting and silver sulfadiazine need not usually be discontinued provided blood counts are monitored carefully to ensure return to normality within a few days.

**ALLERGY AND CROSS-SENSITIVITY**
Contra-indicated in patients with sensitivity to sulfonamides.

**PREGNANCY**
Risk of neonatal haemolysis and methaemoglobinemia in third trimester.

**BREAST FEEDING**
Small risk of kernicterus in jaundiced infants and of haemolysis in G6PD-deficient infants.

**HEPATIC IMPAIRMENT**
Manufacturer advises caution if significant impairment.

**RENAL IMPAIRMENT**
Manufacturer advises caution if significant impairment.

**MONITORING REQUIREMENTS**
Monitor for leucopenia.

**2.2 Fungal skin infections**

**IMIDAZOLE ANTI-FUNGALS**

**Clotrimazole**

**INDICATIONS AND DOSE**

- **Fungal skin infections**
  - **TO THE SKIN**
    - **Child:** Apply 2–3 times a day
    - **Adult:** Apply 2–3 times a day

**CAUTIONS**

- Contact with eyes and mucous membranes should be avoided.

**SIDE-EFFECTS**

- Local irritation - erythema - hypersensitivity reactions - itching - mild burning sensation

**SIDE-EFFECTS, FURTHER INFORMATION**

- Treatment should be discontinued if side-effects are severe.

**PREGNANCY**
Minimal absorption from skin; not known to be harmful.

**PRESCRIBING AND DISPENSING INFORMATION**

- Spray may be useful for application of clotrimazole to large or hairy areas of the skin.

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug.

**Cream**

- **EXCIPIENTS:** May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- **Flamazine** (Smith & Nephew Healthcare Ltd)

- **Sulfadiazine silver 10 mg per 1 gram**

  - **Flamazine 1% cream**
    - 20 gram (£2.91) | 50 gram (£3.85 DT price = £3.85) | 250 gram (£40) £10.32 DT price = £10.32 | 500 gram (£89) £18.27 DT price = £18.27

- **Silver sulfadiazine**

  - **Altargo** 10 mg per 1 gram

    - **Retapamulin 10 mg per 1 gram** (GlaxoSmithKline UK Ltd)

- **Child:** Apply twice daily

- **Adult:** Apply daily, may be applied more frequently if very exudative

- **TO THE SKIN**

  - **Apply every 2–3 days, consult product literature**

  - **Apply every 3 days, consult product literature**

- **Small risk of kernicterus in jaundiced infants and of haemolysis in G6PD-deficient infants.**

- **Risk of neonatal haemolysis and methaemoglobinaemia in third trimester.**

- **Significant impairment.**

**Treatment of seborrhoeic dermatitis and dandruff**

- **To the skin**
  - Child 12-17 years: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing
  - Adult: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing

**Prophylaxis of seborrhoeic dermatitis and dandruff**

- **To the skin**
  - Child 12-17 years: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing
  - Adult: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing

**Treatment of pityriasis versicolor**

- **To the skin**
  - Child 12-17 years: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing

**CAUTIONS** Avoid contact with eyes, avoid contact with mucous membranes

**INTERACTIONS** → Appendix 1 (antifungals, imidazole).

**SIDE-EFFECTS** Erythema, hypersensitivity reactions, itching, mild burning sensation, occasional local irritation

**SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be discontinued if side-effects are severe.

**NATIONAL FUNDING/ACCESS DECISIONS**

- **NHS restrictions** Ketoconazole cream is not prescribable on the NHS except for seborrhoeic dermatitis and pityriasis versicolor and endorsed 'SLS'.

- **Exceptions to legal category**
  - For Fungal skin infections in adults A 15-g tube is available for sale to the public for the treatment of tinea pedis, tinea cruris, and candidal intertrigo.
  - For Seborrhoeic dermatitis and dandruff Can be sold to the public for the prevention and treatment of dandruff and seborrhoeic dermatitis of the scalp as a shampoo formulation containing ketoconazole maximum 2% in a pack containing maximum 120 mL and labelled to show a maximum frequency of application of once every 3 days.

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug.

- **Shampoo**
  - **Excipients**: May contain Emulsifiers, surfactants, stabilisers
  - **Ketoconazole** 20 mg per 1 gram Nizoral 2% shampoo | 120 mL (£) £4.24 07 price = £4.24

  - **Miconazole nitrate 20 mg per 1 g**: Daktarin 2% powder (20 gram) £2.58

**Tioconazole**

**INDICATIONS AND DOSE**
Fungal nail infection

**BY TRANSGINGUAL APPLICATION**
- **Child:** Apply twice daily usually for up to 6 months (may be extended to 12 months), apply to nails and surrounding skin
- **Adult:** Apply twice daily usually for up to 6 months (may be extended to 12 months), apply to nails and surrounding skin

**CAUTIONS** Contact with eyes and mucous membranes should be avoided - use with caution if child likely to suck affected digits

**SIDE-EFFECTS** Burning sensation, dry skin, erythema, exfoliation, hypersensitivity reactions, itching, local oedema, nail discoloration, nail pain, occasional local irritation, periangual inflammation, rash

**SIDE-EFFECTS, FURTHER INFORMATION**
Treatment should be discontinued if side-effects are severe.

**PREGNANCY** Manufacturer advises avoid.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **Paint**
  - Tioconazole 283 mg per 1 ml: Trosyl (Pfizer Ltd)
  - Tioconazole 283 mg per 1 ml: Trosyl (Riner) Spray 283 mg/ml nail solution £27.38 DT price = £27.38

**OTHER ANTIFUNGALS**

**Amorolfine**

**INDICATIONS AND DOSE**
Fungal nail infections

**BY TRANSGINGUAL APPLICATION**
- **Child:** Apply 1 – 2 times a week for 6 months to treat finger nail and for toe nails 9 – 12 months (review at intervals of 3 months), apply to infected nails after filing and cleansing, allow to dry for approximately 3 minutes
- **Adult:** Apply 1 – 2 times a week for 6 months to treat finger nail and for toe nails 9 – 12 months (review at intervals of 3 months), apply to infected nails after filing and cleansing, allow to dry for approximately 3 minutes

**UNLICENSED USE** Not licensed for use in children under 12 years.

**CAUTIONS** Avoid contact with ears, avoid contact with eyes and mucous membranes - use with caution in child likely to suck affected digits

**SIDE-EFFECTS** Burning sensation, erythema, hypersensitivity reactions, itching, occasional local irritation

**SIDE-EFFECTS, FURTHER INFORMATION**
Treatment should be discontinued if side-effects are severe.

**PATIENT AND CARER ADVICE** Avoid nail varnish or artificial nails during treatment.

**EXCEPTIONS TO LEGAL CATEGORY** Amorolfine nail lacquer can be sold to the public if supplied for the treatment of mild cases of distal and lateral subungual onychomycoses caused by dermatophytes, yeasts and moulds; subject to treatment of max. 2 nails, max. strength of nail lacquer amorolfine 5% and a pack size of 3 mL.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

- **Medicated nail lacquer**
  - **CAUTIONARY AND ADVISORY LABELS 10**
  - **AMOROLFINE (Non-proprietary)**
    - Amorolfine (as Amorolfine hydrochloride) 50 mg per 1 ml: Amorolfine 5% medicated nail lacquer (3 ml) £12.00

Benzoic acid with salicylic acid

INDICATIONS AND DOSE

Ringworm (tinea)

TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

- CAUTIONS

Avoid broken or inflamed skin  avoid contact with eyes avoid contact with mucous membranes

CAUTIONS, FURTHER INFORMATION

Salicylate toxicity  Salicylate toxicity may occur particularly if applied on large areas of skin.

SIDE-EFFECTS

Erythema  hypersensitivity reactions  itching  mild burning sensation  occasional local irritation

SIDE-EFFECTS, FURTHER INFORMATION

Treatment should be discontinued if side effects are severe.

- PRESCRIBING AND DISPENSING INFORMATION

Benzoic Acid Ointment, Compound, BP (a preparation containing benzoic acid and salicylic acid) has also been referred to as Whitfield’s ointment. When prepared extemporaneously, the BP states Benzoic Acid Ointment, Compound BP (Whitfield’s ointment) consists of benzoic acid 6%, salicylic acid 3%, in emulsifying ointment.

- MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, cream

Boric acid with salicylic acid and tannic acid

INDICATIONS AND DOSE

Fungal nail infection, particularly tinea

BY TRANSGUNGAL APPLICATION

- Child 5–17 years: Apply twice daily, and after washing
- Adult: Apply twice daily, and after washing

- CAUTIONS

Avoid broken or inflamed skin  contact with eyes and mucous membranes should be avoided - use with caution in children likely to suck affected digits

CAUTIONS, FURTHER INFORMATION

Salicylate toxicity  Salicylate toxicity can occur particularly if applied on large areas of skin.

SIDE-EFFECTS

Burning sensation  erythema  hypersensitivity reactions  itching  occasional local irritation

SIDE-EFFECTS, FURTHER INFORMATION

Treatment should be discontinued if side-effects are severe.

- PREGNANCY  Avoid.

LESS SUITABLE FOR PRESCRIBING  Phytex® is less suitable for prescribing.

- MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.
2.3 Parasitic skin infections

**Parasiticides**

**Benzyl benzoate**

**INDICATIONS AND DOSE**

*Scabies*

**TO THE SKIN**

- **Child:** Apply over the whole body; repeat without bathing on the following day and wash off 24 hours later; a third application may be required in some cases

**CAUTIONS**

- Avoid contact with eyes and mucous membranes - children (not recommended) - do not use on broken or secondarily infected skin

**SIDE-EFFECTS**

- Burning sensation (especially on genitalia and excoriations) - rashes - skin irritation

**BREAST FEEDING**

Suspend feeding until product has been washed off.

**PRESCRIBING AND DISPENSING INFORMATION**

Not recommended for children—dilution to reduce irritant effect also reduces efficacy. Some manufacturers recommend application to the body but to exclude the head and neck. However, application should be extended to the scalp, neck, face, and ears. When prepared extemporaneously, the BP states Benzyl Benzoate Application, BP consists of benzyl benzoate 25% in an emulsion basis.

**LESS SUITABLE FOR PRESCRIBING**

Benzyl benzoate is less suitable for prescribing.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

---

**Undecenoic acid with zinc undecenoate**

**INDICATIONS AND DOSE**

*Treatment of athletes foot*

**TO THE SKIN**

- **Child:** Apply twice daily, continue use for seven days after lesions have healed
- **Adult:** Apply twice daily, continue use for seven days after lesions have healed

**Prevention of athletes foot**

**TO THE SKIN**

- **Child:** Apply once daily
- **Adult:** Apply once daily

**CAUTIONS**

- Avoid broken skin - contact with eyes should be avoided - contact with mucous membranes should be avoided

**SIDE-EFFECTS**

- Erythema - hypersensitivity reactions - itching - local irritation - mild burning sensation

**SIDE-EFFECTS, FURTHER INFORMATION**

Treatment should be discontinued if side effects are severe.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

**EXCIPIENTS:** May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances

- **UNDECENOIC ACID WITH ZINC UNDECENOATE (Non-proprietary)**
  - Undecenoic acid 50 mg per 1 gram, Zinc undecenoate 200 mg per 1 gram 25 gram £0.01
  - Brands may include Mycota

---

**Dimeticone**

**INDICATIONS AND DOSE**

*Head lice*

**TO THE SKIN**

- **Child:** Apply once weekly for 2 doses, rub into hair and scalp, allow to dry naturally, shampoo after minimum 8 hours (or overnight)
- **Adult:** Apply once weekly for 2 doses, rub into hair and scalp, allow to dry naturally, shampoo after minimum 8 hours (or overnight)

**UNLICENSED USE**

Not licensed for use in children under 6 months except under medical supervision.

**CAUTIONS**

- Avoid contact with eyes - children under 6 months, medical supervision required

**SIDE-EFFECTS**

- Skin irritation

**PATIENT AND CARER ADVICE**

Patients should be told to keep hair away from fire and flames during treatment.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.
Malathion

**INDICATIONS AND DOSE**

**Head lice**
- **TO THE SKIN**
  - Child: Apply once weekly for 2 doses, apply 0.5% preparation over whole body, and wash off after 24 hours,
  - Adult: Apply once weekly for 2 doses, apply 0.5% preparation over whole body, and wash off after 24 hours,

**Crab lice**
- **TO THE SKIN**
  - Child: Apply once weekly for 2 doses, apply 0.5% preparation over whole body, and wash off after 24 hours,
  - Adult: Apply once weekly for 2 doses, apply 0.5% preparation over whole body, and wash off after 24 hours,

**Scabies**
- **TO THE SKIN**
  - Child: Apply once weekly for 2 doses, apply 0.5% preparation over whole body, and wash off after 24 hours,
  - Adult: Apply once weekly for 2 doses, apply 0.5% preparation over whole body, and wash off after 24 hours,

**SIDE-EFFECTS**
- Chemical burns · hypersensitivity reactions · skin irritation

**PRESCRIBING AND DISPENSING INFORMATION**
- For scabies, manufacturer recommends application to the body but not necessarily to the head and neck.
- However, application should be extended to the scalp, neck, face, and ears.

Ivermectin

**INDICATIONS AND DOSE**

**Scabies**, in combination with topical drugs, for the treatment of hyperkeratotic (crusted or ‘Norwegian’) scabies that does not respond to topical treatment alone
- **BY MOUTH**
  - **Adult:** 200 micrograms/kg for 1 dose, further doses of 200 micrograms/kg may be required

**SIDE-EFFECTS**
- Aggravation of itching · aggravation of rash

**CAUTIONARY AND ADVISORY LABELS**
- Chemical burns

**UNLICENSED USE**
- Ivermectin is an unlicensed drug.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug.
- **Liquid**
  - **EXCIPIENTS:** May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances, hydroxybenzoates (parabens)
  - **Derbac-M** (G.R. Lane Health Products Ltd)
    - Malathion 5 mg per 1 gram Derbac-M 0.5% liquid | 50 ml [£] 3.23
      DT price = £3.23 | 200 ml [£] 7.76 DT price = £7.76

**Permethrin**

**INDICATIONS AND DOSE**

**Scabies**
- **TO THE SKIN**
  - Child 2 months–17 years: Apply once weekly for 2 doses, apply 5% preparation over whole body including face, neck, scalp and ears then wash off after 8–12 hours.
  - Adult: Apply once weekly for 2 doses, apply 5% preparation over whole body including face, neck, scalp and ears then wash off after 8–12 hours.
    - If hands are washed with soap they should be treated again with cream
  - **Head lice**
    - **TO THE SKIN**
      - Child 2 months–17 years: Apply once weekly for 2 doses, apply 5% cream over whole body, allow to dry naturally and wash off after 12 hours or after leaving on overnight
  - **Crab lice**
    - **TO THE SKIN**
      - Adult: Not recommended; no information given

**SIDE-EFFECTS**
- Rare Oedema · rashes · erythema · pruritus · stinging

**PRESCRIBING AND DISPENSING INFORMATION**
- Manufacturer recommends application to the body but to exclude head and neck. However, application should be extended to the scalp, neck, face, and ears.
- Large children may require up to two 30-g packs for adequate treatment.

**LESS SUITABLE FOR PRESCRIBING**
- Lyclear® Creme Rinse is less suitable for prescribing.

**MEDICINAL FORMS**
- There can be variation in the licensing of different medicines containing the same drug.
- **Liquid**
  - **EXCIPIENTS:** May contain Fatty alcohol, squalene and related substances including lanolin
  - **PERMETHRIN (Non-proprietary)**
  - Permethrin 50 mg per 1 gram Permethrin 5% cream |
  - 30 gram [£] 7.46 DT price = £7.46
  - Brands may include Lyclear 5% dermal cream
2.4 Viral skin infections

NUCLEOSIDE ANALOGUES

Aciclovir
(Acylovir)

INDICATIONS AND DOSE
Herpes simplex infection (local treatment)

TO THE SKIN
- Child: Apply 5 times a day for 5–10 days, to be applied to lesions every 4 hours, starting at first sign of attack
- Adult: Apply 5 times a day for 5–10 days, to be applied to lesions every 4 hours, starting at first sign of attack

CAUTIONS
- Avoid cream coming into contact with eyes and mucous membranes
- SIDE-EFFECTS: Drying of the skin, erythema, itching of the skin, transient burning, transient stinging
- PREGNANCY: Limited absorption from topical aciclovir preparations.
- PATIENT AND CARER ADVICE
  - Medicines for Children leaflet: Aciclovir cream for herpes
  - www.medicinesforchildren.org.uk/aciclovir-cream-for-herpes
- PROFESSION SPECIFIC INFORMATION
  - Dental practitioners’ formulary
  - Aciclovir Cream may be prescribed.
- EXCEPTIONS TO LEGAL CATEGORY
  - A 2-g tube and a pump pack are on sale to the public for the treatment of cold sores.

MEDICINAL FORMS
- There can be variation in the licensing of different medicines containing the same drug.
- Cream
  - Excipients: May contain cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol
  - Aciclovir (Non-proprietary)
    - Aciclovir 50 mg per 1 gram
    - Aciclovir 5% cream | 2 gram (£0.41 DT price + £1.33) | 10 gram (£0.01236 DT price + £6.65)
    - Zovirax (GlaxoSmithKline UK Ltd)
    - Aciclovir 50 mg per 1 gram
    - Zovirax 5% cream | 2 gram (£4.63 DT price + £1.33) | 10 gram (£11.36 DT price + £6.65)

3 Inflammatory skin conditions

3.1 Eczema and psoriasis

Eczema

Eczema (dermatitis) has several causes, which may influence treatment. The main types of eczema are irritant, allergic contact, atopic, venous and discoid; different types may co-exist. Lichenification, due to scratching and rubbing, may complicate any chronic eczema. Atopic eczema is the most common type and it usually involves dry skin as well as infection and lichenification.

Management of eczema involves the removal or treatment of contributory factors including occupational and domestic irritants. Known or suspected contact allergens should be avoided. Rarely, ingredients in topical medicinal products may sensitize the skin; the BNF lists active ingredients together with excipients that have been associated with skin sensitisation.

Skin dryness and the consequent irritant eczema requires emollients applied regularly (at least twice daily) and liberally to the affected area; this can be supplemented with bath or shower emollients. The use of emollients should continue even if the eczema improves or if other treatment is being used.

Topical corticosteroids are also required in the management of eczema; the potency of the corticosteroid should be appropriate to the severity and site of the condition. Mild corticosteroids are generally used on the face and on flexures; potent corticosteroids are generally required for use on adults with discoid or lichenified eczema or with eczema on the scalp, limbs, and trunk. Treatment should be reviewed regularly, especially if a potent corticosteroid is required. In patients with frequent flares (2–3 per month), a topical corticosteroid can be applied on 2 consecutive days each week to prevent further flares.

Bandages (including those containing ichthammol with zinc oxide p. 1019) are sometimes applied over topical corticosteroids or emollients to treat eczema of the limbs. Dry-wrap dressings can be used to provide a physical barrier to help prevent scratching and improve retention of emollients. See Wound management products and elasticated garments p. 1294 for details of elasticated viscose stockinette tubular bandages and garments, and silk clothing.

See Eczema and psoriasis, drugs affecting the immune system p. 1017 for the role of topical pimecrolimus p. 1019 and tacrolimus p. 1020 in atopic eczema.

Infection

Bacterial infection (commonly with Staphylococcus aureus and occasionally with Streptococcus pyogenes) can exacerbate eczema and requires treatment with topical or systemic antibacterial drugs. Antibacterial drugs should be used in short courses (typically 1 week) to reduce the risk of drug resistance or skin sensitisation. Associated eczema is treated simultaneously with a topical corticosteroid which can be combined with a topical antimicrobial. Eczema involving widespread or recurrent infection requires the use of a systemic antibacterial that is active against the infecting organism. Products that combine an antiseptic with an emollient application and with a bath emollient can also be used; antiseptic shampoos can be used on the scalp.

Intertriginous eczema commonly involves candida and bacteria; it is best treated with a mild or moderately potent topical corticosteroid and a suitable antimicrobial drug.

Widespread herpes simplex infection may complicate atopic eczema and treatment with a systemic antiviral drug is indicated.

Management of other features of eczema

Lichenification, which results from repeated scratching is treated initially with a potent corticosteroid. Bandages containing ichthammol paste p. 1019 (to reduce pruritus) and other substances such as zinc oxide can be applied over the corticosteroid or emollient. Coal tar and ichthammol can be useful in some cases of chronic eczema.

A non-sedating antihistamine may be of some value in relieving severe itching or urticaria associated with eczema. A sedating antihistamine can be used if itching causes sleep disturbance.

Exudative (weeping) eczema requires a potent corticosteroid initially; infection may also be present and require specific treatment. Potassium permanganate p. 1052 solution (1 in 10,000) can be used in exudating eczema for its antiseptic and astringent effects; treatment should be stopped when exudation stops.

Severe refractory eczema

Severe refractory eczema is best managed under specialist supervision; it may require phototherapy or drugs that act on the immune system. Alitretinoin p. 1033 is licensed for...
the treatment of severe chronic hand eczema refractory to potent topical corticosteroids; patients with hyperkeratotic features are more likely to respond to alitretinoin than those with pompholyx.

**Seborrhoeic dermatitis**
Seborrhoeic dermatitis (seborrhoeic eczema) is associated with species of the yeast *Malassezia* and affects the scalp, paranasal areas, and eyebrows. Shampoos active against the yeast (including those containing ketoconazole p. 1011 and coal tar) and combinations of mild corticosteroids with suitable antimicrobials are used.

---

### Eczema and psoriasis, drugs affecting the immune response

Drugs affecting the immune response are used for eczema or psoriasis. Systemic drugs acting on the immune system are used under specialist supervision.

- **Pimecrolimus** p. 1019 by topical application is licensed for mild to moderate atopic eczema. Tacrolimus p. 1020 is licensed for topical use in moderate to severe atopic eczema. Both are drugs whose long-term safety is still being evaluated and they should not usually be considered first-line treatments unless there is a specific reason to avoid or reduce the use of topical corticosteroids. Treatment of atopic eczema with topical pimecrolimus or topical tacrolimus should be initiated only by prescribers experienced in managing the condition. Topical tacrolimus and pimecrolimus have a role in the treatment of psoriasis.

- A short course of a systemic corticosteroid can be given for eczema flares that have not improved despite appropriate topical treatment.

- Ciclosporin p. 717 by mouth can be used for severe psoriasis and for severe eczema. Azathioprine p. 716 or mycophenolate mofetil p. 725 are used for severe refractory eczema [unlicensed indication].

- Methotrexate p. 762 can be used for severe psoriasis, the dose being adjusted according to severity of the condition and haematological and biochemical measurements. Folic acid p. 836 should be given to reduce the possibility of side-effects associated with methotrexate. Folic acid can be given once weekly [unlicensed indication], on a different day from the methotrexate; alternative regimens of folic acid may be used in some settings.

- Etanercept p. 903, adalimumab p. 901, and infliximab p. 906 inhibit the activity of tumour necrosis factor (TNFα).

They are used for severe plaque psoriasis either refractory to at least 2 standard systemic treatments and phototherapy, or when standard treatments cannot be used because of intolerance or contra- indications; while either etanercept or adalimumab is considered to be the first choice in stable disease, infliximab or adalimumab may be useful when rapid disease control is required. Ustekinumab p. 899 (a monoclonal antibody that inhibits interleukins 12 and 23) can be used for severe plaque psoriasis that has not responded to at least 2 standard systemic treatments and phototherapy, or when these treatments cannot be used because of intolerance or contra- indications. Adalimumab, etanercept, infliximab and ustekinumab are also licensed for psoriatic arthritis.

---

### Psoriasis

Psoriasis is characterised by epidermal thickening and scaling. It commonly affects extensor surfaces and the scalp.

Occasionally, psoriasis is provoked or exacerbated by drugs such as lithium, chloroquine and hydroxychloroquine, beta-blockers, non-steroidal anti-inflammatory drugs, and ACE inhibitors. Psoriasis may not be seen until the drug has been taken for weeks or months.

**Emollients**, in addition to their effects on dryness, scaling and cracking, may have an anti-proliferative effect in psoriasis, and may be the only treatment necessary for mild psoriasis. They are particularly useful in inflammatory psoriasis and in plaque psoriasis of palms and soles, in which irritant factors can perpetuate the condition. Emollients are useful adjuncts to other more specific treatment.

More specific topical treatment for chronic stable plaque psoriasis on extensor surfaces of trunk and limbs involves the use of vitamin D analogues, coal tar p. 1018, and the retinoid tazarotene p. 1034. However, they can irritate the skin and they are not suitable for the more inflammatory forms of psoriasis; their use should be suspended during an inflammatory phase of psoriasis. The efficacy and the irritancy of each substance varies between patients. If a substance irritates significantly, it should be stopped or the concentration reduced; if it is tolerated, its effects should be assessed after 4 to 6 weeks and treatment continued if it is effective.

**Scalp psoriasis** is usually scaly, and the scale may be thick and adherent; this will require softening with an emollient cream, ointment, or oil. A tar-based shampoo is first-line treatment for scalp psoriasis; a keratolytic, such as salicylic acid, should also be used if there is significant scaling, to allow other treatments to work.

Some preparations prescribed for psoriasis affecting the scalp, combine salicylic acid with coal tar or sulfur. The product should be applied generously, and an adequate quantity should be prescribed. It should be left on for at least an hour, often more conveniently overnight, before washing off. The use of scalp preparations containing a potent corticosteroid or a vitamin D analogue, either alone or in combination, can also be helpful.

**Facial, flexural and genital psoriasis** can be managed with short-term use of a mild or moderate potency topical corticosteroid (a mild potency topical corticosteroid is preferred for the initial treatment of facial psoriasis). Calcipotriol p. 1037 or tacalcitol p. 1037 can be used for longer-term treatment, or if the response to mild or moderate potency topical corticosteroids is inadequate; calcipotriol p. 1036 is more likely to cause irritation. Low strength tar preparations can also be used. Pimecrolimus p. 1019 or tacrolimus p. 1020 by topical application [unlicensed indication] can be used short-term, under specialist supervision, in patients whose condition has not responded adequately to other treatments, or who are intolerant of them.

Widespread unstable psoriasis of erythrodermic or generalised pustular type requires urgent specialist assessment. Initial topical treatment should be limited to using emollients frequently and generously; emollients should be prescribed in quantities of 1 kg or more. More localised acute or subacute inflammatory psoriasis with hot, spreading or itchy lesions, should be treated topically with emollients or with a corticosteroid of moderate potency.

Calcipotriol and tacalcitol are analogues of vitamin D that affect cell division and differentiation. Calcitriol is an active form of vitamin D. Vitamin D and its analogues are used first-line for the long-term treatment of plaque psoriasis; they do not smell or stain and they may be more acceptable than tar or dithranol products. Of the vitamin D analogues, tacalcitol and calcitriol are less likely to irritate.

**Coal tar** has anti-inflammatory properties that are useful in chronic plaque psoriasis; it also has antisingulating properties. Crude coal tar (coal tar, BP) is the most effective form, typically in a concentration of 1 to 10% in a soft paraffin base, but few outpatients tolerate the smell and mess. Cleaner extracts of coal tar included in proprietary preparations, are more practicable for home use but they are less effective and improvement takes longer. Contact of
coal tar products with normal skin is not normally harmful and they can be used for widespread small lesions; however, irritation, contact allergy, and sterile folliculitis can occur. The milder tar extracts can be used on the face and flexures. Tar baths and tar shampoos are also helpful.

Dithranol below is effective for chronic plaque psoriasis. Its major disadvantages are irritation (for which individual susceptibility varies) and staining of skin and of clothing. Dithranol below is not generally suitable for widespread small lesions nor should it be used in the flexures or on the face. Proprietary preparations are more suitable for home use; they are usually washed off after 5 to 60 minutes (‘short contact’). Specialist nurses may apply intensive treatment with dithranol below paste which is covered by stockinette dressings and usually retained overnight. Dithranol below should be discontinued if even a low concentration causes acute inflammation; continued use can result in the psoriasis becoming unstable.

Tazarotene p. 1034, a retinoid, has a similar efficacy to vitamin D and its analogues, but is associated with a greater incidence of irritation. Although irritation is common, it is minimised by applying tazarotene sparingly to the plaques and avoiding normal skin; application to the face and in flexures should also be avoided. Tazarotene does not stain and is odourless.

A topical corticosteroid is not generally suitable for long-term use or as the sole treatment of extensive chronic plaque psoriasis; any early improvement is not usually maintained and there is a risk of the condition deteriorating or of precipitating an unstable form of psoriasis (e.g. erythrodermic psoriasis or generalised pustular psoriasis) on withdrawal. Topical use of potent corticosteroids on widespread psoriasis can also lead to systemic as well as local side-effects. However, topical corticosteroids used short-term may be appropriate to treat psoriasis in specific sites such as the face or flexures (with a mild or moderate corticosteroid), and psoriasis of the scalp, palms, and soles (with a potent corticosteroid). Very potent corticosteroids should only be used under specialist supervision.

Combining the use of a corticosteroid with another specific topical treatment may be beneficial in chronic plaque psoriasis; the drugs may be used separately at different times of the day or used together in a single formulation. Eczema co-existing with psoriasis may be treated with a corticosteroid, or coal tar, or both.

Phototherapy
Phototherapy is available in specialist centres under the supervision of a dermatologist. Ultraviolet B (UVB) radiation is usually effective for chronic stable psoriasis and for guttate psoriasis. It may be considered for patients with moderately severe psoriasis in whom topical treatment has failed, but it may irritate inflammatory psoriasis.

Photochemotherapy combining long-wave ultraviolet A radiation with a psoralen (PUVA) is available in specialist centres under the supervision of a dermatologist. The psoralen, which enhances the effect of irradiation, is administered either by mouth or topically. PUVA is effective in most forms of psoriasis, including localised palmoplantar pustular psoriasis. Early adverse effects include phototoxicity and pruritus. Higher cumulative doses exaggerate skin ageing, increase the risk of dysplastic and neoplastic skin lesions, especially squamous cancer, and pose a theoretical risk of catareata.

Phototherapy combined with coal tar, dithranol, tazarotene, topical vitamin D or vitamin D analogues, or oral acitretin, allows reduction of the cumulative dose of phototherapy required to treat psoriasis.

Systemic treatment
Systemic treatment is required for severe, resistant, unstable or complicated forms of psoriasis, and it should be initiated only under specialist supervision. Systemic drugs for psoriasis include acitretin and drugs that affect the immune response (such as ciclosporin p. 717 and methotrexate p. 762).

Systemic corticosteroids should be used only rarely in psoriasis because rebound deterioration may occur on reducing the dose.

Acitretin p. 1032, a metabolite of etretinate, is a retinoid (vitamin A derivative); it is prescribed by specialists. The main indication for acitretin is psoriasis, but it is also used in disorders of keratinisation such as severe Darier’s disease (keratosis follicularis), and some forms of ichthyosis. Although a minority of cases of psoriasis respond well to acitretin alone, it is only moderately effective in many cases and it is combined with other treatments. A therapeutic effect occurs after 2 to 4 weeks and the maximum benefit after 4 months. Consideration should be given to stopping acitretin if the response is inadequate after 4 months at the optimum dose. The manufacturers of acitretin do not recommend continuous treatment for longer than 6 months. However, some patients may benefit from longer treatment, provided that the lowest effective dose is used, patients are monitored carefully for adverse effects, and the need for treatment is reviewed regularly.

Apart from teratogenicity, which remains a risk for 3 years after stopping, acitretin is the least toxic systemic treatment for psoriasis; in women with a potential for child-bearing, the possibility of pregnancy must be excluded before treatment and effective contraception must be used during treatment and for at least 3 years afterwards (oral progestogen-only contraceptives not considered effective).

Topical treatment
The vitamin D and analogues, calcipotriol p. 1036, calcitriol p. 1037, and tacalcitol p. 1037 are used for the management of plaque psoriasis. They should be avoided by those with calcium metabolism disorders, and used with caution in generalised pustular or erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia).

ANTRACEN DERIVATIVES

Dithranol (Anthralin)

**INDICATIONS AND DOSE**

**Subacute and chronic psoriasis**

**TO THE SKIN**

- Adult: (consult product literature)

**DITHROCREAM®**

**Subacute and chronic psoriasis**

**TO THE SKIN**

- Adult: For application to skin or scalp, 0.1–0.5% cream suitable for overnight treatment, 1–2% cream for maximum 1 hour (consult product literature)

**MICANOL®**

**Subacute and chronic psoriasis**

**TO THE SKIN**

- Adult: Apply once daily, for application to skin or scalp, to be applied for up to 30 minutes, apply 1% cream, if necessary 3% cream can be used under medical supervision

- **CONTRA-INDICATIONS** Acute and pustular psoriasis - hypersensitivity
- **CAUTIONS** Avoid sensitive areas of skin - avoid use near eyes
- **SIDE-EFFECTS** Local burning sensation - local irritation - stains hair - stains skin
- **PREGNANCY** No adverse effects reported.
- **BREAST FEEDING** No adverse effects reported.
**DIRECTIONS FOR ADMINISTRATION** When applying dithranol, hands should be protected by gloves or they should be washed thoroughly afterwards. Dithranol should be applied to chronic extensor plaques only, carefully avoiding normal skin.

**MICANOL** At the end of contact time, use plenty of lukewarm (not hot) water to rinse off cream; soap may be used after the cream has been rinsed off; use shampoo before applying cream to scalp and if necessary after cream has been rinsed off.

**PRESCRIBING AND DISPENSING INFORMATION** Treatment should be started with a low concentration such as dithranol 0.1%, and the strength increased gradually every few days up to 3%, according to tolerance. When prepared extemporaneously, the BP states Dithranol Paste, BP consists of dithranol in zinc and salicylic acid (Lassar’s) paste. Usual strengths 0.1–1% of dithranol. Dithranol Ointment BP, consists of dithranol, in yellow soft paraffin; usual strengths 0.1–2%. Part of basis may be replaced by hard paraffin if a stiffer preparation is required.

**PATIENT AND CARER ADVICE** Dithranol can stain the skin, hair and fabrics.

**EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine if dithranol content more than 1%, otherwise may be sold to the public.

**MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste.

**SIDE-EFFECTS** Skin irritation

**PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Ichthammol Ointment, BP 1980 consists of ichthammol 10%, white soft paraffin 45% and wool fat 45%.

**MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: paste, ointment.

**ICHTHAMMOL (Non-proprietary)** Ichthammol 1 mg per 1 mg

- Ichthammol liquid | 100 gram £11.42
- 500 gram £34.27

**MICANOL** Ichthammol with zinc oxide

The properties listed below are those particular to the combination only. For the properties of the components please consider, ichthammol above.

**INDICATIONS AND DOSE** Chronic lichenified eczema

- **TO THE SKIN**
  - Child 1–17 years: Apply 1–3 times a day
  - Adult: Apply 1–3 times a day

**PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Ichthammol Ointment, BP 1980 consists of ichthammol 10%, white soft paraffin 45% and wool fat 45%.

**MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, cream.

**ICHTHAMMOL WITH ZINC OXIDE (Non-proprietary)** Ichthammol 1 mg per 1 mg

- Ichthammol liquid | 50 gram £11.42
- 100 gram £27.87
- 500 gram £50.00
- 1 bandage £3.67

**CALCINEURIN INHIBITORS AND RELATED DRUGS**

**Pimecrolimus**

**INDICATIONS AND DOSE** Short-term treatment of mild to moderate atopic eczema (including flares) when topical corticosteroids cannot be used (initiated by a specialist)

- **TO THE SKIN**
  - Adult: Apply twice daily until symptoms resolve (stop treatment if eczema worsens or no response after 6 weeks)

Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated by a specialist)

- **TO THE SKIN**
  - Adult: Apply twice daily until symptoms resolve (maximum duration of treatment 4 weeks)

**UNLICENSED USE** Pimecrolimus is not licensed for short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy.
Tacrolimus

**INDICATIONS** Application to malignant or potentially malignant skin lesions - application under occlusion - congenital epidermal barrier defects - contact with eyes - contact with mucous membranes - generalised erythroderma - immunodeficiency - infection at treatment site

**CAUTIONS** Alcohol consumption (risk of facial flushing and skin irritation) - avoid other topical treatments except emollients at treatment site - UV light (avoid excessive exposure to sunlight and sunlamps)

**INTERACTIONS** Concomitant use with drugs that cause immunosuppression is contra-indicated (may be prescribed in exceptional circumstances by specialists).

**SIDE-EFFECTS**
- Common or very common Burning sensation - erythema - folliculitis - pruritus - skin infections
- Uncommon Herpes simplex - herpes zoster - impetigo - molluscum contagiosum
- Rare Dryness - local reactions including pain - oedema - papilloma - paraesthesia - peeling - skin discoloration - worsening of eczema
- Frequency not known Skin malignancy

**PREGNANCY** Manufacturer advises avoid; toxicity in animal studies following systemic administration.

**BREAST FEEDING** Manufacturer advises caution; ensure infant does not come in contact with treated areas.

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**
- Tacrolimus and pimecrolimus for atopic eczema (August 2004) NICE TA82
  Topical pimecrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy). Topical pimecrolimus is recommended for moderate atopic eczema on the face and neck of children aged 2–16 years. Pimecrolimus should be used within its licensed indications. www.nice.org.uk/TA82

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

**CAUTIONARY AND ADVISORY LABELS** 4, 11, 28

**EXCIPIENTS:** May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

- **Elidel** (Meda Pharmaceuticals Ltd)

  **Pimecrolimus 10 mg per 1 gram** Elidel 1% cream | 30 gram £37.41 DT price + £13.69 | 60 gram £69.74 DT price + £37.41 | 100 gram £93.07 DT price + £53.07

**Tarrocin**

**DRUG ACTION** Tacrolimus is a calcineurin inhibitor.

**INDICATIONS AND DOSE**

**Short-term treatment of moderate to severe atopic eczema (including flares) in patients unresponsive to, or intolerant of conventional therapy**

**TO THE SKIN**

- **Adult:** Apply twice daily until lesion clears (consider other treatment if eczema worsens or no improvement after 2 weeks), initially 0.1% ointment to be applied thinly, reduce frequency to once daily or strength of ointment to 0.03% if condition allows

**Prevention of flares in patients with moderate to severe atopic eczema and 4 or more flares a year who have responded to initial treatment with topical tacrolimus**

**TO THE SKIN**

- **Adult:** Apply twice weekly, 0.1% ointment to be applied thinly, with an interval of 2–3 days between applications, use short-term treatment regimen during an acute flare; review need for preventative therapy after 1 year

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy**

**TO THE SKIN**

- **Adult:** Apply twice daily until symptoms resolve, 0.1% ointment to be applied thinly, reduce to once daily or switch to 0.03% ointment if condition allows, maximum duration of treatment 4 weeks

**UNLICENSED USE** Short-term treatment of facial, flexural, or genital psoriasis is unlicensed.

**CONTRA-INDICATIONS**

Application to malignant or potentially malignant skin lesions - application under occlusion - avoid contact with eyes - avoid contact with mucous membranes - congenital epidermal barrier defects - generalised erythroderma - immunodeficiency - infection at treatment site

**SIDE-EFFECTS**

- **Common or very common** Acne, CUTANEOUS LYMPHOMA, MALIGNANCIES, OTHER TYPES OF LYPHOMAS, ROSACEA, SKIN MALIGNANCY

**PREGNANCY**

Manufacturer advises avoid unless essential; toxicity in animal studies following systemic administration.

**BREAST FEEDING**

Avoid—present in milk (following systemic administration).

**NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- Tacrolimus and pimecrolimus for atopic eczema (August 2004) NICE TA82

Topical tacrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy).

Topical tacrolimus is recommended for moderate to severe atopic eczema in adults and children over 2 years. Tacrolimus should be used within its licensed indications. www.nice.org.uk/TA82

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium has advised (March 2010) that tacrolimus ointment (Protopic®) is accepted for restricted use within NHS Scotland for the prevention of flares in patients aged over 2 years with moderate to severe atopic eczema in accordance with the licensed indications; initiation of treatment is restricted to doctors (including general practitioners) with a specialist interest and experience in treating atopic eczema with immunomodulatory therapy.
CORTICOSTEROIDS

Topical corticosteroids

Topical corticosteroids are used for the treatment of inflammatory conditions of the skin (other than those arising from an infection), in particular eczema, contact dermatitis, insect stings, and eczema of scabies. Corticosteroids suppress the inflammatory reaction during use; they are not curative and on discontinuation a rebound exacerbation of the condition may occur. They are generally used to relieve symptoms and suppress signs of the disorder when other measures such as emollients are ineffective.

Topical corticosteroids are not recommended in the routine treatment of urticaria; treatment should only be initiated and supervised by a specialist. They should not be used indiscriminately in pruritus (where they will only be effective when other measures such as emollients are ineffective).

Systemic or very potent topical corticosteroids should be avoided or given only under specialist supervision in psoriasis because, although they may suppress the psoriasis in the short term, relapse or vigorous rebound occurs on withdrawal (sometimes precipitating severe pustular psoriasis). See the role of topical corticosteroids in the treatment of psoriasis.

In general, the most potent topical corticosteroids should be reserved for recalcitrant dermatoses such as chronic discoid lupus erythematosus, lichen simplex chronicus, hypertrophic lichen planus, and palmoplantar pustulosis.

Potent corticosteroids should generally be avoided on the face and skin flexures, but specialists occasionally prescribe them for use on these areas in certain circumstances.

When topical treatment has failed, intraleisional corticosteroid injections may be used. These are more effective than the very potent topical corticosteroid preparations and should be reserved for severe cases where there are localised lesions such as keloid scars, hypertrophic lichen planus, or localised alopecia areata.

Perioral lesions

Hydrocortisone cream 1% p. 993 can be used for up to 7 days to treat uninfected inflammatory lesions on the lips. Hydrocortisone with miconazole p. 1031 cream or ointment is useful where infection by susceptible organisms and inflammation co-exist, particularly for initial treatment (up to 7 days) e.g. in angular cheilitis. Organisms susceptible to miconazole include Candida spp. and many Gram-positive bacteria including streptococci and staphylococci.

Choice of formulation

Water-miscible corticosteroid creams are suitable for moist or weeping lesions whereas ointments are generally chosen for dry, lichenified or scaly lesions or where a more occlusive effect is required. Lotions may be useful when minimal application to a large or hair-bearing area is required or for the treatment of exudative lesions. Occlusive polythene or hydrocolloid dressings increase absorption, but also increase the risk of side effects; they are therefore used only under supervision on a short-term basis for areas of very thick skin (such as the palms and soles). The inclusion of urea or salicylic acid also increases the penetration of the corticosteroid.

In the BNF publications topical corticosteroids for the skin are categorised as ‘mild’, ‘moderately potent’, ‘potent’ or ‘very potent’; the least potent preparation which is effective should be chosen but dilution should be avoided whenever possible.

Absorption through the skin

Mild and moderately potent topical corticosteroids are associated with few side-effects but care is required in the use of potent and very potent corticosteroids. Absorption through the skin can rarely cause adrenal suppression and even Cushing’s syndrome, depending on the area of the body being treated and the duration of treatment. Absorption is greatest where the skin is thin or raw, and from intertriginous areas; it is increased by occlusion.

Suitable quantities of corticosteroid preparations to be prescribed for specific areas of the body

<table>

</table>

These amounts are usually suitable for an adult for a single daily application for 2 weeks.

Compound preparations

The advantages of including other substances (such as antibacterials or antifungals) with corticosteroids in topical preparations are uncertain, but such combinations may have a place where inflammatory skin conditions are associated with bacterial or fungal infection, such as infected eczema. In these cases the antimicrobial drug should be chosen according to the sensitivity of the infecting organism and used regularly for a short period (typically twice daily for 1 week). Longer use increases the likelihood of resistance and of sensitisation.

The keratolytic effect of salicylic acid p. 1057 facilitates the absorption of topical corticosteroids; however, excessive and prolonged use of topical preparations containing salicylic acid p. 1057 may cause salicylism.

Topical corticosteroid preparation potencies

Potency of a topical corticosteroid preparation is a result of the formulation as well as the corticosteroid. Therefore, proprietary names are shown.

- **Mild**
  - Hydrocortisone 0.1–2.5%
  - Dioderm

Skin

Corticosteroids (topical)

- **CONTRA-INDICATIONS** Acne · perioral dermatitis · potent corticosteroids in widespread plaque psoriasis · rosacea · untreated bacterial, fungal or viral skin lesions
- **CAUTIONS** Avoid prolonged use (particularly on the face) · cautions applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · infection - keep away from eyes · use potent or very potent topical corticosteroids under specialist supervision in psoriasis (can result in rebound relapse, development of generalised pustular psoriasis, and local and systemic toxicity)

- **SIDE-EFFECTS**
  - **Rare** Adrenal suppression - Cushing’s syndrome
  - **Frequency not known** Acne · contact dermatitis · hypertrichosis · irreversible striae atrophicae · irreversible telangiectasia · mild depigmentation (may be reversible) · perioral dermatitis · side-effects applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · spread and worsening of untreated infection · thinning of the skin (may be restored over a period after stopping treatment but the original structure may never return) · worsening of acne · worsening of rosacea

- **SIDE-EFFECTS, FURTHER INFORMATION**
  - In order to minimise the side-effects of a topical corticosteroid, it is important to apply it thinly to affected areas only, no more frequently than twice daily, and to use the least potent formulation which is fully effective.

- **DIRECTIONS FOR ADMINISTRATION** Topical corticosteroid preparations should be applied no more frequently than twice daily; once daily is often sufficient. Topical corticosteroids should be spread thinly on the skin but in sufficient quantity to cover the affected areas. The length of cream or ointment expelled from a tube may be used to specify the quantity to be applied to a given area of skin. This length can be measured in terms of a **fingertip unit** (the distance from the tip of the adult index finger to the first crease). One **fingertip unit** (approximately 500 mg from a tube with a standard 5 mm diameter nozzle) is sufficient to cover an area that is twice that of the flat adult handprint (palm and fingers). Mixing topical preparations on the skin should be avoided where possible; several minutes should elapse between application of different preparations.

- **PRESCRIBING AND DISPENSING INFORMATION** The potency of each topical corticosteroid should be included on the label with the directions for use. The label should be attached to the container (for example, the tube) rather than the outer packaging.

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer corticosteroid creams and ointments. If a patient is using topical corticosteroids of different potencies, the patient should be told when to use each corticosteroid. Patients and their carers should be reassured that side effects such as skin thinning and systemic effects rarely occur when topical corticosteroids are used appropriately.

**Alclometasone dipropionate**

- **INDICATIONS AND DOSE**
  - **Inflammatory skin disorders such as eczemas**
    - **TO THE SKIN**
      - Child: Apply 1–2 times a day, to be applied thinly
      - Adult: Apply 1–2 times a day, to be applied thinly

**Use in children**

Children, especially infants, are particularly susceptible to side-effects. However, concern about the safety of topical corticosteroids in children should not result in the child being undertreated. The aim is to control the condition as well as possible; inadequate treatment will perpetuate the condition. A mild corticosteroid such as hydrocortisone 0.5% or 1% p. 993 is useful for treating nappy rash and hydrocortisone 1% for atopic eczema in childhood. A moderately potent or potent corticosteroid may be appropriate for severe atopic eczema on the limbs, for 1–2 weeks only, switching to a less potent preparation as the condition improves. In an acute flare-up of atopic eczema, it may be appropriate to use more potent formulations of topical corticosteroids for a short period to regain control of the condition. A very potent corticosteroid should be initiated under the supervision of a specialist. Continuous daily application of a mild corticosteroid such as hydrocortisone 1% is equivalent to a potent corticosteroid such as betamethasone 0.1% p. 993 applied intermittently. Carers of young children should be advised that treatment should not necessarily be reserved to ’treat only the worst areas’ and they may need to be advised that patient information leaflets may contain inappropriate advice for the patient’s condition.
Beclometasone dipropionate

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Cream**

- **CAUTIONARY AND ADVISORY LABELS 28**
- **EXCIPIENTS:** May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, propylene glycol

- **ALCLOMETASONE DIPROPIONATE (Non-proprietary)**

Betamethasone with clioquinol

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 993.

**INDICATIONS AND DOSE**
Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis

- Child 1-17 years: (consult product literature)
- Adult: (consult product literature)

**Potency**
Betamethasone (as valerate) 0.1% with clioquinol cream and ointment: potent.

**PATIENT AND CARER ADVICE**
Stains clothing. Patients or carers should be counselled on application of betamethasone with clioquinol preparations.

**MEDICINAL FORMS**
There can be variation in the listing of different medicines containing the same drug.

**Cream**
CAUTIONARY AND ADVISORY LABELS 28
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol
- BETAMETHASONE WITH CLIQUINOIL (Non-proprietary)
  Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Clioquinol 30 mg per 1 gram Betamethasone valerate 0.1% / Clioquinol 3% cream | 30 gram (PO) £18.88 DT price = £18.88

**Ointment**
CAUTIONARY AND ADVISORY LABELS 28
- BETAMETHASONE WITH CLIQUINOIL (Non-proprietary)
  Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Clioquinol 30 mg per 1 gram Betamethasone valerate 0.1% / Clioquinol 3% ointment | 30 gram (PO) £18.88 DT price = £18.88

Betamethasone with clotrimazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 993, clotrimazole p. 1010.

**INDICATIONS AND DOSE**
Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis

- Child 12-17 years: (consult product literature)
- Adult: (consult product literature)

**Potency**
Betamethasone dipropionate 0.064% (=betamethasone 0.5%) with clotrimazole cream: potent.

**PATIENT AND CARER ADVICE**
Patients or carers should be given advice on how to administer betamethasone with clotrimazole cream.

**MEDICINAL FORMS**
There can be variation in the listing of different medicines containing the same drug.

**Cream**
CAUTIONARY AND ADVISORY LABELS 28
EXCIPIENTS: May contain Benzy alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol
- Lotriderm (Teva UK Ltd)
  Betamethasone dipropionate 640 microgram per 1 gram, Clotrimazole 10 mg per 1 gram Lotriderm cream | 30 gram (PO) £6.34 DT price = £6.34

Betamethasone with fusidic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 993, fusidic acid p. 956.

**INDICATIONS AND DOSE**
Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis

- Child 6-17 years: (consult product literature)
- Adult: (consult product literature)

**Potency**
Betamethasone (as valerate) 0.1% with fusidic acid cream: potent.

**PATIENT AND CARER ADVICE**
Patients or carers should be counselled on application of betamethasone with fusidic acid preparations.

**MEDICINAL FORMS**
There can be variation in the listing of different medicines containing the same drug.

**Cream**
CAUTIONARY AND ADVISORY LABELS 28
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, hydroxybenzoates (parabens)

  Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram Betamethasone valerate 0.1% / Neomycin 0.5% ointment | 30 gram (PO) £18.88 DT price = £18.88 | 100 gram (PO) £38.00 DT price = £38.00
Betamethasone with salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 993, salicylic acid p. 1027.

INDICATIONS AND DOSE

**DIPROSALIC® OINTMENT**

Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis

- **Child:** Apply 1–2 times a day. max. 60 g per week
- **Adult:** Apply 1–2 times a day. max. 60 g per week

**Potency**

Betamethasone (as dipropionate) 0.05% with salicylic acid 3%: potent.

**DIPROSALIC® SCALP APPLICATION**

Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis

- **Child:** Apply 1–2 times a day, apply a few drops
- **Adult:** Apply 1–2 times a day, apply a few drops

**Potency**

Betamethasone (as dipropionate) 0.05% with salicylic acid 2%: potent.

**PATIENT AND CARER ADVICE**

Patients or carers should be counselled on application of betamethasone and salicylic acid preparations.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, cream, shampoo.

**Liquid**

CAUTIONARY AND ADVISORY LABELS 28

EXCEPTIONS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- **Clarelux** (Pierre Fabre Dermo-Cosmetique)

**Scalp application**

Severe inflammatory skin disorders such as Psoriasis associated with infection

- **ETRIVEX®**
  - Moderate scalp psoriasis

  **TO THE SKIN**

  - **Adult:** Apply once daily maximum duration of treatment 4 weeks, to be applied thinly then rinsed off after 15 minutes; frequency of application should be reduced after clinical improvement

**UNLICENSED USE**

Dermovate® not licensed for use in children under 1 year.

**PATIENT AND CARER ADVICE**

Patients or carers should be given advice on how to administer clobetasol propionate foam, liquid (sculp application), cream, ointment and shampoo.

Scalp application Patients or carers should be advised to apply foam directly to scalp lesions (foam begins to subside immediately on contact with skin).

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

**Foam**

CAUTIONARY AND ADVISORY LABELS 15, 28

**Clobetasol propionate with neomycin sulfate and nystatin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasol propionate above, neomycin sulfate p. 1009.

INDICATIONS AND DOSE

Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas associated with infection and unresponsive to less potent corticosteroids | Psoriasis associated with infection

- **Adult:** (consult product literature)
## Clobetasone butyrate with nystatin and oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasone butyrate above, oxytetracycline p. 498.

### INDICATIONS AND DOSE
Steroid-responsive dermatoses where candidal or bacterial infection is present

- **TO THE SKIN**
  - Adult: (consult product literature)

### Potency
Clobetasone butyrate 0.05% with nystatin and oxytetracycline cream: moderate.

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

- **Cream**
  - **CAUTIONARY AND ADVISORY LABELS 2B**
  - Clobetasol propionate with neomycin sulfate and nystatin (GlaxoSmithKline Consumer Healthcare, GlaxoSmithKline UK Ltd)
    - **Cream**: very potent.
    - **Ointment**: very potent.

### Diffucortolone valerate

#### INDICATIONS AND DOSE
Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (using 0.3% diffucortolone valerate) | Short-term treatment of severe exacerbations (using 0.3% diffucortolone valerate) | Psoriasis (using 0.3% diffucortolone valerate)

- **TO THE SKIN**
  - Child: Apply 1–2 times a day for up to 2 weeks, reducing strength as condition responds, to be applied thinly; maximum 60 g per week
  - Adult: Apply 1–2 times a day for up to 2 weeks, reducing strength as condition responds, to be applied thinly; maximum 60 g per week

Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (using 0.3% diffucortolone valerate) | Psoriasis (using 0.1% diflucortolone valerate)

- **TO THE SKIN**
  - Child: Apply 1–2 times a day for up to 4 weeks, to be applied thinly
  - Adult: Apply 1–2 times a day for up to 4 weeks, to be applied thinly

### Potency
Diflucortolone valerate 0.1% cream and ointment: potent.

Diflucortolone valerate 0.3% cream and ointment: very potent.

### MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

- **Cream**
  - **CAUTIONARY AND ADVISORY LABELS 2B**
  - May contain Beeswax, cetylstearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, hydroxybenzoates (parabens)
Fludroxycortide (Flurandrenolone)

**INDICATIONS AND DOSE**

Inflammatory skin disorders such as eczemas

**TO THE SKIN**

- **Child:** Apply 1–2 times a day, to be applied thinly
- **Adult:** Apply 1–2 times a day, to be applied thinly

**Potency**

Fludroxycortide 0.0125% cream and ointment: moderate

**HAELEN® TAPE**

Chronic localised recalcitrant dermatoses (but not acute or weeping)

**TO THE SKIN**

- **Child:** Cut tape to fit lesion, apply to clean, dry skin shorn of hair, usually for 12 hours daily
- **Adult:** Cut tape to fit lesion, apply to clean, dry skin shorn of hair, usually for 12 hours daily

**PATIENT AND CARER ADVICE**

Patients or carers should be counselled on application of fludroxycortide cream and ointment.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

**CAUTIONARY AND ADVISORY LABELS**

- **EXCIPIENTS:** May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol
- **Fluocinolone acetonide 25 microgram per 1 gram** Synalar 1 in 10

  - 60 gram | £10.02 DT price = £10.02

Fluocinolone acetonide with clioquinol

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide above.

**INDICATIONS AND DOSE**

Inflammatory skin disorders such as eczemas associated with infection | Psoriasis associated with infection

**TO THE SKIN**

- **Adult:** Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

**Potency**

Clioquinol 3% with fluocinolone acetonide 0.025% cream and ointment: potent

**PATIENT AND CARER ADVICE**

Patient counselling is advised for clioquinol with fluocinolone acetonide cream and ointment (application). Ointment stains clothing.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

**CAUTIONARY AND ADVISORY LABELS**

- **EXCIPIENTS:** May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, hydroxybenzoates (parabens), polysorbates, propylene glycol
- **Fluocinolone acetonide 0.025% cream, gel, and ointment:** potent
  - Fluocinolone acetonide 0.00625% cream and ointment: moderate
  - Fluocinolone acetonide 0.0025% cream: mild.

**Fluocinolone acetonide**

**INDICATIONS AND DOSE**

Severe inflammatory skin disorders such as eczemas | Psoriasis

**TO THE SKIN**

- **Child 1–7 years:** Apply 1–2 times a day, to be applied thinly, reduce strength as condition responds
- **Adult:** Apply 1–2 times a day, to be applied thinly, reduce strength as condition responds

**Potency**

Fluocinolone acetonide 0.025% cream, gel, and ointment: potent

**PATIENT AND CARER ADVICE**

Patient counselling is advised for fluocinolone acetonide cream, gel and ointment (application). Ointment stains clothing.
Fluocinolone acetonide with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1027, neomycin sulfate p. 1009.

### INDICATIONS AND DOSE

Inflammatory skin disorders such as eczemas associated with infection | Psoriasis associated with infection

**TO THE SKIN**
- Child 1-17 years: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds
- Adult: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

**Potency**
Fluocinolone acetonide 0.025% with neomycin 0.5% cream and ointment: potent.

#### PATIENT AND CARER ADVICE
Patients or carers should be counselled on the application of fluocinolone acetonide with neomycin preparations.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Cream**
- **INDICATIONS AND ADVISORY LABELS** 28
- EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates, propylene glycol
- Synalar C (Derma UK Ltd)
  - Fluocinolone acetonide 250 microgram per 1 gram
  - Neomycin sulfate 5 mg per 1 gram

**Ointment**
- **INDICATIONS AND ADVISORY LABELS** 28
- EXCIPIENTS: May contain Propylene glycol, wool fat and related substances including lanolin
- Synalar C (Derma UK Ltd)
  - Fluocinolone acetonide 250 microgram per 1 gram
  - Neomycin sulfate 5 mg per 1 gram

**Fluticasone**

#### INDICATIONS AND DOSE

Severe inflammatory skin disorders such as dermatitis and eczemas unresponsive to less potent corticosteroids | Psoriasis

**TO THE SKIN**
- Adult: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

**Potency**
Fluticasone pivalate 2.5 mg per 1 gram

**PATIENT AND CARER ADVICE**
Patients or carers should be given advice on application of fluticasone creams and ointments.
Hydrocortisone

INDICATIONS AND DOSE
Mild inflammatory skin disorders such as eczema

TO THE SKIN
Child: Apply 1–2 times a day, to be applied thinly
Adult: Apply 1–2 times a day, to be applied thinly

Nappy rash

TO THE SKIN
Child
Apply as required for no more than 1 week, discontinued as soon as the inflammation subsides

Potency
Hydrocortisone cream and ointment 0.5 to 2.5%: mild

PRESCRIBING AND DISPENSING INFORMATION
When hydrocortisone cream or ointment is prescribed and no strength is stated, the 1% strength should be supplied.

DIODERM®
Although Dioderm® contains only 0.1% hydrocortisone, the formulation is designed to provide a clinical activity comparable to that of Hydrocortisone Cream 1% BP.

PATIENT AND CARER ADVICE
Medicines for children leaflet: Hydrocortisone (topical) for eczema
www.medicinesforchildren.org.uk/hydrocortisone-topical-for-eczema

Patient counselling is advised for hydrocortisone cream and ointment (application).

PROFESSION SPECIFIC INFORMATION
Dental practitioners’ formulary Hydrocortisone Cream 1% 15g may be prescribed.

EXCEPTIONS TO LEGAL CATEGORY
• Over-the-counter hydrocortisone preparations Skin creams and ointments containing hydrocortisone (alone or with other ingredients) can be sold to the public for the treatment of allergic contact dermatitis, irritant dermatitis, insect bite reactions and mild to moderate eczema in patients over 10 years, to be applied sparingly over the affected area 1–2 times daily for max. 1 week. Over-the-counter hydrocortisone preparations should not be sold without medical advice for children under 10 years or for pregnant women; they should not be sold for application to the face, anogenital region, broken or infected skin (including cold sores, acne, and athlete’s foot).

MEDICINAL FORMS
Cream

CAUTIONARY AND ADVISORY LABELS 28
EXCipients: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), imidurea, propylene glycol

Cutivate (GlauxsmithKline UK Ltd)
Fluticasone propionate 500 microgram per 1 gram Cutivate 0.05% cream | 15 gram (PSt) £2.27 DT price = £2.27 | 30 gram (PSt) £4.24 DT price = £4.24

Hydrocortisone butyrate

INDICATIONS AND DOSE
Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids

TO THE SKIN
Child 1–17 years: Apply 1–2 times a day, to be applied thinly
Adult: Apply 1–2 times a day, to be applied thinly

Potency
Hydrocortisone butyrate 0.1% cream, liquid, and ointment: potent

PATIENT AND CARER ADVICE
Medicines for children leaflet: Hydrocortisone (topical) for eczema
www.medicinesforchildren.org.uk/hydrocortisone-topical-for-eczema

Patients or carers should be given advice on how to administer hydrocortisone butyrate lotion, cream, ointment and scalp lotion.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Liquid

CAUTIONARY AND ADVISORY LABELS 15, 28
EXCipients: May contain Butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), propylene glycol

Locoid® (Astellas Pharma Ltd)
Hydrocortisone butyrate 1 mg per 1 ml Locoid 0.1% scalp lotion | 100 ml (PSt) £6.83 DT price = £6.83

Hydrocortisone with benzalkonium chloride, dimeticone and nystatin

The properties listed below are those particular to the combination only. For the properties of the components please consider, dimeticone p. 1014, hydrocortisone p. 993.

**INDICATIONS AND DOSE**

Mild inflammatory skin disorders such as eczemas TO THE SKIN

- **Child:** Apply 1–2 times a day, to be applied thinly
- **Adult:** Apply 1–2 times a day, to be applied thinly

**Potency**

Benzalkonium with dimeticone, hydrocortisone acetate 1%, and nystatin cream: mild.

**PATIENT AND CARER ADVICE**

Patients or carers should be advised on application of benzalkonium with dimeticone and hydrocortisone and nystatin preparations.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

| CAUTIONARY AND ADVISORY LABELS 28 |

Hydrocortisone with chlorhexidine hydrochloride and nystatin

The properties listed below are those particular to the combination only. For the properties of the components please consider, chlorhexidine p. 993.

**INDICATIONS AND DOSE**

Mild inflammatory skin disorders such as eczemas TO THE SKIN

- **Child:** To be applied thinly (consult product literature)
- **Adult:** To be applied thinly (consult product literature)

**Potency**

Chlorhexidine hydrochloride 1% with hydrocortisone 0.5% and nystatin cream: mild

Chlorhexidine hydrochloride 1% with hydrocortisone 1% and nystatin ointment: mild

**PATIENT AND CARER ADVICE**

Patients or carers should be given advice on application of chlorhexidine hydrochloride with hydrocortisone and nystatin preparations.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

| CAUTIONARY AND ADVISORY LABELS 28 |
| EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polyisobutanes, sorbic acid, sodium metabisulfite, sorbic acid |

- **Canesten HC cream (Bayer Plc)**
  Clotrimazole 10 mg per 1 gram, Hydrocortisone 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystaform HC cream | 30 gram | £2.66

- **Nystaform HC (Typharm Ltd)**
  Chlorhexidine acetate 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystaform HC ointment | 30 gram | £2.66

Hydrocortisone with clortrimazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, clortrimazole p. 1010, hydrocortisone p. 993.

**INDICATIONS AND DOSE**

Mild inflammatory skin disorders such as eczemas (associated with fungal infection) TO THE SKIN

- **Child:** (consult product literature)
- **Adult:** (consult product literature)

**Potency**

Clotrimazole with hydrocortisone 1% cream: mild

**PATIENT AND CARER ADVICE**

Patients or carers should be given advice on how to administer clortrimazole with hydrocortisone cream.

**EXCEPTIONS TO LEGAL CATEGORY**

A 15-g tube is on sale to the public for the treatment of athlete’s foot and fungal infection of skin folds with associated inflammation in patients 10 years and over.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

| CAUTIONARY AND ADVISORY LABELS 28 |
| EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol) |

- **Canesten HC (Bayer Plc)**
  Clotrimazole 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram Canesten HC cream | 30 gram | £2.42 DT price = £2.42

- **Brands may include Canesten Hydrocortisone cream**

Hydrocortisone with fusidic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, fusidic acid p. 956, hydrocortisone p. 993.

**INDICATIONS AND DOSE**

Mild inflammatory skin disorders such as eczemas TO THE SKIN

- **Child:** To be applied thinly (consult product literature)
- **Adult:** To be applied thinly (consult product literature)

**Potency**

Hydrocortisone with fusidic acid cream: mild

**PATIENT AND CARER ADVICE**

Patients or carers should be advised on application of hydrocortisone with fusidic acid preparations.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.
Hydrocortisone with miconazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 993, miconazole p. 1011.

### INDICATIONS AND DOSE

Mild inflammatory skin disorders such as eczemas associated with infections

**TO THE SKIN**
- **Adult:** (consult product literature)

**Potency**
- Hydrocortisone 1% with miconazole cream and ointment: mild

### INTERACTIONS
- Appendix 1 (antifungals, imidazole).

### PATIENT AND CARER ADVICE
- Patients or carers should be advised on application of hydrocortisone with miconazole preparations.

### PROFESSION SPECIFIC INFORMATION
- Dental practitioners’ formulary
  - May be prescribed as Miconazole and Hydrocortisone Cream or Ointment for max. 7 days.

### EXCEPTIONS TO LEGAL CATEGORY
- A 15-g tube of hydrocortisone with miconazole cream is on sale to the public for the treatment of athlete’s foot and candidal intertrigo.

### MEDICINAL FORMS
- There can be variation in the licensing of different medicines containing the same drug.

#### Cream
- CAUTIONARY AND ADVISORY LABELS 28
- EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, potassium sorbate
  - Fusidin H (Fusidic acid / Hydrocortisone) (LEO Pharma)
  - Fusidic acid 20 mg per 1 gram, Hydrocortisone acetate 10 mg per 1 gram Fusidin H cream | 30 gram £5.02 DT price = £5.02 | 60 gram £10.04 DT price = £10.04

#### Ointment
- CAUTIONARY AND ADVISORY LABELS 28
- **Fucidin H** (Fusidic acid / Hydrocortisone) (LEO Pharma)
  - Fusidic acid 20 mg per 1 gram, Hydrocortisone acetate 10 mg per 1 gram Fucidin H cream | 30 gram £5.02 DT price = £5.02 | 60 gram £10.04 DT price = £10.04

Hydrocortisone with oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 993, oxytetracycline p. 1093.

### INDICATIONS AND DOSE

Mild inflammatory skin disorders such as eczemas

**TO THE SKIN**
- **Child 0-2 years:** To be applied thinly (consult product literature)
- **Child 2-17 years:** Apply once daily, to be applied thinly (to scalp in case of lotion)
- **Adult:** Apply once daily, to be applied thinly (to scalp in case of lotion)

**Potency**
- Hydrocortisone 1% with oxytetracycline ointment: mild.

### CONTRA-INDICATIONS
- Children under 12 years

### PREGNANCY
- Tetracyclines should not be given to pregnant women. Effects on skeletal development have been documented when tetracyclines have been used in the first trimester in animal studies. Administration during the second or third trimester may cause discolouration of the child’s teeth.

### MEDICATION FORMS
- There can be variation in the licensing of different medicines containing the same drug.

#### Cream
- CAUTIONARY AND ADVISORY LABELS 28
- **Daktacort** (McNeil Products Ltd, Janssen-Cilag Ltd)
  - Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort Hydrocortisone cream 1 gram £2.49 DT price = £2.49
  - Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort cream | 30 gram £7.03 DT price = £7.03

#### Ointment
- CAUTIONARY AND ADVISORY LABELS 28
- **Daktacort** (McNeil Products Ltd, Janssen-Cilag Ltd)
  - Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort ointment | 30 gram £2.50 DT price = £2.50

Mometasone furoate

### INDICATIONS AND DOSE

Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids

**TO THE SKIN**
- **Child 2-17 years:** Apply once daily, to be applied thinly (to scalp in case of lotion)
- **Adult:** Apply once daily, to be applied thinly (to scalp in case of lotion)

**Potency**
- Mometasone furoate 0.1% cream, ointment, and scalp lotion: potent.

### MEDICINAL FORMS
- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment.
## Triamcinolone with chlortetracycline

### INDICATIONS AND DOSE

Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (associated with infection) | Psoriasis (associated with infection)
---|---
**TO THE SKIN**
- Child 8-17 years: To be applied thinly (consult product literature)
- Adult: To be applied thinly (consult product literature)

### Potency

Triamcinolone acetonide 0.1%, chlortetracycline hydrochloride 3% ointment: potent.

### PATIENT AND CARER ADVICE

Stains clothing. Patients or carers should be counselled on the application of chlortetracycline with triamcinolone products.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Ointment

**CAUTIONARY AND ADVISORY LABELS 28**

**EXCIPIENTS:** May contain Wool fat and related substances including lanolin.

- **Aureocort (AMCo)**
  - Chlortetracycline hydrochloride 30.9 mg per 1 gram,
  - Triamcinolone acetonide 1 mg per 1 gram
  - Aureocort ointment | 15 gram [P] £3.51

### RETINOID AND RELATED DRUGS

**Acitretin**

**DRUG ACTION** Acitretin is a metabolite of etretinate.

### INDICATIONS AND DOSE

**Severe extensive psoriasis resistant to other forms of therapy** | **Palmoplantar pustular psoriasis** | **Severe congenital ichthyosis (under expert supervision)**
---|---|---
**BY MOUTH**
- Adult: Initially 25–30 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily, increased to up to 75 mg daily, dose only increased to 75 mg daily for short periods in psoriasis

### Severe Darier’s disease (keratosis follicularis) (under expert supervision)

**BY MOUTH**

- Adult: Initially 10 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily

### CONTRA-INDICATIONS

- Hyperlipidaemia

### CAUTIONS

- Avoid excessive exposure to sunlight and unsupervised use of sunlamps—diabetes (can alter glucose tolerance—initial frequent blood glucose checks) | do not donate blood during and for 2 years after stopping therapy (teratogenic risk) | in children use only in exceptional circumstances and monitor growth parameters and bone development (premature epiphyseal closure reported) | investigate atypical musculoskeletal symptoms

### INTERACTIONS

- → Appendix 1 (retinoids).

Avoid concomitant use of keratolytics.

### SIDE-EFFECTS

- **Common or very common** Abdominal pain | abnormal hair texture | alopecia (reversible on withdrawal) | arthralgia | brittle nails | dermatitis | diarrhoea | dryness and inflammation of mucous membranes | dryness of conjunctiva | epidermal fragility | erythema | headache | myalgia | nausea | paronychia | peripheral oedema | pruritus | reversible increase in serum-cholesterol (with high doses) | reversible increase in serum-triglyceride concentrations (with high doses) | skin exfoliation | sticky skin | vomiting

- **Uncommon** Dizziness | headaches | photosensitivity | visual disturbances

- **Rare** Peripheral neuropathy

- **Very rare** Benign intracranial hypertension | bone pain | exostosis | night blindness | ulcerative keratitis

- **Frequency not known** Drowsiness | dry skin | flushing | granulomatous lesions | impaired hearing | initial worsening of psoriasis | malaise | rectal haemorrhage | sweating | taste disturbance | tinnitus

### SIDE-EFFECTS, FURTHER INFORMATION

**Exostosis** Skeletal hyperostosis and extra-osseous calcification reported following long-term treatment with etretinate (of which Acitretin is a metabolite) and premature epiphyseal closure in children.

**Benign intracranial hypertension** Discontinue if severe headache, nausea, vomiting, or visual disturbances occur.

### CONCEPTION AND CONTRACEPTION

Effective contraception must be used.

**Pregnancy prevention** In females of child-bearing potential (including those with a history of infertility), exclude pregnancy up to 3 days before treatment, every month during treatment, and every 1–3 months for 3 years after stopping treatment. Treatment should be started on day 2 or 3 of menstrual cycle. Females of child-bearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 3 years after stopping treatment. Females should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods. Females should be advised to seek medical attention immediately if they become pregnant during treatment or within 3 years of stopping treatment. They should also be advised to avoid alcohol during treatment and for 2 months after stopping treatment.

- **PREGNANCY** Avoid—teratogenic.

- **BREAST FEEDING** Avoid.

- **HEPATIC IMPAIRMENT** Avoid in severe impairment—risk of further impairment.
Alitretinoin

**INDICATIONS AND DOSE**

Severe chronic hand eczema refractory to potent topical corticosteroids

**BY MOUTH**

- Adult (prescribed by or under supervision of a consultant dermatologist): 30 mg once daily; reduced if not tolerated to 10 mg once daily for 12–24 weeks total duration of treatment, discontinue if no response after 12 weeks, course may be repeated in those who relapse

Severe chronic hand eczema refractory to potent topical corticosteroids in patients with diabetes, history of hyperlipidaemia, or risk factors for cardiovascular disease

**BY MOUTH**

- Adult (prescribed by or under supervision of a consultant dermatologist): Initially 10 mg once daily, increased if necessary up to 30 mg once daily for 12–24 weeks total duration of treatment, discontinue if no response after 12 weeks, course may be repeated in those who relapse

**CONTRA-INDICATIONS**

- Hypervitaminosis A
- Uncontrolled hyperlipidaemia
- Uncontrolled hypothyroidism

**CAUTIONS**

- Avoid blood donation during treatment and for at least 1 month after stopping treatment • dry eye syndrome • history of depression

**INTERACTIONS**

- Appendix 1 (retinoids).

**SIDE-EFFECTS**

- Common or very common: Alopecia • anaemia • arthralgia • changes in thyroid function tests • cheilitis • conjunctivitis • dry eyes • dryness of lips • dryness of skin • erythema • eye irritation • flushing • headache • myalgia • raised creatinine kidney • raised serum concentration of triglycerides and of cholesterol (risk of pancreatitis if triglycerides above 9 mmol/litre)

- Uncommon: Ankylosing spondylitis • asthetotic eczema • blurred vision • cataracts • epistaxis • hyperostrosis • pruritus

- Rare: Benign intracranial hypertension • vasculitis

- Frequency not known: Decreased tolerance to contact lenses • depression • impaired night vision • keratitis • mood changes • suicidal ideation

**SIDE-EFFECTS, FURTHER INFORMATION**

**Dry eyes**

- Dry eyes may respond to lubricating eye ointment or tear replacement therapy.

**Benign intracranial hypertension**

- Discontinue treatment if severe headache, nausea, vomiting, papilloedema, or visual disturbances occur.

**CONCEPTION AND CONTRACEPTION**

- Effective contraception must be used.

- Pregnancy prevention

- In women of child-bearing potential, exclude pregnancy 1 month before treatment, up to 3 days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 5 weeks after stopping treatment—perform pregnancy test in the first 3 days of the menstrual cycle. Women must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. Women should be advised to use at least 1 method of contraception but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods. Women should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

**PREGNANCY**

- Avoid—teratogenic.

**BREAST FEEDING**

- Manufacturer advises avoid.

**HEPATIC IMPAIRMENT**

- Manufacturer advises avoid—no information available.

**RENAL IMPAIRMENT**

- Manufacturer advises avoid in severe impairment—no information available.

**MONITORING REQUIREMENTS**

- Monitor serum lipids (more frequently in those with diabetes, history of hyperlipidaemia, or risk factors for cardiovascular disease)—discontinue if uncontrolled hyperlipidaemia.

**PRESCRIBING AND DISPENSING INFORMATION**

- Prescribing for women of child-bearing potential. Each prescription for alitretinoin should be limited to a supply of up to 30 days’ treatment and dispensed within 7 days of the date stated on the prescription.

- Alitretinoin is teratogenic and must not be given to women of child-bearing potential unless they practise effective contraception and then only after detailed assessment and explanation by the physician.

- Women of child-bearing potential must be counselled on pregnancy prevention.

**NATIONAL FUNDING/ACCESS DECISIONS**

- **NICE technology appraisals (TAs)**

  - Alitretinoin for the treatment of severe chronic hand eczema in adults (August 2009) NICE TA177

- Alitretinoin is recommended for the treatment of severe chronic hand eczema that has not responded to potent topical corticosteroids. Treatment should be stopped as soon as an adequate response has been achieved (hands clear or almost clear), or if the eczema remains severe after 12 weeks, or if an adequate response has not been achieved by 24 weeks. www.nice.org.uk/TA177

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug.
### 1034 Inflammatory skin conditions

**Capsule**

*CAUTIONARY AND ADVISORY LABELS 10, 11, 21*

- **Tocino** (Stiefel Laboratories (UK) Ltd)
  - Alitretinoin 10 mg: Tocino 10mg capsules | 30 capsule **£411.43**
  - Alitretinoin 30 mg: Tocino 30mg capsules | 30 capsule **£411.43**

**Salicylic acid with zinc oxide**

- **INDICATIONS AND DOSE**
  - **Hyperkeratotic skin disorders**
  - **Adult:** Apply twice daily

  **CAUTIONS** Avoid broken skin - avoid inflamed skin

**SIDE-EFFECTS** Excessive drying - irritation - sensitivity - systemic effects (after widespread use)

- **PRESCRIBING AND DISPENSING INFORMATION**
  - Zinc and Salicylic Acid Paste BP is also referred to as Lassar’s Paste.
  - When prepared extemporaneously, the BP states Zinc and Salicylic Acid Paste BP is also referred to as Lassar’s Paste, zinc oxide 24%, salicylic acid 2%, starch 24%, white soft paraffin 50%.

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste.

**Tars**

**Coal tar**

- **INDICATIONS AND DOSE**
  - **Psoriasis** | **Chronic atopic eczema**
  - **Adult:** Apply once daily usually for up to 12 weeks, apply in the evening

- **CONTRA-INDICATIONS** Avoid broken or inflamed skin. Can be diluted with a few drops of water before applying

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste.

**Exorex**

- **Aliphosyl 1 in 1**
  - **Shampoo**
  - **Psoriasis** | **Seborrhoeic dermatitis** | **Scaling** | **Itching**
  - **Adult:** Apply every 2–3 days

- **Dandruff**
  - **Adult:** Apply 1–2 times a week as required

**Exorex**

- **Lotion**
  - **Psoriasis**
  - **Adult:** Apply 2–3 times a day, to be applied to skin or scalp. Can be diluted with a few drops of water before applying

**MEDICINAL FORMS**

- There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste, cream, ointment.

**Bath additive**

- **Coal Tar** (Non-proprietary)
  - **Coal tar distilled 400 mg per 1 ml** Psoriderm Emulsion 40% bath additive | 200 mL **£2.74**

**Shampoo**

- **Exciipients:** May contain Fragrances, hydroxybenzoates (parabens)
- **Coal Tar** (Non-proprietary)
  - **Coal tar extract 20 mg per 1 gram** Coal tar extract 2% shampoo | 125 mL **GSK no price available** | 250 mL **GSK no price available**
  - **Brands may include Aliphosyl 2 in 1, Neutrogena T/Gel Therapeutic**
Coal tar with cade oil, arachis oil extract of coal tar, light liquid paraffin and tar

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1034.

**INDICATIONS AND DOSE**

Psoriasis | Eczema | Atopic dermatoses | Pruritic dermatoses

**TO THE SKIN**

- **Child:** 2–4 capfuls/bath, alternatively 15–30 mL, to be added in an adult-size bath and soak for 20 minutes (proportionally less for a child’s bath)
- **Adult:** 2–4 capfuls/bath, alternatively 15–30 mL, to be added in an adult-size bath and soak for 20 minutes (proportionally less for a child’s bath)

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Bath additive**

**EXCIPIENTS:** May contain Isopropyl palmitate

- **Polytar** (GlaxoSmithKline Consumer Healthcare)

Arachis oil extract of crude coal tar 75 mg per 1 gram, Cade oil 75 mg per 1 gram, Coal tar solution 25 mg per 1 gram, Liquid paraffin light 350 mg per 1 gram, Pine tar 75 mg per 1 gram

Polytar Emollient | 500 ml (GSK) £5.78

---

Coal tar with calamine

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1034.

**INDICATIONS AND DOSE**

Psoriasis | Chronic atopic eczema (occasionally)

**TO THE SKIN**

- **Adult:** Apply 1–2 times a day

**PRESCRIBING AND DISPENSING INFORMATION**

When prepared extemporaneously, the BP states Calamine and Coal Tar Ointment, BP consists of calamine 12.5 g, strong coal tar solution 2.5 g, zinc oxide 12.5 g, hydrous wool fat 25 g, white soft paraffin 47.5 g.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

Coal tar with coconut oil and salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, salicylic acid p. 1057, coal tar p. 1034.

**INDICATIONS AND DOSE**

Scaly scalp disorders | Psoriasis | Seborrhoeic dermatitis | Dandruff | Cradle cap

**TO THE SKIN USING SHAMPOO**

- **Child:** Apply daily as required
- **Adult:** Apply daily as required

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Shampoo**

- **Capasal** (Dermal Laboratories Ltd)

  Coal tar distilled 60 mg per 1 gram, Lecithin 4 mg per 1 gram

  Psoriderm shampoo | 250 ml [£] £4.69

---

Coal tar with dithranol and salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, dithranol p. 1018, salicylic acid p. 1057, coal tar p. 1034.

**INDICATIONS AND DOSE**

Subacute and chronic psoriasis

**TO THE SKIN**

- **Child:** Apply up to twice daily
- **Adult:** Apply up to twice daily

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

Coal tar with lecithin

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1034.

**INDICATIONS AND DOSE**

**PSORIDERM** CREAM

Psoriasis

**TO THE SKIN**

- **Child:** Apply 1–2 times a day, cream to be applied to the skin or scalp
- **Adult:** Apply 1–2 times a day, cream to be applied to the skin or scalp

**PSORIDERM** SCALP LOTION

Scalp psoriasis

**TO THE SKIN**

- **Child:** Apply as required
- **Adult:** Apply as required

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

**EXCIPIENTS:** May contain Isopropyl palmitate, propylene glycol

- **COAL TAR WITH LECITHIN (Non-proprietary)**

  Coal tar distilled 60 mg per 1 gram, Lecithin 4 mg per 1 gram

  Psoriderm cream | 225 ml [£] £3.42

**Shampoo**

**EXCIPIENTS:** May contain Disodium edetate

- **COAL TAR WITH LECITHIN (Non-proprietary)**

  Coal tar distilled 25 mg per 1 mL, Lecithin 3 mg per 1 mL

  Psoriderm scalp lotion | 250 mL [£] £4.74

---

Coal tar with salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, salicylic acid p. 1057, coal tar p. 1034.

**INDICATIONS AND DOSE**

Psoriasis | Chronic atopic eczema

**TO THE SKIN USING OINTMENT**

- **Child:** Apply 1–2 times a day

---
**Coal tar with salicylic acid and precipitated sulfur**

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1034.

**INDICATIONS AND DOSE**

**COCOIS® OINTMENT**
Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff

**INITIALLY TO THE SKIN USING SCALP OINTMENT**
- Child 5-11 years: Medical supervision required
- Child 12-17 years: Apply once weekly as required, alternatively (to the skin) apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- Adult: Apply once weekly as required, alternatively (to the skin) apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

**SEBCO® OINTMENT**
Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff

**INITIALLY TO THE SKIN USING SCALP OINTMENT**
- Child 6–11 years: Medical supervision required
- Adult: Apply as required, alternatively (to the skin) apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, cream.

**Extract of coal tar with arachis oil**

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1034.

**INDICATIONS AND DOSE**

**Scalp disorders | Psoriasis | Seborrhoea | Eczema | Pruritus | Dandruff**

**TO THE SKIN**
- Child: Apply 1–2 times a week, to the scalp
- Adult: Apply 1–2 times a week, to the scalp

**VITAMIN D AND ANALOGUES**

**Calcipotriol**

**INDICATIONS AND DOSE**

**Plaque psoriasis**

**TO THE SKIN USING OINTMENT**
- Adult: Apply 1–2 times a day, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 100 g per week

**Scalp psoriasis**

**TO THE SKIN USING SCALP LOTION**
- Adult: Apply twice daily, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 60 mL per week

**CONTRA-INDICATIONS**
Calcium metabolism disorders

**CAUTIONS**
Avoid excessive exposure to sunlight and sunlamps; avoid use on face; erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) - generalised pustular psoriasis (enhanced risk of hypercalcaemia)

**SIDE-EFFECTS**
- Common or very common Burning, dermatitis, erythema, itching, local skin reactions, paraesthesia
- Rare Facial dermatitis, perioral dermatitis
- Frequency not known Aggravation of psoriasis, dry skin, photosensitivity

**PREGNANCY**
Manufacturers advise avoid unless essential.

**BREAST FEEDING**
No information available.
Calcipotriol with betamethasone

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1036, calcipotriol p. 993, calcipotriol ointment 50 microgram per g ointment; maximum 5 mg in any one week.

INDICATIONS AND DOSE

DOVOBET® GEL

Scalp psoriasis

TO THE SKIN

Adult: Apply 1–4 g once daily usual duration of therapy 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, shampoo off leaving on scalp overnight or during day, when different preparations containing calcipotriol used together, maximum total calcipotriol 5 mg in any one week.

Mild to moderate plaque psoriasis

TO THE SKIN

Adult: Apply once daily for 8 weeks; if necessary, treatment may be continued beyond 8 weeks or repeated, on the advice of a specialist, apply to maximum 30% of body surface, when different preparations containing calcipotriol used together, max. total calcipotriol 5 mg in any one week; maximum 15 g per day.

DOVOBET® OINTMENT

Stable plaque psoriasis

TO THE SKIN

Adult: Apply once daily for 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, apply to a maximum 30% of body surface, when different preparations containing calcipotriol used together, max. total calcipotriol 5 mg in any one week; maximum 15 g per day.

CONTRA-INDICATIONS

SIDE-EFFECTS

· Common or very common Burning, dermatitis, erythema, itching, local skin reactions, paraesthesia.
· Frequency not known Aggravation of psoriasis.

DOVOBET® GEL

Calcipotriol 50 microgram per 1 g ointment | 30 gram £6.93 DT price = £6.93
Calcipotriol 50 microgram per 1 g ointment | 60 gram £13.86 | 120 gram £27.72
Calcipotriol 50 microgram per 1 g ointment | 30 gram £6.93 DT price = £6.93

Calcipotriol (Non-proprietary)

Calcipotriol as Calcipotriol hydrate 50 microgram per 1 g. Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 gram. Calcipotriol (as Calcipotriol hydrate) 50 microgram per 1 gram. Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 gram.

Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 gram. Calcipotriol (as Calcipotriol monohydrate) 1 microgram per 1 ml. Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 ml. Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 ml. Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 ml.

Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 gram. Calcipotriol (as Calcipotriol monohydrate) 50 microgram per 1 gram.

Calcitriol (1,25-Dihydroxycholecalciferol)

INDICATIONS AND DOSE

Mild to moderate plaque psoriasis

TO THE SKIN

Adult: Apply twice daily, not more than 35% of body surface to be treated daily; maximum 30 g per day.

CONTRA-INDICATIONS

SIDE-EFFECTS

· Common or very common Burning, dermatitis, erythema, itching, local skin reactions, paraesthesia.
· Frequency not known Aggravation of psoriasis.

DOVOBET® GEL

Calcitriol 3 microgram per 1 g ointment | 100 gram £18.06 DT price = £18.06
Calcitriol 3 microgram per 1 g ointment | 50 microgram per 1 g ointment | 30 gram £6.93 DT price = £6.93
Calcitriol 3 microgram per 1 g ointment | 60 gram £13.86 | 120 gram £27.72
Calcitriol 3 microgram per 1 g ointment | 30 gram £6.93 DT price = £6.93

Tacalcitol

INDICATIONS AND DOSE

Plaque psoriasis

TO THE SKIN

Adult: Apply once daily, preferably at bedtime, maximum 10 g ointment or 10 mL lotion daily, when lotion and ointment used together, maximum total tacalcitol 280 micrograms in any one week (e.g. lotion 30 mL with ointment 40 g).

CONTRA-INDICATIONS

Calcium metabolism disorders.

SIDE-EFFECTS

· Common or very common Burning, dermatitis, erythema, itching, local skin reactions, paraesthesia.
· Frequency not known Aggravation of psoriasis.
4 Perspiration

Antiperspirants

Aluminium chloride hexahydrate below is a potent antiperspirant used in the treatment of hyperhidrosis. Aluminium salts are also incorporated in preparations used for minor fungal skin infections associated with hyperhidrosis.

In more severe cases specialists use glycopyrronium bromide as a 0.05% solution below in the iontophoretic treatment of hyperhidrosis of plantar and palmar areas. Botox® contains botulinum toxin type A complex p. 322 and is licensed for use intradermally for severe hyperhidrosis of the axillae unresponsive to topical antiperspirant or other anticholinergic topical treatments.

4.1 Hyperhidrosis

Aluminium chloride hexahydrate

INDICATIONS AND DOSE

Hyperhidrosis affecting axillae, hands or feet

TO THE SKIN

Adult: Apply once daily, apply liquid formulation at night to dry skin, wash off the following morning, reduce frequency as condition improves—do not bathe immediately before use

Hyperhidrosis | Bromhidrosis | Intertrigo | Prevention of lineae pedis and related conditions

TO THE SKIN

Adult: Apply powder to dry skin

• CAUTIONS Avoid contact with eyes · avoid contact with mucous membranes · avoid use on broken or irritated skin · do not shave axillae or use depilatories within 12 hours of application

• SIDE-EFFECTS Skin irritation

PATIENT AND CARER ADVICE

Avoid contact with clothing.

EXCEPTIONS TO LEGAL CATEGORY

A 30 mL pack of aluminium chloride hexahydrate 20% is on sale to the public.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Liquid

Aluminium chloride hexahydrate (Non-proprietary)

Aluminium chloride 200 mg per 1 ml | Aluminium chloride 20% solution | 60 ml (£) no price available

Anhydrol (Dermal Laboratories Ltd)

Aluminium chloride 200 mg per 1 ml | Anhydrol Forte 20% solution | 60 ml (£) £2.51

Driclor (GlaxoSmithKline Consumer Healthcare)

Aluminium chloride 200 mg per 1 ml | Driclor 20% solution | 20 ml (PO) £3.01 | 75 ml (£) £3.01

Spray

Aluminium chloride hexahydrate (Non-proprietary)

Aluminium chloride 200 mg per 1 ml | Aluminium chloride 20% spray | 30 ml no price available

Odaban (Brucey’s Pharmaceuticals Ltd)

Aluminium chloride 200 mg per 1 ml | Odaban 20% spray | 30 ml £6.69

ANTIMUSCARINICS

Glycopyrronium bromide (Glycopyrrolate)

INDICATIONS AND DOSE

Iontophoretic treatment of hyperhidrosis

TO THE SKIN

Adult: Only 1 site to be treated at a time, maximum 2 sites treated in any 24 hours, treatment not to be repeated within 7 days (consult product literature)

CONTRA-INDICATIONS

Infections affecting the treatment site

CONTRA-INDICATIONS, FURTHER INFORMATION

Contra-indications applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

CAUTIONS

Cautions applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

SIDE-EFFECTS

Tingling at administration site

SIDE-EFFECTS, FURTHER INFORMATION

The possibility of systemic side-effects should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for iontophoresis

Robinul (AMCo)

Glycopyrronium bromide 1 mg per 1 mg | Robinul powder for solution for iontophoresis | 3 gram (£) £266.00
5 Photodamage

Photodamage

Patients should be advised to use a high-SPF sunscreen and to minimise exposure of the skin to direct sunlight or sun lamps.

Topical treatments can be used for actinic keratosis. An emollient may be sufficient for mild lesions. Diclofenac sodium p. 521 is suitable for the treatment of superficial lesions in mild disease. Fluorouracil cream p. 761 is effective against most types of non-hypertrrophic actinic keratosis; a solution containing fluorouracil and salicylic acid is available for the treatment of low or moderately thick hyperkeratotic actinic keratosis. Imiquimod p. 1057 is used for lesions on the face and scalp when cryotherapy or other topical treatments cannot be used. Fluorouracil and imiquimod produce a more marked inflammatory reaction than diclofenac but lesions resolve faster. A short course of ingenol mebutate below is licensed for the treatment of non-hypertrrophic actinic keratosis; response to treatment can usually be assessed 8 weeks after the course. Photodynamic therapy in combination with methyl-aminolevulinate cream (Metvix, available from Galderma) or 5-aminolevulinic acid gel (Ameluz, available from Spirit Healthcare) is used in specialist centres for treating superficial and confluent, non-hypertrrophic actinic keratosis when other treatments are inadequate or unsuitable; it is particularly suitable for multiple lesions, for periorbital lesions, or for lesions located at sites of poor healing.

Imiquimod or topical fluorouracil is used for treating superficial basal cell carcinomas. Photodynamic therapy in combination with methyl-5-aminolevulinate cream is used in specialist centres for treating superficial, nodular basal cell carcinomas when other treatments are unsuitable.

Antimetabolites

Fluorouracil

Indications and Dose

Superficial malignant and pre-malignant skin lesions

Adult: Apply 1–2 times a day for 3–4 weeks (usual duration of initial therapy), apply thinly to the affected area, maximum area of skin 500 cm² (e.g. 23 cm x 23 cm) treated at one time, alternative regimens may be used in some settings.

Caution: Avoid contact with broken skin - avoid contact with eyes - avoid contact with inside of ears - avoid contact with inside of nostrils - avoid contact with lips - avoid occlusive dressings on treated area.

Side-effects: Erythema multiforme - photosensitivity - local irritation (use an emollient if necessary).

Pregnancy: Not absorbed from skin; ensure infant does not come in contact with treated area for 6 hours after application.

Breastfeeding: Not absorbed from skin; ensure infant does not come in contact with treated area.

Medicinal forms: There can be variation in the licensing of different medicines containing the same drug.

Cream

Excipients: May contain benzyl alcohol, hydroxybenzoates (parabens), polyethylene glycol, sodium hydroxide, sorbitol, titanium dioxide, xanthan gum.

Efudix (Meda Pharmaceuticals Ltd), Fluorouracil 50 mg per 1 gram

P: £32.90 GT price = £32.90

Fluorouracil with salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluorouracil p. 761, salicylic acid p. 1057.

Indications and Dose

Low or moderately thick hyperkeratotic actinic keratosis

To the skin

Adult: Apply once daily for up to 12 weeks, reduced to 3 times a week if severe side effects occur and until side effects improve, to be applied to the affected area, if treating area with thin epidermis, reduce frequency of application and monitor response more often; maximum area of skin treated at one time, 25 cm² (e.g. 5 cm x 5 cm).

Medicinal forms: There can be variation in the licensing of different medicines containing the same drug.

Cutaneous solution

Contraindications and Advisory Labels 15

Actikerall (Almirall Ltd) Fluorouracil 5 mg/g, salicylic acid 100 mg/g

Actikerall 5 mg/g & 100 mg/g cutaneous solution | 25 ml £83.30

Protein kinase C activators

Ingenol mebutate

Indications and Dose

Actinic keratosis on face and scalp

To the skin

Adult: Apply once daily for 3 days, use the 150 microgram/g gel

Actinic keratosis on trunk and extremities

To the skin

Adult: Apply once daily for 2 days, use the 500 microgram/g gel

Caution: Avoid contact with broken skin - avoid contact with eyes - avoid contact with inside of ears - avoid contact with inside of nostrils - avoid contact with lips - avoid occlusive dressings on treated area.

Pregnancy: Not absorbed from skin, but manufacturer advises avoid.

Breastfeeding: Not absorbed from skin; ensure infant does not come in contact with treated area for 6 hours after application.

Directions for Administration

One tube covers skin area of 25 cm². Allow gel to dry on treatment area for 15 minutes. Avoid washing or touching the treated area for 6 hours after application; after this time, area may be washed with mild soap and water. Avoid use immediately after shower or less than 2 hours before bedtime.

Medicinal forms: There can be variation in the licensing of different medicines containing the same drug.

Gel

Drug master file 15

Excipients: May contain benzyl alcohol

Picato (LEO Pharma) Ingenuel mebutate 150 microgram per 1 gram

Picato 150 micrograms/g gel | 1.41 gram £65.00

Picato 500 micrograms/g gel | .94 gram £65.00
6 Pruritus

Topical local antipruritics

Pruritus may be caused by systemic disease (such as obstructive jaundice, endocrine disease, chronic renal disease, iron deficiency, and certain malignant diseases), skin disease (e.g. psoriasis, eczema, urticaria, and scabies), drug hypersensitivity, or as a side-effect of opioid analgesics. Where possible, the underlying causes should be treated. An emollient may be of value where the pruritus is associated with dry skin. Pruritus that occurs in otherwise healthy elderly people can also be treated with an emollient.

Levomenthol cream below can be used to relieve pruritus; it exerts a cooling effect on the skin. Local antipruritics have a role in the treatment of pruritus in palliative care.

Preparations containing crotamiton below are sometimes used but are of uncertain value. Preparations containing calamine are often ineffective.

A topical preparation containing doxepin 5% below is licensed for the relief of pruritus in eczema; it can cause drowsiness and there may be a risk of sensitisation.

Pruritus is common in biliary obstruction, especially in primary biliary cirrhosis and drug-induced cholestasis. Oral administration of colestyramine p. 168 is the treatment of choice.

Topical antihistamines and local anaesthetics are only marginally effective and occasionally cause hypersensitisation. For insect stings and insect bites, a short course of a topical corticosteroid is appropriate. Short-term treatment with a sedating antihistamine may help in insect stings and in intractable pruritus where sedation is desirable. Calamine preparations are of little value for the treatment of insect stings or bites and are no longer widely available.

Topical local anaesthetics are indicated for the relief of local pain. Preparations may be absorbed, especially through mucosal surfaces, therefore excessive application should be avoided and they should preferably not be used for more than 3 days; not generally suitable for young children and are less suitable for prescribing.

Topical antihistamines should be avoided in eczema and are not recommended for longer than 3 days. They are less suitable for prescribing.

ANTIPRURITICS

Crotamiton

INDICATIONS AND DOSE
Pruritus (including pruritus after scabies)

TO THE SKIN

- Child 1 month–2 years (on doctor’s advice only): Apply once daily
- Child 3–17 years: Apply 2–3 times a day
- Adult: Apply 2–3 times a day

CONTRA-INDICATIONS Acute exudative dermatoses

CAUTIONS Avoid use in buccal mucosa • avoid use near eyes • avoid use on broken skin • avoid use on very inflamed skin • use on doctor’s advice for children under 3 years

PREGNANCY Manufacturer advises avoid, especially during the first trimester—no information available.

BREAST FEEDING No information available; avoid application to nipple area.

MEDICINAL FORMS

- There can be variation in the licensing of different medicines containing the same drug.

Doxepin

INDICATIONS AND DOSE
Pruritus in eczema

TO THE SKIN

- Child 12–17 years: Apply up to 3 g 3–4 times a day, apply thinly; coverage should be less than 10% of body surface area; maximum 12 g per day
- Adult: Apply up to 3 g 3–4 times a day, apply thinly; coverage should be less than 10% of body surface area; maximum 12 g per day

CAUTIONS Avoid application to large areas • cardiac arrhythmias • mania • severe heart disease • susceptibility to angle-closure glaucoma • urinary retention

SIDE-EFFECTS

- Common or very common Dizziness • drowsiness
- Frequency not known Antimuscarinic effects • fever • gastro-intestinal disturbances • headache • irritation • local burning • rash • stinging • tingling

PREGNANCY Manufacturer advises use only if potential benefit outweighs risk.

BREAST FEEDING Manufacturer advises use only if potential benefit outweighs risk.

HEPATIC IMPAIRMENT Manufacturer advises caution in severe liver disease.

PATIENT AND CARER ADVICE Drowsiness may affect performance of skilled tasks (e.g. driving). Effects of alcohol enhanced. A patient information leaflet should be provided.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Levomenthol

INDICATIONS AND DOSE
Pruritus

TO THE SKIN

- Adult: Apply 1–2 times a day

PRESCRIBING AND DISPENSING INFORMATION When prepared extemporaneously, the BP states Levomenthol cream, BP (Menthol in Aqueous Cream) consists of levomenthol 0.5%.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream
Rosacea and acne

Acne

Treatment of acne should be commenced early to prevent scarring. Patients should be counselled that an improvement may not be seen for at least a couple of months. The choice of treatment depends on whether the acne is predominantly inflammatory or comedonal and its severity.

Mild to moderate acne is generally treated with topical preparations. Systemic treatment with oral antibacterials is generally used for moderate to severe acne or where topical preparations are not tolerated or are ineffective or where application to the site is difficult. Another oral preparation used for acne is the hormone treatment co-cyprindiol (cyproterone acetate with ethinylestradiol) for women only.

Severe acne, acne unresponsive to prolonged courses of oral antibacterials, scarring, or acne associated with psychological problems calls for early referral to a consultant dermatologist who may prescribe isotretinoin for administration by mouth.

Topical preparations for acne

In mild to moderate acne, comedones and inflamed lesions respond well to benzoyl peroxide p. 1044 or to a topical retinoid. Alternatively, topical application of an antibacterial such as erythromycin p. 1043 or clindamycin p. 467 may be effective for inflammatory acne. If topical preparations prove inadequate, oral preparations may be needed.

Benzoyl peroxide and azelaic acid

Benzoyl peroxide p. 1044 is effective in mild to moderate acne. Both comedones and inflamed lesions respond well to benzoyl peroxide. The lower concentrations seem to be as effective as higher concentrations in reducing inflammation. It is usual to start with a lower strength and to increase the concentration of benzoyl peroxide gradually. Adverse effects include local skin irritation, particularly when therapy is initiated, but the scaling and redness often subside with treatment continued at a reduced frequency of application. If the acne does not respond after 2 months then use of a topical antibacterial should be considered.

Azelaic acid p. 1043 has antimicrobial and antiinflammatory properties. It may be an alternative to benzoyl peroxide or to a topical retinoid for treating mild to moderate comedonal acne, particularly of the face. Some patients prefer azelaic acid because it is less likely to cause local irritation than benzoyl peroxide.

Topical antibacterials for acne

For many patients with mild to moderate inflammatory acne, topical antibacterials may be no more effective than topical benzoyl peroxide or tretinoin. Topical antibacterials are probably best reserved for patients who wish to avoid oral antibacterials or who cannot tolerate them. Topical preparations of erythromycin p. 1043 and clindamycin p. 467 are effective for inflammatory acne. Topical antibacterials can produce mild irritation of the skin, and on rare occasions cause sensitisation; gastro-intestinal disturbances have been reported with topical clindamycin.

Antibacterial resistance of Propionibacterium acnes is increasing; there is cross-resistance between erythromycin and clindamycin. To avoid development of resistance:

- when possible use non-antibiotic antimicrobials (such as benzoyl peroxide or azelaic acid);
- avoid concomitant treatment with different oral and topical antibacterials;
- if a particular antibacterial is effective, use it for repeat courses if needed (short intervening courses of benzoyl peroxide or azelaic acid may eliminate any resistant propionibacteria);
- do not continue treatment for longer than necessary (however, treatment with a topical preparation should be continued for at least 6 months).

Some manufacturers of topical antibacterial preparations for acne advise that preparations containing alcohol are not suitable for use with benzoyl peroxide.

Topical retinoids and related preparations for acne

Topical tretinoin p. 765, its isomer isotretinoin p. 1045, and adapalene p. 1045 (a retinoid-like drug), are useful for treating comedones and inflammatory lesions in mild to moderate acne. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop. Isotretinoin is given by mouth in severe acne.

Other topical preparations for acne

Preparations containing aluminium oxide p. 1042 are not considered beneficial in acne. A topical preparation of nicotinamide p. 1048 is available for inflammatory acne.

Oral preparations for acne

Systemic antibacterial treatment is useful for inflammatory acne if topical treatment is not adequately effective or if it is inappropriate. Anticomendoidal treatment (e.g. with topical benzoyl peroxide p. 1044) may also be required. Either oxytetracycline p. 498 or tetracycline p. 498 is usually given for acne. If there is no improvement after the first 3 months another oral antibacterial should be used. Maximum improvement usually occurs after 4 to 6 months but in more severe cases treatment may need to be continued for 2 years or longer.

Doxycycline p. 995 and lymecycline p. 497 are alternatives to tetracycline.

Although minocycline p. 498 is as effective as other tetracyclines for acne, it is associated with a greater risk of lupus erythematosus–like syndrome. Minocycline sometimes causes irreversible pigmentation; it is given in a once or twice daily dose.

Erythromycin p. 1043 in a twice daily dose is an alternative for the management of acne but proprionibacteria strains resistant to erythromycin are becoming widespread and this may explain poor response.

Trimethoprim p. 462 may be used for acne resistant to other antibacterials [unlicensed indication]. Prolonged treatment with trimethoprim may depress haematopoiesis; it should generally be initiated by specialists.

Concomitant use of different topical and systemic antibacterials is undesirable owing to the increased likelihood of the development of bacterial resistance.

Hormone treatment for acne

Co-cyprindiol (cyproterone acetate with ethinylestradiol p. 1042) contains an anti-androgen. It is licensed for use in women with moderate to severe acne that has not
responded to topical therapy or oral antibacterials, and for moderately severe hirsutism. Although it is an effective hormonal contraceptive, it should not be used solely for contraception.

Improvement of acne with co-cyprindiol probably occurs because of decreased sebum secretion which is under androgen control. Some women with moderately severe hirsutism may also benefit because hair growth is also androgen-dependent.

**Skin irritation**

Isotretinoin is a toxic drug that should be prescribed only by, or under the supervision of, a consultant dermatologist. It is given for at least 15 weeks; repeat courses are not normally required.

**Side-effects of isotretinoin include severe dryness of the skin and mucous membranes, nose bleeds, and joint pains.** The drug is teratogenic and must not be given to women of child-bearing age unless they practise effective contraception (oral progesterone-only contraceptives not considered effective) and then only after detailed assessment and explanation by the physician. Women must also be registered with a pregnancy prevention programme.

Although a causal link between isotretinoin use and psychiatric changes (including suicidal ideation) has not been established, the possibility should be considered before initiating treatment; if psychiatric changes occur during treatment, isotretinoin should be stopped, the prescriber informed, and specialist psychiatric advice should be sought.

**Rosacea**

Rosacea is not comedonal (but may exist with acne which may be comedonal). Brimonidine tartrate p. 1045 is licensed for the treatment of facial erythema in rosacea. The pustules and papules of rosacea respond to topical metronidazole p. 1008 or topical azelaic acid p. 1043. Alternatively oral administration of oxytetracycline p. 498 or tetracycline p. 498, or erythromycin p. 1043, can be used; courses usually last 6–12 weeks and are repeated intermittently. Doxycycline p. 995 can be used [unlicensed indication] if oxytetracycline or tetracycline is inappropriate (e.g. in renal impairment). A modified-release preparation of doxycycline is licensed in low daily doses for the treatment of facial rosacea. Isotretinoin p. 1045 is occasionally given in refractory cases [unlicensed indication]. Camouflagers may be required for the redness.

**Anti-androgens**

**Co-cyprindiol**

**INDICATIONS AND DOSE**

Moderate to severe acne in women of child-bearing age refractory to topical therapy or oral antibacterials.

**Moderately severe hirsutism**

**INDICATIONS**

Acute porphyria · gallstones · heart disease associated with pulmonary hypertension or risk of embolus · history during pregnancy of cholestatic jaundice · history during pregnancy of chorea · history during pregnancy of pemphigoid gestationis · history during pregnancy of pruritus · history of breast cancer but can be used after 5 years if no evidence of disease and non-hormonal methods unacceptabe · history of haemolytic uraemic syndrome · migraine with aura · personal history of venous or arterial thrombosis · sclerosing treatment for varicose veins · severe or multiple risk factors for arterial disease or for venous thromboembolism · systemic lupus erythematosus with (or unknown) antiphospholipid antibodies · transient cerebral ischaemic attacks without headaches · undiagnosed vaginal bleeding

**CONTRA-INDICATIONS**

Acute porphyria · gallstones · heart disease associated with pulmonary hypertension or risk of embolus · history during pregnancy of cholestatic jaundice · history during pregnancy of chorea · history during pregnancy of pemphigoid gestationis · history during pregnancy of pruritus · history of breast cancer but can be used after 5 years if no evidence of disease and non-hormonal methods unacceptabe · history of haemolytic uraemic syndrome · migraine with aura · personal history of venous or arterial thrombosis · sclerosing treatment for varicose veins · severe or multiple risk factors for arterial disease or for venous thromboembolism · systemic lupus erythematosus with (or unknown) antiphospholipid antibodies · transient cerebral ischaemic attacks without headaches · undiagnosed vaginal bleeding

**CAUTIONS**

Active trophoblastic disease (until return to normal of urine- and plasma-gonadotrophin concentration)—seek specialist advice · arterial disease · gene mutations associated with breast cancer (e.g. BRCA 1) · history of severe depression especially if induced by hormonal contraceptive · hyperprolactinaemia—seek specialist advice · inflammatory bowel disease including Crohn’s disease · migraine · personal or family history of hypertriglyceridaemia (increased risk of pancreatitis) · risk factors for venous thromboembolism · sickle-cell disease · undiagnosed breast mass

**CAUTIONS, FURTHER INFORMATION**

Venous thromboembolism There is an increased risk of venous thromboembolism in women taking co-cyprindiol, particularly during the first year of use. The incidence of venous thromboembolism is 1.5–2 times higher in women using co-cyprindiol than in women using combined oral contraceptives containing levonorgestrel, but the risk may be similar to that associated with use of combined oral contraceptives containing third generation progestogens (desogestrel and gestodene) or drospirenone. Women requiring co-cyprindiol may have an inherently increased risk of cardiovascular disease.

**INTERACTIONS** → Appendix 1 (oestrogens).

**SIDE-EFFECTS**
- **Rare** Rarely gallstones, systemic lupus erythematosus
- **Very rare** Photosensitivity
- **Frequency not known** Abdominal cramps, absence of withdrawal bleeding, amenorrhoea after discontinuation, breast enlargement, breast secretion, breast tenderness, changes in libido, changes in lipid metabolism, changes in vaginal discharge, chloasma, chorea, contact lenses may irritate, depression, fluid retention, headache, hepatic tumours, hypertension, irritability, leg cramps, liver impairment, nausea, nervousness, reduced menstrual loss, skin reactions, thrombosis (more common when factor V Leiden present in blood groups A, B, and AB), visual disturbances, vomiting, “spotting” in early cycles

**PREGNANCY** Avoid—risk of feminisation of male fetus with cyproterone.

**BREAST FEEDING** Manufacturer advises avoid; possibility of anti-androgen effects in neonate with cyproterone.

**HEPATIC IMPAIRMENT** Avoid in active liver disease including disorders of hepatic excretion (e.g. Dubin-Johnson or Rotor syndromes), infective hepatitis (until liver function returns to normal), and liver tumours.

**PRESCRIBING AND DISPENSING INFORMATION** A mixture of cyproterone acetate and ethinylestradiol in the mass proportions 2000 parts to 35 parts, respectively.

**CAUTIONS** Avoid contact with eyes, avoid contact with mouth, avoid contact with mucous membranes

**ANTICOMEDONALS**

**SIDE-EFFECTS**
- **Common or very common** Local irritation (reduce frequency or discontinue temporarily)
- **Uncommon** Skin discoloration
- **Frequency not known** Worsening of asthma

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**
- EXCIPIENTS: May contain Propylene glycol
- **Skinoren** (Bayer Plc)
  - Azelaic acid 200 mg per 1 gram Skinoren 20% cream | 30 g [POT] £3.74 DT price = £3.74

**Gel**
- EXCIPIENTS: May contain Disodium edetate, polysorbates, propylene glycol
- **Finacea** (Bayer Plc)
  - Azelaic acid 150 mg per 1 gram Finacea 15% gel | 30 gram [POT] £7.48 DT price = £7.48

**ANTI-INFECTIVES**

**Erythromycin**

The properties listed below are those particular to the drug only. For properties common to the class, see macrolides, p. 469.

**INDICATIONS AND DOSE**

**Rosacea**
- **BY MOUTH**
  - Adult: 500 mg twice daily courses usually last 6–12 weeks and are repeated intermittently

**Acne**
- **BY MOUTH**
  - Adult: 500 mg twice daily

**STIEMYCIN®**

**Acne vulgaris**
- **TO THE SKIN**
  - Child 12-17 years: Apply twice daily, to be applied thinly
  - Adult: Apply twice daily, to be applied thinly

**CAUTIONS**
- With systemic use avoid in acute porphyrrias p. 864

**STIEMYCIN®**

Some manufacturers advise preparations containing alcohol are not suitable for use with benzoyl peroxide

**INTERACTIONS** → Appendix 1 (macrolides).
- Caution with concomitant use of drugs that prolong the QT interval.
- With topical use Interactions do not apply to small amounts of erythromycin used topically.

**PREGNANCY**
- With systemic use Not known to be harmful.

**BREAST FEEDING**
- With systemic use Only small amounts in milk—not known to be harmful.

**HEPATIC IMPAIRMENT**
- With systemic use May cause idiosyncratic hepatotoxicity.

**RENAL IMPAIRMENT**
- With systemic use in adults: Max. 1.5 g daily in severe renal impairment (ototoxicity).
- With systemic use in children: Reduce dose in severe renal impairment (ototoxicity).

**PRESCRIBING AND DISPENSING INFORMATION**
- With oral use Flavours of oral liquid formulations may include banana

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: gel, ointment
### Erythromycin with zinc acetate

**INDICATIONS AND DOSE**

**Acne vulgaris**

**TO THE SKIN**

- **Child:** Apply twice daily
- **Adult:** Apply twice daily

- **CAUTIONS** Some manufacturers advise preparations containing alcohol are not suitable for use with benzoyl peroxide

- **MEDICINAL FORMS**

  There can be variation in the licensing of different medicines containing the same drug.

---

### Benzoyl peroxide

#### BENZOYL PEROXIDE

**INDICATIONS AND DOSE**

**Acne vulgaris**

**TO THE SKIN**

- **Child 12-17 years:** Apply 1–2 times a day, preferably after washing with soap and water, start treatment with lower-strength preparations
- **Adult:** Apply 1–2 times a day, preferably after applying washing with soap and water, start treatment with lower-strength preparations

- **CAUTIONS** Avoid contact with broken skin - avoid contact with eyes - avoid contact with mouth - avoid contact with mucous membranes - avoid excessive exposure to sunlight

- **SIDE-EFFECTS** Skin irritation

**SIDE-EFFECTS, FURTHER INFORMATION**

Skin irritation Reduce frequency or suspend use until irritation subsides and re-introduce at reduced frequency.

**PATIENT AND CARER ADVICE** May bleach fabrics and hair.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances, isopropyl palmitate, propylene glycol

- **Brevoxyl** (GlaxoSmithKline Consumer Healthcare)
- **Benzoyl peroxide 40 mg per 1 gram Brevoxyl 4% cream**
  
  50 gram £4.13 DT price = £4.13

- **PanOxyl** (GlaxoSmithKline Consumer Healthcare)

- **Benzoyl peroxide 50 mg per 1 gram PanOxyl 5 cream**
  
  40 gram £1.89 DT price = £1.89

**Gel**

EXCIPIENTS: May contain Fragrances, propylene glycol

- **Acnecide** (Galderma (UK) Ltd)

- **Benzoyl peroxide 50 mg per 1 gram Acnecide 5% gel**
  
  30 gram £5.46 DT price = £5.46 | 60 gram £12.56

  Acnecide Wash 5% gel | 50 gram £5.44

  - Brands may include PanOxyl Acnecid, PanOxyl Aquagel

**Wash**

EXCIPIENTS: May contain Imidurea

- **PanOxyl** (GlaxoSmithKline Consumer Healthcare)

- **Benzoyl peroxide 100 mg per 1 gram PanOxyl 10 wash**
  
  150 ml £6.40 DT price = £6.40

---

**Benzoyl peroxide with clindamycin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, benzoyl peroxide above, clindamycin p. 467.

**INDICATIONS AND DOSE**

**Acne vulgaris**

**TO THE SKIN**

- **Child 12-17 years:** Apply once daily, dose to be applied in the evening
- **Adult:** Apply once daily, dose to be applied in the evening

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.
Adapalene

**INDICATIONS AND DOSE**

**Mild to moderate acne vulgaris**

- **TO THE SKIN**
  - Child 12–17 years: Apply once daily, apply thinly in the evening
  - Adult: Apply once daily, apply thinly in the evening

- **CAUTIONS** Avoid accumulation in angles of the nose - avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin - avoid exposure to UV light (including sunlight, solariums) - avoid in severe acne involving large areas - caution in sensitive areas such as the neck

- **PREGNANCY** Avoid.

- **BREAST FEEDING** Amount of drug in milk probably too small to be harmful; ensure infant does not come in contact with treated areas.

- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.

**Cream**

- **CAUTIONARY AND ADVISORY LABELS**
  - Adaplene may contain Disodium edetate, hydroxybenzoates (parabens)
  - **ADAPALENE (Non-proprietary)**
    - Adapalene 1 mg per 1 gram Adapalene 0.1% cream | 45 gram | £16.43 DT price = £16.43
    - Differin (Galderma (UK) Ltd) Adapalene 1 mg per 1 gram Differin 0.1% cream | 45 gram | £16.43 DT price = £16.43

**Gel**

- **CAUTIONARY AND ADVISORY LABELS**
  - Adapalene may contain Disodium edetate, hydroxybenzoates (parabens), propylene glycol
  - **ADAPALENE (Non-proprietary)**
    - Adapalene 1 mg per 1 gram Adapalene 0.1% gel | 45 gram | £16.43 DT price = £16.43
    - Differin (Galderma (UK) Ltd) Adapalene 1 mg per 1 gram Differin 0.1% gel | 45 gram | £16.43 DT price = £16.43

**Adapalene with benzoyl peroxide**

The properties listed below are those particular to the combination only. For the properties of the components please consider, adapalene above, benzoyl peroxide p. 1044.

**INDICATIONS AND DOSE**

**Acne vulgaris**

- **TO THE SKIN**
  - Child 9–17 years: Apply once daily, to be applied thinly in the evening
  - Adult: Apply once daily, to be applied thinly in the evening

**PATIENT AND CARER ADVICE** Gel may bleach clothing and hair.

**NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) Decisions**

The Scottish Medicines Consortium has advised (March 2014) that Epilduo® should be restricted for use in mild to moderate facial acne when monotherapy with benzoyl peroxide or adapalene is inappropriate.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Gel**

- **CAUTIONARY AND ADVISORY LABELS**
  - Adapalene 1 mg per 1 gram, benzoyl peroxide 50 mg per 1 gram Duvac Once Daily gel (3% and 1%) | 30 gram | £13.14 DT price = £13.14
  - £10.95 DT price = £10.95
  - 25 gram | £21.89 DT price = £21.89

**Isotretinoin**

**INDICATIONS AND DOSE**

**Topical treatment of mild to moderate acne**

- **TO THE SKIN**
  - Adult: Apply 1–2 times a day, to be applied thinly
  - Severe acne (under expert supervision) | Acne which is associated with psychological problems (under expert supervision) | Acne which has not responded to an adequate course of a systemic antibacterial (under expert supervision) | Acne with scarring (under expert supervision) | Systemic treatment of nodulo-cystic and conglobate acne (under expert supervision)

- **BY MOUTH**
  - Adult: Initially 500 micrograms/kg daily in 1–2 divided doses, increased if necessary to 1 mg/kg daily for 16–24 weeks, repeat treatment course after a period of at least 8 weeks if relapse after first course; maximum 150 mg/kg per course

**CONTRA-INDICATIONS**

- With oral use hypolipaemia - hypervitaminosis A
- With topical use perioral dermatitis - rosacea

**CAUTIONS**

- With oral use avoid blood donation during treatment and for at least 1 month after treatment - diabetes - dry eye syndrome (associated with risk of keratitis) - history of depression - monitor for depression
- With topical use allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid - alternating a preparation that causes peeling with a topical retinoid may give rise to contact dermatitis (reduce frequency of retinoid application) - avoid accumulation in angles of the nose - avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin - avoid exposure to UV light (including sunlight, solariums) - avoid in severe acne involving large areas - avoid use of topical retinoids with abrasive cleaners, comedogenic or astringent cosmetics - caution in sensitive areas such as the neck - personal or familial history of non-melanoma skin cancer

**INTERACTIONS**

- With oral use → Appendix 1 (retinoids). Avoid keratolytics.

**SIDE-EFFECTS**

- Common or very common
- With oral use anaemia - arthralgia - dryness of eyes (with blepharitis and conjunctivitis) - dryness of lips (sometimes cheilitis) - dryness of nasal mucosa (with epistaxis) - dryness of pharyngeal mucosa (with hoarseness) - dryness of skin (with dermatitis, scaling, thinning, erythema, pruritus) - epidermal fragility (trauma may cause
blistering) - haematuria - headache - myalgia - neutropenia - proteinuria - raised blood-glucose concentration - raised plasma-triglyceride concentration - raised serum-cholesterol concentration (with reduced high-density lipoprotein concentration) - raised serum-transaminase concentration - thrombocytopenia - thrombocytosis

▶ Rare
▶ With oral use aggressive behaviour - alopecia - anxiety - depression - mood changes - skin reactions
▶ Very rare
▶ With oral use acne fulminans - allergic vasculitis - arthritis - benign intracranial hypertension - blurred vision - bone changes following long-term administration - calcification of tendons and ligaments following long-term administration - cataracts - colour blindness - convulsions - corneal opacities - decreased night vision - decreased tolerance to contact lenses - diabetes mellitus - dizziness - drowsiness - early ephaptic closure following long-term administration - exacerbation of acne - gastrointestinal haemorrhage - glomerulonephritis - Gram-positive infections of skin and mucous membranes - granulomatous lesions - haemorrhagic diarrhoea - hepatitis - hirsutism - hyperuricaemia - impaired hearing - increased sweating - inflammatory bowel disease - keratitis - lymphadenopathy - malaise - nail dystrophy - nausea - papilloedema - paronychia - photophobia - photosensitivity - psychosis - raised serum-creatinine kinase concentration - reduced bone density following long-term administration - skeletal hyperostosis following long-term administration - skin hyperpigmentation - suicidal ideation - tendinitis - visual disturbances
▶ Frequency not known
▶ With oral use Stevens-Johnson syndrome - toxic epidermal necrolysis
▶ With topical use blistering of skin - burning - crusting of skin - dry or peeling skin - erythema - eye irritation - increased sensitivity to UVB light or sunlight - oedema - pruritus - stinging

SIDE-EFFECTS, FURTHER INFORMATION
Management of side-effects Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis. Psychiatric side-effects require expert referral. Discontinue treatment if skin peeling severe or haemorrhagic diarrhoea develops. Visual disturbances require expert referral and possible withdrawal.

CONCEPTION AND CONTRACEPTION
▶ With oral use Effective contraception must be used. In women of child-bearing age with potential, exclude pregnancy up to 3 days before treatment (start treatment on day 2 or 3 of menstrual cycle), every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 5 weeks after stopping treatment—perform pregnancy test in the first 3 days of the menstrual cycle. Women must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. Women should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone, but can be used in conjunction with other contraceptive methods. Each prescription for isotretinoin should be limited to a supply of up to 30 days' treatment and dispensed within 7 days of the date stated on the prescription; repeat prescriptions or faxed prescriptions are not acceptable. Women should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

▶ With topical use Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered sufficiently effective).
▶ PREGNANCY Contra-indicated in pregnancy (teratogenic).
▶ BREAST FEEDING Avoid.
▶ HEPATIC IMPAIRMENT
▶ With oral use Avoid—further impairment may occur.
▶ RENAL IMPAIRMENT
▶ With oral use In severe impairment, reduce initial dose (e.g. 10 mg daily) and increase gradually up to 1 mg/kg daily as tolerated.

MONITORING REQUIREMENTS
With oral use Measure hepatic function and serum lipids before treatment, 1 month after starting and then every 3 months (reduce dose or discontinue if transaminase or serum lipids persistently raised).

PRESCRIBING AND DISPENSING INFORMATION Isotretinoin is an isomer of tretinoin.

PATIENT AND CARER ADVICE
▶ With oral use Warn patient to avoid wax epilation (risk of epidermal stripping), dermabrasion, and laser skin treatments (risk of scarring) during treatment and for at least 6 months after stopping; patient should avoid exposure to UV light (including sunlight) and use sunscreen and emollient (including lip balm) preparations from the start of treatment. Patients and carers should be told how to recognise signs and symptoms of psychiatric disorders such as depression, anxiety, and rarely suicidal thoughts.

▶ With topical use Patients should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop. If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

MEDIcINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Capsule
CAUTIONARY AND ADVISORY LABELS 10, 11, 21

**Tretinoin with clindamycin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, erythromycin p. 1043, tretinoin p. 769.

**INDICATIONS AND DOSE**

**Acne**

**TO THE SKIN**
- ***Child:** Apply 1–2 times a day, apply thinly
- ***Adult:** Apply 1–2 times a day, apply thinly

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Gel**

**CAUTIONARY AND ADVISORY LABELS**
- **11**
- **EXCIPIENTS:** May contain Butylated hydroxytoluene, hydroxybenzoates (parabens), polysorbates
- **Treclin (Meda Pharmaceuticals Ltd)**
  - Clindamycin (as Clindamycin phosphate) 10 mg per 1 gram, Tretinoin 250 microgram per 1 gram Treclin 1%/0.025% gel | 30 gram (£7.47 DT price = £7.47)
8 Scalp and hair conditions

Scalp and hair conditions

Dandruff is considered to be a mild form of seborrhoeic dermatitis. Shampoos containing antimicrobial agents such as pyrithione zinc (which are widely available) and selenium p. 1049 may have beneficial effects. Shampoos containing tar extracts may be useful and they are also used in psoriasis. Ketoconazole shampoo p. 1011 should be considered for more persistent or severe dandruff or for seborrhoeic dermatitis of the scalp.

Corticosteroid gels and lotions can also be used. Shampoos containing coal tar with salicylic acid p. 1035 may also be useful. A cream or an ointment containing coal tar with salicylic acid p. 1035 is very helpful in Psoriasis p. 1017 that affects the scalp. Patients who do not respond to these treatments may need to be referred to exclude the possibility of other skin conditions.

Cradle cap in infants may be treated with coconut oil or olive oil applications followed by shampooing.

Hirsutism

Hirsutism may result from hormonal disorders or as a side-effect of drugs such as minoxidil p. 1049, corticosteroids, anabolic steroids, androgens, danazol p. 636, and progestogens.

Weight loss can reduce hirsutism in obese women. Women should be advised about local methods of hair removal, and in the mildest cases this may be all that is required.

Eflornithine p. 1050 an antiprotozoal drug, inhibits the enzyme ornithine decarboxylase in hair follicles. Topical eflornithine can be used as an adjunct to laser therapy for facial hirsutism in women.

Co-cyprindiol p. 1042 may be effective for moderately severe hirsutism. Metformin hydrochloride p. 594 is an alternative in women with polycystic ovary syndrome [unlicensed indication]. Systemic treatment is required for 6–12 months before benefit is seen.

Androgenetic alopecia

Finasteride p. 676 is licensed for the treatment of androgenetic alopecia in men. Continuous use for 3–6 months is required before benefit is seen, and effects are reversed 6–12 months after treatment is discontinued.

Topical application of minoxidil p. 1049 may stimulate limited hair growth in a small proportion of adults but only for as long as it is used.
**Antiseptics and Disinfectants**

**Benzalkonium chloride**

**Indications and Dose**

Seborrhoeic scalp conditions associated with dandruff and scaling

To the skin

- Child: Apply as required
- Adult: Apply as required

**Medicinal Forms**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

Shampoo

- Dermax (Derma Laboratories Ltd)
  - Benzalkonium chloride 5 mg per 1 ml Dermax Therapeutic 0.5% shampoo | 250 ml £5.69

**Cetrimide with undecenoic acid**

**Indications and Dose**

Scalp psoriasis | Seborrhoeic dermatitis | Dandruff

To the skin

- Child: Apply 3 times a week for 1 week, then apply twice weekly
- Adult: Apply 3 times a week for 1 week, then apply twice weekly

**Medicinal Forms**

There can be variation in the licensing of different medicines containing the same drug.

Shampoo

- Ceanel (Alliance Pharmaceuticals Ltd)
  - Cetrimide 100 mg per 1 ml, Phenylethyl alcohol 75 mg per 1 ml, Undecenoic acid 10 mg per 1 ml Ceanel Concentrate shampoo | 150 ml £3.40 | 500 ml £9.80

**Essential Trace Elements**

**Selenium**

**Indications and Dose**

Seborrhoeic dermatitis | Dandruff

To the skin

- Child 5-17 years: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required
- Adult: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required

**Pityriasis versicolor**

Adult: Apply daily for 7 days, apply to the affected area and leave on for 10 minutes before rinsing off. The course may be repeated if necessary. Diluting with a small amount of water prior to application can reduce irritation

**Unlicensed Use**

The use of selenium sulfide shampoo as a lotion for the treatment of pityriasis (tinea) versicolor is an unlicensed indication.

**Patient and Carer Advice**

Avoid using 48 hours before or after applying hair colouring, straightening or waving preparations.

**Medicinal Forms**

There can be variation in the licensing of different medicines containing the same drug.

---

**8.1 Alopecia**

**Peripheral Vasodilators**

**Minoxidil**

**Indications and Dose**

**Regaine® for Men Extra Strength Foam**

Androgenetic alopecia

To the skin

- Adult: Apply 0.5 capful twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 16 weeks

**Regaine® for Men Extra Strength Solution**

Androgenetic alopecia

To the skin

- Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

**Contra-Indications**

Phaeochromocytoma

**CAUTIONS**

Avoid contact with broken, infected, shaved, or inflamed skin - avoid contact with eyes - avoid contact with mouth - avoid contact with mucous membranes - avoid inhalation of spray mist - avoid occlusive dressings

**Side-Effects, Further Information**

When used topically systemic effects unlikely; only about 1–2% absorbed (greater absorption may occur with use on inflamed skin).

**Interactions**

Caution—avoid topical drugs which enhance absorption.

**Side-Effects**

- Common or very common Headache · local irritation
- Uncommon Changes in hair colour or texture (discontinue if increased hair loss persists for more than 2 weeks) · hypotension

**SIDE-EFFECTS, FURTHER INFORMATION**

When used topically systemic effects unlikely; only about 1–2% absorbed (greater absorption may occur with use on inflamed skin).

**Pregnancy**

Avoid—possible toxicity including reduced placental perfusion. Neonatal hirsutism reported.

**Breast Feeding**

Present in milk but not known to be harmful.

**Patient and Carer Advice**

Ensure hair and scalp dry before application. Patients and their carers should be advised to wash hands after application of liquid or foam.

**Medicinal Forms**

There can be variation in the licensing of different medicines containing the same drug.
8.2 Hirsutism

**Efornithine**

- **DRUG ACTION** An antiprotozoal drug that inhibits the enzyme ornithine decarboxylase in hair follicles.

**INDICATIONS AND DOSE**

Adjuvant to laser therapy for facial hirsutism in women

**TO THE SKIN**

- **Adult:** Apply twice daily, to be applied thinly, discontinue use if no improvement after 4 months of treatment

- **SIDE-EFFECTS**
  - **Common or very common** Acne, burning at application site, rash, stinging at application site
  - **Uncommon** Abnormal hair growth, abnormal hair texture

- **PREGNANCY** Toxicity in animal studies—manufacturer advises avoid.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **PATIENT AND CARER ADVICE** Medicines must be rubbed in thoroughly. Cosmetics may be applied over treated area 5 minutes after efornithine, do not wash treated area for 4 hours after application.

- **NATIONAL FUNDING/ACCESS DECISIONS**

  **Scottish Medicines Consortium (SMC) Decisions**

  The Scottish Medicines Consortium has advised (September 2005) that efornithine for facial hirsutism be restricted for use in women in whom alternative drug treatment cannot be used.

- **MEDICINAL FORMS**

  There are variations in the licensing of different medicines containing the same drug.

  - **Cream**
    - **EXCIPIENTS:** May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)
    - **Vaniqa (Almirall Ltd)**
      - Efornithine (as Efornithine monohydrate chloride) 115 mg per 1 gram
      - Vaniqa 11.5% cream | 60 gram (£6.87)

  - **Liquid**
    - **EXCIPIENTS:** May contain Propylene glycol
      - **Regaine (McNeil Products Ltd)**
        - Minoxidil 20 mg per 1 ml | Regaine for Women Regular Strength | 60 ml (£39.71)
        - Minoxidil 50 mg per 1 ml | Regaine for Men Extra Strength | 60 ml (£34.36)

- **INTERACTIONS**

  For the interactions following the ingestion of alcohol, see Appendix 1 (alcohol).

- **SIDE-EFFECTS**

  Features of acute alcohol intoxication include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis.
**Antiseptics and disinfectants**

**indications and dose**

**Cepton® lotion**

For skin disinfection in acne

- **Adult:** (consult product literature)
- **Child:** (consult product literature)

**Cepton® skin wash**

For use as skin wash in acne

- **Adult:** (consult product literature)
- **Child:** (consult product literature)

**Chloraprep®**

For skin disinfection before invasive procedures

- **Child 2 months-17 years:** (consult product literature)
- **Adult:** (consult product literature)

**CX antiseptic dusting powder**

For skin disinfection

- **Adult:** (consult product literature)

**Hibiscrub®**

Pre-operative hand and skin disinfection | General hand and skin disinfection

- **Child:** Use as alternative to soap (consult product literature)
- **Adult:** Use as alternative to soap (consult product literature)

**Hibitane® plus 5% concentrate solution**

General and pre-operative skin disinfection

- **Child:** (consult product literature)

**Hibitane® obstetric®**

For use in obstetrics and gynaecology as an antiseptic and lubricant

- **Adult:** To be applied to skin around vulva and perineum and to hands of midwife or doctor

**Prescribing and dispensing information**

When prepared extemporaneously, the BP states Surgical Spirit, BP consists of methyl salicylate 0.5 mL, diethanolamine 2%, castor oil 2.5%, in industrial methylated spirit.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug.

- **Alcohol (Non-proprietary)**
  - Industrial methylated spirit 70% | 600 mL £5.71
  - Ethanol 950 mL per 1 litre, Wood naphtha 50 mL per 1 litre | Industrial methylated spirit 95% | 600 mL £5.82 | 1000 mL £4.29-£6.02

**Antiseptics and disinfectants**

**Chlorhexidine**

**Indications and dose**

**Cepton® lotion**

For skin disinfection in acne

- **Adult:** (consult product literature)
- **Child:** (consult product literature)

**Cepton® skin wash**

For use as skin wash in acne

- **Adult:** (consult product literature)
- **Child:** (consult product literature)

**Chloraprep®**

For skin disinfection before invasive procedures

- **Child 2 months-17 years:** (consult product literature)
- **Adult:** (consult product literature)

**Cx antiseptic dusting powder**

For skin disinfection

- **Adult:** (consult product literature)

**Hibiscrub®**

Pre-operative hand and skin disinfection | General hand and skin disinfection

- **Child:** Use as alternative to soap (consult product literature)
- **Adult:** Use as alternative to soap (consult product literature)

**Hibitane® plus 5% concentrate solution**

General and pre-operative skin disinfection

- **Child:** (consult product literature)

**Hibitane® obstetric®**

For use in obstetrics and gynaecology as an antiseptic and lubricant

- **Adult:** To be applied to skin around vulva and perineum and to hands of midwife or doctor

**Contra-indications**

Alcoholic solutions not suitable before diathermy; alcoholic solutions not suitable for use on neonatal skin - not for use in body cavities.

**Caution**

Avoid contact with brain - avoid contact with eyes - avoid contact with meninges - avoid contact with middle ear.

**Side-effects**

Chemical burns in preterm neonates - sensitivity.

**Directions for administration**

Hibitane® plus 5% concentrate solution

For pre-operative skin preparation, dilute 1 in 10 (0.5%) with alcohol 70%. For general skin disinfection, dilute 1 in 100 (0.05%) with water. Alcoholic solutions not suitable for use before diathermy or on neonatal skin.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid, alcohol, syrup, 10% solution, 2.5% solution.

**Liquid**

- **Chlorhexidine (Non-proprietary)**
  - Chlorhexidine gluconate 500 microgram per 1 ml | Chlorhexidine gluconate 0.05% solution 100ml sachets | 10 sachet | no price available
  - Cepton (Boston Healthcare Ltd)
  - Chlorhexidine gluconate 5 mg per 1 gram | 150 mL | £5.10
  - Hibitane (Molnlycke Healthcare Ltd)
  - Chlorhexidine gluconate 50 mg per 1 mL | Hibitane Plus 5% concentrate solution | 500 mL | £14.50
  - Hydrex (Ecolab Healthcare Division)
  - Chlorhexidine gluconate 5 mg per 1 mL | Hydrex pink chlorhexidine 4% solution | 250 mL | £4.25 | 500 mL | £5.25 | 1000 mL | £24.00
  - Chlorhexidine gluconate 40 mg per 1 mL | Habiscrib 4% Surgical Scrub | 250 mL | £3.39 | 500 mL | £3.59 | 1000 mL | £26.96

**Cream**

- **Chlorhexidine (Non-proprietary)**
  - Chlorhexidine hydrochloride 5 mg per 1 gram | 30 gram | £2.07
  - Brands may include Acriflex, Eczmol, Hibitane

**Gel**

- **Cepton (Boston Healthcare Ltd)**
  - Chlorhexidine gluconate 5 mg per 1 gram | 30 gram | £2.97

Skin cleansers, antiseptics and desloughing agents

**Hydrogen peroxide**

**Drug Action** Hydrogen peroxide is an oxidising agent.

**Indications and dose**

For skin disinfection, particularly cleansing and deodorising wounds and ulcers

**To the skin**

- Adult: Use 3% and 6% solutions (consult product literature)

**Crystacide**

Superficial bacterial skin infection

**To the skin**

- Child: Apply 2–3 times a day for up to 3 weeks
- Adult: Apply 2–3 times a day for up to 3 weeks

**Contra-indications** Closed body cavities, deep wounds, large wounds; use as disinfectant agent for surgical instruments - use as emer - use during surgery

**Caution** Avoid on eyes; avoid on healthy skin; incompatible with products containing iodine or potassium permanganate

**Prescribing and dispensing information** The BP directs that when hydrogen peroxide is prescribed, hydrogen peroxide solution 6% (20 vols) should be dispensed. Strong solutions of hydrogen peroxide which contain 27% (90 vols) and 30% (100 vols) are only for the preparation of weaker solutions. When prepared extemporaneously, the BP states Hydrogen Peroxide Solution, BP consists of hydrogen peroxide 6% (20 vols) or hydrogen peroxide 3% (10 vols).

**Handling and Storage** Hydrogen peroxide bleaches fabric.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

**Irrigation solution**

- **Hydrogen peroxide 60 mg per 1 ml** Hydrogen peroxide 6% solution | 200 ml GSK £0.57 | 500 ml GSK £2.47 | 2000 ml GSK £7.52
- **Hydrogen peroxide 90 mg per 1 ml** Hydrogen peroxide 9% solution | 200 ml GSK £0.61–£0.62
- **Hydrogen peroxide 30 ml per 1 litre** Hydrogen peroxide 3% solution | 200 ml GSK £0.55

**Cream**

**Excipients:** May contain Edetic acid (edta), propylene glycol

- **Crystacide** (Germa UK Ltd)
  - Hydrogen peroxide 10 mg per 1 gram Crystacide 1% cream | 25 gram £8.07 DT price = £8.07 | 40 gram £11.62

**Proflavine**

**Indications and dose**

Infected wounds | Infected burns

**To the skin**

- Adult: (consult product literature)

**Patient and carer advice** Stains clothing.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

**Astringents**

**Potassium permanganate**

**Indications and dose**

Cleansing and deodorising suppurating eczematous reactions and wounds

**To the skin**

- Adult: For wet dressings or baths, use approximately 0.01% (1 in 10 000) solution

**Caution** Irritant to mucous membranes

**Directions for administration** Potassium permanganate 0.1% solution to be diluted 1 in 10 to provide a 0.01% (1 in 10 000) solution. With potassium permanganate tablets for solution, 1 tablet dissolved in 4 litres of water provides a 0.01% (1 in 10 000) solution.

**Patient and carer advice** Can stain clothing, skin and nails (especially with prolonged use).

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

**Tablet for cutaneous solution**

- **Potassium permanganate (Non-proprietary)**
  - Potassium permanganate 400 mg
    - Potassium permanganate 400 mg tablets for cutaneous solution | 30 tablet no price available DT price = £15.95
    - EN-Potab 400mg tablets for cutaneous solution | 30 tablet no price available DT price = £15.95
  - Permitabs (Alliance Pharmaceuticals Ltd)
    - Potassium permanganate 400 mg Permitabs 400mg tablets for cutaneous solution | 30 tablet £15.95 DT price = £15.95

**Chlorhexidine gluconate with isopropyl alcohol**

The properties listed below are those particular to the combination only. For the properties of the components please consider, chlorhexidine p. 1051.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug.

**Liquid**

**Cautionary and advisory labels** 15

- **Chlorhexidine** (CareFusion UK Ltd)
- Chlorhexidine gluconate 20 mg per 1 ml, isopropyl alcohol 700 ml per 1 litre Chloraprep with tint solution 10.5ml applicators | 25 applicator GSK £76.05
- Chloraprep with tint solution 26ml applicators | 25 applicator GSK £170.75
- Chloraprep solution 3ml applicators | 25 applicator GSK £21.25
- Chloraprep solution 1.5ml applicators | 20 applicator GSK £11.00
- Chloraprep with tint solution 3ml applicators | 25 applicator GSK £22.31
- Chloraprep solution 0.67ml applicators | 200 applicator GSK £80.00

Skin cleansers, antiseptics and desloughing agents

**IODINE PRODUCTS**

**Povidone-iodine**

**INDICATIONS AND DOSE**

Skin disinfection

TO THE SKIN

- **Child:** (consult product literature)
- **Adult:** (consult product literature)

**BETADINE® DRY POWDER SPRAY**

Skin disinfection, particularly minor wounds and infections

TO THE SKIN

- **Adult:** Not for use in serous cavities (consult product literature)

**SAVLON® DRY**

Skin disinfection of minor wounds

TO THE SKIN

- **Adult:** (consult product literature)

**VIDENE® SOLUTION**

Skin disinfection

TO THE SKIN

- **Child:** Apply undiluted in pre-operative skin disinfection and general antisepsis
- **Adult:** Apply undiluted in pre-operative skin disinfection and general antisepsis

**VIDENE® SURGICAL SCRUB®**

Skin disinfection

TO THE SKIN

- **Child:** Use as a pre-operative scrub for hand and skin disinfection
- **Adult:** Use as a pre-operative scrub for hand and skin disinfection

**VIDENE® TINCTURE**

Skin disinfection

TO THE SKIN

- **Adult:** Apply undiluted in pre-operative skin disinfection

**CONTRA-INDICATIONS**

Avoid regular use in patients with thyroid disorders, concomitant use of lithium, corrected gestational age under 32 weeks, infants body-weight under 1.5 kg, regular use in neonates

**CAUTIONS**

Broken skin, large open wounds

**CAUTIONS, FURTHER INFORMATION**

Large open wounds: The application of povidone-iodine to large wounds or severe burns may produce systemic adverse effects such as metabolic acidosis, hypernatraemia and impairment of renal function.

**VIDENE® TINCTURE**

Procedures involving hot wire cautery and diathermy

**SIDE-EFFECTS**

- Rare: Sensitivity
- **PREGNANCY** Sufficient iodine may be absorbed to affect the fetal thyroid in the second and third trimester.
- **BREAST FEEDING** Avoid regular or excessive use.
- **RENAI IMPAIRMENT** Avoid regular application to inflamed or broken skin or mucosa.

**EFFECT ON LABORATORY TESTS**

May interfere with thyroid function tests.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

**Liquid**

**CAUTIONARY AND ADVISORY LABELS 15**

- **Impregnated dressing**
  - **BETADINE-IODINE (Non-proprietary)**
    - Povidone-iodine 100 mg per 1 gram Poviuluke dressing 9.5cm x 9.5cm | 1 dressing £0.42 | 10 dressing no price available
    - Poviuluke dressing 5cm x 5cm | 1 dressing £0.28 | 25 dressing no price available
  - **Inadine** (Syagenex Wound Management Ltd)
    - Povidone-iodine 100 mg per 1 gram Inadine dressing 5cm x 5cm | 1 dressing £0.49 | 10 dressing no price available

**SAVLON® DRY**

Skin disinfection

TO THE SKIN

- **Adult:** (consult product literature)

**TINCTURE**

Skin disinfection of minor wounds

TO THE SKIN

- **Adult:** (consult product literature)

**SPRAY**

- **Betadine® (J M Loveridge Ltd)
  - Povidone-iodine 25 mg per 1 gram Betadine 2.5% dry powder spray | 100 ml NHS indicative price = £3.05
- **Savlon Dry** (Novartis Consumer Health UK Ltd)
  - Povidone-iodine 11.4 mg per 1 gram Savlon Dry 1.14% spray | 50 ml NHS indicative price = £2.51

**VIDENE® (Ecolab Healthcare Division)**

- Povidone-iodine 75 mg per 1 ml Videne 7.5% surgical scrub solution | 500 ml £15.43
9.1 Minor cuts and abrasions

Minor cuts and abrasions

Many preparations traditionally used to manage minor burns, and abrasions have fallen out of favour. Preparations containing camphor and sulfonamides should be avoided. Preparations such as magnesium sulfate paste are now rarely used to treat carbuncles and boils as these are best treated with antibiotics.

Cetrimide is used to treat minor cuts and abrasions and prolavine p. 1052 may be used to treat infected wounds or burns, but its use has now been largely superseded by other antiseptics or suitable antibacterials. The effervescent effect of hydrogen peroxide p. 1052 is used to clean minor cuts and abrasions. When prepared extemporaneously, the BP states Cetrimide Cream 0.5% in a suitable water-miscible basis such as cetostearyl alcohol 5%, consists of liquid paraffin 50% in freshly boiled and cooled purified water.

Flexible collodion (see castor oil with collodion and colophony below) may be used to seal minor cuts and wounds that have partially healed; skin tissue adhesives are used similarly, and also for additional suture support.

Antiseptics and disinfectants

Cetrimide with chlorhexidine

The properties listed below are those particular to the combination only. For the properties of the components please consider, chlorhexidine p. 1051.

**INDICATIONS AND DOSE**

Skin disinfecion such as wound cleansing and obstetrics

**TO THE SKIN**

- Adult: To be used undiluted
- Child: To be used undiluted

10 Skin disfigurement

Camouflagers

Disfigurement of the skin can be very distressing to patients and may have a marked psychological effect. In skilled hands, or with experience, camouflages can be very effective in concealing scars and birthmarks. The depigmented patches in vitiligo are also very disfiguring and camouflage creams are of great cosmetic value.

Opaque cover foundation or cream is used to mask skin pigment abnormalities; careful application using a combination of dark- and light-coloured cover creams set with powder helps to minimise the appearance of skin deformities.

Borderline substances

The preparations marked ‘ACBS’ cannot be prescribed on the NHS for postoperative scars and other deformities except as adjunctive therapy in the relief of emotional disturbances due to disfiguring skin disease, such as vitiligo.

Camouflages

- **CAMOUFLAGES**
  - Covemark classic foundation (Derma UK Ltd)
  - 15 ml (ACBS) - NHS indicative price = £11.86 (22 shades)
  - Covemark finishing powder (Derma UK Ltd)
  - 25 gram (ACBS) - NHS indicative price = £11.86
  - Covemark removing cream (Camouflage Cosmetics Ltd)
  - 200 ml - No NHS indicative price available
  - Dermablend Dermasmooth Corrective Foundation (Vichy)
  - 30 ml - No NHS indicative price available (12 shades)
  - Dermacolor Creme Effectiv (Charles H Fox Ltd)
  - 50 ml - NHS indicative price = £5.48
  - Dermacolor body cover (Charles H Fox Ltd)
  - 75 ml - No NHS indicative price available (51 shades)
  - Dermacolor camouflage creme (Charles H Fox Ltd)
  - 25 ml (ACBS) - NHS indicative price = £10.52 (150 shades)
  - Dermacolor cleansing cream (Charles H Fox Ltd)
  - 75 gram - No NHS indicative price available
  - Dermacolor fixing powder (Charles H Fox Ltd)
  - 20 gram (ACBS) - NHS indicative price = £3.05 (8 shades)
  - Keromask finishing powder (Bellava Ltd)
  - 20 gram (ACBS) - NHS indicative price = £5.68 (28 shades)
  - Veil cleansing cream (Thomas Blake Cosmetic Creams Ltd)
  - 50 gram - NHS indicative price = £2.45/100 gram - NHS indicative price = £4.00
  - Veil cover cream (Thomas Blake Cosmetic Creams Ltd)
  - 19 gram (ACBS) - NHS indicative price = £22.42/gram (ACBS) - NHS indicative price = £33.57/gram (ACBS) - NHS indicative price = £42.10 (40 shades)
  - Veil finishing powder (Thomas Blake Cosmetic Creams Ltd)
  - 35 gram (ACBS) - NHS indicative price = £24.58 (2 shades)

11 Superficial soft-tissue injuries and superficial thrombophlebitis

Topical circulatory preparations

These preparations are used to improve circulation in conditions such as bruising, superficial thrombophlebitis, chilblains and varicose veins but are of little value. Chilblains are best managed by avoidance of exposure to cold; neither systemic nor topical vasodilator therapy is established as being effective.

12 Warts and calluses

Warts and calluses

Warts (verrucae) are caused by a human papillomavirus, which most frequently affects the hands, feet (plantar warts), and the anogenital region; treatment usually relies on local tissue destruction. Warts may regress on their own and treatment is required only if the warts are painful, unsightly, persistent, or cause distress.

Preparations of salicylic acid p. 1057, formaldehyde, glutaraldehyde or silver nitrate p. 1056 are available for purchase by the public; they are suitable for the removal of warts on hands and feet. Salicylic acid is a useful keratolytic which may be considered first-line; it is also suitable for the removal of corns and calluses. Preparations of salicylic acid in a collodion basis are available but some patients may develop an allergy to colophony in the formulation; collodion should be avoided in children allergic to elastic adhesive plaster. Cryotherapy causes pain, swelling, and blistering, and may be no more effective than topical salicylic acid in the treatment of warts.

Anogenital warts

The treatment of anogenital warts (condylomata acuminata) should be accompanied by screening for other sexually transmitted infections. Podophyllotoxin (the major active ingredient of podophyllum) may be used for soft, non-keratinised external anogenital warts. Patients with a limited number of external warts or keratinised lesions may be better treated with cryotherapy or other forms of physical ablation.

Imiquimod cream p. 1057 is licensed for the treatment of external anogenital warts; it may be used for both keratinised and non-keratinised lesions. It is also licensed for the treatment of superficial basal cell carcinoma and actinic keratosis.

Insine pranobex p. 550 is licensed for adjunctive treatment of genital warts but it has been superseded by more effective drugs.
## ALDEHYDES AND DERIVATIVES

### Formaldehyde

**INDICATIONS AND DOSE**

Warts, particularly plantar warts

**TO THE SKIN**
- **Child**: Apply twice daily
- **Adult**: Apply twice daily

**CAUTIONS**
- Impaired peripheral circulation - not suitable for application to anogenital region - not suitable for application to face - not suitable for application to large areas - patients with diabetes at risk of neuropathic ulcers - protect surrounding skin and avoid broken skin - significant peripheral neuropathy

**SIDE-EFFECTS**
- Skin irritation - skin ulceration (with high concentrations)

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

- **Liquid**
  - **FORMALDEHYDE (Non-proprietary)**
    - Formaldehyde 40 mg per 1 ml Formaldehyde (Buffered) 4% solution | 1000 ml £3.56-£3.90

- **Gel**
  - **Veracur** (Typharm Ltd)
    - Formaldehyde 7.5 mg per 1 gram Veracur 0.75% gel | 15 gram £3.91 

### Glutaraldehyde

**INDICATIONS AND DOSE**

Warts, particularly plantar warts

**TO THE SKIN**
- **Child**: Apply twice daily
- **Adult**: Apply twice daily

**CAUTIONS**
- Not for application to anogenital areas - not for application to face - not for application to mucosa - protect surrounding skin

**SIDE-EFFECTS**
- Rash - skin irritation (discontinue if severe) - stains skin brown

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Paint**
  - **Glutarol** (Dermal Laboratories Ltd)
    - Glutaraldehyde 100 mg per 1 ml Glutarol 10% cutaneous solution | 10 ml £2.07 DT price + £2.07

### Podophyllotoxin

**INDICATIONS AND DOSE**

**CONDYLINE**

Condylomata acuminata affecting the penis or the female external genitalia

**TO THE SKIN**
- **Adult**: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm²

**WARTICON**

Condylomata acuminata affecting the penis or the female external genitalia

**TO THE SKIN**
- **Adult**: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm², maximum 50 single applications (‘loops’) per session (consult product literature)

**CAUTIONS**
- Avoid normal skin - avoid open wounds - keep away from face - very irritant to eyes

**SIDE-EFFECTS**
- Local irritation

**PREGNANCY**
- Avoid.

**BREAST FEEDING**
- Avoid.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

- **Liquid**

**CAUTIONARY AND ADVISORY LABELS**

1. **Condylone** (Takeda UK Ltd)
   - Podophyllotoxin 5 mg per 1 ml Condylone 0.5% solution | 3.5 ml £14.49

2. **Warticon** (Stiefel Laboratories (UK) Ltd)
   - Podophyllotoxin 5 mg per 1 ml Warticon 0.5% solution | 3 ml £14.86

- **Cream**
  - **CONDYLINE** (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sorbic acid
  - **Warticon** (Stiefel Laboratories (UK) Ltd)
    - Podophyllotoxin 1.5 mg per 1 gram Warticon 0.15% cream | 5 gram £17.83 DT price + £17.83

## CAUSTIC DRUGS

### Silver nitrate

**INDICATIONS AND DOSE**

Common warts

**TO THE SKIN**
- **Child**: Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- **Adult**: Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

**Verrucas**

**TO THE SKIN**
- **Child**: Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- **Adult**: Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes.
Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application.

**Umbilical granulomas**

**TO THE SKIN**

- **Child:** Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin.
- **Adult:** Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin.

**CAUTIONS** Avoid broken skin • not suitable for application to ano-genital region • not suitable for application to face • not suitable for application to large areas • protect surrounding skin.

**SIDE-EFFECTS** Chemical burns on surrounding skin • stains skin.

**PATIENT AND CARER ADVICE** Patients should be advised that silver nitrate may stain fabric.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid stick.

- **Avoca (Bray Group Ltd)**
  - Silver nitrate 400 mg per 1 gram Avoca 40% silver nitrate pencil | 1 applicator £1.01.
  - Silver nitrate 750 mg per 1 gram Avoca 75% silver nitrate applicators | 100 applicator £43.73.
  - Avoca 5% silver nitrate applicators with thick handles | 50 applicator £42.49.
  - Silver nitrate 950 mg per 1 gram Avoca 95% silver nitrate applicators | 100 applicator £43.73.
  - Avoca 95% silver nitrate pencils | 1 applicator £1.96 DT price = £2.44 | 12 applicator £23.04.
  - Avoca wart and verruca treatment set | 1 applicator £2.44 DT price = £2.44 | 6 applicator £14.37.

**IMMUNE RESPONSE MODIFIERS**

**Imiquimod**

**INDICATIONS AND DOSE**

**ALDARA®**

**Warts (external genital and perianal)**

**TO THE SKIN**

- **Child:** Apply 3 times a week until lesions resolve (maximum 16 weeks), to be applied thinly at night.
- **Adult:** Apply daily for 5 nights of each week for 6 weeks, to be applied to lesion and 1 cm beyond it, assess response 12 weeks after completing treatment.

**Actinic keratosis**

**TO THE SKIN**

- **Adult:** Apply 3 times a week for 4 weeks, to be applied to lesion at night, assess response after a 4-week treatment-free interval; repeat 4-week course if lesions persist, maximum 2 courses.

**ZYCLARA®**

**Actinic keratosis**

**TO THE SKIN**

- **Adult:** Apply once daily for 2 weeks, to be applied at bedtime to lesion on face or balding scalp, repeat course after a 2-week treatment-free interval, assess response 8 weeks after second course; maximum 2 sachets per day.

**CAUTIONS** Autoimmune disease • avoid broken skin • avoid contact with eyes • avoid contact with lips • avoid contact

with nostrils • avoid open wounds • immunosuppressed patients • not suitable for internal genital warts • uncircumcised males (risk of phimosis or stricture of foreskin).

**SIDE-EFFECTS**

- **Common or very common** Burning sensation • erosion • erythema • excoriations • headache • influenza-like symptoms • itching • local reactions • myalgia • oedema • scabbing.
- **Uncommon** Alopecia • local ulceration.
- **Rare** Cutaneous lupus erythematosus-like effect • Stevens-Johnson syndrome.
- **Very rare** Dysuria.
- **Frequency not known** Permanent hyperpigmentation • permanent hypopigmentation.

**CONCEPTION AND CONTRACEPTION** May damage latex condoms and diaphragms.

**PREGNANCY** No evidence of teratogenicity or toxicity in animal studies; manufacturer advises caution.

**BREAST FEEDING** No information available.

**DIRECTIONS FOR ADMINISTRATION**

**ALDARA®**

**Important** Should be rubbed in and allowed to stay on the treated area for 6–12 hours for warts or for 8 hours for basal cell carcinoma and actinic keratosis, then washed off with mild soap and water (uncircumcised males treating warts under foreskin should wash the area daily).

The cream should be washed off before sexual contact.

**ZYCLARA®**

**Important** Should be rubbed in and allowed to stay on the treated area for 8 hours, then washed off with mild soap and water.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

**CAUTIONARY AND ADVISORY LABELS**

**DIRECTIONS FOR ADMINISTRATION**

**ALDARA®**

**Important** Should be rubbed in and allowed to stay on the treated area for 6–10 hours for warts or for 8 hours for basal cell carcinoma and actinic keratosis, then washed off with mild soap and water (uncircumcised males treating warts under foreskin should wash the area daily). The cream should be washed off before sexual contact.

**ZYCLARA®**

**Important** Should be rubbed in and allowed to stay on the treated area for 8 hours, then washed off with mild soap and water.

**INDICATIONS AND DOSE**

**OCCULAS®**

**Common and plantar warts**

**TO THE LESION**

- **Child:** Apply daily, treatment may need to be continued for up to 3 months.

- **Adult:** Apply daily, treatment may need to be continued for up to 3 months.

**VERRUGON®**

**For plantar warts**

**TO THE LESION**

- **Child:** Apply daily, treatment may need to be continued for up to 3 months.

- **Adult:** Apply daily, treatment may need to be continued for up to 3 months.

**UNLICENSED USE** Not licensed for use in children under 2 years.

**CAUTIONS** Avoid broken skin • impaired peripheral circulation • not suitable for application to ano-genital.
Salicylic acid with lactic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, salicylic acid p. 1057.

**INDICATIONS AND DOSE**

**CUPLEX®**
- Plantar and mosaic warts | Corns | Calluses
  - TO THE LESION
  - Adult: Apply twice daily

**DUOFILM®**
- Plantar and mosaic warts
  - TO THE LESION
  - Adult: Apply daily

**SALATAC®**
- Warts | Verrucas | Corns | Calluses
  - TO THE LESION
  - Adult: Apply daily

**SALACTOL®**
- Warts (particularly plantar warts) | Verrucas | Corns | Calluses
  - TO THE LESION
  - Adult: Apply daily

**PRESCRIBING AND DISPENSING INFORMATION**

**CUPLEX® AND SALACTOL®**

Preparations of salicylic acid in a collodion basis are available but some patients may develop an allergy to colophony in the formulation.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, cream

**Gel**

- Lactic acid 40 mg per 1 gram, Salicylic acid 110 mg per 1 gram CUPLEX (Crawford Healthcare Ltd) Lactic acid 40 mg per 1 gram, Salicylic acid 120 mg per 1 gram CUPLEX Verruca gel | 5 gram (£3.98) DT price = £2.88
- Salatac (Dermal Laboratories Ltd) Lactic acid 40 mg per 1 gram, Salicylic acid 120 mg per 1 gram Salatac gel | 8 gram (£2.98) DT price = £2.98
- Brands may include Bazuka gel

**Paint**

- LACTIC ACID WITH SALICYLIC ACID (Non-proprietary)
  - Lactic acid 167 mg per 1 gram, Salicylic acid 167 mg per 1 gram GEL (Optima Consumer Health Ltd) Lactic acid 40 mg per 1 gram, Salicylic acid 110 mg per 1 gram Bazuka Extra Strength (Dendron Ltd) Lactic acid 40 mg per 1 gram, Salicylic acid 120 mg per 1 gram Bazuka Extra Strength 26% gel | 5 gram (£3.95) DT price = £3.95
- Brands may include Pickles 50% ointment, Wartex 50% ointment

**Preparations of Salicylic acid with Lactic acid**

- brands may include Scholl Corn Removal

**EXCIPIENTS:** May contain Colophony

- Bazuka Extra Strength (Dendron Ltd) Lactic acid 40 mg per 1 gram, Salicylic acid 110 mg per 1 gram Bazuka Extra Strength 26% gel | 5 gram (£3.95) DT price = £3.95

**Medicated plaster**

- LACTIC ACID (Non-proprietary)
  - Salicylic acid 400 mg per 1 gram 30 plaster (£3.91)
- Brands may include Scholl Corn Removal

**Side-effects**

Skin irritation • skin ulceration (with high concentrations)

**Patient and carer advice**

Advise patient to apply carefully to wart and to protect surrounding skin (e.g. with soft paraffin or specially designed plaster); rub wart surface gently with file or pumice stone once weekly.

1 Immunoglobulin therapy

Immunoglobulins

Passive immunity
Immunology with immediate protection against certain infectious organisms can be obtained by injecting preparations made from the plasma of immune individuals with adequate levels of antibody to the disease for which protection is sought. The duration of this passive immunity varies according to the dose and the type of immunoglobulin. Passive immunity may last only a few weeks; when necessary, passive immunisation can be repeated. Antibodies of human origin are usually termed immunoglobulins. The term antiserum is applied to material prepared in animals. Because of serum sickness and other allergic-type reactions that may follow injections of antiserum, this therapy has been replaced wherever possible by the use of immunoglobulins. Reactions are theoretically possible after injection of human immunoglobulins but reports of such reactions are very rare.

Two types of human immunoglobulin preparation are available, normal immunoglobulin p. 1063 and disease-specific immunoglobulins.

Human immunoglobulin is a sterile preparation of concentrated antibodies (immune globulins) recovered from pooled human plasma or serum obtained from outside the UK, tested and found non-reactive for hepatitis B surface antigen and for antibodies against hepatitis C virus and human immunodeficiency virus (types 1 and 2). A global shortage of human immunoglobulin and the rapidly increasing range of clinical indications for treatment with immunoglobulins has resulted in the need for a Demand Management programme in the UK, for further information consult www.ivig.nhs.uk and Clinical Guidelines for Immunoglobulin Use, www.gov.uk/dh.

Further information on the use of immunoglobulins is included in Public Health England’s Immunoglobulin Handbook www.gov.uk/phe, and in the Department of Health’s publication, Immunisation against Infectious Disease, www.gov.uk/dh.

Availability
Normal immunoglobulin for intramuscular administration is available from some regional Public Health laboratories for protection of contacts and the control of outbreaks of hepatitis A, measles, and rubella only. For other indications, subcutaneous or intravenous normal immunoglobulin should be purchased from the manufacturer.

Disease-specific immunoglobulins are available from some regional Public Health laboratories, with the exception of tetanus immunoglobulin p. 1065 which is available from BPL, hospital pharmacies, or blood transfusion departments. Rabies immunoglobulin p. 1064 is available from the Specialist and Reference Microbiology Division, Public Health England, Colindale. Hepatitis B immunoglobulin p. 1062 required by transplant centres should be obtained commercially.

In Scotland all immunoglobulins are available from the Scottish National Blood Transfusion Service (SNBTS).

In Wales all immunoglobulins are available from the Welsh Blood Service (WBS).

In Northern Ireland all immunoglobulins are available from the Northern Ireland Blood Transfusion Service (NIIBTS).

Normal immunoglobulin
Human normal immunoglobulin p. 1063 (‘HNIG’) is prepared from pools of at least 1000 donations of human plasma; it contains immunoglobulin G (IgG) and antibodies to hepatitis A, measles, mumps, rubella, varicella, and other viruses that are currently prevalent in the general population.

Uses
Normal immunoglobulin p. 1063 (containing 10%–18% protein) is administered by intramuscular injection for the protection of susceptible contacts against hepatitis A virus (infectious hepatitis), measles and, to a lesser extent, rubella. Injection of immunoglobulin produces immediate protection lasting several weeks.

Normal immunoglobulin p. 1063 (containing 3%–12% protein) for intravenous administration is used as replacement therapy for patients with congenital agammaglobulinaemia and hypogammaglobulinaemia, and for the short-term treatment of idiopathic thrombocytopenic purpura and Kawasaki disease; it is also used for the prophylaxis of infection following bone-marrow transplantation and in children with symptomatic HIV infection who have recurrent bacterial infections. Normal immunoglobulin for replacement therapy may also be given intramuscularly or subcutaneously, but intravenous formulations are normally preferred. Intravenous immunoglobulin is also used in the treatment of Guillain-Barré syndrome as an alternative to plasma exchange.

For guidance on the use of intravenous normal immunoglobulin and alternative therapies for certain conditions, consult Clinical Guidelines for Immunoglobulin Use (www.gov.uk/dh).

Hepatitis A
Hepatitis A vaccine p. 1081 is preferred for individuals at risk of infection including those visiting areas where the disease is highly endemic (all countries excluding Northern and Western Europe, North America, Japan, Australia, and New Zealand). In unimmunised individuals, transmission of hepatitis A is reduced by good hygiene. Intramuscular normal immunoglobulin p. 1063 is no longer recommended for routine prophylaxis in travellers, but it may be indicated for immunocompromised patients if their antibody response to the vaccine is unlikely to be adequate.

Intramuscular normal immunoglobulin is recommended for prevention of infection in close contacts (of confirmed cases of hepatitis A) who have chronic liver disease or HIV
infection, or who are immunosuppressed or over 50 years of age; normal immunoglobulin should be given as soon as possible, preferably within 14 days of exposure to the primary case. However, normal immunoglobulin can still be given to contacts at risk of severe disease up to 28 days after exposure to the primary case. Hepatitis A vaccine p. 1081 can be given at the same time, but it should be given at a separate injection site.

Measles
Intravenous or subcutaneous normal immunoglobulin p. 1063 may be given to prevent or attenuate an attack of measles in individuals who do not have adequate immunity. Patients with compromised immunity who have come into contact with measles should receive intravenous or subcutaneous normal immunoglobulin as soon as possible after exposure. It is most effective if given within 72 hours but can be effective if given within 6 days.

Subcutaneous or intramuscular normal immunoglobulin should also be considered for the following individuals if they have been in contact with a confirmed case of measles or with a person associated with a local outbreak:
- non-immune pregnant women
- infants under 9 months

Further advice should be sought from the Centre for Infections, Public Health England (tel. (020) 8200 6868). Individuals with normal immunity who are not in the above categories and who have not been fully immunised against measles, can be given measles, mumps and rubella vaccine, live p. 1087 for prophylaxis following exposure to measles.

Rubella
Intramuscular immunoglobulin after exposure to rubella does not prevent infection in non-immune contacts and is not recommended for protection of pregnant women exposed to rubella. It may, however, reduce the likelihood of a clinical attack which may possibly reduce the risk to the fetus. Risk of intra-uterine transmission is greatest in the first 11 weeks of pregnancy, between 16 and 20 weeks there is minimal risk of deafness only, after 20 weeks there is no increased risk. Intramuscular normal immunoglobulin p. 1063 should be used only if termination of pregnancy would be unacceptable to the pregnant woman—it should be given as soon as possible after exposure. Serological follow-up of recipients is essential to determine if the woman has become infected despite receiving immunoglobulin.

Rubella vaccine p. 1090 should also be given intramuscularly at a different site (for details see rubies vaccine). If there is delay in giving the rubies immunoglobulin p. 1064, it should be given within 7 days of starting the course of rubies vaccine.

Tetanus immunoglobulin
For the management of tetanus-prone wounds, tetanus immunoglobulin p. 1065 should be used in addition to wound cleansing and, where appropriate, antibacterial prophylaxis and a tetanus-containing vaccine. Tetanus immunoglobulin, together with metronidazole p. 1008 and wound cleansing, should also be used for the treatment of established cases of tetanus.

Varicella-zoster immunoglobulin
Varicella-zoster immunoglobulin p. 1065 (VZIG) is recommended for individuals who are at increased risk of severe varicella and who have no antibodies to varicella–zoster virus and who have significant exposure to chickenpox or herpes zoster. Those at increased risk include:
- neonates whose mothers develop chickenpox in the period 7 days before to 7 days after delivery;
- susceptible neonates exposed in the first 7 days of life;
- susceptible neonates or infants exposed whilst requiring intensive or prolonged special care nursing;
- susceptible women exposed at any stage of pregnancy (but when supplies of VZIG are short, may only be issued to those exposed in the first 20 weeks’ gestation or to those near term) providing VZIG is given within 10 days of contact;
- immunocompromised individuals including those who have received corticosteroids in the previous 3 months at the following dose equivalents of prednisolone: children 2 mg/kg daily for at least 1 week or 1 mg/kg daily for 1 month; adults about 40 mg daily for more than 1 week.

Important: for full details consult Immunisation against Infectious Disease. Varicella-zoster vaccine p. 1092 is available.

Anti-D (Rh0) immunoglobulin
Anti-D (Rh0) immunoglobulin p. 1061 is prepared from plasma taken from rhesus-negative donors who have been immunised against the anti-D-antigen. Anti-D (Rh0) immunoglobulin is used to prevent a rhesus-negative mother from forming antibodies to fetal rhesus-positive cells which may pass into the maternal circulation. The objective is to protect any subsequent child from the hazard of haemolytic disease of the newborn.

Anti-D (Rh0) immunoglobulin p. 1061 should be administered to the mother following any sensitising episode (e.g. abortion, miscarriage and birth); it should be injected within 72 hours of the episode but even if a longer period has elapsed it may still give protection and should be administered. Anti-D (Rh0) immunoglobulin p. 1061 is also given when significant fetal-maternal haemorrhage occurs in rhesus-negative women during delivery. The dose of anti-
D (Rh<sub>D</sub>) immunoglobulin below is determined according to the level of exposure to rhesus-positive blood.

Use of routine antenatal anti-D prophylaxis should be given irrespective of previous anti-D prophylaxis for a sensitising event early in the same pregnancy. Similarly, postpartum anti-D prophylaxis should be given irrespective of previous routine antenatal anti-D prophylaxis or antenatal anti-D prophylaxis for a sensitising event in the same pregnancy.

Anti-D (Rh<sub>D</sub>) immunoglobulin below is also given to women of child-bearing potential after the inadvertent transfusion of rhesus-incompatible blood components and is used for the treatment of idiopathic thrombocytopenia purpura.

**MMR vaccine**

Measles, mumps and rubella vaccine, live p. 1087 may be given in the postpartum period with anti-D (Rh<sub>D</sub>) immunoglobulin below injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

**IMMUNOGLOBULINS**

**Anti-D (Rh<sub>D</sub>) immunoglobulin**

**INDICATIONS AND DOSE**

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following birth of rhesus-positive infant

**BY DEEP INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 500 units, dose to be administered immediately or within 72 hours; for transplacental bleed of over 4 mL fetal red cells, extra 100–125 units per mL fetal red cells, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) up to 20 weeks’ gestation

**BY DEEP INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 250 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) after 20 weeks’ gestation

**BY DEEP INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 500 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, antenatal prophylaxis

**BY DEEP INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 500 units per episode, dose to be given at weeks 28 and 34 of pregnancy, a further dose is still needed immediately or within 72 hours of delivery, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, antenatal prophylaxis (alternative NICE recommendation)

**BY DEEP INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 1000–1650 units, dose to be given at weeks 28 and 34 of pregnancy,

alternatively 1500 units for 1 dose, dose to be given between 28 and 34 weeks gestation

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following Rh<sub>D</sub>(D) incompatible blood transfusion

**BY DEEP INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 100–125 units/mL, dose per mL transfused rhesus-positive red cells given, subcutaneous route used for patients with bleeding disorders

**RHOPHYLAC®**

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following birth of rhesus-positive infant

**BY INTRAMUSCULAR INJECTION OR BY INTRAVENOUS INJECTION**

- Females of childbearing potential: 1000 units per episode, dose to be administered immediately or within 72 hours, intravenous route recommended for patients with bleeding disorders, higher doses may be required after 12 weeks gestation

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following any potentially sensitising episode (e.g. abortion, amniocentesis, chorionic villous sampling) up to 12 weeks’ gestation

**BY INTRAMUSCULAR INJECTION OR BY INTRAVENOUS INJECTION**

- Females of childbearing potential: 1500 units, dose to be given between weeks 28–30 of pregnancy; if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, intravenous route recommended for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh<sub>D</sub>(D) sensitisation, following Rh<sub>D</sub>(D) incompatible blood transfusion

**BY INTRAVENOUS INJECTION**

- Females of childbearing potential: 50 units/mL, dose per mL of transfused rhesus-positive blood, alternatively 100 units/mL, dose per mL of erythrocyte concentrate, intravenous route recommended for patients with bleeding disorders

**CONTRA-INDICATIONS** Treatment of idiopathic thrombocytopenia purpura in rhesus negative patients · treatment of idiopathic thrombocytopenia purpura in splenectomised patients

**CAUTIONS** Immunoglobulin A deficiency · possible interference with live virus vaccines

**CAUTIONS, FURTHER INFORMATION**

MMR vaccine may be given in the postpartum period with anti-D (Rh<sub>D</sub>) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

**INTERACTIONS** → Appendix 1 (immunoglobulins).

**SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS**

- Rare Anaphylaxis · dyspnoea · hypotension · tachycardia · urticaria
- Frequency not known Abdominal pain · arthralgia · asthenia · back pain · diarrhoea · dizziness · drowsiness ·
MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Solution for injection
- D-Gam (Bio-Products Laboratory Ltd)
  - Anti-D (RHO) immunoglobulin 250 unit: 1 vial £23.75
  - Anti-D (RHO) immunoglobulin 500 unit: 1 vial £33.75
  - Anti-D (RHO) immunoglobulin 1500 unit: 1 vial £58.00
- Rhophylac (CSL Behring UK Ltd)
  - Anti-D (RHO) immunoglobulin 750 unit per 1 ml: 1 vial £39.52

**Hepatitis B immunoglobulin**

**INDICATIONS AND DOSE**

Prophylaxis against hepatitis B infection
BY INTRAMUSCULAR INJECTION
- Adult: 500 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure

Prophylaxis against hepatitis B infection, after exposure to hepatitis B virus–contaminated material
BY INTRAVENOUS INFUSION
- Adult: Dose to be administered as soon as possible after exposure, but no later than 72 hours (consult product literature)

Prevention of hepatitis B in haemodialysed patients
BY INTRAVENOUS INFUSION
- Adult: (consult product literature)

Prophylaxis against re-infection of transplanted liver
BY INTRAVENOUS INFUSION
- Adult: (consult product literature)

**PREVENTION OF HEPATITIS B RE-INFECTION MORE THAN 6 MONTHS AFTER LIVER TRANSPLANTATION IN STABLE HBV–DNA NEGATIVE PATIENTS**

**BY SUBCUTANEOUS INJECTION**
- Adult (body-weight up to 75 kg): 500 units once weekly, increased if necessary up to 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin
- Adult (body-weight 75 kg and above): 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin

**CAUTIONS**
- IgA deficiency
- Interference with live virus vaccines

**SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS**
- Common or very common
  - Injection site reactions
- Uncommon
  - Abdominal pain
  - Anaphylaxis
  - Arthralgia
  - Buccal ulceration
  - Chest pain
  - Dizziness
  - Dyspnoea
  - Glossitis
  - Headache
  - Tremor

**SPECIFIC SIDE-EFFECTS**
- With intravenous use
  - Abdominal distension
  - Abdominal pain
  - Blood pressure fluctuations
  - Deep vein thrombosis
  - Haemolytic anaemia
  - Injection site reactions
  - Myocardial infarction
  - Pulmonary embolism
  - Stroke
  - Thromboembolic events

**PREScribing and dispensing information**
Vials containing 200 units or 500 units (for intramuscular injection), available from selected Public Health England and NHS laboratories (except for Transplant Centres), also available from BPL.

**HANDLING AND STORAGE**
Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. Refrigerated storage is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**
- Hepatitis B immunoglobulin human 200 unit: 1 vial £122.44
- Hepatitis B immunoglobulin human 500 unit: 1 vial £66.33
- Zulectra (Biotest (UK) Ltd)
  - Zulectra 500 units: 1 ml solution for injection pre-filled syringes: 5 syringe (PCT) no price available

**Solution for infusion**
- Hepact CP (Biotest (UK) Ltd)
  - Hepact B immunoglobulin human 50 unit per 1 ml: 1 vial (PCT) no price available
  - Hepact CP 100 units/2 ml solution for infusion vials: 1 vial (PCT) no price available
  - Hepact CP 200 units/40 ml solution for infusion vials: 1 vial (PCT) no price available
  - Hepact CP 500 units/10 ml solution for infusion vials: 1 vial (PCT) no price available
  - Hepact CP 5000 units/100 ml solution for infusion vials: 1 vial (PCT) no price available
Normal immunoglobulin

INDICATIONS AND DOSE

To control outbreaks of hepatitis A
BY DEEP INTRAMUSCULAR INJECTION
▶ Adult: 500 mg
Rubella in pregnancy, prevention of clinical attack
BY DEEP INTRAMUSCULAR INJECTION
▶ Females of childbearing potential: 750 mg
Antibody deficiency syndromes
BY SUBCUTANEOUS INFUSION
▶ Adult: (consult product literature)

Subgam®
Hepatitis A prophylaxis in outbreaks
BY INTRAMUSCULAR INJECTION
▶ Adult: 750 mg

UNLICENSED USE
Subgam® is not licensed for prophylactic use, but due to difficulty in obtaining suitable immunoglobulin products, Public Health England recommends intramuscular use for prophylaxis against hepatitis A or rubella.

CONTRA-INDICATIONS
Patients with selective IgA deficiency who have known antibody against IgA

FLEBOGAMMA® DIF SOLUTION FOR INFUSION
Hereditary fructose intolerance (contains sorbitol)

GAMMAPLEX® SOLUTION FOR INFUSION
Hereditary fructose intolerance (contains sorbitol)

HIZENTRA® SOLUTION FOR INFUSION
Hyperprolinaemia (contains L-proline)

PRIVIGEN® SOLUTION FOR INFUSION
Hyperprolinaemia (contains L-proline)

CAUTIONS

GENERAL CAUTIONS
Agammaglobulinaemia with or without IgA deficiency - hypogammaglobulinaemia with or without IgA deficiency - interference with live virus vaccines

SPECIFIC CAUTIONS
With intravenous use ensure adequate hydration - obesity - renal insufficiency - risk factors for arterial thromboembolic events - risk factors for venous thromboembolic events - thrombophilic disorders

OCTAGAM® SOLUTION FOR INFUSION
Falsely elevated results with blood glucose testing systems (contains maltose)

CAUTIONS, FURTHER INFORMATION
Interference with live virus vaccines Normal immunoglobulin may interfere with the immune response to live virus vaccines which should therefore only be given at least 3 weeks before or 3 months after an injection of normal immunoglobulin (this does not apply to yellow fever vaccine since normal immunoglobulin does not contain antibody to this virus).

INTERACTIONS
▶ Appendix 1 (immunoglobulins).

SIDE-EFFECTS

GENERAL SIDE-EFFECTS
▶ Rare Acute renal failure - anaphylaxis - aseptic meningitis - cutaneous skin reactions - hypotension
▶ Frequency not known Arthralgia - chills - diarrhoea - dizziness - fever - headache - low back pain - muscle spasms - myalgia - nausea

SPECIFIC SIDE-EFFECTS
▶ With intravenous use abdominal distension - abdominal pain - blood pressure fluctuations - deep vein thrombosis - haemolytic anaemia - injection site reactions - myocardial infarction - pulmonary embolism - stroke - thromboembolic events

SIDE-EFFECTS, FURTHER INFORMATION
Adverse reactions are more likely to occur in patients receiving normal immunoglobulin for the first time, or following a prolonged period between treatments, or when a different brand of normal immunoglobulin is administered.

MONITORING REQUIREMENTS
Monitor for acute renal failure; consider discontinuation if renal function deteriorates. Intravenous preparations with added sucrose have been associated with cases of renal dysfunction and acute renal failure.

DIRECTIONS FOR ADMINISTRATION
Preparations for subcutaneous use may be administered by intramuscular injection if subcutaneous route not possible; intramuscular route not for patients with thrombocytothrombocytopenia or other bleeding disorders.

For intravenous use

KIOVIG® SOLUTION FOR INFUSION
Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

GAMUNEX® SOLUTION FOR INFUSION
Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

PRESCRIBING AND DISPENSING INFORMATION
Antibody titres can vary widely between normal immunoglobulin preparations from different manufacturers—formulations are not interchangeable; patients should be maintained on the same formulation throughout long-term treatment to avoid adverse effects.

With intramuscular use Available from the Centre for Infections and other regional Public Health England offices (for contacts and control of outbreaks only).

HANDLING AND STORAGE
Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. Refrigerated storage is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

ELECTROLYTES: May contain Sodium
▶ Gammanorm (Octapharma Ltd)

**Indications and Dose**

Post-exposure prophylaxis against rabies infection by local infiltration or by intramuscular injection

- **Child:** 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainders by intramuscular injection into anterolateral thigh (remote from vaccination site)

- **Adult:** 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainders by intramuscular injection into anterolateral thigh (remote from vaccination site)

**Caution**

IgA deficiency - interference with live virus vaccines

**Side-effects**

- Rare: Anaphylaxis - arthralgia - buccal ulceration - chest tightness - dizziness - dyspnoea - glossitis - tremor

**Frequency not known**

Facial oedema - injection site pain - injection site swelling

**Prescribing and dispensing information**

The potency of individual batches of rabies immunoglobulin from the manufacturer may vary; potency may also be described differently by different manufacturers. It is therefore critical to know the potency of the batch to be used and the weight of the patient in order to calculate the specific volume required to provide the necessary dose. Available from Specialist and Reference Microbiology Division, Public Health England (also from BPL).

**Handling and storage**

Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. Refrigerated storage is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug.
Solution for injection

➤ RABIES IMMUNOGLOBULIN (Non-proprietary)
Rabies immunoglobulin human 500 unit Rabies immunoglobulin human 500 unit solution for injection vials | 1 vial £412.13

Tetanus immunoglobulin

INDICATIONS AND DOSE
Post-exposure prophylaxis
BY INTRAMUSCULAR INJECTION
➤ Child: Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns
➤ Adult: Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns

Treatment of tetanus infection
BY INTRAMUSCULAR INJECTION
➤ Child: 150 units/kg, dose may be given over multiple sites
➤ Adult: 150 units/kg, dose may be given over multiple sites

• CAUTIONS IgA deficiency • interference with live virus vaccines
• SIDE-EFFECTS
  ➤ Rare Anaphylaxis • arthralgia • buccal ulceration • chest tightness • dizziness • dyspnoea • glossitis • tremor
  ➤ Frequency not known Facial oedema • injection site swelling • pain at injection site
• HANDLING AND STORAGE Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. Refrigerated storage is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

• MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Solution for injection
➤ TETANUS IMMUNOGLOBULIN (Non-proprietary)
Tetanus immunoglobulin human 250 unit Tetanus immunoglobulin human 250 unit solution for injection vials | 1 vial £45.00

Varicella-zoster immunoglobulin
(Varicella-zoster Immunoglobulin)

INDICATIONS AND DOSE
Prophylaxis against varicella infection
BY DEEP INTRAMUSCULAR INJECTION
➤ Adult: 1 g, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease

• CAUTIONS IgA deficiency • interference with live virus vaccines
• SIDE-EFFECTS
  ➤ Rare Anaphylaxis
  ➤ Frequency not known Injection site pain • injection site swelling

Post-exposure prophylaxis

ANTITOXINS

Botulinum antitoxin

• DRUG ACTION A preparation containing the specific antitoxin globulins that have the power of neutralising the toxins formed by types A, B, and E of Clostridium botulinum.

INDICATIONS AND DOSE
Post exposure prophylaxis of botulism
BY INTRAMUSCULAR INJECTION
➤ Adult: (consult product literature)

• SIDE-EFFECTS
  ➤ Hypersensitivity reactions
• SIDE-EFFECTS, FURTHER INFORMATION
  ➤ Hypersensitivity reactions It is essential to read the contra-indications, warnings, and details of sensitivity tests on the package insert. Prior to treatment checks should be made regarding previous administration of any antitoxin and history of any allergic condition, e.g. asthma, hay fever, etc.

• PRE-TREATMENT SCREENING All patients should be tested for sensitivity (diluting the antitoxin if history of allergy).

• PRESCRIBING AND DISPensing INFORMATION
Available from selected Public Health England and NHS laboratories (also from BPL).

Solution for infusion
➤ BOTULISM ANTITOXIN (Non-proprietary)
Botulinum antitoxin type A 750 unit per 1 ml Botulinum antitoxin type A 750 unit solution for injection vials | 1 ml £50.00

Botulinum antitoxin type B 500 unit per 1 ml Botulinum antitoxin type B 500 unit solution for injection vials | 1 ml £50.00

2 Post-exposure prophylaxis

There can be variation in the licensing of different medicines containing the same drug.
Diphtheria antitoxin  
(Dip/Ser)

**INDICATIONS AND DOSE**
Passive immunisation in suspected cases of diphtheria

**BY INTRAVENOUS INFUSION**
- Adult: Dose should be given without waiting for bacteriological confirmation (consult product literature)

**SIDE-EFFECTS**
- Common or very common: Hypersensitivity reactions

**CAUTIONS**
Hypersensitivity
- Dose should be given without waiting for bacteriological confirmation (consult product literature)

**PRE-TREATMENT SCREENING**
Diphtheria antitoxin is derived from horse serum and reactions are common; tests for hypersensitivity should be carried out before use.

**PRESCRIBING AND DISPENSING INFORMATION**
Available from Centre for Infections (Tel (020) 8200 6868) or in Northern Ireland from Public Health Laboratory, Belfast City Hospital (Tel (028) 9032 9241).

---

### 3 Tuberculosis diagnostic test

#### DIAGNOSTICS

**Tuberculin purified protein derivative** (Tuberculin PPD)

**INDICATIONS AND DOSE**

**Mantoux test**  
**BY INTRADERMAL INJECTION**
- Child: 2 units for one dose  
- Adult: 2 units for one dose

**Mantoux test (if first test is negative and a further test is considered appropriate)**

**Dose equivalence and conversion**
2 units is equivalent to 0.1 mL of 20 units/mL strength. 10 units is equivalent to 0.1 mL of 100 units/mL strength.

**CAUTIONS**
Mantoux test
- Response to tuberculin may be suppressed by live viral vaccines, viral infection, sarcoidosis, corticosteroid therapy, or immunosuppression due to disease or treatment. Tuberculin testing should not be carried out within 4 weeks of receiving a live viral vaccine.

**PRESCRIBING AND DISPENSING INFORMATION**
Available from ImmForm (SSI brand). The strength of tuberculin PPD in currently available products may be different to the strengths of products used previously for the Mantoux test; care is required to select the correct strength.

---

### 4 Vaccination

#### Vaccines

**Active immunity**
Active immunity can be acquired by natural disease or by vaccination. Vaccines stimulate production of antibodies and other components of the immune mechanism; they consist of either:

- A **live attenuated** form of a virus (e.g. measles, mumps and rubella vaccine) or bacteria (e.g. BCG vaccine),
- **Inactivated** preparations of the virus (e.g. influenza vaccine) or bacteria, or
- **Detoxified exotoxins** produced by a micro-organism (e.g. tetanus vaccine), or
- **Extracts of** a micro-organism, which may be derived from the organism (e.g. pneumococcal vaccine) or produced by recombinant DNA technology (e.g. hepatitis B vaccine).

**Live attenuated vaccines** usually produce a durable immunity, but not always as long-lasting as that resulting from natural infection.

**Inactivated vaccines** may require a primary series of injections of vaccine to produce an adequate antibody response, and in most cases booster (reinforcing) injections are required; the duration of immunity varies from months to many years. Some inactivated vaccines are adsorbed onto an adjuvant (such as aluminium hydroxide) to enhance the antibody response.

Advice reflects that in the handbook **Immunisation against Infectious Disease** (2006), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI).

Chapters from the handbook are available at [www.immunisation.dh.gov.uk](http://www.immunisation.dh.gov.uk)

The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates.

#### Immunisation schedule

Vaccines for the childhood immunisation schedule should be obtained from local health organisations or from ImmForm ([www.immform.dh.gov.uk](http://www.immform.dh.gov.uk)—not to be prescribed on FP10 (HS21 in Northern Ireland; GP10 in Scotland; WP10 in Wales). For most up to date immunisation schedule consult The complete routine immunisation schedule available at ([www.gov.uk](http://www.gov.uk)).

**Preterm birth**
Babies born preterm should receive all routine immunisations based on their actual date of birth. The risk of apnoea following vaccination is increased in preterm babies, particularly in those born at or before 28 weeks gestational age. If babies at risk of apnoea are in hospital at the time of their first immunisation, they should be monitored for 48 hours after immunisation. If a baby develops apnoea, bradycardia, or desaturation after the first immunisation, the second immunisation should also be given in hospital with similar monitoring. Seroconversion may be unreliable in babies born earlier than 28 weeks’ gestation or in babies treated with corticosteroids for chronic lung disease; consideration should be given to testing for antibodies against *Haemophilus influenzae* type b, meningococcal C, and hepatitis B after primary immunisation.
### Vaccination

<table>
<thead>
<tr>
<th>When to immunise</th>
<th>Vaccine given and dose schedule (for details of dose, see under individual vaccines)</th>
</tr>
</thead>
</table>
| **Neonates at risk only** | Bacillus Calmette-Guérin vaccine p. 1078  
Hepatitis B vaccine p. 1083 |
| **2 months** | Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1079 First dose  
Pneumococcal vaccine p. 1089 First dose  
Rotavirus vaccine p. 1090 First dose |
| **3 months** | Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1079 Second dose  
Meningococcal group C vaccine p. 1088 First dose  
Rotavirus vaccine p. 1090 Second dose |
| **4 months** | Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1079 Third dose  
Pneumococcal vaccine p. 1089 Second dose |
| **12-13 months** | Measles, mumps and rubella vaccine, live p. 1087 First dose  
Pneumococcal vaccine p. 1089 Single booster dose  
Haemophilus influenzae type B with meningococcal group C vaccine p. 1080 Single booster dose |
| **Between 3 years and 4 months, and 5 years** | Diphtheria with pertussis, poliomyelitis vaccine and tetanus p. 1080 Single booster dose.  
**Note:** Preferably allow interval of at least 3 years after completing primary course |
| **11-14 years (females only). First dose of HPV vaccine will be offered to females aged 12-13 years of age in England, Wales, and Northern Ireland, and 11-14 years of age in Scotland.** | Human papillomavirus vaccines p. 1085 If a 3-dose course of HPV vaccine has been started under the 2013/2014 programme, where possible, the course should be completed. The two human papillomavirus vaccines are not interchangeable and, ideally, one vaccine product should be used for the entire course. However, for those females who started the schedule with Cervarix® under the national immunisation programme, but did not complete the vaccination course, the course can be completed with Gardasil®. |
| **13-15 years** | Meningococcal group C vaccine p. 1088 Single booster dose |
| **13-18 years** | Diphtheria with poliomyelitis and tetanus vaccine p. 1080 Single booster dose. **Note:** Can be given at the same time as the booster dose of meningococcal group C conjugate vaccine at 13-15 years of age. |
| **During adult life, women of child-bearing age susceptible to rubella** | Measles, mumps and rubella vaccine, live p. 1087 Women of child-bearing age who have not received 2 doses of a rubella-containing vaccine or who do not have a positive antibody test for rubella should be offered rubella immunisation (using the MMR vaccine)—exclude pregnancy before immunisation. |
| **During adult life, those entering or being at university who are at risk of meningococcal group C disease** | Meningococcal group C vaccine p. 1088 Single dose. **Note:** Should be offered to those of any age entering or being at university who have never been vaccinated against meningococcal group C disease, or those born after September 1995 who are entering university and only received meningococcal group C vaccine under the age of 10 years |
| **During adult life, if not previously immunised** | Diphtheria with poliomyelitis and tetanus vaccine p. 1080 |
| **70 years** | Varicella-zoster vaccine p. 1092 Single dose |

### Vaccines and HIV infection

HIV-positive individuals with or without symptoms can receive the following live vaccines:

- MMR (but avoid if immunity significantly impaired; use of normal immunoglobulin should be considered after exposure to measles), varicella-zoster vaccine against chickenpox (but avoid if immunity significantly impaired—consult product literature; varicella—zoster immunoglobulin should be considered after exposure to chickenpox or herpes zoster), rotavirus; and the following inactivated vaccines:
  - anthrax, cholera (oral), diphtheria, haemophilus influenzae type b, hepatitis A, hepatitis B, human papillomavirus, influenza (injection), meningococcal, pertussis, pneumococcal, poliomyelitis, rabies, tetanus, tick-borne encephalitis, typhoid (injection).
- HIV-positive individuals should not receive:
  - BCG, influenza nasal spray (unless stable HIV infection and receiving antiretroviral therapy), typhoid (oral), yellow fever (if yellow fever risk is unavoidable, specialist advice should be sought)

The above advice differs from that for other immunocompromised patients; *Immunisation Guidelines for HIV-infected Adults* issued by British HIV Association (BHIVA) are available at [www.bhiva.org](http://www.bhiva.org)

### Vaccines and asplenia

The following vaccines are recommended for asplenic patients or those with splenic dysfunction:

- haemophilus influenzae type b; influenza; pneumococcal A, C, W135, and Y conjugate; pneumococcal.

### Vaccines and antisera availability

Anthrax vaccine p. 1078 and yellow fever vaccine, live p. 1092, botulism antitoxin p. 1065, diphtheria antitoxin p. 1066, and snake and spider venom antitoxins are available from local designated holding centres.

For antivenom, see Emergency treatment of poisoning p. 1123.

Enquiries for vaccines not available commercially can also be made to:

**Public Health England**

Vaccines and Countermeasures Response Department  
Public Health England  
Wellington House  
133-155 Waterloo Road  
London SE1 8UG  
vaccinesupply@phe.gov.uk
In Scotland information about availability of vaccines can be obtained from a Specialist in Pharmaceutical Public Health.

In Wales enquiries for vaccines not available commercially should be directed to:

**University Hospital of Wales**
Welsh Medicines Information Centre
University Hospital of Wales
Cardiff CF14 4XW
(029) 2074 2979

In Northern Ireland:

**Northern Health and Social Care Trust**
Pharmacy and Medicines Management Centre
Northern Health and Social Care Trust
Beech House
Antrim Hospital Site
Bush Road
Antrim BT41 2RL
rhps.admin@northerntrust.hscni.net

For further details of availability, see under individual vaccines.

**Anthrax vaccine**

Anthrax vaccine p. 1078 is made from antigens from *B. anthracis*. Anthrax immunisation is indicated for individuals who handle infected animals, for those exposed to imported infected animal products, and for laboratory staff who work with *B. anthracis*. A 4-dose regimen is used for primary immunisation; booster doses should be given annually to workers at continued risk of exposure to anthrax.

In the event of possible contact with *B. anthracis*, post-exposure immunisation may be indicated, in addition to antimicrobial prophylaxis. Advice on the use of anthrax vaccine p. 1078 for post-exposure prophylaxis must be obtained from Public Health England Colindale (tel. 020 8200 4400).

**BCG vaccine**

BCG (Bacillus Calmette-Guérin) vaccine p. 1078 should be given intradermally by operators skilled in the technique. The expected reaction to successful BCG vaccine is induration at the site of injection followed by a local lesion which starts as a papule 2 or more weeks after vaccination; the lesion may ulcerate then subside over several weeks or months, leaving a small, flat scar. A dry dressing may be used if the ulcer discharges, but air should not be excluded.

BCG is recommended for the following groups if BCG immunisation has not previously been carried out and they are negative for tuberculoprotein hypersensitivity:

- neonates with a family history of tuberculosis in the last 5 years;
- all neonates and infants (0–12 months) born in areas where the incidence of tuberculosis is greater than 40 per 100 000;
- neonates, infants, and children under 16 years with a parent or grandparent born in a country with an incidence of tuberculosis greater than 40 per 100 000;
- new immigrants aged under 16 years who were born in, or lived for more than 2 months in a country with an incidence of tuberculosis greater than 40 per 100 000;
- new immigrants aged 16–35 years from Sub-Saharan Africa or a country with an incidence of tuberculosis greater than 500 per 100 000;
- contacts aged under 36 years of those with active respiratory tuberculosis (for healthcare or laboratory workers who have had contact with clinical materials or patients with tuberculosis, age limit does not apply);
- healthcare workers and laboratory staff (irrespective of age) who are likely to have contact with patients, clinical materials, or derived isolates; other individuals under 35 years (there is inadequate evidence of protection by BCG vaccine in adults aged over 35 years; however, vaccination is recommended for healthcare workers irrespective of age because of the increased risk to them or their patients) at occupational risk including veterinary and other staff who handle animal species susceptible to tuberculosis, and staff working directly with prisoners, in care homes for the elderly, or in hostels or facilities for the homeless or refugees;
- individuals under 16 years intending to live with local people for more than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000.

List of countries or primary care trusts where the incidence of tuberculosis is greater than 40 cases per 100 000 is available at www.gov.uk/phe.

Bladder instillations of BCG are licensed for the management of bladder carcinoma.

See also Tuberculosis p. 501 for advice on chemoprophylaxis; for the treatment of infection following vaccination, seek expert advice.

**Tuberculosis Diagnostic Agents**

The Mantoux test is recommended for tuberculin skin testing, but no licensed preparation is currently available. Guidance for healthcare professionals is available at www.dh.gov.uk/immunisation.

In the Mantoux test, the diagnostic dose is administered by intradermal injection of tuberculin purified protein derivative p. 1066 (PPD).

The Heaf test (involving the use of multiple-puncture apparatus) is no longer available.

Two interferon gamma release assay (IGRA) tests are also available as an aid in the diagnosis of tuberculosis infection: Quantiferon® TB Gold and T-Spot®. Both tests measure T-cell mediated immune response to synthetic antigens. For further information on the use of interferon gamma release assay tests for tuberculosis, see www.gov.uk/phe.

**Botulinum antitoxin**

A polyvalent botulinum antitoxin p. 1065 is available for the post-exposure prophylaxis of botulism and for the treatment of persons thought to be suffering from botulism. It specifically neutralises the toxins produced by *Clostridium botulinum* types A, B, and E. It is not effective against infantile botulism as the toxin (type A) is seldom, if ever, found in the blood in this type of infection.

**Cholera vaccine**

Cholera vaccine p. 1079 (oral) contains inactivated Inaba (including El-Tor biotype) and Ogawa strains of *Vibrio cholerae*, serotype O1 together with recombinant B-subunit of the cholera toxin produced in Inaba strains of *V.cholerae*, serotype O1.

Oral cholera vaccine is licensed for travellers to endemic or epidemic areas on the basis of current recommendations. Immunisation should be completed at least 1 week before potential exposure. However, there is no requirement for cholera vaccination for international travel. Injectable cholera vaccine provides unreliable protection and is no longer available in the UK.

**Diphtheria vaccine**

Diphtheria-containing vaccines are prepared from the toxin of *Corynebacterium diphtheriae* and adsorption on aluminium hydroxide or aluminium phosphate improves antigenicity. The vaccine stimulates the production of the protective antibody. The quantity of diphtheria toxoid in a preparation determines whether the vaccine is defined as ‘high dose’ or ‘low dose’. Vaccines containing the higher dose of diphtheria toxoid are used for primary
immunisation of children under 10 years of age. Vaccines containing the lower dose of diphtheria toxoid are used for primary immunisation in adults and children over 10 years. Single-antigen diphtheria vaccine is not available and adsorbed diphtheria vaccine is given as a combination product containing other vaccines.

For primary immunisation of children aged between 2 months and 10 years vaccination is recommended usually in the form of 3 doses (separated by 1-month intervals) of diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and Haemophilus type b conjugate vaccine (adsorbed) (see Immunisation schedule). In unimmunised individuals aged over 10 years the primary course comprises of 3 doses of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine.

A booster dose should be given 3 years after the primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed). Children under 10 years should receive either adsorbed diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine or adsorbed diphtheria [low dose], tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine. Individuals aged over 10 years should receive adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine.

A second booster dose, of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, should be given 10 years after the previous booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed).

Diphtheria-containing vaccines for children over 10 years and adults

A low dose of diphtheria toxoid is sufficient to recall immunity in individuals previously immunised against diphtheria but whose immunity may have diminished with time; it is insufficient to cause serious reactions in an individual who is already immune. Preparations containing low dose diphtheria should be used for adults and children over 10 years, for both primary immunisation and booster doses.

Travel

Those intending to travel to areas with a risk of diphtheria infection should be fully immunised according to the UK schedule. If more than 10 years have lapsed since completion of the UK schedule, a dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine should be administered.

Contacts

Staff in contact with diphtheria patients or with potentially pathogenic clinical specimens or working directly with C. diphtheriae or C. ulcerans should receive a booster dose if fully immunised (with 5 doses of diphtheria-containing vaccine given at appropriate intervals); further doses should be given at 10-year intervals if risk persists. Individuals at risk who are not fully immunised should complete the primary course; a booster dose should be given after 5 years and then at 10-year intervals. Adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine is used for this purpose; immunity should be checked by antibody testing at least 3 months after completion of immunisation.

Advice on the management of cases, carriers, contacts and outbreaks must be sought from health protection units. The immunisation history of infected individuals and their contacts should be determined; those who have been incompletely immunised should complete their immunisation and fully immunised individuals should receive a reinforcing dose. See advice on antibacterial treatment to prevent a secondary case of diphtheria in a non-immune individual.

Haemophilus influenzae type B conjugate vaccine

Haemophilus influenzae type b (Hib) vaccine is made from capsular polysaccharide; it is conjugated with a protein such as tetanus toxoid to increase immunogenicity, especially in young children. Haemophilus influenzae type b vaccine immunisation is given in combination with diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine, as a component of the primary course of childhood immunisation (see Immunisation schedule). For infants under 1 year, the course consists of 3 doses of a vaccine containing Haemophilus influenzae type b component with an interval of 1 month between doses. A booster dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) should be given at 12–13 months of age.

Children 1–10 years who have not been immunised against Haemophilus influenzae type b need to receive only 1 dose of Haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine). However, if a primary course of immunisation has not been completed, these children should be given 3 doses of diphtheria, tetanus, pertussis (acellular, component), and poliomyelitis (inactivated). The risk of infection falls sharply in older children and the vaccine is not normally required for children over 10 years.

Haemophilus influenzae type b vaccine may be given to those over 10 years who are considered to be at increased risk of invasive H. influenzae type b disease (such as those with sickle-cell disease or complement deficiency, or those receiving treatment for malignancy).

Invasive Haemophilus influenzae type b disease

After recovery from infection, unimmunised and partially immunised index cases under 10 years of age should complete their age-specific course of immunisation. Previously vaccinated cases under 10 years of age should be given an additional dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) if Hib antibody concentrations are low or if it is not possible to measure antibody concentrations. Index cases of any age with asplenia or splenic dysfunction should complete their immunisation according to the recommendations below; fully vaccinated cases with asplenia or splenic dysfunction should be given an additional dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) if they received their previous dose over 1 year ago. See also use of rifampicin p. 508 in the prevention of secondary cases of Haemophilus influenzae type b disease.

Individuals diagnosed with asplenia, splenic dysfunction, or complement deficiency at:

- under 2 years of age should be vaccinated according to the Immunisation Schedule. The booster dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine), given at 12–13 months of age, should be followed at least 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine. An additional dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) should be given after the second birthday;
- over 2 years of age should receive one dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine), followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine.

Hepatitis A vaccine

Hepatitis A vaccine p. 1081 is prepared from formaldehyde-inactivated hepatitis A virus grown in human diploid cells. Immunisation is recommended for:
Vaccines

- laboratory staff who work directly with the virus;
- staff and residents of homes for those with severe learning difficulties;
- workers at risk of exposure to untreated sewage;
- individuals who work with primates;
- patients with haemophilia or other conditions treated with plasma-derived clotting factors;
- patients with severe liver disease;
- travellers to high-risk areas;
- individuals who are at risk due to their sexual behaviour;
- parenteral drug abusers. Immunisation should be considered for:
  - patients with chronic liver disease including chronic hepatitis B or chronic hepatitis C;
  - prevention of secondary cases in close contacts of confirmed cases of hepatitis A, within 14 days of exposure to the primary case (within 8 weeks of exposure to the primary case where there is more than 1 contact in the household).

A booster dose is usually given 6–12 months after the initial dose. A second booster dose can be given 20 years after the previous booster dose to those who continue to be at risk. Specialist advice should be sought on re-immunisation of immunocompromised individuals.

For rapid protection against hepatitis A after exposure or during an outbreak, in adults a single dose of a monovalent vaccine is recommended; for children under 16 years, a single dose of the combined vaccine Ambirix® can also be used.

Intramuscular normal immunoglobulin p. 1063 is recommended for use in addition to hepatitis A vaccine p. 1081 for close contacts (of confirmed cases of hepatitis A) who have chronic liver disease or HIV infection, or who are immunosuppressed or over 50 years of age.

Post-exposure prophylaxis is not required for healthy children under 1 year of age, so long as all those involved in nappy changing are vaccinated against hepatitis A. However, children 2–12 months of age can be given a dose of hepatitis A vaccine if it is not possible to vaccinate their carers, or if the child becomes a source of infection to others [unlicensed use]; in these cases, if the child goes on to require long-term protection against hepatitis A after the first birthday, the full course of 2 doses should be given.

Hepatitis B vaccine

Hepatitis B vaccine p. 1083 contains inactivated hepatitis B virus surface antigen (HBsAg) adsorbed onto aluminium hydroxide adjuvant. It is made biosynthetically using recombinant DNA technology. The vaccine is used in individuals at high risk of contracting hepatitis B.

In the UK, groups at high-risk of hepatitis B include:
- parenteral drug misusers, their sexual partners, and household contacts; others drug misusers who are likely to ‘progress’ to injecting;
- individuals who change sexual partners frequently;
- close family contacts of a case or individual with chronic hepatitis B infection;
- babies whose mothers have had acute hepatitis B during pregnancy or are positive for hepatitis B surface antigen (regardless of e-antigen markers); hepatitis B vaccination is started immediately on delivery and hepatitis B immunoglobulin given at the same time (but preferably at a different site). Babies whose mothers are positive for hepatitis B surface antigen and for e-antigen antibody should receive the vaccine only (but babies weighing 1.5 kg or less should also receive the immunoglobulin regardless of the mother’s e-antigen antibody status);
- individuals with haemophilia, those receiving regular blood transfusions or blood products, and carers responsible for the administration of such products;
- patients with chronic renal failure including those on haemodialysis. Haemodialysis patients should be monitored for antibodies annually and re-immunised if necessary. Home carers (of dialysis patients) should be vaccinated;
- individuals with chronic liver disease;
- healthcare personnel (including trainees) who have direct contact with blood or blood-stained body fluids or with patients’ tissues;
- laboratory staff who handle material that may contain the virus;
- other occupational risk groups such as morticians and embalmers;
- staff and patients of day-care or residential accommodation for those with severe learning difficulties;
- staff and inmates of custodial institutions;
- those travelling to areas of high or intermediate prevalence who are at increased risk or who plan to remain there for lengthy periods;
- families adopting children from countries with a high or intermediate prevalence of hepatitis B;
- foster carers and their families.

Different immunisation schedules for hepatitis B vaccine are recommended for specific circumstances. Generally, three or four doses are required for primary immunisation; an ‘accelerated schedule’ is recommended for pre-exposure prophylaxis in high-risk groups where rapid protection is required, and for post-exposure prophylaxis.

Immunisation may take up to 6 months to confer adequate protection; the duration of immunity is not known precisely, but a single booster 5 years after the primary course may be sufficient to maintain immunity for those who continue to be at risk.

Immunisation does not eliminate the need for commonsense precautions for avoiding the risk of infection from known carriers by the routes of infection which have been clearly established, consult Guidance for Clinical Health Care Workers: Protection against Infection with Blood-borne Viruses (available at www.dh.gov.uk). Accidental inoculation of hepatitis B virus-infected blood into a wound, incision, needle-prick, or abrasion may lead to infection, whereas it is unlikely that indirect exposure to a carrier will do so.

Following significant exposure to hepatitis B, an accelerated schedule, with the second dose given 1 month, and the third dose 2 months after the first dose, is recommended. For those at continued risk, a fourth dose should be given 12 months after the first dose. More detailed guidance is given in the handbook Immunisation Against Infectious Disease. Specific hepatitis B immunoglobulin p. 1062 (‘HBIG’) is available for use with the vaccine in those accidentally inoculated and in neonates at special risk of infection.

A combined hepatitis A and B vaccine p. 1082 is also available.

Human papillomavirus vaccine

Human papillomavirus vaccines p. 1085 is available as a bivalent vaccine (Cervarix®) or a quadrivalent vaccine (Gardasil®). Cervarix® is licensed for use in females for the prevention of cervical cancer and other pre-cancerous lesions caused by human papillomavirus types 16 and 18. Gardasil® is licensed for use in females for the prevention of cervical and anal cancers, genital warts and pre-cancerous genital (cervical, vulvar, and vaginal) and anal lesions caused by the vaccine papillomavirus types 6, 11, 16, and 18. The vaccines may also provide limited protection against disease caused by other types of human papillomavirus. The two vaccines are not interchangeable and one vaccine product should be used for an entire course.
Human papillomavirus vaccines will be most effective if given before sexual activity starts. From September 2014, a 2-dose schedule is recommended, as long as the first dose is received before the age of 15 years. The first dose is given to females aged 11 to 14 years, and the second dose is given 6–24 months after the first dose (for the purposes of planning the national immunisation programme, it is appropriate to give the second dose 12 months after the first (see Immunisation Schedule). If the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more. Females receiving their first dose aged 15 years or older require a 3-dose schedule (see Cervarix® and Gardasil®), with the second and third doses given 1 and 4–6 months after the first dose; all 3 doses should be given within a 12-month period. If the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses. If a 3-dose course of vaccination has been started before September 2014, then where possible this should be completed; if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses. Under the national programme in England, females remain eligible to receive the human papillomavirus vaccines p. 1085 up to the age of 18 years if they did not receive the vaccine when scheduled. Where appropriate, immunisation with human papillomavirus vaccines should be offered to females coming into the UK as they may not have been offered protection in their country of origin. The duration of protection has not been established, but current studies suggest that protection is maintained for at least 6 years after completion of the primary course.

As the vaccines do not protect against all strains of human papillomavirus, routine cervical screening should continue.

**Influenza vaccine**

While most viruses are antigenically stable, the influenza viruses A and B (especially A) are constantly altering their antigenic structure as indicated by changes in the haemagglutinins (H) and neuraminidases (N) on the surface of the viruses. It is essential that influenza vaccine p. 1085 in use contain the H and N components of the prevalent strain or strains as recommended each year by the World Health Organization.

Immunisation is recommended for persons at high risk, and to reduce transmission of infection. Annual immunisation is strongly recommended for individuals aged over 6 months with the following conditions:

- chronic respiratory disease (includes asthma treated with continuous or repeated use of inhaled or systemic corticosteroids or asthma with previous exacerbations requiring hospital admission);
- chronic heart disease;
- chronic liver disease;
- chronic renal disease;
- chronic neurological disease;
- diabetes mellitus;
- immunosuppression because of disease (including asplenia or splenic dysfunction) or treatment (including prolonged systemic corticosteroid treatment [for over 1 month at dose equivalents of prednisolone: adult and child over 20 kg, 20 mg or more daily; child under 20 kg, 1 mg/kg or more daily] and chemotherapy);
- HIV infection (regardless of immune status).

Seasonal influenza vaccine p. 1085 is also recommended for all pregnant women, for all persons aged over 65 years, for residents of nursing or residential homes for the elderly and other long-stay facilities, and for carers of persons whose welfare may be at risk if the carrier falls ill. Influenza immunisation should also be considered for household contacts of immunocompromised individuals.

As part of winter planning, NHS employers should offer vaccination to healthcare workers who are directly involved in patient care. Employers of social care workers should consider similar action.

Unless contra-indicated, the live influenza vaccine p. 1085, FluMux Tetra®, is preferred in children aged 2–18 years because it provides a higher level of protection than inactivated influenza vaccine p. 1085. From 1 September 2014, seasonal influenza vaccine will also be offered to all children aged 2–4 years (i.e. those born between 2 September 2009 and 1 September 2012). Information on pandemic influenza, avian influenza and swine influenza may be found at www.dh.gov.uk/pandemicflu and at www.gov.uk/phe.

**Japanese encephalitis vaccine**

Japanese encephalitis vaccine p. 1086 is indicated for travellers to areas in Asia and the Far East where infection is endemic and for laboratory staff at risk of exposure to the virus. The primary immunisation course of 2 doses should be completed at least one week before potential exposure to Japanese encephalitis virus.

Up-to-date information on the risk of Japanese encephalitis in specific countries can be obtained from the National Travel Health Network and Centre (www.nathnae.org).

**Measles, Mumps and Rubella vaccine**

**Measles vaccine** has been replaced by a combined live measles, mumps and rubella vaccine, live p. 1087 (MMR vaccine).

Measles, mumps and rubella vaccine, live aims to eliminate measles, mumps, and rubella (German measles) and congenital rubella syndrome. Every child should receive two doses of measles, mumps and rubella vaccine, live by entry to primary school, unless there is a valid contra-indication. Measles, mumps and rubella vaccine, live should be given irrespective of previous measles, mumps, or rubella infection or vaccination.

The first dose of measles, mumps and rubella vaccine, live is given to children aged 12–13 months. A second dose is given before starting school at 3 years and 4 months–5 years of age (see Immunisation Schedule).

Children presenting for pre-school booster who have not received the first dose of measles, mumps and rubella vaccine, live should be given a dose of measles, mumps and rubella vaccine, live followed 2 months later by a second dose.

At school-leaving age or at entry into further education, measles, mumps and rubella vaccine, live immunisation should be offered to individuals of both sexes who have not received 2 doses during childhood. In those who have received only a single dose of measles, mumps and rubella vaccine, live in childhood, a second dose is recommended to achieve full protection. If 2 doses of measles, mumps and rubella vaccine, live are required, the second dose should be given one month after the initial dose. The decision on whether to vaccinate adults should take into consideration their vaccination history, the likelihood of the individual remaining susceptible, and the future risk of exposure and disease.

Measles, mumps and rubella vaccine, live should be used to protect against rubella in seronegative women of child-bearing age (see Immunisation Schedule); unimmunised healthcare workers who might put pregnant women and other vulnerable groups at risk of rubella or measles should be vaccinated. Measles, mumps and rubella vaccine, live may also be offered to previously unimmunised and seronegative post-partum women (see measles, mumps and rubella vaccine, live)—vaccination a few days after delivery.
Vaccines

is important because about 60% of congenital abnormalities from rubella infection occur in babies of women who have borne more than one child. Immigrants arriving after the age of school immunisation are particularly likely to require immunisation.

Contacts

Measles, mumps and rubella vaccine, live may also be used in the control of outbreaks of measles and should be offered to susceptible children aged under 1 year (and other children who are contacts of a case, within 3 days of exposure to infection. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose may be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months–5 years should still be given. Children aged under 9 months for whom avoidance of measles infection is particularly important (such as with history of recent severe illness) can be given normal immunoglobulin after exposure to measles; routine measles, mumps and rubella vaccine, live p. 1087 immunisation should then be given after at least 3 months at the appropriate age.

Measles, mumps and rubella vaccine, live is not suitable for prophylaxis following exposure to mumps or rubella since the antibody response to the mumps and rubella components is too slow for effective prophylaxis.

Children and adults with impaired immune response should not receive live vaccines (see advice on HIV). If they have been exposed to measles infection they should be given normal immunoglobulin.

Travel

Unimmunised travellers, including children over 6 months, to areas where measles is endemic or epidemic should receive measles, mumps and rubella vaccine, live. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose should be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months–5 years should still be given.

Meningococcal vaccine

Almost all childhood meningococcal disease in the UK is caused by Neisseria meningitidis serogroups B and C. Meningococcal group C conjugate vaccine protects only against infection by serogroup C. The risk of meningococcal disease declines with age—immunisation is not generally recommended after the age of 25 years.

Tetravalent meningococcal vaccines that cover serogroups A, C, W135, and Y are available. Although the duration of protection has not been established, the meningococcal groups A, C, W135, and Y conjugate vaccine is likely to provide longer-lasting protection than the unconjugated meningococcal polysaccharide vaccine. The antibody response to serogroup C in unconjugated meningococcal polysaccharide vaccines in young children may be suboptimal (not currently available in the UK).

A meningococcal group B vaccine, Bexsero®, is licensed in the UK against infection caused by Neisseria meningitidis serogroup B. Bexsero® contains 3 recombinant Neisseria meningitidis serogroup B proteins and the outer membrane vesicles from the NZ 98/254 strain, in order to achieve broad protection against Neisseria meningitidis serogroup B; the proteins are adsorbed onto an aluminium compound to stimulate an enhanced immune response.

Childhood immunisation

Meningococcal group C conjugate vaccine provides long-term protection against infection by serogroup C of Neisseria meningitidis. Immunisation consists of 1 dose given at 3 months of age; 2 booster doses are recommended, the first is given at 12–13 months of age (combined with haemophilus influenzae type b vaccine), and the second at 13–15 years of age (see Immunisation Schedule).

Unimmunised children aged 4–12 months should be given 1 dose of meningococcal group C conjugate vaccine and then they should be vaccinated according to the Immunisation Schedule. Unimmunised children aged 1–10 years should be given 1 dose of meningococcal group C conjugate vaccine, followed by a booster dose at 13–15 years of age. Unimmunised individuals aged 10–25 years should be given 1 dose of meningococcal group C conjugate vaccine, but a booster dose is not required.

From August 2014 there will be a catch-up programme for individuals aged under 25 years who are attending university for the first time and who did not receive a dose of meningococcal group C conjugate vaccine at 13–15 years of age.

Patients under 25 years of age with confirmed serogroup C disease, who have previously been immunised with meningococcal group C vaccine, should be offered meningococcal group C conjugate vaccine before discharge from hospital.

Travel

Individuals travelling to countries of risk should be immunised with meningococcal groups A, C, W135, and Y conjugate vaccine, even if they have previously received meningococcal group C conjugate vaccine. If an individual has recently received meningococcal group C conjugate vaccine, an interval of at least 4 weeks should be allowed before administration of the tetravalent (meningococcal groups A, C, W135, and Y) vaccine.

Vaccination is particularly important for those living or working with local people or visiting an area of risk during outbreaks.

Immunisation recommendations and requirements for visa entry for individual countries should be checked before travelling, particularly to countries in Sub-Saharan Africa, Asia, and the Indian sub-continent where epidemics of meningococcal school and infection are reported. Country-by-country information is available from the National Travel Health Network and Centre (www.nathnac.org).

Proof of vaccination with the tetravalent meningococcal groups A with C and W135 and Y vaccine p. 1089 is required for those travelling to Saudi Arabia during the Hajj and Umrah pilgrimages (where outbreaks of the W135 strain have occurred).

Contacts

For advice on the immunisation of laboratory workers and close contacts of cases of meningococcal disease in the UK and on the role of the vaccine in the control of local outbreaks, consult Guidance for Public Health Management of Meningococcal Disease in the UK at www.gov.uk/phe. Also see for antibacterial prophylaxis for prevention of secondary cases of meningococcal meningitis.

The need for immunisation of laboratory staff who work directly with Neisseria meningitidis should be considered.

Pertussis vaccine

Pertussis vaccine is given as a combination preparation containing other vaccines. Acellular vaccines are derived from highly purified components of Bordetella pertussis. Primary immunisation against pertussis (whooping cough)
requires 3 doses of an acellular pertussis-containing vaccine (see Immunisation schedule), given at intervals of 1 month from the age of 2 months.

All children up to the age of 10 years should receive primary immunisation with diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed).

A booster dose of an acellular pertussis-containing vaccine should ideally be given 3 years after the primary course, although, the interval can be reduced to 1 year if the primary course was delayed. Children aged 1–10 years who have not received a pertussis-containing vaccine as part of their primary immunisation should be offered 1 dose of a suitable pertussis-containing vaccine; after an interval of at least 1 year, a booster dose of a suitable pertussis-containing vaccine should be given. Immunisation against pertussis is not routinely recommended in individuals over 10 years of age.

**Vaccination of pregnant women against pertussis**

In response to the pertussis outbreak, the UK health departments introduced a temporary programme (October 2012) to vaccinate pregnant women against pertussis, and this programme will continue until further notice. The aim of the programme is to boost the levels of pertussis–specific antibodies that are transferred through the placenta, from the mother to the fetus, so that the newborn is protected before routine immunisation begins at 2 months of age.

Pregnant women should be offered a single dose of acellular pertussis-containing vaccine (as adsorbed diphtheria [low dose], tetanus, pertussis [acellular, component] and poliomyelitis [inactivated] vaccine; *Boostrix*-IPV®) between 28 to 38 weeks of pregnancy; the optimal time for vaccination is between 28–32 weeks of pregnancy. Pregnant women should be offered a single dose of acellular pertussis-containing vaccine up to the onset of labour if they missed the opportunity for vaccination at 28–38 weeks of pregnancy. A single dose of acellular pertussis-containing vaccine may also be offered to new mothers, who have never previously been vaccinated against pertussis, until the child receives the first vaccination.

While this programme is in place, women who become pregnant again should be offered vaccination during each pregnancy to maximise transplacental transfer of antibody.

**Contacts**

Vaccination against pertussis should be considered for close contacts of cases with pertussis who have been offered antibacterial prophylaxis. Unimmunised or partially immunised contacts under 10 years of age should complete their vaccination against pertussis. A booster dose of an acellular pertussis-containing vaccine is recommended for contacts aged over 10 years who have not received a pertussis-containing vaccine in the last 5 years and who have not received adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine in the last month.

**Side-effects**

Local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:
- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

**Pneumococcal vaccine**

Pneumococcal vaccine p. 1089 protects against infection with *Streptococcus pneumoniae* (pneumoccus); the vaccines contain polysaccharide from capsular pneumococci. **Pneumococcal polysaccharide vaccine** contains purified polysaccharide from 23 capsular types of pneumococci, whereas **pneumococcal polysaccharide conjugate vaccine (adsorbed)** contains polysaccharide from either 10 capsular types (*Synflorix®*) or 13 capsular types (*Prevenar 13®*) and the polysaccharide is conjugated to protein.

The 13-valent conjugate vaccine (*Prevenar 13®*) is used in the childhood immunisation schedule. The recommended schedule consists of 3 doses, the first at 2 months of age, the second at 4 months, and the third at 12–15 months (see Immunisation Schedule).

Pneumococcal vaccine is recommended for individuals at increased risk of pneumococcal infection as follows:
- age over 65 years;
- asplenia or splenic dysfunction (including homozygous sickle cell disease and coeliac disease which could lead to splenic dysfunction);
- chronic respiratory disease (includes asthma treated with continuous or frequent use of a systemic corticosteroid);
- chronic heart disease;
- chronic renal disease;
- chronic liver disease;
- diabetes mellitus requiring insulin or oral hypoglycaemic drugs;
- immune deficiency because of disease (e.g. HIV infection) or treatment (including prolonged systemic corticosteroid treatment for over 1 month at dose equivalents of prednisolone: *adult and child over 20 kg*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily);
- presence of cochlear implant;
- conditions where leakage of cerebrospinal fluid may occur;
- child under 5 years with a history of invasive pneumococcal disease;
- at risk of occupational exposure to metal fume (e.g. welders).

Where possible, the vaccine should be given at least 2 weeks before splenectomy, cochlear implant surgery, chemotherapy, or radiotherapy; patients should be given advice about increased risk of pneumococcal infection. If it is not practical to vaccinate at least 2 weeks before splenectomy, chemotherapy, or radiotherapy, the vaccine should be given at least 2 weeks after the splenectomy or, where possible, at least 3 months after completion of chemotherapy or radiotherapy. Prophylactic antibacterial therapy against pneumococcal infection should not be stopped after immunisation. A patient card and information leaflet for patients with asplenia are available from the Department of Health or in Scotland from the Scottish Executive, Public Health Division 1 (Tel (0131) 244 2501).

**Choice of vaccine**

Children under 2 years at increased risk of pneumococcal infection (see list) should receive the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) at the recommended ages, followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine after their second birthday. Children at increased risk of pneumococcal infection presenting late for vaccination should receive 2 doses (separated by at least 1 month) of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) before the age of 12 months, and a third dose at 12–13 months. Children over 12 months and under 5 years (who have not been vaccinated or not completed the primary course) should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) (2 doses separated by an interval of 2 months in the immunocompromised or those with asplenia or splenic dysfunction). All children under 5 years at increased risk of pneumococcal infection should receive a single dose of the 23-valent pneumococcal polysaccharide vaccine after their second birthday and at least 2 months after the final dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).
Children over 5 years and adults who are at increased risk of pneumococcal disease should receive a single dose of the 23-valent unconjugated pneumococcal polysaccharide vaccine.

Revaccination
In individuals with higher concentrations of antibodies to pneumococcal polysaccharides, revaccination with the 23-valent pneumococcal polysaccharide vaccine more commonly produces adverse reactions. Revaccination is therefore not recommended, except every 5 years in individuals in whom the antibody concentration is likely to decline rapidly (e.g. asplenia, splenic dysfunction and nephrotic syndrome). If there is doubt, the need for revaccination should be discussed with a haematologist, immunologist, or microbiologist.

Polio vaccine
Two types of polio vaccines (containing strains of poliovirus types 1, 2, and 3) are available, inactivated polio vaccine (for injection) and live (oral) polio vaccine. Inactivated polio vaccines, only available in combined preparation, are recommended for routine immunisation.

A course of primary immunisation consists of 3 doses of a combined preparation containing inactivated poliovirus vaccines, starting at 2 months of age with intervals of 1 month between doses (see Immunisation schedule). A course of 3 doses should also be given to all unimmunised adults; no adult should remain unimmunised against poliomyelitis.

Two booster doses of a preparation containing inactivated poliovirus vaccines are recommended, the first before school entry and the second before leaving school (see Immunisation schedule). Further booster doses are only necessary for adults at special risk, such as travellers to endemic areas, or laboratory staff likely to be exposed to the viruses, or healthcare workers in possible contact with cases; booster doses should be given to such individuals every 10 years.

Live (oral) polio vaccine is no longer available for routine use; its use may be considered during large outbreaks, but advice should be sought from Public Health England. The live (oral) vaccine poses a very rare risk of vaccine-associated paralytic polio because the attenuated strain of the virus can revert to a virulent form. For this reason the live (oral) vaccine must not be used for immunosuppressed individuals or their household contacts. The use of inactivated polio vaccines removes the risk of vaccine-associated paralytic polio altogether.

Travel
Unimmunised travellers to areas with a high incidence of poliomyelitis should receive a full 3-dose course of a preparation containing inactivated poliovirus vaccines. Those who have not been vaccinated in the last 10 years should receive a booster dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine.

Information about countries with a high incidence of poliomyelitis can be obtained from www.travax.nhs.uk or from the National Travel Health Network and Centre (www.nathnac.org).

Rabies vaccine
Rabies vaccine p. 1090 contains inactivated rabies virus cultivated in either human diploid cells or purified chick embryo cells; vaccines are used for pre- and post-exposure prophylaxis.

Pre-exposure prophylaxis
Immunisation should be offered to those at high risk of exposure to rabies—laboratory staff who handle the rabies virus, those working in quarantine stations, animal handlers, veterinary surgeons and field workers who are likely to be bitten by infected wild animals, certain port officials, and bat handlers. Transmission of rabies by humans has not been recorded but it is advised that those caring for patients with the disease should be vaccinated.

Immunisation against rabies is also recommended where there is limited access to prompt medical care for those living in areas where rabies is enzootic, for those travelling to such areas for longer than 1 month, and for those on shorter visits who may be exposed to unusual risk.

Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

Up-to-date country-by-country information on the incidence of rabies can be obtained from the National Travel Health Network and Centre (www.nathnac.org) and, in Scotland, from Health Protection Scotland (www.hps.scot.nhs.uk).

Immunisation against rabies requires 3 doses of rabies vaccine p. 1090, with further booster doses for those who remain at frequent risk. To ensure continued protection in persons at high risk (e.g. laboratory workers), the concentration of antirabies antibodies in plasma is used to determine the intervals between doses.

Post-exposure management
Following potential exposure to rabies, the wound or site of exposure (e.g. mucous membrane) should be cleansed under running water and washed for several minutes with soapy water as soon as possible after exposure. Disinfectant and a simple dressing can be applied, but suturing should be delayed because it may increase the risk of introducing rabies virus into the nerves.

Post-exposure prophylaxis against rabies depends on the level of risk in the country, the nature of exposure, and the individual’s immunity. In each case, expert risk assessment and advice on appropriate management should be obtained from the local Public Health England Centre or Public Health England’s Virus Reference Department, Colindale (tel. (020) 8200 4400) or the PHE Colindale Duty Doctor (tel. (020) 8200 6868), in Wales from the Public Health Wales local Health Protection Team or Public Health Wales Virus Reference Laboratory (tel. (029) 2074 7747), in Scotland from the local on-call infectious diseases consultant, and in Northern Ireland from the Public Health Agency Duty Room (tel. (028) 9055 3997 / (028) 9063 2662) or the Regional Virology Service (tel. (028) 9024 0503).

There are no specific contra-indications to the use of rabies vaccine for post-exposure prophylaxis and its use should be considered whenever a patient has been attacked by an animal in a country where rabies is enzootic, even if there is no direct evidence of rabies in the attacking animal. Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis.

For post-exposure prophylaxis of fully immunised individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine), 2 doses of cell-derived vaccine are likely to be sufficient; the first dose is given on day 0 and the second dose is given between day 3–7. Rabies immunoglobulin is not necessary in such cases.

Post-exposure treatment for unimmunised individuals (or those whose prophylaxis is possibly incomplete) comprises 5 doses of rabies vaccine given over 1 month (on days 0, 3, 7, 14, and the fifth dose is given between day 28–30); also, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin p. 1064 is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine. The immunisation
course can be discontinued if it is proved that the individual was not at risk.

**Rotavirus vaccine**

Rotavirus vaccine p. 1090 is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection. The recommended schedule consists of 2 doses, the first at 2 months of age, and the second at 3 months of age (see Immunisation schedule). The first dose of rotavirus vaccine must be given between 6–15 weeks of age and the second dose should be given after an interval of at least 4 weeks; the vaccine should not be started in children 15 weeks of age or older. Ideally, the full course should be completed before 16 weeks of age to provide protection before the main burden of disease, and to avoid a temporal association between vaccination and intussusception; the course must be completed before 24 weeks of age.

The rotavirus vaccine p. 1090 virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus. Carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby’s nappies.

**Smallpox vaccine**

Limited supplies of smallpox vaccine are held at the Specialist and Reference Microbiology Division, Public Health England Colindale (Tel. (020) 8200 4400) for the exclusive use of workers in laboratories where pox viruses (such as vaccinia) are handled.

If a wider use of the vaccine is being considered, Guidelines for smallpox response and management in the post-eradication era should be consulted at www.gov.uk/jphe.

**Tetanus vaccine**

Tetanus vaccine contains a cell-free purified toxin of Clostridium tetani adsorbed on aluminium hydroxide or aluminium phosphate to improve antigenicity.

Primary immunisation for children under 10 years consists of 3 doses of a combined preparation containing adsorbed tetanus vaccine, with an interval of 1 month between doses. Following routine childhood vaccination, 2 booster doses of a preparation containing adsorbed tetanus vaccine are recommended, the first before school entry and the second before leaving school (see Immunisation schedule).

The recommended schedule of tetanus vaccination not only gives protection against tetanus in childhood but also gives the basic immunity for subsequent booster doses. In most circumstances, a total of 5 doses of tetanus vaccine is considered sufficient for long term protection.

For primary immunisation of adults and children over 10 years previously unimmunised against tetanus, 3 doses of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine are given with an interval of 1 month between doses (see Diphtheria-containing Vaccines).

When an individual presents for a booster dose but has been vaccinated following a tetanus-prone wound, the vaccine preparation administered at the time of injury should be determined. If this is not possible, the booster should still be given to ensure adequate protection against all antigens in the booster vaccine.

Very rarely, tetanus has developed after abdominal surgery; patients awaiting elective surgery should be asked about tetanus immunisation and immunised if necessary.

Parenteral drug abuse is also associated with tetanus; those abusing drugs by injection should be vaccinated if unimmunised—booster doses should be given if there is any doubt about their immunisation status.

All laboratory staff should be offered a primary course if unimmunised.

**Wounds**

Wounds are considered to be tetanus-prone if they are sustained more than 6 hours before surgical treatment or at any interval after injury and are puncture-type (particularly if contaminated with soil or manure) or show much devitalised tissue or are septic or are compound fractures or contain foreign bodies. All wounds should receive thorough cleansing.

- For clean wounds: fully immunised individuals (those who have received a total of 5 doses of a tetanus-containing vaccine at appropriate intervals) and those whose primary immunisation is complete (with boosters up to date), do not require tetanus vaccine; individuals whose primary immunisation is incomplete or whose boosters are not up to date require a reinforcing dose of a tetanus-containing vaccine (followed by further doses as required to complete the schedule); non-immunised individuals (or those whose immunisation status is not known or who have been fully immunised but are now immunocompromised) should be given a dose of the appropriate tetanus-containing vaccine immediately (followed by completion of the full course of the vaccine if records confirm the need)

- For tetanus-prone wounds: management is as for clean wounds with the addition of a dose of tetanus immunoglobulin given at a different site; in fully immunised individuals and those whose primary immunisation is complete (with boosters up to date) the immunoglobulin is needed only if the risk of infection is especially high (e.g. contamination with manure). Antibacterial prophylaxis (with benzylpenicillin, co-amoxiclav, or metronidazole) may also be required for tetanus-prone wounds.

**Tick-borne encephalitis vaccine**

Tick-borne encephalitis vaccine, inactivated p. 1091 contains inactivated tick-borne encephalitis virus cultivated in chick embryo cells. It is recommended for immunisation of those working in, or visiting, high-risk areas (see International Travel). Those working, walking or camping in warm forested areas of Central and Eastern Europe, Scandinavia, Northern and Eastern China, and some parts of Japan, particularly from April to November when ticks are most prevalent, are at greatest risk of tick-borne encephalitis. For full protection, 3 doses of the vaccine are required; booster doses are required every 3–5 years for those still at risk. Ideally, immunisation should be completed at least one month before travel.

**Typhoid vaccine**

Typhoid vaccine p. 1091 is available as Vi capsular polysaccharide (from Salmonella typhi) vaccine for injection and as live attenuated Salmonella typhi for oral use.

Typhoid immunisation is advised for:

- travellers to areas where typhoid is endemic, especially if staying with or visiting local people;
- travellers to endemic areas where frequent or prolonged exposure to poor sanitation and poor food hygiene is likely;
- laboratory personnel who, in the course of their work, may be exposed to Salmonella typhi.

Typhoid vaccination is not a substitute for scrupulous personal hygiene.

Capsular polysaccharide typhoid vaccine p. 1091 is usually given by intramuscular injection. Children under 2 years may respond suboptimally to the vaccine, but children aged between 1–2 years should be immunised if the risk of typhoid fever is considered high (immunisation is not recommended for infants under 12 months). Revaccination is needed every 3 years on continued exposure.
All travellers should have immunity to tetanus and poliomyelitis (and childhood immunisations should be up to date); Tick-borne encephalitis vaccine is recommended for immunisation of those working in, or visiting, high-risk areas. Certain special precautions are required in non-European areas surrounding the Mediterranean, in Africa, the Middle East, Asia, and South America.

Travellers to areas that have a high incidence of poliomyelitis or tuberculosis should be immunised with the appropriate vaccine; in the case of poliomyelitis previously immunised travellers may be given a booster dose of a preparation containing inactivated poliomyelitis vaccine. BCG immunisation is recommended for travellers aged under 16 years proposing to stay for longer than 3 months (or in close contact with the local population) in countries with an incidence of tuberculosis greater than 40 per 100 000 (list of countries where the incidence of tuberculosis is greater than 40 cases per 100 000 is available from www.gov.uk/phe); it should preferably be given 3 months or more before departure.

Yellow fever immunisation is recommended for travel to the endemic zones of Africa and South America. Many countries require an International Certificate of Vaccination from individuals arriving from, or who have been travelling through, endemic areas; other countries require a certificate from all entering travellers (consult the Department of Health handbook, Health Information for Overseas Travel, www.dh.gov.uk).

Immunisation against meningococcal meningitis is recommended for a number of areas of the world. Protection against hepatitis A is recommended for travellers to high-risk areas outside Northern and Western Europe, North America, Japan, Australia and New Zealand. Hepatitis A vaccine is preferred and it is likely to be effective even if given shortly before departure; normal immunisation is not required if no longer given routinely but may be indicated in the immunocompromised. Special care must also be taken with food hygiene.

Hepatitis B vaccine is recommended for those travelling to areas of high or intermediate prevalence who intend to seek employment as healthcare workers or who plan to remain there for lengthy periods and who may therefore be at increased risk of acquiring infection as the result of medical or dental procedures carried out in those countries. Short-term tourists or business travellers are not generally at increased risk of infection but may put themselves at risk by their sexual behaviour when abroad. Prophylactic immunisation against typhoid is recommended for travellers to enzootic areas on long journeys or to areas out of reach of immediate medical attention.

Travellers who have not had a tetanus booster in the last 10 years and are visiting areas where medical attention may not be accessible should receive a booster dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, even if they have received 5 doses of a tetanus-containing vaccine previously.

Typhoid vaccine is indicated for travellers to countries where typhoid is endemic, but the vaccine is no substitute for personal precautions.

There is no requirement for cholera vaccination as a condition for entry into any country, but oral cholera vaccine should be considered for backpackers and those travelling to situations where the risk is greatest (e.g. refugee camps). Regardless of vaccination, travellers to areas where cholera is endemic should take special care with food hygiene.

Advice on diphtheria, on Japanese encephalitis, and on tick-borne encephalitis is included in Health Information for Overseas Travel.

**Travel vaccinations**

See advice on Malaria, treatment p. 529.

No special immunisation is required for travellers to the United States, Europe, Australia, or New Zealand, although
**Food hygiene**
In areas where sanitation is poor, good food hygiene is important to help prevent hepatitis A, typhoid, cholera, and other diarrhoeal diseases (including travellers’ diarrhoea). Food should be freshly prepared and hot, and uncooked vegetables (including green salads) should be avoided; only fruits which can be peeled should be eaten. Only suitable bottled water, or tap water that has been boiled or treated with sterilising tablets, should be used for drinking.

**Information on health advice for travellers**
Health professionals and travellers can find the latest information on immunisation requirements and precautions for avoiding disease while travelling from: www.nathnac.org. The handbook, Health Information for Overseas Travel (2010), which draws together essential information for healthcare professionals regarding health advice for travellers, can also be obtained from this website. Immunisation requirements change from time to time, and information on the current requirements for any particular country may be obtained from the embassy or legation of the appropriate country or from:

Anthrax vaccine

**INDICATIONS AND DOSE**

Pre-exposure immunisation against anthrax | Post-exposure immunisation

- **BY INTRAMUSCULAR INJECTION**
  - Adult: Initially 1 dose every 3 weeks for 3 doses, followed by 1 dose after 6 months, to be administered in the deltoid region, 1 dose is equivalent to 0.5 mL

**Booster**

- **BY INTRAMUSCULAR INJECTION**
  - Adult: 1 dose every 12 months, to be administered in deltoid region, 1 dose is equivalent to 0.5 mL

**PRESCRIBING AND DISPENSING INFORMATION**

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

**EXCIPIENTS:** May contain Thiomersal

- **ANTHRAX VACCINE (Non-proprietary)**
  - Anthrax vaccine (alum precipitated sterile filtrate) suspension for injection 0.5ml ampoules | 5 ampoule (Pres) no price available

**Bacillus Calmette-Guérin vaccine**

**(BCG Vaccine)**

- **DRUG ACTION**
  - BCG (Bacillus Calmette-Guérin) is a live attenuated strain derived from *Mycobacterium bovis* which stimulates the development of immunity to *M. tuberculosis*.

**INDICATIONS AND DOSE**

Immunisation against tuberculosis

- **BY INTRADERMAL INJECTION**
  - Child 1-11 months: 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be avoided
  - Child 1-7 years: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be avoided
  - Adult: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be avoided

- **CONTRA-INDICATIONS**
  - Generalised septic skin conditions
  - Neonate in household contact with known or suspected case of active tuberculosis
  - CONTRA-INDICATIONS, FURTHER INFORMATION
  - A lesion-free site should be used to administer BCG vaccine to patients with eczema.

- **CAUTIONS**
  - BCG vaccine can be given simultaneously with another live vaccine, but if they are not given at the same time an interval of 4 weeks should normally be allowed. When BCG is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

- **SIDE-EFFECTS**
  - Rare: Disseminated complications - osteitis - osteomyelitis
  - Frequency not known: Prolonged ulceration at the injection site · subcutaneous abscess at the injection site

- **PRE-TREATMENT SCREENING**
  - Apart from children under 6 years, any person being considered for BCG immunisation must first be given a skin test for hypersensitivity to tuberculoprotein (see tuberculin purified protein derivative p. 1066). A skin test is not necessary for a child under 6 years provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000, the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

- **DIRECTIONS FOR ADMINISTRATION**
  - Intradermal injection technique Skin is stretched between thumb and forefinger and needle (size 25G or 26G) inserted (bevel upwards) for about 3 mm into superficial layers of dermis (almost parallel with surface). Needle should be short with short bevel (can usually be seen through epidermis during insertion). Tense raised blanched bleb showing tips of hair follicles is sign of correct injection; 7 mm bleb $\equiv$ 0.1 mL injection, 3 mm bleb $\equiv$ 0.05 mL injection; if considerable
Cholera vaccine

**INDICATIONS AND DOSE**
Immunisation against cholera (for travellers to endemic or epidemic areas on the basis of current recommendations)

**BY MOUTH**
- Child 2-5 years: 1 dose every 1–6 weeks for 3 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- Child 6-17 years: 1 dose every 1–6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- Adult: 1 dose every 1–6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure

**Booster**
**BY MOUTH**
- Child 2-5 years: A single booster dose can be given within 6 months after primary course, if more than 6 months have elapsed since the last vaccination, the primary course should be repeated
- Child 6-17 years: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated
- Adult: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated

**CONTRA-INDICATIONS**
Acute gastro-intestinal illness

**SIDE-EFFECTS**
- Rare: Cough - respiratory symptoms - rhinitis
- Very rare: Insomnia - sore throat
- Frequency not known: Abdominal pain and cramps - diarrhoea - nausea - vomiting

**DIRECTIONS FOR ADMINISTRATION**
- In children: Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). For children over 6 years, add vaccine suspension to make one dose. For child 2–6 years, discard half (approximately 75 mL) of the solution, then add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.
- In adults: Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). Add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for suspension for injection**
- Bacillus Calmette-Guerin vaccine (Non-proprietary)
  - Dukoral (Janssen-Cilag Ltd)
  - Pediacel (GlaxoSmithKline UK Ltd)
  - Infanrix-IPV + Hib (GSK) (£32.00)

**SIDE-EFFECTS**
- Atopic dermatitis - hypotonia - restlessness - sleep disturbances - unusual crying in infants

**SIDE-EFFECTS, FURTHER INFORMATION**
Side effects of vaccines containing pertussis: The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contra-indicate further doses. The vaccine should not be withheld from children with a history to a preceding dose of:
- Fever, irrespective of severity;
- Persistent crying or screaming for more than 3 hours;
- Severe local reaction, irrespective of extent.

**PRESCRIBING AND DISPENSING INFORMATION**
Available as part of childhood schedule from health organisations or ImnForm.

Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus

**INDICATIONS AND DOSE**
Primary immunisation

**BY INTRAMUSCULAR INJECTION**
- Child 2-5 months-10 years: 0.5 mL every month for 3 doses

**UNLICENSED USE**
Infanrix-IPV + Hib not licensed for use in children over 36 months; Pediacel not licensed in children over 4 years. However, the Department of Health recommends that these be used for children up to 10 years.

**SIDE-EFFECTS**
Atopic dermatitis - hypotonia - restlessness - sleep disturbances - unusual crying in infants

**SIDE-EFFECTS, FURTHER INFORMATION**
Side effects of vaccines containing pertussis: The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contra-indicate further doses. The vaccine should not be withheld from children with a history to a preceding dose of:
- Fever, irrespective of severity;
- Persistent crying or screaming for more than 3 hours;
- Severe local reaction, irrespective of extent.

**PRESCRIBING AND DISPENSING INFORMATION**
Available as part of childhood schedule from health organisations or ImnForm.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**
- Exipients: May contain neomycin, polymyxin b, streptomycin
  - Pediacel (Sanofi pasteur MSD Ltd)
    - Pediacel vaccine suspension for injection 0.5mL vials | 1 vial (£34)
    - £32.00
  - Infanrix-IPV + Hib (GSK)
    - Infanrix-IPV + Hib vaccine powder and solvent for suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection (£50) no price available
Diphtheria with pertussis, poliomyelitis vaccine and tetanus

**INDICATIONS AND DOSE**

First booster dose

**BY INTRAMUSCULAR INJECTION**

- Child 3–10 years: 0.5 mL to be given 3 years after primary immunisation

Vaccination of pregnant women against pertussis

**BY INTRAMUSCULAR INJECTION**

- Females of childbearing potential: 0.5 mL for 1 dose

**SIDE-EFFECTS**

Restlessness • sleep disturbances • unusual crying in infants

**SIDE-EFFECTS, FURTHER INFORMATION**

Side effects of vaccines containing pertussis

The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- Fever, irrespective of severity;
- Persistent crying or screaming for more than 3 hours;
- Severe local reaction, irrespective of extent.

**PREGNANCY**

Contra-indicated in pregnant women with a history of encephalopathy of unknown origin within 7 days of previous immunisation with a pertussis-containing vaccine. Contra-indicated in pregnant women with a history of transient thrombocytopenia or neurological complications following previous immunisation against diphtheria or tetanus.

**PRESCRIBING AND DISPENSING INFORMATION**

Available as part of childhood immunisation schedule from health organisations or ImmForm. Available for vaccination of pregnant women from ImmForm.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

**EXCipients:** May contain Neomycin, polymyxin b, streptomycin

- *Boostrix*-IPV (GlaxoSmithKline UK Ltd)
  - Boostrix-IPV suspension for injection 0.5 mL pre-filled syringes [1 pre-filled disposable injection (PDI)] £1.95
- *Infanrix*-IPV (GlaxoSmithKline UK Ltd)
  - Infanrix-IPV vaccine suspension for injection 0.5 mL pre-filled syringes [1 pre-filled disposable injection (PDI)] £1.75
- *Repevax* (sanofi pasteur MSD Ltd)
  - Repevax vaccine suspension for injection 0.5 mL pre-filled syringes [1 pre-filled disposable injection (PDI)] £21.00

**Diphtheria with poliomyelitis and tetanus vaccine**

**INDICATIONS AND DOSE**

Primary immunisation

**BY INTRAMUSCULAR INJECTION**

- Child 10–17 years: 0.5 mL every month for 3 doses
- Adult: 0.5 mL every month for 3 doses

Booster doses

**BY INTRAMUSCULAR INJECTION**

- Child 10–17 years: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

- Adult: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

**SIDE-EFFECTS**

Restlessness • sleep disturbances • unusual crying in infants

**PRESCRIBING AND DISPENSING INFORMATION**

Available as part of childhood schedule from health organisations or ImmForm.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

**EXCipients:** May contain Neomycin, polymyxin b, streptomycin

- *Revaxis* (sanofi pasteur MSD Ltd)
  - Revaxis vaccine suspension for injection 0.5 mL pre-filled syringes [1 pre-filled disposable injection (PDI)] £16.50

Haemophilus influenzae type b with meningococcal group C vaccine

**INDICATIONS AND DOSE**

Booster dose (for infants who have received primary immunisation with a vaccine containing *Haemophilus influenzae* type b component)

**BY INTRAMUSCULAR INJECTION**

- Child 12–13 months: 0.5 mL for 1 dose

Booster dose (for children who have not been immunised against *Haemophilus influenzae* type b) • Booster dose after recovery from *Haemophilus influenzae* type b disease (for index cases previously vaccinated, with low Hib antibody concentration or if it is not possible to measure antibody concentration)

**BY INTRAMUSCULAR INJECTION**

- Child 1–9 years: 0.5 mL for 1 dose

Booster dose after recovery from *Haemophilus influenzae* type b disease (for fully vaccinated index cases with asplenia or splenic dysfunction, if previous dose received over 1 year ago)

**BY INTRAMUSCULAR INJECTION**

- Child 1–7 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose

Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at under 2 years of age)

**BY INTRAMUSCULAR INJECTION**

- Child 12–13 months: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine, followed by 0.5 mL for 1 dose, the second dose should be given after the second birthday
Hepatitis A vaccine

**INDICATIONS AND DOSE**

**AVAXIM®**

**Immunisation against hepatitis A infection**

**BY INTRAMUSCULAR INJECTION**

- Child 2–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)

**VAQTA® PAEDIATRIC**

**Immunisation against hepatitis A infection**

**BY INTRAMUSCULAR INJECTION**

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–18 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

**HAVRIX MONODOSE®**

**Immunisation against hepatitis A infection**

**BY INTRAMUSCULAR INJECTION**

- Child 1–15 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

**VAQTA® ADULT**

**Immunisation against hepatitis A infection**

**BY INTRAMUSCULAR INJECTION**

- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be delayed)

**EPAXAL®**

**Immunisation against hepatitis A infection**

**BY INTRAMUSCULAR INJECTION**

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–18 months, dose given as booster; booster dose may be delayed by up to 4 years if not given after recommended interval following primary dose. The deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 4 years if not given after recommended interval following primary dose. The deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

**Immunisation against hepatitis A infection (splenectomised patients)**

**BY INTRAMUSCULAR INJECTION**

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 1–6 months, dose given as booster; booster dose may be delayed by up to 4 years in adults if not given after recommended interval following primary dose. The deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 1–6 months, dose given as booster; booster dose may be delayed by up to 4 years in adults if not given after recommended interval following primary dose. The deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

**ALLERGY AND CROSS-SENSITIVITY**

*Epaxal®* contains influenza virus haemagglutinin grown in the allantoic cavity of chick embryos, therefore contra-indicated in those hypersensitive to eggs or chicken proteins.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.
Hepatitis A and B vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1081, hepatitis B vaccine p. 1083.

INDICATIONS AND DOSE

**TWINRIX® PAEDIATRIC**

**Immunisation against hepatitis A and hepatitis B infection by intramuscular injection**

- Child 1-15 years: Initially 0.5 mL every month for 2 doses, then 0.5 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttoc (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

**TWINRIX® ADULT**

**Immunisation against hepatitis A and hepatitis B infection by intramuscular injection**

- Child 16-17 years: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in adults and older children; not to be injected into the buttoc (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

- Adult: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection in adults and older children; not to be injected into the buttoc (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

**AMBIRIX®**

**Immunisation against hepatitis A and hepatitis B infection by intramuscular injection**

- Child 1-15 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttoc (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

**VIATIM®**

**Immunisation against hepatitis A and typhoid infection (primary course) by intramuscular injection**

- Child 16-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttoc (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

- Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttoc (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

Important safety information

Ambirix® and TWINRIX® are not recommended for post-exposure prophylaxis following percutaneous (needle-stick),ocular, or mucous membrane exposure to hepatitis B virus.

**PRESCRIBING AND DISPENSING INFORMATION**

AMBIRIX®

Primary course should be completed with Ambirix® (single component vaccines given at appropriate intervals may be used for booster dose).

TWINRIX® PREPARATIONS

Primary course should be completed with Twinrix® (single component vaccines given at appropriate intervals may be used for booster dose).

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Neomycin

- Ambirix® (GliaxoSmithKline UK Ltd)
  - Ambirix vaccine suspension for injection 1mL pre-filled syringes | 1 pre-filled disposable injection (PPh) £22.43
  - Twinrix® (GliaxoSmithKline UK Ltd)
  - Twinrix Paediatric vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection (PPh) £16.77 | 10 pre-filled disposable injection (PPh) £167.68

**Emulsion for injection**

- Epaxal® (Janssen-Cilag Ltd)
  - Epaxal vaccine emulsion for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection (PPh) £14.74

**Importance of the interval**

- For the properties of the components please consider, hepatitis A vaccine p. 1081, hepatitis B vaccine p. 1083.

Hepatitis A with typhoid vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1081, typhoid vaccine p. 1091.

**INDICATIONS AND DOSE**

**VIATIM®**

**Immunisation against hepatitis A and typhoid infection (primary course) by intramuscular injection**

- Child 16-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttoc (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

- Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttoc (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)
route may be used for patients with bleeding disorders, booster dose given using single component vaccines

**HEPATYRIX®**

**Immunisation against hepatitis A and typhoid infection (primary course)**

**BY INTRAMUSCULAR INJECTION**

- **Child 15-17 years:** 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines
- **Adult:** 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

**EXCIPIENTS:** May contain Neomycin

- **Hepatyrix (GlaxoSmithKline UK Ltd)**
  - Hepatyrix vaccine suspension for injection 1 mL pre-filled disposable syringes | 1 mL pre-filled disposable injection £37.21 | 10 mL pre-filled disposable injection £372.10
- **ViATIM (sanofi pasteur MSD Ltd)**
  - ViATIM vaccine suspension for injection 1 mL pre-filled syringes | 1 mL pre-filled disposable injection £29.80

**Hepatitis B vaccine**

**INDICATIONS AND DOSE**

**ENGERIX B®**

**Immunisation against hepatitis B infection**

**BY INTRAMUSCULAR INJECTION**

- **Neonate:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- **Child 1 month-15 years:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- **Adult:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (accelerated schedule)**

**BY INTRAMUSCULAR INJECTION**

- **Neonate:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- **Child 1 month-15 years:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- **Adult:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection in renal insufficiency, including haemodialysis patients**

**BY INTRAMUSCULAR INJECTION**

- **Neonate:** 10 micrograms once a month for 3 months, first dose to be given at birth with hepatitis B immunoglobulin injection (separate site), followed by 10 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection**

**INJECTION**

- **BY INTRAMUSCULAR INJECTION**
  - **Neonate:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
  - **Child 1 month-15 years:** 10 micrograms every 3 months, followed by 10 micrograms after 9 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants and young
children; not to be injected into the buttock (vaccine efficacy reduced)

- Child 16-17 years: 40 micrograms every month for 3 months, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 40 micrograms every month for 3 months, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

Immunisation against hepatitis B infection (accelerated schedule)

**BY INTRAMUSCULAR INJECTION**

- Neonate: 10 micrograms every month for 3 months, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- Child 1 month-15 years: 10 micrograms every month for 3 months, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 10 micrograms every month for 3 months, followed by 10 micrograms after 9 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

**HBVAXPRO®**

Immunisation against hepatitis B infection

**BY INTRAMUSCULAR INJECTION**

- Neonate: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month-15 years: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16-17 years: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, then 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, then 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

**FENDRIX®**

Immunisation against hepatitis B infection in renal insufficiency (including pre-haemodialysis and haemodialysis patients)

**BY INTRAMUSCULAR INJECTION**

- Child 15-17 years: 20 micrograms every month for 3 months, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
Human papillomavirus vaccines

**INDICATIONS AND DOSE**

**GARDASIL®**

Prevention of premalignant genital (cervical, vulvar and vaginal) and anal lesions, cervical and anal cancers, and genital warts

**BY INTRAMUSCULAR INJECTION**

- Child 9-17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1 month for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL after 3 months, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

- Adult (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1 month for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL after 3 months, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

**Prevention of premalignant genital (cervical, vulvar, and vaginal) and anal lesions, cervical and anal cancers, and genital warts (alternative schedule)**

**BY INTRAMUSCULAR INJECTION**

- Child 9-13 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 6 months for 1 dose, if the second dose is administered earlier than 6 months after the first dose, a third dose should be administered, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.

**CERVARIX®**

Prevention of premalignant genital lesions and cervical cancer

**BY INTRAMUSCULAR INJECTION**

- Child 9-14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 5–7 months for 1 dose, if second dose administered earlier than 5 months after the first, a third dose should be administered, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.

- Child 15-17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

- Adult (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

**PREGNANCY**

Not known to be harmful, but vaccination should be postponed until completion of pregnancy.

**PRESCRIBING AND DISPENSING INFORMATION**

To avoid confusion, prescribers should specify the brand to be dispensed.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

**EXCipients:** May contain Thiomerosal

- **Engerix** B (GlaxoSmithKline UK Ltd)
  - Hepatitis B virus surface antigen 20 microgram per 1 mL
  - Pre-filled disposable injection [POD] £12.34 | 10 vial [POD] £123.41
  - 1 pre-filled disposable injection [POD] £9.67
  - 10 pre-filled disposable injection [POD] £129.92

- **Fendrix** (GlaxoSmithKline UK Ltd)
  - Hepatitis B virus surface antigen 40 microgram per 1 mL
  - Pre-filled disposable injection [POD] £38.10

- **HBVAXPRO** (sanofi pasteur MSD Ltd)
  - Hepatitis B virus surface antigen 10 microgram per 1 mL
  - Pre-filled disposable injection [POD] £12.20
  - 1 pre-filled disposable injection [POD] £18.95

- **HVBAXPRO** 40micrograms/1mL vaccine suspension for injection vials | 1 vial [POD] £27.60

**Influenza vaccine**

**INDICATIONS AND DOSE**

Annual immunisation against seasonal influenza (for children who have not received seasonal influenza vaccine previously)

**BY INTRAMUSCULAR INJECTION**

- Child 6 months-9 years: 0.5 mL for 1 dose, followed by 0.5 mL after at least 4 weeks for 1 dose

**BY INTRanasAL ADMINISTRATION**

- Child 2-9 years: 0.1 mL for 1 dose, followed by 0.1 mL after at least 4 weeks for 1 dose, 0.1 mL dose to be administered into each nostril

**Annual immunisation against seasonal influenza**

**BY INTRAMUSCULAR INJECTION**

- Child 6 months-17 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose
FLUENZ TETRA® SPRAY
Avoid close contact with severely immunocompromised patients for 1–2 weeks after vaccination.

MEDIcular FORMS
There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection
EXCIPIENTS: May contain Gentican, kanamycin, neomycin penicillins, polymyxin b, thiomenal

INFLUENZA VACCINE (Non-proprietary)
Influenza vaccine (split virion, inactivated) suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection £5.55–6.59 | 10 pre-filled disposable injection £65.90
Influenza vaccine (surface antigen, inactivated) suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection £61.50

Agrippal (Novartis Vaccines and Diagnostics Ltd)
Agrippal vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection £58.50

Enzira (Pfizer Ltd)
Enzira vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection £65.90

Fluarix Tetra vaccine nasal suspension
Fluarix Tetra vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection £65.90

Imvac (BGP Products Ltd)
Imvac vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection £65.90

Influvac Sub-unit (BGP Products Ltd)
Influvac Sub-unit vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection £65.90

Intanza (sanofi pasteur MSD Ltd)
Intanza 15microgram strain vaccine suspension for injection 0.1ml pre-filled syringes | 1 pre-filled disposable injection £3.05 | 10 pre-filled disposable injection £30.50
Intanza 9microgram strain vaccine suspension for injection 0.1ml pre-filled syringes | 1 pre-filled disposable injection £3.05

Optafu (Novartis Vaccines and Diagnostics Ltd)
Optafu vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection £65.90

Emulsion and suspension for emulsion for injection

Pandemrix H1N1 (GlaxoSmithKline UK Ltd)
Pandemrix vaccine emulsion and suspension for emulsion for injection | 500 dose £49 no price available

Spray
EXCIPIENTS: May contain Gentican, gentamicin

Fluenz Tetra (AstraZeneca UK Ltd)
Fluenz Tetra vaccine nasal suspension 0.2ml unit dose | 10 unit dose £180.00

Japanese encephalitis vaccine

INDICATIONS AND DOSE
Immunisation against Japanese encephalitis

BY INTRAMUSCULAR INJECTION

Child 2 months-2 years: 0.25 mL every 28 days for 2 doses, anterolateral thigh is preferred site of injection in infants, the subcutaneous route may be used for patients with bleeding disorders
Child 3-17 years: 0.5 mL every 28 days for 2 doses, deltoid muscle is preferred site in older children; anterolateral thigh is preferred in infants, the subcutaneous route may be used for patients with bleeding disorders
Adult: 0.5 mL every 28 days for 2 doses, deltoid muscle is preferred site of injection, the subcutaneous route may be used for patients with bleeding disorders

BY INTRADERMAL INJECTION

Adult 18-59 years: 9 micrograms for 1 dose, dose to be injected into deltoid region
Adult 60 years and over: 15 micrograms for 1 dose, dose to be injected into deltoid region

BY INTRanasAL ADMINISTRATION

Child 2-17 years: 0.1 mL for 1 dose, dose to be administered into each nostril

UNLICENSED USE
Some products containing inactivated influenza vaccine (surface antigen) are not licensed for use in children under 4 years—check product literature.

Severe asthma, active wheezing, concomitant use with antiviral therapy for influenza

CONTRA-INDICATIONS, FURTHER INFORMATION

FLUENZ TETRA® SPRAY
Concomitant use with antivirals
Avoid antivirals for at least 2 weeks after immunisation; avoid immunisation for at least 48 hours after stopping the antiviral.

CAUTIONS
Increased risk of fever in child 5–9 with preparations marketed by Pfizer or CSL Biotherapies

ENZIRA® SUSPENSION FOR INJECTION
Child 5–9 years (increased risk of fever)—use alternative influenza vaccine if available

SIDE-EFFECTS

GENERAL SIDE-EFFECTS

Uncommon Epistaxis
Frequency not known Febrile convulsions - transient thrombocytopenia - vasculitis (in adults)

SPECIFIC SIDE-EFFECTS

With intranasal use Rhinorrhea

ALLERGY AND CROSS-SENSITIVITY
Individuals with a history of egg allergy can be immunised with an egg free influenza vaccine, if available, or an influenza vaccine with an ovalbumin content less than 120 nanograms/mL (facilities should be available to treat anaphylaxis). Vaccines with an ovalbumin content more than 120 nanograms/mL or where content is not stated should not be used in individuals with egg allergy. If an influenza vaccine containing ovalbumin is being considered in those with a history of anaphylaxis to egg or egg allergy with uncontrolled asthma, these individuals should be referred to a specialist in hospital.

Pregnancy
Inactivated vaccines not known to be harmful.

FLUENZ TETRA® SPRAY
Avoid in pregnancy.

Breastfeeding
Inactivated vaccines not known to be harmful.

FLUENZ TETRA® SPRAY
Avoid in breast-feeding.

PRESCRIBING AND DISPENSING INFORMATION

FLUARIX TETRA® SUSPENSION FOR INJECTION
Ovalbumin content less than 100 nanograms/mL.

PATIENT AND CARER ADVICE
Driving and skilled tasks
May affect performance of skilled tasks (e.g. driving); effects of alcohol may be enhanced.
Measles, mumps and rubella vaccine, live

INDICATIONS AND DOSE
Primary immunisation against measles, mumps, and rubella (first dose)
- BY INTRAMUSCULAR INJECTION OR BY DEEP SUBCUTANEOUS INJECTION
  - Child 12-13 months: 0.5 mL for 1 dose
Primary immunisation against measles, mumps, and rubella (second dose)
- BY INTRAMUSCULAR INJECTION OR BY DEEP SUBCUTANEOUS INJECTION
  - Child 40 months-5 years: 0.5 mL for 1 dose
Rubella immunisation (in seronegative women, susceptible to rubella and in unimunised, seronegative women, post-partum)
- BY INTRAMUSCULAR INJECTION OR BY DEEP SUBCUTANEOUS INJECTION
  - Females of childbearing potential: consult product literature or local protocols
Children presenting for pre-school booster, who have not received the primary immunisation (first dose)
- Immunisation for patients at school-leaving age or at entry into further education, who have not completed the primary immunisation course Control of measles outbreak Immunisation for patients travelling to areas where measles is endemic or epidemic, who have not completed the primary immunisation
- BY INTRAMUSCULAR INJECTION OR BY DEEP SUBCUTANEOUS INJECTION
  - Child 6 months-17 years: consult product literature or local protocols
  - Adult: consult product literature or local protocols

SIDE-EFFECTS
- Uncommon Cough (in children) - migraine (in adults) - vertigo (in adults)
- Rare Dyspnoea (in adults) - neuritis (in adults) - palpitation (in adults) - tachycardia (in adults) - thrombocytopenia (in adults)
- PREGNANCY Although manufacturer advises avoid because of limited information, miscarriage has been associated with Japanese encephalitis virus infection acquired during the first 2 trimesters of pregnancy.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection
- Ixiaro (Novartis Vaccines and Diagnostics Ltd)
  - Ixiaro vaccine suspension for injection 0.5ml pre-filled syringes £59.50

UNLICENSED USE Not licensed for use in children under 9 months.

Important safety information
MMR VACCINATION AND BOWEL DISEASE OR AUTISM
- Vaccination and bowel disease or autism. The Chief Medical Officers have advised that the MMR vaccine is the safest and best way to protect children against measles, mumps, and rubella. Information (including fact sheets and a list of references) may be obtained from www.dh.gov.uk/immunisation.

CAUTIONS
- Antibody response to measles component may be reduced after immunoglobulin administration or blood transfusion - leave an interval of at least 3 months before MMR immunisation
- MMR vaccine should not be administered on the same day as yellow fever vaccine; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.
- MMR and varicella-zoster vaccine can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

SIDE-EFFECTS
- Uncommon Parotid swelling (usually in the third week) - sleep disturbances - unusual crying in infants
- Rare Arthropathy (2 to 3 weeks after immunisation) - idiopathic thrombocytopenic purpura
- Frequency not known Optic neuritis - peripheral neuritis

SIDE-EFFECTS, FURTHER INFORMATION
Malaise, fever, or a rash can occur after the first dose of MMR vaccine—most commonly about a week after vaccination and lasting about 2 to 3 days. Leaflets are available for parents on advice for reducing fever (including the use of paracetamol). Febrile seizures—occur rarely 6 to 11 days after MMR vaccination (the incidence is lower than that following measles infection)
- Idiopathic thrombocytopenic purpura
  - Idiopathic thrombocytopenic purpura has occurred rarely following MMR vaccination, usually within 6 weeks of the first dose.
  - The risk of idiopathic thrombocytopenic purpura after MMR vaccine is much less than the risk after infection with wild measles or rubella virus. Children who develop idiopathic thrombocytopenic purpura within 6 weeks of the first dose of MMR should undergo serological testing before the second dose is due; if the results suggest incomplete immunity against measles, mumps or rubella then a second dose of MMR is recommended. The Specialist and Reference Microbiology Division, Health Protection Agency offers free serological testing for children who develop idiopathic thrombocytopenic purpura within 6 weeks of the first dose of MMR.
- Aseptic meningitis
  - Post-vaccination aseptic meningitis was reported (rarely and with complete recovery)
  - Following vaccination with MMR vaccine containing Urabe mumps vaccine, which has now been discontinued; no cases have been confirmed in association with the currently used Jeryl Lynn mumps vaccine. Children with post-vaccination symptoms are not infectious.
- Frequency of side effects
  - Adverse reactions are considerably less frequent after the second dose of MMR vaccine than after the first.

ALLERGY AND CROSS-SENSITIVITY
MMR vaccine can be given safely even when the child has had an anaphylactic reaction to food containing egg, or confirmed anaphylactic reactions to egg-containing food is not a contra-indication to MMR vaccination. Children with a confirmed anaphylactic reaction to the MMR vaccine should be assessed by a specialist.
Meningococcal group C vaccine

INDICATIONS AND DOSE
Primary immunisation against Neisseria meningitidis BY INTRAMUSCULAR INJECTION
• Child 3 months: 0.5 mL for 1 dose, the primary immunisation dose is followed by a booster dose of meningococcal group C conjugate vaccine combined with haemophilus influenzae type b vaccine at 12–13 months of age

Second booster dose for immunisation against Neisseria meningitidis BY INTRAMUSCULAR INJECTION
• Child 13-15 years: 0.5 mL for 1 dose

Immunisation against Neisseria meningitidis in an unimmunised patient BY INTRAMUSCULAR INJECTION
• Child 4–11 months: 0.5 mL for 1 dose, the primary immunisation dose is followed by a booster dose of meningococcal group C conjugate vaccine combined with haemophilus influenzae type b vaccine at 12–13 months of age, then 0.5 mL for 1 dose, this second booster dose to be given at 13–15 years of age
• Child 1–9 years: 0.5 mL for 1 dose, then 0.5 mL for 1 dose, this booster dose to be given at 13–15 years of age
• Child 10–17 years: 0.5 mL for 1 dose, booster dose is not required
• Adult 18–24 years: 0.5 mL for 1 dose, booster dose is not required

Patients attending university for the first time (who did not receive second booster dose at 13–15 years) BY INTRAMUSCULAR INJECTION
• Adult 18–24 years: 0.5 mL for 1 dose

Patients with confirmed serogroup C disease (who have previously been immunised) BY INTRAMUSCULAR INJECTION
• Child 4–15 years: 0.5 mL for 1 dose, dose to be given before discharge from hospital
• Adult 18–24 years: 0.5 mL for 1 dose, dose to be given before discharge from hospital

SIDE-EFFECTS
• Rare Symptoms of meningitis (but no evidence that vaccine causes meningococcal C meningitis)

DIRECTIONS FOR ADMINISTRATION Meningigate Kit® may be used via subcutaneous route in children with bleeding disorders.

PRESCRIBING AND DISPENSING INFORMATION Available as part of childhood immunisation schedule from www.immform.dh.gov.uk.

MEDICINAL FORMS
There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for suspension for injection
• Meningitec (Novartis Vaccines and Diagnostics Ltd)
• NeisVac-C (Pfizer Ltd)

Meningitec vaccine suspension for injection 0.5mL pre-filled syringes 10 pre-filled disposable injection (Peg) 43.30

NeisVac-C vaccine suspension for injection 0.5mL pre-filled syringes 10 pre-filled disposable injection (Peg) 119.50
**Meningococcal groups A with C and W135 and Y vaccine**

### INDICATIONS AND DOSE

**MENVEO®**

Immunisation against *Neisseria meningitidis*

**BY INTRAMUSCULAR INJECTION**

- Child 3–11 months: 0.5 mL for 1 dose, dose preferably injected into deltoid region
- Child 1–7 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region
- Adult: 0.5 mL for 1 dose, dose preferably injected into deltoid region

**NIMENRIX®**

Immunisation against *Neisseria meningitidis*

**BY INTRAMUSCULAR INJECTION**

- Child 1–7 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region (or anterolateral thigh in child 1–2 years), then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection
- Adult: 0.5 mL for 1 dose, to be injected preferably into deltoid region, then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection

### UNLICENSED USE

**MENVEO®** 

*MENVEO*® is not licensed for use in children under 2 years.

### SIDE-EFFECTS

**Rare** Symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug:  

**Powder and solvent for solution for injection**

- *Menveo* (Novartis Vaccines and Diagnostics Ltd)
  - Menveo vaccine powder and solvent for solution for injection 0.5 mL vials | 1 vial £30.00
- *Nimenrix* (GlucoSmithKline UK Ltd)
  - Nimenrix vaccine powder and solvent for solution for injection 0.5 mL pre-filled syringes | 1 pre-filled disposable injection £30.00

**Pneumococcal vaccine**

### INDICATIONS AND DOSE

Immunisation against pneumococcal infection

**BY INTRAMUSCULAR INJECTION OR BY SUBCUTANEOUS INJECTION**

- Child 2–17 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose

Immunisation in patients at increased risk of pneumococcal disease

**BY INTRAMUSCULAR INJECTION OR BY SUBCUTANEOUS INJECTION**

- Child 2–4 years: 0.5 mL for 1 dose, dose should be administered after the second birthday or at least 2 months after the final dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed)
- Child 5–17 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose

### PREVENAR 13®

Primary immunisation against pneumococcal infection (first dose)

**BY INTRAMUSCULAR INJECTION**

- Child 2 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants

Primary immunisation against pneumococcal infection (second dose)

**BY INTRAMUSCULAR INJECTION**

- Child 4 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants

Primary immunisation against pneumococcal infection (third dose)

**BY INTRAMUSCULAR INJECTION**

- Child 12–13 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants

Immunisation against pneumococcal infection (in patients who have not been vaccinated or not completed the primary course)

**BY INTRAMUSCULAR INJECTION**

- Child 12 months–4 years: 0.5 mL for 1 dose, Deltoid muscle is preferred site of injection in young children; anterolateral thigh is preferred site in infants

Immunisation against pneumococcal infection, in immunocompromised or asplenic patients or patients with splenic dysfunction (who have not been vaccinated or not completed the primary course)

**BY INTRAMUSCULAR INJECTION**

- Child 12 months–4 years: 0.5 mL every 2 months for 2 doses

**SYNFLORIX®**

Immunisation against pneumococcal infection

**BY INTRAMUSCULAR INJECTION**

- Child 6 weeks–5 years: Deltoid muscle is preferred site of injection in young children; anterolateral thigh is preferred site in infants (consult product literature)

### UNLICENSED USE

**PREVENAR 13®**

The dose in BNF publications may differ from that in product literature.

### CONTRA-INDICATIONS

Concomitant use of high potency varicella-zoster vaccine (*Zostavax®*) with pneumococcal polysaccharide vaccine (in adults)

### PRESCRIBING AND DISPENSING INFORMATION

**PREVENAR 13®**

Available as part of childhood immunisation schedule from Immform www.immform.dh.gov.uk

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **PNEUMOCOCCAL VACCINE (Non-proprietary)**
  - Pneumococcal polysaccharide vaccine solution for injection 0.5 mL vials | 1 vial £8.32

**Suspension for injection**

- **Prevenar** (Pfizer Ltd)
  - Prevenar 13 vaccine suspension for injection 0.5 mL pre-filled syringes | 1 pre-filled disposable injection £49.10 | 10 pre-filled disposable injection £491.00
- **Synflorix** (GlucoSmithKline UK Ltd)
  - Synflorix vaccine suspension for injection 0.5 mL pre-filled syringes | 1 pre-filled disposable injection £27.60
Rabies vaccine

**INDICATIONS AND DOSE**

**Pre-exposure prophylaxis**

**BY INTRAMUSCULAR INJECTION**

- Child: 1 mL every week for 2 doses (on days 0 and 7), followed by 1 mL after 21 days for 1 dose (on day 28), to be administered in deltoid region or anterolateral thigh in infants, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel

- Adult: 1 mL every week for 2 doses (on days 0 and 7), followed by 1 mL after 21 days for 1 dose (on day 28), to be administered in deltoid region, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel

**Adult (administered on expert advice):**

- BY INTRAMUSCULAR INJECTION

  - Child: 1 mL after 1 year for 1 dose, then 1 mL every 3–5 years for 1 dose, to be administered in deltoid region or anterolateral thigh in infants, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies

  - Adult: 1 mL after 1 year for 1 dose, then 1 mL every 3–5 years for 1 dose, to be administered in deltoid region, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies

**Pre-exposure prophylaxis booster dose (for patients at frequent risk of exposure)**

**BY INTRAMUSCULAR INJECTION**

- Child: 1 mL after 10 years for 1 dose, to be administered in deltoid region or anterolateral thigh in infants

- Adult: 1 mL after 10 years for 1 dose, to be administered in deltoid region

**Post-exposure prophylaxis of fully immunised individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine)**

**BY INTRAMUSCULAR INJECTION**

- Child (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region or anterolateral thigh in infants, rabies immunoglobulin is not necessary

- Adult (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region, rabies immunoglobulin is not necessary

**Post-exposure treatment for unimmunised individuals (or those whose prophylaxis is possibly incomplete)**

**BY INTRAMUSCULAR INJECTION**

- Child (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region or anterolateral thigh in infants, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk

**Adult (administered on expert advice):** 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk

**SIDE-EFFECTS** Paresis

**PREGNANCY** Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis. Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Rotavirus vaccine

**INDICATIONS AND DOSE**

Immunisation against gastro-enteritis caused by rotavirus

**BY MOUTH**

- 6–24 weeks: 1.5 mL at least every 4 weeks for 2 doses, first dose must be given between 6–15 weeks of age; course should be completed before 24 weeks of age (preferably before 16 weeks)

**CONTRA-INDICATIONS** History of intussusception - predisposition to intussusception - severe combined immunosuppression

**CONTRA-INDICATIONS, FURTHER INFORMATION**

Immunosuppression With the exception of severe combined immunodeficiency, rotavirus vaccine is not contra-indicated in immunosuppressed patients—benefit from vaccination is likely to outweigh the risk, if there is any doubt, seek specialist advice.

**CAUTIONS** Diarrhoea (postpone vaccination) - immunosuppressed close contacts - vomiting (postpone vaccination)

**CAUTIONS, FURTHER INFORMATION**

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus.

**SIDE-EFFECTS** Abdominal cramps - abdominal pain - diarrhoea - nausea - vomiting

**PATIENT AND CARER ADVICE**

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close
contacts; carers of a recently vaccinated baby should be  
advised of the need to wash their hands after changing  
the baby’s nappies.

- **MEDICINAL FORMS**
  There can be variation in the licensing of different 
medicines containing the same drug.

**Oral suspension**
- **Rotarix** (GSK)
  Rotarix live oral suspension 1.5ml pre-filled syringes | 1 unit dose (£34.76)

---

**Tick-borne encephalitis vaccine, inactivated**

**INDICATIONS AND DOSE**

- **Initial immunisation against tick-borne encephalitis by intramuscular injection**
  - Child 1-5 years: 0.25 ml for 1 dose, followed by 0.25 ml after 1–3 months for 1 dose, then 0.25 ml after 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region or anterolateral thigh in infants, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
  - Child 6-17 years: 0.5 ml for 1 dose, followed by 0.5 ml after 1–3 months for 1 dose, then 0.5 ml after 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
  - Adult: 0.5 ml for 1 dose, followed by 0.5 ml after 1–3 months for 1 dose, then 0.5 ml after 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

- **Immunisation against tick-borne encephalitis, booster doses by intramuscular injection**
  - Child 1-7 years: First dose to be given within 3 years after initial course completed and then every 3–5 years (consult product literature)
  - Adult: First dose to be given within 3 years after initial course completed and then every 3–5 years (consult product literature)

- **ALLERGY AND CROSS-SENSITIVITY** Individuals with evidence of previous anaphylactic reaction to egg should not be given tick-borne encephalitis vaccine.

---

**Typhoid vaccine**

- **INDICATIONS AND DOSE**
  - **Immunisation against typhoid fever by intramuscular injection**
  - **Adult**: 0.5 ml for 1 dose, should be given at least 2 weeks before potential exposure to typhoid infection
  - **By mouth**
    - **Adult**: 1 capsule every 2 days for 3 doses

- **CONTRA-INDICATIONS**
  - With oral use acute gastro-intestinal illness

- **INTERACTIONS**
  - Appendix 1 (vaccines).

  Oral typhoid vaccine is inactivated by concomitant administration of antibacterials or antimalarials:
  - antibacterials should be avoided for 3 days before and after oral typhoid vaccination;
  - **Mefloquine** should be avoided for at least 12 hours before or after oral typhoid;
  - For other antimalarials vaccination with oral typhoid vaccine should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which may be given concomitantly).

- **SIDE-EFFECTS**
  - With oral use abdominal cramps · abdominal pain · diarrhoea · nausea · vomiting

- **DIRECTIONS FOR ADMINISTRATION** Capsule should be taken one hour before a meal. Swallow as soon as possible after placing in mouth with a cold or lukewarm drink.

- **HANDLING AND STORAGE**
  - With oral use It is important to store capsules in a refrigerator.

- **PATIENT AND CARER ADVICE**
  - With oral use Patients or carers should be given advice on how to administer and store typhoid vaccine capsules.

- **MEDICINAL FORMS**
  There can be variation in the licensing of different medicines containing the same drug.

**Gastro-resistant capsule**

- **CAUTIONARY AND ADVISORY LABELS** 25
  - **Vivotif** (PaxVax Ltd)
    Vivotif vaccine gastro-resistant capsules | 3 capsule (£14.77)

- **Solution for injection**
  - **Typhervax** (GSK)
    Typhervax Vi capsular polysaccharide 50 microgram per 1 ml Typhervax 25 micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection (£9.93) | 10 pre-filled disposable injection (£93.32)
  - **Typhim VI** (canonil pasteur MSD Ltd)
    Typhim VI capsular polysaccharide 50 microgram per 1 ml Typhim VI 25 micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection (£9.30) | 10 pre-filled disposable injection (£93.00)
Varicella-zoster vaccine

**INDICATIONS AND DOSE**

**VARILRIX®**

Prevention of varicella infection (chickenpox)

**BY SUBCUTANEOUS INJECTION**
- Child 1-17 years: 0.5 mL every 4–6 weeks for 2 doses, to be administered preferably into the deltoid region
- Adult: 0.5 mL every 4–6 weeks for 2 doses, to be administered preferably into the deltoid region

**VARIVAX®**

Prevention of varicella infection (chickenpox)

**BY SUBCUTANEOUS INJECTION OR BY INTRAMUSCULAR INJECTION**
- Child 1-12 years: 0.5 mL for 2 doses, interval of at least 4 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh)
- Child 13-17 years: 0.5 mL every 4–8 weeks for 2 doses, to be administered preferably into the deltoid region (or higher anterolateral thigh in children)
- Adult: 0.5 mL every 4–8 weeks for 2 doses, to be administered preferably into the deltoid region

Prevention of varicella infection (chickenpox) in children with asymptomatic HIV infection

**BY SUBCUTANEOUS INJECTION OR BY INTRAMUSCULAR INJECTION**
- Child 1-12 years: 0.5 mL every 12 weeks for 2 doses, to be administered into the deltoid region (or higher anterolateral thigh)

**ZOSTAVAX®**

Prevention of herpes zoster (shingles)

**BY SUBCUTANEOUS INJECTION**
- Adult 70-79 years: 0.65 mL for 1 dose, to be administered preferably into the deltoid region

**CAUTIONS**

Post-vaccination close contact with susceptible individuals

**CAUTIONS, FURTHER INFORMATION**

Rarely, the varicella–zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:
- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

**Administration with MMR vaccine**

Varicella–zoster and MMR vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

**SIDE-EFFECTS**

- **CONTRA-INDICATIONS**
  - Children under 6 months - history of thymus dysfunction

- **CAUTIONS**
  - Individuals over 60 years—greater risk of vaccine-associated adverse effects (in adults)

- **CAUTIONS, FURTHER INFORMATION**
  - Administration with MMR vaccine
  - Yellow fever and MMR vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

- **SIDE-EFFECTS**
  - Neurotropic disease - viscerotropic disease

- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Vaccine-associated adverse effects
  - Very rare adverse effects, such as viscerotropic disease (yellow-fever vaccine-associated viscerotropic disease, YEL-AVD), a syndrome which may include metabolic acidosis, muscle and liver cirrhosis, and multi-organ failure. Neurological disorders (yellow fever vaccine-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These very rare adverse effects usually occur after the first dose of yellow fever vaccine in those with no previous immunity.

- **ALLERGY AND CROSS-SENSITIVITY**
  - Yellow fever vaccine should only be considered under the guidance of a specialist in individuals with evidence of previous anaphylactic reaction to egg.

- **PREGNANCY**
  - Live yellow fever vaccine should not be given during pregnancy because there is a theoretical risk of fetal infection. Pregnant women should be advised not to travel to areas at high risk of yellow fever. If exposure cannot be avoided during pregnancy, then the vaccine should be given if the risk from disease in the mother outweighs the risk to the fetus from vaccination.

- **BREAST FEEDING**
  - Avoid; seek specialist advice if exposure to virus cannot be avoided.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
Chapter 15

Anaesthesia

1 General anaesthesia

Anaesthetic adjuvants

Several different types of drug are given together during general anaesthesia. Anaesthesia is induced with either a volatile drug given by inhalation or with an intravenously administered drug; anaesthesia is maintained with an intravenous or inhalational anaesthetic. Analgesics, usually short-acting opioids, are also used. The use of neuromuscular blocking drugs necessitates intermittent positive-pressure ventilation. Following surgery, anticholinesterases can be given to reverse the effects of neuromuscular blocking drugs; specific antagonists can be used to reverse central and respiratory depression caused by some drugs used in surgery. A local topical anaesthetic can be used to reduce pain at the injection site.

Individual requirements vary considerably and the recommended doses are only a guide. Smaller doses are indicated in ill, shocked, or debilitated patients and in significant hepatic impairment, while robust individuals may require larger doses. The required dose of induction agent may be less if the patient has been premedicated with a sedative agent or if an opioid analgesic has been used.

Intravenous anaesthetics

Intravenous anaesthetics may be used either to induce anaesthesia or for maintenance of anaesthesia throughout surgery. Intravenous anaesthetics nearly all produce their effect in one arm-brain circulation time. Extreme care is required in surgery of the mouth, pharynx, or larynx where the airway may be difficult to maintain (e.g. in the presence of a tumour in the pharynx or larynx).

To facilitate tracheal intubation, induction is usually followed by a neuromuscular blocking drug or a short-acting opioid.

The doses of all intravenous anaesthetic drugs should be titrated to effect (except when using ‘rapid sequence induction’); lower doses may be required in premedicated patients.

Total intravenous anaesthesia

This is a technique in which major surgery is carried out with all drugs given intravenously. Respiration can be spontaneous, or controlled with oxygen-enriched air. Neuromuscular blocking drugs can be used to provide relaxation and prevent reflex muscle movements. The main problem to be overcome is the assessment of depth of anaesthesia. Target Controlled Infusion (TCI) systems can be used to titrate intravenous anaesthetic infusions to predicted plasma-drug concentrations in ventilated adult patients.

Drugs used for intravenous anaesthesia

Propofol p. 1095, the most widely used intravenous anaesthetic, can be used for induction or maintenance of anaesthesia in adults and children, but it is not commonly used in neonates. Propofol is associated with rapid recovery and less hangover effect than other intravenous anaesthetics. Propofol can also be used for sedation during diagnostic procedures and sedation in adults in intensive care.

Thiopental sodium p. 412 is a barbiturate that is used for induction of anaesthesia, but has no analgesic properties. Induction is generally smooth and rapid, but dose-related cardiovascular and respiratory depression can occur. Awakening from a moderate dose of thiopental sodium is rapid because the drug redistributes into other tissues, particularly fat. However, metabolism is slow and sedative effects can persist for 24 hours. Repeated doses have a cumulative effect and recovery is much slower. Etomidate p. 1095 is an intravenous agent associated with rapid recovery without a hangover effect. Etomidate causes less hypotension than thiopental sodium and propofol during induction. It produces a high incidence of extraneous muscle movements, which can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Ketamine p. 1110 is used rarely. Ketamine causes less hypotension than thiopental sodium and propofol during induction. It is used mainly for paediatric anaesthesia, particularly when repeated administration is required (such as for serial burns dressings); recovery is relatively slow and there is a high incidence of extraneous muscle movements. The main disadvantage of ketamine is the high incidence of hallucinations, nightmares, and other transient psychotic effects; these can be reduced by a benzodiazepine such as diazepam p. 267 or midazolam p. 414.

Inhalational anaesthetics

Inhalational anaesthetics include gases and volatile liquids. Gaseous anaesthetics require suitable equipment for storage and administration. Volatile liquid anaesthetics are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times. Higher concentrations of oxygen (greater than 30%) are usually required during inhalational anaesthesia when nitrous oxide p. 1096 is being administered.

Volatile liquid anaesthetics

Volatile liquid anaesthetics can be used for induction and maintenance of anaesthesia, and following induction with an intravenous anaesthetic.

Isoflurane p. 1098 is a volatile liquid anaesthetic. Heart rhythm is generally stable during isoflurane anaesthesia, but heart-rate can rise, particularly in younger patients.
Systemic arterial pressure and cardiac output can fall, owing to a decrease in systemic vascular resistance. Muscle relaxation occurs and the effects of muscle relaxant drugs are potentiated. Isoflurane is the preferred inhalational anaesthetic for use in obstetrics. Desflurane p. 1097 is a rapid acting volatile liquid anaesthetic; it is reported to have about one-fifth the potency of isoflurane. Emergence and recovery from anaesthesia are particularly rapid because of its low solubility. Desflurane is not recommended for induction of anaesthesia as it is irritant to the upper respiratory tract. Sevoflurane p. 1098 is a rapid acting volatile liquid anaesthetic and is more potent than desflurane. Emergence and recovery are particularly rapid, but slower than desflurane. Sevoflurane is non-irritant and is therefore often used for inhalational induction of anaesthesia; it has little effect on heart rhythm compared with other volatile liquid anaesthetics.

**Nitrous oxide**

Nitrous oxide p. 1096 is used for maintenance of anaesthesia and, in sub-anaesthetic concentrations, for analgesia. For *anaesthesia*, nitrous oxide is commonly used in a concentration of 50 to 66% in oxygen as part of a balanced technique in association with other inhalational or intravenous agents. Nitrous oxide is unsatisfactory as a sole anaesthetic owing to lack of potency, but is useful as part of a combination of drugs since it allows a significant reduction in dosage.

For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (Entonox®, Equanox®) is used. Self-administration using a demand valve is popular in obstetric practice, for changing painful dressings, as an aid to postoperative physiotherapy, and in emergency ambulances.

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

**Malignant hyperthermia**

Malignant hyperthermia is a rare but potentially lethal complication of anaesthesia. It is characterised by a rapid rise in temperature, increased muscle rigidity, tachycardia, and acidosis. The most common triggers of malignant hyperthermia are the volatile anaesthetics. Suxamethonium chloride (Siprad, Equanox) has also been implicated, but malignant hyperthermia is more likely if it is given following a volatile anaesthetic. Volatile anaesthetics and suxamethonium chloride should be avoided during anaesthesia in patients at high risk of malignant hyperthermia. Dantrolene sodium p. 1101 is used in the treatment of malignant hyperthermia.

**Surgery and long-term medication**

The risk of losing disease control on stopping long-term medication before surgery is often greater than the risk posed by continuing it during surgery. It is vital that the anaesthetist knows about all drugs that a patient is (or has been) taking.

Patients with adrenal atrophy resulting from long-term corticosteroid use may suffer a precipitous fall in blood pressure unless corticosteroid cover is provided during anaesthesia and in the immediate postoperative period. Anaesthetists must therefore know whether a patient is, or has been, receiving corticosteroids (including high-dose inhaled corticosteroids).

Other drugs that should normally not be stopped before surgery include antiepileptics, antiparkinsonian drugs, antipsychotics, anxiolytics, bronchodilators, cardiovascular drugs (but see potassium-sparing diuretics, angiotensin-converting enzyme inhibitors, and angiotensin-II receptor antagonists), glaucoma drugs, immunosuppressants, drugs of dependence, and thyroid or antithyroid drugs. Expert advice is required for patients receiving antivirals for HIV infection. See general advice on surgery in diabetic patients.

Patients taking antiplatelet medication or an oral anticoagulant present an increased risk for surgery. In these circumstances, the anaesthetist and surgeon should assess the relative risks and decide jointly whether the antiplatelet or the anticoagulant drug should be stopped or replaced with heparin (unfractionated) or low molecular weight heparin therapy.

Drugs that should be stopped before surgery include combined oral contraceptives; for advice on hormone replacement therapy. MAOIs can have important interactions with some drugs used during surgery, such as pethidine hydrochloride. Tricyclic antidepressants need not be stopped, but there may be an increased risk of arrhythmias and hypotension (and dangerous interactions with vasopressor drugs); therefore, the anaesthetist should be informed if they are not stopped. Lithium should be stopped 24 hours before major surgery but the normal dose can be continued for minor surgery (with careful monitoring of fluids and electrolytes). Potassium-sparing diuretics may need to be withheld on the morning of surgery because hyperkalaemia may develop if renal perfusion is impaired or there is tissue damage. Angiotensin-converting enzyme (ACE) inhibitors and angiotensin-II receptor antagonists can be associated with severe hypotension after induction of anaesthesia; these drugs may need to be discontinued 24 hours before surgery. Herbal medicines may be associated with adverse effects when given with anaesthetic drugs and consideration should be given to stopping them before surgery.

**Anaesthesia, sedation, and resuscitation in dental practice**

Sedation for dental procedures should be limited to conscious sedation. Diazepam p. 267 and temazepam p. 420 are effective anxiolytics for dental treatment in adults.

For details of anaesthesia, sedation, and resuscitation in dental practice see *A Conscious Decision: A review of the use of general anaesthesia and conscious sedation in primary dental care*; report by a group chaired by the Chief Medical Officer and Chief Dental Officer, July 2000 and associated documents. Further details can also be found in the *Conscious Sedation in the Provision of Dental Care*; report of an Expert Group on Sedation for Dentistry (commissioned by the Department of Health), 2003.

Guidance is also included in *Conscious Sedation in Dentistry: Dental Clinical Guidance*, Scottish Dental Clinical Effectiveness Programme, June 2012 (www.sdcop.org.uk).
ANAESTHETICS (GENERAL, INTRAVENOUS)

Etomidate

INDICATIONS AND DOSE

Induction of anaesthesia

BY SLOW INTRAVENOUS INJECTION

- Adult: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (over 60 seconds in patients in whom hypotension might be hazardous)
- Elderly: 150–200 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (over 60 seconds in patients in whom hypotension might be hazardous)

Important safety information

Etomidate should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

★ CAUTIONS

Acute porphyrias p. 864 (avoid) • acute circulatory failure (shock) • adrenal insufficiency • cardiovascular disease • elderly • fixed cardiac output • hypovolaemia

CAUTIONS, FURTHER INFORMATION

Adrenal insufficiency

Etomidate suppresses adrenocortical function, particularly during continuous administration, and it should not be used for maintenance of anaesthesia. It should be used with caution in patients with underlying adrenal insufficiency, for example, those with sepsis.

★ INTERACTIONS ➔ Appendix 1 (anaesthetics, general).

★ SIDE-EFFECTS

- Common or very common
  - Apathy
  - Hypertension
  - Hypotension
  - Nausea
  - Rash
  - Stridor
  - Vomiting

- Uncommon
  - Arrhythmias
  - Cough
  - Hiccups
  - Hypersalivation
  - Hyperventilation

- Frequency unknown
  - AV block
  - Cardiac arrest
  - Extraneous muscle movement (high incidence)
  - Pain on injection
  - Respiratory depression
  - Seizures
  - Shivering
  - Stevens-Johnson syndrome

SIDE-EFFECTS, FURTHER INFORMATION

Pain on injection: Can be reduced by injecting into a larger vein or by giving an opioid analgesic just before induction.

Extraneous muscle movement

Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

★ PREGNANCY

May depress neonatal respiration if used during delivery.

★ BREAST FEEDING

Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

★ HEPATIC IMPAIRMENT

Reduce dose in liver cirrhosis.

★ DIRECTIONS FOR ADMINISTRATION

To be administered over 30–60 seconds (over 60 seconds in patients in whom hypotension might be hazardous).

★ PATIENT AND CARER ADVICE

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to at least 24 hours after administration. Responsible persons should be available to take patients home. The dangers of taking alcohol should also be emphasised.

★ MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

EXCIPIENTS: May contain Propylene glycol

- Hypnomidate (Janssen-Cilag Ltd)
  - Etomidate 2 mg per 1 ml Hypnomidate 20mg/10ml solution for injection ampoules | 5 ampoules £6.00

Emulsion for injection

- ETOMIDATE (Non-proprietary)
  - Etomidate 2 mg per 1 ml Etomidate-Lipuro 20mg/10ml emulsion for injection ampoules | 10 ampoules £15.62

Propofol

INDICATIONS AND DOSE

Induction of anaesthesia using 0.5% or 1% injection

BY SLOW INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION

- Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response. For debilitated patients use dose for 55 years and over
- Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

Induction of anaesthesia using 2% injection

BY INTRAVENOUS INFUSION

- Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response. For debilitated patients use dose for 55 years and over
- Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

Maintenance of anaesthesia using 1% injection

INITIALLY BY INTRAVENOUS INFUSION

- Adult: Usual dose 4–12 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response, for debilitated patients use dose for elderly
- Elderly: Usual dose 3–6 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response

Maintenance of anaesthesia using 2% injection

BY INTRAVENOUS INFUSION

- Adult: Usual dose 4–12 mg/kg/hour, for debilitated patients use dose for elderly
- Elderly: Usual dose 3–6 mg/kg/hour

Sedation of ventilated patients in intensive care using 1% or 2% injection

BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: Usual dose 0.3–4 mg/kg/hour, adjusted according to response

Induction of sedation for surgical and diagnostic procedures using 0.5% or 1% injection

BY SLOW INTRAVENOUS INJECTION

- Adult: Initially 0.5–1 mg/kg, to be administered over 1–5 minutes, dose and rate of administration adjusted according to desired level of sedation and response

Maintenance of sedation for surgical and diagnostic procedures using 0.5% or 1% injection

INITIALLY BY INTRAVENOUS INFUSION

- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration
1096 General anaesthesia

Maintenance of sedation for surgical and diagnostic procedures using 2% injection
INITIALLY BY INTRAVENOUS INFUSION
- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg using 0.5% or 1% injection (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration.

Important safety information
Propofol should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- CAUTIONS Acute circulatory failure (shock) - cardiac impairment - cardiovascular disease - elderly - epilepsy - fixed cardiac output - hypotension - hypervolaemia - raised intracranial pressure - respiratory impairment
- INTERACTIONS → Appendix 1 (anaesthetics, general).
- SIDE-EFFECTS
  - Common or very common Headache - hypotension - tachycardia - transient apnoea
  - Uncommon Phlebitis - thrombosis
  - Rare Anaphylaxis - arrhythmia - convulsions (onset can be delayed) - delayed recovery from anaesthesia - euphoria
  - Very rare Discoloration of urine - pancreatitis - pulmonary oedema - sexual disinhibition
- FREQUENCY NOT KNOWN Bradycardia - pain on intravenous injection - propofol infusion syndrome - significant extraneous muscle movements

SIDE-EFFECTS, FURTHER INFORMATION
Bradycardia Bardycardia may be profound and may be treated with intravenous administration of an antimuscarinic drug.
Extraneous muscle movement Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Pain on injection Can be reduced by intravenous lidocaine.

Propofol infusion syndrome Prolonged infusion of propofol doses exceeding 4 mg/kg/hour may result in potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis, hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure.

- PREGNANCY Max. dose for maintenance of anaesthesia 5 mg/kg/hour. May depress neonatal respiration if used during delivery.
- BREAST FEEDING Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- HEPATIC IMPAIRMENT Use with caution.
- RENAL IMPAIRMENT Use with caution.
- MONITORING REQUIREMENTS Monitor blood-lipid concentration if risk of fat overload or if sedation longer than 3 days.
- DIRECTIONS FOR ADMINISTRATION Shake before use; microbiological filter not recommended; may be administered via a Y-piece close to injection site co-administered with Glucose 5% or Sodium chloride 0.9%. 0.5% emulsion for injection or intermittent infusion; may be administered undiluted, or diluted with Glucose 5% or Sodium chloride 0.9%; dilute to a concentration not less than 1 mg/mL. 1% emulsion for injection or infusion; may be administered undiluted, or diluted with Glucose 5% (Diprivan®) or (Propofol-Lipuro®) or Sodium chloride 0.9% (Propofol-Lipuro® only); dilute to a concentration not less than 2 mg/mL; use within 6 hours of preparation. 2% emulsion for infusion; do not dilute.

- PATIENT AND CARER ADVICE Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to at least 24 hours after administration. Responsible persons should be available to take patients home. The dangers of taking alcohol should also be emphasised.
- MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

Emulsion for injection
- PROPOFOL (Non-proprietary) Propofol 5 mg per 1 ml Propofol-Lipuro 0.5% emulsion for injection 20ml ampoules | 5 ampoule (PSt) £14.71
- Diprivan (AstraZeneca UK Ltd) Propofol 10 mg per 1 ml Diprivan 1% emulsion for injection 20ml ampoules | 5 ampoule (PSt) £15.36 (Hospital only)

Emulsion for infusion
- Diprivan (AstraZeneca UK Ltd) Propofol 10 mg per 1 ml Diprivan 1% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection (PSt) £10.68
- Propofol 20 mg per 1 ml Diprivan 2% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection (PSt) £15.16

ANAESTHETICS (VOLATILE LIQUID)
Nitrous oxide

INDICATIONS AND DOSE
Maintenance of anaesthesia in conjunction with other anaesthetic agents
BY INHALATION
- Adult: 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen
Analgesia
BY INHALATION
- Adult: Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient’s needs

Important safety information
Nitrous oxide should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- CAUTIONS Entrapped air following recent underwater dive - pneumothorax - presence of intracranial air after head injury - recent intra-ocular gas injection
- CAUTIONS, FURTHER INFORMATION Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

INTERACTIONS → Appendix 1 (anaesthetics, general).
- SIDE-EFFECTS Depression of white cell formation - hypoxia - megaloblastic anaemia - neurological toxic effects
SIDE-EFFECTS, FURTHER INFORMATION
Hypoxia Hypoxia can occur immediately following the administration of nitrous oxide; additional oxygen should always be given for several minutes after stopping the flow of nitrous oxide.

Prolonged exposure Exposure of patients to nitrous oxide for prolonged periods, either by continuous or by
intermittent administration, may result in megaloblastic anaemia owing to interference with the action of vitamin B₁₂; neurological toxic effects can occur without preceding overt haematological changes. Depression of white cell formation may also occur.

- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **MONITORING REQUIREMENTS**
  - Assessment of plasma-vitamin B₁₂ concentration should be considered in those at risk of deficiency, including the elderly, those who have a poor, vegetarian, or vegan diet, and those with a history of anaemia.
  - Nitrous oxide should not be given continuously for longer than 24 hours or more frequently than every 4 days without close supervision and haematological monitoring.

- **DIRECTIONS FOR ADMINISTRATION** For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (Entonox® Equanox®) is used.

- **HANDLING AND STORAGE** Exposure of theatre staff to nitrous oxide should be minimised (risk of serious side-effects).

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.

### Inhalation gas

- **NITROUS OXIDE (Non-proprietary)**
  - Nitrous oxide 1 ml per 1 ml
  - Nitrous oxide cylinders size E | 1800 litre (no price available)
  - Medical Nitrous Oxide cylinders size D | 900 litre (no price available)
  - Medical Nitrous Oxide cylinders size G | 9000 litre (no price available)
  - Nitrous oxide cylinders size F | 3600 litre (no price available)
  - Nitrous oxide cylinders size J | 18000 litre (no price available)
  - Nitrous oxide cylinders size G | 9000 litre (no price available)
  - Nitrous oxide cylinders size C | 450 litre (no price available)
  - Medical Nitrous Oxide cylinders size F | 3600 litre (no price available)
  - Nitrous oxide cylinders size D | 900 litre (no price available)
  - Medical Nitrous Oxide cylinders size E | 1800 litre (no price available)

### Volatile halogenated anaesthetics

**Important safety information**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Susceptibility to malignant hyperthermia
- **CAUTIONS** Can trigger malignant hyperthermia • raised intracranial pressure (can increase cerebrospinal pressure)
- **SIDE-EFFECTS**
  - Common or very common • Arrhythmias • cardiorespiratory depression • hypotension
  - Frequency not known • Convulsions • mood changes (that can last several days)
- **ALLERGY AND CROSS-SENSITIVITY** Can cause hepatotoxicity in those sensitised to halogenated anaesthetics.

### DIRECTIONS FOR ADMINISTRATION

Volatile liquid anaesthetics are administered using calibrated vapourisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times.

- **PATIENT AND CARER ADVICE** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of driving or undertaking skilled tasks afterwards. For a short general anaesthetic, the risk extends to at least 24 hours after administration. Responsible persons should be available to take patients home. The dangers of taking alcohol should also be emphasised.

### Desflurane

#### INDICATIONS AND DOSE

**Induction of anaesthesia (but not recommended)**

**BY INHALATION**
- **Adult:** 4–11%, to be inhaled through specifically calibrated vaporiser

**Maintenance of anaesthesia (in nitrous oxide–oxygen)**

**BY INHALATION**
- **Adult:** 2–6%, to be inhaled through a specifically calibrated vaporiser

**Maintenance of anaesthesia (in oxygen or oxygen-enriched air)**

**BY INHALATION**
- **Adult:** 2.5–8.5%, to be inhaled through a specifically calibrated vaporiser

**Important safety information**

Desflurane should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **INTERACTIONS** ➜ Appendix 1 (anaesthetics, general).
- **SIDE-EFFECTS** Apnoea • breath-holding • cough • increased secretions • laryngospasm
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **PATIENT AND CARER ADVICE** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to at least 24 hours after administration. Responsible persons should be available to take patients home. The dangers of taking alcohol should also be emphasised.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Inhalation vapour**

- **Suprane** (Baxter Healthcare Ltd)
  - Desflurane 1 ml per 1 ml | Suprane volatile liquid | 240 ml (no price available) (Hospital only)
**Isoflurane**

**INDICATIONS AND DOSE**

**Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)**

**BY INHALATION**

- Adult: Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser

**Maintenance of anaesthesia (in nitrous oxide-oxygen)**

**BY INHALATION**

- Adult: 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1 % may be required when given with oxygen alone

**Breast-feeding**

- May depress neonatal respiration if used during delivery.

**Pregnancy**

- Caution should also be emphasised.

**Renal impairment**

- Use with caution.

**Patient and carer advice**

- Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to at least 24 hours after administration. Responsible persons should be available to take patients home. The dangers of taking alcohol should also be emphasised.

**Medicinal forms**

There can be variation in the licensing of different medicines containing the same drug.

**Inhalation vapour**

- **Isoflurane (non-proprietary)**
  - Isoflurane 1 ml per 1 ml (Baxter Healthcare Ltd) $£47.50 (Hospital only)
  - Isoflurane volatile liquid 1 ml (Baxter Healthcare Ltd) $£35.29 (Hospital only)

**Sevoflurane**

**Indications and dose**

**Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)**

**By Inhalation**

- Adult: Initially 0.5–1 %, adjusted according to response, then increased to up to 8 %, to be administered using specifically calibrated vaporiser

**Maintenance of anaesthesia (in oxygen or nitrous oxide-oxygen)**

**By Inhalation**

- Adult: 0.5–3 %, adjusted according to response, to be administered using specifically calibrated vaporiser

**Important safety information**

Sevoflurane should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

**Caution**

- Susceptibility to QT-interval prolongation

**Interactions**

- May depress neonatal respiration if used during delivery.

**Breast-feeding**

Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

**Renal impairment**

Use with caution.

**Patient and carer advice**

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to at least 24 hours after administration. Responsible persons should be available to take patients home. The dangers of taking alcohol should also be emphasised.

**Pre-medication and peri-operative drugs**

**Drugs that affect gastric pH**

Regurgitation and aspiration of gastric contents (Mendelson’s syndrome) can be an important complication of general anaesthesia, particularly in obstetrics and during emergency surgery, and requires prophylaxis against acid aspiration. Prophylaxis is also needed in those with gastro-oesophageal reflux disease and in circumstances where gastric emptying may be delayed.

A H[subscript:2]-receptor antagonist can be used before surgery to increase the pH and reduce the volume of gastric fluid. It does not affect the pH of fluid already in the stomach and this limits its value in emergency procedures; an oral H[subscript:2]-receptor antagonist can be given 1–2 hours before the procedure. Antacids are frequently used to neutralise the acidity of the fluid already in the stomach; ‘clear’ (non-particulate) antacids such as sodium citrate are preferred.
Anaesthetic adjuvants 1099

Antimuscarinic drugs
Antimuscarinic drugs are used (less commonly nowadays) as premedicants to dry bronchial and salivary secretions which are increased by intubation, upper airway surgery, or some inhalational anaesthetics. They are also used before or with neostigmine p. 912 to prevent bradycardia, excessive salivation, and other muscarinic actions of neostigmine. They also prevent bradycardia and hypotension associated with drugs such as propofol and suxamethonium chloride.

Atropine sulphate below is now rarely used for premedication but still has an emergency role in the treatment of vagotonic side-effects. Atropine sulphate may have a role in acute arrhythmias after myocardial infarction.

Hyoscine hydrobromide p. 344 reduces secretions and also provides a degree of amnesia, sedation, and anti-emesis. Unlike atropine sulphate it may produce bradycardia rather than tachycardia.

Glycopyrronium bromide p. 1100 reduces salivary secretions. When given intravenously it produces less tachycardia than atropine sulphate. It is widely used with neostigmine for reversal of non-depolarising neuromuscular blocking drugs.

Phenothiazines do not effectively reduce secretions when used alone.

Sedative drugs
Fear and anxiety before a procedure (including the night before) can be minimised by using a sedative drug, usually a benzodiazepine. Premedication may also augment the action of anaesthetics and provide some degree of pre-operative amnesia. The choice of drug depends on the individual, the nature of the procedure, the anaesthetic to be used, and other prevailing circumstances such as outpatients, obstetrics, and availability of recovery facilities. The choice also varies between elective and emergency procedures.

Premeditants can be given the night before major surgery; a further, smaller dose may be required before surgery. Alternatively, the first dose may be given on the day of the procedure.

Benzodiazepines
Benzodiazepines possess useful properties for premedication including relief of anxiety, sedation, and amnesia; short-acting benzodiazepines taken by mouth are the most common premedicants. Benzodiazepines are also used in intensive care units for sedation, particularly in those receiving assisted ventilation. Flumazenil p. 1132 is used to antagonise the effects of benzodiazepines.

Diazepam p. 267 is used to produce mild sedation with amnesia. It is a long-acting drug with active metabolites and a second period of drowsiness can occur several hours after its administration. Peri-operative use of diazepam in children is not recommended; its effect and timing of response are unreliable and paradoxical effects may occur.

Diazepam is relatively insoluble in water and preparations formulated in organic solvents are painful on intravenous injection and give rise to a high incidence of venous thrombosis (which may not be noticed for several days after the injection). Intramuscular injection of diazepam is painful and absorption is erratic. An emulsion formulated for intravenous injection is less irritant and reduces the risk of venous thrombosis; it is not suitable for intramuscular injection.

Temazepam p. 420 is given by mouth for premedication and has a shorter duration of action and a more rapid onset than oral diazepam; anxiolytic and sedative effects last about 90 minutes although there may be residual drowsiness.

Lorazepam p. 412 produces more prolonged sedation than temazepam and it has marked amnesic effects.

Midazolam p. 414 is a water-soluble benzodiazepine that is often used in preference to intravenous diazepam; recovery is faster from diazepam, but may be significantly longer in the elderly, in patients with a low cardiac output, or after repeated dosing. Midazolam is associated with profound sedation when high doses are given intravenously or when it is used with certain other drugs.

Other drugs for sedation
Dexmedetomidine p. 1110 and clonidine hydrochloride p. 137 are alpha2-adrenergic agonists with sedative properties. Dexmedetomidine p. 1110 is licensed for the sedation of patients receiving intensive care who need to remain responsive to verbal stimulation. Clonidine hydrochloride p. 137 [unlicensed indication] can be used by mouth or by intravenous injection as a sedative agent when adequate sedation cannot be achieved with standard treatment.

Antagonists for central and respiratory depression
Respiratory depression is a major concern with opioid analgesics and it may be treated by artificial ventilation or be reversed by naloxone hydrochloride p. 1133. Naloxone hydrochloride will immediately reverse opioid-induced respiratory depression but the dose may have to be repeated because of the short duration of action of naloxone hydrochloride; however, naloxone hydrochloride will also antagonise the analgesic effect.

Flumazenil p. 1132 is a benzodiazepine antagonist for the reversal of the central sedative effects of benzodiazepines after anaesthetic and similar procedures. Flumazenil has a shorter half-life and duration of action than diazepam or midazolam so patients may become resedated.

Doxapram hydrochloride p. 261 is a central and respiratory stimulant but is of limited value in anaesthesia.

ANTIMUSCARINICS

Atropine sulfate
The properties listed below are those particular to the drug only. For properties common to the class, see Antimuscarinics Systemic, p. 668.

INDICATIONS AND DOSE
Premedication
BY INTRAVENOUS INJECTION
– Child 12-17 years: 300–600 micrograms, to be administered immediately before induction of anaesthesia
– Adult: 300–600 micrograms, to be administered immediately before induction of anaesthesia

BY SUBCUTANEOUS INJECTION OR BY INTRAMUSCULAR INJECTION
– Child 12-17 years: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia
– Adult: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia

Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block
BY INTRAVENOUS INJECTION
– Child 12-17 years: 0.6–1.2 mg
– Adult: 0.6–1.2 mg

Intra-operative bradycardia
BY INTRAVENOUS INJECTION
– Child 12-17 years: 300–600 micrograms, larger doses may be used in emergencies
– Adult: 300–600 micrograms, larger doses may be used in emergencies
1100 General anaesthesia

Treatment of poisoning by organophosphorus insecticide or nerve agent (in combination with pralidoxime chloride)

**BY INTRAVENOUS INJECTION**
- Child: 20 micrograms/kg every 5–10 minutes (max. per dose 2 mg) until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning
- Adult: 2 mg every 5–10 minutes until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning

**EXCEPTIONS TO LEGAL CATEGORY**
- With oral use

**MONITORING REQUIREMENTS**
- Bowel colic in palliative care

**PREGNANCY**
- Not licensed for use in children under 12 years for intra-operative bradycardia or by intravenous route for premedication. Not licensed for the control of muscarinic side-effects of edrophonium in reversal of competitive neuromuscular block.

**UNLICENSED USE**
- With use in children

**Important safety information**
Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

**INDICATIONS AND DOSE**

1. Premedication at induction

**BY INTRAMUSCULAR INJECTION OR BY INTRAVENOUS INJECTION**
- Adult: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms)

2. Intra-operative bradycardia

**BY INTRAVENOUS INJECTION**
- Adult: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms), repeated if necessary

3. Control of muscarinic side-effects of neostigmine in reversal of non-depolarising neuromuscular block

**BY INTRAVENOUS INJECTION**
- Adult: 10–15 micrograms/kg, alternatively, 200 micrograms per 1 mg of neostigmine to be administered

4. Bowel colic in palliative care

**EXCEPTIONS TO LEGAL CATEGORY**
- With intravenous use or intravenous use or subcutaneous use

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

Tablet

- **ATROPINE SULFATE (Non-proprietary)**
  - Atropine sulfate 600 microgram tablets | 28 tablet (P) £25.75 DT price = £25.75

Solution for injection

- **ATROPINE SULFATE (Non-proprietary)**
  - Atropine sulfate 200 microgram per 1 ml Atropine 1mg/5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (P) £7.08 | 10 pre-filled disposable injection (P) £130.00
  - Atropine sulfate 300 microgram per 1 ml Atropine 3mg/10ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (P) 16.78–17.08 | 10 pre-filled disposable injection (P) £130.00

**Atropine sulfate 400 microgram per 1 ml**
- Atropine 400microgram/1ml solution for injection ampoules | 10 ampoule (P) £64.55

**Atropine sulfate 600 microgram per 1 ml**
- Atropine 600microgram/1ml solution for injection ampoules | 10 ampoule (P) £11.71 DT price = £11.69
- Atropine 600micrograms/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (P) £7.08

**Atropine sulfate 1 mg per 1 ml**
- Atropine 1mg/1ml solution for injection ampoules | 10 ampoule (P) £54.91

**Glycopyrronium bromide**

(Glycopyrrolate)

The properties listed below are those particular to the drug only. For properties common to the class, see Antimuscarinics Systemic, p. 668.

**INDICATIONS AND DOSE**

**Premedication at induction**

**BY INTRAMUSCULAR INJECTION OR BY INTRAVENOUS INJECTION**
- Child: 40 micrograms/kg (max. per dose 3 mg)
- Adult: 3 mg

**Excessive bradycardia associated with beta-blocker use**

**BY INTRAVENOUS INJECTION**
- Adult: 0.6–2.4 mg in divided doses (max. per dose 600 micrograms)

**Bradycardia following myocardial infarction (particularly if complicated by hypotension)**

**BY INTRAVENOUS INJECTION**
- Adult: 500 micrograms every 3–5 minutes; maximum 3 mg

**Symptomatic relief of gastro-intestinal disorders characterised by smooth muscle spasm**

**BY MOUTH**
- Adult: 0.6–1.2 mg daily, dose to be taken at night

**LESS SUITABLE FOR PRESCRIBING**
- With oral use

**Important safety information**
Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

**Tablet**

- **GLICYCYPYRRIUM BROMIDE (Non-proprietary)**
  - Glycopyrronium bromide 1 mg tablets | 30 tablet (P) £102.60–£113.69 DT price = £110.85
  - Glycopyrronium bromide 2 mg tablets | 30 tablet (P) £131.10–£145.26 DT price = £141.63
1.2 Malignant hyperthermia

MUSCLE RELAXANTS

Dantrolene sodium

**DRUG ACTION** Acts on skeletal muscle cells by interfering with calcium efflux, thereby stopping the contractile process.

**INDICATIONS AND DOSE**

Malignant hyperthermia

*BY RAPID INTRAVENOUS INJECTION*

- **Adult:** Initially 2–3 mg/kg, then 1 mg/kg, repeated if necessary; maximum 10 mg per course

Chronic severe spasticity of voluntary muscle

*BY MOUTH*

- **Adult:** Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals; usual dose 75 mg 3 times a day

**SIDE-EFFECTS, FURTHER INFORMATION**

**Hepatotoxicity** Potentially life-threatening hepatotoxicity reported—discontinue if abnormal liver function tests or symptoms of liver disorder; re-introduce only if complete reversal of hepatotoxicity.

**PREGNANCY**

- With intravenous use Use only if potential benefit outweighs risk.
- With oral use Avoid use in chronic spasticity—embryotoxic in animal studies.

**BREAST FEEDING**

- With intravenous use Present in milk—use only if potential benefit outweighs risk.
- With oral use Present in milk—manufacturer advises avoid use in chronic spasticity.

**HEPATIC IMPAIRMENT** Avoid—may cause severe liver damage (injection may be used in an emergency for malignant hyperthermia).

**MONITORING REQUIREMENTS**

- With oral use Test liver function before and at intervals during therapy.

**PATIENT AND CARER ADVICE** Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

- With oral use Hepatotoxicity Patients should be told how to recognise signs of liver disorder and advised to seek prompt medical attention if symptoms such as anorexia, nausea, vomiting, fatigue, abdominal pain, dark urine, or pruritus develop.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, oral suspension

**Capsule**

**CAUTIONARY AND ADVISORY LABELS 2**

- Dantrolium (Norgine Pharmaceuticals Ltd)
  - Dantrolene sodium 25 mg
  - Dantrolene sodium 100 mg
  - Dantrolene sodium 20 mg

**Powder for solution for injection**

- Dantrolium (Norgine Pharmaceuticals Ltd)
  - Dantrolene sodium 20 mg

**ANNEX**

**CONTRA-INDICATIONS**

- With oral use acute muscle spasm—avoid when spasticity is useful, for example, locomotion

**CAUTIONS**

- With intravenous use avoid extravasation (risk of tissue necrosis)
- With oral use females (hepatotoxicity)· history of liver disorders (hepatotoxicity)· if doses greater than 400 mg daily (hepatotoxicity)· impaired cardiac function· impaired pulmonary function· patients over 30 years (hepatotoxicity)· therapeutic effect may take a few weeks to develop—discontinue if no response within 6–8 weeks

**INTERACTIONS** → Appendix 1 (muscle relaxants).

- With oral use Caution if concomitant use of hepatotoxic drugs.

**SIDE-EFFECTS**

- Common or very common → With oral use abdominal pain· anorexia· asthenia· chills· diarrhoea (withdraw if severe, discontinue treatment if recurs on re-introduction)· dizziness· drowsiness· fatigue· fever· headache· hepatotoxicity· nausea· pericarditis· pleural effusion· rash· respiratory depression· seizures· speech disturbances· visual disturbances· vomiting

- Uncommon → With oral use confusion· constipation· crystalluria· depression· dysphagia· dysphonia· erratic blood pressure· exacerbation of cardiac insufficiency· haematuria· increased sweating· increased urinary frequency· insomnia· nervousness· tachycardia· urinary incontinence· urinary retention

- Frequency not known → With intravenous use dizziness· erythema· hepatotoxicity· injection-site reactions· pulmonary oedema· rash· swelling· thrombophlebitis· weakness

1.3 Neuromuscular blockade

**Neuromuscular blockade**

**Neuromuscular blocking drugs**

Neuromuscular blocking drugs used in anaesthesia are also known as muscle relaxants. By specific blockade of the neuromuscular junction they enable light anaesthesia to be used with adequate relaxation of the muscles of the abdomen and diaphragm. They also relax the vocal cords and allow the passage of a tracheal tube. Their action differs from the muscle relaxants used in muscular skeletal disorders that act on the spinal cord or brain.

Patients who have received a neuromuscular blocking drug should always have their respiration assisted or controlled until the drug has been inactivated or antagonised. They should also receive sufficient concomitant inhalational or intravenous anaesthetic or sedative drugs to prevent awareness.

**Non-depolarising neuromuscular blocking drugs**

Non-depolarising neuromuscular blocking drugs (also known as competitive muscle relaxants) compete with
acetylcholine for receptor sites at the neuromuscular junction and their action can be reversed with anticholinesterases such as neostigmine p. 912. Non-depolarising neuromuscular blocking drugs can be divided into the aminosteroid group, comprising pancuronium bromide p. 1104, rocuronium bromide p. 1105, and vecuronium bromide p. 1105; and the benzylisoquinolinium group, comprising atracurium besilate p. 1103, cisatracurium p. 1104, and mivacurium p. 1104.

Non-depolarising neuromuscular blocking drugs have a slower onset of action than suxamethonium chloride. These drugs can be classified by their duration of action as short-acting (15–30 minutes), intermediate-acting (30–40 minutes), and long-acting (60–120 minutes), although duration of action is dose-dependent. Drugs with a shorter or intermediate duration of action, such as atracurium besilate and vecuronium bromide, are more widely used than those with a longer duration of action, such as pancuronium bromide.

Non-depolarising neuromuscular blocking drugs have no sedative or analgesic effects and are not considered to trigger malignant hyperthermia.

For patients receiving intensive care and who require tracheal intubation and mechanical ventilation, a non-depolarising neuromuscular blocking drug is chosen according to its onset of effect, duration of action, and side-effects. Rocuronium bromide, with a rapid onset of effect, may facilitate intubation. Atracurium besilate or cisatracurium may be suitable for long-term neuromuscular blockade since their duration of action is not dependent on elimination by the liver or the kidneys.

Atracurium besilate, a mixture of 10 isomers, is a benzylisoquinolinium neuromuscular blocking drug with an intermediate duration of action. It undergoes non-enzymatic metabolism which is independent of liver and kidney function, thus allowing its use in patients with hepatic or renal impairment. Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute.

Cisatracurium is a single isomer of atracurium besilate. It is more potent and has a slightly longer duration of action than atracurium besilate and provides greater cardiovascular stability because cisatracurium lacks histamine-releasing effects.

Mivacurium, a benzylisoquinolinium neuromuscular blocking drug, has a short duration of action. It is metabolised by plasma cholinesterase and muscle paralysis is prolonged in individuals deficient in this enzyme. It is not associated with vagolytic activity or ganglionic blockade although histamine release can occur, particularly with rapid injection.

Pancuronium bromide, an aminosteroid neuromuscular blocking drug, has a long duration of action and is often used in patients receiving long-term mechanical ventilation in intensive care units. It lacks a histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

Rocuronium bromide exerts an effect within 2 minutes and has the most rapid onset of any of the non-depolarising neuromuscular blocking drugs. It is an aminosteroid neuromuscular blocking drug with an intermediate duration of action. It is reported to have minimal cardiovascular effects; high doses produce mild vagolytic activity.

Vechuronium bromide, an aminosteroid neuromuscular blocking drug, has an intermediate duration of action. It does not generally produce histamine release and lacks cardiovascular effects.

Depolarising neuromuscular blocking drugs
Suxamethonium chloride below has the most rapid onset of action of any of the neuromuscular blocking drugs and is ideal if fast onset and brief duration of action are required, e.g. with tracheal intubation. Unlike the non-depolarising neuromuscular blocking drugs, its action cannot be reversed and recovery is spontaneous; anticholinesterases such as neostigmine potentiate the neuromuscular block.

Suxamethonium chloride (below) should be given after anaesthetic induction because paralysis is usually preceded by painful muscle fasciculations. While tachycardia occurs with single use, bradycardia may occur with repeated doses in adults and with the first dose in children. Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium chloride below.

Prolonged paralysis may occur in dual block, which occurs with high or repeated doses of suxamethonium chloride below and is caused by the development of a non-depolarising block following the initial depolarising block. Individuals with myasthenia gravis are resistant to suxamethonium chloride below but can develop dual block resulting in delayed recovery. Prolonged paralysis may also occur in those with low or atypical plasma cholinesterase. Assisted ventilation should be continued until muscle function is restored.

Drugs for reversal of neuromuscular blockade

Anticholinesterases
Anticholinesterases reverse the effects of the non-depolarising (competitive) neuromuscular blocking drugs such as pancuronium bromide but they prolong the action of the depolarising neuromuscular blocking drug suxamethonium chloride.

Neostigmine is used specifically for reversal of non-depolarising (competitive) blockade. It acts within one minute of intravenous injection and its effects last for 20 to 30 minutes; a second dose may then be necessary. Glycopyronium bromide p. 1100 or alternatively atropine sulfate p. 1099, given before or with neostigmine, prevent bradycardia, excessive salivation, and other muscarinic effects of neostigmine.

Other drugs for reversal of neuromuscular blockade
Sugammadex p. 1106 is a modified gamma cyclodextrin that can be used for rapid reversal of neuromuscular blockade induced by rocuronium bromide or vecuronium bromide. In practice, sugammadex is used mainly for rapid reversal of neuromuscular blockade in an emergency.

NEUROMUSCULAR BLOCKING DRUGS
(DEPOLARISING)

Suxamethonium chloride
(Succinylcholine chloride)

**Drug Action** Suxamethonium acts by mimicking acetylcholine at the neuromuscular junction but hydrolysis is much slower than for acetylcholine; depolarisation is therefore prolonged, resulting in neuromuscular blockade.

**Indications and Dose**
**Neuromuscular blockade (short duration) during surgery and intubation**
- **By Intravenous Injection**
  - Adult: 1–1.5 mg/kg

**Important safety information**
Should only be administered by, or under the direct supervision of, personnel experienced in its use.

**Contra-indications** Duchenne muscular dystrophy - family history of malignant hyperthermia - hyperkalaemia - low plasma-cholinesterase activity (including severe liver
Non-depolarising neuromuscular blocking drugs (NON-DEPOLARISING)

Important safety information
Non-depolarising neuromuscular blocking drugs should only be administered by, or under direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

Cautions
Burns (resistance can develop, increased doses may be required) - cardiovascular disease (reduce rate of administration) - electrolyte disturbances (response unpredictable) - fluid disturbances (response unpredictable) - hypothermia (activity prolonged, lower doses required) - myasthenia gravis (activity prolonged, lower doses required) - neuromuscular disorders (response unpredictable)

Interactions
Appendix 1 (muscle relaxants).

Allergy and cross-sensitivity
Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.

Pregnancy
Non-depolarising neuromuscular blocking drugs are highly ionised at physiological pH and are therefore unlikely to cross the placenta in significant amounts.

Breast feeding
Non-depolarising neuromuscular blocking drugs are ionised at physiological pH and are unlikely to be present in milk in significant amounts. Breast-feeding may be resumed once the mother has recovered from neuromuscular block.

Atracurium besilate
(Atracurium besylate)

Indications and dose
Neuromuscular blockade (short to intermediate duration) for surgery and intubation
- Adult: Initially 300–600 micrograms/kg, then (by intravenous injection) 100–200 micrograms/kg as required, alternately (by intravenous injection) initially 300–600 micrograms/kg, followed by (by intravenous infusion) 300–600 micrograms/kg/hour

Neuromuscular blockade during intensive care
- Adult: Initially 300–600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 270–1770 micrograms/kg/hour; (by intravenous infusion) usual dose 650–780 micrograms/kg/hour

Doses at extremes of body weight
To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body weight.

Side-effects
- Very rare Anaphylactoid reactions
- Frequency not known Acute myopathy (after prolonged use in intensive care) - bronchospasm - hypotension - seizures - skin flushing - tachycardia

Directions for administration
For intravenous infusion (Tracrium®; Atracurium besilate injection, Hospira; Atracurium injection/infusion, Genus), give continuously in Glucose 5% or Sodium Chloride 0.9%; stability varies with diluent; dilute requisite dose with infusion fluid to a concentration of 0.5–5 mg/mL.

Medicinal forms
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Solution for injection
- SUXAMETHONIUM CHLORIDE (Non-proprietary)
  - Suxamethonium chloride 50 mg per 1 ml Suxamethonium chloride 100mg/2ml solution for injection ampoules | 10 ampoule (£0.50)
  - £5.76–7.00
- Anectine (GlaxoSmithKline Ltd)
  - Suxamethonium chloride 50 mg per 1 ml Anectine 100mg/2ml solution for injection ampoules | 5 ampoule (£0.57)

Neuromuscular blockade
1103

Anaesthesia
Cisatracurium

**INDICATIONS AND DOSE**

Neuromuscular blockade (intermediate duration) during surgery and intubation

**INITIALLY BY INTRAVENOUS INJECTION**

- Adult: Initially 150 micrograms/kg, then (by intravenous injection) maintenance 30 micrograms/kg every 20 minutes, alternatively (by intravenous infusion) initially 180 micrograms/kg/hour, then (by intravenous infusion) maintenance 60–120 micrograms/kg/hour, maintenance dose administered after stabilisation

**Neuromuscular blockade (intermediate duration) during intensive care**

**INITIALLY BY INTRAVENOUS INJECTION**

- Adult: Initially 150 micrograms/kg, initial dose is optional, then (by intravenous infusion) 180 micrograms/kg/hour, adjusted according to response; (by intravenous infusion) usual dose 30–600 micrograms/kg/hour

**Doses at extremes of body-weight**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **SIDE-EFFECTS** Acute myopathy (after prolonged use in intensive care) - bradycardia

- **DIRECTIONS FOR ADMINISTRATION**
  - With intravenous use For intravenous infusion (Nimbex®, Nimbex Forte®), give continuously in Glucose 5% or Sodium Chloride 0.9%; solutions of 2 mg/mL and 5 mg/mL may be infused undiluted; alternatively dilute with infusion fluid to a concentration of 0.1–2 mg/mL.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Solution for injection**
    - **Cisatracurium (Non-proprietary)**
      - Cisatracurium (as Cisatracurium besilate) 2 mg per 1 ml Cisatracurium besilate 20mg/10ml solution for injection vials | 5 vial [P3] £37.75 (Hospital only) | 5 vial [P3] £37.75
      - Cisatracurium (as Cisatracurium besilate) 5 mg per 1 ml Cisatracurium besilate 150mg/30ml solution for injection vials | 1 vial [P3] £45.00 (Hospital only) | 1 vial [P3] £18.66
    - **Nimbex** (GlaxoSmithKline UK Ltd)
      - Cisatracurium (as Cisatracurium besilate) 2 mg per 1 ml Nimbex 20mg/10ml solution for injection ampoules | 5 ampoule [P3] £37.75
      - Cisatracurium (as Cisatracurium besilate) 5 mg per 1 ml Nimbex Forte 150mg/30ml solution for injection vials | 1 vial [P3] £31.09

Mivacurium

**INDICATIONS AND DOSE**

Neuromuscular blockade (short duration) during surgery and intubation

**INITIALLY BY INTRAVENOUS INJECTION**

- Adult: 70–250 micrograms/kg; (by intravenous injection) maintenance 100 micrograms/kg every 15 minutes, alternatively (by intravenous infusion) maintenance 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 6–7 micrograms/kg/minute

**Doses at extremes of body-weight**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **SIDE-EFFECTS** Burns (low plasma cholinesterase activity; dose titration required) - elderly

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Solution for injection**
    - **Mivacron** (GlaxoSmithKline UK Ltd)
      - Mivacurium (as Mivacurium chloride) 2 mg per 1 ml Mivacron 10mg/5ml solution for injection ampoules | 5 ampoule [P3] £13.95

Pancuronium bromide

**INDICATIONS AND DOSE**

Neuromuscular blockade (long duration) during surgery and intubation

**BY INTRAVENOUS INJECTION**

- Adult: Initially 100 micrograms/kg, then 20 micrograms/kg as required

**Neuromuscular blockade (long duration) during intensive care**

**BY INTRAVENOUS INJECTION**

- Adult: Initially 100 micrograms/kg, initial dose is optional, then 60 micrograms/kg every 60–90 minutes

**Doses at extremes of body-weight**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **SIDE-EFFECTS** Acute myopathy (after prolonged use in intensive care) - hypertension - tachycardia

- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Pancuronium lacks histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

- **HEPATIC IMPAIRMENT** Possibly slower onset, higher dose requirement, and prolonged recovery time.

- **RENAI IMPAIRMENT** Use with caution; prolonged duration of block.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug.
  - **Solution for injection**
    - **PANCURONIUM BROMIDE (Non-proprietary)**
      - Pancuronium bromide 2 mg per 1 ml Pancuronium bromide 4mg/2ml solution for injection ampoules | 10 ampoule [P3] £50.00
Vecuronium bromide

**INDICATIONS AND DOSE**
Neuromuscular blockade (intermediate duration) during surgery and intubation

**INITIALLY BY INTRAVENOUS INJECTION**
- Adult: Initially 600 micrograms/kg; (by intravenous injection) maintenance 150 micrograms/kg, alternatively (by intravenous infusion) maintenance 300–600 micrograms/kg/hour, adjusted according to response
- Elderly: Initially 600 micrograms/kg; (by intravenous injection) maintenance 75–100 micrograms/kg, alternatively (by intravenous infusion) maintenance up to 400 micrograms/kg/hour, adjusted according to response

Neuromuscular blockade (intermediate duration) during intensive care

**INITIALLY BY INTRAVENOUS INJECTION**
- Adult: Initially 600 micrograms/kg, initial dose is optional; (by intravenous infusion) maintenance 300–600 micrograms/kg/hour for first hour, then (by intravenous infusion), adjusted according to response

**Doses at extremes of body-weight**
To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

**SIDE-EFFECTS**
- Very rare: Anaphylactoid reactions
- Frequency not known: Acute myopathy (after prolonged use in intensive care) - bronchospasm - hypotension - skin flushing - tachycardia

**HEPATIC IMPAIRMENT**
Use with caution in significant impairment.

**RENAL IMPAIRMENT**
Use with caution.

**DIRECTIONS FOR ADMINISTRATION**
Reconstitute each vial with 5 mL. Water for Injections to give 2 mg/mL solution; alternatively reconstitute with up to 10 mL Glucose 5% or Sodium Chloride 0.9% or Water for Injections—unsuitable for further dilution if not reconstituted with Water for Injections. For continuous intravenous infusion, dilute reconstituted solution to a concentration up to 40 micrograms/L with Glucose 5% or Sodium Chloride 0.9%; reconstituted solution can also be given via drip tubing.

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for solution for injection**
- Norcuron (Merck Sharp & Dohme Ltd)
  Vecuronium bromide 10 mg powder and solvent for solution for injection vials | 10 vial (£33.73) (Hospital only)

1.4 Neuromuscular blockade reversal

**Drugs used for Neuromuscular blockade reversal not listed below; Neostigmine, p. 912**

Glycopyrrolonium bromide with neostigmine

The properties listed below are those particular to the combination only. For the properties of the components please consider, glycopyrrolonium bromide p. 1100, neostigmine p. 912.

**INDICATIONS AND DOSE**
Reversal of non-depolarising neuromuscular blockade

**BY INTRAVENOUS INJECTION**
- Adult: 1–2 mL, repeated if necessary, alternatively 0.02 mL/kilogram (max. per dose 2 mL), repeated if necessary, dose to be given over 10–30 seconds

**MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**
- GLYCOPPYRROLONIUM BROMIDE WITH NEOSTIGMINE (Non-proprietary)
  Glycopyrrolonium bromide 500 microgram per 1 mL, Neostigmine metilsulfate 2.5 mg per 1 mL (Merck Sharp & Dohme Ltd)
  Glycopyrrolonium bromide 500 micrograms/1ml solution for injection ampoules | 10 ampoule (£9.11)
postoperative use. Diclofenac and paracetamol can be given by injection as well as by mouth. Diclofenac sodium, can be given by intravenous infusion for the treatment or prevention of postoperative pain. Intramuscular injections of diclofenac sodium and ketoprofen are rarely used; they are given deep into the gluteal muscle to minimise pain and tissue damage. Ketorolac trometamol is less irritant on intramuscular injection but pain has been reported; it can also be given by intravenous injection.

Suppositories of diclofenac sodium and ketoprofen may be effective alternatives to the parenteral use of these drugs.

**Opioid analgesics**

Opioid analgesics are now rarely used as premedicants; they are more likely to be administered at induction. Preoperative use of opioid analgesics is generally limited to those patients who require control of existing pain. See general notes on opioid analgesics and their use in postoperative pain. See also the management of opioid-induced respiratory depression.

**Intra-operative analgesia**

Opioid analgesics given in small doses before or with induction reduce the dose requirement of some drugs used during anaesthesia. Alfentanil p. 357, fentanyl p. 362, and remifentanil p. 1108 are particularly useful because they act within 1–2 minutes and have short durations of action. The initial doses of alfentanil or fentanyl are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect. Repeated intra-operative doses of alfentanil or fentanyl should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive. Alfentanil, fentanyl, and remifentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs. are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect.

In contrast to other opioids which are metabolised in the liver, remifentanil undergoes rapid metabolism by nonspecific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression. Remifentanil should not be given by intravenous injection intraoperatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanil.

**Bupivacaine with fentanyl**

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1113, fentanyl p. 362.

---

**1.5 Peri-operative analgesia**

**Peri-operative analgesia**

**Non-opioid analgesics**

Since non-steroidal anti-inflammatory drugs (NSAIDs) do not depress respiration, do not impair gastro-intestinal motility, and do not cause dependence, they may be useful alternatives or adjuncts to opioids for the relief of postoperative pain. NSAIDs may be inadequate for the relief of severe pain. Acmetacin p. 917, diclofenac sodium p. 921, diclofenac potassium p. 920, flurbiprofen p. 994, ibuprofen p. 927, ketoprofen p. 930, paracetamol p. 354, parecoxib p. 1108, and ketorolac trometamol p. 1107 are licensed for
During labour (once epidural block established)

**BY CONTINUOUS LUMBAR EPIDURAL INFUSION**

- Adult: 10–18.75 mg/hour of bupivacaine to be administered and 16–30 micrograms/hour of fentanyl to be administered

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion, infusion

**Solution for infusion**

- Bufyl (AMCo)
  - Bupivacaine hydrochloride 1 mg per 1 ml, Fentanyl 2 microgram per 1 ml
  - [20 bag £9.00](Hospital only) Schedule 2 (CD)
  - Bupivacaine hydrochloride 1.25 mg per 1 ml, Fentanyl (as Fentanyl citrate) 2 microgram per 1 ml
  - [Bufyl 1.25mg/ml and 2micrograms/ml 250ml infusion bags £18.00](Hospital only) Schedule 2 (CD)
  - Bufyl 1.25mg/ml and 2micrograms/ml 500ml infusion bags | 10 bag £92.00 (Hospital only) Schedule 2 (CD)

**NON-Steroidal ANTI-INFLAMMATORY DRUGS**

**Ketorolac trometamol**

**INDICATIONS AND DOSE**

**Short-term management of moderate to severe acute postoperative pain only**

- **BY INTRAMUSCULAR INJECTION OR BY INTRAVENOUS INJECTION**
  - Adult (body-weight up to 50 kg): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, to be given over at least 15 seconds, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day
  - Adult (body-weight 50 kg and above): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, to be given over at least 15 seconds, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 90 mg per day
  - Elderly: Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, to be given over at least 15 seconds, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day

**CONTRA-INDICATIONS**

Active or history of gastro-intestinal bleeding - active or history of gastro-intestinal ulceration - coagulation disorders - complete or partial syndrome of nasal polyps - confirmed or suspected cerebrovascular bleeding - dehydration - following operations with high risk of haemorrhage or incomplete haemostasis - haemorrhagic diatheses - history of gastro-intestinal perforation - hypovolaemia - severe heart failure

**CAUTIONS**

Allergic disorders - cardiac impairment (NSAIDs may impair renal function) - cerebrovascular disease - coagulation defects - connective-tissue disorders - Crohn’s disease (may be exacerbated) - elderly (risk of serious side-effects and fatalities) - heart failure - ischaemic heart disease - peripheral arterial disease - risk factors for cardiovascular events - ulcerative colitis (may be exacerbated) - uncontrolled hypertension

**INTERACTIONS**

Appendix 1 (NSAIDs).

**SIDE-EFFECTS**

- Rare - Alveolitis - aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) - hepatic damage - interstitial fibrosis associated with NSAIDs can lead to renal failure - pancreatitis - papillary necrosis associated with NSAIDs can lead to renal failure - pulmonary eosinophilia - Stevens-Johnson syndrome - toxic epidermal necrolysis

**SIDE-EFFECTS, FURTHER INFORMATION**

Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY**

Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**CONCEPTION AND CONTRACEPTION**

Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY**

Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosis in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING**

Amount too small to be harmful.

**HEPATIC IMPAIRMENT**

Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT**

- With intramuscular use or intravenous use The lowest effective dose should be used for the shortest possible duration. Max. 60 mg daily by intramuscular injection or intravenous injection. Avoid if possible or use with caution. Avoid if serum creatinine greater than 160 micromol/litre. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **KETOROLAC TROMETAMOL (Non-proprietary)**
  - Ketorolac trometamol 30 mg per 1 ml
  - [Ketorolac 30mg/1ml solution for injection ampoules £6.56](Roche Products Ltd)
  - Toradol (Roche Products Ltd)
  - Toradol 30mg/1mg solution for injection ampoules | 5 ampoule £5.36
**Parecoxib**

**DRUG ACTION** Parecoxib is a selective inhibitor of cyclooxygenase-2.

**INDICATIONS AND DOSE** Short-term management of acute postoperative pain by deep intramuscular injection or by intravenous injection.

- **Adult:** Initially 40 mg, then 20–40 mg every 6–12 hours as required for up to 3 days; maximum 80 mg per day.
- **Elderly** (body-weight up to 50 kg): Initially 20 mg; maximum 40 mg per day.

**CONTRA-INDICATIONS** Active gastro-intestinal bleeding, active gastro-intestinal ulceration, cerebrovascular disease, inflammatory bowel disease, ischaemic heart disease, mild to severe heart failure, peripheral arterial disease.

**CAUTIONS** Allergic disorders, cardiac impairment (NSAIDs may impair renal function), coagulation defects, connective-tissue disorders, Crohn’s disease (may be exacerbated), dehydration, elderly (risk of serious side-effects and fatalities), following coronary artery bypass graft surgery, history of cardiac failure, hypertension, left ventricular dysfunction, oedema, risk factors for cardiovascular events, ulcerative colitis (may be exacerbated).

**INTERACTIONS** Appendix I (NSAIDs).

**SIDE-EFFECTS**

- Common or very common: Alveolar oedema, flatulence, hypoaesthesia, hypokalaemia, hypotension, postoperative anaemia, sweating.
- Uncommon: Anorexia, arthralgia, bradycardia, cardiovascular events, ecchymosis, hyperglycaemia, malaise, pulmonary embolism.
- Rare: Alveolitis, aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible), hepatic damage, interstitial fibrosis associated with NSAIDs can lead to renal failure, pancreatitis, papillary necrosis associated with NSAIDs can lead to renal failure, pulmonary eosinophilia, Stevens-Johnson syndrome, toxic epidermal necrolysis, visual disturbances.
- Frequency not known: Angioedema, blood disorders, blood pressure may be raised, bronchospasm, circulatory collapse, colitis (induction of or exacerbation of), Crohn’s disease (induction of or exacerbation of), depression, diarrhoea, dizziness, drowsiness, fluid retention (rarely precipitating congestive heart failure), gastro-intestinal bleeding, gastro-intestinal discomfort, gastro-intestinal disturbances, gastro-intestinal ulceration, haematuria, headache, hearing disturbances, hypersensitivity reactions, insomnia, nausea, nervousness, photosensitivity, rash(es), renal failure (especially in patients with pre-existing renal impairment), tachycardia, tinnitus, vertigo.

**SIDE-EFFECTS, FURTHER INFORMATION**

Serious side-effects: For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 915.

**ALLERGY AND CROSS-SENSITIVITY** Contraindicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. Contraindicated in patients with a history of allergic drug reactions including sulphonamide hypersensitivity.

**SIDE-EFFECTS**

- Common: Anaphylaxis, angioedema, bronchospasm, collapse, cutaneous reactions including urticaria, earache, rashes, headache, hypoaesthesia, hyporesponsiveness, hypotension, nausea, palpitations, pruritus, rash, rhinitis, rhinorrhea, rigors, sweating, tachycardia, tinnitus.
- Rare: Anaphylactic reaction, angioedema, bronchospasm, collapse, cutaneous reactions, fever, headache, hypoaesthesia, hyporesponsiveness, hypotension, nausea, palpitations, pruritus, rash, rhinitis, rhinorrhea, rigors, sweating, tachycardia, tinnitus.
- Frequency not known: Headache, hypoaesthesia, hyporesponsiveness, hypotension, nausea, palpitations, pruritus, rash, rhinitis, rhinorrhea, rigors, sweating, tachycardia, tinnitus.

**RECOMMENDATION**

Always check packaging for further information and contraindications.

**CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus in utero and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

**BREAST FEEDING** Avoid—present in milk.

**HEPATIC IMPAIRMENT** Halve dose in moderate impairment (max. 40 mg daily). Use with caution; there is an increased risk of gastrointestinal bleeding and fluid retention. Avoid in severe liver disease.

**RENAL IMPAIRMENT** The lowest effective dose should be used for the shortest possible duration. Avoid if possible or use with caution. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

**NATIONAL FUNDING/ACCESS DECISIONS**

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (January 2003) that parecoxib is not recommended for use within NHS Scotland.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**

- Dynastat (Pfizer Ltd) Parecoxib (as Parecoxib sodium) 40 mg
- Dynastat 40 mg powder for solution for injection vials | 10 vial | PO £49.60

**Powder and solvent for solution for injection**

- Dynastat (Pfizer Ltd) Parecoxib (as Parecoxib sodium) 40 mg
- Dynastat 40 mg powder and solvent for solution for injection vials | 5 vial | PO £28.34

**OPIOIDS**

Remifentanil

The properties listed below are those particular to the drug only. For properties common to the class, see Opioids, p. 357.

**INDICATIONS AND DOSE**

Analgesia and enhancement of anaesthesia at induction initially by intravenous injection.

- **Adult:** Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, then (by intravenous infusion) 30–60 micrograms/kg/hour, alternatively (by intravenous infusion) initially 30–60 micrograms/kg/hour, if patient to be intubated more than 8 minutes after start of intravenous infusion, initial intravenous injection dose is not necessary.

Assisted ventilation: Analgesia and enhancement of anaesthesia during maintenance of anaesthesia initially by intravenous injection.

- **Adult:** Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, according to anaesthetic technique and adjusted according to response, followed by (by intravenous infusion) 3–120 micrograms/kg/hour, intravenous infusion may be given with or without initial intravenous injection dose; in light anaesthesia supplemental doses by intravenous injection every 2–5 minutes.
**Assisted ventilation: analgesia and sedation in intensive-care patients (for max 3 days)**

BY INTRAVENOUS INFUSION

- Adult: Initially 6–9 micrograms/kg/hour, then adjusted in steps of 1.5 micrograms/kg/hour, allow at least 5 minutes between dose adjustments; usual dose 0.36–4.4 micrograms/kg/hour, if an infusion rate of 12 micrograms/kg/hour does not produce adequate sedation add another sedative (consult product literature for details)

**Assisted ventilation: additional analgesia during stimulating or painful procedures in intensive-care patients**

BY INTRAVENOUS INFUSION

- Adult: Usual dose 15–45 micrograms/kg/hour, maintain infusion rate of at least 6 micrograms/kg/hour for at least 5 minutes before procedure and adjust every 2–5 minutes according to requirements

**Spontaneous respiration: analgesia and enhancement of anaesthesia during maintenance of anaesthesia**

BY INTRAVENOUS INFUSION

- Adult: Initially 2.4 micrograms/kg/hour, adjusted according to response; usual dose 1.5–6 micrograms/kg/hour

**Cardiac surgery**

- Adult: (consult product literature)

**Doses at extremes of body-weight**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

**UNLICENSED USE** Remifentanil doses in BNF may differ from those in product literature.

**CONTRA-INDICATIONS** Analgesia in conscious patients

**SIDE-EFFECTS**

- Common or very common: Hypertension
- Uncommon: Hypoxia
- Rare: Asystole
- Frequency not known: AV block - convulsions

**SIDE-EFFECTS, FURTHER INFORMATION**

**Muscle rigidity** Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

**Respiratory depression** In contrast to other opioids which are metabolised in the liver, remifentanil undergoes rapid metabolism by non-specific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression.

**PREGNANCY** No information available.

**BREAST FEEDING** Avoid breast-feeding for 24 hours after administration—present in milk in animal studies.

**RENAL IMPAIRMENT** No dose adjustment necessary in renal impairment.

**DIRECTIONS FOR ADMINISTRATION**

- With intravenous use: For intravenous infusion (Ultiva®), give continuously in Glucose 5% or Sodium Chloride 0.9% or Water for Injections; reconstitute with infusion fluid to a concentration of 1 mg/mL then dilute further to a concentration of 20–250 micrograms/mL (50 micrograms/mL recommended for general anaesthesia, 20–50 micrograms/mL recommended when used with target controlled infusion (TCI) device).

**PRESCRIBING AND DISPENSING INFORMATION**

Remifentanil should not be given by intravenous injection intra-operatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanil.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**

- **REMIFENTANIL (Non-proprietary)**
  - Remifentanil (as Remifentanyl hydrochloride) 1 mg Remifentanil 1mg powder for concentrate for solution for injection vials | 5 vial (PQ) £25.58–£26.60 (Hospital only) Schedule 2 (CD)
  - Remifentanil (as Remifentanyl hydrochloride) 2 mg Remifentanil 2mg powder for concentrate for solution for injection vials | 5 vial (PQ) £29.13–£31.15 (Hospital only) Schedule 2 (CD)
  - Remifentanil (as Remifentanyl hydrochloride) 5 mg Remifentanil 5mg powder for concentrate for solution for injection vials | 5 vial (PQ) £117.00–£127.00 (Hospital only) Schedule 2 (CD)
  - **Ultiva** (GlaxoSmithKline UK Ltd)
    - Remifentanil (as Remifentanyl hydrochloride) 1 mg Ultiva 1mg powder for solution for injection vials | 5 vial (PQ) no price available (Hospital only) Schedule 2 (CD)
    - Remifentanil (as Remifentanyl hydrochloride) 2 mg Ultiva 2mg powder for solution for injection vials | 5 vial (PQ) no price available (Hospital only) Schedule 2 (CD)
    - Remifentanil (as Remifentanyl hydrochloride) 5 mg Ultiva 5mg powder for solution for injection vials | 5 vial (PQ) no price available (Hospital only) Schedule 2 (CD)

**INDICATIONS AND DOSE**

**Premedication**

- By subcutaneous injection or by intramuscular injection
  - Adult: 0.5–1 mL

**LESS SUITABLE FOR PRESCRIBING** Hyoscine hydrobromide with papaveretum is less suitable for prescribing.

**MEDICINAL FORMS**

Medicines not identified.

1.6 **Peri-operative sedation**

**Conscious sedation for clinical procedures**

Sedation of patients during diagnostic and therapeutic procedures is used to reduce fear and anxiety, to control pain, and to minimise excessive movement. The choice of sedative drug will depend upon the intended procedure; some procedures are safer and more successful under anaesthesia. The patient should be monitored carefully; monitoring should begin as soon as the sedative is given or when the patient becomes drowsy, and should be continued until the patient wakes up.

**Hyoscine hydrobromide with papaveretum**

The properties listed below are those particular to the combination only. For the properties of the components please consider, hyoscine hydrobromide p. 344, papaveretum p. 371.

**Hyoscine hydrobromide with papaveretum**

- **INDICATIONS AND DOSE**
  - **Premedication**
    - By subcutaneous injection or by intramuscular injection
      - Adult: 0.5–1 mL
    - **Less suitable for prescribing**
      - Hyoscine hydrobromide with papaveretum is less suitable for prescribing.
    - **MEDICINAL FORMS**
      - Medicines not identified.
1110 General anaesthesia

**ALPHA₂-ADRENOCEPTOR AGONISTS**

**Dexmedetomidine**

**INDICATIONS AND DOSE**

Maintenance of sedation during intensive care

BY INTRAVENOUS INFUSION
- Adult: 0.7 microgram/kg/hour, adjusted according to response; usual dose 0.2–1.4 micrograms/kg/hour

**DIRECTIONS FOR ADMINISTRATION**

**HEPATIC IMPAIRMENT**

**SIDE-EFFECTS**

- Common or very common Agitation, blood pressure changes, bradycardia, changes in blood sugar, dry mouth, hyperthermia, myocardial infarction, myocardial ischaemia, nausea, tachycardia, vomiting
- Uncommon Abdominal distension, AV block, decreased cardiac output, dyspnœa, hallucination, hypoalbuminaemia, metabolic acidosis, thirst
- PREGNANCY**

Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in animal studies.

**BREAST FEEDING**

Manufacturer advises avoid unless potential benefit outweighs risk—present in milk in animal studies.

**HEPATIC IMPAIRMENT**

Dose reduction may be required. Manufacturer advises caution.

**MONITORING REQUIREMENTS**

Monitor cardiac function. Monitor respiratory function in non-intubated patients.

**DIRECTIONS FOR ADMINISTRATION**

To be diluted before use.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

- **Dexdor** (Orion Pharma (UK) Ltd)
  - Dexmedetomidine (as Dexmedetomidine hydrochloride) 100 microgram per 1 ml
  - Dexdor 1mg/10ml concentrate for solution for infusion vials | 4 vial (£20.89) 113.20 (Hospital only)
  - Dexdor 400micrograms/4ml concentrate for solution for infusion vials | 4 vial (£20.89) 1125.28 (Hospital only)
  - Dexdor 200micrograms/2ml concentrate for solution for infusion ampoules | 5 ampoule (£20.89) 78.30 (Hospital only) | 25 ampoule (£20.89) 391.50 (Hospital only)

**ANAESTHETICS (GENERAL, INTRAVENOUS, NMDA RECEPTOR ANTAGONISTS)**

**Ketamine**

**INDICATIONS AND DOSE**

Induction and maintenance of anaesthesia for short procedures

BY INTRAMUSCULAR INJECTION
- Adult: Initially 6.5–13 mg/kg, adjusted according to response, a dose of 10 mg/kg usually produces 12–25 minutes of surgical anaesthesia

**BY INTRAVENOUS INJECTION**

- Adult: Initially 1–4.5 mg/kg, adjusted according to response, to be administered over at least 60 seconds, a dose of 2 mg/kg usually produces 5–10 minutes of surgical anaesthesia

**Diagnostic manoeuvres and procedures not involving intense pain**

- Adult: Initially 4 mg/kg

**Induction and maintenance of anaesthesia for long procedures**

- Adult: Initially 0.5–2 mg/kg, using an infusion solution containing 1 mg/ml; maintenance 10–45 micrograms/kg/minute, adjusted according to response

**Important safety information**

Ketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management.

**CONTRA-INDICATIONS**

Acute porphyrias p. 864; eclampsia; head trauma; hypertension; pre-eclampsia; raised intracranial pressure; severe cardiac disease; stroke

**CAUTIONS**

Acute circulatory failure (shock); cardiovascular disease; dehydration; elderly; fixed cardiac output; hallucinations; head injury; hypertension; hypovolaemia; increased cerebrospinal fluid pressure; intracranial mass lesions; nightmares; predisposition to seizures; psychiatric disorders; raised intra-ocular pressure; respiratory tract infection; thyroid dysfunction

**INTERACTIONS**

→ Appendix 1 (anaesthetics, general).

**SIDE-EFFECTS**

- Common or very common Diplopia; hallucinations; hypertension; nausea; nightmares; nystagmus; rash; tachycardia; transient psychotic effects; vomiting
- Uncommon Arrhythmias; bradycardia; hypotension; laryngospasm; respiratory depression
- Rare Apnoea; cystitis; cytisitis; haemorrhagic cystitis; hypersalivation; insomnia
- Frequency not known Raised intra-ocular pressure

**SIDE-EFFECTS, FURTHER INFORMATION**

Transient psychotic effects: Incidence of hallucinations, nightmares, and other transient psychotic effects can be reduced by a benzodiazepine such as diazepam or midazolam.

**PREGNANCY**

May depress neonatal respiration if used during delivery.

**BREAST FEEDING**

Avoid for at least 12 hours after last dose.

**HEPATIC IMPAIRMENT**

Consider dose reduction.

**DIRECTIONS FOR ADMINISTRATION**

For continuous intravenous infusion, dilute to a concentration of 1 mg/ml with Glucose 5% or Sodium Chloride 0.9%; use microdrip infusion for maintenance of anaesthesia.

For intravenous injection, dilute 100 mg/mL strength to a concentration of not more than 50 mg/mL with Glucose 5% or Sodium Chloride 0.9% or Water for Injections.

**PATIENT AND CARER ADVICE**

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to at least 24 hours after administration. Responsible persons should be available...
Local anaesthesia

Local anaesthesia

The use of local anaesthetics by injection or by application to mucous membranes to produce local analgesia is discussed in this section.

Local anaesthetic drugs act by causing a reversible block to conduction along nerve fibres. They vary widely in their potency, toxicity, duration of action, stability, solubility in water, and ability to penetrate mucous membranes. These factors determine their application, e.g. topical (surface), infiltration, peripheral nerve block, intravenous regional anaesthesia (Bier's block), plexus, epidural (extradural), or spinal (intrathecal or subarachnoid) block. Local anaesthetics may also be used for postoperative pain relief, thereby reducing the need for analgesics such as opioids.

Bupivacaine hydrochloride p. 1113 has a longer duration of action than other local anaesthetics. It has a slow onset of action, taking up to 30 minutes for full effect. It is often used in lumbar epidural blockade and is particularly suitable for continuous epidural analgesia in labour, or for postoperative pain relief. It is the principal drug used for spinal anaesthesia. Hyperbaric solutions containing glucose may be used for spinal block.

Chloroprocaine hydrochloride p. 1114, a paraaminobenzoic acid ester, is used for spinal anaesthesia in adults where the planned procedure should not exceed 40 minutes.

Levobupivacaine p. 1115, an isomer of bupivacaine, has anaesthetic and analgesic properties similar to bupivacaine hydrochloride, but is thought to have fewer adverse effects.

Lidocaine hydrochloride p. 1116 is effectively absorbed from mucous membranes and is a useful surface anaesthetic in concentrations up to 10%. Except for surface anaesthesia and dental anaesthesia, solutions should not usually exceed 1% in strength. The duration of the block (with adrenaline/epinephrine p. 1156) is about 90 minutes.

Prilocaine hydrochloride p. 1120 is a local anaesthetic of low toxicity which is similar to lidocaine hydrochloride. A hyperbaric solution of prilocaine hydrochloride (containing glucose) may be used for spinal anaesthesia.

Ropivacaine hydrochloride p. 1121 is an amide-type local anaesthetic agent similar to bupivacaine hydrochloride. It is less cardiotoxic than bupivacaine hydrochloride, but also less potent.

Tetracaine p. 1122, a para-aminobenzoic acid ester, is an effective local anaesthetic for topical application; a 4% gel is indicated for anaesthesia before venepuncture or venous cannulation. It is rapidly absorbed from mucous membranes and should never be applied to inflamed, traumatised, or highly vascular surfaces. It should never be used to provide anaesthesia for bronchoscopy or cystoscopy because lidocaine hydrochloride is a safer alternative.

Administration

The dose of local anaesthesia depends on the injection site and the procedure used. In determining the safe dosage, it is important to take account of the rate of absorption and excretion, and of the potency. The patient's age, weight, physique, and clinical condition, and the vascularity of the administration site and the duration of administration, must also be considered.

Uptake of local anaesthetics into the systemic circulation determines their duration of action and produces toxicity. Great care must be taken to avoid accidental intravascular injection; local anaesthetic injections should be given slowly in order to detect inadvertent intravascular administration. When prolonged analgesia is required, a long-acting local anaesthetic is preferred to minimise the likelihood of cumulative systemic toxicity. Local anaesthesia around the oral cavity may impair swallowing and therefore increases the risk of aspiration.

Epidural anaesthesia is commonly used during surgery, often combined with general anaesthesia, because of its protective effect against the stress response of surgery. It is often used when good postoperative pain relief is essential.

Use of vasoconstrictors

Local anaesthetics cause dilatation of blood vessels. The addition of a vasoconstrictor such as adrenaline/epinephrine to the local anaesthetic preparation diminishes local blood flow, slowing the rate of absorption and thereby prolonging the anaesthetic effect. Great care should be taken to avoid inadvertent intravenous administration of a preparation containing adrenaline/epinephrine, and it is not advisable to give adrenaline/epinephrine with a local anaesthetic injection in digits or appendages because of the risk of ischaemic necrosis.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. Care must also be taken to calculate a safe maximum dose of local anaesthetic when using combination products.

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline/epinephrine with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline/epinephrine should be used.

Dental anaesthesia

Lidocaine hydrochloride is widely used in dental procedures; it is most often used in combination with adrenaline/epinephrine. Lidocaine hydrochloride 2% combined with adrenaline/epinephrine 1 in 80 000 (12.5 micrograms/mL) is a safe and effective preparation; there is no justification for using higher concentrations of adrenaline/epinephrine.

The amide-type local anaesthetics articaine and mepivacaine hydrochloride p. 1119 are also used in dentistry; they are available in cartridges suitable for dental use. Mepivacaine hydrochloride is available with or without adrenaline/epinephrine and articaine is available with adrenaline.

In patients with severe hypertension or unstable cardiac rhythm, mepivacaine hydrochloride without adrenaline/epinephrine may be used. Alternatively, prilocaine hydrochloride with or without felypressin can be used but there is no evidence that it is any safer. Felypressin...
Severe local anaesthetic-induced cardiovascular toxicity

After injection of a bolus of local anaesthetic, toxicity may develop at any time in the following hour. In the event of signs of toxicity during injection, the administration of the local anaesthetic must be stopped immediately.

Cardiovascular status must be assessed and cardiopulmonary resuscitation procedures must be followed.

In the event of local anaesthetic-induced cardiac arrest, standard cardiopulmonary resuscitation should be initiated immediately. Lidocaine must not be used as anti-arrhythmic therapy.

If the patient does not respond rapidly to standard procedures, 20% lipid emulsion such as Intralipid® [unlicensed indication] should be given intravenously at an initial bolus dose of 1.5 mL/kg over 1 minute, followed by an infusion of 15 mL/kg/hour. After 5 minutes, if cardiovascular stability has not been restored or circulation deteriorates, give a maximum of two further bolus doses of 1.5 mL/kg over 1 minute, 5 minutes apart, and increase the infusion rate to 30 mL/kg/hour. Continue infusion until cardiovascular stability and adequate circulation are restored or maximum cumulative dose of 12 mL/kg is given.

Standard cardiopulmonary resuscitation must be maintained throughout lipid emulsion treatment.

Propofol is not a suitable alternative to lipid emulsion.

Further advice on ongoing treatment should be obtained from the National Poisons Information Service.

Detailed treatment algorithms and accompanying notes are available at www.toxbase.org or can be found in the Association of Anaesthetists of Great Britain and Ireland safety guideline, Management of Severe Local Anaesthetic Toxicity and Management of Severe Local Anaesthetic Toxicity – Accompanying notes.

ANAESTHETICS (LOCAL)

Articaine hydrochloride with adrenaline (Carticaine hydrochloride with epinephrine)

INDICATIONS AND DOSE

Infiltration anaesthesia in dentistry

Enteral: Consult expert dental sources

Doses at extremes of body-weight

To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

Important safety information

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

CONTRA-INDICATIONS Application to damaged skin - application to the middle ear (may cause otoxicity) - complete heart block - injection into infected tissues - injection into inflamed tissues - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block)

CONTRA-INDICATIONS, FURTHER INFORMATION

Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

SIDE-EFFECTS

- Toxic effects after administration of local anaesthetics mainly involves the central nervous and cardiovascular systems.
- For patients with severe cardiovascular disease, arrhythmias occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- Use only if potential benefit outweighs risk - no information available.
- Avoid breast-feeding for 48 hours after administration.
Bupivacaine hydrochloride

INDICATIONS AND DOSE

Surgical anaesthesia, lumbar epidural block

BY REGIONAL ADMINISTRATION
> Adult: 75–150 mg, dose administered using a 5 mg/mL (0.5%) solution

Surgical anaesthesia, field block

BY REGIONAL ADMINISTRATION
> Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

Surgical anaesthesia, thoracic epidural block

BY THORACIC EPIDURAL
> Adult: 12.5–50 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

Surgical anaesthesia, caudal epidural block

BY REGIONAL ADMINISTRATION
> Adult: 50–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

Surgical anaesthesia, major nerve block

BY REGIONAL ADMINISTRATION
> Adult: 50–175 mg, dose administered using 5 mg/mL (0.5%) solution

Acute pain, intra-articular block

BY INTRA-ARTICULAR INJECTION
> Adult: Up to 100 mg, dose administered using a 2.5 mg/mL (0.25%) solution; when co-administered with bupivacaine by another route, total max. 150 mg

Acute pain, thoracic epidural block

BY CONTINUOUS EPIDURAL INFUSION
> Adult: 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

Acute pain, lumbar epidural block

INITIALLY BY LUMBAR EPIDURAL
> Adult: 15–37.5 mg, then (by lumbar epidural) 15–37.5 mg at least every 30 minutes, repeated when required, alternatively (by continuous epidural infusion) 12.5–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution

Acute pain, field block

BY REGIONAL ADMINISTRATION
> Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

Doses at extremes of body-weight

To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

**MCRAIN HEAVY**

Intrathecal anaesthesia for surgery

BY INTRATHECAL INJECTION
> Adult: 10–20 mg

Important safety information

The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

**CONTRA-INDICATIONS**

Application to the middle ear (can cause ototoxicity). Avoid injection into infected tissues. Avoid injection into inflamed tissues. Complete heart block - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block) - should not be applied to damaged skin

**CONTRA-INDICATIONS, FURTHER INFORMATION**

Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

**CAUTIONS**

Cardiovascular disease - cerebral atheroma - debilitated patients (consider dose reduction) - elderly (consider dose reduction) - epilepsy - hypertension - hypotension - hypovolaemia - impaired cardiac conduction - impaired respiratory function - myasthenia gravis - myocardial depression may be more severe and more resistant to treatment - shock

**INTERACTIONS**

> Appendix 1 (bupivacaine).

**SIDE-EFFECTS**

Arrhythmias - blurred vision - cardiac arrest - convulsions - dizziness - drowsiness - feeling of inebriation - headache - lightheadedness - muscle twitching - myocardial depression (resulting in hypotension and bradycardia) - nausea - numbness of the tongue and perioral region - paraesthesia (including sensations of hot and cold) - peripheral vasodilatation (resulting in hypotension and bradycardia) - restlessness - tinnitus - transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) - tremors - vomiting

**SIDE-EFFECTS, FURTHER INFORMATION**

**Toxic effects**

Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

**ALLERGY AND CROSS-SENSITIVITY**

Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-

**EXCIPIENTS:** May contain Sulfites
sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use lower doses for intrathecal use during late pregnancy. Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Use with caution in severe impairment.
- **RENAL IMPAIRMENT** Use with caution in severe impairment.

- **MEDICINAL FORMS**
  - There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, infusion, solution for infusion

  - **Solution for injection**
    - **BUPIVACAINE HYDROCHLORIDE (Non-proprietary)**
      - Bupivacaine hydrochloride 2.5 mg per 1 ml
        - Bupivacaine 0.25% solution for injection 10ml Sure-Amp ampoules | 20 ampoule £17.50
        - Bupivacaine hydrochloride 5 mg per 1 ml
          - Bupivacaine 0.5% solution for injection 10ml Sure-Amp ampoules | 20 ampoule £18.30
        - Bupivacaine hydrochloride 50 mg/10 ml (0.5%) solution for injection ampoules | 10 ampoule no price available
        - **Marcain (AstraZeneca UK Ltd)**
          - Bupivacaine hydrochloride 2.5 mg per 1 ml
            - Marcain 0.25% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule £7.92
          - Bupivacaine hydrochloride 5 mg per 1 ml
            - Marcain 0.5% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule £9.25
    - **Infusion**
      - **BUPIVACAINE HYDROCHLORIDE (Non-proprietary)**
        - Bupivacaine hydrochloride 1 mg per 1 ml
          - Bupivacaine 500ng/100 ml (0.1%) infusion bags | 20 bag £9.00 no price available
          - Bupivacaine hydrochloride 250 ng/250 ml (0.1%) infusion bags | 20 bag no price available
        - Bupivacaine hydrochloride 1.25 mg per 1 ml
          - Bupivacaine 525ng/250 ml (0.125%) infusion bags | 20 bag £9.00 no price available

- **Bupivacaine with adrenaline**
  - The properties listed below are those particular to the combination only. For the properties of the components please consider, adrenaline/epinephrine p. 196, bupivacaine hydrochloride p. 1112.

  - **INDICATIONS AND DOSE**
    - **Surgical anaesthesia**
      - **BY LUMBAR EPIDURAL OR BY LOCAL INFILTRATION OR BY CAUDAL EPIDURAL**
        - Adult: (consult product literature)
      - **Acute pain management**
        - **BY LUMBAR EPIDURAL OR BY LOCAL INFILTRATION**
        - Adult: (consult product literature)

  - **CAUTIONS**

  - **CAUTIONS, FURTHER INFORMATION**
    - In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

  - **MEDICINAL FORMS**
    - There can be variation in the licensing of different medicines containing the same drug.

    - **Solution for injection**
      - **ADRENALINE WITH BUPIVACAINE (Non-proprietary)**
        - Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml
        - Bupivacaine hydrochloride 2.5 mg per 1 ml
      - Bupivacaine hydrochloride 2.5 mg/10 ml (0.25%) / Adrenaline (base) 50 micrograms/10 ml (1 in 200,000) solution for injection ampoules | 10 ampoule £25.00
      - Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml
        - Bupivacaine hydrochloride 5 mg per 1 ml
        - Bupivacaine hydrochloride 50 mg/10 ml (0.5%) / Adrenaline (base) 50 micrograms/10 ml (1 in 200,000)
        - solution for injection ampoules | 10 ampoule £27.00

### Chloroprocaine hydrochloride

**INDICATIONS AND DOSE**

- **Intrathecal anaesthesia for surgical procedures lasting up to 40 minutes**
- **BY SLOW INTRATHECAL INJECTION**
  - Adult: 40–50 mg, dose depends on desired length of block

- **Doses at extremes of body-weight**
  - To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

**Important safety information**

The licensed doses stated above may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) - avoid injection into infected tissues - avoid injection into inflamed tissues - complete heart block - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block) - severe anaemia - should not be applied to damaged skin

- **CONTRA-INDICATIONS, FURTHER INFORMATION**
  - **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- **CAUTIONS**

  - Acute porphyrias p. 864 - cardiovascular disease - debilitated patients (consider dose reduction) - elderly (consider dose reduction) - epilepsy - hypovolaemia - impaired cardiac conduction - impaired respiratory function - myasthenia gravis - shock

- **INTERACTIONS** ➔ Appendix 1 (chloroprocaine).

- **SIDE-EFFECTS**

  - **Uncommon** Hypertension

  - **Frequency not known** Arrhythmias - blurred vision - cardiac arrest - convulsions - dizziness - drowsiness - feeling of inebriation - headache - light-headedness - muscle twitching - myocardial depression (resulting in hypotension and bradycardia) - nausea - numbness of the tongue and perioral region - paraesthesia (including sensations of hot and cold) - peripheral vasodilatation (resulting in hypotension and bradycardia) - restlessness - tinnitus - transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) - tremors - vomiting

- **SIDE-EFFECTS, FURTHER INFORMATION**

  - **Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful
surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

- **ALLERGY AND CROSS-SENSITIVITY** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

### Levobupivacaine

#### INDICATIONS AND DOSE

**Acute postoperative pain**

- **BY CONTINUOUS EPIDURAL INFUSION**
  - Adult: 12.5–18.75 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

- **Acute labour pain**
  - Initially by lumbar epidural
    - Adult: 15–25 mg every 15 minutes as required, dose administered using a 2.5 mg/mL (0.25%) solution, alternatively (by continuous epidural infusion) 5–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution

- **Surgical anaesthesia, peripheral nerve block**
  - By regional administration
    - Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

- **Surgical anaesthesia, peribulbar nerve block**
  - By regional administration
    - Adult: 7.5–112.5 mg, dose administered using a 7.5 mg/mL (0.75%) solution

- **Surgical anaesthesia for caesarean section**
  - By lumbar epidural
    - Adult: 75–150 mg, to be given over 15–20 minutes, dose administered using a 5 mg/mL (0.5%) solution

- **Surgical anaesthesia**
  - By lumbar epidural
    - Adult: 50–150 mg, to be given over 5 minutes, dose administered using a 5 mg/mL (0.5%) or 7.5 mg/mL (0.75%) solution
  - By intrathecal injection
    - Adult: 15 mg, dose administered using a 5 mg/mL (0.5%) solution
  - By local infiltration
    - Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

---

### Doses at extremes of body-weight

To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

#### Important safety information

The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthetics and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) - avoid injection into infected tissues - avoid injection into inflamed tissues - complete heart block - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block) - should not be applied to damaged skin

- **SIDE-EFFECTS** Anaemia - arthralgia - blurred vision - cardiac arrest - convulsions - dizziness - drowsiness - feeling of inebriation - headache - lightheadedness - muscle twitching - myocardial depression (resulting in hypotension and bradycardia) - nausea - numbness of the tongue and perioral region - paraesthesia (including sensations of hot and cold) - peripheral vasodilatation (resulting in hypotension and bradycardia) - paresthesia - restlessness - sweating - tinnitus - transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) - tremors - vomiting

**SIDE-EFFECTS, FURTHER INFORMATION**

#### Toxic effects

Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

- **ALLERGY AND CROSS-SENSITIVITY** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid if possible in the first trimester—tolerance in animal studies. May cause fetal
Lidozaine hydrochloride
(Lignocaine hydrochloride)

INDICATIONS AND DOSE

Dental practice
BY BUCCAL ADMINISTRATION USING OINTMENT
Adult: Rub gently into dry gum

Infiltration anaesthesia
BY LOCAL INFLTRATION
Adult: Dose to be given according to patient’s weight and nature of procedure; max. 200 mg, maximum dose 500 mg if given in solutions containing adrenaline

Intravenous regional anaesthesia and nerve block
Adult: Seek expert advice

Pain relief (in anal fissures, haemorrhoids, pruritis ani, pruritis vulvae, herpes zoster, or herpes labialis)

Lubricant in cystoscopy | Lubricant in proctoscopy

TO THE SKIN USING OINTMENT
Adult: Apply 1–2 ml as required, avoid long-term use

Sore nipples from breast-feeding

TO THE SKIN USING OINTMENT
Adult: Apply using gauze and wash off immediately before next feed

LARYNGOJET®

Anaesthesia of mucous membranes of oropharynx, trachea, or respiratory tract
TO MUCOUS MEMBRANES
Adult: 40–200 mg; to be given as a single dose sprayed, instilled (if a cavity), or applied with a swab (reduce dose according to size, age and condition of patient); usual dose 160 mg

Important safety information

For local infiltration, the licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

CONTRA-INDICATIONS

GENERAL CONTRA-INDICATIONS
All grades of atrioventricular block - severe myocardial depression - sino-atrial disorders

SPECIFIC CONTRA-INDICATIONS
When used by regional administration Application to the middle ear (can cause ototoxicity) - avoid injection into infected tissues - avoid injection into inflamed tissues -
preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block) - severe myocardial depression - should not be applied to damaged skin

CONTRA-INDICATIONS, FURTHER INFORMATION

- When used by regional administration
  - Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- CAUTIONS
  - With intravenous use Acute porphyria (consider infusion with glucose for its anti-porphyrinogenic effects) - congestive cardiac failure (consider lower dose) - post cardiac surgery (consider lower dose)
  - With used by regional administration Acute porphyria (consider infusion with glucose for its anti-porphyrinogenic effects) - congestive cardiac failure (consider lower dose) - post cardiac surgery (consider lower dose) - debilitated patients (consider dose reduction) - elderly (consider dose reduction) - epilepsy - hypovolaemia - impaired cardiac conduction - impaired respiratory function - myasthenia gravis - shock
  - With oral (topical) use Avoid anaesthesia of the pharynx before meals - risk of choking - can damage plastic cuffs of endotrachial tubes

- INTERACTIONS → Appendix 1 (lidocaine). Interactions less likely when lidocaine used topically.

- SIDE-EFFECTS
  - Common or very common
  - With intravenous use Bradycardia (may lead to cardiac arrest) - confusion - convulsions - dizziness (particularly if injection too rapid) - drowsiness (particularly if injection too rapid) - hypotension (may lead to cardiac arrest) - paraesthesia (particularly if injection too rapid) - respiratory depression
  - When used by regional administration Bradycardia (may lead to cardiac arrest) - confusion - convulsions - hypotension (may lead to cardiac arrest) - respiratory depression
  - Rare
  - With intravenous use or by regional administration
  - Anaphylaxis
  - Frequency not known
  - When used by regional administration
    - Arrhythmias - blurred vision - cardiac arrest - feeling of inebriation - headache - hypoglycaemia (following intrathecal or extradural administration) - methaemoglobinemia - muscle twitching - myocardial depression (resulting in hypotension and bradycardia) - nausea - numbness of the tongue and perioral region - myasthenia - peripheral vasodilatation (resulting in hypotension and bradycardia) - rash - restlessness - tinnitus - transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) - tremors - vomiting

SIDE-EFFECTS, FURTHER INFORMATION

Topical application A single application of a topical lidocaine preparation does not generally cause systemic side-effects.

Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

Methaemoglobininaemia Methaemoglobininaemia can be treated with an intravenous injection of methyliodihium chloride; neonates and infants under 6 months are particularly susceptible to methaemoglobinemia.

- ALLERGY AND CROSS-SENSITIVITY Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- PREGNANCY Crosses the placenta but not known to be harmful in animal studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or spinal block.

- BREAST FEEDING Present in milk but amount too small to be harmful.

- HEPATIC IMPAIRMENT Caution—increased risk of side-effects.

- RENAL IMPAIRMENT Possible accumulation of lidocaine and active metabolite; caution in severe impairment.

- PROFESSION SPECIFIC INFORMATION
  - Dental practitioners’ formulary Lidocaine ointment 5% may be prescribed. Spray may be prescribed as Lidocaine Spray 10%.

- NATIONAL FUNDING/ACCESS DECISIONS

VERSATIS®

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (July 2008) that Versatis® is accepted for restricted use within NHS Scotland for the treatment of postherpetic neuralgia in patients who are intolerant of first-line systemic therapies or when they have been ineffective.

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, gel, ointment, liquid, nebuliser liquid, mouthwash, lozenge

Solution for injection

- LIDOCAINE HYDROCHLORIDE (Non-proprietary)

Lidocaine hydrochloride 5 mg per 1 ml Lidocaine 50mg/10ml (0.5%) solution for injection ampoules £10.89 Lidocaine 100mg/10ml (1%) solution for injection ampoules £10.80 Lidocaine hydrochloride 10 mg per 1 ml Lidocaine 100mg/10ml (1%) solution for injection ampoules £4.50 Lidocaine 200mg/20ml (1%) solution for injection vials £8.40 Lidocaine 200mg/20ml (1%) solution for injection ampoules 10 vial (PFR) £18.00-£19.00 Lidocaine 200mg/20ml (3%) solution for injection ampoules 10 ampoule (PFR) £7.00 Lidocaine hydrochloride 20 mg per 1 ml Lidocaine 50mg/5ml (2%) solution for injection ampoules 10 ampoule (PFR) £2.43 Lidocaine 400mg/20ml (2%) solution for injection vials 10 vial (PFR) £18.50-£19.50 Lidocaine 200mg/10ml (2%) solution for injection Mini-Plasco ampoules 20 ampoule (PFR) £14.52 Lidocaine 40mg/2ml (2%) solution for injection ampoules 10 ampoule (PFR) £4.00 DT price = £2.13 Lidocaine hydrochloride 20 mg per 1 ml Lidocaine 100mg/5ml (2%) solution for injection ampoules 10 ampoule (PFR) £5.00 Lidocaine 400mg/20ml (2%) solution for injection ampoules 10 ampoule (PFR) £8.00-£10.00 DT price = £3.07
Lidocaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1116, adrenaline p. 1116.

**INDICATIONS AND DOSE**

Anaesthesia before nasal surgery, endoscopy, laryngoscopy, or removal of foreign bodies from the nose

**BY INTRANASAL ADMINISTRATION**

- Adult: Up to 8 sprays

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Spray**

- **LIDOCAINE WITH PHENYLEPHRINE (Non-proprietary)**
  - Lidocaine hydrochloride 50 mg per 1 ml, Phenylephrine hydrochloride 5 mg per 1 ml
  - Lidocaine 5% / Phenylephrine 0.5% nasal spray | 2.5 ml | £11.48

Lidocaine with prilocaine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1116, prilocaine hydrochloride p. 1120.

**INDICATIONS AND DOSE**

Anaesthesia before minor skin procedures including venepuncture

**TO THE SKIN**

- Child 1-2 months: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day
- Child 3-11 months: Apply up to 2 g for maximum 4 hours before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- Child 1-11 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- Child 12-17 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca)
- Adult: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing

Anaesthesia on genital skin before injection of local anaesthetics

**TO THE SKIN**

- Adult: Apply for 15 minutes (in adult men) and 60 minutes (in adult women), to be applied under occlusive dressing
Anaesthesia before surgical treatment of lesions on genital mucosa
TO THE SKIN
- Adult: Apply up to 10 g, to be applied 5–10 minutes before procedure

Anaesthesia before cervical curettage
TO THE SKIN
- Adult: Apply 10 g in lateral vaginal fornices for 10 minutes

Anaesthesia before mechanical cleansing or debridement of leg ulcer
TO THE SKIN
- Adult: Apply up to 10 g for 30–60 minutes, to be applied under occlusive dressing

- CONTRA-INDICATIONS Use in child less than 37 weeks corrected gestational age
- PATIENT AND CARER ADVICE
  Medicine for Children leaflet: EMLA cream for local anaesthesia
  www.medicinesforchildren.org.uk/emla-cream-for-local-anaesthesia
- MEDICINAL FORMS
  There can be variation in the licensing of different medicines containing the same drug.
  Cream
  - Lidocaine with Prilocaine (Non-proprietary)
  - Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram
  - Lidocaine 2.5% / Prilocaine 2.5% cream | 5 gram | no price available
  - Emla (AstraZeneca UK Ltd)
  - Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram
  5% cream | 5 gram | £2.25–£2.99
  25 gram | £11.70
  30 gram | £12.30
  - Brands may include Denela

Lidocaine with tetracaine
The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1116, tetracaine p. 1122.

INDICATIONS AND DOSE
Anaesthesia before dermatological procedures and venepuncture
TO THE SKIN
- Adult: Apply 1 mm layer using a spatula 30 minutes before procedure, then peel off immediately before procedure; max. application area 400 cm², application time of 60 minutes indicated for certain procedures, such as laser-assisted tattoo removal and laser leg vein ablation

- MEDICINAL FORMS
  There can be variation in the licensing of different medicines containing the same drug.
  Cream
  - Excipients: May contain Hydroxybenzoates (parabens)
  - Pipaglis (Galderma (UK) Ltd)
  - Lidocaine 70 mg, Tetracaine 70 mg
  - Pipaglis 70mg/g / 70mg/g cream | 15 gram | £22.95

Mepivacaine hydrochloride

INDICATIONS AND DOSE
Infiltration anaesthesia and nerve block in dentistry
- Child 3-17 years: Consult expert dental sources
- Adult: Consult expert dental sources

Doses at extremes of body-weight
To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

- CONTRA-INDICATIONS Application to the middle ear (can cause ototoxicity) - avoid injection into infected tissues - avoid injection into inflamed tissues - complete heart block - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block) - should not be applied to damaged skin
- CAUTIONS
  - Cardiovascular disease
  - Children (consider dose reduction)
  - Debilitated patients (consider dose reduction)
  - Elderly (consider dose reduction)
  - Epilepsy
  - Hyponatraemia
  - Impaired cardiac conduction
  - Impaired respiratory function
  - Myasthenia gravis
  - Shock
- SIDE-EFFECTS
  - Arrhythmias
  - Blurred vision
  - Cardiac arrest
  - Convulsions
  - Dizziness
  - Drowsiness
  - Feeling of inebriation
  - Headache
  - Lightheadedness
  - Muscle twitching
  - Myocardial depression (resulting in hypotension and bradycardia)
  - Nausea
  - Number of the tongue and perioral region
  - Parasthesia (including sensations of hot and cold)
  - Peripheral vasodilatation (resulting in hypotension and bradycardia)
  - Restlessness
  - Tinnitus
  - Transient excitement (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma)
  - Tremors
  - Vomiting
- ALLERGY AND CROSS-SENSITIVITY
  - Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- PREGNANCY
  - Use with caution in early pregnancy.
- BREAST FEEDING
  - Use with caution.
- HEPATIC IMPAIRMENT
  - Use with caution; increased risk of side-effects in severe impairment.
- RENAL IMPAIRMENT
  - Use with caution; increased risk of side-effects.
1120 Local anaesthesia

**CONTRA-INDICATIONS**

**Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

**CAUTIONS** Acute porphyrias p. 864 - cardiovascular disease - debilitated patients (consider dose reduction) - elderly (consider dose reduction) - epilepsy - hypovolaemia - impaired cardiac conduction - impaired respiratory function - myasthenia gravis - neonates and infants under 6 months are particularly susceptible to methaemoglobinaemia - severe or untreated hypertension - shock

**INTERACTIONS** → Appendix 1 (prilocaine). Caution with concomitant use of drugs that cause methaemoglobinaemia.

**SIDE-EFFECTS** Arrhythmias - blurred vision - cardiac arrest - convulsions - dizziness - drowsiness - feeling of inebriation - headache - hypertension - lightheadedness - methaemoglobinaemia (with high doses) - muscle twitching - myocardial depression (resulting in hypotension and bradycardia) - nussa - numbness of the tongue and perioral region - paraesthesia (including sensations of hot and cold) - peripheral vasodilatation (resulting in hypotension and bradycardia) - restlessness - tinnitus - transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) - tremors - vomiting

**SIDE-EFFECTS, FURTHER INFORMATION**

**Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

**Methaemoglobinaemia** Methaemoglobinaemia can be treated with an intravenous injection of methylthioninium chloride.

**ALLERGY AND CROSS-SENSITIVITY** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as lidocaine, mepivacaine, lidocaine, prilocaine, ropivacaine, and mepivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

**PREGNANCY** Use lower doses for intrathecal use during late pregnancy. Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid paracervical or pudendal block in obstetrics (neonatal methaemoglobinaemia reported).

**BREAST FEEDING** Present in milk but not known to be harmful.

**HEPATIC IMPAIRMENT** Lower doses may be required for intrathecal anaesthesia. Use with caution.

**RENAL IMPAIRMENT** Lower doses may be required for intrathecal anaesthesia. Use with caution.

**NATIONAL FUNDING/ACCESS DECISIONS**

**PRILOTEKAL**

**Scottish Medicines Consortium (SMC) Decisions**

With intrathecal use The Scottish Medicines Consortium has advised (December 2010) that prilocaine 2% hyperbaric...
solution for injection (Prilotekal®) is accepted for restricted use within NHS Scotland for use in spinal anaesthesia in ambulatory surgery settings.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**

- **Citanest** (AstraZeneca UK Ltd)
  - Prilocaine hydrochloride 10 mg per 1 ml Citanest 3% solution for injection 50ml vials | 1 vial (pH) £5.06
- **Prilotekal** (AMCo)
  - Prilocaine hydrochloride 20 mg per 1 ml Prilotekal 100mg/5ml solution for injection ampoules | 10 ampoule (pH) £7.75

**Prilocaine with felypressin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, prilocaine hydrochloride p. 1120.

**INDICATIONS AND DOSE**

**Dental anaesthesia**

**BY REGIONAL ADMINISTRATION**

- Adult: Consult expert dental sources for specific advice

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **Citanest with Octapressin** (Dentsply Ltd)
  - Felypressin 0.03 unit per 1 ml, Prilocaine hydrochloride 30 mg per 1 ml Citanest 3% with Octapressin Dental 0.054units/1.8ml solution for injection self aspirating cartridges | 100 cartridge (pH) no price available
  - Citanest 3% with Octapressin Dental 0.066units/2.2ml solution for injection self aspirating cartridges | 100 cartridge (pH) no price available

**Ropivacaine hydrochloride**

**INDICATIONS AND DOSE**

**Acute pain, peripheral nerve block**

**BY REGIONAL ADMINISTRATION**

- Adult: 10–20 mg/hour, dose administered as a continuous infusion or by intermittent injection using a 2 mg/mL (0.2%) solution

**Acute pain, field block**

**BY REGIONAL ADMINISTRATION**

- Adult: 2–200 mg, dose administered using a 2 mg/mL (0.2%) solution

**Acute pain, lumbar epidural block**

**BY LUMBAR EPIDURAL**

- Adult: 20–40 mg, followed by 20–30 mg at least every 30 minutes, dose administered using a 2 mg/mL (0.2%) solution

**Acute labour pain**

**BY CONTINUOUS EPIDURAL INFUSION**

- Adult: 12–20 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Acute postoperative pain**

**BY CONTINUOUS EPIDURAL INFUSION**

- Adult: Up to 28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Postoperative pain, thoracic epidural block**

**BY CONTINUOUS EPIDURAL INFUSION**

- Adult: 12–28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Surgical anaesthesia, field block**

**BY REGIONAL ADMINISTRATION**

- Adult: 7.5–225 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, major nerve block (brachial plexus block)**

**BY REGIONAL ADMINISTRATION**

- Adult: 225–300 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, thoracic epidural block (to establish block for postoperative pain)**

**BY THORACIC EPIDURAL**

- Adult: 38–113 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia for caesarean section**

**BY LUMBAR EPIDURAL**

- Adult: 113–150 mg, to be administered in incremental doses using a 7.5 mg/mL (0.75%) solution

**Doses at extremes of body-weight**

To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal bodyweight.

**Important safety information**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

**CONTRA-INDICATIONS**

Application to the middle ear (can cause ototoxicity) . avoid injection into infected tissues . avoid injection into inflamed tissues . complete heart block . preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier’s block) . should not be applied to damaged skin.

**CONTRA-INDICATIONS, FURTHER INFORMATION**

**Injection site**

Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

**CAUTIONS**

Acute porphyrias p. 864 . cardiovascular disease . debilitated patients (consider dose reduction) . elderly (consider dose reduction) . epilepsy . hypovolaemia . impaired cardiac conduction . impaired respiratory function . myasthenia gravis . shock

**INTERACTIONS**

Appendix 1 (ropivacaine).

**SIDE-EFFECTS**

- Common or very common  Hypertension . pyrexia
- Uncommon  Hypothermia . syncope
- Frequency not known  Arrhythmias . blurred vision . cardiac arrest . convulsions . dizziness . drowsiness . feeling of inebriation . headache . lightheadedness . muscle twitching . myocardial depression (resulting in hypotension and bradycardia) . nausea . numbness of the tongue and perioral region . paraesthesia (including sensations of hot and cold) . peripheral vasodilatation (resulting in hypotension and bradycardia) . restlessness . tinnitus . transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) . tremors . vomiting
SIDE-EFFECTS, FURTHER INFORMATION

Toxic effects  Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravenous injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

- ALLERGY AND CROSS-SENSITIVITY  Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- PREGNANCY  Not known to be harmful. Do not use for paracervical block in obstetrics.
- Breast feeding  Not known to be harmful.
- HEPATIC IMPAIRMENT  Use with caution in severe impairment.

**Tetracaine (Amethocaine)**

INDICATIONS AND DOSE  Anaesthesia before venepuncture or venous cannulation

- Child 1 month-4 years: Apply contents of up to 1 tube (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation

- CONTRA-INDICATIONS  Should not be applied to damaged skin

- SIDE-EFFECTS  Local skin reactions

- SIDE-EFFECTS, FURTHER INFORMATION  The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems; systemic side effects unlikely as minimal absorption following topical application.

- ALLERGY AND CROSS-SENSITIVITY  Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

Emergency treatment of poisoning

These notes provide only an overview of the treatment of poisoning, and it is strongly recommended that either TOXBASE or the UK National Poisons Information Service be consulted when there is doubt about the degree of risk or about management.

Hospital admission
Patients who have features of poisoning should generally be admitted to hospital. Patients who have taken poisons with delayed action should also be admitted, even if they appear well. Delayed-action poisons include aspirin p. 104, iron, paracetamol p. 354, tricyclic antidepressants, and co-phenotrope p. 55 (diphenoxylate with atropine, Lomotil®); the effects of modified-release preparations are also delayed. A note of all relevant information, including what treatment has been given, should accompany the patient to hospital.

Further information
TOXBASE, the primary clinical toxicology database of the National Poisons Information Service, is available on the internet to registered users at www.toxbase.org (a backup site is available at www.toxbasebackup.org if the main site cannot be accessed). It provides information about routine diagnosis, treatment, and management of patients exposed to drugs, household products, and industrial and agricultural chemicals.

Specialist information and advice on the treatment of poisoning is available day and night from the UK National Poisons Information Service on the following number: Tel: 0844 892 0111.

Advice on laboratory analytical services can be obtained from TOXBASE or from the National Poisons Information Service. Help with identifying capsules or tablets may be available from a regional medicines information centre or from the National Poisons Information Service (out of hours).

General care
It is often impossible to establish with certainty the identity of the poison and the size of the dose. This is not usually important because only a few poisons (such as opioids, paracetamol p. 354, and iron) have specific antidotes; few patients require active removal of the poison. In most patients, treatment is directed at managing symptoms as they arise. Nevertheless, knowledge of the type and timing of poisoning can help in anticipating the course of events. All relevant information should be sought from the poisoned individual and from carers or parents. However, such information should be interpreted with care because it may not be complete or entirely reliable. Sometimes symptoms arise from other illnesses and patients should be assessed carefully. Accidents may involve domestic and industrial products (the contents of which are not generally known). The National Poisons Information Service should be consulted when there is doubt about any aspect of suspected poisoning.

Respiration
Respiration is often impaired in unconscious patients. An obstructed airway requires immediate attention. In the absence of trauma, the airway should be opened with simple measures such as chin lift or jaw thrust. An oropharyngeal or nasopharyngeal airway may be useful in patients with reduced consciousness to prevent obstruction, provided ventilation is adequate. Intubation and ventilation should be considered in patients whose airway cannot be protected or who have respiratory acidosis because of inadequate ventilation; such patients should be monitored in a critical care area.

Most poisons that impair consciousness also depress respiration. Assisted ventilation (either mouth-to-mouth or using a bag-valve-mask device) may be needed. Oxygen is not a substitute for adequate ventilation, although it should be given in the highest concentration possible in poisoning with carbon monoxide and irritant gases.

Blood pressure
Hypotension is common in severe poisoning with central nervous system depressants. A systolic blood pressure of less than 70 mmHg may lead to irreversible brain damage or renal tubular necrosis. Hypotension should be corrected initially by raising the foot of the bed and administration of an infusion of either sodium chloride p. 851 or a colloid. Vasoconstrictor sympathomimetics are rarely required and their use may be discussed with the National Poisons Information Service.

Fluid depletion without hypotension is common after prolonged coma and after aspirin p. 104 poisoning due to vomiting, sweating, and hyperpnoea.

Hypertension, often transient, occurs less frequently than hypotension in poisoning; it may be associated with sympathomimetic drugs such as amphetamines, phencyclidine, and cocaine.

Heart
Cardiac conduction defects and arrhythmias can occur in acute poisoning, notably with tricyclic antidepressants, some antipsychotics, and some antihistamines. Arrhythmias
Emergency treatment of poisoning

often respond to correction of underlying hypoxia, acidosis, or other biochemical abnormalities, but ventricular arrhythmias that cause serious hypotension require treatment. If the QT interval is prolonged, specialist advice should be sought because the use of some anti-arrhythmic drugs may be inappropriate. Supraventricular arrhythmias are seldom life-threatening and drug treatment is best withheld until the patient reaches hospital.

**Body temperature**

Hypothermia may develop in patients of any age who have been deeply unconscious for some hours, particularly following overdose with barbiturates or phenothiazines. It may be missed unless core temperature is measured using a low-reading rectal thermometer or by some other means. Hypothermia should be managed by prevention of further heat loss and appropriate re-warming as clinically indicated.

Hypothermia can develop in patients taking CNS stimulants; children and the elderly are also at risk when taking therapeutic doses of drugs with antimuscarinic properties. Hyperthermia is initially managed by removing all unnecessary clothing and using a fan. Sponging with tepid water will promote evaporation. Advice should be sought from the National Poisons Information Service on the management of severe hyperthermia resulting from conditions such as the serotonin syndrome.

Both hypothermia and hyperthermia require urgent hospitalisation for assessment and supportive treatment.

**Convolusions**

Single short-lived convulsions (lasting less than 5 minutes) do not require treatment. If convulsions are protracted or recur frequently, lorazepam p. 412 or diazepam p. 267 (preferably as emulsion) should be given by slow intravenous injection into a large vein. Benzendiazepines should not be given by the intramuscular route for convulsions. If the intravenous route is not readily available, midazolam oromucosal solution p. 414 [unlicensed use in adults and children under 3 months] can be given by the buccal route or diazepam can be administered as a rectal solution.

**Methaemoglobinaemia**

Drug- or chemical-induced methaemoglobinaemia should be treated with methylythioninium chloride p. 1135 if the methylnitrogen concentration is 30% or higher, or if symptoms of tissue hypoxia are present despite oxygen therapy. Methylthioninium chloride reduces the ferric iron of methaemoglobin back to the ferrous iron of haemoglobin; in high doses, methylthioninium chloride can itself cause methaemoglobinaemia.

**Removal and elimination**

Prevention of absorption

Given by mouth, activated charcoal p. 1130 can bind many poisons in the gastro-intestinal system, thereby reducing their absorption. The sooner it is given the more effective it is, but it may still be effective up to 1 hour after ingestion of the poison—longer in the case of modified-release preparations or of drugs with antimuscarinic (anticholinergic) properties. It is particularly useful for the prevention of absorption of poisons that are toxic in small amounts, such as antidepressants.

Active elimination techniques

Repeated doses of activated charcoal by mouth enhance the elimination of some drugs after they have been absorbed; repeated doses are given after overdosage with:

- Carbamazepine
- Dapsone
- Phenobarbital
- Quinine
- Theophylline

If vomiting occurs after dosing it should be treated (e.g. with an antiemetic drug) since it may reduce the efficacy of charcoal treatment. In cases of intolerance, the dose may be reduced and the frequency increased but this may compromise efficacy.

Activated charcoal p. 1130 should not be used for poisoning with petroleum distillates, corrosive substances, alcohols, malathion, cyanides and metal salts including iron and lithium salts.

Other techniques intended to enhance the elimination of poisons after absorption are only practicable in hospital and are only suitable for a small number of severely poisoned patients. Moreover, they only apply to a limited number of poisons. Examples include:

- haemodialysis for ethylene glycol, lithium, methanol, phenobarbital, salicylates, and sodium valproate;
- alkalisation of the urine for salicylates.

**Removal from the gastro-intestinal tract**

Gastric lavage is rarely required; for substances that cannot be removed effectively by other means (e.g. iron), it should be considered only if a life-threatening amount has been ingested within the previous hour. It should be carried out only if the airway can be protected adequately. Gastric lavage is contra-indicated if a corrosive substance or a petroleum distillate has been ingested, but it may occasionally be considered in patients who have ingested drugs that are not adsorbed by charcoal, such as iron or lithium. Induction of emesis (e.g. with ipecacuanha) is not recommended because there is no evidence that it affects absorption and it may increase the risk of aspiration.

**Whole bowel irrigation** (by means of a bowel cleansing preparation) has been used in poisoning with certain modified-release or enteric-coated formulations, in severe poisoning with iron and lithium salts, and if illicit drugs are carried in the gastro-intestinal tract (‘body-packing’). However, it is not clear that the procedure improves outcome and advice should be sought from the National Poisons Information Service.

**Specific Drugs**

**Alcohol**

Acute intoxication with alcohol (ethanol) is common in adults but also occurs in children. The features include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis. Aspiration of vomit is a special hazard and hypoglycaemia may occur in children and some adults. Patients are managed supportively, with particular attention to maintaining a clear airway and measures to reduce the risk of aspiration of gastric contents. The blood glucose is measured and glucose given if indicated.

**Analgesics**

**Aspirin**

The main features of salicylate poisoning are hyperventilation, tinnitus, deafness, vasodilatation, and sweating. Coma is uncommon but indicates very severe poisoning. The associated acid-base disturbances are complex.

Treatment must be in hospital, where plasma salicylate, pH, and electrolytes can be measured; absorption of aspirin may be slow and the plasma-salicylate concentration may continue to rise for several hours, requiring repeated measurement. Plasma-salicylate concentration may not correlate with clinical severity in the young and the elderly, and clinical and biochemical assessment is necessary. Generally, the clinical severity of poisoning is less below a plasma-salicylate concentration of 500 mg/litre (3.6 mmol/litre), unless there is evidence of metabolic acidosis. Activated charcoal can be given within 1 hour of ingesting more than 125 mg/kg of aspirin. Fluid losses
should be replaced and intravenous sodium bicarbonate may be given (ensuring plasma-potassium concentration is within the reference range) to enhance urinary salicylate excretion (optimum urinary pH 7.5–8.5). Plasma-potassium concentration should be corrected before giving sodium bicarbonate as hypokalaemia may complicate alkalinisation of the urine.

Haemodialysis is the treatment of choice for severe salicylate poisoning and should be considered when the plasma-salicylate concentration exceeds 700 mg/litre (5.1 mmol/litre) or in the presence of severe metabolic acidosis.

Opioids
Opioids (narcotic analgesics) cause coma, respiratory depression, and pinpoint pupils. The specific antidote naloxone hydrochloride p. 1133 is indicated if there is coma or bradypnoea. Since naloxone has a shorter duration of action than many opioids, close monitoring and repeated injections are necessary according to the respiratory rate and depth of coma. When repeated administration of naloxone is required, it can be given by continuous intravenous infusion instead and the rate of infusion adjusted according to vital signs. The effects of some opioids, such as buprenorphine, are only partially reversed by naloxone. Dextropropoxyphene and methadone have very long durations of action; patients may need to be monitored for long periods following large overdoses.

Naloxone reverses the opioid effects of dextropropoxyphene; the long duration of action of dextropropoxyphene calls for prolonged monitoring and further doses of naloxone may be required.

Norpropoxyphene, a metabolite of dextropropoxyphene, also has cardiotoxic effects which may require treatment with sodium bicarbonate p. 848, or magnesium sulfate p. 858, or both; arrhythmias may occur for up to 12 hours.

Paracetamol
In cases of intravenous paracetamol poisoning contact the National Poisons Information Service for advice on risk assessment and management.

Toxic doses of paracetamol may cause severe hepatocellular necrosis and, much less frequently, renal tubular necrosis. Nausea and vomiting, the only early features of poisoning, usually settle within 24 hours. Persistence beyond this time, often associated with the onset of right subcostal pain and tenderness, usually indicates development of hepatic necrosis. Liver damage is maximal 3–4 days after paracetamol overdose and may lead to encephalopathy, haemorrhage, hypoglycaemia, cerebral oedema, and death. Therefore, despite a lack of significant early symptoms, patients who have taken an overdose of paracetamol should be transferred to hospital urgently.

To avoid underestimating the potentially toxic paracetamol dose ingested by obese patients who weigh more than 110 kg, use a body-weight of 110 kg (rather than their actual body-weight) when calculating the total dose of paracetamol ingested (in mg/kg).

Acetylcysteine p. 1134 protects the liver if infused up to, and possibly beyond, 24 hours of ingesting paracetamol. It is most effective if given within 8 hours of ingestion, after which effectiveness declines. Very rarely, giving
Emergency treatment of poisoning

Acetylcysteine by mouth (unlicensed route) is an alternative if intravenous access is not possible—contact the National Poisons Information Service for advice.

Neonates less than 45 weeks corrected gestational age may be more susceptible to paracetamol-induced liver toxicity, therefore, treatment with acetylcysteine should be considered in all paracetamol overdoses, and advice should be sought from the National Poisons Information Service.

Acute overdose

Hepatotoxicity may occur after a single ingestion of more than 150 mg/kg of paracetamol taken in less than 1 hour. Rarely, hepatotoxicity may develop with single ingestions as low as 75 mg/kg of paracetamol taken in less than 1 hour. Patients who have ingested 75 mg/kg or more of paracetamol in less than 1 hour should be referred to hospital. Administration of charcoal, activated p. 1130 should be considered if paracetamol in excess of 150 mg/kg is thought to have been ingested within the previous hour.

Patients at risk of liver damage and, therefore, requiring acetylcysteine, can be identified from a single measurement of the plasma-paracetamol concentration, related to the time from ingestion, provided this time interval is not less than 4 hours; earlier samples may be misleading. The concentration is plotted on a paracetamol treatment graph, with a reference line (‘treatment line’) joining plots of 100 mg/litre (0.66 mmol/litre) at 4 hours and 3.13 mg/litre (0.02 mmol/litre) at 24 hours. Acetylcysteine treatment should commence immediately in patients:

- whose plasma-paracetamol concentration falls on or above the treatment line on the paracetamol treatment graph;
- who present 8–24 hours after taking an acute overdose of more than 150 mg/kg of paracetamol, even if the plasma-paracetamol concentration is not yet available; acetylcysteine can be discontinued if the plasma-paracetamol concentration is later reported to be below the treatment line on the paracetamol treatment graph, provided that the patient is asymptomatic and liver function tests, serum creatinine and INR are normal.

The prognostic accuracy of a plasma-paracetamol concentration taken after 15 hours is uncertain, but a concentration on or above the treatment line on the paracetamol treatment graph should be regarded as carrying a serious risk of liver damage. If more than 15 hours have elapsed since ingestion, or there is doubt about appropriate management, advice should be sought from the National Poisons Information Service.

‘Staggered’ overdose, uncertain time of overdose, or therapeutic excess

A ‘staggered’ overdose involves ingestion of a potentially toxic dose of paracetamol over more than one hour, with the possible intention of causing self-harm. Therapeutic excess is the inadvertent ingestion of a potentially toxic dose of paracetamol during its clinical use. The paracetamol treatment graph is unreliable if a ‘staggered’ overdose is taken, if there is uncertainty about the time of the overdose, or if there is therapeutic excess. In these cases, patients who have taken more than 150 mg/kg of paracetamol in any 24-hour period are at risk of toxicity and should be commenced on acetylcysteine immediately, unless it is more than 24 hours since the last ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal.

Rarely, toxicity can occur with paracetamol doses between 75–150 mg/kg in any 24-hour period; clinical judgement of the individual case is necessary to determine whether to treat those who have ingested this amount of paracetamol. For small adults, this may be within the licensed dose, but ingestion of a licensed dose of paracetamol is not considered an overdose.

Although there is some evidence suggesting that factors such as the use of liver enzyme-inducing drugs (e.g. carbamazepine p. 387, efavirenz p. 558, nevirapine p. 560, phenobarbital p. 409, phenytoin p. 398, primidone p. 401, rifabutin p. 507, rifampicin p. 508, St John’s wort), chronic alcoholism, and starvation may increase the risk of hepatotoxicity, the CHM has advised that these should no longer be used in the assessment of paracetamol toxicity.

Significant toxicity is unlikely if, 24 hours or longer after the last paracetamol ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal. Patients with clinical features of hepatic injury such as jaundice or hepatic tenderness should be treated urgently with acetylcysteine. If there is uncertainty about a patient’s risk of toxicity after paracetamol overdose, treatment with acetylcysteine should be commenced. Advice should be sought from the National Poisons Information Service whenever necessary.

Acetylcysteine dose and administration

For paracetamol overdosage, acetylcysteine p. 1134 is given in a total dose that is divided into 3 consecutive intravenous infusions over a total of 21 hours. The tables below include the dose of acetylcysteine, for adults and children of body-weight 40 kg and over, in terms of the volume of Acetylcysteine Concentrate for Intravenous Infusion required for each of the 3 infusions. The requisite dose of acetylcysteine is added to Glucose Intravenous Infusion 5% p. 852.

First infusion (based on an acetylcysteine dose of approx. 150mg/kg)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 200mL Glucose Intravenous Infusion 5%; infuse over 1 hour.

Second infusion (based on an acetylcysteine dose of approx. 50mg/kg; start immediately after completion of first infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 500mL Glucose Intravenous Infusion 5%; infuse over 4 hours.
Third infusion

Third infusion (based on an acetylcysteine dose of approx. 100mg/kg; start immediately after completion of second infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 1 litre Glucose Intravenous Infusion 5%; infuse over 16 hours.

### Third infusion

### Antidepressants

**Tricyclic and related antidepressants**

Tricyclic and related antidepressants cause dry mouth, coma of varying degree, hypotension, hypothermia, hyperreflexia, extensor plantar responses, convulsions, respiratory failure, cardiac conduction defects, and arrhythmias. Dilated pupils and urinary retention also occur. Metabolic acidosis may complicate severe poisoning; delirium with confusion, agitation, and visual and auditory hallucinations are common during recovery.

Assessment in hospital is strongly advised in case of poisoning by tricyclic and related antidepressants but symptomatic treatment can be given before transfer. Supportive measures to ensure a clear airway and adequate ventilation during transfer are mandatory. Intravenous lorazepam or intravenous diazepam (preferably in emulsion form) may be required to treat convulsions. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Although arrhythmias are worrying, some will respond to correction of hypoxia and acidosis.

The use of anti-arrhythmic drugs is best avoided, but intravenous infusion of sodium bicarbonate can arrest arrhythmias or prevent them in those with an extended QRS duration. Diazepam given by mouth is usually adequate to sedate delirious patients but large doses may be required.

The National Poisons Information Service (Tel: 0844 892 0111) will provide specialist advice on all aspects of poisoning day and night.

### Selective serotonin re-uptake inhibitors (SSRIs)

Symptoms of poisoning by selective serotonin re-uptake inhibitors include nausea, vomiting, agitation, tremor, nystagmus, drowsiness, and sinus tachycardia; convulsions may occur. Rarely, severe poisoning results in the serotonin syndrome, with marked neuropsychiatric effects, neuromuscular hyperactivity, and autonomic instability; hyperthermia, rhabdomyolysis, renal failure, and coagulopathies may develop.

Management of SSR1 poisoning is supportive. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Convulsions can be treated with lorazepam, diazepam, or midazolam oromucosal solution [unlicensed use in adults and children under 3 months] (see Convulsions) p. 1124. Contact the National Poisons Information Service for the management of hyperthermia or the serotonin syndrome.

### Antimarialls

Overdosage with quinine, chloroquine, or hydroxychloroquine is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

### Antipsychotics

**Phenothiazines and related drugs**

Phenothiazines cause less depression of consciousness and respiration than other sedatives. Hypotension, hypothermia, sinus tachycardia, and arrhythmias may complicate poisoning. Dystonic reactions can occur with therapeutic doses (particularly with prochlorperazine and trifluoperazine), and convulsions may occur in severe cases. Arrhythmias may respond to correction of hypoxia, acidosis, and other biochemical abnormalities, but specialist advice should be sought if arrhythmias result from a prolonged QT interval; the use of some anti-arrhythmic drugs can worsen such arrhythmias. Dystonic reactions are rapidly abolished by injection of drugs such as procyclidine hydrochloride p. 326 or diazepam p. 267 (emulsion preferred).

**Second-generation antipsychotic drugs**

Features of poisoning by second-generation antipsychotic drugs include drowsiness, convulsions, extrapyramidal symptoms, hypotension, and ECG abnormalities (including prolongation of the QT interval). Management is supportive. Charcoal, activated p. 1130 can be given within 1 hour of ingesting a significant quantity of a second-generation antipsychotic drug.

### Benzodiazepines

Benzodiazepines taken alone cause drowsiness, ataxia, dysarthria, nystagmus, and occasionally respiratory depression, and coma. Charcoal, activated p. 1130 can be given within 1 hour of ingesting a significant quantity of benzodiazepine, provided the patient is awake and the airway is protected. Benzodiazepines potentiate the effects of other central nervous system depressants taken concomitantly. Use of the benzodiazepine antagonist flumazenil p. 1132 [unlicensed indication] can be hazardous, particularly in mixed overdoses involving tricyclic antidepressants or in benzodiazepine-dependent patients. Flumazenil may prevent the need for ventilation, particularly in patients with severe respiratory disorders; it should be used on expert advice only and not as a diagnostic test in patients with a reduced level of consciousness.

### Beta blockers

Therapeutic overdosages with beta-blockers may cause lightheadedness, dizziness, and possibly syncope as a result of bradycardia and hypotension; heart failure may be precipitated or exacerbated. These complications are most likely in patients with conduction system disorders or impaired myocardial function. Bradycardia is the most common arrhythmia caused by beta-blockers, but sotalol may induce ventricular tachyarrhythmias (sometimes of the torsade de pointes type). The effects of massive overdose can vary from one beta-blocker to another; propranolol overdose in particular may cause coma and convulsions. *Acute massive overdose* must be managed in hospital and expert advice should be obtained. Maintenance of a clear airway and adequate ventilation is mandatory. An intravenous injection of atropine sulfate p. 1099 is required to treat bradycardia. Cardiogenic shock unresponsive to atropine sulfate is probably best treated with an intravenous injection of glucagon p. 618 [unlicensed] in glucose 5% (with precautions to protect the airway in case of vomiting) followed by an intravenous infusion. If glucagon is not...
available, intravenous isoprenaline (available from ‘special-order’ manufacturers or specialist importing companies) is an alternative. A cardiac pacemaker can be used to increase the heart rate.

**Calcium-channel blockers**

Features of calcium-channel blocker poisoning include nausea, vomiting, dizziness, agitation, confusion, and coma in severe poisoning. Metabolic acidosis and hyperglycaemia may occur. Verapamil and diltiazem have a profound cardiac depressant effect causing hypotension and arrhythmias, including complete heart block and asystole. The dihydropyridine calcium-channel blockers cause severe hypotension secondary to profound peripheral vasodilatation.

Charcoal, activated p. 1130 should be considered if the patient presents within 1 hour of overdosage with a calcium-channel blocker; repeated doses of activated charcoal are considered if a modified-release preparation is involved. In patients with significant features of poisoning, calcium chloride p. 857 or calcium gluconate p. 857 is given by injection; atropine sulfate p. 1099 is given to correct symptomatic bradycardia. In severe cases, an insulin and glucose infusion may be required in the management of hypotension and myocardial failure. For the management of hypotension, the choice of inotropic sympathomimetic depends on whether hypotension is secondary to vasodilatation or to myocardial depression—advice should be sought from the National Poisons Information Service.

**Iron salts**

Iron poisoning in childhood is usually accidental. The symptoms are nausea, vomiting, abdominal pain, diarrhoea, haematemesis, and rectal bleeding. Hypotension and hepato-cellular necrosis can occur later. Coma, shock, and metabolic acidosis indicate severe poisoning.

Advice should be sought from the National Poisons Information Service if a significant quantity of iron has been ingested within the previous hour. Mortality is reduced by intensive and specific therapy with desferrioxamine mesylate p. 839, which chelates iron. The serum iron concentration is measured as an emergency and intravenous desferrioxamine mesylate given to chelate absorbed iron in excess of the expected iron binding capacity. In severe toxicity intravenous desferrioxamine mesylate should be given immediately without waiting for the result of the serum-iron measurement.

**Lithium**

Most cases of lithium intoxication occur as a complication of long-term therapy and are caused by reduced excretion of the drug because of a variety of factors including dehydration, deterioration of renal function, infections, and co-administration of diuretics or NSAIDs (or other drugs that interact). Acute deliberate overdoses may also occur with delayed onset of symptoms (12 hours or more) owing to slow entry of lithium into the tissues and continuing absorption from modified-release formulations.

The early clinical features are non-specific and may include apathy and restlessness which could be confused with mental changes arising from the patient’s depressive illness. Vomiting, diarrhoea, ataxia, weakness, dysarthria, muscle twitching, and tremor may follow. Severe poisoning is associated with convulsions, coma, renal failure, electrolyte imbalance, dehydration, and hypotension.

Therapeutic serum-lithium concentrations are within the range of 0.4–1 mmol/litre; concentrations in excess of 2 mmol/litre are usually associated with serious toxicity and such cases may need treatment with haemodialysis if neurological symptoms or renal failure are present. In acute overdosage much higher serum-lithium concentrations may be present without features of toxicity and all that is usually necessary is to take measures to increase urine output (e.g. by increasing fluid intake but avoiding diuretics). Otherwise, treatment is supportive with special regard to electrolyte balance, renal function, and control of convulsions. Gastric lavage may be considered if it can be performed within 1 hour of ingesting significant quantities of lithium. Whole-bowel irrigation should be considered for significant ingestion, but advice should be sought from the National Poisons Information Service.

**Stimulants**

Amphetamines cause wakefulness, excessive activity, paranoia, hallucinations, and hypertension followed by exhaustion, convulsions, hyperthermia, and coma. The early stages can be controlled by diazepam p. 267 or lorazepam p. 412; advice should be sought from the National Poisons Information Service on the management of hypertension. Later, tepid sponging, anticonvulsants, and artificial respiration may be needed.

**Cocaine**

Cocaine stimulates the central nervous system, causing agitation, dilated pupils, tachycardia, hypertension, hallucinations, hyperthermia, hypertonia, and hyperreflexia; cardiac effects include chest pain, myocardial infarction, and arrhythmias.

Initial treatment of cocaine poisoning involves intravenous administration of diazepam p. 267 to control agitation and cooling measures for hyperthermia (see Body temperature); hypertension and cardiac effects require specific treatment and expert advice should be sought.

**Ecstasy**

Ecstasy (methylenedioxymethamphetamine, MDMA) may cause severe reactions, even at doses that were previously tolerated. The most serious effects are delirium, coma, convulsions, ventricular arrhythmias, hyperthermia, rhabdomyolysis, acute renal failure, acute hepatitis, disseminated intravascular coagulation, adult respiratory distress syndrome, hyperreflexia, hypotension and intracerebral haemorrhage; hyponatraemia has also been associated with ecstasy use.

Treatment of methylenedioxymethamphetamine poisoning is supportive, with diazepam p. 267 to control severe agitation or persistent convulsions and close monitoring including ECG. Self-induced water intoxication should be considered in patients with ecstasy poisoning.

‘Liquid ecstasy’ is a term used for sodium oxybate (gamma-hydroxybutyrate, GHB), which is a sedative.

**Theophylline**

Theophylline and related drugs are often prescribed as modified-release formulations and toxicity can therefore be delayed. They cause vomiting (which may be severe and intractable), agitation, restlessness, dilated pupils, sinus tachycardia, and hyperglycaemia. More serious effects are haematemesis, convulsions, and supraventricular and ventricular arrhythmias. Severe hypokalaemia may develop rapidly.

Repeated doses of activated charcoal can be used to eliminate theophylline even if more than 1 hour has elapsed after ingestion and especially if a modified-release preparation has been taken (see also under Active Elimination Techniques). Ondansetron p. 349 may be effective for severe vomiting that is resistant to other antiemetics [unlicensed indication]. Hypokalaemia is corrected by intravenous infusion of potassium chloride p. 863 and may be so severe as to require 60 mmol/hour (high doses require ECG monitoring). Convulsions should be...
Sulfur dioxide, chlorine, phosgene, ammonia
All of these gases can cause upper respiratory tract and conjunctival irritation. Pulmonary oedema, with severe breathlessness and cyanosis may develop suddenly up to 36 hours after exposure. Death may occur. Patients are kept under observation and those who develop pulmonary oedema are given oxygen. Assisted ventilation may be necessary in the most serious cases.

**CS spray**
CS spray, which is used for riot control, irritates the eyes (hence ‘tear gas’) and the respiratory tract; symptoms normally settle spontaneously within 15 minutes. If symptoms persist, the patient should be removed to a well-ventilated area, and the exposed skin washed with soap and water after removal of contaminated clothing. Contact lenses should be removed and rigid ones washed (soft ones should be discarded). Eye symptoms should be treated by irrigating the eyes with physiological saline (or water if saline is not available) and advice sought from an ophthalmologist. Patients with features of severe poisoning, particularly respiratory complications, should be admitted to hospital for symptomatic treatment.

**Nerve agents**
Treatment of nerve agent poisoning is similar to organophosphorus insecticide poisoning, but advice must be sought from the National Poisons Information Service.

The risk of cross-contamination is significant; adequate decontamination and protective clothing for healthcare personnel are essential. In emergencies involving the release of nerve agents, kits (‘NAAS pods’) containing pralidoxime chloride p. 1131 can be obtained through the Ambulance Service from the National Blood Service (or the Welsh Blood Service in South Wales or designated hospital pharmacies in Northern Ireland and Scotland—see TOXBASE for list of designated centres).

**Pesticides**
Organophosphorus insecticides
Organophosphorus insecticides are usually supplied as powders or dissolved in organic solvents. All are absorbed through the bronchi and intact skin as well as through the gut and inhibit cholinesterase activity, thereby prolonging and intensifying the effects of acetylcholine. Toxicity between different compounds varies considerably, and onset may be delayed after skin exposure. Anxiety, restlessness, dizziness, headache, miosis, nausea, hypersalivation, vomiting, abdominal colic, diarrhoea, bradycardia, and sweating are common features of organophosphorus poisoning. Muscle weakness and fasciculation may develop and progress to generalised flaccid paralysis, including the ocular and respiratory muscles. Convulsions, coma, pulmonary oedema with copious bronchial secretions, hypoxia, and arrhythmias occur in severe cases. Hyperglycaemia and glycosuria without ketonuria may also be present.

Further absorption of the organophosphorus insecticide should be prevented by moving the patient to fresh air, removing soiled clothing, and washing contaminated skin. In severe poisoning it is vital to ensure a clear airway, frequent removal of bronchial secretions, and adequate ventilation and oxygenation; gastric lavage may be considered provided that the airway is protected. Atropine sulphate p. 1099 will reverse the muscarinic effects of acetylcholine and is given by intravenous injection until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished.

Pralidoxime chloride p. 1131, a cholinesterase reactivator, is used as an adjunct to atropine sulphate in moderate or severe poisoning. It improves muscle tone within 30 minutes of administration. Pralidoxime chloride is
Emergency treatment of poisoning
National Poisons Information Service

Snake bites and animal stings
Snake bites
Envenoming from snake bite is uncommon in the UK. Many exotic snakes are kept, some illegitimately, but only indigenous venomous snake is the adder (Vipera berus). The bite may cause local and systemic effects. Local effects include pain, swelling, bruising, and tender enlargement of regional lymph nodes. Systemic effects include early anaphylactic symptoms (transient hypotension with syncope, angioedema, urticaria, abdominal colic, diarrhoea, and vomiting), with later persistent or recurrent hypotension, ECG abnormalities, spontaneous systemic bleeding, coagulopathy, adult respiratory distress syndrome, and acute renal failure. Fatal envenoming is rare but the potential for severe envenoming must not be underestimated.

Early anaphylactic symptoms should be treated with adrenaline/epinephrine p. 196. Indications for European viper snake venom antiserum treatment p. 1136 include systemic envenoming, especially hypotension, ECG abnormalities, vomiting, haemostatic abnormalities, and marked local envenoming such that after bites on the hand or foot, swelling extends beyond the wrist or ankle within 4 hours of the bite. For those patients who present with clinical features of severe envenoming (e.g. shock, ECG abnormalities, or local swelling that has advanced from the foot to above the knee or from the hand to above the elbow within 2 hours of the bite), a higher initial dose of the European viper snake venom antiserum is recommended; if symptoms of systemic envenoming persist contact the National Poisons Information Service.

Adrenaline/epinephrine injection must be immediately to hand for treatment of anaphylactic reactions to the European viper snake venom antiserum.

Antivenom is available for bites by certain foreign snakes and spiders, stings by scorpions and fish. For information on identification, management, and supply in an emergency telephone the National Poisons Information Service. Whenever possible the TOXBASE entry should be read, and relevant information collected, before telephoning the National Poisons Information Service.

Insect stings
Stings from ants, wasps, hornets, and bees cause local pain and swelling but seldom cause severe direct toxicity unless many stings are inflicted at the same time. If the sting is in the mouth or on the tongue local swelling may threaten the upper airway. The stings from these insects are usually treated by cleaning the area with a topical antiseptic. Bee stings should be removed as quickly as possible. Anaphylactic reactions require immediate treatment with intramuscular adrenaline/epinephrine p. 196; self-administered intramuscular adrenaline/epinephrine (e.g. EpiPen®) is the best first-aid treatment for patients with severe hypersensitivity. An inhaled bronchodilator should be used for asthmatic reactions, see also the management of anaphylaxis. A short course of an oral antihistamine or a topical corticosteroid may help to reduce inflammation and relieve itching. A vaccine containing extracts of bee and wasp venom can be used to reduce the risk of anaphylaxis and systemic reactions in patients with systemic hypersensitivity to bee or wasp stings.

Marine stings
The severe pain of weeverfish (Trachinus vulpe) and Portuguese man-o’-war stings can be relieved by immersing the stung area immediately in uncomfortably hot, but not scalding, water (not more than 45°C). People stung by jellyfish and Portuguese man-o’-war around the UK coast should be removed from the sea as soon as possible. Adherent tentacles should be lifted off carefully (wearing gloves or using tweezers) or washed off with seawater. Alcoholic solutions, including suntan lotions, should not be applied because they can cause further discharge of stinging hairs. Ice packs can be used to reduce pain.

Other poisons
Consult either the National Poisons Information Service or TOXBASE.

The National Poisons Information Service (Tel: 0844 892 0111) will provide specialist advice on all aspects of poisoning day and night.

1 Active elimination from the gastro-intestinal tract

CHELATORS AND ANTIDOTES
Charcoal, activated

INDICATIONS AND DOSE
Reduction of absorption of poisons in the gastro-intestinal system

BY MOUTH
▶ Neonate: 1 g/kg.
▶ Child 1 month-11 years: 1 g/kg (max. per dose 50 g)
▶ Child 12-17 years: 50 g
▶ Adult: 50 g

Active elimination of poisons

BY MOUTH
▶ Neonate: 1 g/kg every 4 hours, dose may be reduced and the frequency increased if not tolerated.
▶ Child 1 month-11 years: 1 g/kg every 4 hours (max. per dose 50 g), dose may be reduced and the frequency increased if not tolerated.
▶ Child 12-17 years: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, dose may be reduced if higher doses not tolerated but this may compromise efficacy.
▶ Adult: Initially 50 g, then 50 g every 4 hours. reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, dose may be reduced if higher doses not tolerated but this may compromise efficacy.

Accelerated elimination of teriflunomide

BY MOUTH USING GRANULES
▶ Adult: 50 g every 12 hours for 11 days

Accelerated elimination of leflunomide (washout procedure)

BY MOUTH USING GRANULES
▶ Adult: 50 g 4 times a day for 11 days

UNLICENSED USE Activated charcoal doses in BNF may differ from those in product literature.

CAUTIONS Comatose patient (risk of aspiration—ensure airway is protected) - drowsy patient (risk of aspiration—ensure airway protected) - reduced gastrointestinal motility (risk of obstruction)

SIDE-EFFECTS Black stools

DIRECTIONS FOR ADMINISTRATION Suspension or reconstituted powder may be mixed with soft drinks (e.g. caffeine-free diet cola) or fruit juices to mask the taste.
2 Chemical toxicity

2.1 Cyanide toxicity

CHELATORS AND ANTIDOTES

Dicobalt edetate

**INDICATIONS AND DOSE**

**Severe poisoning with cyanides**

**BY INTRAVENOUS INJECTION**

- Child: Consult the National Poisons Information Service
- Adult: 300 mg, to be given over 1 minute (or 5 minutes if condition less serious), dose to be followed immediately by 50 mL of glucose intravenous infusion 50%; if response inadequate a second dose of both may be given, but risk of cobalt toxicity

- **CAUTIONS** Owing to toxicity to be used only for definite cyanide poisoning when patient tending to lose, or has lost, consciousness
- **SIDE-EFFECTS** Anaphylactoid reactions - cardiac abnormalities - facial oedema - hypotension - laryngeal oedema - tachycardia - vomiting
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **DICOBALT EDTATE (Non-proprietary)**
  Dicobalt edetate 15 mg per 1 mL Dicobalt edetate 300 mg/20 mL solution for injection ampoules | 6 ampoule (BNF) £11.72

Sodium nitrite

**INDICATIONS AND DOSE**

Poisoning with cyanides (used in conjunction with sodium thiosulfate)

**BY INTRAVENOUS INJECTION**

- Child: 4–10 mg/kg (max. per dose 300 mg), to be given over 5–20 minutes followed by sodium thiosulfate injection
- Adult: 300 mg, to be given over 5–20 minutes (as sodium nitrite injection 30 mg/mL)

**Dose equivalence and conversion**

4–10 mg/kg equates to 0.13–0.33 mL/kg of a 3% solution.

Dose max. of 300 mg equates to 10 mL of a 3% solution.

- **SIDE-EFFECTS** Flushing (due to vasodilatation) - headache (due to vasodilatation)
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Sodium thiosulfate

**INDICATIONS AND DOSE**

Poisoning with cyanides (used in conjunction with sodium nitrite)

**BY INTRAVENOUS INJECTION**

- Child: 400 mg/kg (max. per dose 12.5 g), to be given over 10 minutes, dose may be repeated in severe cyanide poisoning if dicobalt edetate not available
- Adult: 12.5 g, to be given over 10 minutes (as sodium thiosulfate injection 500 mg/mL), dose may be repeated in severe cyanide poisoning if dicobalt edetate not available

**Dose equivalence and conversion**

400 mg/kg equates to 0.8 mL/kg of a 50% solution.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, solution for infusion, liquid

2.2 Organophosphorous toxicity

**Drugs used for Organophosphorous toxicity not listed below**: Atropine sulfate, p. 1099

CHELATORS AND ANTIDOTES

Pralidoxime chloride

**INDICATIONS AND DOSE**

Adjunct to atropine in the treatment of poisoning by organophosphorous insecticide or nerve agent

**BY INTRAVENOUS INFUSION**

- Child: Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day

continued →
1132 Drug toxicity

3 Drug toxicity

3.1 Benzodiazepine toxicity

BENZODIAZEPINE ANTAGONISTS

Flumazenil

INDICATIONS AND DOSE

- Reversal of sedative effects of benzodiazepines in anaesthesia and clinical procedures
  - Adult: 200 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; usual dose 300–600 micrograms; maximum 1 mg per course
- Reversal of sedative effects of benzodiazepines in intensive care
  - Adult: 300 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; maximum 2 mg per course

Reversal of sedative effects of benzodiazepines in intensive care (if drowsiness recurs after initial dose)

Initially by intravenous infusion
- Adult: 100–400 micrograms/hour, adjusted according to response, alternatively (by intravenous injection) 300 micrograms, adjusted according to response

Important safety information

Should only be administered by, or under the direct supervision of, personnel experienced in their use.

- CONTRA-INDICATIONS Life-threatening condition (e.g. raised intracranial pressure, status epilepticus) controlled by benzodiazepines
- CAUTIONS Avoid rapid injection following major surgery • avoid rapid injection in high-risk or anxious patients • benzodiazepine dependence (may precipitate withdrawal symptoms) • elderly • ensure neuromuscular blockade cleared before giving • head injury (rapid reversal of benzodiazepine sedation may cause convulsions) • history of panic disorders (risk of recurrence) • prolonged benzodiazepine therapy for epilepsy (risk of convulsions) • short-acting (repeat doses may be necessary) benzodiazepine effects may persist for at least 24 hours
- SIDE-EFFECTS
  - Common or very common Nausea • vomiting
  - Uncommon Anxiety • fear • palpitation
  - Frequency not known Agitation • chills • convulsions (particularly in those with epilepsy) • dizziness • flushing • sensory disturbance • sweating • tachycardia • transient hypertension
- PREGNANCY Not known to be harmful.
- BREAST FEEDING Avoid breast-feeding for 24 hours.
- HEPATIC IMPAIRMENT Carefully titrate dose.
- DIRECTIONS FOR ADMINISTRATION For continuous intravenous infusion, dilute with Glucose 5% or Sodium Chloride 0.9%

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- FLUMAZENIL (Non-proprietary)
  - Flumazenil 100 microgram per 1 ml Flumazenil
  - 500micrograms/5ml solution for injection ampoules
  | 5 ampoule (£67.50–£72.46

3.2 Digoxin toxicity

CHELATORS AND ANTIDOTES

Digoxin-specific antibody

INDICATIONS AND DOSE

Treatment of known or strongly suspected life-threatening digoxin toxicity associated with ventricular arrhythmias or bradycardia unresponsive to atropine and when measures beyond the withdrawal of digoxin and correction of any electrolyte abnormalities are considered necessary

Initially by intravenous infusion
- Child: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)
- Adult: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)
3.3 Heparin toxicity

CHELATORS AND ANTIDOTES

Protein sulfate

INDICATIONS AND DOSE

Overdosage with intravenous injection of unfractionated heparin

BY INTRAVENOUS INJECTION

- Adult: Dose to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 80–100 units heparin when given within 15 minutes; if longer than 15 minutes, heparin, less protamine required (consult product literature for details) as heparin rapidly excreted; maximum 50 mg

Overdosage with intravenous infusion of unfractionated heparin

BY INTRAVENOUS INJECTION

- Adult: Dose to be administered once heparin infusion stopped at a rate not exceeding 5 mg/minute

Overdosage with subcutaneous injection of unfractionated heparin

INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 25–50 mg, to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 100 units heparin, then (by intravenous infusion), any remaining dose to be administered over 8–16 hours; maximum 50 mg per course

Overdosage with subcutaneous injection of low molecular weight heparin

BY INTRAVENOUS INJECTION OR BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: Dose to be administered by intermittent intravenous injection at a rate not exceeding 5 mg/minute, 1 mg neutralises approx. 100 units low molecular weight heparin (consult product literature of low molecular weight heparin for details); maximum 50 mg

CAUTIONS

- Excessive doses can have an anticoagulant effect

SIDE-EFFECTS

- Anaphylaxis, angioedema, back pain, bradycardia, dyspnoea, flushing, hypersensitivity reactions, hypertension, hypotension, lassitude, nausea, pulmonary oedema, rebound bleeding, vomiting

ALLERGY AND CROSS-SENSITIVITY

- Caution if increased risk of allergic reaction to protamine (includes previous treatment with protamine or protamine insulin, allergy to fish, men who are infertile, or who have had a vasectomy and who may have antibodies to protamine).

MONITORING REQUIREMENTS

- Monitor activated partial thromboplastin time or other appropriate blood clotting parameters.

3.4 Opioid toxicity

OPIOID RECEPTOR ANTAGONISTS

Naloxone hydrochloride

INDICATIONS AND DOSE

Overdosage with opioids

BY INTRAVENOUS INJECTION OR BY SUBCUTANEOUS INJECTION OR BY INTRAMUSCULAR INJECTION

- Neonate: Initially 100 micrograms/kg, if no response, repeat at intervals of 1 minute to a total max. 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates.

- Child 1 month-11 years: Initially 100 micrograms/kg, if no response, repeat at intervals of 1 minute to a total max. 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates.

- Child 12-17 years: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response, then review diagnosis; further doses may be required if respiratory function deteriorates, 4 mg dose may be required in seriously poisoned patients

- Adult: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response, then review diagnosis; further doses may be required if respiratory function deteriorates, 4 mg dose may be required in seriously poisoned patients

BY CONTINUOUS INTRAVENOUS INFUSION

- Neonate: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is that which maintained satisfactory ventilation for at least 15 minutes

- Child: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is that which maintained satisfactory ventilation for at least 15 minutes

- Adult: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is...
**Common or very common**
- vomit
- tachycardia
- hypotension
- dizziness
- hypoventilation in (children)
- hypotension
- nausea
- pulmonary oedema (in children)
- tachycardia
- ventricular fibrillation (in children)

**Rare**
- seizures (in adults)
- anaphylaxis (in adults)
- cardiac arrest (in adults)
- erythema multiforme
- hypersensitivity reactions (in adults)
- pulmonary oedema (in adults)
- seizures (in children)

**Frequency not known**
- Agitation (in adults)

**Pregnancy**
- Use only if potential benefit outweighs risk.

**Breastfeeding**
- Not orally bioavailable.

**Pharmacokinetics**
Naloxone has a short duration of action; repeated doses or infusion may be necessary to reverse effects of opioids with longer duration of action.

**Important**
- Only give by subcutaneous or intramuscular routes if intravenous route is not feasible; intravenous administration has more rapid onset of action.

**Unlicensed use**
Naloxone doses in BNF may differ from those in product literature.

**Caution**
Cardiovascular disease or those receiving cardiotoxic drugs (serious adverse cardiovascular effects reported) - maternal physical dependence on opioids (may precipitate withdrawal in newborn) - pain - physical dependence on opioids (precipitates withdrawal)

**Caution, Further Information**
Titration of dose
In postoperative use, the dose should be titrated for each patient in order to obtain sufficient respiratory response; however, naloxone antagonises analgesia.

**Side-effects**
- Common or very common
  - Cardiac arrest (in children)
  - Dizziness
  - Dyspnoea (in children)
  - Headache
  - Hypertension
  - Hyperventilation in (children)
  - Hypotension
  - Nausea
  - Pulmonary oedema (in children)
  - Tachycardia
  - Ventricular fibrillation (in children)
  - Vomiting

**Uncommon**
- Agitation (in children)
- Arrhythmia (in adults)
- Bradycardia (in adults)
- Diarrhoea
- Dry mouth
- Excitement (in children)
- Hyperventilation (in adults)
- Parasthesia (in children)
- Sweating
- Tremor

**Medicinal Forms**
- There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**
- **Naloxone hydrochloride (Non-proprietary)**
  - Naloxone hydrochloride 20 microgram per 1 ml
  - Naloxone 40 micrograms/2 ml solution for injection ampoules
  - 10 ampoules (PSt) £55.00
  - Naloxone hydrochloride 400 microgram per 1 ml
  - Naloxone 400 micrograms/1 ml solution for injection Minijet pre-filled syringes
  - 1 pre-filled disposable injection (PSt) £20.40
  - Naloxone 2 mg/5 mL solution for injection Minijet pre-filled syringes
  - 1 pre-filled disposable injection (PSt) £20.40
  - Naloxone 400 micrograms/1 ml solution for injection Minijet pre-filled syringes
  - 1 pre-filled disposable injection (PSt) £17.70
  - 10 ampoules (PSt) £41.00–£53.70
  - Naloxone 800 micrograms/2 ml solution for injection Minijet pre-filled syringes
  - 1 pre-filled disposable injection (PSt) £20.40
  - Naloxone hydrochloride 1 mg per 1 ml
  - Naloxone 2 mg/2 ml solution for injection pre-filled syringes
  - 1 pre-filled disposable injection (PSt) £16.80
  - **Prenoxad** (Martindale Pharmaceuticals Ltd)
  - Naloxone hydrochloride 1 mg per 1 ml
  - Prenoxad 2 mg/2 ml solution for injection pre-filled syringes
  - 1 pre-filled disposable injection (PSt) £18.00

**3.5 Paracetamol toxicity**

**Chelators and Antidotes**

**Acetylcysteine**

**Indications and Dose**

**Paracetamol overdose**

**By intravenous infusion**
- **Child (body-weight up to 20 kg):** Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 14 mL/kg glucose 5%
- **Child (body-weight 20–39 kg):** Initially 150 mg/kg over 1 hour, dose to be administered in 100 mL glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 250 mL glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 500 mL glucose 5%
- **Child (body-weight 40 kg and above):** 150 mg/kg over 1 hour, dose to be administered in 200 mL glucose
Methaemoglobinaemia

**CHELATORS AND ANTIDOSES**

**Methylothioninium chloride**
(Methylene blue)

**INDICATIONS AND DOSE**

**Drug- or chemical-induced methaemoglobinaemia**

**BY SLOW INTRAVENOUS INJECTION**

- **Child 3 months-17 years:** Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course

**Aniline- or dapsone-induced methaemoglobinaemia**

**BY SLOW INTRAVENOUS INJECTION**

- **Child 3 months-17 years:** Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

**SAFETY**

- **CAUTIONS** Asthma (see Side-effects for management of asthma but do not delay acetylcysteine treatment) • atopy • may slightly increase INR • may slightly increase prothrombin time

**SIDE-EFFECTS**

Hypersensitivity-like reactions • rash • slight increase in INR and prothrombin time

**FURTHER INFORMATION**

Hypersensitivity-like reactions

- **SIDE-EFFECTS**
- **INTERACTIONS**
- **DIRECTIONS FOR ADMINISTRATION**
- **MEDICINAL FORMS**

**ACETYLCYSTEINE (Non-proprietary)**

- Acetylcysteine 200 mg per 1 ml
- Acetylcysteine 2g/10ml

**PARVOLEX (Phoenix Labs Ltd)**

- Acetylcysteine 200 mg per 1 ml
- Parvolex 2g/10ml

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: granules, tablet, eye drops, effervescent tablet, oral solution, capsule, liquid

**Solution for injection**

- May contain Sodium

**Electrolytes**

- Parvolex

**RECOMMENDATIONS**

- **MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, irrigation solution

**Solution for injection**

- **METHYLTIONIUM CHLORIDE (Non-proprietary)**
- Methylothioninium chloride 5 mg per 1 ml
- Methylothioninium chloride Proveblue 50mg/10ml

**SIDE-EFFECTS**

- **INR**
- **Prothrombin time**

**INTERACTIONS**

- **Appendix 1 (methylthioninium).**

**DIRECTIONS FOR ADMINISTRATION**

- **With intravenous use in children**

**MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, irrigation solution

**Solution for injection**

- **METHYLTIONIUM CHLORIDE (Non-proprietary)**
- Methylothioninium chloride 5 mg per 1 ml
- Methylothioninium chloride Proveblue 50mg/10ml
**5 Snake bites**

**ANTISERA**

**European viper snake venom antiserum**

**INDICATIONS AND DOSE**

Systemic envenoming from snake bites

**BY INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION**

- **Child:** Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service
- **Adult:** Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

Severe systemic envenoming from snake bites in patients presenting with clinical features

**BY INTRAVENOUS INJECTION OR BY INTRAVENOUS INFUSION**

- **Child:** Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service
- **Adult:** Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

**DIRECTIONS FOR ADMINISTRATION**

- By intravenous injection give over 10–15 minutes or by intravenous infusion over 30 minutes after diluting in sodium chloride 0.9% (use 5 mL diluent/kg body-weight).

**PRESCRIBING AND DISPENSING INFORMATION**

To order, email immform@dh.gsi.gov.uk.

The National Poisons Information Service (Tel: 0844 892 0111) will provide specialist advice on all aspects of poisoning day and night.
Appendix 1 Interactions

Two or more drugs given at the same time may exert their effects independently or may interact. The interaction may be potentiation or antagonism of one drug by another, or occasionally some other effect. Adverse drug interactions should be reported to the Medicines and Healthcare products Regulatory Agency (MHRA), through the Yellow Card Scheme (see Adverse Reactions to Drugs), as for other adverse drug reactions.

Drug interactions may be pharmacodynamic or pharmacokinetic.

Pharmacodynamic interactions

These are interactions between drugs which have similar or antagonistic pharmacological effects or side-effects. They may be due to competition at receptor sites, or occur between drugs acting on the same physiological system. They are usually predictable from a knowledge of the pharmacology of the interacting drugs; in general, those demonstrated with one drug are likely to occur with related drugs. They occur to a greater or lesser extent in most patients who receive the interacting drugs.

Pharmacokinetic interactions

These occur when one drug alters the absorption, distribution, metabolism, or excretion of another, thus increasing or reducing the amount of drug available to produce its pharmacological effects. They are not easily predicted and many of them affect only a small proportion of patients taking the combination of drugs. Pharmacokinetic interactions occurring with one drug cannot be assumed to occur with related drugs unless their pharmacokinetic properties are known to be similar.

Pharmacokinetic interactions are of several types:

Affecting absorption The rate of absorption or the total amount absorbed can both be altered by drug interactions. Delayed absorption is rarely of clinical importance unless high peak plasma concentrations are required (e.g. when giving an analgesic). Reduction in the total amount absorbed, however, may result in ineffective therapy.

Due to changes in protein binding To a variable extent most drugs are loosely bound to plasma proteins. Protein-binding sites are non-specific and one drug can displace another thereby increasing its proportion free to diffuse from plasma to its site of action. This only produces a detectable increase in effect if it is an extensively bound drug (more than 90%) that is not widely distributed throughout the body. Even so displacement rarely produces more than transient potentiation because this increased concentration of free drug results in an increased rate of elimination.

Displacement from protein binding plays a part in the potentiation of warfarin by sulfonamides and tolbutamide but the importance of these interactions is due mainly to the fact that warfarin metabolism is also inhibited.

Affecting metabolism Many drugs are metabolised in the liver. Induction of the hepatic microsomal enzyme system by one drug can gradually increase the rate of metabolism of another, resulting in lower plasma concentrations and a reduced effect. On withdrawal of the inducer plasma concentrations increase and toxicity may occur.

Barbiturates, griseofulvin, many antiepileptics, and rifampicin are the most important enzyme inducers. Drugs affected include warfarin and the oral contraceptives.

Conversely when one drug inhibits the metabolism of another higher plasma concentrations are produced, rapidly resulting in an increased effect with risk of toxicity. Some drugs which potentiate warfarin and phenytoin do so by this mechanism.

Isoenzymes of the hepatic cytochrome P450 system interact with a wide range of drugs. Drugs may be substrates, inducers or inhibitors of the different isoenzymes; however, since drugs are eliminated by a number of different metabolic routes as well as renal excretion, the clinical effects of interactions cannot be predicted accurately from laboratory data on the cytochrome P450 isoenzymes. Except where a combination of drugs is specifically contra-indicated, the BNF presents only interactions that have been reported in clinical practice. In all cases the possibility of an interaction must be considered if toxic effects occur or if the activity of a drug diminishes.

Affecting renal excretion Drugs are eliminated through the kidney both by glomerular filtration and by active tubular secretion. Competition occurs between those which share active transport mechanisms in the proximal tubule. For example, salicylates and some other NSAIDs delay the excretion of methotrexate; serious methotrexate toxicity is possible.

Relative importance of interactions

Many drug interactions are harmless and many of those which are potentially harmful only occur in a small proportion of patients; moreover, the severity of an interaction varies from one patient to another. Drugs with a small therapeutic ratio (e.g. phenytoin) and those which require careful control of dosage (e.g. anticoagulants, antihypertensives, and antidiabetics) are most often involved.

Patients at increased risk from drug interactions include the elderly and those with impaired renal or liver function.

Serious interactions The symbol ● has been placed against interactions that are potentially serious and where concomitant administration of the drugs involved should be avoided (or only undertaken with caution and appropriate monitoring).

Interactions that have no symbol do not usually have serious consequences.
List of drug interactions

The following is an alphabetical list of drugs and their interactions, to avoid excessive cross-referencing each drug or group is listed twice: in the alphabetical list and also against the drug or group with which it interacts.

**Abacavir**
- Analgesics: abacavir possibly reduces plasma concentration of METHADONE
- Antibacterials: plasma concentration of abacavir possibly reduced by RIFAMPICIN
- Antiepileptics: plasma concentration of abacavir possibly reduced by FOSPHENTOIN, PHENOBARBITAL, PHENTOIN and PHTHALOGEN
- Antivirals: abacavir possibly reduces effects of RIBAVIRIN; plasma concentration of abacavir reduced by TIPRANAVIR
- Orlistat: absorption of abacavir possibly reduced by ORLISTAT

**Abatacept**
- Cytotoxics: increased risk of side-effects when abatacept given with ADALIMUMAB; avoid concomitant use of abatacept with CERTOLIZUMAB PEGOL, GOLIMUMAB or INFlixIMAB
- Etanercept: avoid concomitant use of abatacept with ETANERCEPT
- Vaccines: risk of generalised infections when abatacept given with live VACCINES—avoid concomitant use

**Abiraterone**
- Analgesics: abiraterone increases plasma concentration of DEXTROMETHORPHAN
- Antibacterials: plasma concentration of abiraterone possibly reduced by RIFABUTIN—manufacturer of abiraterone advises avoid concomitant use; plasma concentration of abiraterone reduced by RIFAMPICIN—manufacturer of abiraterone advises avoid concomitant use
- Antidepressants: plasma concentration of abiraterone possibly reduced by ST JOHN’S WORT—manufacturer of abiraterone advises avoid concomitant use
- Antiepileptics: plasma concentration of abiraterone possibly reduced by CARBAMAZEPINE, FOSPHENTOIN, PHENOBARBITAL, PHENTOIN and PRIMIDONE—manufacturer of abiraterone advises avoid concomitant use

**Acarbose** see Antidiabetics

**ACE inhibitors**
- Alcohol: enhanced hypotensive effect when ACE inhibitors given with ALCOHOL.
- Aldesleukin: enhanced hypotensive effect when ACE inhibitors given with ALDESLEUKIN.
- Aliskiren: increased risk of hyperkalaemia, hypotension, and impaired renal function when ACE inhibitors given with ALISKIREN—avoid concomitant use
- Allopurinol: manufacturers state possible increased risk of leucopenia and hypersensitivity reactions when ACE inhibitors given with ALLOPURINOL especially in renal impairment
- Alpha-blockers: enhanced hypotensive effect when ACE inhibitors given with ALPHA-BLOCKERS
- Anaesthetics, General: enhanced hypotensive effect when ACE inhibitors given with GENERAL ANAESTHETICS
- Analgesics: increased risk of renal impairment when ACE inhibitors given with NSAIDS, also hypotensive effect antagonised
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia, hypotension, and impaired renal function when ACE inhibitors given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS—avoid concomitant use
- Antacids: absorption of ACE inhibitors possibly reduced by ANTACIDS; absorption of captopril, enalapril and fosinopril reduced by ANTACIDS
- Antibacterials: plasma concentration of active metabolite of imidapril reduced by RIFAMPICIN (reduced antihypertensive effect); quinapril tablets reduce absorption of TETRACYCLINES (quinapril tablets contain magnesium carbonate); possible increased risk of hyperkalaemia when ACE inhibitors given with TRIMETHOPRIM
- Anticoagulants: increased risk of hyperkalaemia when ACE inhibitors given with HEPARINS

**ACE inhibitors (continued)**
- Antidepressants: hypotensive effect of ACE inhibitors possibly enhanced by MAOIS.
- Antidiabetics: ACE inhibitors possibly enhance hypoglycaemic effect of INSULIN, METFORMIN and SULFONYLUREAS.
- Antipsychotics: enhanced hypotensive effect when ACE inhibitors given with ANTIPSYCHOTICS
- Anxiolytics and Hypnotics: enhanced hypotensive effect when ACE inhibitors given with ANXIOLYTICS AND HYPNOTICS
- Avanafil: hypotensive effect of enalapril possibly enhanced by AVANAFIL
- Azathioprine: increased risk of anaemia or leucopenia when captopril given with AZATHIOPRINE especially in renal impairment; increased risk of anaemia when enalapril given with AZATHIOPRINE especially in renal impairment
- Bee Venom Extracts: possible severe anaphylactoid reaction when ACE inhibitors given with BEE VENOM EXTRACTS
- Beta-blockers: enhanced hypotensive effect when ACE inhibitors given with BETA-BLOCKERS
- Calcium-Channel Blockers: enhanced hypotensive effect when ACE inhibitors given with CALCIUM-CHANNEL BLOCKERS
- Cardiac Glycosides: captopril possibly increases plasma concentration of DIGOXIN
- Cilostazol: increased risk of severe hyperkalaemia when ACE inhibitors given with CILOSTAZOL
- Clonidine: enhanced hypotensive effect when ACE inhibitors given with CLONIDINE; antihypertensive effect of captopril possibly delayed by previous treatment with CLONIDINE
- Corticosteroids: hypotensive effect of ACE inhibitors antagonised by CORTICOSTEROIDS
- Cytoxotics: increased risk of angioedema when ACE inhibitors given with EVEROLIMUS
- Diazoxide: enhanced hypotensive effect when ACE inhibitors given with DIAZoxide
- Diuretics: enhanced hypotensive effect when ACE inhibitors given with DIURETICS; increased risk of severe hyperkalaemia when ACE inhibitors given with POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS
- Dopaminergics: enhanced hypotensive effect when ACE inhibitors given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA
- Lithium: ACE inhibitors reduce excretion of LITHIUM (increased plasma concentration)
- Methyldopa: enhanced hypotensive effect when ACE inhibitors given with METHYLDOPA
- Moxisylyte: enhanced hypotensive effect when ACE inhibitors given with MOXISYLYTE
- Moxonidine: increased risk of severe hyperkalaemia when ACE inhibitors given with MOXONIDINE
- Muscle Relaxants: enhanced hypotensive effect when ACE inhibitors given with BACLOFEN or TIZANIDINE
- Nitrates: enhanced hypotensive effect when ACE inhibitors given with NITRATES
- Oestrogens: enhanced hypotensive effect of ACE inhibitors antagonised by OESTROGENS
- Potassium Salts: increased risk of severe hyperkalaemia when ACE inhibitors given with POTASSIUM SALTS
- Prostaglandins: enhanced hypotensive effect when ACE inhibitors given with PROSTAGLANDINS
- Sodium Aurothiomalate: flushing and hypotension reported when ACE inhibitors given with SODIUM AUROTHIOMALATE
- Vasodilator Antihypertensives: enhanced hypotensive effect when ACE inhibitors given with HYDRAZINE, MINOXIDIL or SODIUM NITROPRUSSIATE
- Wasp Venom Extracts: possible severe anaphylactoid reaction when ACE inhibitors given with WASP VENOM EXTRACTS

**Acebutolol** see Beta-blockers

**Aceclofenac** see NSAIDs

**Acemetacin** see NSAIDs

**Acenocoumarol** see Coumarins

**Acetazolamide** see Diuretics

**Aciclovir**
- NOTE Interactions do not apply to topical aciclovir preparations
- Aminophylline: aciclovir possibly increases plasma concentration of AMINOPHYLLINE
Adalimumab

- Adalimumab: increased risk of nephrototoxicity when adalimumab given with theophylline.
- Adaline: increased risk of nephrotoxicity when adaline given with tacrolimus.
- Adrenergic Neurone Blockers: increased risk of nephrotoxicity when adrenergic neurone blockers given with tacrolimus.
- Adrenaline (epinephrine): increased risk of nephrotoxicity when adrenergic neurone blockers given with tacrolimus.
- Theophylline: increased risk of nephrotoxicity when adrenergic neurone blockers given with tacrolimus.
- Acitretin: see Retinooids.
- Aciclovir: see Antivirals.
- Aclidinium: see Antimuscarinics.
- Aclidinium: see Antimuscarinics.
- Adefovir: increased risk of nephrotoxicity when adalimumab given with Adefovir.

Afatinib (continued)  
▶ Ciclosporin: plasma concentration of afatinib possibly increased by Ciclosporin—manufacturer of afatinib advises separating administration of ciclosporin by 6 to 12 hours  
▶ Tacrolimus: plasma concentration of afatinib possibly increased by Tacrolimus—manufacturer of afatinib advises separating administration of tacrolimus by 6 to 12 hours

Agalsidase Alfa and Beta  
▶ Anti-arrhythmics: effects of agalsidase alfa and beta possibly inhibited by Amiodarone (manufacturers of agalsidase alfa and beta advise avoid concomitant use)  
▶ Antibacterials: effects of agalsidase alfa and beta possibly inhibited by Gentamicin (manufacturers of agalsidase alfa and beta advise avoid concomitant use)  
▶ Antimalarials: effects of agalsidase alfa and beta possibly inhibited by Chloroquine and Hydroxychloroquine (manufacturers of agalsidase alfa and beta advise avoid concomitant use)

Agomelatine  
● Antibacterials: manufacturer of agomelatine advises avoid concomitant use with Ciclosporin

Antidepressants: metabolism of agomelatine inhibited by Fluvoxamine (increased plasma concentration)  
Antimalarials: avoidance of antidepressants advised by manufacturer of Arteether with Lumefantrine and Arteminol with Piperaquine  
Atomoxetine: possible increased risk of convulsions when antidepressants given with Atomoxetine

Albendazole  
Antihistamines: plasma concentration of both drugs possibly reduced when albendazole given with Levamisole  
Antiepileptics: plasma concentration of albendazole reduced by Carbamazepine, Phenytoin, Phenobarbital, Phenytoin and Primidone—consider increasing albendazole dose when given for systemic infections  
Antivirals: plasma concentration of active metabolite of albendazole reduced by Ritonavir—consider increasing albendazole dose when given for systemic infections  
Corticosteroids: plasma concentration of active metabolite of albendazole increased by Dexamethasone  
Grapefruit juice: plasma concentration of active metabolite of albendazole increased by Grapefruit Juice  
Ulcer-healing Drugs: effects of albendazole possibly enhanced by Cimetidine

Alcohol  
ACE Inhibitors: enhanced hypotensive effect when alcohol given with ACE inhibitors  
Adrenergic Neurone Blockers: enhanced hypotensive effect when alcohol given with Adrenergic Neurone Blockers  
Alpha-blockers: increased sedative effect when alcohol given with Indoramin; enhanced hypotensive effect when alcohol given with Alpha-blockers  
Analgesics: enhanced hypotensive and sedative effects when alcohol given with Opioid Analgesics  
Antihistamines: enhanced hypotensive and sedative effects when alcohol given with Antihistamines  
Anticoagulants: major changes in consumption of alcohol may affect anticoagulant control with Coumarins or Phenindione  
Antidepressants: some beverages containing alcohol and some dealkoholised beverages contain tyramine which interacts with Madi (hypertensive crisis)—if no tyramine, enhanced hypotensive effect; sedative effects possibly increased when alcohol given with SSRIs; increased sedative effect when alcohol given with Mirtazapine, Tricyclic-related Antidepressants or Tricyclics  
Antidiabetics: alcohol enhances hypoglycaemic effect of Antidiabetics; increased risk of lactic acidosis when alcohol given with Metformin

Alcohol (continued)  
Antiepileptics: alcohol possibly increases CNS side-effects of Carbamazepine; chronic heavy consumption of alcohol possibly reduces plasma concentration of Phenytoin and Phenytoin; increased sedative effect when alcohol given with Phenobarbital or Primidone; increased risk of blurred vision when alcohol given with Retigabine  
Antifungals: possibility of disulfiram-like reaction when alcohol given with Ketoconazole; effects of alcohol possibly enhanced by Griseofulvin  
Antihistamines: increased sedative effect when alcohol given with Antihistamines (possibly less effect with non-sedating antihistamines)  
Antimuscarinics: increased sedative effect when alcohol given with Hydroxyzine  
Antipsychotics: increased sedative effect when alcohol given with Antipsychotics  
Anxiolytics and Hypnotics: increased sedative effect when alcohol given with Anxiolytics and Hypnotics  
Avasif: possible enhanced hypotensive effect when alcohol given with Avasif  
Beta-blockers: enhanced hypotensive effect when alcohol given with Beta-blockers  
Calcium-channel Blockers: enhanced hypotensive effect when alcohol given with Calcium-channel Blockers; plasma concentration of alcohol possibly increased by Verapamil  
Clonidine: enhanced hypotensive effect when alcohol given with Clonidine  
Cytotoxics: disulfiram-like reaction when alcohol given with Procarbazine; avoidance of alcohol advised by manufacturer of Trecetidine  
Dapoxetine: increased sedative effect when alcohol given with Dapoxetine  
Diuretics: enhanced hypotensive effect when alcohol given with Diuretics  
Dopaminergics: alcohol reduces tolerance to Bromocriptine  
Lipid-regulating Drugs: avoidance of alcohol advised by manufacturer of Lomitapide  
Lofexidine: increased sedative effect when alcohol given with Lofexidine  
Methylalpha: enhanced hypotensive effect when alcohol given with Methylalpha  
Metoclopromide: absorption of alcohol possibly increased by Metoclopromide  
Moxonidine: enhanced hypotensive effect when alcohol given with Moxonidine  
Muscle Relaxants: increased sedative effect when alcohol given with Baclofen, Methocarbamol or Tizanidine  
Nicorandil: alcohol possibly enhances hypotensive effect of Nicorandil  
Nitrates: enhanced hypotensive effect when alcohol given with Nitrates  
Paraldehyde: increased sedative effect when alcohol given with Paraldehyde  
Retinoids: presence of alcohol causes etretinate to be formed from Acitretin (increased risk of teratogenicity in women of child-bearing potential)  
Sympathomimetics: alcohol possibly enhances effects of Methylphenidate  
vasodilator Antihypertensives: enhanced hypotensive effect when alcohol given with Hydralazine, Minoxidil or Sodium Nitroprusside

Aldesleukin  
ACE Inhibitors: enhanced hypotensive effect when aldesleukin given with ACE inhibitors  
Alpha-blockers: enhanced hypotensive effect when aldesleukin given with Alpha-blockers  
Antiangiostatin-II Receptor Antagonists: enhanced hypotensive effect when aldesleukin given with Angiostatin-II Receptor Antagonists  
Antivirals: aldesleukin possibly increases plasma concentration of Indinavir

Antidotes: effects of alcohol possibly increased by Antidotes; increased sedative effect when alcohol given with Antidotes; increased risk of lactic acidosis when alcohol given with Metformin

Antidiabetics: alcohol enhances hypoglycaemic effect of Antidiabetics; increased risk of lactic acidosis when alcohol given with Metformin
Aliskiren (continued)

- Beta-blockers: enhanced hypotensive effect when aliskiren given with beta blockers.
- Calcium-channel Blockers: enhanced hypotensive effect when aliskiren given with calcium-channel blockers.
- Clonidine: enhanced hypotensive effect when aliskiren given with clonidine.
  - Corticosteroids: manufacturer of aliskiren advises avoid concomitant use with corticosteroids.
  - Cytoxotics: manufacturer of aliskiren advises avoid concomitant use with cisplatin, dacarbazine, and vinblastine.
- Diazoxide: enhanced hypotensive effect when aliskiren given with diazoxide.
- Diuretics: enhanced hypotensive effect when aliskiren given with diuretics.
- Moxonidine: enhanced hypotensive effect when aliskiren given with moxonidine.
- Nitrates: enhanced hypotensive effect when aliskiren given with nitrates.
- Vasodilator Antihypertensives: enhanced hypotensive effect when aliskiren given with hydralazine, minoxidil of sodium nitropusside.

Almuzumab

- Antipsychotics: avoid concomitant use of cytoxotics with clozapine (increased risk of agranulocytosis).
- Vaccines: risk of generalised infections when monoclonal antibodies given with live vaccines—avoid concomitant use.

Aldromeric Acid see Bisphosphonates

Alfacacidol see Vitamins

Alfatentanil see Opioid Analgesics

Alfuzosin see Alpha-blockers

Alimemazine see Antihistamines

Alikiren

- ACE Inhibitors: increased risk of hyperkalaemia, hypotension, and impaired renal function when aliskiren given with ACE INHIBITORS—avoid concomitant use.
- Analgesics: hypotensive effect of aliskiren possibly antagonised by NSAIDS.
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia, hypotension, and impaired renal function when aliskiren given with angiotensin-II receptor antagonists—avoid concomitant use.
- Antibacterials: plasma concentration of aliskiren reduced by rifampicin.
- Anticoagulants: increased risk of hyperkalaemia when aliskiren given with heparins.
- Antifungals: plasma concentration of aliskiren increased by ketoconazole; plasma concentration of aliskiren increased by itraconazole—avoid concomitant use.
- Calcium-channel Blockers: plasma concentration of aliskiren increased by verapamil.
- Ciclosporin: plasma concentration of aliskiren increased by ciclosporin—avoid concomitant use.
- Diuretics: aliskiren reduces plasma concentration of furosemide; increased risk of hyperkalaemia when aliskiren given with potassium-sparing diuretics and aldosterone antagonists.
- Grapefruit juice: plasma concentration of aliskiren reduced by grapefruit juice—avoid concomitant use.
- Potassium Salts: increased risk of hyperkalaemia when aliskiren given with potassium salts.

Alitretinoin see Retinoids

Alkylating Drugs see Bendamustine, Busulfan, Carmustine, Cyclophosphamide, Estramustine, Ifosfamide, Lomustine, Melphalan, and Thiopeta

Allopurinol

- ACE Inhibitors: manufacturers state possible increased risk of leucopenia and hypersensitivity reactions when allopurinol given with ACE INHIBITORS especially in renal impairment.
- Aminophylline: allopurinol possibly increases plasma concentration of aminophylline.

Allopurinol (continued)

- Antibacterials: increased risk of rash when allopurinol given with amoxicillin, ampicillin or co-amoxiclav.
- Anticoagulants: allopurinol possibly enhances anticoagulant effect of coumarins.
- Antidiabetics: allopurinol increases plasma concentration of diabates (risk of toxicity)—avoid concomitant use.
- Azathioprine: allopurinol enhances effects and increases toxicity of azathioprine (reduce dose of azathioprine to one quarter of usual dose).
- Ciclosporin: allopurinol possibly increases plasma concentration of ciclosporin (risk of nephrotoxicity).
- Cytoxotics: avoidance of allopurinol advised by manufacturer of capetibamine; allopurinol enhances effects and increases toxicity of mercaptopurine (reduce dose of mercaptopurine to one quarter of usual dose).
- Diuretics: increased risk of hypersensitivity when allopurinol given with thiazides and related diuretics especially in renal impairment.
- Theophylline: allopurinol possibly increases plasma concentration of theophylline.

Almotriptan see 5HT1-receptor Agonists (under HT)

Alogliptin see Antidiabetics

Alpha-adrenoceptor Stimulants see Apraclonidine, Brimonidine, Clonidine, and Methylodopa

Alpha-blockers

- ACE Inhibitors: enhanced hypotensive effect when alpha-blockers given with ACE INHIBITORS.
- Adrenergic Neurone Blockers: enhanced hypotensive effect when alpha-blockers given with adrenergic neurone blockers.
- Alcohol: enhanced hypotensive effect when alpha-blockers given with alcohol; increased sedative effect when indoramin given with alcohol.
- Aldesleukin: enhanced hypotensive effect when alpha-blockers given with aldesleukin.
- Analgesics: enhanced hypotensive effect when alpha-blockers given with general analgesics.
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when alpha-blockers given with angiotensin-receptor antagonists.
- Antidepressants: manufacturer of indoramin advises avoid concomitant use with maois.
- Antifungals: plasma concentration of alfuzosin possibly increased by ketoconazole; plasma concentration of tamsulosin increased by ketoconazole.
- Antipsychotics: enhanced hypotensive effect when alpha-blockers given with antipsychotics.
- Antivirals: plasma concentration of doxazosin and tamsulosin possibly increased by boceprevir—manufacturer of boceprevir advises avoid concomitant use; plasma concentration of alfuzosin possibly increased by ritonavir—avoid concomitant use; avoidance of alfuzosin advised by manufacturer of telaprevir.
- Anxiolytics and Hypnotics: enhanced hypotensive and sedative effects when alpha-blockers given with anxiolytics and hypnotics.
- Avanafil: enhanced hypotensive effect when alpha-blockers given with avanafil—when patient is stable on the alpha blocker initiate avanafil at the lowest possible dose.
- Beta-blockers: enhanced hypotensive effect when alpha-blockers given with beta-blockers, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin.
- Calcium-channel Blockers: enhanced hypotensive effect when alpha-blockers given with calcium-channel blockers, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin.
- Cardiac Glycosides: prazosin increases plasma concentration of digoxin.
- Clonidine: enhanced hypotensive effect when alpha-blockers given with clonidine.
Alpha-blockers (continued)
- Cobicistat: plasma concentration of alfuzosin possibly increased by Cobicistat - manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: hypotensive effect of alpha-blockers antagonised by corticosteroids
- Cytotoxics: avoidance of alfuzosin advised by manufacturer of Idelalisib
- Diazoxide: enhanced hypotensive effect when alpha-blockers given with Diazoxide
- Diuretics: enhanced hypotensive effect when alpha-blockers given with Diuretics, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
- Dopaminergics: enhanced hypotensive effect when alpha-blockers given with Methyldopa
- Mostylyte: possible severe postural hypotension when alpha-blockers given with Mostylyte
- Moxonidine: enhanced hypotensive effect when alpha-blockers given with Moxonidine
- Muscle Relaxants: enhanced hypotensive effect when alpha-blockers given with Baclofen or Tizanidine
- Nitrates: enhanced hypotensive effect when alpha-blockers given with Nitrates
- Oestrogens: hypotensive effect of alpha-blockers antagonised by Oestrogens
- Prostaglandins: enhanced hypotensive effect when alpha-blockers given with Alprostadil
- Sildenafil: enhanced hypotensive effect when alpha-blockers given with Sildenafil (avoid alpha-blockers for 4 hours after sildenafil)—when patient is stable on the alpha blocker initiate sildenafil at the lowest possible dose
- Sympathomimetics: avoid concomitant use of tolazoline with Adrenaline (epinephrine) or Dopamine
- Tadalafil: enhanced hypotensive effect when alpha-blockers given with Tadalafil—when patient is stable on the alpha blocker initiate tadalafil at the lowest possible dose; enhanced hypotensive effect when doxazosin given with Tadalafil—manufacturer of tadalafil advises avoid concomitant use
- Ulcer-healing Drugs: effects of tolazoline antagonised by Cimetidine and Ranitidine
- Vardenafil: enhanced hypotensive effect when alpha-blockers given with Vardenafil—when patient is stable on the alpha blocker initiate vardenafil at the lowest possible dose—separate doses by 6 hours (except with tamsulosin)
- Vasodilator Antihypertensives: enhanced hypotensive effect when alpha-blockers given with Hydralazine, Minoxidil or Sodium Nitroprusside

**Alpha-blockers (post-synaptic)** see Alpha-blockers

Alphazolam see Anxiolytics and Hypnotics

Alprostadil see Prostaglandins

Aluminium Hydroxide see Antacids

Amantadine
- Antimalarials: plasma concentration of amantadine possibly increased by Quinine
- Antipsychotics: increased risk of extrapyramidal side-effects when amantadine given with Antipsychotics
- Bupropion: increased risk of side-effects when amantadine given with Bupropion
- Memantine: increased risk of CNS toxicity when amantadine given with Memantine (manufacturer of memantine advises avoid concomitant use); effects of dopaminergics possibly enhanced by Memantine
- Methyldopa: increased risk of extrapyramidal side-effects when amantadine given with Methyldopa; antiparkinsonian effect of dopaminergics antagonised by Methyldopa
- Tetrabenazine: increased risk of extrapyramidal side-effects when amantadine given with Tetrabenazine

Ambrisentan
- Antibacterials: plasma concentration of ambrisentan possibly increased by Rifampicin

Ambrisentan (continued)
- Ciclosporin: plasma concentration of ambrisentan increased by Cyclosporin (see under Ambrisentan, p. 162)

Amikacin see Aminoglycosides

Amiloride see Diuretics

Aminoglycosides
- Agalasidase Alfa and Beta: gentamicin possibly inhibits effects of Agalasidase Alfa and Beta (manufacturers of agalasidase alfa and beta advise avoid concomitant use)
- Analgesics: plasma concentration of amikacin and gentamicin in neonates possibly increased by Indometacin
- Antibacterials: neomycin reduces absorption of Phenoxybenzamine; increased risk of nephrotoxicity when aminoglycosides given with Colistimethate Sodium or Polymyxins; increased risk of nephrotoxicity and ototoxicity when amikacin given with Cephradine or Vancomycin; possible increased risk of nephrotoxicity when aminoglycosides given with Cephalosporins
- Anticoagulants: experience in anticoagulant clinics suggests that INR possibly altered when neomycin (given for local action on gut) is given with Conjugates or Phenindione
- Antidiabetics: neomycin possibly enhances hypoglycaemic effect of Acarbose, also severity of gastro-intestinal effects increased
- Antifungals: increased risk of nephrotoxicity when aminoglycosides given with Ambroten and Bisphosphonates
- Cardiac Glycosides: gentamicin possibly increases plasma concentration of Digoxin; neomycin reduces absorption of Digoxin
- Ciclosporin: increased risk of nephrotoxicity when aminoglycosides given with Ciclosporin
- Cytotoxics: neomycin possibly reduces absorption of Methotrexate; neomycin reduces bioavailability of Sorafenib; increased risk of nephrotoxicity and possibly of ototoxicity when aminoglycosides given with Platinum Compounds
- Diuretics: increased risk of otoxicity when aminoglycosides given with Loop Diuretics
- Mannitol: manufacturer of tobramycin advises avoid concomitant use with Mannitol
- Muscle Relaxants: aminoglycosides enhance effects of Non-depolarising muscle relaxants and Succinylcholine
- Parasympathomimetics: aminoglycosides antagonise effects of Neostigmine and Pyridostigmine
- Tacrolimus: increased risk of nephrotoxicity when aminoglycosides given with Tacrolimus
- Vaccines: antibacterials inactivate Oral Typhoid Vaccine—see under Typhoid Vaccine in BNF
- Vitamins: neomycin possibly reduces absorption of Vitamin A

Aminophylline
- Allopurinol: plasma concentration of aminophylline possibly increased by Allopurinol
- Anaesthetics, General: increased risk of convulsions when aminophylline given with Ketamine
- Anti-arrhythmics: aminophylline antagonises anti-arrhythmic effect of Adenosine—manufacturer of adenosine advises avoid aminophylline for 24 hours before adenosine; plasma concentration of aminophylline increased by Propranolone
- Antibacterials: plasma concentration of aminophylline possibly increased by Clarithromycin and Isoniazid; plasma concentration of aminophylline increased by Erythromycin (also aminophylline may reduce absorption of oral erythromycin); plasma concentration of aminophylline increased by Ciprofloxacin and Norfloxacin; metabolism of aminophylline accelerated by Rifampicin (reduced plasma concentration); possible increased risk of convulsions when aminophylline given with Quinolones
- Antidepressants: plasma concentration of aminophylline increased by Fluvoxamine (concomitant use should usually be avoided, but where not possible halve aminophylline dose and monitor plasma-aminophylline concentration); plasma concentration of aminophylline possibly reduced by St John’s Wort
Aminophylline (continued)
- Antiarrhythmics: metabolism of aminophylline accelerated by CARBAMAZEPINE, PHENOBARBITAL and PRIMODONE (reduced effect); plasma concentration of both drugs reduced when aminophylline given with FOSPHENYTIOIN and PHENYTOIN
- Antifungals: plasma concentration of aminophylline possibly increased by FLUCONAZOLE and KETOCONAZOLE
- Antivirals: plasma concentration of aminophylline possibly increased by ACICLOVIR and VALACLOVIR; metabolism of amiodarone possibly accelerated by RITONAVIR (reduced plasma concentration)
- Anxiolytics and Hypnotics: aminophylline possibly reduces effects of BENZODIAZEPINES
- Calcium-channel Blockers: plasma concentration of aminophylline possibly increased by CALCIUM-CHANNEL BLOCKERS (enhanced effect); plasma concentration of aminophylline increased by DILTIAZEM; plasma concentration of pentoxifylline, plasma coned by VERAPAMIL (enhanced effect)
- Corticosteroids: increased risk of hypokalaemia when aminophylline given with CORTICOSTEROIDS
- Cytotoxics: plasma concentration of aminophylline possibly increased by METHOTREXATE
- Diuretics: plasma concentration of aminophylline increased by DEFERASIROX (consider reducing dose of aminophylline)
- Disulfiram: metabolism of aminophylline inhibited by DISULFIRAM (increased risk of toxicity)
- Diuretics: increased risk of hypokalaemia when aminophylline given with ACEIZOTOLAMIDE, LOOP DIURETICS or THIAZIDES and RELATED DIURETICS
- Droxapram: increased CNS stimulation when aminophylline given with DOXAPRAM
- Interferons: metabolism of aminophylline inhibited by INTERFERON-ALFA and INTERFERON-ALFA (consider reducing dose of aminophylline)
- Leukotriene Receptor Antagonists: plasma concentration of aminophylline possibly increased by ZAFIRLUKAST, also plasma concentration of zafirlukast reduced
- Lithium: aminophylline increases excretion of LITHIUM (reduced plasma concentration)
- Oestrogens: plasma concentration of aminophylline increased by OESTROGENS (consider reducing dose of aminophylline)
- Pentoxifylline: plasma concentration of aminophylline increased by PENTOXIFYLLINE
- Rotflumilast: avoidance of aminophylline advised by manufacturer of ROTFLUMILAST
- Sulfipyrazone: plasma concentration of aminophylline reduced by SULFOPYRAZONE
- Symptomimetics: manufacturer of aminophylline advises avoid concomitant use with EPHEDRINE in children
- Symptomimetics: Beta₂ increased risk of hypokalaemia when aminophylline given with high doses of BETA₂ SYMPTOMIMETICS
- Ulcer-healing Drugs: metabolism of aminophylline inhibited by CIMETIDINE (increased plasma concentration); absorption of aminophylline possibly reduced by SUCRALFATE (give at least 2 hours apart)
- Vaccines: plasma concentration of aminophylline possibly increased by INFLUENZA VACCINE

Aminosaliclylates see individual drugs

Amiodarone

NOTE: Amiodarone has a long half-life; there is a potential for drug interactions to occur for several weeks (or even months) after treatment with it has been stopped.

- Antiarrhythmics: metabolism of aminophylline inhibited by AGALSIDASE ALFA AND BETA (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- Anasetics: Localised increased myocardial depression when anti-arrhythmics given with BUPIVACAINE, LEVOBUPIVACAINE, PRILOCAIN or ROPIVACAINE
- Antiarrhythmics: increased myocardial depression when anti-arrhythmics given with other ANTI-ARRHYTHMICS; increased risk of ventricular arrhythmias when amiodarone given with DISOPYRAMIDE or DRONEDARONE—avoid concomitant use

Amiodarone
- Antiarrhythmics (continued): amiodarone increases plasma concentration of FLECAINIDE (halve dose of flecainide)
- Antibacterials: increased risk of ventricular arrhythmias when amiodarone given with piperacillin—erythromycin—avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with LEVOFLOXACIN or MOXIFLOXACIN—avoid concomitant use; possible increased risk of ventricular arrhythmias when amiodarone given with SULTAMETHOXAZOLE and TRIMETHOPRIM (as co-trimoxazole)—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole; increased risk of ventricular arrhythmias when amiodarone given with DELAMANIDE; avoidance of amiodarone advised by manufacturer of FIDAXOMICIN; possible increased risk of ventricular arrhythmias when amiodarone given with TELITHROMYCIN
- Anticoagulants: amiodarone inhibits metabolism of COUMARINS and PHENINDIONE (enhanced anticoagulant effect); amiodarone increases plasma concentration of DEFERASIROX (see under Deferasirox, p. 117)
- Antidepressants: avoidance of amiodarone advised by manufacturer of CITRALOPRAM and ESCITALOPRAM (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when amiodarone given with TRICYCLES—avoid concomitant use
- Antiarrhythmics: amiodarone inhibits metabolism of FOSPHENYTIOIN and PHENYTOIN (increased plasma concentration)
- Antihistamines: increased risk of ventricular arrhythmias when amiodarone given with MIZOLASTINE—avoid concomitant use
- Antimalarials: avoidance of amiodarone advised by manufacturer of ARTEMETHER WITH LUMEFANTRINE (risk of ventricular arrhythmias); avoidance of amiodarone advised by manufacturer of ARTENIMOL WITH Piperidine (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when amiodarone given with CHLOROQUINE, HYDROXYCHLOROQUINE, MELFOQUINE or QUININE—avoid concomitant use
- Antimuscarinics: increased risk of ventricular arrhythmias when amiodarone given with TOLERTODINE
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ANTIPSYCHOTICS; that prolong the QT interval; increased risk of ventricular arrhythmias when amiodarone given with BERPEDIOL—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with AMILSULPRIDE, DROPERIDOL, HALOPERIDOL, PHENOTHIAZINES, PIMOCID or ZUCLOPENTHIXOL—avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with SULPIRIDE
- Antivirals: plasma concentration of amiodarone possibly increased by ATAZANAVIR, possibly increased increased risk of bradycardia when amiodarone given with DACLATASVIR and SIMPREVIR (with sofosbuvir)—see under Amiodarone, p. 88; plasma concentration of amiodarone possibly increased by FOSAPRENAVIR (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of amiodarone possibly increased by INDINAVIR—avoid concomitant use; plasma concentration of amiodarone increased by RITONAVIR (increased risk of ventricular arrhythmias—avoid concomitant use); increased risk of ventricular arrhythmias when amiodarone given with SAAVNAVIR—avoid concomitant use; possible increased increased risk of bradycardia when amiodarone given with SOFOSBUVIR—see under Amiodarone, p. 88; avoidance of amiodarone advised by manufacturer of TELAPREVIR (risk of ventricular arrhythmias)
- Atomoxetine: increased risk of ventricular arrhythmias when amiodarone given with ATOMOXETINE
- Beta-blockers: increased risk of bradycardia, AV block and myocardial depression when amiodarone given with BETA-BLOCKERS; increased myocardial depression when anti-
Amiodarone
- Beta-blockers (continued)
  - arrhythmics given with Beta-blockers; increased risk of ventricular arrhythmias when amiodarone given with SOTALOL—avoid concomitant use
  - Calcium-channel Blockers: increased risk of bradycardia, AV block and myocardial depression when amiodarone given with DILTIAZEM or VERAPAMIL
  - Cardiac Glycosides: amiodarone increases plasma concentration of DIGOXIN (halve dose of digoxin)
  - Ciclosporin: amiodarone possibly increases plasma concentration of CICLOSPORIN
  - Cobicistat: plasma concentration of amiodarone possibly increased by COBICISTAT—manufacturer of cobicistat advises avoid concomitant use
  - Colchicine: amiodarone possibly increases risk of COLCHICINE toxicity
  - Cytoxotics: amiodarone possibly increases the plasma concentration of AFATINIB—manufacturer of afatinib advises separating administration of amiodarone by 6 to 12 hours; possible increased risk of ventricular arrhythmias when amiodarone given with BOSTINIB; amiodarone possibly increases the plasma concentration of IBRUTINIB—reduce dose of ibrutinib (see under Ibrutinib, p. 809); avoidance of amiodarone advised by manufacturer of IDEALISAL; possible increased risk of ventricular arrhythmias when amiodarone given with VANETANIB—avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with ARSENIC TRIODIDE
  - Diuretics: increased cardiac toxicity with amiodarone if hypokalaemia occurs with ACETAZOLAMIDE, LOOP DIURETICS or THIAZIDES AND RELATED DIURETICS; amiodarone increases plasma concentration of EPERLENONE (reduce dose of eperlenone)
  - Fingolimod: possible increased risk of bradycardia when amiodarone given with FINGOLIMOD
  - Grapefruit Juice: plasma concentration of amiodarone increased by GRAPEFRUIT JUICE
  - Ibratrudine: increased risk of ventricular arrhythmias when amiodarone given with IBRUTINIB
  - Lipid-regulating Drugs: increased risk of myopathy when amiodarone given with SIMVASTATIN (see under Simvastatin, p. 181); separating administration from amiodarone by 12 hours advised by manufacturer of LOMITAPIDE
  - Lithium: manufacturer of amiodarone advises avoid concomitant use with LITHIUM (risk of ventricular arrhythmias)
  - Orlisat: plasma concentration of amiodarone possibly decreased by ORLISTAT
  - Pentamidine isetionate: increased risk of ventricular arrhythmias when amiodarone given with PENTAMIDINE ISETINATE—avoid concomitant use
  - Thyroid Hormones: amiodarone can affect serum concentrations of THYROID HORMONES—monitor thyroid function closely
  - Ulcer-healing Drugs: plasma concentration of amiodarone increased by CIMEIDINE

Amisulpride see Antipsychotics

Amiriptyline see Antidepressants, Tricyclic

Amiodipine see Calcium-channel Blockers

Amodiliciin see Penicillins

Amphotericin
- NOTE Close monitoring required with concomitant administration of nephrotoxic drugs or cytoxotics
- Antibacterials: increased risk of nephrotoxicity when amphotericin given with AMINOGLYCOSIDES or POLYMIXINS; possible increased risk of nephrotoxicity when amphotericin given with VANCOMYCIN
- Antifungals: amphotericin reduces renal excretion and increases cellular uptake of FLUCYTOSINE (toxicity possibly increased); effects of amphotericin possibly antagonised by IMIDAZOLES and TRIAZOLES; plasma concentration of amphotericin possibly increased by MICAFUNGIN
- Cardiac Glycosides: hypokalaemia caused by amphotericin increases cardiac toxicity with CARDIAC GLYCOSIDES

Amphotericin (continued)
- Ciclosporin: increased risk of nephrotoxicity when amphotericin given with CICLOSPORIN
- Corticosteroids: increased risk of hypokalaemia when amphotericin given with CORTICOSTEROIDS—avoid concomitant use unless corticosteroids needed to control reactions
- Cytoxotics: increased risk of ventricular arrhythmias when amphotericin given with ARSENIC TRIODIDE
- Diuretics: increased risk of hypokalaemia when amphotericin given with LOOP DIURETICS or THIAZIDES AND RELATED DIURETICS
- Pentamidine isetionate: possible increased risk of nephrotoxicity when amphotericin given with PENTAMIDINE ISETINATE
- Sodium Stibogluconate: possible increased risk of arrhythmias when amphotericin given after SODIUM STIBOGLUCONATE—manufacturer of sodium stibogluconate advises giving 14 days apart
- Tacrolimus: increased risk of nephrotoxicity when amphotericin given with TACROLIMUS

Ampicillin see Penicillins

Anabolic Steroids
- Anticoagulants: anabolic steroids enhance anticoagulant effect of CLOMARINS and PHENINDIONE
- Antidiabetics: anabolic steroids possibly enhance hypoglycaemic effect of ANTI DIABETICS

Anaesthetics, General
- NOTE See also Surgery and Long-term Medication, Under General Anaesthesia in BNF
- ACE inhibitors: enhanced hypotensive effect when general anaesthetics given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when general anaesthetics given with ADRENERGIC NEURONE BLOCKERS
- Alpha-blockers: enhanced hypotensive effect when general anaesthetics given with ALPHA-BLOCKERS
- Aminophylline: increased risk of convulsions when ketamine given with AMINOPHYLLINE
- Analgesics: metabolism of etomidate inhibited by FENTANYL (consider reducing dose of etomidate); effects of thiopental possibly enhanced by ASPIRIN; effects of intravenous general anaesthetics and volatile liquid general anaesthetics possibly enhanced by OPIOID ANALGESICS
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when general anaesthetics given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Antibacterials: increased risk of hepatotoxicity when isoflurane given with SULFONAMIDES; hypersensitivity-like reactions can occur when general anaesthetics given with intravenous VANCOMYCIN
- Antidepressants: increased risk of arrhythmias and hypotension when general anaesthetics given with TRICYCLICS
- Antipsychotics: enhanced hypotensive effect when general anaesthetics given with ANTI PSYCHOTICS; effects of thiopental enhanced by DROPERIDOL
- Anxiolytics and Hypnotics: increased sedative effect when general anaesthetics given with ANXIOLYTICS AND HYPNOTICS
- Beta-blockers: enhanced hypotensive effect when general anaesthetics given with beta-BLOCKERS
- Calcium-channel Blockers: enhanced hypotensive effect when general anaesthetics or isoflurane given with CALCIUM-CHANNEL BLOCKERS; general anaesthetics enhance hypotensive effect of VERAPAMIL (also AV delay)
- Clonidine: enhanced hypotensive effect when general anaesthetics given with CLONIDINE
- Cytoxotics: nitrous oxide increases antifolate effect of METHOTREXATE—avoid concomitant use
- Diazoxide: enhanced hypotensive effect when general anaesthetics given with DIAZOXIDE
- Diuretics: enhanced hypotensive effect when general anaesthetics given with DIURETICS
- Dopaminergics: increased risk of arrhythmias when volatile liquid general anaesthetics given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA
Anaesthetics, General (continued)

- Doxapram: increased risk of arrhythmias when volatile liquid general anaesthetics given with doxapram (avoid doxapram for at least 10 minutes after volatile liquid general anaesthetics)
- Memantine: increased risk of CNS toxicity when ketamine given with memantine (manufacturer of memantine advises avoid concomitant use)
- Methyldopa: enhanced hypotensive effect when general anaesthetics given with methyldopa
- Metoclopramide: effects of thiopental enhanced by metoclopramide
- Moxonidine: enhanced hypotensive effect when general anaesthetics given with moxonidine
- Muscle Relaxants: increased risk of myocardial depression and bradycardia when propofol given with suxamethonium; volatile liquid general anaesthetics enhance effects of non-depolarising muscle relaxants and suxamethonium; ketamine enhances effects of atracurium
- Nitrates: enhanced hypotensive effect when general anaesthetics given with nitrates
- Oxytocin: oxytocin effect possibly reduced, also enhanced hypotensive and risk of arrhythmias when volatile liquid general anaesthetics given with oxytocin
- Sympathomimetics: manufacturer of isoflurane advises avoid concomitant use with sympathomimetics (risk of ventricular arrhythmias); increased risk of arrhythmias when volatile liquid general anaesthetics given with adrenaline (epinephrine) or noradrenaline (norepinephrine); increased risk of hypertension when volatile liquid general anaesthetics given with methylephedrinate
- Theophylline: increased risk of convulsions when ketamine given with theophylline
- Vasodilator Antihypertensives: enhanced hypotensive effect when general anaesthetics given with hydralazine, minoxidil or sodium nitroprusside

Anaesthetics, General (Intravenous) see Anaesthetics, General

Anaesthetics, General (Volatile liquids) see Anaesthetics, General

Anaesthetics, Local see Bupivacaine, Chloroprocaine, Levobupivacaine, Lidocaine, Prilocaine, and Ropivacaine

Anagrelide
- Cilostazol: manufacturer of anagrelide advises avoid concomitant use with cilostazol
- Phosphodiesterase Type-5 inhibitors: manufacturer of anagrelide advises avoid concomitant use with enoximidine and milrinone

Anakinra
- Cytotoxics: avoid concomitant use of anakinra with alumlumab, certolizumab pegol, golimumab or infliximab
- Etanercept: avoid concomitant use of anakinra with etanercept
- Vaccines: risk of generalised infections when anakinra given with live vaccines—avoid concomitant use

Analgesics see Aspirin, Nefopam, NSAIDs, Opioid Analgesics, and Paracetamol

Angiotensin-II Receptor Antagonists (continued)

- Alpha-blockers: enhanced hypotensive effect when angiotensin-II receptor antagonists given with alpha-blockers
- Anagrelide: enhanced hypotensive effect when angiotensin-II receptor antagonists given with general anaesthetics
- Analgesics: increased risk of renal impairment when angiotensin-II receptor antagonists given with NSAIDs, also hypotensive effect antagonised
- Antibacterials: plasma concentration of losartan and its active metabolite reduced by rifampicin; possible increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with trimethoprim
- Antidepressants: hypotensive effect of angiotensin-II receptor antagonists possibly enhanced by maois
- Antipsychotics: enhanced hypotensive effect when angiotensin-II receptor antagonists given with antipsychotics and antidepressants

Anticoagulants
- Lithium: enhanced hypotensive effect when angiotensin-II receptor antagonists given with co-beneldopa, co-careldopa or levodopa
- Methylprednisolone: enhanced hypotensive effect when angiotensin-II receptor antagonists given with methylprednisolone
- Moxisylyte: enhanced hypotensive effect when angiotensin-II receptor antagonists given with moxisylyte
- Moxonidine: enhanced hypotensive effect when angiotensin-II receptor antagonists given with moxonidine
- Muscle relaxants: enhanced hypotensive effect when angiotensin-II receptor antagonists given with baclofen or tizanidine
- Nitrates: enhanced hypotensive effect when angiotensin-II receptor antagonists given with nitrates
- Oestrogens: hypotensive effect of angiotensin-II receptor antagonists antagonised by oestrogens
- Potassium salts: increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with potassium salts
- Tacrolimus: increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with tacrolimus
- Vasodilator Antihypertensives: enhanced hypotensive effect when angiotensin-II receptor antagonists given with hydralazine, minoxidil or sodium nitroprusside

Antacids

NOTE: Antacids should preferably not be taken at the same time as other drugs since they may impair absorption

- ACE inhibitors: antacids possibly reduce absorption of ACE inhibitors; antacids reduce absorption of captopril, enalapril and fosinopril
Interactions

Antacids (continued)

- Analgesics: antacids possibly reduce absorption of 
  ACETAMINOPHEN, ASPIRIN, ORAL MAGNESIUM SALT.
- Antihistamines: cimetidine and ranitidine can reduce plasma concentration of 
  BRAZAMINE.
- Antibacterials: antacids reduce absorption of 
  SULFOTOMYCIN, CEFACLOR, CIPROFLOXACIN, ISONIAZID.
- Antifungals: fluconazole reduces absorption of 
  DURATAZOLE.
- Anthelmintics: antacids reduce absorption of 
  HYDROXYCHLOROQUINE, MEfloKINE, NITAZOXANIDE.
- Antihypertensives: antacids reduce absorption of 
  Labetalol, Metoprolol, Nifedipine.
- Antipsychotics: antacids reduce absorption of 
  LITHOTRITYLATE, PALOMETYN.
- Antidepressants, Tricyclic: antacids reduce absorption of 
  DOLOFAZINE, IMIPRAMINE, NORTIPIRIDE.
- Antidepressants, Noradrenaline Re-uptake Inhibitors: antacids reduce absorption of 
  DULOXETINE, GALANTIMIDINE, ROXITHROMYCIN.
- Antidiabetics: antacids reduce absorption of 
  ACETOGLUCOSE, GLIMEPIRIDE.
- Anticoagulants: antacids reduce absorption of 
  DOLESAZOLE, RUFANTEREN, TENDOSOL.
- Anticoagulants: antacids reduce absorption of 
  DIETHYLCARBAZINE.
- Antineoplastics: antacids reduce absorption of 
  BENDAMUSTINE, ETOPIRONATE, PEGSOLYSINE.
- Antimicrobials: antacids reduce absorption of 
  ALTAMOX, CILASTATIN, IMPATRINE.
- Antipsychotics: antacids reduce absorption of 
  RESERPOZINE, ZOLOXIDE.
- Antituberculars: antacids reduce absorption of 
  الأنابيب، الاريباسول، أوراسون، دينيراديل، فيلاريدارين، مقاومة Mobility, POLYPSITIFIN.
- Antitumor agents: antacids reduce absorption of 
  gpu, ralitriamid.
- Antiulcer drugs: antacids reduce absorption of 
  TACRAZONE, KETOACID.
- Anxiolytics: antacids reduce absorption of 
  BUSPIRONE, LORAZEPONE.
- Antioxidants: antacids reduce absorption of 
  FERITIMIDE, LUKANTIN.
- Antipruritics: antacids reduce absorption of 
  VERNALITIN, XANDIPHTER.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antiulcer drugs: antacids reduce absorption of 
  DURATAZOLE.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
- Antivirals: antacids reduce absorption of 
  AZAFLAVIN, DOLUTEGRAVIR.
- Antiulcer drugs: antacids reduce absorption of 
  IRON, MAGNESIUM, ZINC.
Antidepressants, SSRI

- Antipsychotics (continued) be started until 2 weeks after stopping • MAOI, also MAOIs should not be started until at least 5 weeks after stopping fluoxetine; CNS effects of SSRIs increased by • MAOI (risk of serious toxicity); increased risk of CNS toxicity when escitalopram given with • MOCLOBEMIDE, preferably avoid concomitant use; after stopping citalopram, fluvoxamine, paroxetine or sertraline do not start • MOCLOBEMIDE for at least 1 week; after stopping fluoxetine do not start • MOCLOBEMIDE for 5 weeks; increased serotonergic effects when SSRIs given with • ST JOHN’S WORT—avoid concomitant use; fluvoxamine inhibits metabolism of • AGOMELATINE (increased plasma concentration); possible increased serotonergic effects when fluoxetine or fluvoxamine given with SSRIs; increased plasma concentration of some • TRICYCLICS; manufacturer of citalopram and escitalopram advises avoid concomitant use with • TRICYCLICS (risk of ventricular arrhythmias)

- Antimuscarinics: manufacturer of citalopram and escitalopram advise avoid concomitant use with • TRICYCLICS

- Antihistamines: manufacturer of citalopram and escitalopram advise avoid concomitant use with • MIZOLASTINE (risk of ventricular arrhythmias); antihistaminic effect of SSRIs possibly antagonised by • CYPROHEPTADINE

- Antifungals: avoidance of antidepressants advised by manufacturer of • ARTEMETHER WITH LUMEFLANTRINE and • ARTEMINOL WITH PIPERIQUE; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with • ARTEMETHER WITH LUMEFLANTRINE—avoid concomitant use; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with • ARTEMINOL WITH PIPERIQUE—avoid concomitant use; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with • CHLOROQUINE; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with • QUININE—avoid concomitant use

- Antiretrovirals: paroxetine increases plasma concentration of • DARIFENACIN and • PROCYCLIDINE

- Antipsychotics: avoidance of fluoxetine, fluvoxamine and sertraline advised by manufacturer of • DROPERIDOL (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid concomitant use with • HALOPERIDOL (risk of ventricular arrhythmias); fluoxetine increases plasma concentration of • CLOzapine, • HALOPERIDOL and • RISPERIDONE; fluvoxamine possibly increases plasma concentration of • ASENAPINE and • HALOPERIDOL; paroxetine inhibits metabolism of • PERPHENAZINE (reduce dose of phenothiazine); fluoxetine and paroxetine possibly increase plasma concentration of • ARIPIPRAZOLE (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of paroxetine possibly increased by • ASENAPINE; fluvoxamine, paroxetine and sertraline increase plasma concentration of • CLOzapine; citalopram possibly increases plasma concentration of • CLOzapine (increased risk of toxicity); fluvoxamine increases plasma concentration of • OLANZAPINE; manufacturer of citalopram and escitalopram advises avoid concomitant use with • PHENOTHIAZINES (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid concomitant use with • PIMOZIDE (risk of ventricular arrhythmias); SSRIs possibly increase plasma concentration of • PIMOZIDE (increased risk of ventricular arrhythmias—avoid concomitant use); paroxetine possibly increases plasma concentration of • RISPERIDONE (increased risk of toxicity)

- Antivirals: plasma concentration of paroxetine and sertraline possibly reduced by • DARUNAVIR; plasma concentration of SSRIs possibly increased by • RITONAVIR; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with • RITONAVIR, • FLUCONAZOLE; fluoxetine increases plasma concentration of • ALPRAZOLAM; fluoxetine increases plasma concentration of some • BENZODIAZEPINES; fluoxetine increases plasma concentration of • MELATONIN—avoid concomitant use; sedative effects possibly increased when sertraline given with • ZOLPIDEM

- Atomoxetine: possible increased risk of convulsions when antidepressants given with • ATOMOXETINE; fluoxetine and paroxetine possibly inhibit metabolism of • ATOMOXETINE

- Beta-blockers: citalopram and escitalopram increase plasma concentration of • METOPROLOL; paroxetine possibly increases plasma concentration of • METOPROLOL—increased risk of AV block (manufacturer of paroxetine advises avoid concomitant use in cardiac insufficiency); fluvoxamine increases plasma concentration of • PROPRANOLOL; increased risk of ventricular arrhythmias when citalopram given with • SOTALOL—avoid concomitant use; manufacturer of escitalopram advises avoid concomitant use with • SOTALOL (risk of ventricular arrhythmias)

- Bupropion: plasma concentration of citalopram possibly increased by • BUPROPION

- Calcium-channel blockers: fluoxetine possibly inhibits metabolism of • NIFEDIPINE (increased plasma concentration)

- Clopidogrel: fluoxetine and fluvoxamine possibly reduce antiplatelet effect of • CLOPIDOGREL

- Dopamine: possible increased risk of serotonergic effects when SSRIs given with • DOPAXETINE (manufacturer of dapoxetine advises SSRIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping SSRIs)

- Dopaminergic: increased risk of CNS toxicity when SSRIs given with • RASAGILINE; fluoxetine should not be started until 2 weeks after stopping • RASAGILINE; fluoxetine should not be started until 2 weeks after stopping • RASAGILINE, also rasagiline should not be started until at least 5 weeks after stopping fluoxetine; avoid fluoxetine or sertraline for 5 weeks after stopping selegiline; increased risk of hypertension and CNS excitation when fluoxetine or sertraline given with • SELEGILINE (selegiline should not be started until 1 week after stopping fluvoxamine or sertraline, avoid fluoxetine or sertraline for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when fluoxetine or sertraline given with • SELEGILINE (selegiline should not be started until 2 weeks after stopping paroxetine, avoid paroxetine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when fluoxetine given with • SELEGILINE (selegiline should not be started until 5 weeks after stopping fluoxetine, avoid fluoxetine for 2 weeks after stopping selegiline)

- Grapefruit juice: plasma concentration of sertraline possibly increased by • GRAPEFRUIT JUICE

- Hormone Antagonists: fluoxetine and paroxetine possibly inhibit metabolism of • TAMOXIFEN to active metabolite (avoid concomitant use)

- SHT-receptor Agonists: increased risk of CNS toxicity when citalopram given with • SHT, AGONISTS (manufacturer of citalopram advises avoid concomitant use); fluvoxamine inhibits the metabolism of • FROVATRIPTAN; possible increased serotonergic effects when SSRIs given with • NARATRIPTAN; CNS toxicity reported when sertraline given with • SUMATRIPTAN; increased risk of CNS toxicity when citalopram, escitalopram, fluoxetine, fluvoxamine or paroxetine given with • SUMATRIPTAN; fluoxetine possibly inhibits metabolism of • ZOLMITRIPTAN (reduce dose of zolmitriptan)

- SHT-receptor Antagonists: possible increased serotonergic effects when SSRIs given with • SHT, ANTAGONISTS
Antidepressants, SSRI (continued)

Lipid-regulating Drugs: separating administration from fluoxetine and fluvoxamine by 12 hours advised by manufacturer of LOMITAPIDE

Lithium: increased risk of CNS effects when SSRIs given with lithium (lithium toxicity reported)

Methylthioninium: risk of CNS toxicity when SSRIs given with methylthioninium (separate administration for up to 4 hours after administration)

Metoclopamide: CNS toxicity reported when SSRIs given with METOCLOPRAMIDE

Muscle Relaxants: fluvoxamine increases plasma concentration of TIZANIDINE (increased risk of toxicity)—avoid concomitant use

Parasympathomimetics: paroxetine increases plasma concentration of GALANTAMINE

Pentamidine isetionate: manufacturer of cilostrol and escitalopram advises avoid concomitant use with PENTAMIDINE ISETIONATE (risk of ventricular arrhythmias)

Pirfenidone: fluvoxamine increases plasma concentration of PIRFENIDONE—manufacturer of pirfenidone advises avoid concomitant use

Pomalidomide: fluvoxamine increases plasma concentration of POMALIDOMIDE

Ranolazine: paroxetine increases plasma concentration of RANOLAZINE

Roflumilast: fluvoxamine inhibits the metabolism of ROFLUMILAST

Sympathomimetics: metabolism of SSRIs possibly inhibited by METHYLPHENIDATE

Theophylline: fluvoxamine increases plasma concentration of THEOPHYLLINE (concomitant use should usually be avoided, but where not possible halve theophylline dose and monitor plasma—theophylline concentration)

Ticagrelor: possible increased risk of bleeding when cilostrol, paroxetine or sertraline given with TICAGRELOR

Ulcer-healing Drugs: plasma concentration of cilostrol, escitalopram and sertraline increased by CIMETIDINE; fluvoxamine possibly increases plasma concentration of Lansoprazole; plasma concentration of escitalopram increased by OMEPRAZOLE

Antidepressants, SSRI (related) see Duloxetine and Venlafaxine

Antidepressants, Tricyclic

Adrenergic Neurone Blockers: tricyclics antagonise hypotensive effect of ADRENERGIC NEURONE BLOCKERS

Alcohol: increased sedative effect when tricyclics given with ALCOHOL

Alpha-2-adrenoceptor Stimulants: avoidance of tricyclics advised by manufacturer of APRACLOLIDINE and BRIMONIDINE

Anaesthetics, General: increased risk of arrhythmias and hypotension when tricyclics given with GENERAL ANAESTHETICS

Analgesics: increased risk of CNS toxicity when tricyclics given with TRAMADOL; side-effects possibly increased when tricyclics given with NEFOPAM; sedative effects possibly increased when tricyclics given with OPIOID ANALGESICS

Anti-arrhythmics: increased risk of ventricular arrhythmias when tricyclics given with NICOTINIC; avoid concomitant use; increased risk of ventricular arrhythmias when tricyclics given with DISOPYRAMIDE or Flecaidine; avoidance of tricyclics advised by manufacturer of DRONEDARONE (risk of ventricular arrhythmias); increased risk of arrhythmias when tricyclics given with PROPafenONE

Antibacterials: increased risk of ventricular arrhythmias when tricyclics given with MOXIFLOXACIN—avoid concomitant use; possible increased risk of ventricular arrhythmias when tricyclics that prolong the QT interval given with

DELAMANID; possible increased risk of ventricular arrhythmias when tricyclics given with TELITHROMYCIN

Anticoagulants: tricyclics may enhance or reduce anticoagulant effect of OUMARINS

Antidepressants: avoidance of tricyclics advised by manufacturer of CITOPRAM and ESCITALOPRAM (risk of ventricular arrhythmias); possible increased serotonergic

Antidepressants, Tricyclic

Antidepressants (continued)

effects when amitriptyline or clomipramine given with DULOXETINE; increased risk of hypertension and CNS excitation when tricyclics given with MAOIs, tricyclics should not be started until 2 weeks after stopping MAOIs (3 weeks if starting clomipramine or imipramine), also MAOIs should not be started for at least 1–2 weeks after stopping tricyclics (5 weeks in the case of clomipramine or imipramine); after stopping tricyclics do not start MOLOCROMIDE for at least 1 week; plasma concentration of some tricyclics increased by SSRI; plasma concentration of amitriptyline reduced by ST JOHN'S WORT

Antiepileptics: tricyclics antagonise anti-convulsant effect of

Antiepileptics: tricyclics antagonise anti-convulsant effect of ANTIEPILEPTICS (convulsive threshold lowered); metabolism of tricyclics accelerated by CARBAMAZEPINE (reduced plasma concentration and reduced effect); plasma concentration of tricyclics possibly reduced by FOSPHENOTIN and PHENYTOIN; metabolism of tricyclics possibly accelerated by PHENOBARBITAL and PRIMIDONE (reduced plasma concentration)

Antifungals: plasma concentration of amitriptyline and nortriptyline possibly increased by Fluconazole; plasma concentration of tricyclics possibly increased by TERTIBAFINE

Antihistamines: increased antimuscarinic and sedative effects when tricyclics given with ANTIHISTAMINES

Antimicrobials: avoidance of antidepressants advised by manufacturer of ARTEMETHER with LUMEFANTRINE and ARTENIOMIL with PIPERAQUINE

Antimuscarinics: increased risk of antimuscarinic side-effects when tricyclics given with ANTUSCUMARINICS

Antipsychotics: avoidance of tricyclics advised by manufacturer of DROPERIDOL, FLUPHENAZINE, HALOPERIDOL, SULPRAZIDE and ZUCLOPENTHIXOL (risk of ventricular arrhythmias); possible increased antimuscarinic side-effects when tricyclics given with CLOzapine; increased risk of antimuscarinic side-effects when tricyclics given with PHENOThiAZINES; possible increased risk of ventricular arrhythmias when tricyclics given with RISPERIDONE

Antivirals: plasma concentration of tricyclics possibly increased by RITONAVIR; increased risk of ventricular arrhythmias when tricyclics given with SAQUINAVIR—avoid concomitant use

Antidepressants, SSRI (related) see Duloxetine and Venlafaxine
Antidepressants, Tricyclic (related) (continued)

- Antimuscarinics: possible increased antimuscarinic side-effects when tricyclic-related antidepressants given with
  - **ANTIMUSCARINICS**
- Antivirals: plasma concentration of trazodone increased by
  - **RIFAPRICIN** (increased risk of toxicity); increased risk of ventricular arrhythmias when trazodone given with
  - **SAQUINAVIR**—avoid concomitant use; plasma concentration of trazodone possibly increased by **TELAPREVIR**
- Antihistamines and Hypnotics: increased sedative effect when tricyclic-related antidepressants given with
  - **ANXIOLYTES AND HYPNOTICS**
- Benzodiazepines: possible increased risk of convulsions when tricyclic-related antidepressants given with **ATOMOXETINE**
- Diazoxide: enhanced hypotensive effect when tricyclic-related antidepressants given with **DIAZoxide**
- Nitrates: tricyclic-related antidepressants possibly reduce effects of sublingual tablets of **NITRATES** (failure to dissolve under tongue owing to dry mouth)
- Vasodilators: Antihypertensives: enhanced hypotensive effect when tricyclic-related antidepressants given with **HYDRALazine or SODIUM NITROPRUSSIDE**

**Antidiabetics**

**NOTE** Other drugs administered orally may need to be taken at least 1 hour before or 4 hours after exenatide injection, or taken with a meal when lirinisenate is not administered, to minimise possible interference with absorption

**NOTE** Other drugs administered orally may need to be taken at least 1 hour before or 4 hours after exenatide injection, or taken with a meal when lirinisenate is not administered, to minimise possible interference with absorption

- **ACE Inhibitors**: hypoglycaemic effect of insulin, metformin and sulfonylureas possibly enhanced by **ACE INHIBITORS**
- Alcohol: hypoglycaemic effect of antiadibiotics enhanced by **ALCOHOL**; increased risk of lactic acidosis when metformin given with **ALCOHOL**
- Anabolic Steroids: hypoglycaemic effect of antiadiabtics possibly enhanced by **ANABOLIC STEROIDS**
- Analgesics: effects of sulfonylureas possibly enhanced by
  - **NEOXYLIN**; lirinisenate possibly reduces the absorption of **PARACETAMOL** when given 1 to 4 hours before paracetamol
- Anti-arrhythmics: hypoglycaemic effect of gliclazide, insulin and metformin possibly enhanced by **DISOPYRAMIDE**
- Antibacterials: hypoglycaemic effect of acarbose possibly enhanced by **NEOXYLIN**; also severity of gastro-intestinal effects increased; effects of repaglinide enhanced by **CLARITHROMYCIN**; effects of glibenclamide possibly enhanced by **NORFLOXACIN**; plasma concentration of canagliflozin and nateglinide reduced by **RIFAMPICIN**; effects of linagliptin possibly reduced by **RIFAMPICIN**; hypoglycaemic effect of repaglinide possibly antagonised by **RIFAMPICIN**; effects of sulfonylureas enhanced by
  - **CHLORAMPHENICOL**; metabolism of tolbutamide accelerated by **RIFAMPICIN** (reduced effect); metabolism of sulfonylureas possibly accelerated by
  - **RIFAMPICIN** (reduced effect); effects of sulfonylureas rarely enhanced by **SULFONAMIDES and TRIMETHOPRIM**; hypoglycaemic effect of sulfonylureas possibly enhanced by **TETRACYCLINES**; hypoglycaemic effect of repaglinide possibly enhanced by **TRIMETHOPRIM**—manufacturer advises avoid concomitant use
- Anticoagulants: exenatide possibly enhances anticoagulant effect of **WARFARIN**; hypoglycaemic effect of sulfonylureas possibly enhanced by **COUMARINS**, also possible changes to anticoagulant effect
- Antidepressants: hypoglycaemic effect of antiadibiotics possibly enhanced by **MAOIs**; hypoglycaemic effect of insulin, metformin and sulfonylureas enhanced by **MAOIs**
- Antidiabetics: manufacturer of dapagliflozin advises avoid concomitant use with **PIOGLITAZONE**
- Antiepileptics: tolbutamide transiently increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN** (possibility of toxicity); plasma concentration of glibenclamide possibly reduced by **TOPIRAMATE**; plasma concentration of metformin possibly increased by **TOPIRAMATE**
- Antifungals: plasma concentration of pioglitazone, saxagliptin and tolbutamide increased by **KETOCONAZOLE**; plasma...
### Antidiabetics

- **Antifungals (continued)**
  - Concentration of sulfonylureas increased by **FLUCONAZOLE** and **MICAZOLE**; hypoglycaemic effect of glipizide and glimepiride enhanced by **MICAZOLE**—avoid concomitant use; **hypoglycaemic effect of nateglinide possibly enhanced by FLUCONAZOLE**; hypoglycaemic effect of repaglinide possibly enhanced by **FLUCONAZOLE**; hypoglycaemic effect of repaglinide possibly enhanced by **ITRACONAZOLE**; hypoglycaemic effect of glipizide possibly enhanced by **POSACONAZOLE**; plasma concentration of repaglinide possibly increased by **VIRCONEZOLE**
  - Antihistamines: thombocytoc count depressed when metformin given with **KETOTIFEN** (manufacturer of ketotifen advises avoid concomitant use)
  - Antipsychotics: hypoglycaemic effect of sulfonylureas possibly antagonised by **PHENOTHAZINES**
  - Antivirals: plasma concentration of tolbutamide possibly increased by **RITONAVIR**; plasma concentration of metformin increased by **TELAPREVIR** (consider reducing dose of metformin)
  - Aprepitant: plasma concentration of tolbutamide reduced by **APEPPITANT**
  - beta-blockers: warning signs of hypoglycaemia (such as tremor) with antidiabetics may be masked when given with **BETA-BLOCKERS**; hypoglycaemic effect of insulin enhanced by **BETA-BLOCKERS**
  - Bosentan: increased risk of hepatotoxicity when glibenclamide given with **BOSENTAN**—avoid concomitant use
  - Calcium-channel blockers: glucose tolerance occasionally impaired when insulin given with **NIFEDIPINE**
  - Carboxy Glicosides: canagliflozin and sitagliptin increase plasma concentration of **DIOXIGIN**; acarbose possibly reduces plasma concentration of **DIOXIGIN**
  - Ciclosporin: hypoglycaemic effect of repaglinide possibly enhanced by **CICLOSPORIN**
  - Corticosteroids: hypoglycaemic effect of antidiabetics antagonised by **CORTICOSTEROIDS**
  - Cytotoxics: avoidance of repaglinide advised by manufacturer of **LAPATINIB**; plasma concentration of metformin possibly increased by **VANDETANIB** (consider reducing dose of metformin)
  - Deferasirox: plasma concentration of repaglinide increased by **DEFERASIROX**
  - Diazoxide: hypoglycaemic effect of antidiabetics antagonised by **DIAZOXIDE**
  - Diuretics: canagliflozin possibly enhances diuretic effect of **DIURETICS**; manufacturer of canagliflozin advises avoid concomitant use with **LOOP DIURETICS**; hypoglycaemic effect of antidiabetics antagonised by **LOOP DIURETICS and THIAZIDES and RELATED DIURETICS**; dapagliflozin possibly enhances diuretic effect of **LOOP DIURETICS and THIAZIDES and RELATED DIURETICS**
  - Fosaprepitant: plasma concentration of tolbutamide reduced by **FOSAPREPTANT**
  - Hormone Antagonists: requirements for antidiabetics possibly reduced by **LAMERTIDE, OCRETIDINE and PASIRETIDINE**
  - Leflunomide: hypoglycaemic effect of tolbutamide possibly enhanced by **LEFLUNOMIDE**
  - Lipid-regulating Drugs: absorption of glibenclamide and glipizide reduced by **COLESEVELAM**; absorption of glimepiride reduced by **COLESEVELAM**—manufacturer of glimepiride advises give at least 4 hours before colesevelam; hypoglycaemic effect of acarbose possibly enhanced by **COLESTRYRAMINE**; hypoglycaemic effect of nateglinide possibly enhanced by **SEMIFIBROLIZ**—increased risk of severe hypoglycaemia when repaglinide given with **SEMIFIBROLIZ**—avoid concomitant use; plasma concentration of glibenclamide possibly increased by **FLUVASTATIN**; manufacturer of canagliflozin advises give at least 1 hour before or 4–6 hours after **ACE-039 SEQUESTRANTS**; may be improved glucose tolerance and an additive effect when insulin or sulfonylureas given with **FIBRATES**; separating administration from linagliptin by 12 hours advised by manufacturer of **LOMITAPIDE**
  - Oestrogens: hypoglycaemic effect of antidiabetics antagonised by **OESTROGENS**

### Antidiabetics (continued)

- **Orlistat**: avoidance of acarbose advised by manufacturer of **ORLISTAT**
- Pancreatin: hypoglycaemic effect of acarbose antagonised by **PANCREATIN**
- Progestogens: hypoglycaemic effect of antidiabetics antagonised by **PROGESTOGENS**
- Sulfinpyrazone: effects of sulfonylureas enhanced by **SULFINPYRAZONE**
- Teriflunomide: plasma concentration of repaglinide increased by **TERIFLUNOMIDE**
- Testosterone: hypoglycaemic effect of antidiabetics possibly enhanced by **TESTOSTERONE**
- Ulcer-healing Drugs: excretion of metformin reduced by **CIMETIDINE** (increased plasma concentration); hypoglycaemic effect of sulfonylureas enhanced by **CIMETIDINE**

### Antiepileptics

- **See Carbamazepine, Eslicarbazepine, Ethosuximide, Fosphenytoin, Gabapentin, Lacosamide, Lamotrigine, Levetiracetam, Oxcarbazepine, Perampanel, Phenoeharbital, Phenytoin, Pregabalin, Primidone, Reticapine, Rufinamide, Sodium valproate, Stiripentol, Tiagabine, Topiramate, Valproic acid, Vigabatrin, and Zonisamide**

### Antifungals

- **See Amphotericin; Antifungals, Imidazole; Antifungals, Triazole; Caspofungin; Fluconazole; Griseofulvin; Micafungin; Terbinafine**

### Antifungals, Imidazole

- **Alcohol**: possibility of disulfram-like reaction when ketoconazole given with **ALCOHOL**
- **Aliskiren**: ketoconazole increases plasma concentration of **ALISKIREN**
  - Alpha-blockers: ketoconazole possibly increases plasma concentration of **ALFUZOSIN**; ketoconazole increases plasma concentration of **TAMSULOSIN**
  - Aminophylline: ketoconazole possibly increases plasma concentration of **AMINOPHYLLINE**
  - Analgesics: ketoconazole inhibits metabolism of **BUPRENORPHINE** (reduce dose of buprenorphine); possible increased risk of ventricular arrhythmias when ketoconazole given with **METHADONE**—manufacturer of ketoconazole advises avoid concomitant use; ketoconazole increases plasma concentration of **OXYCODONE**; manufacturer of ketoconazole advises avoid concomitant use with **PARACETAMOL**
  - Antacids: absorption of ketoconazole reduced by **ANTACIDS**
  - Antihelminics: ketoconazole increases plasma concentration of **PRAZIQUANTEL**
  - Anti-arrhythmic: increased risk of ventricular arrhythmias when ketoconazole given with **DISOPYRAMIDE**—avoid concomitant use; ketoconazole increases plasma concentration of **DRONEDARONE**—avoid concomitant use
  - Antibacterials: manufacturer of ketoconazole advises avoid concomitant use **CLARITHROMYCIN** in severe renal impairment; metabolism of ketoconazole accelerated by **RIFAMPICIN** (reduced plasma concentration); also plasma concentration of rifampicin may be reduced by ketoconazole; ketoconazole increases plasma concentration of **BEDAQUILINE**—avoid concomitant use if ketoconazole given for more than 14 days; avoidance of ketoconazole advised by manufacturer of **FIDASOMICIN**; plasma concentration of ketoconazole possibly reduced by **ISONIAZID**; ketoconazole increases the plasma concentration of **TELITHROMYCIN**—avoid in severe renal and hepatic impairment
  - Anticoagulants: ketoconazole increases plasma concentration of **APIXABAN**—manufacturer of apixaban advises avoid concomitant use; miconazole enhances anticoagulant effect of **COUMARINS** (miconazole oral gel and possibly vaginal and topical formulations absorbed); ketoconazole enhances anticoagulant effect of **COUMARINS**; ketoconazole increases plasma concentration of **DABIGATRAN** and **RIVAROXABAN**—avoid concomitant use
  - Antidepressants: avoidance of imidazoles advised by manufacturer of **REBOXETINE**; ketoconazole increases plasma concentration of **MIRTAZAPINE**
  - Antidiabetics: miconazole enhances hypoglycaemic effect of **GLICOZIDE and GLIPIZIDE**—avoid concomitant use;
Antifungals, Imidazole
- Antidiabetics (continued)
  - ketoconazole increases plasma concentration of 
    PIPIGLITAZONE, SAXAGLITOPIN and TOLBUTAMIDE; miconazole increases plasma concentration of 
    SULFONYLUREAS
- Antiepileptics: miconazole possibly increases plasma concentration of CARBAMAZEPINE; plasma concentration of 
  ketocanazole possibly reduced by CARBAMAZEPINE, also plasma concentration of carbamazepine possibly increased; 
  pipeline concentration of ketonazole reduced by 
    FOSPHENOTIOIN and PHENTOYIN; miconazole enhances anticonvulsant effect of 
    FOSPHENOTIOIN and PHENTOYIN (plasma concentration of fosphenytoin and phenytoin increased); ketocanazole increases plasma concentration of 
  PERAMAPANE
- Antifungals: imidazoles possibly antagonise effects of 
  AMPHOTERICIN
- Antihistamines: imidazoles possibly inhibit metabolism of 
  MIZOLASTINE (avoid concomitant use)
- Antimalarials: avoidance of imidazoles advised by manufacturer of 
  ARTEMETHER WITH LUMEFANTRINE; avoidance of imidazoles advised by manufacturer of 
  ARTEMINOL WITH PIPERAQUIN (possible risk of ventricular arrhythmias); ketocanazole increases plasma concentration of 
  MEfloquine
- Antimuscarinics: absorption of ketocanazole reduced by 
  ANTIMUSCARINICS; ketocanazole increases plasma concentration of 
  DARIFENACIN—avoid concomitant use; manufacturer of fosfoterodine advises dose reduction when 
  ketocanazole given with FOSFOTERODINE—consult fosfoterodine product literature; ketocanazole increases plasma concentration of 
  OXYBUTYNIN; ketocanazole increases plasma concentration of 
  SOLIFENACIN—see under Solifenacin, p. 670; avoidance of ketocanazole advised by manufacturer of 
  TOLTERODINE
- Antivirals: ketocanazole inhibits metabolism of 
  ARIPIPRAZOLE (reduce dose of aripiprazole); ketocanazole increases plasma concentration of 
  LURASIDONE—avoid concomitant use; increased risk of ventricular arrhythmias when imidazoles given with 
  PIMOZIDE—avoid concomitant use; imidazoles possibly increase plasma concentration of 
  QUETIAPINE—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: ketocanazole increases plasma concentration of 
  BOCEPREVIR; ketocanazole increases the plasma concentration of 
  DAclatasvir in plasma concentration of daclatasvir (see under Daclatasvir, p. 544); plasma concentration of both drugs increased when ketocanazole given with 
  DURANAVIR; plasma concentration of ketocanazole reduced by 
  EFAVIRENZ; plasma concentration of ketocanazole increased by 
  SAMPEZUMIR (also fosamprenavir possibly increased); ketocanazole increases plasma concentration of 
  INDINAVIR and MARAriVoC (consider reducing dose of indinavir and maraviroc); plasma concentration of ketocanazole reduced by 
  NEVIRapine—avoid concomitant use; plasma concentration of 
  ketonazole increased by 
  RITONAVIR (reduce dose of ketonazole); imidazoles possibly increase plasma concentration of 
  SAquinavIR; ketocanazole increases plasma concentration of 
  QUINAPril—manufacturer of quinapril advises avoid concomitant use; avoidance of ketocanazole advised by manufacturer of 
  SIMprevIR; plasma concentration of both drugs possibly increased when ketocanazole given with 
  TELAPrevIR (increased risk of ventricular arrhythmias)—reduce dose of ketocanazole
- Anxiolytics and Hypnotics: ketocanazole increases plasma concentration of 
  ALPRAZOLAM—manufacturer of 
  ketocanazole advises avoid concomitant use; ketocanazole increases plasma concentration of 
  MIDAZolAM (risk of prolonged sedation—avoid concomitant use of oral midazolam); ketocanazole increases plasma concentration of 
  ZOLPIDEM
- Aprepitant: ketocanazole increases plasma concentration of 
  AprepitAnt
- Avanafil: ketocanazole increases plasma concentration of 
  AVANafiL—avoid concomitant use

Antifungals, Imidazole (continued)
- Beta-blockers: ketoconazole possibly increases plasma concentration of 
  NADOLOL
- Bosentan: ketocanazole increases plasma concentration of 
  BOsentAN
- Calcium-channel Blockers: ketoconazole inhibits metabolism of 
  FELODIPINE (increased plasma concentration)—manufacturer of ketoconazole advises avoid concomitant use; avoidance of ketoconazole advised by manufacturer of 
  LERICANDIPINE; ketoconazole possibly inhibits metabolism of 
  DHYDROPYRIDINES (increased plasma concentration)
- Cannabis Extract: ketoconazole increases plasma concentration of 
  CANNABIS EXTRACT
- Ciclosporin: ketoconazole inhibits metabolism of 
  CICLOSPORIN (increased plasma concentration); miconazole possibly inhibits metabolism of 
  CICLOSPORIN (increased plasma concentration)
- Cisplatin: ketoconazole increases plasma concentration of 
  CILoSTAzoL (see under Cisplatin, p. 206)
- CINACalcET (increased plasma concentration)
- Clopidogrel: ketoconazole possibly reduces antiplatelet effect of 
  CLOPiDOgREL
- Coxcistat: plasma concentration of ketoconazole possibly increased by 
  COXCISTAT—manufacturer of coxcistat advises reduce dose of ketoconazole
- Colchicine: ketoconazole possibly increases risk of 
  COLCHICINE—toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Corticosteroids: ketoconazole possibly inhibits metabolism of 
  CORTICOSTEROIDS; ketoconazole increases plasma concentration of 
  INHALED FLUTICASone; ketoconazole inhibits the metabolism of 
  METHYLPREDNISOLONE; ketoconazole increases plasma concentration of 
  INHALED MIMEsTASone
- Cytoxic: ketoconazole inhibits the metabolism of 
  IFOFAMIDE; possible increased risk of neuropenia when 
  ketoconazole given with 
  BRENTuxIMAB VEDOTIN; ketoconazole possibly increases the plasma concentration of 
  AFAtinIB—manufacturer of afatinib advises separating administration of ketoconazole by 6 to 12 hours; 
  ketoconazole increases plasma concentration of 
  AEXiTINIB (reduce dose of axitinib—consult axitinib product literature); ketoconazole increases the plasma concentration of 
  BOSUtINIB—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; ketoconazole increases plasma concentration of 
  DASAtINIB; ketoconazole increases metabolism of 
  ERLOtinIB and SUnItINIB (increased plasma concentration)
- Daclatasvir: plasma concentration of daclatasvir and 
  DAclatasvir—consult daclatasvir product literature; ketocanazole increases plasma concentration of 
  DASAtINIB; ketoconazole inhibits metabolism of 
  ERLOtinIB and SUnItINIB (increased plasma concentration)
- Docetaxel: plasma concentration of docetaxel and 
  DocaTeXeL (consult docetaxel product literature); ketocanazole reduces plasma concentration of 
  IRINOTeCAN (but concentration of irinotecan increased)—avoid concomitant use; ketoconazole increases plasma concentration of 
  VINfluNINE—manufacturer of vinflunine advises avoid concomitant use
Antifungals, Imidazole (continued)
- Dopamine: ketonazole increases plasma concentration of dopamine—manufacturer of dopamine advises avoid concomitant use
- Diuretics: ketonazole increases plasma concentration of diuretics—avoid concomitant use
- Domperidone: manufacturer of ketonazole advises avoid concomitant use with domperidone (risk of ventricular arrhythmias)
- Ergot Alkaloids: manufacturer of ketonazole advises avoid concomitant use with ergot alkaloids; increased risk of ergotism when imidazoles given with ergotamine—avoid concomitant use
- Fingolimod: ketonazole increases plasma concentration of fingolimod
- Fosaprepitant: ketonazole increases plasma concentration of fosaprepitant
- Hormone Antagonists: manufacturer of ketonazole advises avoid concomitant use with pasireotide
- SERT—receptor Agonists: ketonazole increases plasma concentration of almotriptan (increased risk of toxicity); ketonazole increases plasma concentration of eliptptan (risk of toxicity)—avoid concomitant use
- Ivaloxidine: ketonazole increases plasma concentration of ivaloxidine
- Ivacaftor: ketonazole increases plasma concentration of ivacaftor (see under ivacaftor, p. 257)
- Lanthanum: absorption of ketonazole possibly reduced by lanthanum (give at least 2 hours apart)
- Lenalidomide: ketonazole possibly increases plasma concentration of lenalidomide (increased risk of toxicity)
- Lipid-regulating Drugs: possible increased risk of myopathy when imidazoles given with atorvastatin; possible increased risk of myopathy when ketonazole given with atorvastatin—manufacturer of ketonazole advises avoid concomitant use; increased risk of myopathy when ketonazole given with simvastatin (avoid concomitant use); possible increased risk of myopathy when miconazole given with simvastatin; ketonazole increases plasma concentration of comitapide—avoid concomitant use
- Macitentan: ketonazole increases plasma concentration of macitentan
- Mirabegron: when given with ketonazole avoid or reduce dose of mirabegron in hepatic or renal impairment—see mirabegron, p. 671
- Nintedanib: ketonazole increases plasma concentration of nintedanib
- Dostrojen: anecdotal reports of contraceptive failure when imidazoles given with dostrojen
- Parasympathomimetics: ketonazole increases plasma concentration of galantamine
- Ranolazine: ketonazole increases plasma concentration of ranolazine—avoid concomitant use
- Retinoids: ketonazole increases plasma concentration of retinoids—ketonazole possibly increases risk of retinoid toxicity
- Tretinoin: ketonazole increases plasma concentration of tretinoin—avoid concomitant use
- Riociguat: avoidance of ketonazole advised by manufacturer of riociguat
- Sildenafil: ketonazole increases plasma concentration of sildenafil—reduce initial dose of sildenafil for erectile dysfunction and avoid concomitant use of sildenafil for pulmonary hypertension
- Sirolimus: ketonazole increases plasma concentration of sirolimus—avoid concomitant use; miconazole increases plasma concentration of sirolimus
- sympathomimetics, beta: ketonazole increases plasma concentration of olodaterol; ketonazole inhibits metabolism of salmeterol (increased plasma concentration)
- Tacrolimus: ketonazole increases plasma concentration of tacrolimus (consider reducing dose of tacrolimus); miconazole oral gel possibly increases plasma concentration of tacrolimus
- Tadalafil: ketonazole increases plasma concentration of tadalafil—avoid concomitant use of tadalafil for pulmonary hypertension

Antifungals, imidazole (continued)
- Theophylline: ketonazole possibly increases plasma concentration of theophylline
- Ticagrelor: ketonazole increases plasma concentration of ticagrelor—manufacturer of ticagrelor advises avoid concomitant use
- Tolvaptan: ketonazole increases plasma concentration of tolvaptan—manufacturer of ketonazole advises avoid concomitant use
- Ulcera-Healing Drugs: absorption of ketonazole reduced by histamine H₂-antagonists, proton pump inhibitors and sucralfate
- Ulipristal: ketonazole increases plasma concentration of low-dose ulipristal—manufacturer of low-dose ulipristal advises avoid concomitant use
- Vardenafil: ketonazole increases plasma concentration of vardenafil—avoid concomitant use
- Vitamins: miconazole possibly reduces effects of alfacalcidol, calcitriol, colecalciferol, dihydroxycholesterol, ergocalciferol, paricalcitol and vitamin D; ketonazole possibly increases plasma concentration of paricalcitol

Antifungals, Polyene see Amphotericin B

Antifungals, Triazole
NOTE In general, fluconazole interactions relate to multiple-dose treatment
- Aliskiren: itraconazole increases plasma concentration of aliskiren—avoid concomitant use
- Aminophylline: fluconazole possibly increases plasma concentration of aminophylline
- Analgesics: fluconazole increases plasma concentration of celecoxib (halve dose of celecoxib); voriconazole increases plasma concentration of diclofenac, ibuprofen and oxycodeone; fluconazole increases plasma concentration of flurbiprofen, ibuprofen and methadone; fluconazole increases plasma concentration of parecoxib (reduce dose of parecoxib); voriconazole increases plasma concentration of alfentanil and methadone; itraconazole possibly increases plasma concentration of alfentanil; triazoles possibly increase plasma concentration of fentanyl; itraconazole possibly increases plasma concentration of methadone (increased risk of ventricular arrhythmias); itraconazole increases plasma concentration of oxycodeone
- Antacids: absorption of itraconazole reduced by antacids
- Anti-arrhythmics: manufacturer of itraconazole advises avoid concomitant use with disopyramide; avoidance of itraconazole, posaconazole and voriconazole advised by manufacturer of disopyramide
- Antibacterials: plasma concentration of itraconazole increased by clarithromycin; manufacturer of fluconazole advises avoid concomitant use with erythromycin; itraconazole, posaconazole and voriconazole advised by manufacturer of disopyramide
- Anticoagulants: plasma concentration of itraconazole increased by clarithromycin; manufacturer of fluconazole advises avoid concomitant use with erythromycin; itraconazole, posaconazole and voriconazole advised by manufacturer of disopyramide
Antifungals, Triazole

- Anticoagulants (continued)
  - Antivirals: concentration of **ATAZANAVIR**; itraconazole, posaconazole and voriconazole possibly increase the plasma concentration of **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, p. 544); plasma concentration of voriconazole reduced by **EFAVIRENZ**, also plasma concentration of efavirenz increased (increase voriconazole dose and reduce efavirenz dose); plasma concentration of itraconazole and posaconazole reduced by **EFAVIRENZ**; plasma concentration of both drugs may increase when itraconazole given with **FOSAMPRENAVIR**; plasma concentration of posaconazole possibly reduced by **FOSAMPRENAVIR**; itraconazole increases plasma concentration of **INDINAVIR** (consider reducing dose of indinavir); fluorconazole increases plasma concentration of **NEVIRAPINE**, **RITONAVIR** and **TIPRANAVIR**; plasma concentration of itraconazole possibly reduced by **NEVIRAPINE**—consider increasing dose of itraconazole; plasma concentration of voriconazole reduced by **RITONAVIR**—avoid concomitant use; combination of itraconazole with **RITONAVIR** may increase plasma concentration of either drug (or both); triazoles possibly increase plasma concentration of **SAQUINAVIR**; fluconazole, itraconazole, posaconazole and voriconazole possibly increase plasma concentration of **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of voriconazole possibly affected by **TELAPREVI** (possible increased risk of ventricular arrhythmias); plasma concentration of posaconazole possibly increased by **TELAPREVI** (increased risk of ventricular arrhythmias); plasma concentration of itraconazole possibly increased by **TELAPREVI**; voriconazole increases plasma concentration of **ZIDOVUDINE** (increased risk of toxicity)

- Anxiolytics and Hypnotics: itraconazole increases plasma concentration of **ALPRAZOLAM**; fluconazole and voriconazole increase plasma concentration of **DIAZEPAM** (risk of prolonged sedation); fluconazole, itraconazole, posaconazole and voriconazole increase plasma concentration of **MIDAZOLAM** (risk of prolonged sedation); itraconazole increases plasma concentration of **BUSBIPRO** (reduce dose of busipiron)

- Aripiprazole: itraconazole and voriconazole possibly increase plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use; fluconazole possibly increases plasma concentration of **AVANAFIL**—see under Avanafil, p. 698

- Bosantan: fluconazole possibly increases plasma concentration of **BOSENTAN**—avoid concomitant use; itraconazole possibly increases plasma concentration of **BOSENTAN**

- Calcium-channel Blockers: negative inotropic effect possibly increased when itraconazole given with **CALCIUM-CHANNEL BLOCKERS**; itraconazole inhibits metabolism of **FELODIPINE** (increased plasma concentration); avoidance of itraconazole advised by manufacturer of **LECADIRIPINE**; itraconazole possibly inhibits metabolism of **DHYDROPYRIDINES** (increased plasma concentration)

- Cardiac Glycosides: itraconazole increases plasma concentration of **DIGOXIN**

- Ciclosporin: fluconazole, itraconazole, posaconazole and voriconazole inhibit metabolism of **CICLOSPORIN** (increased plasma concentration)

- Cilostazol: itraconazole possibly increases plasma concentration of **CILOSTAZOL** (see under Cilostazol, p. 206)

- Clopidogrel: fluconazole, itraconazole and voriconazole possibly reduce antiplatelet effect of **CLOPIDOGREL**

- Cobicitstat: plasma concentration of itraconazole possibly increased by **COBICISTAT**—manufacturer of cobicitstat advises reduce dose of itraconazole

- Colchicine: itraconazole possibly increases risk of **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)

- Corticosteroids: itraconazole possibly inhibits metabolism of **CORTICOSTEROIDS** and **METHYLPRERNSOLO**; itraconazole increases the plasma concentration of **inhaled and oral** (and
Antifungals, Triazole
- Corticosteroids (continued)
  - possibly also intranasal and rectal
  - BUDESONIDE; itraconazole increases plasma concentration of inhaled FLUTICASONE
- Cytotoxics: itraconazole inhibits metabolism of BUSULFAN (increased risk of toxicity); fluconazole and itraconazole possibly increase side-effects of CYCLOPHOSPHAMIDE; itraconazole possibly increases the plasma concentration of Arafibine—manufacturer of afatinib advises parating administration of itraconazole by 6 to 12 hours; itraconazole possibly increases plasma concentration of AXTINIB (reduce dose of axitinib—consult axitinib product literature); fluconazole, itraconazole, posaconazole and voriconazole possibly increase the plasma concentration of • BUSULFAN—manufacturer of busulfan advises reducing dose of busulfan; itraconazole possibly increases plasma concentration of CAPOZANTINIB; itraconazole and voriconazole possibly increase plasma concentration of • CRIZOTINIB—manufacturer of crizotinib advises avoid concomitant use; avoidance of itraconazole advised by manufacturer of DASATINIB and • TEMSIROLIMUS (plasma concentration of dasatinib and temsirolimus possibly increased); itraconazole, posaconazole and voriconazole possibly increase plasma concentration of • EVEROLIMUS—manufacturer of everolimus advises avoid concomitant use; itraconazole increases plasma concentration of GEFINIBIN; fluconazole, itraconazole and voriconazole possibly increase the plasma concentration of • IBRUTINIB—reduce dose of ibritunib (see under Ibrutinib, p. 809); avoidance of itraconazole, posaconazole and voriconazole advised by manufacturer of • LAPIX; avoidance of itraconazole and voriconazole advised by manufacturer of • Nilotinib; itraconazole and voriconazole possibly increase plasma concentration of • RAZONTAXEL—manufacturer of raxotaxel advises avoiding concomitant use; itraconazole and voriconazole possibly increase plasma concentration of • PONATINIB—consider reducing initial dose of ponatinib (see under Ponatinib, p. 814); manufacturer of ruxolitinib advises dose reduction when fluconazole, itraconazole, posaconazole and voriconazole given with • RUXOLITINIB—consult ruxolitinib product literature; itraconazole and voriconazole possibly increase the plasma concentration of • CABAZITAXEL—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel; itraconazole and voriconazole possibly increase plasma concentration of • DOCETAXEL—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; increased risk of toxicity when itraconazole given with • RINFOTECAN—avoid concomitant use; itraconazole possibly increases plasma concentration of • VINDESINE, • VINFLUNINE and • VINOERIBINE toxicity; posaconazole possibly inhibits metabolism of • VINBLASTINE and • VINCristine (increased risk of neurotoxicity); itraconazole increases risk of • VINCristine toxicity
- Dopamine: manufacturer of dopaemine advises dose reduction when fluconazole given with • DOPAEMINE (see under Dapoxetine, p. 705); avoidance of itraconazole advised by manufacturer of • DAPoxetine (increased risk of toxicity)
- Diuretics: fluconazole increases plasma concentration of • Eplerenone (reduce dose of eplerenone); itraconazole increases plasma concentration of • Eplerenone—avoid concomitant use; plasma concentration of fluconazole increased by HYDROCHLOROTHIAZIDE
- Dopemonedone: possible increased risk of ventricular arrhythmias when itraconazole or voriconazole given with • DOPERINDONE—avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when voriconazole given with • ERGOMETRINE—avoid concomitant use; manufacturer of itraconazole advises avoid concomitant use with • ERGOMETRINE (increased risk of ergotism); increased risk of ergotism when triazoles given with • ERGOTAMINE—avoid concomitant use
- SHT-receptor Agonists: itraconazole increases plasma concentration of • ELETRIPATAN (risk of toxicity)—avoid concomitant use

Antifungals, Triazole (continued)
- Ivarabine: fluconazole increases plasma concentration of IVABRADINE—reduce initial dose of ivabradine; itraconazole possibly increases plasma concentration of • IVABRADINE—avoid concomitant use
- Ivacarif, itraconazole, posaconazole and voriconazole possibly increase plasma concentration of • WACAFOR (see under Ivacarif, p. 257); fluconazole increases plasma concentration of • IVAFACTOR (see under Ivacarif, p. 257)
- Lenalidomide: itraconazole possibly increases plasma concentration of • LENALIDOMIDE (increased risk of toxicity)
- Leukotriene Receptor Antagonists: fluconazole increases plasma concentration of ZAFIRILUKAST
- Lipid-regulating Drugs: increased risk of myopathy when itraconazole, posaconazole or voriconazole given with • ATORVASTATIN; possible increased risk of myopathy when fluconazole given with • ATORVASTATIN or • SIMVASTATIN; fluconazole increases plasma concentration of FLUVASTATIN—possible increased risk of myopathy; itraconazole increases plasma concentration of • ROSUVASTATIN—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when itraconazole or posaconazole given with • SIMVASTATIN (avoid concomitant use); increased risk of myopathy when voriconazole given with • SIMVASTATIN; avoidance of triazoles advised by manufacturer of • LOMIPATIDE (plasma concentration of lomitapide possibly increased)
- Mirabegron: when given with itraconazole avoid or reduce dose of Mirabegron in hepatic or renal impairment—see Mirabegron, p. 671
- Oestrogens: plasma concentration of voriconazole increased by OESTROGENS
- Progestogens: plasma concentration of voriconazole possibly increased by PROGESTOGENS
- Ranolazine: itraconazole, posaconazole and voriconazole possibly increase plasma concentration of • RANOLAZINE—manufacturer of ranolazine advises avoid concomitant use
- Retinoids: fluconazole and voriconazole possibly increase risk of • TRETINOIN toxicity
- Rofecoxib: avoidance of itraconazole and voriconazole advised by manufacturer of RICOGUT
- Sildenafil: itraconazole increases plasma concentration of SILDENAFIL—reduce initial dose of sildenafil
- Sirolimus: fluconazole and posaconazole possibly increase plasma concentration of SIROLIMUS; itraconazole and voriconazole increase plasma concentration of • SIROLIMUS—avoid concomitant use
- Tacrolimus: fluconazole, itraconazole, posaconazole and voriconazole increase plasma concentration of • TACROLIMUS (consider reducing dose of tacrolimus)
- Tadalafil: itraconazole possibly increases plasma concentration of TADALAFIL
- Theophylline: fluconazole possibly increases plasma concentration of • THEOPHYLLINE
- Ulcer-healing Drugs: plasma concentration of posaconazole reduced by • Cimetidine and • Esomeprazole—manufacturer of posaconazole suspension advises avoid concomitant use; plasma concentration of posaconazole possibly reduced by • Famotidine, • Lansoprazole, • Nizatidine, • Omeprazole, • Pantoprazole, • Rabeprazole and • Ranitidine—manufacturer of posaconazole suspension advises avoid concomitant use; voriconazole possibly increases plasma concentration of ESOMEPRAZOLE; voriconazole increases plasma concentration of OMEPRAZOLE (consider reducing dose of omeprazole); absorption of itraconazole reduced by • Histamine H2-ANTAGONISTS and • Proton Pump Inhibitors
- Ulipristal: avoidance of itraconazole advised by manufacturer of ULIPRISTAL
- Vardenafil: itraconazole possibly increases plasma concentration of • VARDENAFIL—avoid concomitant use

Antihistamines
- NOTE Sedative interactions apply to a lesser extent to the non-sedating antihistamines. Interactions do not generally apply to antihistamines used for topical action (including inhalation)
Antihistamines (continued)
- Alcohol: increased sedative effect when antihistamines given with ALCOHOL (possibly less effect with non-sedating antihistamines)
- Analgesics: sedative effects possibly increased when sedating antihistamines given with OPIOID ANALGESICS
- Antacids: absorption of fexofenadine reduced by ANTACIDS
- Anti-arrhythmics: increased risk of ventricular arrhythmias when mizolastine given with AMIODARONE, DISOPYRAMIDE or FLECAINIDE—avoid concomitant use; manufacturer of mizolastine advises avoid concomitant use with PROPafenONE (possible risk of ventricular arrhythmias)
- Antibacterials: manufacturer of lortadine advises plasma concentration possibly increased by ERYTHROMYCIN; metabolism of mizolastine possibly inhibited by MACROLIDES (avoid concomitant use)
- Antidepressants: avoidance of mizolastine advised by manufacturer of CITALOPRAM and ESCITALOPRAM (risk of ventricular arrhythmias); increased antimuscarinic and sedative effects when antihistamines given with MAOiS or TRICYCLICs; manufacturer of promethazine advises avoid for 2 weeks after stopping MAOiS; manufacturer of hydroxyzine advises avoid concomitant use with MAOiS; cyproheptadine possibly antagonises antidepressant effect of SSRIiS; possible increased antimuscarinic and sedative effects when antihistamines given with TRICYCLIC-RELATED ANTIDEPRESSANTS
- Antiarrhythmics: increased risk of ventricular arrhythmias when mizolastine given with CICLOSPORIN
- Anti-diabetics: thomboctye count depressed when ketotifen given with METFORMIN (manufacturer of ketotifen advises avoid concomitant use)
- Anti-epileptics: metabolism of mizolastine inhibited by ITRACONAZOLE—avoid concomitant use; metabolism of mizolastine possibly inhibited by IMIDAZOLES (avoid concomitant use)
- Antimalarials: avoidance of mizolastine advised by manufacturer of ARTEMIONIL with PIPERAQUIN (possible risk of ventricular arrhythmias)
- Antimuscarinics: increased risk of antimuscarinic side-effects when antihistamines given with ANTIMUSCARINICS
- Antivirals: plasma concentration of chlorphenamine possibly increased by LOPINAVIR; plasma concentration of non-sedating antihistamines possibly increased by RITONAVIR; increased risk of ventricular arrhythmias when mizolastine given with SAQUINAVIR—avoid concomitant use
- Anxiolytics and Hypnotics: increased sedative effect when antihistamines given with ANXIOLYTICS and HYPNOTICS
- Beta-blockers: increased risk of ventricular arrhythmias when mizolastine given with SOLFITOL—avoid concomitant use
- Betahistine: antihistamines theoretically antagonise effect of BETAHISTINE
- Cytotoxics: possible increased risk of ventricular arrhythmias when mizolastine given with VANDETANIB—avoid concomitant use
- Grapefruit Juice: plasma concentration of bilastine reduced by GRAPEFRUIT JUICE
- Histamine: antihistamines theoretically antagonise effects of HISTAMINE—manufacturer of histamine advises avoid concomitant use
- Ulcer-healing Drugs: manufacturer of loratadine advises plasma concentration possibly increased by CIMETIDINE; plasma concentration of hydroxyzine increased by CIMETIDINE
- Ulipristal: manufacturer of ulipristal advises give fexofenadine at least 1.5 hours before or after ULIPRISTAL

Antihistamines, Non-sedating see Antihistamines

Antihistamines, Sedating see Antihistamines

Antimalarials see Antimalarial

Antimetabolites see Cepacitabin, Ciprofloxacin, Docetaxel, Fluorouracil, Gomecitabine, Mercaptopurine, Methotrexate, Pemetrexed, Raltitrexed, Tegafur, and Tioguanine

Antimetabolites (continued)
- Mercaptopurine, Methotrexate, Pemetrexed, Raltitrexed, Tegafur, and Tioguanine

Antimuscarinics
- Note: Many drugs have antimuscarinic effects; concomitant use of two or more such drugs can increase side-effects such as dry mouth, urine retention, and constipation; concomitant use can also lead to confusion in the elderly. Interactions do not generally apply to antimuscarinics used by inhalation
- Alcohol: increased sedative effect when hyoscine given with ALCOHOL
- Analgesics: possible increased risk of antimuscarinic side-effects when antimuscarinics given with CODEINE; increased risk of antimuscarinic side-effects when antimuscarinics given with NEFOFAM
- Anti-arrhythmics: increased risk of ventricular arrhythmias when toterodine given with AMIODARONE, DISOPYRAMIDE or FLECAINIDE—avoid concomitant use; increased risk of antimuscarinic side-effects when antimuscarinics given with CODEINE
- Antibacterials: manufacturer of fesoterodine advises dose reduction when fesoterodine given with CLARITHROMYCIN and TELITHROMYCIN—consult fesoterodine product literature; manufacturer of toterodine advises avoid concomitant use with CLARITHROMYCIN and ERYTHROMYCIN; plasma concentration of darifenacin possibly increased by ERYTHROMYCIN; plasma concentration of active metabolite of fesoterodine reduced by RIFAMPICIN
- Antidepressants: plasma concentration of darifenacin and procyclidine increased by PAROXETINE; increased risk of antimuscarinic side-effects when antimuscarinics given with MAOiS or TRICYCLICs; possible increased antimuscarinic side-effects when antimuscarinics given with TRICYCLIC-RELATED ANTIDEPRESSANTS
- Antifungalis: antimuscarinics reduce absorption of KETOCONAZOLE; manufacturer of darifenacin advises dose reduction when fesoterodine given with ITRACONAZOLE and KETOCONAZOLE—consult fesoterodine product literature; plasma concentration of darifenacin increased by KETOCONAZOLE—avoid concomitant use; plasma concentration of solifenacin increased by KETOCONAZOLE—see under Solifenacin, p. 670; plasma concentration of oxybutynin increased by KETOCONAZOLE; manufacturer of toterodine advises avoid concomitant use with ITRACONAZOLE and KETOCONAZOLE; manufacturer of darifenacin advises avoid concomitant use with Ritonavir; plasma concentration of solifenacin possibly increased by ITRACONAZOLE—see under Solifenacin, p. 670
- Antihistamines: increased risk of antimuscarinic side-effects when antimuscarinics given with ANTIMUSCARINICS
- Antipsychotics: antimuscarinics possibly reduce effects of HALOPERIDOL; increased risk of antimuscarinic side-effects when antimuscarinics given with clozapine; antimuscarinics reduce plasma concentration of PHENOThIAZINES, but risk of antimuscarinic side-effects increased
- Antivirals: manufacturer of fesoterodine advises dose reduction when fesoterodine given with ATAZANAVIR, INDINAVIR, RITONAVIR and SAQUINAVIR—consult fesoterodine product literature; manufacturer of darifenacin advises avoid concomitant use with ATAZANAVIR, FOSAMPRENAVIR, INDINAVIR, LOPINAVIR, RITONAVIR, SAQUINAVIR and TIPRANAVIR; manufacturer of toterodine advises avoid concomitant use with FOSAMPRENAVIR, INDINAVIR, LOPINAVIR, RITONAVIR and SAQUINAVIR; plasma concentration of solifenacin possibly increased by RITONAVIR—see under Solifenacin, p. 670
- Beta-blockers: increased risk of ventricular arrhythmias when toterodine given with SOLITOL
- Calcium-channel Blockers: plasma concentration of solifenacin increased by VERAPAMIL; manufacturer of darifenacin advises avoid concomitant use with VERAPAMIL
- Carbamazepine: antimuscarinics possibly increase plasma concentration of DIGOXIN
- Ciclosporin: manufacturer of darifenacin advises avoid concomitant use with CICLOSPORIN
- Biperiden: antimuscarinics antagonise effects of DOMPERIDONE on gastro-intestinal activity
Antimuscarinics (continued)

- Dopaminergics: antimuscarinics possibly reduce absorption of CO-BENELDOPA, CO-CARELDOPA and LEVODOPA
- Hormone Antagonists: possible increased risk of bradycardia when ipratropium or oxybutynin given with PASIRETIDE
- Membrane effects of antimuscarinics possibly enhanced by MEMANTINE
- Metoclopramide: antimuscarinics antagonist effects of METOCLOPRAMIDE on gastro-intestinal activity
- Nitrate: antimuscarinics possibly reduce effects of sublingual tablets of NITRATES (failure to dissolve under tongue owing to dry mouth)
- Parasympathomimetics: antimuscarinics antagonist effects of PARASYMPATHOMIMETICS

Antiparkinsonian Neurone Blockers

- Antiarrhythmics: increased risk of ventricular arrhythmias when amisulpride given with AMIODARONE; higher doses of chlorpromazine antagonise effects of ADRENERGIC NEURONE BLOCKERS; haloperidol antagonises hypotensive effect of ADRENERGIC NEURONE BLOCKERS
- Adsorbents: absorption of phenothiazines possibly reduced by KAOLIN
- Alcohol: enhanced sedative effect when antipsychotics given with ALCOHOL
- Alpha-blockers: enhanced hypotensive effect when antipsychotics given with ALPHA-BLOCKERS
- Anaesthetics, General: droperidol enhances effects of THIOPENTAL; enhanced hypotensive effect when antipsychotics given with GENERAL ANAESTHETICS
- Analgesics: possible severe drowsiness when haloperidol given with ACEMETACIN or INDOMETACIN; increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with METHADONE; increased risk of ventricular arrhythmias when amisulpride given with METHADONE—avoid concomitant use; increased risk of convulsions when antipsychotics given with TRAMADOL; enhanced hypotensive and sedative effects when antipsychotics given with OPIOID ANALGESICS
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when antipsychotics given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Antacids: absorption of phenothiazines and sulphide reduced by ANTACIDS
- Anti-arrhythmics: increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with
  - ANTI-ARRHYTHMIKS that prolong the QT interval; increased risk of ventricular arrhythmias when amisulpride, droperidol, haloperidol, phenothiazines, pimozide or zuclopenthixol given with AMIODARONE—avoid concomitant use; increased risk of ventricular arrhythmias when benperidol given with AMIODARONE—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when sulphide given with AMIODARONE or DISOPYRAMIDE; increased risk of ventricular arrhythmias when amisulpride, droperidol, pimozide or zuclopenthixol given with DISOPYRAMIDE—avoid concomitant use; possible increased risk of ventricular arrhythmias when haloperidol given with DISOPYRAMIDE—avoid concomitant use; increased risk of ventricular arrhythmias when phenothiazines given with DISOPYRAMIDE; avoidance of phenothiazines advised by manufacturer of DRONERADONE (risk of ventricular arrhythmias); increased risk of arrhythmias when clozapine given with FLECAINIDE
- Antimicrobials: plasma concentration of lurasidone possibly increased by CLARITHROMYCIN and TEFLUTHYMICIN—avoid concomitant use; increased risk of ventricular arrhythmias when pimozide given with CLARITHROMYCIN, MOXIFLOXACIN or TEFLUTHYMICIN—avoid concomitant use; plasma concentration of quetiapine possibly increased by CLARITHROMYCIN—manufacturer of quetiapine advises avoid concomitant use; plasma concentration of lurasidone possibly increased by ERYTHROMYCIN (see also Lurasidone, p. 315); increased risk of ventricular arrhythmias when amisulpride given with ERYTHROMYCIN—avoid concomitant use; plasma concentration of clozapine possibly increased by ERYTHROMYCIN (possible increased risk of convulsions); possible increased risk of ventricular arrhythmias when pimozide given with ERYTHROMYCIN—avoid concomitant use; plasma concentration of quetiapine increased by ERYTHROMYCIN—manufacturer of quetiapine advises avoid concomitant use; increased risk of ventricular arrhythmias when sulphide given with parenteral ERYTHROMYCIN; increased risk of ventricular arrhythmias when zuclopenthixol given with parenteral ERYTHROMYCIN—avoid concomitant use; plasma concentration of clozapine increased by CIPROFLOXACIN; plasma concentration of olanzapine possibly increased by CIPROFLOXACIN; increased risk of ventricular arrhythmias when droperidol, haloperidol, phenothiazines or zuclopenthixol given with MOXIFLOXACIN—avoid concomitant use; increased risk of ventricular arrhythmias when benperidol given with MOXIFLOXACIN—manufacturer of benperidol advises avoid concomitant use; plasma concentration of aripiprazole possibly reduced by CIPROFLOXACIN; plasma concentration of lorazepam possibly increased by CIPROFLOXACIN; increased risk of ventricular arrhythmias when droperidol, haloperidol, phenothiazines or zuclopenthixol given with THIOPENTAL; increased risk of ventricular arrhythmias when benperidol given with THIOPENTAL; increased risk of ventricular arrhythmias when droperidol, haloperidol or pimozide given with DELAMANID; increased risk of ventricular arrhythmias when phenothiazines that prolong the QT interval given with DELAMANID; manufacturer of droperidol advises avoid concomitant use with MACROLIDES (risk of ventricular arrhythmias); possible increased risk of ventricular arrhythmias when chlorpromazine given with TELITHROMYCIN; plasma concentration of quetiapine possibly increased by TELITHROMYCIN
- Antidepressants: plasma concentration of clozapine possibly increased by CITALOPRAM (increased risk of toxicity); avoidance of haloperidol, phenothiazines and pimozide advised by manufacturer of CITALOPRAM (risk of ventricular arrhythmias); avoidance of haloperidol, phenothiazines and pimozide advised by manufacturer of ESICITALOPRAM (risk of ventricular arrhythmias); plasma concentration of aripiprazole possibly increased by FLUOXETINE and PAROXETINE (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of lorazepam reduced by FLUOXETINE; manufacturer of droperidol advises avoid concomitant use with FLUOXETINE, FLUKETINE, FLUVAXAMINE, SERTRALINE and TRICYCLICS (risk of ventricular arrhythmias); plasma concentration of asenapine and haloperidol possibly increased by FLUVAXAMINE; plasma concentration of clozapine and olanzapine increased by FLUVAXAMINE; asenapine possibly increases plasma concentration of PAROXETINE; plasma concentration of clozapine increased by PAROXETINE and SERTRALINE; plasma concentration of risperidone possibly increased by PAROXETINE (increased risk of toxicity); metabolism of haloperidol accelerated by SERTRALINE and perphenazine inhibited by PAROXETINE (reduce dose of perphenazine); plasma concentration of haloperidol increased by VENLAFAXINE; clozapine possibly increases CNS effects of MAOIS; plasma concentration of pimozide possibly increased by SSRI (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of lorazepam possibly reduced by ST JOHN’S WORT—avoid concomitant use; plasma concentration of aripiprazole possibly reduced by ST JOHN’S WORT (avoid concomitant use or consider increasing the dose of aripiprazole—consult

Antipsychotics

- Antibacterials (continued) concomitant use; plasma concentration of lurasidone possibly increased by ERYTHROMYCIN (see also Lurasidone, p. 315); increased risk of ventricular arrhythmias when amisulpride given with ERYTHROMYCIN—avoid concomitant use; plasma concentration of clozapine possibly increased by ERYTHROMYCIN (possible increased risk of convulsions); possible increased risk of ventricular arrhythmias when pimozide given with ERYTHROMYCIN—avoid concomitant use; plasma concentration of quetiapine possibly increased by ERYTHROMYCIN—manufacturer of quetiapine advises avoid concomitant use; increased risk of ventricular arrhythmias when sulphide given with parenteral ERYTHROMYCIN; increased risk of ventricular arrhythmias when zuclopenthixol given with parenteral ERYTHROMYCIN—avoid concomitant use; plasma concentration of clozapine increased by CIPROFLOXACIN; plasma concentration of olanzapine possibly increased by CIPROFLOXACIN; increased risk of ventricular arrhythmias when droperidol, haloperidol, phenothiazines or zuclopenthixol given with MOXIFLOXACIN—avoid concomitant use; increased risk of ventricular arrhythmias when benperidol given with MOXIFLOXACIN—manufacturer of benperidol advises avoid concomitant use; plasma concentration of aripiprazole possibly reduced by CIPROFLOXACIN; plasma concentration of lorazepam possibly increased by CIPROFLOXACIN; increased risk of ventricular arrhythmias when droperidol, haloperidol, phenothiazines or zuclopenthixol given with THIOPENTAL; increased risk of ventricular arrhythmias when benperidol given with THIOPENTAL; increased risk of ventricular arrhythmias when droperidol, haloperidol or pimozide given with DELAMANID; increased risk of ventricular arrhythmias when phenothiazines that prolong the QT interval given with DELAMANID; manufacturer of droperidol advises avoid concomitant use with MACROLIDES (risk of ventricular arrhythmias); possible increased risk of ventricular arrhythmias when chlorpromazine given with TELITHROMYCIN; plasma concentration of quetiapine possibly increased by TELITHROMYCIN
- Antidepressants: plasma concentration of clozapine possibly increased by CITALOPRAM (increased risk of toxicity); avoidance of haloperidol, phenothiazines and pimozide advised by manufacturer of CITALOPRAM (risk of ventricular arrhythmias); avoidance of haloperidol, phenothiazines and pimozide advised by manufacturer of ESICITALOPRAM (risk of ventricular arrhythmias); plasma concentration of aripiprazole possibly increased by FLUOXETINE and PAROXETINE (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of lorazepam reduced by FLUOXETINE; manufacturer of droperidol advises avoid concomitant use with FLUOXETINE, FLUKETINE, FLUVAXAMINE, SERTRALINE and TRICYCLICS (risk of ventricular arrhythmias); plasma concentration of asenapine and haloperidol possibly increased by FLUVAXAMINE; plasma concentration of clozapine and olanzapine increased by FLUVAXAMINE; asenapine possibly increases plasma concentration of PAROXETINE; plasma concentration of clozapine increased by PAROXETINE and SERTRALINE; plasma concentration of risperidone possibly increased by PAROXETINE (increased risk of toxicity); metabolism of haloperidol accelerated by SERTRALINE and perphenazine inhibited by PAROXETINE (reduce dose of perphenazine); plasma concentration of haloperidol increased by VENLAFAXINE; clozapine possibly increases CNS effects of MAOIS; plasma concentration of pimozide possibly increased by SSRI (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of lorazepam possibly reduced by ST JOHN’S WORT—avoid concomitant use; plasma concentration of aripiprazole possibly reduced by ST JOHN’S WORT (avoid concomitant use or consider increasing the dose of aripiprazole—consult
Antipsychotics

• Antidepressants (continued)
  • Aripiprazole product literature; manufacturer of fluphenazine, haloperidol, sulphpride and zuclopentixol advises avoid concomitant use with • Tricyclics (risk of ventricular arrhythmias); increased risk of antimuscarinic side-effects when phenothiazines given with • Tricyclics; possible increased risk of ventricular arrhythmias when risperidone given with • Tricyclics; possible increased antimuscarinic side-effects when clozapine given with • Tricyclics

• Antidabetics: phenothiazines possibly antagonise hypoglycaemic effect of sulfonylureas

• Antiepileptics: antipsychotics antagonise anticonvulsant effect of • Antiepileptics (convulsive threshold lowered); metabolism of haloperidol, olanzapine, quetiapine and risperidone accelerated by • Carbamazepine (reduced plasma concentration); metabolism of clozapine accelerated by • Carbamazepine (reduced plasma concentration), also avoid concomitant use of drugs with substantial potential for causing agranulocytosis; plasma concentration of aripiprazole reduced by • Carbazapime (avoid concomitant use or consider increasing the dose of aripiprazole — consult aripiprazole product literature); plasma concentration of pimozide reduced by • Carbamazepine; plasma concentration of lurasidone possibly reduced by • Carbamazepine; • Fosphenytoin, • Phenoobarbital, • Phenytoin and • Pramidone—avoid concomitant use; chlorpromazine possibly increases or decreases plasma concentration of • Fosphenytoin and • Phenophytin; metabolism of clozapine, olanzapine and quetiapine accelerated by • Phenobarbital (reduced plasma concentration); plasma concentration of aripiprazole possibly reduced by • Fosphenytoin, • Phenoobarbital, • Phenytoin and • Pramidone (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); plasma concentration of haloperidol reduced by • Fosphenytoin and • Phenophytin; metabolism of haloperidol accelerated by • Phenoobarbital and • Pramidone (reduced plasma concentration); plasma concentration of both drugs reduced when chlorpromazine given with • Phenoobarbital and • Pramidone; plasma concentration of clozapine possibly reduced by • Phenoobarbital and • Pramidone; metabolism of clozapine and quetiapine accelerated by • Phenophytin (reduced plasma concentration); increased risk of antimuscarinic side-effects including neutropenia when olanzapine given with • Sodium Valproate and • Valproic Acid; plasma concentration of clozapine possibly increased or decreased by • Sodium Valproate and • Valproic Acid

• Antimuscarinics: plasma concentration of lurasidone increased by • Ketoconazole—avoid concomitant use; metabolism of aripiprazole inhibited by • Ketoconazole (reduce dose of aripiprazole); plasma concentration of lurasidone possibly increased by • Flucanazole (see under Lurasidone, p. 315); plasma concentration of lurasidone possibly increased by • Itraconazole, • Posaconazole and • Voriconazole—avoid concomitant use; plasma concentration of aripiprazole possibly increased by • Itraconazole (reduce dose of aripiprazole—consult aripiprazole product literature); side-effects of aripiprazole possibly increased by • Itraconazole; plasma concentration of haloperidol possibly increased by • Itraconazole; increased risk of ventricular arrhythmias when pimozide given with • Midazoles or • Triazoles—avoid concomitant use; plasma concentration of quetiapine possibly increased by • Midazoles and • Triazoles—manufacturer of quetiapine advises avoid concomitant use

• Antimalarials: avoidance of antipsychotics advised by manufacturer of • Arteether with Lumefantrine; avoidance of droperidol, haloperidol, phenothiazines and pimozide advised by manufacturer of • Arteether with Piperaquine (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when droperidol given with • Chloroquine, • Hydroxychloroquine or • Quinine—avoid concomitant use; possible increased risk of ventricular arrhythmias when haloperidol given with • Mefloquine or • Mefloquine or • Quinine—avoid concomitant use; manufacturer of risperidone advises possible risk of ventricular arrhythmias when risperidone given with • Mefloquine; increased risk of ventricular arrhythmias when pimozide given with • Mefloquine or • Quinine—avoid concomitant use; manufacturer of amisulpride advises avoid concomitant use with • Mefloquine; possible increased risk of ventricular arrhythmias when risperidone given with • Quinine

• Antimuscarinics: increased risk of antimuscarinic side-effects when clozapine given with • Antimuscarinics; plasma concentration of phenothiazines reduced by • Antimuscarinics, but risk of antimuscarinic side-effects increased; effects of haloperidol possibly reduced by • Antimuscarinics

• Antipsychotics: increased risk of ventricular arrhythmias when amisulpride, pimozide or sulphpride given with • Droperidol—avoid concomitant use; increased risk of ventricular arrhythmias when phenothiazines that prolong the QT interval given with • Droperidol—avoid concomitant use; avoid concomitant use of clozapine with depot formulation of • Fluphenazine, • Haloperidol, • Pipotiazine, • Risperidone or • Zuclopentixol as cannot be withdrawn quickly if neutropenia occurs; increased risk of ventricular arrhythmias when sulphpride given with • Haloperidol; chlorpromazine possibly increases plasma concentration of • Haloperidol; increased risk of ventricular arrhythmias when droperidol given with • Haloperidol—avoid concomitant use; increased risk of ventricular arrhythmias when pimozide given with • Phenoxythiazines—avoid concomitant use; lurasidone possibly increases plasma concentration of • Pimozide (increased risk of toxicity); possible increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with • Risperidone—increased risk of ventricular arrhythmias when pimozide given with • Sulphpride

• Antivirals: plasma concentration of aripiprazole possibly increased by • Atazanavir, • Darunavir, • Fosamprenavir, • Indinavir, • Lopinavir, • Ritonavir, • Saquinavir and • Tiplanavir (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of quetiapine possibly increased by • Atazanavir, • Boceprevir, • Darunavir, • Fosamprenavir, • Indinavir, • Lopinavir, • Ritonavir, • Saquinavir, • Telaprevir and • Tipranavir (reduce dose of aripiprazole—consult aripiprazole product literature); • Quinine—avoid concomitant use; plasma concentration of pimozide possibly increased by • Atazanavir—avoid concomitant use; avoidance of pimozide advised by manufacturer of • Boceprevir and • Telaprevir; plasma concentration of lurasidone possibly increased by • Boceprevir, • Indinavir, • Ritonavir, • Saquinavir and • Telaprevir—avoid concomitant use; plasma concentration of aripiprazole possibly reduced by • Efavirenz and • Nevirapine (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); plasma concentration of pimozide possibly increased by • Efavirenz, • Indinavir and • Saquinavir (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of pimozide increased by • Fosamprenavir and • Ritonavir (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of antipsychotics possibly increased by • Ritonavir; plasma concentration of olanzapine reduced by • Ritonavir—consider increasing dose of olanzapine; avoidance of clozapine advised by manufacturer of • Ritonavir (increased risk of toxicity); increased risk of ventricular arrhythmias when clozapine, haloperidol or phenothiazines given with • Saquinavir—avoid concomitant use

• Anxiolytics and Hypnotics: increased sedative effect when antipsychotics given with • Anxiolytics and Hypnotics; plasma concentration of haloperidol possibly increased by • Alprazolam; lurasidone increases plasma concentration of • Alprazolam; serious adverse events reported with concomitant use of clozapine and • Alprazolam
Dopaminergics:
- **Diazoxide:** increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with; increased risk of ventricular arrhythmias when haloperidol given with quetiapine advised by manufacturer of zuclopenthixol given with chlorpromazine, haloperidol, pimozide, sulpiride or increased risk of ventricular arrhythmias when amisulpride, avoidance of antipsychotics advised by manufacturer of concomitant use increased risk of ventricular arrhythmias when haloperidol given with sotalol;—avoid concomitant use
- **Calcium-channel Blockers:** enhanced hypotensive effect when antipsychotics given with calcium-channel blockers; plasma concentration of lurusidone increased by diltiazem (see under lurusidone, p. 315); plasma concentration of lurusidone possibly increased by verapamil (see under lurusidone, p. 315)
- **Clonidine:** enhanced hypotensive effect when phenothiazines given with clonidine
- **Cobicistat:** plasma concentration of lurusidone possibly increased by cobicitat—avoid concomitant use; plasma concentration of pimozide possibly increased by cobicitat—manufacturer of cobicistat advises avoid concomitant use
- **Cytotoxics:** avoid concomitant use of clozapine with cyanotoxins (increased risk of agranulocytosis); possible increased risk of ventricular arrhythmias when haloperidol given with bosutinib; caution with pimozide advised by manufacturer of crizotinib; avoidance of pimozide and quetiapine advised by manufacturer ofidelalisib; avoidance of pimozide advised by manufacturer of lapatinib; possible increased risk of ventricular arrhythmias when amisulpride, chlorpromazine, haloperidol, pimozide, sulpiride or zuclopenthixol given with vanetanib—avoid concomitant use; increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with arsenic trioxide; increased risk of ventricular arrhythmias when haloperidol given with arsenic trioxide;—deferasirox: avoidance of clozapine advised by manufacturer of deferasirox
- **Desferrioxamine:** manufacturer of leovemopromazine advises avoid concomitant use with desferrioxamine; avoidance of prochlorperazine advised by manufacturer of desferrioxamine
- **Diazoxide:** enhanced hypotensive effect when phenothiazines given with diazoxide
- **Diuretics:** risk of ventricular arrhythmias with amisulpride increased by hypokalaemia caused by diuretics; risk of ventricular arrhythmias with pimozide increased by hypokalaemia caused by diuretics (avoid concomitant use); enhanced hypotensive effect when phenothiazines given with diuretics
- **Dopaminergics:** increased risk of extrapyramidal side-effects when antipsychotics given with amantadine; antipsychotics antagonise effects of apomorphine, benelodopa, co-careldopa, levodopa and pergolide; antipsychotics antagonise hydroprolactiamaic and antiparkinsonian effects of bromocriptine and cabergoline; manufacturer of carbidopa advises avoid concomitant use of co-careldopa, co-careldopa and levodopa (antagonism of effect); avoidance of antipsychotics advised by manufacturer of pramipexole, ropinirole and rotigotine (antagonism of effect)
### Interactions (continued)

**Anxiolytics and Hypnotics**

- **Adrenergic Neurone Blockers:** enhanced hypotensive effect when anxiolytics and hypnotics given with ADRENERGIC NEURONE BLOCKERS.
- **Alcohol:** increased sedative effect when anxiolytics and hypnotics given with ALCOHOL.
- **Alpha-blockers:** enhanced hypotensive and sedative effects when anxiolytics and hypnotics given with ALPHA-BLOCKERS.
- **Aminophylline:** effects of benzodiazepines possibly reduced by AMINOPHylline.
- **Anaesthetics, General:** increased sedative effect when anxiolytics and hypnotics given with GENERAL ANAESTHETICS.
- **Analgesics:** metabolism of midazolam possibly inhibited by FENTANYL; increased sedative effect when anxiolytics and hypnotics given with OPIOID ANALGESICS.
- **Anxiolytics and Hypnotics:** enhanced hypotensive effect when anxiolytics and hypnotics given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS.
- **Antibacterials:** metabolism of midazolam inhibited by CLARITHROMYCIN, ERYTHROMYCIN and TELITHROMYCIN (increased plasma concentration with increased sedation); metabolism of buspirone increased by ERYTHROMYCIN (reduce dose of buspirone); metabolism of zopiclone inhibited by ERYTHROMYCIN; manufacturer of zopiclone advises avoid concomitant use with CIPROFLOXACIN; metabolism of benzodiazepines possibly accelerated by RIFAMPICIN (reduced plasma concentration); metabolism of diazepam and zaleplon accelerated by RIFAMPICIN (reduced plasma concentration and reduced effect); plasma concentration of zopiclone significantly reduced by RIFAMPICIN; metabolism of diazepam inhibited by ISONIAZID.
- **Anticoagulants:** chloral may transiently enhance anticoagulant effect of COUMARINS.
- **Antidepressants:** plasma concentration of alprazolam increased by FLUOXETINE; plasma concentration of melatonin increased by FLUOXETINE—avoid concomitant use; plasma concentration of some benzodiazepines increased by FLUOXETINE; sedative effects possibly increased when zolpidem given with SERTRALINE; manufacturer of buspirone advises avoid concomitant use with MAOIs; avoidance of buspirone for 14 days after stopping TRANLYCPROMINE and manufacturer of hypnotics given with ST JOHN’S WORT; increased sedative effect when anxiolytics and hypnotics given with MIRTAZAPINE, TRICYCLIC-RELATED ANTIDEPRESSANTS or TRICYCLICS.
- **Antifungals:** plasma concentration of midazolam reduced by CARBAMAZEPINE and PERAMPANFL; plasma concentration of clonazepam often reduced by CARBAMAZEPINE, FOSPHENTHOIN, PHENOBARBITAL, PHENOTIN and PRIMIDONE; benzodiazepines possibly increase or decrease plasma concentration of FOSPHENTHOIN and PHENOTIN; diazepam increases or decreases plasma concentration of FOSPHENTHOIN and PHENOTIN; increased sedative effect when anxiolytics and hypnotics given with PHENOBARBITAL or PRIMIDONE; clonazepam possibly increases plasma concentration of SODIUM VALPROATE and VALPROIC ACID; plasma concentration of diazepam and lorazepam possibly increased by SODIUM VALPROATE; increased risk of side-effects when clonazepam given with SODIUM VALPROATE or VALPROIC ACID; plasma concentration of clonazepam possibly increased by VALPROIC ACID.
- **Antifungals:** plasma concentration of alprazolam increased by KETOCONAZOLE—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of midazolam increased by KETOCONAZOLE (risk of prolonged sedation—avoid concomitant use of oral midazolam); plasma concentration of zolpidem increased by KETOCONAZOLE; plasma concentration of diazepam and midazolam increased by FLUCONAZOLE (risk of prolonged sedation); plasma concentration of alprazolam increased by ITRAconazole; plasma concentration of midazolam increased by ITRAconazole.
- **Antivirals:** plasma concentration of midazolam possibly increased by ATAZANAVIR—avoid concomitant use of oral midazolam; plasma concentration of oral midazolam increased by BOCEPREVIR—manufacturer of boceprevir advises avoid concomitant use; increased risk of prolonged sedation when midazolam given with EFAVIRENZ—avoid concomitant use; plasma concentration of midazolam possibly increased by FOSAMPRENAVIR, INDINAVIR, RITONAVIR and TELAPREVIR (risk of prolonged sedation—avoid concomitant use of oral midazolam); increased risk of prolonged sedation when alprazolam given with INDINAVIR—avoid concomitant use; plasma concentration of anxiolytics and hypnotics possibly increased by RITONAVIR; plasma concentration of alprazolam, diazepam, flurazepam and zolpidem possibly increased by RITONAVIR (risk of extreme sedation and respiratory depression—avoid concomitant use); plasma concentration of buspirone increased by RITONAVIR (increased risk of toxicity); plasma concentration of midazolam increased by SAQUINAVIR (risk of prolonged sedation—avoid concomitant use of oral midazolam); plasma concentration of oral midazolam increased by SIMPREVIR.
- **Aprepitant:** plasma concentration of midazolam increased by Aprepitant (risk of prolonged sedation).
- **Beta-blockers:** enhanced hypotensive effect when anxiolytics and hypnotics given with BETA-BLOCKERS.
- **Calcium-channel blockers:** enhanced hypotensive effect when anxiolytics and hypnotics given with CALCIUM-CHANNEL BLOCKERS; midazolam increases absorption of LERCANIDIPINE; metabolism of midazolam inhibited by DILTAZEM and VERAPAMIL (increased plasma concentration with increased sedation); plasma concentration of buspirone increased by DILTAZEM and VERAPAMIL (reduce dose of buspirone).
- **Cardiac Glycosides:** alprazolam increases plasma concentration of DIGOXIN (increased risk of toxicity).
- **Clonidine:** enhanced hypotensive effect when anxiolytics and hypnotics given with CLONIDINE.
- **Cobicistat:** avoidance of oral midazolam advised by manufacturer of Cobicistat.
- **Cyclosporines:** plasma concentration of midazolam increased by CRYSTONIB and NILDONIB, avoidance of oral midazolam advised by manufacturer of IDENTILISIB.
- **Diflunisal:** plasma concentration of midazolam possibly reduced by DEREFASIRON.
- **Disulfiram:** enhanced hypotensive effect when anxiolytics and hypnotics given with DISULFIRAM (increased sedative effects); increased risk of temazepam toxicity when given with DISULFIRAM.
- **Diuretics:** enhanced hypotensive effect when anxiolytics and hypnotics given with DIURETICS; administration of chloral with parenteral EUROSEMI may displace thyroid hormone from binding sites.
- **Dopaminergic:** benzodiazepines possibly antagonise effects of CO-BENELDOPA, CO-CARELDOPA and LEVODOPA.
- **Fluoxetine:** plasma concentration of midazolam increased by FOSAMPRENAVIR (risk of prolonged sedation).
### Appendix 1 Interactions

#### Anxiolytics and Hypnotics (continued)
- Grapefruit Juice: plasma concentration of oral midazolam possibly increased by **GRAPFUIT JUICE**; plasma concentration of buspirone increased by **GRAPEFRUIT JUICE**
- Ivecafarin: plasma concentration of midazolam increased by **IVECAFARIN**
- Lipid-regulating Drugs: plasma concentration of midazolam possibly increased by **ATORVASTATIN**; separating administration from alprazolam by 12 hours advised by **ATORVASTATIN**
- Lithium: increased risk of neurotoxicity when clonazepam given with **LITHIUM**
- Lofexidine: increased sedative effect when anxiolytics and hypnotics given with **LOFEXIDINE**
- Methyldopa: enhanced hypotensive effect when anxiolytics and hypnotics given with ** METHYLDOPA**
  - Methyldiphene: possible risk of CNS toxicity when buspirone given with **METHYLDOPHENE**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methyldiphene and observe patient for up to 4 hours after administration)
- Moxonidine: enhanced hypotensive effect when anxiolytics and hypnotics given with **MOXONIDINE**; sedative effects possibly increased when benzodiazepines given with **MOXONIDINE**
- Muscle Relaxants: increased sedative effect when anxiolytics and hypnotics given with **BACLOFEN** or **TIZANIDINE**
- Nitrates: enhanced hypotensive effect when anxiolytics and hypnotics given with **NITRATES**
- Oestrogens: plasma concentration of melatonin increased by **OESTROGENS**; plasma concentration of chloridiazepoxide, diazepam and nitrazepam possibly increased by **OESTROGENS**; plasma concentration of lorazepam, oxazepam and temazepam possibly reduced by **OESTROGENS**
- Progestogens: plasma concentration of chloridiazepoxide, diazepam and nitrazepam possibly increased by **PROGESTOGENS**; plasma concentration of lorazepam, oxazepam and temazepam possibly reduced by **PROGESTOGENS**
  - Sodium Oxybate: benzodiazepines enhance effects of **SODIUM OXABATE** (avoid concomitant use)
- Theophylline: effects of benzodiazepines possibly reduced by **THEOPHYLLINE**
- Ulcer-healing Drugs: plasma concentration of melatonin increased by **CIMETIDINE**; metabolism of benzodiazepines, clomethiazole and zaleplon inhibited by **CIMETIDINE** (increased plasma concentration); metabolism of diazepam possibly inhibited by **ESOMEPRAZOLE** and **OMEPRAZOLE** (increased plasma concentration)
- Vasodilators: enhanced hypotensive effect when anxiolytics and hypnotics given with **HYDRAZINE, MINOXYLID** or **SODIUM NITROPRUSSIDE**

#### Apixaban (continued)
- Analgesics: increased risk of haemorrhage when anticoagulants given with **INTRAPEPTAN** —manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism
- Antiplatelets: plasma concentration of apixaban possibly reduced by **CARBAMAZEPINE**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism
  - Fosphenytoin, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of apixaban increased by **KETOCONAZOLE**—manufacturer of apixaban advises avoid concomitant use; manufacturer of apixaban advises avoid concomitant use with **ITRACONAZOLE, POSACONAZOLE** and **VORICONAZOLE**
- Antivirals: manufacturer of apixaban advises avoid concomitant use with **ATAZANAVIR, BOCEPREVIR, DARUNAVIR, FOSAMPRENAVIR, INDINAVIR, LOPINAVIR, RITONAVIR, SACHUINAVIR, TELAPREVIR** and **TIPRANAVIR**
- Antidepressants: manufacturer of apixaban advises avoid concomitant use with **COBICISTAT**
- Sulfinpyrazone: increased risk of bleeding when apixaban given with **SULFINPYRAZONE**

#### Apomorphine
- Antipsychotics: effects of apomorphine antagonised by **ANTIPSYCHOTICS**
- Dopaminergics: effects of apomorphine possibly enhanced by **ANTIPSYCHOTICS**

#### Apraclonidine
- Antidepressants: manufacturer of apraclonidine advises avoid concomitant use with **MAOIS, TRICYCLIC-RELATED ANTIDEPRESSANTS AND TRICYCLICS**
- Sympathomimetics: manufacturer of apraclonidine advises avoid concomitant use with **SYMPATHOMIMETICS**

#### Aprindine
- Antibacterials: plasma concentration of aprindine possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of aprindine reduced by **RIFAMPICIN**
- Anticoagulants: aprindine possibly reduces anticoagulant effect of **WARFARIN**
- Antidepressants: manufacturer of aprindine advises avoid concomitant use with **ST JOHN’S WORT**
- Antidiabetics: aprindine reduces plasma concentration of **TOLBUTAMIDE**
- Antiepileptics: plasma concentration of aprindine possibly increased by **CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of aprindine increased by **KETOCONAZOLE**
- Antipsychotics: manufacturer of aprindine advises avoid concomitant use with **PIMOZIDE**
- Antivirals: plasma concentration of aprindine possibly increased by **RITONAVIR**
- Anxiolytics and Hypnotics: aprindine increases plasma concentration of midazolam (risk of prolonged sedation)
- Apanin: aprindine possibly increases plasma concentration of **AVANAFIL**—see under Apanin, p. 698
- Calcium-channel Blockers: plasma concentration of both drugs may increase when aprindine given with **DILTIAZEM**
- Corticosteroids: aprindine inhibits metabolism of **DEXAMETHASONE** and **METHYLPRIDENISOLONE** (reduce dose of dexamethasone and methylprednisolone)
- Cytokines: aprindine possibly increases the plasma concentration of **IBRUTINIB**—manufacturer of bortinib advises avoid or consider reducing dose of bortinib; aprindine possibly increases the plasma concentration of **IBRUTINIB**—reduce dose of ibritinib (see under Ibrutinib, p. 809)
- Dopamine: manufacturer of dopoxetine advises dose reduction when aprindine given with **DAPoxetine** (see under Dapoxetine, p. 703)
Aprepitant (continued)
- Oestrogens: aprepetit possibly causes contraceptive failure of hormonal contraceptives containing • OESTROGENS (alternative contraception recommended)
- Progestogens: aprepetit possibly causes contraceptive failure of hormonal contraceptives containing • PROGESTOGENS (alternative contraception recommended)

Argatroban
- Analgesics: increased risk of haemorrhage when anti-inflammatory given with intravenous • DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with • KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with • APIXABAN, • DABIGATRAN and • RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Artemether with Lumeferantrine
- Anti-arrhythmics: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • AMIODARONE or • DISOPYRAMIDE
- Antibacterials: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • DELAMANID, • ERYTHROMYCIN, • LEVOFLOXACIN or • MOXIFLOXACIN
- Antidepressants: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • AMITRIPTYLINE or • CLOMIPRAMINE
- Antifungals: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • AMPHOTERICIN
- Antimalarials: avoidance of artemether with lumeferantrine advised by • ARTEMETHER WITH LUMEFANTRINE
- Antipsychotics: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • HALOPERIDOL; avoid concomitant use with • CLOzapine (increased risk of agranulocytosis)
- Beta-blockers: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • SOTALOL
- Cytotoxics: possible increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • VANDETANIB — avoid concomitant use with • RIFAMPICIN
- Diuretics: risk of ventricular arrhythmias with artemether with lumeferantrine increased by hypokalaemia caused by • ACETAZOLAMIDE, • LOOP DIURETICS or • THIAZIDES AND RELATED DIURETICS
- Lithium: increased risk of ventricular arrhythmias when artemether with lumeferantrine given with • LITHIUM

Arsenic Trioxide
- Antiarhythmics: increased risk of ventricular arrhythmias when arsenic trioxide given with • AMIODARONE or • DISOPYRAMIDE
- Antibacterials: increased risk of ventricular arrhythmias when arsenic trioxide given with • DELAMANID, • ERYTHROMYCIN, • LEVOFLOXACIN or • MOXIFLOXACIN
- Antidepressants: increased risk of ventricular arrhythmias when arsenic trioxide given with • AMITRIPTYLINE or • CLOMIPRAMINE
- Antifungals: increased risk of ventricular arrhythmias when arsenic trioxide given with • AMPHOTERICIN
- Antimalarials: avoidance of arsenic trioxide advised by manufacturer of • ARTENIMOL WITH PIPERAQUINE
- Antipsychotics: increased risk of ventricular arrhythmias when arsenic trioxide given with • ANTIARRHYTHMICS that prolong the QT interval; increased risk of ventricular arrhythmias when arsenic trioxide given with • HALOPERIDOL; avoid concomitant use with • CLOzapine (increased risk of agranulocytosis)
- Beta-blockers: increased risk of ventricular arrhythmias when arsenic trioxide given with • SOTALOL
- Cytotoxics: possible increased risk of ventricular arrhythmias when arsenic trioxide given with • RIFAMPICIN
- Diuretics: risk of ventricular arrhythmias with arsenic trioxide increased by hypokalaemia caused by • ACETAZOLAMIDE, • LOOP DIURETICS or • THIAZIDES AND RELATED DIURETICS
- Lithium: increased risk of ventricular arrhythmias when arsenic trioxide given with • LITHIUM

Antibacterials
- Anti-arrhythmics: increased risk of ventricular arrhythmias when antibacterials given with intravenous • DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of ventricular arrhythmias when antibacterials given with • KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when antibacterials given with • APIXABAN, • DABIGATRAN and • RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Betablockers
- Anti-arrhythmics: increased risk of ventricular arrhythmias when antibacterials given with intravenous • DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when antibacterials given with • KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when antibacterials given with • APIXABAN, • DABIGATRAN and • RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Beta-blockers
- Anti-arrhythmics: increased risk of ventricular arrhythmias when antibacterials given with intravenous • DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when antibacterials given with • KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when antibacterials given with • APIXABAN, • DABIGATRAN and • RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Betablockers
- Anti-arrhythmics: increased risk of ventricular arrhythmias when antibacterials given with intravenous • DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when antibacterials given with • KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when antibacterials given with • APIXABAN, • DABIGATRAN and • RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
Artemisinin with Piperazine (continued)

- Histamine: avoidance of antimalarials advised by manufacturer of histamine
- Pentamidine i.e.sionate: manufacturer of artemisinin with piperazine advises avoid concomitant use with
  - Pentamidine i.e.sionate (possible risk of ventricular arrhythmias)
- Vaccines: antimalarials inactivate oral typhoid vaccine—see under typhoid vaccine in BNF

Antacid acid see Vitamins

Asenapine see Antipsychotics

Aspirin

- Adsorbtion: absorption of aspirin possibly reduced by kaolin
- Anaesthetics: General: aspirin possibly enhances effects of thiopental
- Analgesics: avoid concomitant use of aspirin with NSAIDs (increased side-effects); antiplatelet effect of aspirin possibly reduced by ibuprofen
- Antacids: excretion of aspirin increased by alkaline urine due to some antacids
- Anticoagulants: increased risk of bleeding when aspirin given with coumarins or phenindione (due to antiplatelet effect); aspirin enhances anticoagulant effect of heparins
- Antidepressants: increased risk of bleeding when aspirin given with SSRIs or venlafaxine
- Anti-epileptics: aspirin enhances effects of fosphenytoin, phenytoin, sodium valproate and valproic acid
- Clopidogrel: increased risk of bleeding when aspirin given with clopidogrel
- Corticosteroids: increased risk of gastrointestinal bleeding and ulceration when aspirin given with corticosteroids, also corticosteroids reduce plasma concentration of salicylate
- Cytotoxics: aspirin reduces excretion of methotrexate (increased risk of toxicity); aspirin possibly reduces renal excretion of gemcitabine—consult product literature
- Diuretics: increased risk of toxicity when high-dose aspirin given with acetazolamide; aspirin antagonises diuretic effect of spironolactone; possible increased risk of toxicity when high-dose aspirin given with loop diuretics (also possible reduced effect of loop diuretics)
- Iloprost: increased risk of bleeding when aspirin given with iloprost
- Leukotriene receptor antagonists: aspirin increases plasma concentration of zafirlukast
- Metoclopramide: rate of absorption of aspirin increased by metoclopramide (enhanced effect)
- Sulfapyrazine: aspirin antagonises effects of sulfapyrazine

Atazanavir

- Antacids: absorption of atazanavir reduced by antacids (give at least 2 hours before or 1 hour after antacids; consult fesoterodine product literature)
- Anti-arrhythmics: atazanavir possibly increases plasma concentration of amiodarone and lidocaine
- Antibacterials: plasma concentration of both drugs increased when atazanavir given with clarithromycin; atazanavir increases plasma concentration of rifabutin (reduce dose of rifabutin); plasma concentration of atazanavir reduced by rifampicin—avoid concomitant use; avoidance of concomitant atazanavir in severe renal and hepatic impairment advised by manufacturer of telithromycin
- Anti-cancer agents: atazanavir may enhance or reduce anticoagulant effect of warfarin; avoidance of atazanavir advised by manufacturer of apixaban and rivaroxaban
- Antidepressants: plasma concentration of atazanavir reduced by St John's Wort—avoid concomitant use
- Antifungals: plasma concentration of atazanavir increased by posaconazole; atazanavir increases or decreases the plasma concentration of voriconazole and plasma concentration of atazanavir also reduced
- Antimalarials: caution with atazanavir advised by manufacturer of artemether with lumefantrine; atazanavir possibly increases plasma concentration of quinine (increased risk of toxicity)
- Antimuscarinics: avoidance of atazanavir advised by manufacturer of darifenacin; manufacturer of fosoterodine advises dose reduction when atazanavir given with fosoterodine—consult fosoterodine product literature
- Antipsychotics: atazanavir possibly increases plasma concentration of aripiprazole (reduce dose of aripiprazole—consult aripiprazole product literature); atazanavir possibly increases plasma concentration of pimozone—avoid concomitant use; atazanavir possibly increases plasma concentration of quetiapine—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: plasma concentration of atazanavir reduced by boceprevir; atazanavir increases the plasma concentration of daclatasvir—reduce dose of daclatasvir (see under daclatasvir, p. 544); absorption of atazanavir reduced by didanosine tablets (give at least 2 hours before or 1 hour after didanosine tablets); manufacturer of atazanavir advises avoid concomitant use with efavirenz (plasma concentration of atazanavir reduced); atazanavir boosted with ritonavir increases plasma concentration of elvitegravir (reduce dose of elvitegravir); avoid concomitant use of atazanavir with indinavir; atazanavir increases plasma concentration of maraviroc (consider reducing dose of maraviroc); plasma concentration of atazanavir possibly reduced by nevirapine—avoid concomitant use; increased risk of ventricular arrhythmias when atazanavir given with saquinavir—avoid concomitant use; atazanavir possibly reduces plasma concentration of telaprevir, also plasma concentration of atazanavir possibly increased; plasma concentration of atazanavir reduced by tenofovir, also plasma concentration of tenofovir possibly increased; atazanavir increases plasma concentration of tipranavir (also plasma concentration of atazanavir reduced)
- Antioxidants and Hypotensives: atazanavir possibly increases plasma concentration of midazolam—avoid concomitant use of oral midazolam
- Avanafil: atazanavir possibly increases plasma concentration of avanafil—manufacturer of avanafil advises avoid concomitant use
- Calcium-channel blockers: atazanavir increases plasma concentration of diltiazem (reduce dose of diltiazem); atazanavir possibly increases plasma concentration of verapamil
- Ciclosporin: atazanavir possibly increases plasma concentration of ciclosporin
- Colchicine: atazanavir possibly increases risk of colchicine toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Cytotoxics: atazanavir possibly increases plasma concentration of axitinib (reduce dose of axitinib—consult axitinib product literature); atazanavir possibly increases the plasma concentration of bosutinib—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; atazanavir possibly increases plasma concentration of crizotinib and everolimus—manufacturer of crizotinib and everolimus advises avoid concomitant use; atazanavir possibly increases the plasma concentration of ibrutinib—reduce dose of ibrutinib (see under ibrutinib, p. 809); atazanavir possibly increases plasma concentration of pazopanib (reduce dose of pazopanib); avoidance of atazanavir advised by manufacturer of cabazitaxe; atazanavir possibly inhibits metabolism of rilotecan (increased risk of toxicity)
- Dapoxetine: avoidance of atazanavir advised by manufacturer of dapoxetine (increased risk of toxicity)
- Ergot alkaloids: atazanavir possibly increases plasma concentration of ergot alkaloids—avoid concomitant use
- Lipid-regulating drugs: possible increased risk of myopathy when atazanavir given with atorvastatin or pravastatin; atazanavir increases plasma concentration of rosuvastatin—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when atazanavir given with simvastatin (avoid concomitant use)
- Oestrogens: atazanavir increases plasma concentration of ethinylestradiol
- Orlistat: absorption of atazanavir possibly reduced by orlistat
- Progestogens: atazanavir increases plasma concentration of norethisterone
Atovaquone (continued)
- Ranolazine: Atovaquone possibly increases plasma concentration of RANOLAZINE—manufacturer of ranolazine advises avoid concomitant use.
- Sildenafil: Atovaquone possibly increases side-effects of SILDENAFIL.
- Sirolimus: Atovaquone possibly increases plasma concentration of SIROLIMUS.
- Tacrolimus: Atovaquone possibly increases plasma concentration of TACROLIMUS.
- Ticagrelor: Atovaquone possibly increases plasma concentration of TICAGRELOR—manufacturer of ticagrelor advises avoid concomitant use.
- Ulcer-healing Drugs: manufacturer of atovaquone advises adjust doses of both drugs when atazanavir given with Cimetidine and Nizatidine—consult atovaquone product literature; plasma concentration of atazanavir reduced by FAMOTIDINE and RANITIDINE (adjust doses of both drugs—consult atovaquone product literature); plasma concentration of atazanavir reduced by PROTON PUMP INHIBITORS—avoid or adjust dose of both drugs (consult product literature).
- Atenolol—see Beta-blockers.

Atovaquone
- Analgesics: Increased risk of venricular arrhytmias when atovaquone given with METHADONE; possible increased risk of convulsions when atovaquone given with TRAMADOL.
- Anti-arrhythmics: increased risk of venricular arrhythmmas when atovaquone given with AMIODARONE or DISOPYRAMIDE.
- Antibacterials: Increased risk of venricular arrhythmmas when atovaquone given with parenteral ETROTHROMYCIN; increased risk of venricular arrhythmmas when atovaquone given with MOXIFLOXACIN.
- Antidepressants: metabolism of atovaquone possibly inhibited by FLUOXETINE and PAROXETINE; possible increased risk of convulsions when atovaquone given with ANTIDEPRESSANTS; atovaquone should not be started until 2 weeks after stopping MAOIs, also MAOIs should not be started until at least 2 weeks after stopping atovaquone; increased risk of venricular arrhythmmas when atovaquone given with TRICYCLICS.
- Antimalarials: increased risk of venricular arrhythmmas when atovaquone given with MEFLOQUINE.
- Antipsychotics: increased risk of venricular arrhythmmas when atovaquone given with ANTIPSYCHOTICS that prolong the QT interval.
- Beta-blockers: increased risk of venricular arrhythmmas when atovaquone given with SOTALOL.
- Diuretics: possible increased risk of convulsions when atovaquone given with BUPROPION.
- Diuretics: risk of venricular arrhythmmas when atovaquone increased by hypokalaemia caused by DIURETICS.
- Sympathomimetics, Beta₂: Increased risk of cardiovascular side-effects when atovaquone given with parenteral SALBUTAMOL.

Avatrombostin see Statins.

Avatrombostin
- Antithromboses: manufacturer of avatrombostin advises avoid concomitant use with RIFABUTIN (plasma concentration of both drugs reduced); plasma concentration of avatrombostin reduced by Rifampicin (and concentration of rifampicin increased)—avoid concomitant use; plasma concentration of avatrombostin reduced by TETRACYCLINE.
- Antivirals: plasma concentration of avatrombostin reduced by EFAVIRENZ—avoid concomitant use; avatrombostin possibly reduces plasma concentration of INDINAVIR; plasma concentration of avatrombostin possibly reduced by RITONAVIR—manufacturer of avatrombostin advises avoid concomitant use; avatrombostin increases plasma concentration of ZIDOVUDINE (increased risk of toxicity).
- Cytostatics: avatrombostin possibly increases plasma concentration of ETOPOSIDE.
- Histamine: avoidance of avatrombostin advised by manufacturer of HISTAMINE.
- Metocalproamide: plasma concentration of avatrombostin reduced by METOCLOPRAMIDE—avoid concomitant use.

Atracurium see Muscle Relaxants.

Atropine see Antimuscarinics.

Avanafil
- ACE Inhibitors: avanafil possibly enhances hypotensive effect of ENALAPRIL.
- Alpha-blockers: enhanced hypotensive effect when avanafil given with ALPHA-BLOCKERS—when patient is stable on the alpha blocker initiate avanafil at the lowest possible dose.
- Antibacterials: plasma concentration of avanafil possibly increased by CLARITHROMYCIN and TELITHROMYCIN—manufacturer of avanafil advises avoid concomitant use; plasma concentration of avanafil increased by ERYTHROMYCIN—see under Avanafil, p. 698; plasma concentration of avanafil possibly reduced by RIFAMPICIN—manufacturer of avanafil advises avoid concomitant use.
- Anti-epileptics: plasma concentration of avanafil possibly reduced by CARBAMAZEPINE, PHENOBARBITAL and PRIMIDONE—manufacturer of avanafil advises avoid concomitant use.
- Antifungals: plasma concentration of avanafil increased by KETOCONAZOLE—avoid concomitant use; plasma concentration of avanafil possibly increased by FLUCONAZOLE—see under Avanafil, p. 698; plasma concentration of avanafil possibly increased by ITRACONAZOLE and VORICONAZOLE—manufacturer of avanafil advises avoid concomitant use.
- Antihistamines: Plasma concentration of avanafil possibly increased by RANITIDINE and NIZATIDINE (reduce dose of avanafil consult avanafil product literature).
- APREPITANT: plasma concentration of avanafil possibly increased by APREPITANT—see under Avanafil, p. 698.
- Bosentan: plasma concentration of avanafil significantly increased by Bosentan—manufacturer of avanafil advises avoid concomitant use.
- Calcium-channel Blocks: plasma concentration of avanafil possibly increased by DILTIAZEM and VERAPAMIL—see under Avanafil, p. 698.
- Fosaprepitant: plasma concentration of avanafil possibly increased by FOSAPREPITANT.
- Grapefruit Juice: plasma concentration of avanafil possibly increased by GRAPEFRUIT JUICE—manufacturer of avanafil advises avoid grapefruit juice for 24 hours before avanafil.
- Norendit: avanafil significantly enhances hypotensive effect of NITRATES (avoid concomitant use).
- Nitrate: avanafil significantly enhances hypotensive effect of NITRATES (avoid concomitant use).
- Riociguat: possible enhanced hypotensive effect when avanafil given with RIOCUIGHT—avoid concomitant use.

Axitinib
- Antibacterials: plasma concentration of axitinib possibly increased by CLARITHROMYCIN, ERYTHROMYCIN and TELITHROMYCIN (reduce dose of axitinib—consult axitinib product literature); plasma concentration of axitinib possibly decreased by RIFABUTIN (increase dose of axitinib—consult axitinib product literature); plasma concentration of axitinib decreased by RIFAMPICIN (increase dose of axitinib—consult axitinib product literature).
- Antidepressants: plasma concentration of axitinib possibly reduced by ST JOHN’S WORT—consider increasing dose of axitinib.
- Anti-epileptics: plasma concentration of axitinib possibly decreased by CARBAMAZEPINE, PHOSPHENITIN, PHENOBARBITAL and PHENOTIN and PRIMIDONE (increase dose of axitinib—consult axitinib product literature).
- Antifungals: plasma concentration of axitinib increased by KETOCONAZOLE (reduce dose of axitinib—consult axitinib product literature); plasma concentration of axitinib possibly decreased by KETONITIN.
Axitinib
Antifungals (continued)
increased by ITRACONAZOLE (reduce dose of axitinib—consult axitinib product literature)
▶ Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
▶ Antivirals: plasma concentration of axitinib possibly increased by ATAZANAVIR, INDINAVIR, RITONAVIR and SAQUINAVIR (reduce dose of axitinib—consult axitinib product literature)
Corticosteroids: plasma concentration of axitinib possibly decreased by DEXAMETHASONE (increase dose of axitinib—consult axitinib product literature)
Grapefruit Juice: plasma concentration of axitinib possibly increased by GRAPEFRUIT JUICE

Azathioprine
▶ ACE Inhibitors: increased risk of anaemia or leucopenia when azathioprine given with CAPTOPRIL especially in renal impairment; increased risk of anaemia when azathioprine given with ENALAPRIL especially in renal impairment
▶ Allepurinol: enhanced effects and increased toxicity of azathioprine when given with ALLOPURINOL (reduce dose of azathioprine to one quarter of usual dose)
▶ Antibacterials: increased risk of haematological toxicity when azathioprine given with SULFAMETHOXAZOLE (as co-trimoxazole); increased risk of haematological toxicity when azathioprine given with PIPERACILLIN (also with co-trimoxazole)
▶ Anticoagulants: azathioprine possibly reduces anticoagulant effect of COUMARINS
▶ Antivirals: myelosuppressive effects of azathioprine possibly enhanced by RIBAVIRIN
▶ Febuxostat: avoidance of azathioprine advised by manufacturer of FEBUXOSTAT

Azelastine see Antihistamines
Azilsartan see Angiotensin-II Receptor Antagonists
Azithromycin see Macrolides
Aztreonam
▶ Anticoagulants: aztreonam possibly enhances anticoagulant effect of COUMARINS
▶ Antibacterials: myelosuppressive effects of azithromycin possibly enhanced by RIBAVIRIN
▶ Febuxostat: avoidance of azathioprine advised by manufacturer of FEBUXOSTAT

Baclofen see Muscle Relaxants
Bambuterol see Sympathomimetics, Beta₂
Basiliximab
▶ Antibacterials: increased risk of generalised infections when monoclonal antibodies given with live VACCINES—avoid concomitant use

BCG Vaccine see Vaccines
Beclometasone see Corticosteroids
Bedaquiline
▶ Antivirals: plasma concentration of bedaquiline possibly increased by CIPROFLOXACIN, CLARITHROMYCIN and ERYTHROMYCIN—avoid concomitant use if ciprofloxacin, clarithromycin and erythromycin given for more than 14 days; manufacturer of bedaquiline advises avoid concomitant use with MOXIFLOXACIN; plasma concentration of bedaquiline possibly reduced by RIFABUTIN—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of bedaquiline reduced by RIFAMPICIN—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of bedaquiline possibly increased by posaconazole—risk increase of ventricular arrhythmias when bedaquiline given with CLOFAZIME
▶ Antidepressants: plasma concentration of bedaquiline possibly reduced by ST JOHN’S WORT—manufacturer of bedaquiline advises avoid concomitant use
▶ Antiepileptics: plasma concentration of bedaquiline possibly reduced by CARBAMAZEPINE, FOSFENOPYRON and PHENYTOIN—manufacturer of bedaquiline advises avoid concomitant use
▶ Antifungals: plasma concentration of bedaquiline increased by KETOCONAZOLE—avoid concomitant use if ketoconazole given for more than 14 days; plasma concentration of bedaquiline possibly increased by FLUCONAZOLE—avoid concomitant use if fluconazole given for more than 14 days

Bedaquiline (continued)
▶ Antivirals: plasma concentration of bedaquiline possibly reduced by EFAVIRENZ and ETRAVIRINE—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of bedaquiline possibly increased by RITONAVIR—avoid concomitant use if ritonavir given for more than 14 days
▶ Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Bee Venom Extracts
▶ ACE Inhibitors: possible severe anaphylactoid reaction when bee venom extracts given with ACE INHIBITORS

Belimumab
▶ Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
▶ Vaccines: risk of generalised infections when monoclonal antibodies given with live VACCINES—avoid concomitant use

Bendamustine
▶ Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
▶ Bendroflumethiazide see Diuretics
Benperidol see Antipsychotics
Benzodiazepines see Anxiolytics and Hypnotics
Benzthiazide see Diuretics
Benzylpenicillin see Penicillins
Beta-blockers
NOTE Since systemic absorption may follow topical application of beta-blockers to the eye the possibility of interactions, in particular, with drugs such as verapamil should be borne in mind
▶ ACE Inhibitors: enhanced hypotensive effect when beta-blockers given with ACE INHIBITORS
▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when beta-blockers given with ADRENERGIC NEURONE BLOCKERS
▶ Alcohol: enhanced hypotensive effect when beta-blockers given with ALCOHOL
▶ Aldesleukin: enhanced hypotensive effect when beta-blockers given with ALDESLEUKIN
▶ Alpha-blockers: enhanced hypotensive effect when beta-blockers given with ALPHA-BLOCKERS, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
▶ Anaesthetics, General: enhanced hypotensive effect when beta-blockers given with GENERAL ANAESTHETICS
▶ Anaesthetics, Local: propranolol increases risk of BUPIVACAINE toxicity
▶ Analgesics: hypotensive effect of beta-blockers antagonised by NSAIDS; plasma concentration of esmolol possibly increased by MORPHINE
▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when beta-blockers given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
▶ Anti-arrhythmics: increased myocardial depression when beta-blockers given with ANTI-ARRHYTHMICS; increased risk of ventricular arrhythmias when sotalol given with AMIODARONE, DISOPYRAMIDE or DRONERADONE; increased risk of myocardial depression and bradyarrhythmia when beta-blockers given with AMIODARONE; plasma concentration of metoprolol and propranolol possibly increased by DRONERADONE; increased risk of myocardial depression when beta-blockers given with AMIODARONE; plasma concentration of metoprolol and propranolol possibly increased by DRONERADONE; increased risk of myocardial depression and bradyarrhythmia when beta-blockers given with FLECAINIDE; propranolol increases risk of LIDOCAINE toxicity; nadolol possibly increases risk of LIDOCAINE toxicity; plasma concentration of metoprolol and propranolol increased by PROPafenONE
▶ Antibacterials: increased risk of ventricular arrhythmias when sotalol given with MOXIFLOXACIN—avoid concomitant use; metabolism of bisoprolol and propranolol accelerated by RIFAMPICIN (plasma concentration significantly reduced); plasma concentration of carvedilol, celiprolol and metoprolol reduced by RIFAMPICIN; plasma concentration of oral timolol possibly reduced by RIFAMPICIN; increased risk of ventricular arrhythmias when sotalol given with DELAMANID
▶ Antidepressants: plasma concentration of metoprolol increased by CITALOPRAM and ESCITALOPRAM; Increased risk of
Beta-blockers  
- Antidepressants (continued)  
  ventricular arrhythmias when sotalol given with  
  CITALOPRAM—avoid concomitant use; avoidance of sotalol advised by manufacturer of  
  ESCITALOPRAM (risk of ventricular arrhythmias); plasma concentration of propranolol increased by FLUOXETINE; plasma concentration of metoprolol possibly increased by  
  PAROXETINE—increased risk of AV block (manufacturer of paroxetine advises avoid concomitant use in cardiac insufficiency); avoidance of sotalol advised by manufacturer of  
  ARTEMETH with LUMEFANTRINE; avoidance of sotalol advised by manufacturer of  
  ARTEMOL with PIPERAQUINE (possible risk of ventricular arrhythmias); increased risk of bradycardia when beta-blockers with  
  MEfloquine  
- Antimicrobials: increased risk of ventricular arrhythmias when sotalol given with  
  TOLERTODINE  
- Antipsychotics: increased risk of ventricular arrhythmias when sotalol given with  
  DROPERIDOL or  
  ZUCLOPENTHIXOL—avoid concomitant use; possible increased risk of ventricular arrhythmias when sotalol given with  
  HALOPERIDOL—avoid concomitant use; plasma concentration of both drugs may increase when propranolol given with  
  CHLORPROMAZINE; plasma concentration of sotalol increased by  
  Amsulpride, Phenothisaines, Pimozide or  
  Sulpride; enhanced hypotensive effect when beta-blockers given with  
  Phenothiazines; possible increased risk of ventricular arrhythmias when sotalol given with  
  Risperidone  
- Antivirals: increased risk of ventricular arrhythmias when sotalol given with  
  Aquamir—avoid concomitant use; avoidance of sotalol advised by manufacturer of  
  Telaprevir (risk of ventricular arrhythmias); avoidance of metoprolol for heart failure advised by manufacturer of  
  Tiranavir  
- Anxiolytics and Hypnotics: enhanced hypotensive effect when beta-blockers with  
  Baclofen, Carbimazepine or  
  Sedative and hypnotic; enhanced hypotensive effect when beta-blockers given with  
  Phenothiazines; possible increased risk of ventricular arrhythmias when sotalol given with  
  Atamoxetine  
- Calcium-channel Blockers: enhanced hypotensive effect when beta-blockers given with  
  Calcium-channel Blockers; possible severe hypotension and heart failure when beta-blockers given with  
  Nifedipine; increased risk of AV block and bradycardia when beta-blockers given with  
  Diltaizem; asystole, severe hypotension and heart failure when beta-blockers given with  
  Verapamil (see under Verapamil, p. 156);  
- Cardiac Glycosides: increased risk of AV block and bradycardia when beta-blockers given with  
  Ciclosporin: carvedilol increases plasma concentration of  
  Cyclosporin  
- Ciclosporin  
- Clonidine: increased risk of withdrawal hypertension when beta-blockers given with  
  Clonidine (withdraw beta-blockers several days before slowly withdrawing clonidine)  
- Corticosteroids: hypotensive effect of beta-blockers antagonised by  
  Corticosteroids  
- Cytosine: possible increased risk of ventricular arrhythmias when sotalol given with  
  Bosutinib; possible increased risk of bradycardia when beta-blockers given with  
  Crizotinib; possible increased risk of ventricular arrhythmias when sotalol given with  
  Vandetanib—avoid concomitant use; increased risk of ventricular arrhythmias when sotalol given with  
  Arsenic trioxide  

Beta-blockers  
- Diazoxide: increased hypotensive effect when beta-blockers given with  
- Diuretics: enhanced hypotensive effect when beta-blockers given with  
- Diuretics; risk of ventricular arrhythmias with sotalol increased by  
- Hypokalaemia caused by  
- Loop diuretics or  
- Thiazides and Related Diuretics  
- Dopaminergics: enhanced hypotensive effect when beta-blockers given with  
  CO-Beveldopa, Co-Careldopa or Lepdova  
- Ergot Alkaloids: increased peripheral vasoconstriction when beta-blockers given with  
  Ergotamine  
- Fingolimod: possible increased risk of bradycardia when beta-blockers given with  
  Fingolimod  
- Hormone Antagonists: possible increased risk of bradycardia when  
  Catechol, Metoprolol, Pranolol or sotalol given with  
  Pasireotide  
- SH2-receptor Agonists: propranolol increases plasma concentration of  
  RizatRIPTAN (manufacturer of rizatRIPTAN advises half dose and avoid within 2 hours of propranolol)  
- Ibradine: increased risk of ventricular arrhythmias when sotalol given with  
- Methyldopa: enhanced hypotensive effect when beta-blockers given with  
  Mirabegron: plasma concentration of metoprolol increased by  
- Moxisylyte: possible severe postural hypotension when beta-blockers given with  
- Moxisylyte  
- Moxonidine: enhanced hypotensive effect when beta-blockers given with  
- Muscle Relaxants: propranolol enhances effects of  
- Muscle Relaxants; enhanced hypotensive effect when beta-blockers given with  
- Nitrates: enhanced hypotensive effect when beta-blockers given with  
- Nitrates  
- Oestrogens: hypotensive effect of beta-blockers antagonised by  
- Neostigmine and Pyridostigmine; increased risk of  
  Nifedipine, Ranolazine  
- Prostaglandins: enhanced hypotensive effect when beta-blockers given with  
- Ranolazine: advice of sotalol given by manufacturer of  
- Ranolazine  
- Symptomimetics: increased risk of severe hypertension and  
- Adrenaline (epinephrine), also response to adrenaline (epinephrine) may be reduced; increased risk of severe hypertension and bradycardia when non-cardioselective beta-blockers with  
- Dobutamine; possible increased risk of severe hypertension and bradycardia when non-cardioselective beta-blockers with  
- Noradrenaline (norepinephrine)  
- Thyroid Hormones: metabolism of propranolol accelerated by  
- Ulcer-healing Drugs: plasma concentration of labetalol, metoprolol and propranolol increased by  
- Cimetidine; plasma concentration of  
- Orlistol possibly increased by  
- Cimetidine  
- Vasodilator Antihypertensives: enhanced hypotensive effect when beta-blockers given with  
- Hydralazine, Minoxidil or  
- Sodium Nitroprusside  

Beta-histine  
- Antihistamines: effect of betahistine theoretically antagonised by  
- Betamethasone see Corticosteroids  
- Betaxolol see Beta-blockers  

Beta-nechanol see Parasympathomimetics  

Bevacizumab  
- Antipsychotics: avoid concomitant use of cytotoxics with  
- Cytotoxics: increased risk of agranulocytosis)  
- Vaccines: risk of generalised infections when monoclonal antibodies given with live  
- Vaccines—avoid concomitant use  

Beaxorone  
- Antipsychotics: avoid concomitant use of cytotoxics with  
- Cytotoxics: increased risk of agranulocytosis)
Boceprevir (continued)
- Antipsychotics: boceprevir possibly increases plasma concentration of lurasidone—avoid concomitant use; manufacturer of boceprevir advises avoid concomitant use with lopinavir; boceprevir possibly increases plasma concentration of quetiapine—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: boceprevir reduces plasma concentration of atazanavir; boceprevir possibly increases the plasma concentration of daclatasvir—reduce dose of daclatasvir (see under Daclatasvir, p. 544); avoid concomitant use of boceprevir with darunavir; effects of both drugs possibly reduced when boceprevir given with etravirine; avoidance of boceprevir advised by manufacturer of fosamprenavir, nevirapine and tipranavir; manufacturers advise avoid concomitant use of boceprevir with lopinavir; boceprevir increases plasma concentration of maraviroc (consider reducing dose of maraviroc); plasma concentration of both drugs reduced when boceprevir given with ritonavir
- Anxiolytics and Hypnotics: boceprevir increases plasma concentration of oral midazolam—manufacturer of boceprevir advises avoid concomitant use
- Cardio Glycosides: boceprevir possibly increases side-effects of digoxin
- Ciclosporin: boceprevir increases plasma concentration of ciclosporin
- Cilostazol: boceprevir possibly increases plasma concentration of cilostazol (see under Cilostazol, p. 206)
- Cobicistat: avoidance of boceprevir advised by manufacturer of cobicistat
- Cytotoxics: boceprevir possibly increases the plasma concentration of bosutinib—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; manufacturer of boceprevir advises avoid concomitant use with dasatinib, erlotinib, geftinib, imatinib, lapatinib, nilotinib, pazopanib, sorafenib and sunitinib; manufacturer of ruxolitinib advises dose reduction when boceprevir given with ruxolitinib—consult ruxolitinib product literature
- Domeridone: possible increased risk of ventricular arrhythmias when boceprevir given with domperidone—avoid concomitant use
- Ergot Alkaloids: manufacturer of boceprevir advises avoid concomitant use with ergot alkaloids
- Lipid-regulating Drugs: boceprevir increases plasma concentration of atorvastatin (reduce dose of atorvastatin); boceprevir increases plasma concentration of pravastatin; manufacturers advise avoid concomitant use of boceprevir with simvastatin
- Progestogens: boceprevir increases plasma concentration of drospirenone (increased risk of toxicity)
- Sirolimus: boceprevir increases plasma concentration of sirolimus (increased risk of toxicity—reduce sirolimus dose)
- Tacrolimus: boceprevir increases plasma concentration of tacrolimus (reduce dose of tacrolimus)

Bosentan
- Antibacterials: plasma concentration of bosentan reduced by rifampicin—manufacturer of bosentan advises avoid concomitant use
- Antidepressants: plasma concentration of bosentan possibly reduced by dexamethasone—manufacturer of bosentan advises avoid concomitant use
- Antiepileptics: plasma concentration of bosentan possibly reduced by dexamethasone—manufacturer of bosentan advises avoid concomitant use
- Antifungals: plasma concentration of bosentan reduced by ketoconazole—manufacturer of bosentan advises avoid concomitant use with antifungals, ketoconazole, clotrimazole, fluconazole
- Antimalarials: manufacturer of bosentan monitors antimalarial effect of chloroquine
Bosentan (continued)

● Antidiabetics: increased risk of hepatotoxicity when bosentan given with • GLIBENCLAMIDE—avoid concomitant use
● Antibacterials: reduced plasma concentration of bosentan increased by • KETOCONAZOLE; plasma concentration of bosentan possibly increased by • FLUCONAZOLE—avoid concomitant use; plasma concentration of bosentan possibly increased by • ITRACONAZOLE
● Antivirals: avoidance of bosentan advised by manufacturer of ETV ENGRAVIR and TIPRANAVIR; bosentan possibly reduces plasma concentration of • INDINAVIR; plasma concentration of bosentan increased by • LOPINAVIR and • RITONAVIR (consider reducing dose of bosentan); bosentan possibly reduces plasma concentration of • TELAPREVIr, also plasma concentration of bosentan possibly increased

● Avanafil: bosentan possibly reduces plasma concentration of • AVANAFIL —manufacturer of avanafil advises avoid concomitant use
● Ciclosporin: plasma concentration of bosentan increased by • CICLOSPORIN (also plasma concentration of ciclosporin reduced—avoid concomitant use)
● Cobicistat: avoidance of bosentan advised by manufacturer of COBI CI STAT
● Cytoxotics: bosentan possibly reduces plasma concentration of • BOSENTAN—manufacturer of bosentan advises avoid concomitant use
● Lipid-regulating Drugs: bosentan reduces plasma concentration of • SIMVASTATIN
● Oestrogens: bosentan possibly causes contraceptive failure of hormonal contraceptives containing • OESTROژENS (alternative contraception recommended)
● Progestogens: bosentan possibly causes contraceptive failure of hormonal contraceptives containing • PROGESTOژENS (alternative contraception recommended)
● Ranitidine: bosentan reduces plasma concentration of • RANITIDINE
● Sildenafil: bosentan reduces plasma concentration of • SILDENAFIL, also plasma concentration of bosentan increased
● Tadalafil: bosentan reduces plasma concentration of • TADALAFIL

Bosutinib

● Analgesics: possible increased risk of ventricular arrhythmias when bosutinib given with • METHADONE
● Antacids: manufacturer of bosutinib advises separating administration with • ANTACIDS by about 12 hours
● Anti-arrhythmics: possible increased risk of ventricular arrhythmias when bosutinib given with • AMIODARONE and • DISOPYRAMIDE; plasma concentration of bosutinib possibly increased by • DRONEDARONE—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Antihypertensives: plasma concentration of bosutinib possibly increased by • CIPROFLOXACIN, • CLARITHROMYCIN, • ERYTHROMYCIN and • TELITHROMYCIN—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; possible increased risk of ventricular arrhythmias when bosutinib given with • MOXIFLOXACIN; plasma concentration of bosutinib possibly reduced by • RIFABUTIN—manufacturer of bosutinib advises avoid concomitant use; plasma concentration of bosutinib reduced by • RIFAMPICIN—manufacturer of bosutinib advises avoid concomitant use
● Antidepressants: plasma concentration of bosutinib possibly reduced by • ST JOHN’S WORT—manufacturer of bosutinib advises avoid concomitant use
● Antiepileptics: plasma concentration of bosutinib possibly reduced by • CARBAMAZEPINE, • FOSPHENYTOIN, • PHENOBARBITAL, • PHENYTOIN and • PRIMIDONE—manufacturer of bosutinib advises avoid concomitant use
● Antifungals: plasma concentration of bosutinib increased by • KETOCONAZOLE—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; plasma concentration of bosutinib possibly increased by • FLUCONAZOLE, • ITRACONAZOLE, • POSACONAZOLE and • VORICONAZOLE—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Antimalarials: possible increased risk of ventricular arrhythmias when bosutinib given with • CHLOROQUINE and • HYDROXYCHLOROQUINE

Bosutinib (continued)

● Antipsychotics: possible increased risk of ventricular arrhythmias when bosutinib given with • HALOPERIDOL; avoid concomitant use of cytoxotics with • CLOZAPINE (increased risk of agranulocytosis)
● Antibacterials: plasma concentration of bosutinib possibly increased by • ATAZANAVIR, • BOCEPREVIr, • DARUNAVIR, • FOSAMPRENAVIR, • INDINAVIR, • RITONAVIR, • SAQUINAVIR and • TELAPREVIr—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; plasma concentration of bosutinib possibly reduced by • EFAVIRENZ and • STRAVINE —manufacturer of bosutinib advises avoid concomitant use
● Aprepitant: plasma concentration of bosutinib possibly increased by • APREPIrant—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Beta-blockers: possible increased risk of ventricular arrhythmias when bosutinib given with • SOTALOL
● Bosentan: plasma concentration of bosutinib possibly reduced by • BOSENTAN—manufacturer of bosutinib advises avoid concomitant use
● Calcium-channel Blockers: plasma concentration of bosutinib possibly increased by • DILTIAZEM and • VERAPAMIL—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Cytoxotics: plasma concentration of bosutinib possibly increased by • MATINIB—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Domperidone: manufacturer of bosutinib advises avoid concomitant use with • DOMPERIDONE (risk of ventricular arrhythmias)
● Fosaprepitant: plasma concentration of bosutinib possibly increased by • FOSAPREPIrant—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Grapefruit juice: plasma concentration of bosutinib possibly increased by • GRAPEFRUIT JUICE—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
● Modafinil: plasma concentration of bosutinib possibly reduced by • MODAFINIL—manufacturer of bosutinib advises avoid concomitant use
● Ulcer-healing Drugs: plasma concentration of bosutinib reduced by • Lansoprazole

Brentuximab vedotin

● Antibacterials: effects of brentuximab vedotin possibly reduced by • RIFAMPICIN
● Antibacterials: possible increased risk of neutropenia when brentuximab vedotin given with • KETOCONAZOLE
● Antipsychotics: avoid concomitant use of cytoxotics with • CLOZAPINE (increased risk of agranulocytosis)
● Cytoxotics: increased risk of pulmonary toxicity when brentuximab vedotin given with • BLEOMYCIN—avoid concomitant use
● Vaccines: risk of generalised infections when monoclonal antibodies given with live • VACCINES—avoid concomitant use

Brimonidine

● Antidepressants: manufacturer of brimonidine advises avoid concomitant use with • MAOIS, TRICYCLIC-RELATED ANTIDEPRESSANTS and TRICYCLICS

Brinzolamide see Diuretics

Bronocaprine

● Alcohol: tolerance of bromocaprine reduced by • ALCOHOL
● Antidepressants: plasma concentration of bromocaprine increased by • ERYTHROMYCIN (increased risk of toxicity); plasma concentration of bromocaprine possibly increased by • MACROLIDES (increased risk of toxicity)
● Antipsychotics: hyperprolactinemic and antiparkinsonian effects of bromocaprine antagonised by • ANTIpsYCHOTICS
● Domperidone: hyperprolactinemic effect of bromocaprine possibly antagonised by • DOMPERIDONE
● Hormone Antagonists: plasma concentration of bromocaprine increased by • OCTREOTIDE
● Memantine: effects of dopaminergic possibly enhanced by • MEMANTINE
● Methyldopa: antiparkinsonian effect of dopaminergic antagonised by • METHYLDOPA
● Metoclopramide: hyperprolactinemic effect of bromocaprine antagonised by • METOCLOPRAMIDE
Bromocriptine (continued)
- sympathomimetics: risk of toxicity when bromocriptine given with isometheptene

Buclizine see Antihistamines
Budesonide see Corticosteroids
Bumetanide see Diuretics
Bupivacaine
- anti-arrhythmics: increased myocardial depression when bupivacaine given with anti-arrhythmics
- beta-blockers: increased risk of bupivacaine toxicity given with propranolol

Buprenorphine see Opioid Analgesics

Bupropion
- antidepressants: bupropion possibly increases plasma concentration of citalopram; manufacturer of bupropion advises avoid concomitant use with saois; manufacturer of bupropion advises avoid concomitant use with moclobemide; bupropion possibly increases plasma concentration of tricyclics (possible increased risk of convulsions)
- antidepressants: plasma concentration of bupropion reduced by carbamazepine, fosphenytoin and phenytoin; metabolism of bupropion inhibited by sodium valproate and valproic acid
- antivirals: metabolism of bupropion accelerated by efavirenz (reduced plasma concentration); plasma concentration of bupropion reduced by ritonavir
- atomoxetine: possible increased risk of convulsions when bupropion given with atomoxetine
- dopaminergics: increased risk of side-effects when bupropion given with amantadine, co-beneldopa, co-careldopa or levodopa
- hormone antagonists: bupropion possibly inhibits metabolism of tamoxifen to active metabolite (avoid concomitant use)
- methylthioninium: possible risk of CNS toxicity when bupropion given with methylthioninium—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

Buspirone see Anxiolytics and Hypnotics
Busulfan
- analgesics: metabolism of intravenous busulfan possibly inhibited by paracetamol (manufacturer of intravenous busulfan advises caution within 72 hours of paracetamol)
- antibacterials: plasma concentration of busulfan increased by metronidazole (increased risk of toxicity)
- antidepressants: plasma concentration of busulfan possibly reduced by fosphenytoin and phenytoin
- antifungals: metabolism of busulfan inhibited by itraconazole (increased risk of toxicity)
- antipsychotics: avoid concomitant use of cytoxotics with clozapine (increased risk of agranulocytosis)
- cytoxotics: increased risk of hepatotoxicity when busulfan given with tioguanine

Butyrophenones see Antipsychotics
Cabazitaxel
- antibacterials: plasma concentration of cabazitaxel possibly increased by clarithromycin and telithromycin—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel; manufacturer of cabazitaxel advises avoid concomitant use with rifabutin; plasma concentration of cabazitaxel reduced by rifampicin—manufacturer of cabazitaxel advises avoid concomitant use
- antidepressants: manufacturer of cabazitaxel advises avoid concomitant use with st john’s wort
- antiepileptics: manufacturer of cabazitaxel advises avoid concomitant use with ketoconazole; plasma concentration of cabazitaxel possibly increased by itraconazole and voriconazole—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel
- antipsychotics: avoid concomitant use of cytoxotics with clozapine (increased risk of agranulocytosis)

Cabergoline
- antibacterials: plasma concentration of cabergoline increased by erythromycin (increased risk of toxicity); plasma concentration of cabergoline possibly increased by macrolides (increased risk of toxicity)
- antipsychotics: hypnotolactamine and antiparkinsonian effects of cabergoline antagonised by antipsychotics
- Dopemidone: hypnotolactamine effect of cabergoline possibly antagonised by memantine
- methylidopa: antiparkinsonian effect of dopaminergics antagonised by methylidopa
- Metoclopramide: hypoprolactinaemic effect of cabergoline antagonised by metoclopramide

Cabozaartinib
- antibacterials: plasma concentration of cabozantinib possibly increased by clarithromycin and erythromycin; plasma concentration of cabozantinib reduced by rifampicin—avoid concomitant use
- antidepressants: plasma concentration of cabozantinib possibly reduced by st john’s wort—manufacturer of cabozantinib advises avoid concomitant use
- antiepileptics: plasma concentration of cabozantinib possibly reduced by carbamazepine, fosphenytoin, phenytoin, phenobarbital, phenytion and primidone—avoid concomitant use
- antifungals: plasma concentration of cabozantinib increased by ketoconazole; plasma concentration of cabozantinib possibly increased by itraconazole
- antipsychotics: avoid concomitant use of cytoxotics with clozapine (increased risk of agranulocytosis)

Caffeine citrate
- aminophylline: manufacturer of caffeine citrate advises avoid concomitant use with aminophylline
- anti-arrhythmics: caffeine citrate antagonises anti-arrhythmic effect of adenosine—manufacturer of adenosine advises avoid caffeine citrate for at least 12 hours before adenosine
- antiepileptics: plasma concentration of caffeine citrate reduced by fosphenytoin and phenytoin; caffeine citrate possibly antagonises effects of phenobarbital and primidone
- theophylline: manufacturer of caffeine citrate advises avoid concomitant use with theophylline
- ulcer-healing Drugs: plasma concentration of caffeine citrate increased by cimetidine

Calcitriol see Vitamins
Calcium Salts
Note see also Antacids
- antibacterials: calcium salts reduce absorption of ciprofloxacin and tetracycline
- antivirals: calcium salts reduce absorption of dolutegravir—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after calcium salts; manufacturer of rilpivirine advises give calcium salts 2 hours before or 4 hours after rilpivirine
- bisphosphonates: calcium salts reduce absorption of bisphosphonates
- cardiac glycosides: large intravenous doses of calcium salts can precipitate arrhythmias when given with cardiac glycosides
- corticosteroids: absorption of calcium salts reduced by corticosteroids
Appendix 1 Interactions

Calcium-channel Blockers

**Calcium-channel Blockers**

- **Alpha-blockers:** verapamil increases plasma concentration of TAMSULOSIN; enhanced hypotensive effect when calcium-channel blockers given with **general anaesthetics** (also AV delay)
- **Analgesics:** hypotensive effect of calcium-channel blockers antagonised by NSAIDS; diltiazem inhibits metabolism of ALFENTANIL (risk of prolonged or delayed respiratory depression)
- **Angiotensin-II Receptor Antagonists:** enhanced hypotensive effect when calcium-channel blockers given with **general anaesthetics**
- **Anti-arrhythmics:** increased risk of bradycardia, AV block and myocardial depression when diltiazem or verapamil given with **midodrine**; increased risk of myocardial depression and asystole when verapamil given with **disopyramide** or **flecainide**; increased risk of bradycardia and myocardial depression when diltiazem and verapamil given with **dronedarone**; nifedipine increases plasma concentration of **dronedarone**
- **Antibacterials:** metabolism of calcium-channel blockers possibly inhibited by **ciprofloxacin**, **erythromycin** and **telithromycin** (increased risk of side-effects); manufacturer of lercanidipine advises avoid concomitant use with **erythromycin**
- **Anticoagulants:** verapamil possibly increases plasma concentration of **dabigatran** (see under Dabigatran Etxedilate, p. 117)
- **Antidepressants:** metabolism of nifedipine possibly inhibited by **fluoxetine** (increased plasma concentration); diltiazem and verapamil increase plasma concentration of **imipramine**
- **Antiepileptics:** increased risk of bradycardia and myocardial depression when diltiazem or verapamil given with **midodrine**; increased risk of hypotensive effect when calcium-channel blockers given with **maois**; plasma concentration of nifedipine possibly reduced by **st john's wort**; plasma concentration of amlodipine and felodipine possibly reduced by **st john's wort**; plasma concentration of verapamil significantly reduced by **st john's wort**; diltiazem and verapamil possibly increase plasma concentration of **tricyclics**
- **Antihistamines:** glucose tolerance occasionally impaired when nifedipine given with **insulin**
- **Antileukemics:** effects of dihydropriazines, nicardipine and nifedipine probably reduced by **carbamazepine**
- **Antimuscarinics:** verapamil possibly increases plasma concentration of **aliskiren**; diltiazem and verapamil possibly increase plasma concentration of **telmisartan**
- **Antithyroidal:** glucose tolerance occasionally impaired when nifedipine given with **insulin**
- **Antivirals:** possibly inhibited by **ritonavir**; caution with diltiazem, felodipine, nicardipine and nifedipine advised by manufacturer of **telaprevir**; plasma concentration of amlodipine increased by **telaprevir** (consider reducing dose of amlodipine)
- **Antioxidants:** enhanced hypotensive effect when calcium-channel blockers given with **anxiolytics and hypnotics**
- **Antipsychotics:** enhanced hypotensive effect when calcium-channel blockers given with **anxiolytics and hypnotics**

Calcium-channel Blockers (continued)

- **Cytoxics:** calcium salts increase absorption of **estramustine**
- **Diuretics:** increased risk of hypercalcaemia when calcium salts given with **thiazides and related diuretics**
- **Ertrombopag:** calcium salts possibly reduce absorption of **ertrombopag** (give at least 4 hours apart)
- **Fluorides:** calcium salts reduce absorption of **fluorides**
- **Iron salts:** calcium salts reduce absorption of **oral iron salts**
- **Thyroid hormones:** calcium salts reduce absorption of **Levothyroxine**
- **Zinc:** calcium salts reduce absorption of **zinc**

Calcium-channel Blockers (continued)

- **ACE inhibitors:** enhanced hypotensive effect when calcium-channel blockers given with **ACE inhibitors**
- **Alpha-blockers:** enhanced hypotensive effect when calcium-channel blockers given with **Adrenergic Neurone Blockers**
- **ACE inhibitors:** enhanced hypotensive effect when calcium-channel blockers given with **aliskiren**
- **Adrenergic Neurone Blockers:** enhanced hypotensive effect when calcium-channel blockers given with **aliskiren**
- **Aliskiren:** enhanced hypotensive effect when calcium-channel blockers given with **aliskiren**
- **Alcohol:** enhanced hypotensive effect when calcium-channel blockers given with **alcohol**; verapamil possibly increases plasma concentration of **alcohol**
- **Aldesleukin:** enhanced hypotensive effect when calcium-channel blockers given with **aldesleukin**
- **Amlodipine:** verapamil possibly increases plasma concentration of **amlodipine**
- **Antidepressants:** increased risk of bradycardia and myocardial depression when diltiazem or verapamil given with **amiodarone**
- **Antihistamines:** possibly inhibited by **ritonavir**; caution with diltiazem, felodipine, nicardipine and nifedipine advised by manufacturer of **telaprevir**; plasma concentration of amlodipine increased by **telaprevir** (consider reducing dose of amlodipine)
- **Antivirals:** enhanced hypotensive effect when calcium-channel blockers given with **anxiolytics and hypnotics**
- **Antipsychotics:** enhanced hypotensive effect when calcium-channel blockers given with **anxiolytics and hypnotics**
Interactions

Appendix 1 Interactions

Calcium-channel Blockers
- Beta-blockers (continued)
  - AV block and bradycardia when diltiazem given with β-BLOCKERS; asystole, severe hypotension and heart failure when verapamil given with β-BLOCKERS (see under Verapamil, p. 156); possible severe hypotension and heart failure when nifedipine given with β-BLOCKERS
- Calcium-channel Blockers: plasma concentration of both drugs may increase when diltiazem given with NIFEDIPINE
  - Nipride: diltiazem, lercanidine and nifedipine increase plasma concentration of DIGOXIN; verapamil increases plasma concentration of DIGOXIN, also increased risk of AV block and bradycardia; nifedipine possibly increases plasma concentration of DIGOXIN
- Ciclosporin: diltiazem, nicardipine and verapamil increase plasma concentration of CICLOSPORIN; combination of lercanidine with CICLOSPORIN may increase plasma concentration of either drug (or both)—avoid concomitant use; plasma concentration of nifedipine possibly increased by CICLOSPORIN (increased risk of toxicity including gingival hyperplasia)
- Clobazam: diltiazem increases plasma concentration of CLOBAZAM (consider reducing dose of clobazam)
- Clonidine: enhanced hypertensive effect when calcium-channel blockers are co-administered with CLONIDINE
- Colchicine: diltiazem and verapamil possibly increase risk of COLCHICINE toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Corticosteroids: hypertensive effect of calcium-channel blockers antagonised by CORTICOSTEROIDS; diltiazem increases plasma concentration of METHYLprednisolone
- Cytoxics: verapamil possibly increases plasma concentration of DOXORUBICIN; verapamil possibly increases the plasma concentration of AFA tinib—manufacturer of afatinib advises separating administration of verapamil by 6 to 12 hours; diltiazem and verapamil possibly increase the plasma concentration of BOSUTINIB—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; possible increased risk of bradycardia when diltiazem or verapamil given with EVEROLIMUS (consider reducing the dose of everolimus—consult everolimus product literature); diltiazem and verapamil possibly increase the plasma concentration of IBRUTINIB—reduce dose of ibritinib (see under ibritinib, p. 809); nifedipine possibly inhibits metabolism of VINCristine
  - Dapoxetine: manufacturer of dapoxetine advises dose reduction when diltiazem and verapamil given with DAPoxetine (see under Dapoxetine, p. 705)
  - Dazoxiben: enhanced hypertensive effect when calcium-channel blockers given with DIAZOXIDE
- Diuretics: enhanced hypertensive effect when calcium-channel blockers given with DIURETICS; diltiazem and verapamil increase plasma concentration of Eplerenone (reduce dose of eplerenone)
  - Dopaminergics: enhanced hypertensive effect when calcium-channel blockers given with CO-BENELDOPA, CO-CAREldopa or LEVODopa
- Fingolimod: possible increased risk of bradycardia when diltiazem or verapamil given with FINGOLIMOD
- Fosaprepitant: plasma concentration of both drugs may increase when diltiazem given with FOSAPREpiTANT
  - Grapefruit Juice: plasma concentration of felodipine, isradipine, lacidipine, lercanidine, nifedipine, nimodipine and verapamil increased by GRAPEFRUIT JUICE; plasma concentration of amlopidine possibly increased by GRAPEFRUIT JUICE
- Hormone Antagonists: diltiazem and verapamil increase plasma concentration of DUTASTERIDE; possible increased risk of bradycardia when diltiazem or verapamil given with PASireotide
- Ivabradine: diltiazem and verapamil increase plasma concentration of IVABRAdINE—avoid concomitant use
- Lenalidomide: verapamil possibly increases plasma concentration of LENALIDOMIDE (increased risk of toxicity)

Calcium-channel Blockers (continued)
- Lipid-regulating Drugs: diltiazem increases plasma concentration of ATORVASTATIN—possible increased risk of myopathy; plasma concentration of verapamil increased by ATORVASTATIN, also possible increased risk of myopathy (consider reducing dose of atorvastatin); possible increased risk of myopathy when amloidpine and diltiazem given with SIMVASTATIN (see under Simvastatin, p. 181); increased risk of myopathy when verapamil given with SIMVASTATIN (see under Simvastatin, p. 181); separating administration from amloidpine and lacidipine by 12 hours advised by manufacturer of LIMOTAPIpE; avoidance of diltiazem and verapamil advised by manufacturer of LIMOTAPIpE (plasma concentration of lomitapide possibly increased)
- Lithium: neurotoxicity may occur when diltiazem or verapamil given with LITHIUM without increased plasma concentration of lithium
- Magnesium (parenteral): profound hypotension reported with concomitant use of nifedipine and PARENTERAL Magnesium in pre-eclampsia
- Methyldopa: enhanced hypertensive effect when calcium-channel blockers given with METHYLDopa
- Moxisylyte: enhanced hypertensive effect when calcium-channel blockers given with MOXYSLyTE
- Moxifloxacin: enhanced hypertensive effect when calcium-channel blockers given with MOXIFLOXAcIN
- Muscle Relaxants: verapamil enhances effects of NON-DEPOLARISING MUSCLE RELAXANTS and SUXAMETHONIum; enhanced hypertensive effect when calcium-channel blockers given with TACLOfin or TIZANIDINE; manufacturer of verapamil advises avoid concomitant use of Intravenous DANTROLENe; possible increased risk of ventricular arrhythmias when diltiazem given with Intravenous DANTROLENe—manufacturer of diltiazem advises avoiding concomitant use; calcium-channel blockers possibly enhance effects of NON-DEPOLARISING MUSCLE RELAXANTS
- Nitrites: enhanced hypertensive effect when calcium-channel blockers given with NITRATES
- Oestrogens: hypertensive effect of calcium-channel blockers antagonised by OESTROGENS
- Prostaglandins: enhanced hypertensive effect when calcium-channel blockers given with ALPROSTADIL
- Ranolazine: diltiazem and verapamil increase plasma concentration of RANOLAZINE (consider reducing dose of ranolazine)
- Sildenafil: enhanced hypertensive effect when amloidpine given with SILDEnALF
- Sirolimus: diltiazem increases plasma concentration of SIROLIMUS; plasma concentration of both drugs increased when verapamil given with SIROLIMUS; nifedipine possibly increases plasma concentration of SIROLIMUS
- Sulfipyrazone: plasma concentration of verapamil reduced by SULFINPYRAZoNE
- Tacrolimus: diltiazem, nicardipine and nifedipine increase plasma concentration of TACROLIMUS; felodipine and verapamil possibly increase plasma concentration of TACrolimus
- Theophylline: calcium-channel blockers possibly increase plasma concentration of THEOPHYLLINE (enhanced effect); diltiazem increases plasma concentration of THEOPHYLLINE; verapamil increases plasma concentration of THEOPHYLLINE (enhanced effect)
- Ticagrelor: diltiazem increases plasma concentration of TICAGRELOR
- Ulcer-healing Drugs: metabolism of calcium-channel blockers possibly inhibited by CIMETIDINE (increased plasma concentration); plasma concentration of isradipine increased by CIMETIDINE. (half dose of isradipine)
- Upralpristil: avoidance of verapamil advised by manufacturer of low-dose UPLRISTIL
- Vardenafil: enhanced hypertensive effect when nifedipine given with VARDENAFL
- Vasodilator Antihypertensives: enhanced hypertensive effect when calcium-channel blockers given with HYDRAZAlINE, MINOdoL or SODIUM NitroPrussIDE
Carbamazepine (continued)
- Anti-arrhythmics: carbamazepine possibly reduces plasma concentration of DRONEDARONE—avoid concomitant use
- Antibacterials: plasma concentration of carbamazepine increased by CLARITHROMYCIN (consider reducing dose of carbamazepine); plasma concentration of carbamazepine increased by ERITHROMYCIN; plasma concentration of carbamazepine reduced by RIFABUTIN; carbamazepine accelerates metabolism of DOXYCYCLINE (reduced effect); carbamazepine possibly reduces plasma concentration of BEDAQUILINE—manufacturer of bedaquiline advises avoid concomitant use; avoidance of carbamazepine advised by manufacturer of DELAMAND; plasma concentration of carbamazepine increased by ISOXAZOLIDINONE (also possibly increased isoxazolid hepatotoxicity); carbamazepine reduces plasma concentration of TELithromycin (avoid during and for 2 weeks after carbamazepine)
- Anticoagulants: carbamazepine possibly reduces plasma concentration of DABIGATRAN—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; carbamazepine accelerates metabolism of COUMARINS (reduced anticoagulant effect); carbamazepine possibly reduces plasma concentration of DABIGATRAN—manufacturer of dabigatran advises avoid concomitant use; carbamazepine possibly reduces plasma concentration of RIVAROXABAN—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: carbamazepine possibly reduces plasma concentration of REBOXETINE; plasma concentration of carbamazepine increased by FLUOXETINE and FLUVORAMINE; carbamazepine reduces plasma concentration of MIAXERIN, MIRTAZAPINE and TRAZODONE; anticonvulsant effect of antiepileptics possibly antagonised by MAIS and TRICYCLICs (convulsive threshold lowered); manufacturer of carbamazepine advises avoid for 2 weeks after stopping MAIS, also antagonism of anticonvulsant effect; anticonvulsant effect of antiepileptics antagonised by SSRI and TRICYCLICs (convulsive threshold lowered); plasma concentration of carbamazepine possibly reduced by ST JOHN'S WORT; carbamazepine accelerates metabolism of TRICYCLICs (increased plasma concentration and reduced effect)
- Antiepileptics: carbamazepine possibly reduces plasma concentration of ESICARACEPTEIN but risk of side-effects increased; carbamazepine possibly reduces plasma concentration of ETHOSUXIMIDE and RETIGABINE; plasma concentration of both drugs often reduced when carbamazepine given with PHOSPHENYTIN or PHENOTHIN, also plasma concentration of fosphenytin or phenytoin may be increased; carbamazepine often reduces plasma concentration of LAMOTRIGINE, also plasma concentration of an active metabolite of carbamazepine sometimes raised (but evidence is conflicting); possible increased risk of carbamazepine toxicity when given with LEVITRACETAM; plasma concentration of carbamazepine sometimes reduced by OXCARABASTINE (but concentration of an active metabolite of carbamazepine may be increased), also plasma concentration of an active metabolite of oxcarbazepine often reduced; carbamazepine reduces plasma concentration of PERAMpanel (see under Perampanel, p. 398); carbamazepine possibly increases plasma concentration of PHENOBARBITAL and PRIMIDONE; plasma concentration of both drugs possibly reduced when carbamazepine given with RUFANAMIDE; carbamazepine reduces plasma concentration of SODIUM VALPROATE and VALPROIC ACID, also plasma concentration of active metabolite of carbamazepine increased; plasma concentration of carbamazepine increased by STRIPERMINOL; carbamazepine reduces plasma concentration of TIAGABINE and ZONISAMIDE; carbamazepine often reduces plasma concentration of TOPIMARTE
- Antifungals: plasma concentration of carbamazepine possibly increased by KETOCONAZOLE, also plasma concentration of ketoconazole possibly reduced; plasma concentration of carbamazepine possibly increased by FLUCONAZOLE and

**Appendix 1 Interactions**

**Calcium-channel Blockers (dihydropyridines)** see Calcium-channel Blockers

**Canagliflozin** see Antidiabetics

**Canakinumab**
- Anti-inflammatory: avoiding concomitant use of cytotoxics with CANAKINUMAB (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live VACCINES—avoid concomitant use

**Candesartan** see Angiotensin-II Receptor Antagonists

**Captopril**
- Cytotoxics: possibly antagonised by Captopril
- Antipsychotics: possibly antagonised by Captopril
- Antibacterials: possibly antagonised by Captopril
- Ulcer-healing Drugs: possibly antagonised by Captopril
- Pegfilgrastim: possibly antagonised by Captopril
- Folates: possibly antagonised by Captopril

**Cytotoxics**
- Antipsychotics: possibly antagonised by Cytotoxics
- Antibacterials: possibly antagonised by Cytotoxics
- Ulcer-healing Drugs: possibly antagonised by Cytotoxics

**Antiepileptics**
- Antidepressants: possibly antagonised by Antiepileptics
- Antiepileptics: possibly antagonised by Antidepressants

**Anticoagulants**
- Antibacterials: possibly antagonised by Anticoagulants
- Ulcer-healing Drugs: possibly antagonised by Anticoagulants

**Antifungals**
- Antibacterials: possibly antagonised by Antifungals
- Ulcer-healing Drugs: possibly antagonised by Antifungals

**Vaccines**
- Antibacterials: possibly antagonised by Vaccines
- Ulcer-healing Drugs: possibly antagonised by Vaccines

**Cannabis Extract**
- Antipsychotics: plasma concentration of cannabis extract reduced by Rifampicin—manufacturer of cannabis extract advises avoid concomitant use
- Antidepressants: plasma concentration of cannabis extract possibly reduced by Rifampicin—manufacturer of cannabis extract advises avoid concomitant use; possible increased risk of hypertension and tachycardia when cannabis extract given with Tricyclics
- Antiepileptics: plasma concentration of cannabis extract possibly reduced by Carbamazepine, Phenytoin, Primidone—manufacturer of cannabis extract advises avoid concomitant use
- Antipsychotics: plasma concentration of cannabis extract increased by Ketekonazole

**Capetabine**
- Allopurinol: manufacturer of capetabine advises avoid concomitant use with Allopurinol
- Antibacterials: metabolism of capetabine inhibited by Metronidazole (increased toxicity)
- Anticoagulants: capetabine enhances anticoagulant effect of Coumarins
- Antiepileptics: capetabine possibly inhibits metabolism of Phenytoin and Phenytoin (increased risk of toxicity)
- Cytotoxic: capetabine possibly increases plasma concentration of Eroltinib
- Filgrastim: neutropenia possibly exacerbated when capetabine given with Filgrastim
- Folates: toxicity of capetabine increased by Folic Acid—avoid concomitant use
- Liphagrilastim: neutropenia possibly exacerbated when capetabine given with Liphagrilastim
- Pegfilgrastim: neutropenia possibly exacerbated when capetabine given with Pegfilgrastim
- Ulcer-healing Drugs: metabolism of capetabine inhibited by Cimetidine (increased plasma concentration)

**Capreomycin**
- Antibacterials: increased risk of nephrotoxicity when capreomycin given with Colistimethate Sodium or Polymyxins; increased risk of nephrotoxicity and ototoxicity when capreomycin given with Aminoglycosides or Vancomycin
- Cytotoxic: increased risk of nephrotoxicity and ototoxicity when capreomycin given with Platinum Compounds
- Vaccines: antibiotics inactivate Oral Typhoid Vaccine—see under Typhoid Vaccine in BNF

**Captopril** see ACE Inhibitors

**Carbamazepine**
- Alcohol: CNS side-effects of carbamazepine possibly increased by Alcohol
- Aminophylline: carbamazepine accelerates metabolism of Aminophylline (reduced effect)
- Analgesics: effects of carbamazepine enhanced by Dextropropoxyphene; carbamazepine possibly accelerates metabolism of Fentanyl (reduced effect); carbamazepine reduces plasma concentration of Methadone; carbamazepine reduces effects of Tramadol; carbamazepine possibly accelerates metabolism of Paracetamol (also isolated reports of hepatotoxicity)
- Anthelmintics: carbamazepine reduces plasma concentration of Albendazole and Praziqantel—consider increasing albendazole and praziquantel dose when given for systemic infections
Carbamazepine

- **Antifungals**: carbamazepine possibly reduces plasma concentration of ITRACONAZOLE and POSaconazole; carbamazepine possibly reduces plasma concentration of voriconazole—avoid concomitant use; avoidance of carbamazepine advised by manufacturer of ARTENIOL with PIPERAZINE; anticonvulsant effect of antiepileptics antagonised by MELOQUINE
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ANTIPSYCHOTICS (convulsive threshold lowered); carbamazepine accelerates metabolism of MACITENTAN, EPLERENONE, and SIPERIDINE (reduced plasma concentration); carbamazepine reduces plasma concentration of ARIPIPRAZOLE (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); carbamazepine accelerates metabolism of CLOZAPINE (reduced plasma concentration), also avoid concomitant use of drugs with substantial potential for causing agranulocytosis; carbamazepine possibly reduces plasma concentration of LURASIDONE—avoid concomitant use; carbamazepine reduces plasma concentration of PALIPERIDONE
- Antivirals: avoidance of carbamazepine advised by manufacturer of BOCEPREVIR and RILPIRIVINE (plasma concentration of boceprevir and rilpivirine possibly reduced); carbamazepine possibly reduces plasma concentration of DAKLATAVIR and SIMERVIRI (manufacturer of daklatavir and simerviri advises avoid concomitant use); carbamazepine possibly reduces plasma concentration of DARUNAVIR, FOSAMPRENAVIR, LIPINAVIR, SAQUINAVIR and TIPRANAVIR; avoidance of carbamazepine advised by manufacturer of DOVITEGRAVIR, ELVITEGRAVIR, ETRAVIRINE, SOFOSBUVIR and TELAPREVIR; plasma concentration of both drugs reduced when carbamazepine given with EFAVIRENZ; carbamazepine possibly reduces plasma concentration of INIDINAVIR, also plasma concentration of carbamazepine possibly increased; carbamazepine reduces plasma concentration of NEVIRAPINE; plasma concentration of carbamazepine possibly increased by RITONAVIR
- Anxiolytics and Hypnotics: carbamazepine often reduces plasma concentration of CLONAZEPAM; carbamazepine reduces plasma concentration of MIDAZOLAM
- Aprepitant: carbamazepine possibly reduces plasma concentration of APREPITANT
- Avanafil: carbamazepine possibly reduces plasma concentration of AVANAFIL—manufacturer of avanafil advises avoid concomitant use
- Bupropion: carbamazepine reduces plasma concentration of BUPROPION
- Calcium-channel Blockers: carbamazepine reduces effects of FELODIPINE and IRADIPINE; carbamazepine probably reduces effects of DIHYDROPYRIDINES, NICARDIPINE and NIFEDIPINE; avoidance of carbamazepine advised by manufacturer of NIMODIPINE (plasma concentration of nimodipine possibly reduced); effects of carbamazepine enhanced by DILTIAZEM and VERAPAMIL
- Cannabis Extract: carbamazepine possibly reduces plasma concentration of CANNABIS EXTRACT—manufacturer of cannabis extract advises avoid concomitant use
- Ciclosporin: carbamazepine accelerates metabolism of CYCLOSPORIN (reduced plasma concentration)
- Clopidogrel: carbamazepine possibly reduces antiplatelet effect of CLOPIDOGREL
- Cobicistat: carbamazepine possibly reduces plasma concentration of COBICISTAT—manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: carbamazepine accelerates metabolism of CORTICOSTEROIDS (reduced effect)
- Cytotoxics: carbamazepine possibly decreases plasma concentration of AXTINIB (increase of axitinib—consult axitinib product literature); carbamazepine possibly reduces plasma concentration of BORTEZOMIB, Bosutinib, Crizotinib, Ibritinib, IDELASIB and PONATINIB—manufacturer of CARBAMAZEPINE
- **Cytotoxics**: carbamazepine possibly reduces plasma concentration of CICLOSPORIN—consider increasing dose of cyclosporin
- **Antimalarials**: avoidance of carbamazepine advised by manufacturer of ARTENIOL with PIPERAZINE; carbamazepine possibly reduces plasma concentration of CASPOFUNGIN—consider increasing dose of caspofungin
- **Antimicrobials**: avoidance of carbamazepine advised by manufacturer of ARTENIOL with PIPERAZINE; carbamazepine possibly reduces plasma concentration of CAFZITAXEL, DABRAFENIB, GEFITINIB and VEMURAFENIB; avoidance of carbamazepine advised by manufacturer of DASITANIB, VANDETANIB and VISMODEGIB (plasma concentration of dasatinib, vandetanib and vismodegib possibly reduced); carbamazepine reduces plasma concentration of IMATIB and LAPATINIB—avoid concomitant use; carbamazepine possibly reduces plasma concentration of Eribulin; carbamazepine reduces plasma concentration of IPRITOCAN and its active metabolite; manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when carbamazepine given with PROCARBAZINE
- **Diuretics**: increased risk of hyponatraemia when carbamazepine given with DIURETICS; plasma concentration of carbamazepine possibly increased by manufacturer of ETALOLAMIDE; carbamazepine reduces plasma concentration of FINGOLIMOD
- Fosaprepitant: carbamazepine possibly reduces plasma concentration of FOSAPREPIANT
- Hormone Antagonists: carbamazepine possibly reduces plasma concentration of ABRATERONE—manufacturer of abiraterone advises avoid concomitant use; avoidance of carbamazepine advised by manufacturer of DABRAFENIB and VEMURAFENIB; carbamazepine reduces plasma concentration of TOREMIFENE (reduced plasma concentration)
- Ivermectin: avoidance of carbamazepine advised by manufacturer of IVACAFOR—manufacturer of ivermectin advises avoid concomitant use
- Lipid-regulating Drugs: carbamazepine reduces plasma concentration of SIMVASTATIN—consider increasing dose of simvastatin
- Lithium: neurotoxicity may occur when carbamazepine given with LITHIUM without increased plasma concentration of lithium
- Macitentan: avoidance of carbamazepine advised by manufacturer of MACITENTAN
- Muscle Relaxants: carbamazepine antagonises muscle relaxant effect of NON-DEPOLARISING MUSCLE RELAXANTS (accelerated recovery from neuromuscular blockade)
- Oestrogens: carbamazepine accelerates metabolism of OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, vaginal rings—see Contraceptive Interactions in BNF)
- Orlistat: possible increased risk of convulsions when carbamazepine given with ORLISTAT
- Progestogens: carbamazepine accelerates metabolism of PROGESTOGENS (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)
- Retinoids: plasma concentration of carbamazepine possibly reduced by ISORETINOIN
- Roflumilast: carbamazepine possibly inhibits effects of ROFLUMILAST (manufacturer of roflumilast advises avoid concomitant use)
- Theophylline: carbamazepine accelerates metabolism of THEOPHYLLINE (reduced effect)
- Thyroid Hormones: carbamazepine accelerates metabolism of THYROID HORMONES (may increase requirements for thyroid hormones in hypothyroidism)
- Tirofiban: carbamazepine accelerates metabolism of TIBOLONE (reduced plasma concentration)
- Ticagrelor: carbamazepine possibly reduces plasma concentration of TICAGRELOR
Cardiac Glycosides (continued)

- Cardiotoxic: increased risk of hypokalaemia when cardiac glycosides given with CORTICOSTEROIDS
- Cytotoxics: absorption of digoxin tablets possibly reduced by BLOMYCIN, CARMUSTINE, CYCLOPHOSPHAMIDE, CYTARABINE, DOXORUBICIN, MELPHALAN, METHOTREXATE, PROCARBAZINE and VINCISTINE; possible increased risk of bradycardia when digoxin given with CRIZOTINIB: manufacturer of digoxin advises give IBUTINIB at least 6 hours before or after ibritinib; plasma concentration of digoxin increased by VANDENAB—possible increased risk of bradycardia
- Diuretics: increased cardiac toxicity with cardiac glycosides if hypokalaemia occurs with ACETAZOLAMIDE, LOOP DIURETICS or THIAZIDES AND RELATED DIURETICS; plasma concentration of digoxin possibly increased by POTASSIUM CANRENOATE; plasma concentration of digoxin increased by SPIRONOLACTONE
- Ivacafarin: plasma concentration of digoxin increased by IVACAFTOR
- Lenalidomide: plasma concentration of digoxin possibly increased by LENALIDOMIDE
- Lipid-regulating Drugs: absorption of cardiac glycosides possibly reduced by COLESTIPOI and COLESTYRAMINE; plasma concentration of digoxin possibly increased by ATORVASTATIN
- Mirabege: plasma concentration of digoxin increased by MIRAPEGON—reduce initial dose of digoxin
- Muscle Relaxants: risk of ventricular arrhythmias when cardiac glycosides given with SUXAMETHONIUM; possible increased risk of bradycardia when cardiac glycosides given with TIZANIDINE
- Penicillamine: plasma concentration of digoxin possibly reduced by PENICILLAMINE
- Ranolazine: plasma concentration of digoxin increased by RANOLAZINE
- Sympathomimetics, Beta—plasma concentration of digoxin possibly reduced by SALBUTAMOL
- Ticagrelor: plasma concentration of digoxin increased by TICAGRELOR
- Tolvaptan: plasma concentration of digoxin increased by TOLVAPATAN (increased risk of toxicity)
- Ulcer-healing Drugs: plasma concentration of digoxin possibly slightly increased by PROTON PUMP INHIBITORS; absorption of cardiac glycosides possibly reduced by SUCRALFATE
- Ulipristal: manufacturer of ulipristal advises give digoxin at least 1.5 hours before or after ULIPRISTAL

Carmustine

- Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
- Cardiac Glycosides: carmustine possibly reduces absorption of DIGOXIN tablets
- Ulcer-healing Drugs: myelosuppressive effects of carmustine possibly enhanced by CIMETIDINE

Carcinoids

- Antibacterials: plasma concentration of caspofungin possibly reduced by CARBAMAZEPINE, FOSPHENTOIN and PHENYTOIN; plasma concentration of digoxin increased by caspofungin reduces plasma concentration of caspofungin possibly increased by EFAVIREN and NEVIRAPINE—consider increasing dose of caspofungin
- Antivirals: plasma concentration of caspofungin possibly increased by CYCLOSPORIN (manufacturer of caspofungin recommends monitoring liver enzymes)
- Corticosteroids: plasma concentration of caspofungin possibly reduced by DEXAMETHASONE—consider increasing dose of caspofungin
- Tacrolimus: caspofungin reduces plasma concentration of TACROLIMUS

Catumaxomab

- Antibacterials: plasma concentration of caspofungin initially increased and then reduced by RIFAMPICIN (consider increasing dose of caspofungin)
- Antiepileptics: plasma concentration of caspofungin possibly reduced by CARBAMAZEPINE, FOSPHENTOIN and PHENYTOIN—consider increasing dose of caspofungin
- Antivirals: plasma concentration of caspofungin possibly increased by COBICISTAT—reduce initial dose of digoxin
- Colchicine: possible increased risk of myopathy when digoxin given with COLCHICINE
**Chloroquine (continued)**
- Agalsidase Alfa and Beta: chloroquine possibly inhibits effects of AGALSIDASE ALFA AND BETA (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- Antacids: absorption of chloroquine reduced by ANTACIDS
- Anthelmintics: chloroquine reduces plasma concentration of PRAZIQUANTEL—consider increasing praziquantel dose when given for systemic infections
- Anti-arrhythmics: increased risk of ventricular arrhythmias when chloroquine given with AMIODARONE—avoid concomitant use
- Antibacterials: increased risk of ventricular arrhythmias when chloroquine given with MOXIFLOXACIN—avoid concomitant use
- Antidepressants: possible increased risk of ventricular arrhythmias when chloroquine given with CITALOPRAM and ESCITALOPRAM
- Antimalarials: possible increased risk of ventricular arrhythmias when chloroquine given with DROPERIDOL—avoid concomitant use
- Cardiac Glycosides: chloroquine possibly increases plasma concentration of DIGOXIN
- Ciclosporin: chloroquine increases plasma concentration of CICLOSPORIN (increased risk of toxicity)
- Cytotoxics: possible increased risk of ventricular arrhythmias when chloroquine given with BSOSUNIB
- Histamine: avoidance of antimalarial advised by manufacturer of HISTAMINE
- Lanthanum: absorption of chloroquine possibly reduced by LANTHANUM (give at least 2 hours apart)
- Larondase: chloroquine possibly inhibits effects of LARONIDASE (manufacturer of larondase advises avoid concomitant use)
- Parasympathomimetics: chloroquine has potential to increase symptoms of myasthenia gravis and thus diminish effect of NEOSTIGMINE and PYRIDOSTIGMINE
- Ulcer-healing Drugs: metabolism of chloroquine inhibited by CIMETIDINE (increased plasma concentration)
- Vaccines: antimalarials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

**Chlorothiazide** see Diuretics
**Chlorphenamine** see Antihistamines
**Chlorpromazine** see Antipsychotics
**Ciclesonide** see Corticosteroids
**Ciclosporin**
- ACE Inhibitors: increased risk of hyperkalaemia when ciclosporin given with ACE INHIBITORS
- Aliskiren: ciclosporin increases plasma concentration of ALISKIREN—avoid concomitant use
- Allopurinol: plasma concentration of ciclosporin possibly increased by ALLOPURINOL (risk of nephrotoxicity)
- Ambrisentan: ciclosporin increases plasma concentration of AMBRISENTAN (see under Ambrisentan, p. 162)
- Analgesics: increased risk of nephrotoxicity when ciclosporin given with NSAIDS; ciclosporin increases plasma concentration of DICLOFENAC (halve dose of diclofenac)
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when ciclosporin given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Anti-arrhythmics: plasma concentration of ciclosporin possibly increased by AMIODARONE and PROPafenone
- Antibacterials: metabolism of ciclosporin inhibited by CLARITHROMYCIN and ERTHROMYCIN (increased plasma concentration); metabolism of ciclosporin accelerated by RAFPICIN (reduced plasma concentration); plasma concentration of ciclosporin possibly reduced by SULFADIAZINE; increased risk of nephrotoxicity when ciclosporin given with AMINGLYCOSIDES, POLYMIXINS, QUINOLONES, SULFONAMIDES or VANCOMYCIN; plasma concentration of ciclosporin possibly increased by...
Appendix 1 Interactions 1175

Ciclosporin
- Antibacterials (continued)
  - CHLORAMPHENICOL and THIOHIDRAZINE; increased risk of myopathy when ciclosporin given with DAPTOMYCIN (preferably avoid concomitant use); avoidance of ciclosporin advised by manufacturer of FIDAXOMICIN; metabolism of ciclosporin possibly inhibited by MACROLIDES (increased plasma concentration); increased risk of nephrotoxicity when ciclosporin given with TRIMETHOPRIM, also plasma concentration of ciclosporin reduced by intravenous trimethoprim
  - Anticoagulants: ciclosporin possibly increases plasma concentration of dabigatran—manufacturer of dabigatran advises avoid concomitant use
  - Antidepressants: plasma concentration of ciclosporin reduced by ST JOHN’S WORT—avoid concomitant use
  - Anti-diabetics: ciclosporin possibly enhances hypoglycaemic effect of repaglinide
  - Antiepileptics: metabolism of ciclosporin accelerated by CARBAMAZEPINE, OXCARBAZEPINE, PHENOBARBITAL, PHENYTOIN, and PRIMIDONE (reduced plasma concentration); plasma concentration of ciclosporin possibly reduced by oxcarbazepine
  - Antifungals: metabolism of ciclosporin inhibited by FLUCONAZOLE, ITRACONAZOLE, KETOCONAZOLE, POSaconazole and voriconazole (increased plasma concentration); metabolism of ciclosporin possibly inhibited by MICONAZOLE (increased plasma concentration); increased risk of nephrotoxicity when ciclosporin given with voriconazole; ciclosporin inhibits plasma concentration of caspofungin (manufacturer of caspofungin recommends monitoring liver enzymes); plasma concentration of ciclosporin possibly reduced by griseofulvin and terbinafine; plasma concentration of ciclosporin possibly increased by miconazole
  - Antimalarials: plasma concentration of ciclosporin increased by chloroquine and hydroxychloroquine (increased risk of toxicity)
  - Antimuscarinics: avoidance of ciclosporin advised by manufacturer of darifenacin
  - Antivirals: increased risk of nephrotoxicity when ciclosporin given with ACICLOVIR or VALACICLOVIR; plasma concentration of ciclosporin possibly increased by atazanavir and ritonavir; plasma concentration of both drugs may increase when ciclosporin given with saquinavir; plasma concentration of both drugs increased when ciclosporin given with telaprevir (reduce dose of ciclosporin)
  - Betablockers: plasma concentration of ciclosporin increased by carvedilol
  - Bile Acids: absorption of ciclosporin increased by ursodeoxycholic acid
  - Bosentan: ciclosporin increases plasma concentration of bosentan (also plasma concentration of ciclosporin reduced—avoid concomitant use)
  - Calcium-channel Blockers: combination of ciclosporin with lercanidipine may increase plasma concentration of either drug (or both)—avoid concomitant use; plasma concentration of ciclosporin increased by diltiazem, nicardipine and verapamil; ciclosporin possibly increases plasma concentration of nifedipine (increased risk of toxicity including gingival hyperplasia)
  - Cardiac Glycosides: ciclosporin increases plasma concentration of digoxin (increased risk of toxicity)
  - Colchicine: possible increased risk of nephrotoxicity and myotoxicity when ciclosporin given with colchicine—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
  - Colestilan: manufacturer of colestilan advises give ciclosporin at least 1 hour before or 3 hours after colestilan
  - Corticosteroids: plasma concentration of ciclosporin increased by high-dose methylprednisolone (risk of convulsions); ciclosporin increases plasma concentration of prednisolone
  - Cytoxics: increased risk of nephrotoxicity when ciclosporin given with melphalan; increased risk of neurotoxicity when ciclosporin given with doxorubicin; ciclosporin increases plasma concentration of epirubicin and idarubicin; ciclosporin reduces excretion of mitoxantrone (increased plasma concentration); risk of toxicity when ciclosporin given with methotrexate; ciclosporin possibly increases the plasma concentration of atafinib—manufacturer of atafinib advises separating administration of ciclosporin by 6 to 12 hours; caution with ciclosporin advised by manufacturer of crizotinib; ciclosporin increases plasma concentration of everolimus (consider reducing the dose of everolimus—consult everolimus product literature); plasma concentration of ciclosporin possibly increased by imatinib; in vitro studies suggest a possible interaction between ciclosporin and docetaxel (consult docetaxel product literature); ciclosporin possibly increases plasma concentration of etoposide (increased risk of toxicity)
  - Dextrazoxane: increased risk of immunosuppression with ciclosporin advised by manufacturer of dextrazoxane
  - Diuretics: plasma concentration of ciclosporin possibly increased by acacetolamide; increased risk of hyperkalaemia when ciclosporin given with potassium-sparing diuretics and aldosterone antagonists; increased risk of nephrotoxicity and possibly hypermagnesaemia when ciclosporin given with thiazides and related diuretics
  - Grapefruit juice: plasma concentration of ciclosporin increased by grapefruit juice (increased risk of toxicity)
  - Hormone Antagonists: metabolism of ciclosporin inhibited by danazol (increased plasma concentration); plasma concentration of ciclosporin reduced by lanreotide and octreotide; plasma concentration of ciclosporin possibly reduced by pasireotide
  - Lenvadomid: ciclosporin possibly increases plasma concentration of lenalidomide (increased risk of toxicity)
  - Lipid-regulating Drugs: absorption of ciclosporin reduced by colesvevalam; increased risk of renal impairment when ciclosporin given with bezafibrate or fenofibrate; increased risk of myopathy when ciclosporin given with atovastatin (see under atorvastatin, p. 179); increased risk of myopathy when ciclosporin given with fluvatatin or pravastatin; increased risk of myopathy when ciclosporin given with rosuvastatin or simvastatin (avoid concomitant use); plasma concentration of both drugs increased when ciclosporin given with ezetimibe; separating administration from ciclosporin by 12 hours advised by manufacturer of lonidamine
  - Lipid-modifying Drugs: possible increased risk of nephrotoxicity when ciclosporin given with manitol
  - Metoclopramide: plasma concentration of ciclosporin increased by metoclopramide
  - Mifamurtide: avoidance of ciclosporin advised by manufacturer of mifamurtide
  - Modafinil: plasma concentration of ciclosporin reduced by modafinil
  - Oestrogens: plasma concentration of ciclosporin possibly increased by oestrogens
  - Orlistat: absorption of ciclosporin possibly reduced by orlistat
  - Potassium Salts: increased risk of hyperkalaemia when ciclosporin given with potassium salts; increased risk of myopathy when ciclosporin given with progestogens; plasma concentration of ciclosporin possibly increased by progestogens; ranolazine: plasma concentration of both drugs may increase when ciclosporin given with ranolazine; sevelamer: plasma concentration of ciclosporin possibly reduced by sevelamer
  - Sirolimus: ciclosporin increases plasma concentration of sirolimus
  - Sulfipyrazone: plasma concentration of ciclosporin reduced by sulfipyrazone
  - Tacrolimus: increased risk of nephrotoxicity—avoid concomitant use
Ciclosporin (continued)
» Ticagrelor: ciclosporin increases plasma concentration of TICAGRELOR
» Ulcer-healing Drugs: plasma concentration of ciclosporin possibly increased by Cimetidine; plasma concentration of ciclosporin possibly affected by OMEPRAZOLE
» Vitamins: plasma concentration of ciclosporin possibly affected by VITAMIN E

Clarithromycin
» Antibacterials: plasma concentration of clarithromycin possibly increased by CAVIMETHINE (see under Clarithromycin, p. 206); plasma concentration of clarithromycin increased by RHYTHROMYCIN (see under Ciprofibrate, p. 206)
» Antifungals: plasma concentration of clarithromycin possibly increased by Ketoconazole (see under Clarithromycin, p. 206); plasma concentration of clarithromycin possibly increased by ITRACONAZOLE (see under Clarithromycin, p. 206)
» Ulcer-healing Drugs: plasma concentration of clarithromycin increased by OMEPRAZOLE (see under Ciprofibrate, p. 206)

Clonidine (continued)
» Anesthetics, General: enhanced hypotensive effect when clonidine given with GENERAL ANAESTHETICS
» Analgesics: hypotensive effect of clonidine antagonised by NSAIDS
» Antiglaucoma Agents: hypotensive effect of clonidine antagonised by TIMAZEPANE; hypotensive effect of clonidine antagonised by TRICYCLICS, also increased risk of hypertension on clonidine withdrawal
» Antipsychotics: enhanced hypotensive effect when clonidine given with PHENOTHIAZINES
» Antidepressants: enhanced hypotensive effect when clonidine given with ANTIHISTAMINES and HYPONOTICS
» Beta-blockers: increased risk of withdrawal hypertension when clonidine given with BETA-BLOCKERS (withdraw beta-blockers several days before slowly withdrawing clonidine)
» Calcium-channel Blockers: enhanced hypotensive effect when clonidine given with CALCIUM-CHANNEL BLOCKERS
» Corticosteroids: hypotensive effect of clonidine antagonised by CORTICOSTEROIDS
» Cytostatics: possible increased risk of bradycardia when clonidine given with CRIZOTINIB
» Diazoxide: enhanced hypotensive effect when clonidine given with DIAZoxide
» Diuretics: enhanced hypotensive effect when clonidine given with DIURETICS
» Dopaminergics: enhanced hypotensive effect when clonidine given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA
» Histamine: avoidance of clonidine advised by manufacturer of HISTAMINE
» Methylodopa: enhanced hypotensive effect when clonidine given with METHYLODOPA
» Moxisylyte: enhanced hypotensive effect when clonidine given with MOXYSLYTE
» Monoxidine: enhanced hypotensive effect when clonidine given with MONOXIDINE
» Muscle Relaxants: enhanced hypotensive effect when clonidine given with BACLOFEN or TIZANIDINE
» Nitrates: enhanced hypotensive effect when clonidine given with NITRATES
» Oestrogens: hypotensive effect of clonidine antagonised by OESTROGENS
» Prostaglandins: enhanced hypotensive effect when clonidine given with ALPROSTADIL
» Symptomametiotics: possible risk of hypertension when clonidine given with ADRENERGIC NEURONE BLOCKERS; hypotensive effect of clonidine antagonised by WARFARIN; antiepileptic action of clonipiprol enhances anticonvulsant effect of CLONIPIPRO and PHENITONINE; increased risk of bleeding when clonidine given with WARFARIN
» Antidepressants: antiepileptic effect of clonidine possibly reduced by FLUOXETINE, FLUOXAMINE and MOLOBEMIDE
» Antiepileptics: antiepileptic effect of clonidine possibly reduced by CARBAMAZEPINE and OXCARBAZEPINE
» Antifungals: antiepileptic effect of clonidine possibly reduced by FLUCONAZOLE, ITRACONAZOLE, KETOCONAZOLE and VORICONAZOLE
Co-beneldopa (continued)

- Vasodilator Antihypertensives: enhanced hypotensive effect when co-beneldopa given with HYDRAZALINE, MINOXIDIL or SODIUM NITROPRUSSIDE

Cobicistat
- Alpha-blockers: cobicistat possibly increases plasma concentration of ALIFUZOSIN—manufacturer of cobicistat advises avoid concomitant use
- Anti-arrhythmics: cobicistat possibly increases plasma concentration of AMIODARONE—manufacturer of cobicistat advises avoid concomitant use
- Antibacterials: plasma concentration of cobicistat reduced by RIFABUTIN (adjust dose—consult product literature); plasma concentration of cobicistat possibly reduced by RIFAMPICIN—manufacturer of cobicistat advises avoid concomitant use
- Anticoagulants: avoidance of cobicistat advised by manufacturer of APIXABAN; cobicistat possibly enhances anticoagulant effect of Rivaroxaban—avoid concomitant use
- Antidepressants: plasma concentration of cobicistat possibly reduced by ST JOHN’S WORT—manufacturer of cobicistat advises avoid concomitant use
- Antiepileptics: plasma concentration of cobicistat possibly reduced by CARBAMAZEPINE, EPSOPHENYTOIN, PHENOBARBITAL, PHENYTIN and PRIMIDONE—manufacturer of cobicistat advises avoid concomitant use
- Antifungals: cobicistat possibly increases plasma concentration of ITRACONAZOLE and KETOCONAZOLE—manufacturer of cobicistat advises reduce dose of itraconazole and ketoconazole
- Antipsychotics: cobicistat possibly increases plasma concentration of LURASIDONE—avoid concomitant use; cobicistat possibly increases plasma concentration of PIMOXIDE—manufacturer of cobicistat advises avoid concomitant use
- Antivirals: manufacturer of cobicistat advises avoid concomitant use with BOCEPREVIR; cobicistat possibly increases the plasma concentration of DACLATASVIR—reduce dose of daclatasvir (see under Daclatasvir, p. 544); cobicistat possibly increases plasma concentration of MARAVIROC (reduce dose of maraviroc); avoidance of cobicistat advised by manufacturer of NEVIRAPINE; cobicistat possibly increases plasma concentration of SIMEPREVIR—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs reduced when cobicistat given with TIPRANAVIR (avoid concomitant use)
- Anxiolytics and Hypnotics: manufacturer of cobicistat advises avoid concomitant use with ORIOL and MIDAZOLAM; Bosantan: manufacturer of cobicistat advises avoid concomitant use with BOSENTAN
- Cardiac Glycosides: cobicistat possibly increases plasma concentration of DIGOXIN—reduce initial dose of digoxin
- Cytoxicics: cobicistat possibly increases the plasma concentration of IBRUTINIB—reduce dose of ibritunib (see under Ibritunib, p. 809)
- Domperidone: possible increased risk of ventricular arrhythmias when cobicistat given with DOMPERIDONE—avoid concomitant use
- Ergot Alkaloids: cobicistat possibly increases plasma concentration of ERGOT ALKALOIDS—manufacturer of cobicistat advises avoid concomitant use
- Lipid-regulating Drugs: cobicistat possibly increases plasma concentration of ATORVASTATIN—manufacturer of cobicistat advises reduce dose of atorvastatin; manufacturer of cobicistat advises avoid concomitant use with SIMVASTATIN
- Estrogens: cobicistat accelerates metabolism of OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
- Progestogens: cobicistat increases plasma concentration of NORGESTIMATE
- Sildenafil: cobicistat possibly increases plasma concentration of SILDAFIL—manufacturer of cobicistat advises avoid concomitant use of sildenafil for pulmonary arterial
Interactions

Colchicine (continued)

- Antibiotics: possible increased risk of colchicine toxicity when given with: azithromycin, clarithromycin, erythromycin and telithromycin—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Antifungals: possible increased risk of colchicine toxicity when given with: itraconazole and ketoconazole—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Antivirals: possible increased risk of colchicine toxicity when given with: atazanavir, indinavir, ritonavir and telaprevir—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Calcium-channel blockers: possible increased risk of colchicine toxicity when given with: diltiazem and verapamil—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Cardiac glycosides: possible increased risk of myopathy when colchicine given with: digoxin
- Ciclosporin: possible increased risk of nephrotoxicity and myotoxicity when colchicine given with: ciclosporin—suspend or reduce dose of ciclosporin (avoid concomitant use in hepatic or renal impairment)
- Grapefruit juice: possible increased risk of colchicine toxicity when given with: grapefruit juice
- Lipid-regulating Drugs: possible increased risk of myopathy when colchicine given with: fibrates or statins

Colecaciferol see Vitamins

Colestevan

NOTE Other drugs should be taken at least 4 hours before or after colesvelam to reduce possible interference with absorption

- Anti-diabetics: colesvelam reduces absorption of glimepiride and glipizide; colesvelam reduces absorption of glimepiride—manufacturer of glimepiride advises give at least 4 hours before colesvelam; manufacturer of canagliflozin advises give bale acid sequestrants at least 1 hour after or 4–6 before canagliflozin
- Anti-epileptics: colesvelam possibly reduces absorption of fosphenytoin and phenytoin
- Cyclosporin: colesvelam reduces absorption of ciclosporin
- Lipid-regulating Drugs: bile acid sequestrants possibly reduce absorption of lomitapide (give at least 4 hours apart)
- Oestrogens: colesvelam reduces absorption of ethinylestradiol
- Thyroid Hormones: colesvelam reduces absorption of levothyroxine

Colestilan

NOTE Other drugs should be taken at least 1 hour before or 3 hours after colestilan to reduce possible interference with absorption

- Anti-diabetics: colesvelam reduces absorption of glimepiride and glipizide; colesvelam reduces absorption of glimepiride—manufacturer of glimepiride advises give at least 4 hours before colesvelam; manufacturer of canagliflozin advises give bile acid sequestrants at least 1 hour after or 4–6 before canagliflozin
- Anti-epileptics: colesvelam reduces absorption of fosphenytoin and phenytoin
- Cyclosporin: colesvelam reduces absorption of ciclosporin
- Lipid-regulating Drugs: bile acid sequestrants possibly reduce absorption of lomitapide (give at least 4 hours apart)
- Oestrogens: colesvelam reduces absorption of ethinylestradiol
- Thyroid Hormones: colesvelam reduces absorption of levothyroxine

Colestipol

NOTE Other drugs should be taken at least 1 hour before or 4–6 hours after colestipol to reduce possible interference with absorption

- Anti-diabetics: colestipol possibly reduces absorption of tetracycline
- Anti-epileptics: manufacturer of canagliflozin advises give bile acid sequestrants at least 1 hour after or 4–6 before canagliflozin
- Cardiac glycosides: colestipol possibly reduces absorption of cardiac glycosides
- Diuretics: colestipol reduces absorption of thiazides and related diuretics (give at least 2 hours apart)
Colestipol (continued)
▶ Lipid-regulating Drugs: bile acid sequestrants possibly reduce
absorption of LOMITAPIDE (give at least 4 hours apart)
▶ Thyroid Hormones: colestipol reduces absorption of THYROID
HORMONES

Colestyramine
NOTE Other drugs should be taken at least 1 hour before or
4–6 hours after colestyramine to reduce possible interference
with absorption
▶ Analgesics: colestyramine increases the excretion of
MELOXICAM ; colestyramine reduces absorption of
PARACETAMOL
▶

Antibacterials: colestyramine possibly reduces absorption of
TETRACYCLINE ; colestyramine antagonises effects of oral
VANCOMYCIN

Anticoagulants: colestyramine may enhance or reduce
anticoagulant effect of l COUMARINS and l PHENINDIONE
▶ Antidiabetics: colestyramine possibly enhances hypoglycaemic
effect of ACARBOSE ; manufacturer of canagliflozin advises
give bile acid sequestrants at least 1 hour after or 4–6 before
l

CANAGLIFLOZIN
▶

Antiepileptics: colestyramine possibly reduces absorption of
SODIUM VALPROATE and VALPROIC ACID
▶ Bile Acids: colestyramine possibly reduces absorption of BILE
ACIDS
▶
▶
▶

▶
▶

Cardiac Glycosides: colestyramine possibly reduces absorption
of CARDIAC GLYCOSIDES
Diuretics: colestyramine reduces absorption of THIAZIDES AND
RELATED DIURETICS (give at least 2 hours apart)
Leflunomide: colestyramine significantly decreases effect of
LEFLUNOMIDE (enhanced elimination)—avoid unless drug
elimination desired
Lipid-regulating Drugs: bile acid sequestrants possibly reduce
absorption of LOMITAPIDE (give at least 4 hours apart)
Mycophenolate: colestyramine reduces absorption of
MYCOPHENOLATE

▶

Raloxifene: colestyramine reduces absorption of RALOXIFENE
(manufacturer of raloxifene advises avoid concomitant
administration)
▶ Teriflunomide: colestyramine significantly decreases effect of
TERIFLUNOMIDE (enhanced elimination)—avoid unless drug
elimination desired
▶ Thyroid Hormones: colestyramine reduces absorption of
THYROID HORMONES
▶

Vitamins: colestyramine possibly reduces absorption of
CALCITRIOL (give at least 1 hour before or 4 to 6 hours after
colestyramine)
Colistimethate Sodium see Polymyxins
Contraceptives, oral see Oestrogens and Progestogens
Corticosteroids
NOTE Interactions do not generally apply to corticosteroids
used for topical action (including inhalation) unless specified
▶ ACE Inhibitors: corticosteroids antagonise hypotensive effect
of ACE INHIBITORS
▶ Adrenergic Neurone Blockers: corticosteroids antagonise
hypotensive effect of ADRENERGIC NEURONE BLOCKERS
l Aldesleukin: avoidance of corticosteroids advised by
manufacturer of l ALDESLEUKIN
▶ Alpha-blockers: corticosteroids antagonise hypotensive effect
of ALPHA-BLOCKERS
▶ Aminophylline: increased risk of hypokalaemia when
corticosteroids given with AMINOPHYLLINE
▶ Analgesics: increased risk of gastro-intestinal bleeding and
ulceration when corticosteroids given with NSAID S ; increased
risk of gastro-intestinal bleeding and ulceration when
corticosteroids given with ASPIRIN , also corticosteroids
reduce plasma concentration of salicylate
▶ Angiotensin-II Receptor Antagonists: corticosteroids antagonise
hypotensive effect of ANGIOTENSIN-II RECEPTOR ANTAGONISTS
▶ Antacids: absorption of deflazacort reduced by ANTACIDS
▶ Anthelmintics: dexamethasone increases plasma concentration
of active metabolite of ALBENDAZOLE ; continuous use of
dexamethasone possibly reduces plasma concentration of
PRAZIQUANTEL
l

Antibacterials: plasma concentration of methylprednisolone
possibly increased by CLARITHROMYCIN ; metabolism of

Corticosteroids
l Antibacterials (continued)
corticosteroids possibly inhibited by ERYTHROMYCIN ;
metabolism of methylprednisolone inhibited by
ERYTHROMYCIN ; corticosteroids possibly reduce plasma
concentration of ISONIAZID ; metabolism of corticosteroids
accelerated by l RIFAMYCINS (reduced effect)
l Anticoagulants: corticosteroids may enhance or reduce
anticoagulant effect of l COUMARINS (high-dose
corticosteroids enhance anticoagulant effect); corticosteroids
may enhance or reduce anticoagulant effect of PHENINDIONE
▶ Antidiabetics: corticosteroids antagonise hypoglycaemic effect
of ANTIDIABETICS
l Antiepileptics: metabolism of corticosteroids accelerated by
l CARBAMAZEPINE , l FOSPHENYTOIN , l PHENOBARBITAL ,
l PHENYTOIN and l PRIMIDONE (reduced effect)
l Antifungals: metabolism of corticosteroids possibly inhibited
by ITRACONAZOLE and KETOCONAZOLE ; plasma concentration of
active metabolite of ciclesonide increased by
l KETOCONAZOLE ; plasma concentration of inhaled
mometasone increased by KETOCONAZOLE ; plasma
concentration of inhaled and oral (and possibly also
intranasal and rectal) budesonide increased by
l ITRACONAZOLE and l KETOCONAZOLE ; inhaled fluticasone
plasma concentration is possibly increased by KETOCONAZOLE ;
metabolism of methylprednisolone inhibited by
KETOCONAZOLE ; increased risk of hypokalaemia when
corticosteroids given with l AMPHOTERICIN —avoid
concomitant use unless corticosteroids needed to control
reactions; plasma concentration of inhaled fluticasone
increased by ITRACONAZOLE ; metabolism of
methylprednisolone possibly inhibited by ITRACONAZOLE ;
dexamethasone possibly reduces plasma concentration of
CASPOFUNGIN —consider increasing dose of caspofungin
l Antivirals: dexamethasone possibly reduces plasma
concentration of DACLATASVIR and SIMEPREVIR —manufacturer
of daclatasvir and simeprevir advises avoid concomitant use;
dexamethasone possibly reduces plasma concentration of
INDINAVIR , LOPINAVIR , SAQUINAVIR and TELAPREVIR ; avoidance
of dexamethasone (except when given as a single dose)
advised by manufacturer of l RILPIVIRINE ; plasma
concentration of inhaled and intranasal fluticasone increased
by l RITONAVIR —increased risk of adrenal suppression;
plasma concentration of budesonide (including inhaled,
intranasal, and rectal budesonide) possibly increased by
l RITONAVIR —increased risk of adrenal suppresion; plasma
concentration of corticosteroids possibly increased by
l RITONAVIR —increased risk of adrenal suppresision; plasma
concentration of inhaled and intranasal budesonide and
fluticasone possibly increased by TELAPREVIR
▶ Aprepitant: metabolism of dexamethasone and
methylprednisolone inhibited by APREPITANT (reduce dose of
dexamethasone and methylprednisolone)
▶ Beta-blockers: corticosteroids antagonise hypotensive effect of
BETA-BLOCKERS
▶

Calcium Salts: corticosteroids reduce absorption of CALCIUM
SALTS

▶

Calcium-channel Blockers: corticosteroids antagonise
hypotensive effect of CALCIUM-CHANNEL BLOCKERS ; plasma
concentration of methylprednisolone increased by DILTIAZEM
▶ Cardiac Glycosides: increased risk of hypokalaemia when
corticosteroids given with CARDIAC GLYCOSIDES
l Ciclosporin: high-dose methylprednisolone increases plasma
concentration of l CICLOSPORIN (risk of convulsions); plasma
concentration of prednisolone increased by CICLOSPORIN
▶ Clonidine: corticosteroids antagonise hypotensive effect of
CLONIDINE
▶

Cytotoxics: possible increased risk of hepatoxicity when
dexamethasone given with high-dose METHOTREXATE ;
dexamethasone possibly decreases plasma concentration of
AXITINIB (increase dose of axitinib—consult axitinib product
literature); dexamethasone possibly reduces plasma
concentration of CABOZANTINIB —manufacturer of
cabozantinib advises avoid concomitant use
▶ Diazoxide: corticosteroids antagonise hypotensive effect of
DIAZOXIDE

Interactions | Appendix 1

Appendix 1 Interactions 1179

BNF 70


Interactions

Corticosteroids (continued)

- Diuretics: corticosteroids antagonise diuretic effect of DIURETICS; increased risk of hypokalaemia when corticosteroids given with ACE-IZAMIDE, LOOP DIURETICS or RELATED DIURETICS
- Fosaprepitant: metabolism of dexamethasone and methylprednisolone inhibited by FOSAPREPITANT (reduce dose of dexamethasone and methylprednisolone)
- Grapefruit juice: plasma concentration of oral budesonide increased by GRAPEFRUIT JUICE—avoid concurrent use or separate administration by as much as possible and consider reducing oral budesonide dose
- Histamine: avoidance of corticosteroids advised by manufacturer of HISTAMINE
- Methyldopa: corticosteroids antagonise hypotensive effect of METHYLOPA
- Mefamurad: avoidance of corticosteroids advised by manufacturer of MEFAMURAD
- Mifepristone: effect of corticosteroids (including inhaled corticosteroids) may be reduced for 3–4 days after MIFEPRISTONE
- Moxonidine: corticosteroids antagonise hypotensive effect of MOXONIDINE
- Muscle Relaxants: corticosteroids possibly antagonise effects of pancuronium and vecuronium
- Nitrates: corticosteroids antagonise hypotensive effect of NITRATES
- Oestrogens: plasma concentration of corticosteroids increased by oral contraceptives containing OESTROGENS
- Sodium Benzolate: corticosteroids possibly reduce effects of SODIUM BENZOATE
- Sodium Phenylbutyrate: corticosteroids possibly reduce effects of SODIUM PHENYLButYRATE
- Somatropin: corticosteroids may inhibit growth—promoting effect of SOMATROPIN
- Sympathomimetens: metabolism of dexamethasone accelerated by EPHEDRINE
- Sympathomimetens, Beta-: increased risk of hypokalaemia when corticosteroids given with high doses of BETABlockers
- Theophylline: increased risk of hypokalaemia when corticosteroids given with THEOPHYLLINE
- Vaccines: high doses of corticosteroids impair immune response to VACCINES—avoid concomitant use with live vaccines
- Vasodilator Antihypertensives: corticosteroids antagonise hypotensive effect of HYDALAZINE, MINOXIDIL and SODIUM NITROPRUSIDE

Co-trimoxazole see Trimethoprim and Sulfamethoxazole

Corticotropin (continued)

- Anti-arrhythmics: metabolism of coumarins inhibited by AMIODARONE (enhanced anticoagulant effect); anticoagulant effect of warfarin may be enhanced or reduced by DISOPYRAMIDE; anticoagulant effect of coumarins possibly enhanced by MIFAMURTIDE; anticoagulant effect of warfarin enhanced by PROPafenONE
- Antibacterials: experience in anticoagulant clinics suggests that INR possibly altered when coumarins are given with NEOMYCIN (given for local action on gut); anticoagulant effect of coumarins enhanced by AZITHROMYCIN, AZTREONAM, CEPHALOSPORINS, CIPROFLOXACIN, LEVOFLOXACIN, TETRACYCLINES, TIGECYCLINE and TRIMETHOPRIM; anticoagulant effect of coumarins enhanced by CHLORAMPHENICOL, CLARITHROMYCIN, CYCLOTHYMICIN, METRONIDAZOLE, NALIDIXIC ACID, NORFLOXACIN, OFLOXACIN and SULFONAMIDES; plasma concentration of warfarin possibly increased by OROXACIN; an interaction between coumarins and broad-spectrum PENCILLINS has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be and metabolism of coumarins accelerated by RIFAMYCINS (reduced anticoagulant effect)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with APYRABAN, DABIGATRAN and RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antidepressants: anticoagulant effect of warfarin possibly enhanced by VENLAFAXINE; anticoagulant effect of warfarin may be enhanced or reduced by TRAZODONE; anticoagulant effect of coumarins possibly enhanced by SSRIS; anticoagulant effect of coumarins reduced by ST JOHN'S WORT (avoid concomitant use); anticoagulant effect of warfarin enhanced by MIRTAZAPINE; anticoagulant effect of coumarins may be enhanced or reduced by TRICYCLICS
- Antidiabetics: anticoagulant effect of warfarin possibly enhanced by CARBAMAZEPINE, PHENOBARBITAL and PRIMIDONE (reduced anticoagulant effect); plasma concentration of warfarin reduced by ESICARBAZEPINE; metabolism of coumarins accelerated by PHENYTOIN and PHENOTYPING (possibility of reduced anticoagulant effect, but enhancement also reported); anticoagulant effect of coumarins possibly enhanced by SODIUM VALPROATE and VALPROIC ACID
- Antifungals: anticoagulant effect of coumarins enhanced by FLUCONAZOLE, ITRACONAZOLE, KETOCONAZOLE, ORICONAZOLE, VORICONAZOLE; anticoagulant effect of coumarins enhanced by MICONAZOLE (micronazole oral gel and possibly vaginal and topical formulations absorbed); anticoagulant effect of coumarins reduced by GRISEOFULVIN
- Antimalarials: isolated reports that anticoagulant effect of warfarin may be enhanced by PROGUANIL; plasma concentration of both drugs increased when warfarin given with QUININE
- Antivirals: anticoagulant effect of warfarin may be enhanced or reduced by ATAZANAVIR, NEVIRAPINE and RITONAVIR; plasma concentration of coumarins possibly affected by EFAVIRENZ; anticoagulant effect of coumarins may be enhanced or reduced by FOSAMPRENAVIR; anticoagulant effect of coumarins possibly enhanced by RITONAVIR; anticoagulant effect of warfarin possibly enhanced by SAQUINAVIR; plasma concentration of warfarin possibly affected by TELAPREVIR
- Antioxidants: metabolism of coumarins may be reduced by CHLORAL
- Aprapit: anticoagulant effect of warfarin possibly reduced by APREPATIN
- Azathioprine: anticoagulant effect of coumarins possibly reduced by AZATHIOPRINE
- Bosentan: monitoring anticoagulant effect of coumarins recommended by manufacturer of BOSENTAN

Note: Change in patient's clinical condition, particularly associated with liver disease, intercurrent illness, or drug administration, necessitates more frequent testing. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption may also affect anticoagulant control

- Alcohol: anticoagulant control with coumarins may be affected by major changes in consumption of ALCOHOL
- Alfaprin: anticoagulant effect of coumarins possibly enhanced by ALLOPURINOL
- Anabolic Steroids: anticoagulant effect of coumarins enhanced by ANABOLIC STEROIDS
- Analgesics: anticoagulant effect of coumarins possibly enhanced by NSAIDS; increased risk of haemorrhage when anticoagulants given with intravenous DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with KETOLOLAC (avoid concomitant use, including low-dose heparins); anticoagulant effect of coumarins enhanced by TRAMADOL; increased risk of bleeding when warfarin given with ASPRIN (due to antiplatelet effect); anticoagulant effect of coumarins possibly enhanced by prolonged regular use of PARACETAMOL
- Anthelmintics: anticoagulant effect of coumarins possibly enhanced by IVERMECTIN; anticoagulant effect of warfarin possibly enhanced by LEVAMISOLE
Appendix 1 Interactions

**Cumarins** (continued)
- **Clodigrel**: anticoagulant effect of cumarins enhanced due to antiplatelet action of **CLODIGREL**; avoidance of warfarin advised by manufacturer of **CLODIGREL**
- **Corticosteroids**: anticoagulant effect of cumarins may be enhanced or reduced by **CORTICOSTEROIDS** (high-dose corticosteroids enhance anticoagulant effect)
- **Cranberry Juice**: anticoagulant effect of cumarins possibly enhanced by **CRANBERRY JUICE**—avoid concomitant use
- **Cytoxotics**: anticoagulant effect of cumarins possibly enhanced by **ETOPOSIDE**, **IFOSFAMIDE** and **SORAFENIB**; anticoagulant effect of cumarins enhanced by **CAPECTABINE**, **FLUOROURACIL** and **TEGAFUR**; anticoagulant effect of warfarin possibly enhanced by **GETFINIB**, **GERMIBABINE** and **VEMARAFENIB**; anticoagulant effect of cumarins possibly reduced by **MERCAPTOPURINE** and **MITOTANE**; plasma concentration of warfarin reduced by **DABBRAFENIB**; increased risk of bleeding when cumarins given with **ERLOTINIB**; avoidance of cumarins advised by manufacturer of **BRUTINIB**; replacement of warfarin with a heparin advised by manufacturer of **MATINIB** (possibility of enhanced warfarin effect); increased risk of bleeding when warfarin given with **REGORAFENIB**
- **Dipyrindamide**: anticoagulant effect of cumarins enhanced due to antiplatelet action of **DESTROGENS**
- **Disulfiram**: anticoagulant effect of cumarins enhanced by **DISULFIRAM**
- **Dopaminergics**: anticoagulant effect of warfarin enhanced by **ENTACAPONE**
- **Enteral Foods—anticoagulant effect of cumarins antagonised by vitamin K (present in some **ENTERAL FEEDS**)**
  - **Fosapreplant**: anticoagulant effect of warfarin possibly reduced by **FOSAPREPLANT**
- **Glucosamine**: anticoagulant effect of warfarin enhanced by **GLUCOSAMINE** (avoid concomitant use)
- **Hormone Antagonists**: anticoagulant effect of cumarins possibly enhanced by **BICALUTAMIDE** and **Toremifene**; metabolism of cumarins inhibited by **DANAZOL** (enhanced anticoagulant effect); plasma concentration of cumarins possibly reduced by **ENALAPRILAMIDE**; anticoagulant effect of cumarins enhanced by **FLUTAMIDE** and **TAMOXIFEN**
  - **Iloprost**: anticoagulant effect of cumarins possibly enhanced by **ILOPROST**
  - **Lactulose**: anticoagulant effect of cumarins possibly enhanced by **LACTULOSE**
  - **Leflunomide**: anticoagulant effect of warfarin possibly enhanced by **LEFLUNOMIDE**
  - **Leukotriene Receptor Antagonists**: anticoagulant effect of warfarin enhanced by **ZAFVRUKAST**
  - **Levocabarnine**: anticoagulant effect of cumarins possibly enhanced by **LEVOCARNITINE**
  - **Lipid-regulating Drugs**: anticoagulant effect of cumarins may be enhanced or reduced by **COLESTYRAMINE**; anticoagulant effect of warfarin may be transiently reduced by **ATORVASTATIN**; anticoagulant effect of cumarins enhanced by **FIBRATES** and **FLUVASTATIN**; anticoagulant effect of cumarins possibly enhanced by **EZETIMIBE** and **ROSVUVASTATIN**; anticoagulant effect of cumarins can be enhanced by **SIMVASTATIN**; anticoagulant effect of warfarin possibly enhanced by **LOMITAPIDE**
  - **Memantine**: anticoagulant effect of warfarin possibly enhanced by **MEMANTINE**
  - **Oestrogens**: anticoagulant effect of cumarins may be enhanced or reduced by **OESTROGENS**
  - **Oritstat**: monitoring anticoagulant effect of cumarins recommended by manufacturer of **ORLISTAT**
  - **Prasugrel**: possible increased risk of bleeding when cumarins given with **PRASUGREL**
  - **Progesterones—anticoagulant effect of cumarins may be enhanced or reduced by **PROGESTOGENS**
  - **Raloxifene**: anticoagulant effect of cumarins antagonised by **RALOXIFENE**
  - **Retinoids**: anticoagulant effect of cumarins possibly reduced by **ACITRETIN**
  - **Sulfinpyrazone**: anticoagulant effect of cumarins enhanced by **SULFINPYRAZONE**

**Cumarins** (continued)
- **Sympathomimetics**: anticoagulant effect of cumarins possibly enhanced by **METHYLPHENIDATE**
- **Testolactone**: anticoagulant effect of cumarins enhanced by **TESTOLACTONE**
- **Testosterone**: anticoagulant effect of cumarins enhanced by **TESTOSTERONE**
- **Thyroid Hormones**: anticoagulant effect of cumarins enhanced by **THYROID HORMONES**
- **Ubidecarenone**: anticoagulant effect of warfarin may be enhanced or reduced by **UBIDEARENONE**
- **Ulcer-healing Drugs—metabolism of cumarins inhibited by **CIMETIDINE** (enhanced anticoagulant effect); anticoagulant effect of cumarins possibly enhanced by **ESOMEPRAZOLE** and **OMEPRAZOLE**; anticoagulant effect of cumarins might be enhanced by **PANTOPRAZOLE**; absorption of cumarins possibly reduced by **SUCRALFATE** (reduced anticoagulant effect)
- **Vaccines**: anticoagulant effect of warfarin possibly enhanced by **INFLUENZA VACCINE**
- **Vitamins**: anticoagulant effect of cumarins possibly enhanced by **VITAMIN E**; anticoagulant effect of cumarins antagonised by **VITAMIN K**

**Cranberry Juice**
- **Anticoagulants**: cranberry juice possibly enhances anticoagulant effect of **CUMARINS**—avoid concomitant use

**Crizotinib**
- **Analgesics**: manufacturer of crizotinib advises caution with **ALFENTANIL** and **FENTANYL**
- **Antibacterials**: plasma concentration of crizotinib possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**—manufacturer of crizotinib advises avoid concomitant use; plasma concentration of crizotinib possibly reduced by **RIFABUTIN**—manufacturer of crizotinib advises avoid concomitant use; plasma concentration of crizotinib reduced by **RIFAMPICIN**—manufacturer of crizotinib advises avoid concomitant use
- **Antidepressants**: plasma concentration of crizotinib possibly reduced by **ST JOHN'S WORT**—manufacturer of crizotinib advises avoid concomitant use
- **Antiepileptics**: plasma concentration of crizotinib possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—manufacturer of crizotinib advises avoid concomitant use
- **Antifungals**: plasma concentration of crizotinib increased by **KETOCONAZOLE**—avoid concomitant use; plasma concentration of crizotinib possibly increased by **ITRACONAZOLE** and **VORICONAZOLE**—manufacturer of crizotinib advises avoid concomitant use
- **Antimalarials**: possible increased risk of bradycardia when crizotinib given with **MEfloQUINE**
- **Antipsychotics**: avoid concomitant use of cytoxotics with **CLOZAPINE** (increased risk of agranulocytosis); manufacturer of crizotinib advises caution with **PIMOZIDE**
- **Antivirals**: plasma concentration of crizotinib possibly increased by **ATAZANAVIR**, **INDINAVIR**, **RITONAVIR** and **SAQUINAVIR**—manufacturer of crizotinib advises avoid concomitant use
- **Anxiolytics and Hypnotics**: crizotinib increases plasma concentration of **NIDAZOLAM**
  - **Beta-blockers**: possible increased risk of bradycardia when crizotinib given with **BETA-BLOCKERS**
  - **Calcium-channel blockers**: possible increased risk of bradycardia when crizotinib given with **DILTIAZEM** or **VERAPAMIL**
  - **Cardiac Glycosides**: possible increased risk of bradycardia when crizotinib given with **DIGOXIN**
  - **Ciclosporin**: manufacturer of crizotinib advises caution with **CICLOSPORIN**
  - **Clonidine**: possible increased risk of bradycardia when crizotinib given with **CLONIDINE**
  - **Cytotoxic**: crizotinib possibly increases the plasma concentration of **IBRUTINIB**—reduce dose of ibrutinib (see under ibrutinib, p. 809)
  - **Ergot Alkaloids**: manufacturer of crizotinib advises caution with **ERGOT ALKALOIDS**
Dabigatran
- Antidepressants (continued) - manufacturer of dabigatran advises avoid concomitant use
  - Antidepressants: plasma concentration of dabigatran possibly reduced by CARBAMAZEPINE, ROSANOFEN and PHENOTYN — manufacturer of dabigatran advises avoid concomitant use
  - Antifungals: plasma concentration of dabigatran increased by KETOCONAZOLE — avoid concomitant use; manufacturer of dabigatran advises avoid concomitant use with TACRIMACAZOLE
  - Antivirals: plasma concentration of dabigatran possibly increased by RILPIVIRINE and TELAPREVIR
- Calcium-channel Blockers: plasma concentration of dabigatran possibly increased by VERAPAMIL (see under Dabigatran)
- Clicosporin: plasma concentration of dabigatran possibly increased by CICLOSPORIN — manufacturer of dabigatran advises avoid concomitant use
- Sulfinpyrazine: possible increased risk of bleeding when dabigatran given with CICLOSPORIN
- Tacrolimus: manufacturer of dabigatran advises avoid concomitant use
  - TACRIMACAZOLE
- Ulipristal: manufacturer of ulipristal gives dabigatran at least 1.5 hours before or after ULIPRISTAL

Dabrafenib
- Antibacterials: manufacturer of dabrafenib gives advice to concomitant use with RIFAMPICIN
- Anticoagulants: dabrafenib reduces plasma concentration of WARFARIN
- Antidepressants: manufacturer of dabrafenib advises avoid concomitant use with ST JOHN'S WORT
- Antiepileptics: manufacturer of dabrafenib advises avoid concomitant use with CARBAMAZEPINE, ROSANOFEN, PHENOBARBITAL, PHENOTYN and PRIMIDONE
- Antifungals: plasma concentration of dabrafenib increased by KETOCONAZOLE
- Antipsychotics: avoid concomitant use of cytotoxics with CLOZAPINE (increased risk of agranulocytosis)
- Antivirals: plasma concentration of dabrafenib increased by GEMFIBROZIL
- Estrogens: manufacturer of dabrafenib advises contraceptive effect of hormonal contraceptives containing OESTROGENS possibly reduced (alternative contraceptive recommended)
- Progestogens: manufacturer of dabrafenib advises contraceptive effect of hormonal contraceptives containing PROGESTOGENS possibly reduced (alternative contraceptive recommended)
- Ulcer-healing Drugs: manufacturer of dabrafenib advises avoid concomitant use with PROTON PUMP INHIBITORS (plasma concentration of dabrafenib possibly reduced)

Dacarbazine
- Alcohol: avoidance of dacarbazine advised by manufacturer of ALDESELIUN
- Antipsychotics: avoid concomitant use of cytotoxics with CLOZAPINE (increased risk of agranulocytosis)

Dactasvir
- Anti-arrhythmics: possible increased risk of bleeding when dactasvir (with sofosbuvir) given with RIFAMPICIN — manufacturer of dabigatran advises avoid concomitant use
- Anticoagulants: plasma concentration of dactasvir possibly increased by CARBAMAZEPINE, ROSANOFEN and PHENOTYN — see under Amiodarone, p. 88
- Antibacterials: plasma concentration of dactasvir possibly increased by CLARITHROMYCIN and TELFORANCIN — reduce dose of dactasvir (see under Dactasvir, p. 544)
- Antidepressants: plasma concentration of dactasvir possibly increased by RIFABUTIN — manufacturer of dabigatran advises avoid concomitant use; plasma concentration of dactasvir possibly reduced by RIFAMPICIN — avoid concomitant use
- Antipsychotics: plasma concentration of dactasvir possibly increased by ST JOHN'S WORT — manufacturer of dactasvir advises avoid concomitant use
- Antiepileptics: plasma concentration of dactasvir possibly reduced by CARBAMAZEPINE, ROSANOFEN, OXCARBAMAZEPINE, PHENOBARBITAL, PHENOTYN and
Daclatasvir
- Antiepileptics: manufacturer of daclatasvir advises avoid concomitant use
- Antifungals: plasma concentration of daclatasvir increased by
  - KETOCONAZOLE—reduce dose of daclatasvir (see under Daclatasvir, p. 544); plasma concentration of daclatasvir possibly increased by
  - ITRACONAZOLE, POSaconazole and
  - voriconazole—reduce dose of daclatasvir (see under Daclatasvir, p. 544)
- Antivirals: plasma concentration of daclatasvir increased by
  - atazanavir and telaprevir—reduce dose of daclatasvir (see under Daclatasvir, p. 544); plasma concentration of daclatasvir possibly increased by
  - boceprevir—reduce dose of daclatasvir (see under Daclatasvir, p. 544); manufacturer of daclatasvir advises avoid concomitant use with darunavir and lopinavir (plasma concentration of daclatasvir possibly increased); plasma concentration of daclatasvir reduced by
  - Efavirenz—increase dose of daclatasvir (see under Daclatasvir, p. 544); manufacturer of daclatasvir advises avoid concomitant use
- Cardiac glycosides: daclatasvir increases plasma concentration of digoxin
- Corticosteroids: plasma concentration of daclatasvir possibly reduced by
dexamethasone—manufacturer of daclatasvir advises avoid concomitant use
- Lipid-regulating Drugs: daclatasvir increases plasma concentration of rosuvastatin

Dactinomycin
- Antipsychotics: avoid concomitant use of cytoxicities with
clozapine (increased risk of agranulocytosis)
- Vitamins: dactinomycin possibly reduces effects of alfalfacalcidol, calcitriol, colecalciferol, dihydrotrachysterol, ergocalciferol, paricalcitol and vitamin D

Dairy Products
- Antibacterials: dairy products reduce absorption of ciprofloxacin and norfloxacin; dairy products reduce absorption of tetracyclines (except doxycycline and minocycline)
- Cytotoxic: dairy products possibly reduce plasma concentration of mercaptopurine—manufacturer of mercaptopurine advises give at least 1 hour before or 2 hours after dairy products
- Ertrombopag: dairy products possibly reduce absorption of erthropag (give at least 4 hours apart)

Dalteparin see Heparins

Danaparoid
- Analgesics: increased risk of haemorrhage when anticoagulants given with intravenous diclofenac (enhanced anticoagulant effect)
- Antiepileptics: danaparoid inhibits metabolism of
  - Carbamazepine (increased risk of toxicity)
- Ciclosporin: danaparoid inhibits metabolism of
  - ciclosporin (increased plasma concentration)
- Lipid-regulating Drugs: possible increased risk of myopathy when danaparoid given with
  - simvastatin—avoid concomitant use
  - Tacrolimus: danaparoid possibly increases plasma concentration of tacrolimus

Dantrolene see Muscle Relaxants

Dapagliflozin see Antidiabetics

Dapoxetine
- Alcohol: increased sedative effect when dapoxetine given with
  - alcohol
- Analgesics: possible increased risk of serotonergic effects when dapoxetine given with
  - tramadol (manufacturer of dapoxetine advises tramadol should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping tramadol)
- Antibacterials: manufacturer of dapoxetine advises dose reduction when dapoxetine given with clarithromycin and erythromycin (see under Dapoxetine, p. 703); manufacturer of dapoxetine advises avoid concomitant use with
  - telithromycin (increased risk of toxicity)
- Antidepressants: possible increased risk of serotonergic effects when dapoxetine given with
  - SSRIs, St John’s Wort,
  - duloxetine, tricyclics and venlafaxine (manufacturer of dapoxetine advises SSRIs, St John’s Wort, duloxetine, tricyclics and venlafaxine should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping SSRIs, St John’s Wort, duloxetine, tricyclics and venlafaxine); increased risk of serotonergic effects when dapoxetine given with
  - MAOIs (MAOIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping MAOIs)
- Antifungals: plasma concentration of dapoxetine increased by
  - Ketoconazole—manufacturer of dapoxetine advises avoid concomitant use; manufacturer of dapoxetine advises dose reduction when dapoxetine given with fluconazole (see under Dapoxetine, p. 705); manufacturer of dapoxetine advises avoid concomitant use with
  - Itracnazole (increased risk of toxicity)
- Antivirals: manufacturer of dapoxetine advises avoid concomitant use with
  - atazanavir, ritonavir and
  - saquinavir (increased risk of toxicity); manufacturer of dapoxetine advises dose reduction when dapoxetine given with fosamprenavir (see under Dapoxetine, p. 705)
- Aprepitant: manufacturer of dapoxetine advises dose reduction when dapoxetine given with aprepitant (see under Dapoxetine, p. 705)
- Calcium-channel Blockers: manufacturer of dapoxetine advises dose reduction when dapoxetine given with diltiazem and verapamil (see under Dapoxetine, p. 705)
- SHT receptor agonists: possible increased risk of serotonergic effects when dapoxetine given with
  - sHT agonists (manufacturer of dapoxetine advises SHT agonists should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping SHT agonists)
- Lithium: possible increased risk of serotonergic effects when dapoxetine given with
  - lithium (manufacturer of dapoxetine advises lithium should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping lithium)
- Sildenafil: manufacturer of dapoxetine advises avoid concomitant use with sildenafil
- Tadalafil: manufacturer of dapoxetine advises avoid concomitant use with tadalafil
- Vardenafil: manufacturer of dapoxetine advises avoid concomitant use with vardenafil

Dapsone
- Antibacterials: plasma concentration of dapsone reduced by rifampcins; plasma concentration of both drugs may increase when dapsone given with trimethoprim
- Antivirals: increased risk of ventricular arrhythmias when dapsone given with
  - saquinavir—avoid concomitant use
- Vaccines: antibacterials inactivate oral typhoid vaccine—see under Typhoid Vaccine in BNF

Daptomycin
- Ciclosporin: increased risk of myopathy when daptomycin given with
  - ciclosporin (preferably avoid concomitant use)
- Lipid-regulating Drugs: increased risk of myopathy when daptomycin given with
  - fibrates or
  - statins (preferably avoid concomitant use)
### Appendix 1 Interactions

#### Darunavir
- **Antituberculars:** darunavir possibly increases plasma concentration of **LIDOCAINE**—avoid concomitant use
- **Antibacterials:** darunavir increases plasma concentration of **RIFABUTIN** (reduce dose of rifabutin); plasma concentration of darunavir significantly reduced by **RIFAMPICIN**—avoid concomitant use
- **Anticoagulants:** avoidance of darunavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**
- **Antidepressants:** darunavir possibly reduces plasma concentration of **PAROXETINE** and **SERTRALINE**; plasma concentration of darunavir reduced by **ST JOHN’S WORT**—avoid concomitant use
- **Antiepileptics:** plasma concentration of darunavir possibly increased by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- **Antifungals:** plasma concentration of both drugs increased when darunavir given with **KETOCONAZOLE**
- **Antimalarials:** plasma concentration of lumefantrine increased when darunavir given with **ARTEMETHER WITH LUMEFANTRINE**; darunavir possibly increases plasma concentration of **QUININE** (increased risk of toxicity)
- **Antipsychotics:** darunavir possibly increases plasma concentration of **ARIPIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); darunavir possibly increases plasma concentration of **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- **Antivirals:** avoidance of darunavir with **BOCEPREVIR** or **TELPREVIR**; avoidance of darunavir advised by manufacturer of **DEFERASIROX** (plasma concentration of deferasirox possibly increased); manufacturer of darunavir advises take **DIDANOSINE** 1 hour before or 2 hours after darunavir; plasma concentration of darunavir reduced by **EFAVirenz** (adjust dose—consult product literature); plasma concentration of both drugs increased when darunavir given with **INDINAVIR**; plasma concentration of darunavir reduced by **LOPINAVIR**, also plasma concentration of lopinavir increased (avoid concomitant use); darunavir increases plasma concentration of **MARAViroC** (consider reducing dose of maraviroc); increased risk of rash when darunavir given with **Raltegravir**; plasma concentration of darunavir reduced by **SAQUINAVIR**; plasma concentration of both drugs increased when darunavir given with **SIMPEPREVIR**—manufacturer of simprevir advises avoid concomitant use
- **Cytotoxics:** darunavir possibly increases the plasma concentration of **BOsUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; darunavir possibly increases plasma concentration of **EVEROLimus**—manufacturer of everolimus advises avoid concomitant use; darunavir possibly increases the plasma concentration of **IBRUTINIB**—reduce dose of ibrutinib (see under ibrutinib, p. 809)
- **Ergot Alkaloids:** increased risk of ergotism when darunavir given with **ERGOT ALKALOIDS**—manufacturer of darunavir advises avoid concomitant use
- **Lipid-regulating Drugs:** possible increased risk of myopathy when darunavir given with **ATORVASTATIN**; darunavir possibly increases plasma concentration of **PRAVASTATIN**; darunavir increases plasma concentration of **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); avoidance of darunavir advised by manufacturer of **Lomitapide** (plasma concentration of lomitapide possibly increased)
- **Orlistat:** absorption of darunavir possibly reduced by **ORLSTAT**
- **Ranolazine:** darunavir possibly increases plasma concentration of **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use

#### Dasatinib
- **Antibacterials:** manufacturer of dasatinib advises avoid concomitant use with **CLARITHROMYCIN**, **ERYTHROMYCIN** and **ERITROMYCIN (plasma concentration of dasatinib possibly increased); metabolism of dasatinib accelerated by **RIFAMPICIN** (reduced plasma concentration—avoid concomitant use)
- **Antiepileptics:** manufacturer of dasatinib advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (plasma concentration of dasatinib possibly reduced)
- **Antifungals:** plasma concentration of dasatinib possibly increased by **KETOCONAZOLE**; manufacturer of dasatinib advises avoid concomitant use with **itraconazole** (plasma concentration of dasatinib possibly increased)
- **Antipsychotics:** avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals:** avoidance of dasatinib advised by manufacturer of **BOCEPREVIR**; manufacturer of dasatinib advises avoid concomitant use with **RITONAVIR** (plasma concentration of dasatinib possibly increased)
- **Grapefruit Juice:** manufacturer of dasatinib advises avoid concomitant use with **GRAPEFRUIT JUICE** (plasma concentration of dasatinib possibly increased)
- **Lipid-regulating Drugs:** dasatinib possibly increases plasma concentration of **SIMVASTATIN**
- **Ulcer-healing Drugs:** plasma concentration of dasatinib possibly reduced by **FAMOTIDINE**

#### Decitabine
- **Antipsychotics:** avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)

#### Deferasirox
- **Aminophylline:** deferasirox increases plasma concentration of **AMINOPHYLLINE** (consider reducing dose of aminophylline)
- **Antacids:** absorption of deferasirox possibly reduced by **ANTACIDS containing aluminium** (manufacturer of deferasirox advises avoid concomitant use)
- **Antibacterials:** plasma concentration of deferasirox reduced by **RIFAMPICIN**
- **Antidiabetics:** deferasirox increases plasma concentration of **RIPAGLINDIDE**
- **Antipsychotics:** manufacturer of deferasirox advises avoid concomitant use with **CLOZAPINE**
- **Anxiolytics and Hypnotics:** deferasirox possibly reduces plasma concentration of **MIDAZOLAM**
- **Muscle Relaxants:** manufacturer of deferasirox advises avoid concomitant use with **TIZANIDINE**
- **Theophylline:** deferasirox increases plasma concentration of **THEOPHYLLINE** (consider reducing dose of theophylline)

#### Deferiprone
- **Antacids:** absorption of deferiprone possibly reduced by **ANTACIDS containing aluminium** (manufacturer of deferiprone advises avoid concomitant use)

#### Deflazacort
- **Corticosteroids**

#### Delamanid
- **Analgesics:** increased risk of ventricular arrhythmias when delamanid given with **METHADONE**
- **Anti-arrhythmics:** increased risk of ventricular arrhythmias when delamanid given with **AMIODARONE** or **DISOPYRAMIDE**
- **Antibacterials:** possible increased risk of ventricular arrhythmias when delamanid given with **CLARITHROMYCIN** and **ERYTHROMYCIN**; increased risk of ventricular arrhythmias when delamanid given with **MOXIFLOXACIN**; plasma concentration of delamanid reduced by **RIFAMPICIN**; delamanid increases plasma concentration of **ETHAMBUTOL**
- **Antidepressants:** possible increased risk of ventricular arrhythmias when delamanid given with **TRICYCLICS** that prolong the QT interval
- **Antiepileptics:** manufacturer of delamanid advises avoid concomitant use with **CARBAMAZEPINE**
- **Antipsychotics:** increased risk of ventricular arrhythmias when delamanid given with **DROPERIDOL**, **HALOPERIDOL** or **PIIMODIZE**; increased risk of ventricular arrhythmias when delamanid given with **PHENObazETINES** that prolong the QT interval
**Delamanid (continued)**
- Antivirals: plasma concentration of delamanid increased by **LOPINAVIR** and **RITONAVIR**; increased risk of ventricular arrhythmias when delamanid given with **SAQUINAVIR**
- Beta-blockers: increased risk of ventricular arrhythmias when delamanid given with **SOTALOL**
- Cytoxics: increased risk of ventricular arrhythmias when delamanid given with **ARSENIC TRIOXIDE** or **VINFLUNINE**; possible increased risk of ventricular arrhythmias when delamanid given with **VINBLASTINE**, **VINCristine**, **VINDesine** and **VINORELBine**
- Domperidone: possible increased risk of ventricular arrhythmias when delamanid given with **DOMPERIDONE**
- Pentamidine isetionate: increased risk of ventricular arrhythmias when delamanid given with **PENTAMIDINE ISETIONATE**

**Diazoxide (continued)**
- Antioxidants: enhanced hypotensive effect when diazoxide given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - ACE inhibitors: enhanced hypotensive effect when diazoxide given with **ACE INHIBITORS**
  - Adrenergic Neurone Blockers: enhanced hypotensive effect when diazoxide given with **ADRENERGIC NEURONE BLOCKERS**
  - Alcohol: enhanced hypotensive effect when diazoxide given with **ALCOHOL**
  - Aldesleukin: enhanced hypotensive effect when diazoxide given with **ALDESLEUKIN**
  - Alpha-blockers: enhanced hypotensive effect when diazoxide given with **ALPHA-BLOCKERS**
  - Anaesthetics, General: enhanced hypotensive effect when diazoxide given with **GENERAL ANAESTHETICS**
  - Analgesics: hypotensive effect of diazoxide antagonised by **NSAIDS**
  - Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when diazoxide given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - Antidepressants: enhanced hypotensive effect when diazoxide given with **MAOIS** or **TRICYCLIC-RELATED ANTIDEPRESSANTS**
  - Antidiabetics: diazoxide antagonises hypoglycaemic effect of **ANTI DIABETICS**
  - Antiepileptics: diazoxide reduces plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**, also effect of diazoxide may be reduced
  - Antipsychotics: enhanced hypotensive effect when diazoxide given with **PHENOTHIAZINES**

**Dopamine (continued)**
- Antihistamines: enhanced hypotensive effect when diazoxide given with **ANTIHISTAMINES**
- Corticosteroids: enhanced hypotensive effect of diazoxide antagonised by **CORTICOSTEROIDS**
- Diuretics: enhanced hypotensive and hyperglycaemic effects when diazoxide given with **DIURETICS**
- Dopaminergics: enhanced hypotensive effect when diazoxide given with **CO-BENZEDOCA, CO-CARELDOPA or LEVODOPA**
  - Methyldopa: enhanced hypotensive effect when diazoxide given with **METHYLDOPA**
  - Moxisylyte: enhanced hypotensive effect when diazoxide given with **MOXISLYTE**
  - Moxonidine: enhanced hypotensive effect when diazoxide given with **MOXONIDINE**
  - Muscle Relaxants: enhanced hypotensive effect when diazoxide given with **BACLOFEN or TIZANIDINE**
  - Nitrates: enhanced hypotensive effect when diazoxide given with **NITRATES**
  - Prostaglandins: enhanced hypotensive effect when diazoxide given with **ALPROSTADIL**
  - Vasodilator Antihypertensives: enhanced hypotensive effect when diazoxide given with **HYDRAZALINE, MINOXIDIL or SODIUM NITROPRUSSIDE**

**Diclofenac (see NSAIDs)**

**Dicycloverine (see Antimuscarinics)**

**Didanosine**
- Analgesics: enhanced hypotensive effect when diazoxide given with **analgesics**
- Antacids in tablet formulation might affect absorption of other drugs—give at least 2 hours apart
- Allopurinol: plasma concentration of didanosine increased by **ALLOPURINOL** (risk of toxicity)—avoid concomitant use
- Analgesics: plasma concentration of didanosine possibly reduced by **METHADONE**
- Antibacterials: manufacturer of norfloxacin advises give didanosine at least 2 hours before or after **NORFLOXACIN**
- Antivirals: didanosine **tablets** reduce absorption of **ATAZANAVIR** (give at least 2 hours before or 1 hour after didanosine tablets); manufacturer of darunavir advises take didanosine 1 hour before or 2 hours after **DARUNAVIR**; plasma concentration of didanosine possibly increased by **GANCICLOVIR** and **VALGANCICLOVIR**; didanosine **tablets** reduce absorption of **INDINAVIR** (give at least 1 hour apart); increased risk of side-effects when didanosine given with **INDINAVIR**—avoid concomitant use; manufacturer of rilpivirine advises give didanosine 2 hours before or 4 hours after **RILPIVIRINE**; manufacturer of ritonavir advises didanosine and **RITONAVIR** should be taken 2.5 hours apart; increased risk of side-effects when didanosine given with **STAVUDINE**; plasma concentration of didanosine increased by **TENOFIVIR** (increased risk of toxicity)—avoid concomitant use; plasma concentration of didanosine reduced by **TIPRANAVIR**—manufacturer of tipranavir advises tipranavir and didanosine capsules should be taken at least 2 hours apart
- Cytotoxic: increased risk of toxicity when didanosine given with **HYDROXYCARBAMIDE**—avoid concomitant use
- Orlistat: absorption of didanosine possibly reduced by **ORLISTAT**
  - Ditogen (see Progestogens)

**Diethylcarbamazine**
- Antacids: excretion of diethylcarbamazine increased by **SODIUM BICARBONATE**

**Digoxin** (see Cardiac Glycosides)

**Dihydronephrine** (see Opioid Analgesics)

**Dihydrotachysterol** (see Vitamins)

**Diltiazem** (see Calcium-channel Blockers)

**Dimethyl sulfoxide**
- Analgesics: avoid concomitant use of dimethyl sulfoxide with **DICTOL** or **SULINDAC**

**Dimoprostine** (see Prostaglandins)
Disopyramide (continued)
- Antivirals: plasma concentration of disopyramide possibly increased by **RITONAVIR** (increased risk of toxicity); increased risk of ventricular arrhythmias when disopyramide given with **SAQUINAVIR**—avoid concomitant use; avoidance of disopyramide advised by manufacturer of **TELAPREVIR** (risk of ventricular arrhythmias)
- Atomoxetine: increased risk of ventricular arrhythmias when disopyramide given with **ATOMOXETINE**
- Beta-blockers: increased myocardial depression when anti-arrhythmics given with **BETA-BLOCKERS**; increased risk of ventricular arrhythmias when disopyramide given with **SOTALOL**—avoid concomitant use
- Calcium-channel Blockers: increased risk of myocardial depression and asystole when disopyramide given with **VERAPAMIL**
- Cytotoxics: possible increased risk of ventricular arrhythmias when disopyramide given with **BOUSUTINIB**; possible increased risk of ventricular arrhythmias when disopyramide given with **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when disopyramide given with **PHENYLTRIAZINE**

**Disopyramide**
- Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILOCaine** or **ROPIVACAINE**
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with **AMIODARONE** or **DRONEDARONE**—avoid concomitant use
- Antibacterials: plasma concentration of disopyramide possibly increased by **CLARITHROMYCIN** (increased risk of toxicity); plasma concentration of disopyramide possibly increased by **ERYTHROMYCIN** (increased risk of toxicity); increased risk of ventricular arrhythmias when disopyramide given with **MOXIFLOXACIN**—avoid concomitant use; increased risk of ventricular arrhythmias when disopyramide given with **RIFAMYCINS** (reduced plasma concentration); possible increased risk of ventricular arrhythmias when disopyramide given with **TELITHROMYCIN**
- Anticoagulants: disopyramide may enhance or reduce anticoagulant effect of **WARFARIN**
- Antidepressants: avoidance of disopyramide advised by manufacturer of **CITALOPRAM** and **ESCITALOPRAM** (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when disopyramide given with **TRICYCLICS**
- Antidiabetics: disopyramide possibly enhances hypoglycaemic effect of **GLICLAZIDE**, **INSULIN** and **METFORMIN**
- Antiepileptics: plasma concentration of disopyramide reduced by **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of disopyramide accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced plasma concentration)
- Antifungals: increased risk of ventricular arrhythmias when disopyramide given with **KETOCONAZOLE**—avoid concomitant use; avoidance of disopyramide advised by manufacturer of **ITRACONAZOLE**
- Antihistamines: increased risk of ventricular arrhythmias when disopyramide given with **MIOLASTINE**—avoid concomitant use
- Antimalarias: avoidance of disopyramide advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE** (risk of ventricular arrhythmias); avoidance of disopyramide advised by manufacturer of **ARTEMETHOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- Antimicrobials: recent increased risk of antimicrobial side-effects when disopyramide given with **ANTIMICROBIALS**; increased risk of ventricular arrhythmias when disopyramide given with **TOLTERODINE**
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of ventricular arrhythmias when disopyramide given with **AMISULPRIDE**, **DROPERIDOL**, **HALOPERIDOL** or **ZUCLOPENTHIXOL**—avoid concomitant use; possible increased risk of ventricular arrhythmias when disopyramide given with **HALOPERIDOL**—avoid concomitant use; increased risk of ventricular arrhythmias when disopyramide given with **PHENOTHIAZINES** or **SULPHIRIDE**

**NOTE** Since systemic absorption may follow topical application of brinzolamide to the eye, the possibility of interactions should be borne in mind

**Diuretics**
- Alcohol: disulfram reaction when disulfram given with **ALCOHOL**
- Aminophylline: disulfram inhibits metabolism of **AMINOPHYLLINE** (increased risk of toxicity)
- Antibacterials: psychotic reaction reported when disulfram given with **METRONIDAZOLE**; CNS effects of disulfram possibly increased by **ISONIAZID**
- Anticoagulants: disulfram enhances anticoagulant effect of **COUMARINS**
- Antidepressants: increased disulfram reaction with alcohol reported with concomitant **AMITRIPTYLINE**; disulfram inhibits metabolism of **TRICYCLICS** (increased plasma concentration)
- Anti-epileptics: disulfram inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- Anxiolytics and Hypnotics: disulfram increases risk of **TEMAZEPAM** toxicity; disulfram inhibits metabolism of **BENZODIAZEPINES** (increased sedative effects)
- Paraldehyde: risk of toxicity when disulfram given with **PARALDEHYDE**
- Theophylline: disulfram inhibits metabolism of **THEOPHYLLINE** (increased risk of toxicity)
Anti-arrhythmics:

- Angiotensin-II Receptor Antagonists:
  - Increased risk of severe hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with ACE INHIBITORS.
  - Increased risk of hyperkalaemia when given with ADRENERGIC NEURONE BLOCKERS.
  - Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.
  - Aminophylline: increased hypotensive effect when diuretics given with ALDESLEUKIN.
  - Allskiren: plasma concentration of furosemide reduced by ALISKIREN; increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS.
  - Allopurinol: increased risk of hyperkalaemia when given with ACE INHIBITORS; increased risk of toxicity when given with ACE INHIBITORS.
  - Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.
  - Aminophylline: increased hypotensive effect when diuretics given with ALDESLEUKIN.
  - Allskiren: plasma concentration of furosemide reduced by ALISKIREN; increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS.
  - Allopurinol: increased risk of hyperkalaemia when given with ALDESLEUKIN.
  - Allskiren: plasma concentration of furosemide reduced by ALISKIREN; increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS.

Analgesics:

- Aminophylline: increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS.

ACE Inhibitors:

- ACE Inhibitors: enhanced hypotensive effect when diuretics given with ACE INHIBITORS; increased risk of severe hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with ACE INHIBITORS.

ADRENERGIC NEURONE BLOCKERS:

- Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.

Alpha-blockers:

- Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.

Alpha-blockers:

- Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.

Alcohol:

- Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.

Corticosteroids:

- Alcohol: enhanced hypotensive effect when diuretics given with ALCOHOL.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.

Calcium Salts:

- Calcium Salts: increased risk of hyperkalaemia when given with CALCIUM SALTS.

Calcium-channel Blockers:

- Calcium-channel Blockers: enhanced hypotensive effect when diuretics given with CALCIUM-SALTS.
Diuretics

Corticosteroids (continued)
acetazolamide, loop diuretics or thiazides and related diuretics given with CORTICOSTEROIDS

- Cytostatics: alkaline urine due to acetazolamide increases excretion of METHOTREXATE; hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics increases risk of ventricular arrhythmias with
  - ARSENIC TROXIDE; avoidance of spironolactone advised by manufacturer of MITOTANE (antagonism of effect); increased risk of nephrotoxicity and ototoxicity when diuretics given with PLATINUM COMPOUNDS

- Diazoxide: enhanced hypotensive and hyperglycaemic effects when diuretics given with DIAZoxide
- Diuretics: increased risk of hypokalaemia when loop diuretics or thiazides and related diuretics given with ACETAZOLAMIDE; profound diuresis possible when metolazone given with FUROSEMIDE; increased risk of hypokalaemia when thiazides and related diuretics given with LOOP DIURETICS
- Dopaminergics: enhanced hypotensive effect when diuretics given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA
- Hormone Antagonists: increased risk of hypercalcaemia when thiazides and related diuretics given with TOREMIFENE
- Lipid-regulating Drugs: absorption of thiazides and related diuretics reduced by COLESTIPOL and COLESTYRAMINE (give at least 2 hours apart)

- Lithium: loop diuretics and thiazides and related diuretics reduce excretion of LITHIUM (increased plasma concentration and risk of toxicity)—loop diuretics safer than thiazides; potassium-sparing diuretics and aldosterone antagonists reduce excretion of LITHIUM (increased plasma concentration and risk of toxicity); acetazolamide increases the excretion of LITHIUM

- Methylodopa: enhanced hypotensive effect when diuretics given with MOXISYLYTE
- Moxonidine: enhanced hypotensive effect when diuretics given with MOXISULYSE

- Nitrites: enhanced hypotensive effect when diuretics given with NITRATES
- Oestrogens: diuretic effect of diuretics antagonised by OESTROGENS

- Potassium Salts: increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with POTASSIUM SALTS
- Progestogens: risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with DROSPIRENONE (monitor serum potassium during first cycle)

- Prostaglandins: enhanced hypotensive effect when diuretics given with ALPROSTADIL
- Sympathomimetics, Beta: increased risk of hypokalaemia when acetazolamide, loop diuretics or thiazides and related diuretics given with high doses of Beta,SYMPATHOMIMETICS

- Tacrolimus: increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with TACROLIMUS

- Theophylline: increased risk of hypokalaemia when acetazolamide, loop diuretics or thiazides and related diuretics given with THEOPHYLLINE

- Vasodilators Antihypertensives: enhanced hypotensive effect when diuretics given with HYDRAZINE, MINOXIDIL or SODIUM NITROPRUSSIDE

- Vitamins: increased risk of hypercalcaemia when thiazides and related diuretics given with ALFACALCICOL, CALCITRIOL, COLECALCIFEROL, DIHYDROTACHYSTEROL, EROGALCIFEROL, PARICALCITOL or VITAMIN D

Diuretics, Loop see Diuretics

Diuretics, Potassium-sparing and Aldosterone Antagonists see Diuretics

Diuretics, Thiazide and related see Diuretics

Dobutamine see Sympathomimetics

Docetaxel

- Antibacterials: plasma concentration of docetaxel possibly increased by CLARITHROMYCIN and TELITHROMYCIN—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- Antifungals: in vitro studies suggest a possible interaction between docetaxel and KETOCONAZOLE (consult docetaxel product literature); plasma concentration of docetaxel possibly increased by ITRACONAZOLE and VORICONAZOLE—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- Antipsychotics: avoid concomitant use of cytoxotics with CLOzapine (increased risk of agranulocytosis)
- Antivirals: plasma concentration of docetaxel possibly increased by INDINAVIR, RITONAVIR and SQuINAVIR—manufacturer of dolutegravir advises avoid concomitant use or consider reducing docetaxel dose

- Ciclosporin: in vitro studies suggest a possible interaction between docetaxel and CICLOSPORIN (consult docetaxel product literature)

- Cytostotics: possible increased risk of neutropenia when docetaxel given with LAPATINIB; plasma concentration of docetaxel increased by SoraFENIB

Dolutegravir

- Antacids: absorption of dolutegravir reduced by ALUMINIUM HYDROXIDE and ORAL MAGNESIUM SALTS—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after aluminium hydroxide and oral magnesium salts

- Antibacterials: plasma concentration of dolutegravir reduced by RIFAMPICIN (see under Dolutegravir, p. 557)

- Antidepressants: manufacturer of dolutegravir advises avoid concomitant use with ST JOHN’S WORT

- Antiepileptics: manufacturer of dolutegravir advises avoid concomitant use with CarbAMAZEPINE, FOSphenytoin, oxCARBAZEPINE, PHENOBARBITAL, PHENyTOIN and PrimidoNE

- Antivirals: plasma concentration of dolutegravir reduced by EFAVIRENZ, ETRAVIRINE and TIPRANAVIR (see under Dolutegravir, p. 557); plasma concentration of dolutegravir reduced by FOSSAMPRAVIR; plasma concentration of dolutegravir possibly reduced by NEvirapine (see under Dolutegravir, p. 557)

- Calcium Salts: absorption of dolutegravir reduced by CALCIUM SALTS—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after calcium salts

- Iron Salts: absorption of dolutegravir reduced by oral IRON SALTS—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after oral iron salts

Dopamnergics

- Analgesics: effects of dopamnergics on gastro-intestinal activity antagonised by OPIoid ANALGESICS

- Antibacterials: possible increased risk of ventricular arrhythmias when dopamnergics given with CLARITHROMYCIN or TELITHROMYCIN—avoid concomitant use; plasma concentration of dopamnergics increased by ERITHROMYCIN (increased risk of ventricular arrhythmias—avoid concomitant use); possible increased risk of ventricular arrhythmias when dopamnergics given with DELAMANID

- Antifungals: avoidance of dopamnergics advised by manufacturer of KETOCOZAOLE (risk of ventricular arrhythmias); possible increased risk of ventricular arrhythmias when dopamnergics given with ITRACONAZOLE or VORICONAZOLE—avoid concomitant use

- Antimalarias: avoidance of dopamnergics advised by manufacturer of ARTEMiNOL WITH PIPERAQUINE (possible risk of ventricular arrhythmias)

- Antimuscularins: effects of dopamnergic on gastro-intestinal activity antagonised by ANTIMuscULARINS

- Antivirals: possible increased risk of ventricular arrhythmias when dopamnergics given with BOCEpREViR, RITONAVIR, SAQuINAVIR or TelAPREViR—avoid concomitant use

- Cobicistat: possible increased risk of ventricular arrhythmias when dopamnergics given with COBicistat—avoid concomitant use

- Cytostotics: avoidance of dopamnergic advised by manufacturer of DOSUTiNIB (risk of ventricular arrhythmias)
Dronedarone (continued)

- Antiplatelet: plasma concentration of dronedarone possibly reduced by carbasalate, carbasalate, Divinylsulfone, Divinylsulfone, Phenoxybenzamine, Phenoxybenzamine, Prindolol—avoid concomitant use
- Antifungal: plasma concentration of dronedarone increased by ketoconazole—avoid concomitant use; manufacturer of dronedarone advises avoid concomitant use
- Antiviral: manufacturer of dronedarone advises avoid concomitant use
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with antipsychotics that prolong the QT interval; manufacturer of dronedarone advises avoid concomitant use
- Hypoglycaemics: reduced plasma concentration of sitagliptin (see under Sitagliptin, p. 809)
- Antidepressants: possible increased risk of bradycardia when duloxetine given with fingolimod
- Grapefruit Juice: plasma concentration of dronedarone increased by grapefruit juice—avoid concomitant use
- Lipid-regulating Drugs: dronedarone possibly increases plasma concentration of atorvastatin; dronedarone increases plasma concentration of rosuvastatin (consult product literature); increased risk of myopathy when dronedarone given with simvastatin; avoidance of dronedarone advised by manufacturer of Lomitapide (plasma concentration of lomitapide possibly increased)
- Sirolimus: manufacturer of dronedarone advises caution with sirolimus
- Tacrolimus: manufacturer of dronedarone advises caution with tacrolimus

Droxiprone (see Antipsychotics)

Drospirenone (see Progestogens)

Duloxetine

- Analgesics: possible increased serotonergic effects when SSRIs-related antidepressants given with fentanyl; possible increased serotonergic effects when duloxetine given with pethidine or tramadol
- Antidepressants: metabolism of duloxetine inhibited by ciprofloxacin—avoid concomitant use
- Antiemetics: possible increased risk of bleeding when SSRIs-related antidepressants given with omeprazole
- Antidepressants: metabolism of duloxetine inhibited by fluvoxamine—avoid concomitant use; possible increased serotonergic effects when duloxetine given with SSRIs, St John's Wort, amitriptyline, clobazam, moclobemide or venlafaxine; duloxetine should not be started until 2 weeks after stopping; also MAOIs should not be started until at least 5 days after stopping duloxetine; after stopping SSRI-related antidepressants do not start moclobemide for at least 1 week
- Antimalarials: manufacturer of dronedarone advises caution with doxapram given with amphotericin B, carboplatin, cisplatin, cyclophosphamide, ifosfamide, mitomycin C, oxaliplatin, pemetrexed, temozolomide
- Anticoagulants: increased risk of ventricular arrhythmias when amiodarone given with amiodarone, dofetilide, dronedarone, Ibutilide, olaparib, sorafenib, ticagrelor, vorinostat
- Antiplatelet: plasma concentration of clopidogrel increased by omeprazole; increased risk of bleeding when SSRIs-related antidepressants given with omeprazole
- Antithrombotics: possible increased risk of bleeding when SSRIs-related antidepressants given with omeprazole
- Antipsychotics: possible increased risk of bleeding when SSRIs-related antidepressants given with omeprazole
- Antineoplastics: possible increased risk of bleeding when SSRIs-related antidepressants given with omeprazole
- Antiepileptics: possible increased risk of bleeding when SSRIs-related antidepressants given with omeprazole
- Antithrombotics: possible increased risk of bleeding when SSRIs-related antidepressants given with omeprazole

Dropperidol (see Antipsychotics)
Dutasteride

Calcium-channel Blockers: plasma concentration of dutasteride increased by <i>LITIAZEM</i> and <i>VERAPAMIL</i>

Efavirenz

Analgesics: efavirenz reduces plasma concentration of <i>METHADONE</i>

Antibacterials: efavirenz reduces plasma concentration of <i>CLARITHROMYCIN</i>, also plasma concentration of active metabolite of clarithromycin increased; efavirenz reduces plasma concentration of <i>RIFABUTIN</i>—increase dose of rifabutin; plasma concentration of efavirenz reduced by <i>RIFAMPICIN</i>—increase dose of efavirenz; efavirenz possibly reduces plasma concentration of <i>BEDAQUILINE</i>—manufacturer of bedaquiline advises avoid concomitant use

Anticoagulants: efavirenz possibly affects plasma concentration of <i>CLOMARINS</i>

Antidepressants: plasma concentration of efavirenz reduced by <i>ST JOHN'S WORT</i>—avoid concomitant use

Antiepileptics: plasma concentration of both drugs reduced when efavirenz given with <i>CARBAMAZEPINE</i>

Antifungals: efavirenz reduces plasma concentration of <i>ITRACONAZOLE</i>, <i>KETOCONAZOLE</i> and <i>Posaconazole</i>; efavirenz reduces plasma concentration of <i>VORICONAZOLE</i>, also plasma concentration of efavirenz increased (increase voriconazole dose and reduce efavirenz dose); efavirenz possibly reduces plasma concentration of <i>CASPOFUNGIN</i>—consider increasing dose of caspofungin

Antimalarials: efavirenz reduces plasma concentration of <i>ARTENETHER WITH LUMEFANTRINE</i>; efavirenz possibly affects plasma concentration of <i>PROGUANIL</i>

Antipsychotics: efavirenz reduces plasma concentration of <i>Aripiprazole</i> (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); efavirenz possibly increases plasma concentration of <i>PIMOZIDE</i> (increased risk of ventricular arrhythmias—avoid concomitant use)

Antivirals: avoidance of efavirenz advised by manufacturer of <i>ATAZANAVIR</i> (plasma concentration of atazanavir reduced); efavirenz reduces the plasma concentration of <i>DACLATASVIR</i>—increase dose of daclatasvir (see under Daclatasvir, p. 544); efavirenz reduces plasma concentration of <i>DARUNAVIR</i> (adjust dose—consult product literature); efavirenz reduces the plasma concentration of <i>DOLUTEGRAVIR</i> (see under Dolutegravir, p. 557); avoidance of efavirenz advised by manufacturer of <i>ELVITEGRAVIR</i>; efavirenz possibly reduces plasma concentration of <i>ETRAVIRINE</i>—avoid concomitant use; efavirenz reduces plasma concentration of <i>INDINAVIR</i> and <i>SIMEPREVIR</i>; efavirenz reduces plasma concentration of <i>LOPINAVIR</i>—consider increasing dose of lopinavir; efavirenz possibly reduces plasma concentration of <i>Maraviroc</i>—consider increasing dose of maraviroc; plasma concentration of efavirenz reduced by <i>NEVIRAPINE</i>—avoid concomitant use; toxicity of efavirenz increased by <i>RITONAVIR</i>, monitor liver function tests—manufacturer of <i>Attril</i> advises avoid concomitant use with high-dose ritonavir; efavirenz significantly reduces plasma concentration of <i>Saquinarivir</i>; efavirenz reduces plasma concentration of <i>Teleprevir</i>—increase dose of telaprevir

Antioxidants: efavirenz increases risk of prolonged sedation when efavirenz given with <i>MIDAZOLAM</i>—avoid concomitant use

Antivirals: efavirenz reduces plasma concentration of <i>ATOVIRAVIRUS</i>—avoid concomitant use

Avanafil: efavirenz possibly reduces plasma concentration of <i>AVANAFIL</i>—manufacturer of avanafil advises avoid concomitant use

Bupropion: efavirenz accelerates metabolism of <i>BUPROPION</i> (reduced plasma concentration)

Calcium-channel Blockers: efavirenz reduces plasma concentration of <i>DILTIAZEM</i>

Ciclosporin: efavirenz possibly reduces plasma concentration of <i>BOSUTINIB</i>—manufacturer of bosutinib advises avoid concomitant use

Cytotoxics: efavirenz reduces plasma concentration of <i>PROGESTAGENS</i>

Ergot Alkaloids: increased risk of ergotism when efavirenz given with <i>ERGOT ALKALOIDS</i>—avoid concomitant use

Grapefruit Juice: plasma concentration of efavirenz possibly increased by <i>GRAPEFRUIT JUICE</i>

Lipid-regulating Drugs: efavirenz reduces plasma concentration of <i>ATORVASTATIN</i>, <i>PRAVASTATIN</i> and <i>SIMVASTATIN</i>

Orlistat: absorption of efavirenz possibly reduced by <i>ORLISTAT</i>

Progestogens: efavirenz possibly reduces contraceptive effect of <i>PROGESTAGENS</i>

Tacrolimus: efavirenz possibly affects plasma concentration of <i>TACROLIMUS</i>

Eltrombopag: absorption of eltrombopag reduced by <i>ELTROMBOPAG</i> (give at least 4 hours apart)

Antacids: plasma concentration of eltrombopag possibly reduced by <i>ANTACIDS</i> (give at least 4 hours apart)

Antivirals: plasma concentration of eltrombopag possibly reduced by <i>LOPINAVIR</i>

Calcium Salts: absorption of eltrombopag possibly reduced by <i>CALCIUM SALTS</i> (give at least 4 hours apart)

Dairy Products: absorption of eltrombopag possibly reduced by <i>DAIRY PRODUCTS</i> (give at least 4 hours apart)

Iron Salts: absorption of eltrombopag possibly reduced by <i>IRON SALTS</i> (give at least 4 hours apart)

Lipid-regulating Drugs: eltrombopag increases plasma concentration of <i>ROSUVASTATIN</i>—adjust dose of rosuvastatin (consult product literature)

Selenium: absorption of eltrombopag possibly reduced by <i>SELENIUM</i> (give at least 4 hours apart)

Zinc: absorption of eltrombopag possibly reduced by <i>ZINC</i> (give at least 4 hours apart)

Elvitegravir: absorption of elvitegravir reduced by <i>ALUMINUM HYDROXIDE</i> and <i>ORAL MAGNESIUM SALTS</i> (give at least 4 hours apart)

Antibacterials: plasma concentration of elvitegravir reduced by <i>RIFABUTIN</i>—also plasma concentration of active metabolite of rifabutin increased—reduce dose of rifabutin; manufacturer of elvitegravir advises avoid concomitant use with <i>RIFAMPICIN</i>

Antidepressants: manufacturer of elvitegravir advises avoid concomitant use with <i>ST JOHN'S WORT</i>

Antiepileptics: manufacturer of elvitegravir advises avoid concomitant use with <i>CARBAZAMPELINE</i>, <i>FOSPHENYTOIN</i>, <i>PHENOBARBITAL</i>, <i>PHENYTOIN</i> and <i>PRIMIDONE</i>

Antivirals: plasma concentration of elvitegravir increased by <i>ATAZANAVIR</i> and <i>LOPINAVIR</i> boosted with ritonavir (reduce dose of elvitegravir); manufacturer of elvitegravir advises avoid concomitant use with <i>EFAVIRENZ</i> and <i>NEVIRAPINE</i>

Bosentan: manufacturer of elvitegravir advises avoid concomitant use with <i>BOSENTAN</i>

Orlistat: absorption of elvitegravir possibly reduced by <i>ORLISTAT</i>
Ergot Alkaloids

- Antidepressants: possible risk of hypertension when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use
- Antipsychotics: plasma concentration of ergot alkaloids possibly increased by LURASIDONE (increased risk of toxicity)
- Antivirals: plasma concentration of ergot alkaloids possibly increased by ATAZANAVIR—avoid concomitant use; avoidance of ergot alkaloids advised by manufacturer of BOCEPREVIR and TELAPREVI; increased risk of ergotism when ergot alkaloids given with DARUNAVIR—manufacturer of darunavir advises avoid concomitant use; increased risk of ergotism when ergot alkaloids given with EFAVIRENZ—avoid concomitant use; increased risk of ergotism when ergotamine given with POSAMPRENAVIR, INDINAVIR, RITONAVIR or SAQUINAVIR—avoid concomitant use; increased risk of ergotism when ergometrine given with INDINAVIR or RITONAVIR—avoid concomitant use
- Beta-blockers: increased peripheral vasconstriction when ergotamine given with BETA-BLOCKERS
- Cobicistat: plasma concentration of ergot alkaloids possibly increased by COBICISTAT—manufacturer of cobicistat advises avoid concomitant use
- Cytotoxics: caution with ergot alkaloids advised by manufacturer of CRIZOTINIB; avoidance of ergotamine advised by manufacturer of IDEALIS
- SHT-receptor Agonists: increased risk of vasospasm when ergotamine given with ALMOPRIPITAN, RIZATRIPTAN, SUMATRIPTAN or ZOMITRIPTAN (avoid ergotamine for 6 hours after almotriptan, rizatriptan, sumatriptan or zolmitriptan, avoid almotriptan, rizatriptan, sumatriptan or zolmitriptan for 24 hours after ergotamine); increased risk of vasospasm when ergotamine given with ELETRIPTAN, FROVATRIPTAN or NARATRIPTAN (avoid ergotamine for 24 hours after eletriptan, frovatriptan or naratriptan, avoid eletriptan, frovatriptan or naratriptan for 24 hours after ergotamine)
- Sympathomimetics: increased risk of ergotism when ergotamine given with SYMPATHOMIMETICS
- Ticagrelor: plasma concentration of ergot alkaloids possibly increased by TICAGRELOR
- Ulcer-healing Drugs: increased risk of ergotism when ergotamine given with Cimetidine—avoid concomitant use

Ergotamine

- Antidepressants: possible risk of hypertension when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Enfuvirtide

- See ACE Inhibitors

Entacapone

- See Phosphodiesterase Inhibitors

Entacapone

- Anticoagulants: entacapone enhances anticoagulant effect of WARFARIN
- Antidepressants: manufacturer of entacapone advises caution with MOXIBEMIDE, TRICYCLICS and VENLAFAXINE; avoid concomitant use of entacapone with non-selective MAOIS
- Dopaminergics: entacapone possibly enhances effects of APOMORPHINE; entacapone possibly reduces plasma concentration of RASAGILINE; manufacturer of entacapone advises max. dose of 10 mg SELEGILINE if used concomitantly
- Iron Salts: absorption of entacapone reduced by oral IRON SALTS
- Memantine: effects of dopaminergics possibly enhanced by MEMANTINE
- Metyldopa: entacapone possibly enhances effects of METHYLDOPA; antiparkinsonian effect of dopaminergics antagonised by METHYLDOPA
- Sympathomimetics: entacapone possibly enhances effects of ADRENALINE (EPINEPHRINE), DOBUTAMINE, DOPAMINE and NORDRENALINE (NOREPINEPHRINE)

Enteral Foods

- Anticoagulants: the presence of vitamin K in some enteral feeds can antagonise the anticoagulant effect of COUMARINS and PHENIDIONE
- Antiepileptics: enteral feeds possibly reduce absorption of FOSPHENOTYIN and PHENITOIN

Enzalutamide

- Antibacterials: manufacturer of enzalutamide advises avoid concomitant use with RIFAMPICIN
- Anticoagulants: enzalutamide possibly reduces plasma concentration of COUMARINS
- Lipid-regulating Drugs: plasma concentration of enzalutamide increased by GEMFIBROZIL—manufacturer of enzalutamide advises avoid concomitant use or halve dose of enzalutamide

Ephedrine

- See Sympathomimetics

Epinephrine

- See Sympathomimetics

Eripiprin

- Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
- Cyclosporin: plasma concentration of eripiprin increased by CICLOスポRIN
- Ulcer-healing Drugs: plasma concentration of eripiprin increased by CIMEtIDINE

Eplerenone

- See Diuretics

Eprosartan

- See Angiotensin-II Receptor Antagonists

Eptifibatide

- Iloprost: increased risk of bleeding when eptifibatide given with ILOPROST

Ergocorniferol

- See Vitamins

Ergometrine

- See Ergot Alkaloids

Ergot Alkaloids

- Antibacterials: increased risk of ergotism when ergometrine given with CLARITHROMYCIN or ERYTHROMYCIN—avoid concomitant use; increased risk of ergotism when ergotamine given with MACROLIDES or TETRACYCLINES—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Ergotamine

- Antidepressants: possible risk of hypertension when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Ergometrine

- Antidepressants: possible risk of hypertension when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Ergonovine

- Antidepressants: possible risk of hypertension when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Ergotamine

- Antidepressants: possible risk of hypertension when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Elvitegravir

- See Antidiabetics

Emfuvirtide

- See ACE Inhibitors

Enoximone

- See Phosphodiesterase Inhibitors

Enzalutamide

- Anticoagulants: increased risk of ergotism when ergotamine given with REBOXETINE
- Antifungals: avoidance of ergot alkaloids advised by manufacturer of KETOCONAZOLE; avoidance of ergotamine advised by manufacturer of TRICARIN; increased risk of ergotism; increased risk of ergotism when ergometrine given with VORICONAZOLE—avoid concomitant use; increased risk of ergotism when ergotamine given with IMIDAZOLES or TRIAZOLEs—avoid concomitant use; increased risk of ergotism when ergotamine given with TETRACYCLINES

Ertapenem

- See Antibacterials

Evetolizumab

- See Antibioties
Erlotinib (continued)

- Cytotoxics: plasma concentration of erlotinib possibly increased by **CAPECITABINE**
- Ultra-healing Drugs: manufacturer of erlotinib advises avoid concomitant use with **CIMETIDINE, ESOMEPRAZOLE, FAMOTIDINE, Lansoprazole, NIZATIDINE, Pantoprazole** and **RABEPRAZOLE**; plasma concentration of erlotinib reduced by **RANITIDINE**—manufacturer of erlotinib advises give at least 2 hours before or 10 hours after ranitidine; plasma concentration of erlotinib reduced by **OMEPRAZOLE**—manufacturer of erlotinib advises avoid concomitant use

Ertapenem

- Antiepileptics: carbenapens reduce plasma concentration of **SODIUM VALPROATE** and **VALPROIC ACID**—avoid concomitant use
- Vaccines: antibacterials inactivate **ORTAL TYPOID VACCINE**—see under Typhoid Vaccine in BNF

Erythromycin see Macrolides

Escitalopram see Antidepressants, SSRI

Eslicarbazepine

- Anticoagulants: eslicarbazepine reduces plasma concentration of **WARFARIN**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of eslicarbazepine possibly reduced by **CARBAMAZEPINE** but risk of side-effects increased; plasma concentration of eslicarbazepine reduced by **PHENOBARBITAL** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin increased; manufacturer of eslicarbazepine advises avoid concomitant use with **OXCARBAZEPINE**
  - Antimalarials: anticonvulsant effect of antiepileptics antagonised by **MEFLOQUINE**
  - Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Lipid-regulating Drugs: eslicarbazepine reduces plasma concentration of **ROSUVASTATIN**; eslicarbazepine reduces plasma concentration of **SIMVASTATIN**—consider increasing dose of simvastatin
- Oestrogens: eslicarbazepine accelerates metabolism of **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
- Orlistat: possible increased risk of convulsions when antiepileptics given with **ORLISTAT**
- Progestogens: eslicarbazepine accelerates metabolism of **PROGESTGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)

Esmolol see Beta-blockers

Esomeprazole see Proton Pump Inhibitors

Estradiol see Oestrogens

Estramustine

- Antacids: absorption of estramustine possibly reduced by **ALUMINIUM HYDROXIDE** and **ORAL MAGNESIUM SALTS**—manufacturer of estramustine advises avoid concomitant administration
- Antipsychotics: avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- Bisphosphonates: plasma concentration of estramustine increased by **SODIUM CLORIDRATO**
- Calcium Salts: absorption of estramustine reduced by **CALCIUM SALTS** (manufacturer of estramustine advises avoid concomitant administration)

Estradiol see Oestrogens

Estrone see Oestrogens

Etenacept (continued)

- Anakinra: avoid concomitant use of etenacept with **ANAKINRA**
- Vaccines: risk of generalised infections when etenacept given with live **VACCINES**—avoid concomitant use

Etilomab see Oestrogens

Ethosuximide

- Antibacterials: metabolism of ethosuximide inhibited by **ISONIAZID** (increased plasma concentration and risk of toxicity)
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of ethosuximide possibly reduced by **CARBAMAZEPINE, PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of ethosuximide possibly reduced by **FOSPHENYTOIN** and **PHENYOINT**, also plasma concentration of fosphenytoin and phenytoin possibly enhanced anticoagulant effect of antiepileptics antagonised by **SODIUM VALPROATE** and **VALPROIC ACID**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with **ORLISTAT**

Etodolac see NSAIDs

Etoricoxib see NSAIDs

Etoposide

- Anticoagulants: etoposide possibly enhances anticoagulant effect of **GUMARINS**
- Antiretrovirals: plasma concentration of etoposide possibly reduced by **FOSPHENYTOIN, PHENOBARBITAL, PHENYOINT** and **PRIMIDONE**
- Antifungals: plasma concentration of etoposide increased by **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- Atovaquone: plasma concentration of etoposide possibly increased by **ATovaquone**
- Cilostazol: plasma concentration of etoposide possibly increased by **CILOSTAZOL** (increased risk of toxicity)

Etoricoxib see NSAIDs

Etravirine

- Antibacterials: etravirine reduces plasma concentration of **CLARITHROMYCIN** (but concentration of an active metabolite increased), also plasma concentration of etravirine increased; plasma concentration of both drugs reduced when etravirine given with **RIFABUTIN**; manufacturer of etravirine advises avoid concomitant use with **RIFAMPICIN**; etravirine possibly reduces plasma concentration of **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use
- Antidepressants: manufacturer of etravirine advises avoid concomitant use with **ST JOHN’S WORT**
- Antiepileptics: manufacturer of etravirine advises avoid concomitant use with **CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYOINT** and **PRIMIDONE**
- Antimalarials: etravirine reduces plasma concentration of **ARTEMETHER WITH LUMEFANTRINE**
- Antivirals: effects of both drugs possibly reduced when etravirine given with **BOCEPIRIVINE**; avoidance of etravirine advised by manufacturer of **DACLATASVIR** (plasma concentration of daclatasvir possibly reduced); etravirine reduces the plasma concentration of **DOLUTEGRAVIR** (see under Dolutegravir, p. 557); plasma concentration of etravirine possibly reduced by **EFAVIRENZ** and **NEVIRAPINE**—
Etravirine
- Antivirals (continued) use; etravirine increases plasma concentration of • **fosamprenavir** (consider reducing dose of fosamprenavir), etravirine possibly reduces plasma concentration of • **indinavir**—avoid concomitant use; etravirine possibly reduces plasma concentration of **maraviroc**; avoidance of etravirine advised by manufacturer of **simeprevir**; plasma concentration of etravirine reduced by • **tipranavir**, also plasma concentration of tipranavir increased (avoid concomitant use)
  - Cardiac Glycosides: etravirine increases plasma concentration of **digoxin**
  - Clondipigrel: etravirine possibly reduces antiplatelet effect of • **clondipigrel**
  - Cytotoxics: etravirine possibly reduces plasma concentration of • **bosutinib**—manufacturer of bosutinib advises avoid concomitant use
  - Lipid regulating Drugs: etravirine possibly reduces plasma concentration of **clopidogrel**: also plasma concentration of tipranavir increased (avoid concomitant use)

Famotidine see Histamine H₂-antagonists
Fampidine
- Ulcer-healing Drugs: manufacturer of fampridine advises avoid concomitant use with • **cimetidine**

Fexofenadine see Antihistamines
Fenofibrate see Fibrates
Fenoprofen see NSAIDs
Fentanyl see Opioid Analgesics
Ferrous Sulfate see Iron salts
Ferrous Gluconate see Iron salts

Fesoterodine see Antimuscarinics
Fexofenadine see Antihistamines

Fibrates
- Antibacterials: increased risk of myopathy when fibrates given with • **daptomycin** (preferably avoid concomitant use)
- Anticoagulants: fibrates enhance anticoagulant effect of • **coumarins** and • **phenindione**
- Antidiabetics: fibrates may improve glucose tolerance and have an additive effect with **insulin** or **sulfonylureas**; gemfibrozil possibly enhances hypoglycaemic effect of **Nateglinide**; increased risk of severe hypoglycaemia when gemfibrozil given with • **repaglinide**—avoid concomitant use
  - Ciclosporin: increased risk of renal impairment when bezafibrate or fenofibrate given with **ciclosporin**
  - Colchicine: possible increased risk of myopathy when fibrates given with • **colchicine**
  - Cytotoxics: gemfibrozil increases plasma concentration of **dabrafenib**; gemfibrozil increases plasma concentration of • **bexarotene**—avoid concomitant use
  - Hormone Antagonists: gemfibrozil increases plasma concentration of • **enzalutamide**—manufacturer of enzalutamide advises avoid concomitant use or halve dose of enzalutamide
  - Leukotriene Receptor Antagonists: gemfibrozil increases plasma concentration of **Montelukast**

Fexofenadine see Antihistamines

Fidaxomicin
- Anti-arthrhythmics: manufacturer of fidaxomicin advises avoid concomitant use with **amiodarone** and **dronedarone**
- Anti-infectives: manufacturer of fidaxomicin advises avoid concomitant use with • **clarithromycin** and **erythromycin**
- Anti-inflamamts: manufacturer of fidaxomicin advises avoid concomitant use with **ketocanozole**
- Calcium-channel Blockers: manufacturer of fidaxomicin advises avoid concomitant use with **verapamil**
- Ciclosporin: manufacturer of fidaxomicin advises avoid concomitant use concomitant use with **ciclosporin**
- Vaccines: antibacterials inactivate **oral typhoid vaccine**—see under Typhoid Vaccine in BNF
Filgrastim
- Cytotoxics: neutropenia possibly exacerbated when filgrastim given with CAPECITABINE, FLUOROURACIL or TEGAFUR

Fingolimod
- Anti-arrhythmics: possible increased risk of bradycardia when fingolimod given with AMIODARONE, DISOPYRAMIDE or DRONEDARONE
- Antidepressants: plasma concentration of fingolimod possibly reduced by ST JOHN’S WORT—manufacturer of fingolimod advises avoid concomitant use
- Antiepileptics: plasma concentration of fingolimod reduced by CARBAMAZEPINE
- Antifungals: plasma concentration of fingolimod increased by KETOCONAZOLE
- Beta-blockers: possible increased risk of bradycardia when fingolimod given with LAMINAR
- Calcium-channel Blockers: possible increased risk of bradycardia when fingolimod given with DILTIAZEM or VERAPAMIL

Flavoxate
- see Antimuscarinics

Flecainide
- Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with BUPIVAÇANE, LEVOBUPIVAÇANE, PRILOCAZÉ or ROPIVAPAÇAZÉ
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other ANTI-ARRHYTHMICS; plasma concentration of flecainide increased by AMIODARONE (halve dose of flecainide)
- Antidepressants: plasma concentration of flecainide increased by FLUOKETINE; increased risk of ventricular arrhythmias when flecainide given with TRICYCLICS
- Antihistamines: increased risk of ventricular arrhythmias when flecainide given with MIZOLASTINE—avoid concomitant use
- Antiarrhythmics: avoidance of flecainide advised by manufacturer of ARTEMETHER WITH LUMEFANTRINE (risk of ventricular arrhythmias); plasma concentration of flecainide increased by QUININE
- Antimuscarinics: increased risk of ventricular arrhythmias when flecainide given with FOLTERODINE
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ANTIPSYCHOTICS that prolong the QT interval; increased risk of arrhythmias when flecainide given with CLOZAPINE
- Antivirals: plasma concentration of flecainide possibly increased by FOSAMPRENAVIR, INDINAVIR, RITONAVIR and PRONAVIR (increased risk of ventricular arrhythmias—avoid concomitant use); increased risk of ventricular arrhythmias when flecainide given with SAQUINAVIR—avoid concomitant use; caution with flecainide advised by manufacturer of TELAPREVIR (risk of ventricular arrhythmias)
- Beta-blockers: increased risk of myocardial depression and bradycardia when flecainide given with BETABLOCKERS; increased myocardial depression when anti-arrhythmics given with BETABLOCKERS
- Calcium-channel Blockers: increased risk of myocardial depression and asystole when flecainide given with VERAPAMIL
- Diuretics: increased cardiac toxicity with flecainide if hypokalaemia occurs with ACETAZOLAMIDE, LOOP DIURETICS or THIURAS AND RELATED DIURETICS
- Ulcer-healing Drugs: metabolism of flecainide inhibited by Cimetidine (increased plasma concentration)

Flucloxacillin see Penicillins

Fluconazole see Antifungals, Triazole

Flucytosine
- Antifungals: renal excretion of flucytosine decreased and cellular uptake increased by AMPHOTERICIN (toxicity possibly increased)
- Cytotoxics: plasma concentration of flucytosine possibly reduced by CYTARABINE

Fludarabine
- Antipsychotics: avoid concomitant use of cytoxotics with CLOZAPINE (increased risk of agranulocytosis)
- Cytotoxics: fludarabine increases intracellular concentration of CYTARABINE; increased pulmonary toxicity when

Fludarabine (continued)
- Cytotoxics (continued) fludarabine given with PENTOSTATIN (unacceptably high incidence of fatalities)
- Diprydiamole: effects of fludarabine possibly reduced by DIPRYDAMOLE

Fludrocortisone see Corticosteroids

Fluorides
- Calcium Salts: absorption of fluorides reduced by CALCIUM SALTS

Fluouracil
- Antibacterials: metabolism of fluorouracil inhibited by METRONIDAZOLE (increased toxicity)
- Anticoagulants: fluorouracil enhances anticoagulant effect of COUMARINS
- Antiepileptics: fluorouracil possibly prohibits metabolism of FOSPHENITOIN and PHENYTOIN (increased risk of toxicity)
- Antipsychotics: avoid concomitant use of cytoxotics with CLOZAPINE (increased risk of agranulocytosis)
- Filgrastim: neutropenia possibly exacerbated when fluorouracil given with FILGRASTIM
- Folate: toxicity of fluorouracil increased by FOLIC ACID—avoid concomitant use
- Filgrastim: neutropenia possibly exacerbated when fluorouracil given with FILGRASTIM
- PEGFILGRASTIM
- Pegfilgrastim: neutropenia possibly exacerbated when fluorouracil given with PEGFILGRASTIM
- Temoporfin: increased skin photosensitivity when topical fluorouracil used with TEMPORFIN
- Ulcer-healing Drugs: metabolism of fluorouracil inhibited by Cimetidine (increased plasma concentration)

Fluvastatin see Antidepressants, SSRI

Flupentixol see Antipsychotics

Fluphenazine see Antipsychotics

Flurazepam see Anxiolytics and Hypnotics

Flurbiprofen see NSAIDs

Flutamide
- Anticoagulants: flutamide enhances anticoagulant effect of COUMARINS

Fluticasone see Corticosteroids

Fluvastatin see Statins

Fluoxamine see Antidepressants, SSRI

Folates
- Aminosalicylates: absorption of folic acid possibly reduced by SULFASALAZINE
- Anticids: absorption of folic acid possibly reduced by ANTACIDS (manufacturer of folic acid advises give at least 2 hours apart)
- Antiepileptics: folates possibly reduce plasma concentration of FOSPHENITOIN, PHENOBARBITAL, PHENYTOIN and PRIMIDONE
- Cytotoxics: folic acid increases toxicity of CAPECITABINE, FLUOROURACIL and TEGERAF—avoid concomitant use; avoidance of folates advised by manufacturer of RALITREXED

Folic Acid see Folates

Folinic Acid see Folates

Fosamprenavir
- Acids: increased risk of haemorrhage when anticoagulants given with intravenous DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with APIXABAN, DABIGATRAN and RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Formoterol see Symathomimetics, Beta2

Fosamprenavir
- Acids: increased risk of haemorrhage when anticoagulants given with intravenous DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with APIXABAN, DABIGATRAN and RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Formoterol see Symathomimetics, Beta2

Fosamprenavir
- Acids: increased risk of haemorrhage when anticoagulants given with intravenous DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with APIXABAN, DABIGATRAN and RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Formoterol see Symathomimetics, Beta2
Fosamprenavir
- Lipid-regulating Drugs (continued); use; avoidance of fosamprenavir advised by manufacturer of LOMITAPIDE (plasma concentration of lomitapide possibly increased)
- Oralist; absorption of fosamprenavir possibly reduced by ORLISTAT
- Ranolazone: fosamprenavir possibly increases plasma concentration of ranolazine—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: fosamprenavir possibly increases plasma concentration of sildenafil
- Tacrolimus: fosamprenavir increases plasma concentration of tacrolimus
- Tadalafil: fosamprenavir possibly increases plasma concentration of tadalafil

Fosaprepitant
- Anticoagulants: fosaprepitant possibly reduces anticoagulant effect of warfarin
- Antidepressants: manufacturer of fosaprepitant advises avoid concomitant use with ST JOHN'S WORT
- Antidiabetics: fosaprepitant reduces plasma concentration of tolbutamide
- Antibacterials: fosaprepitant possibly increases plasma concentration of fosamprenavir
- Antifungals: fosaprepitant possibly increases plasma concentration of ketoconazole
- Antihistamines: caution with fosaprepitant by manufacturer of artemether with lumefantrine; fosaprepitant possibly increases plasma concentration of quetiapine—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: manufacturer of fosaprepitant advises avoid concomitant use with boceprevir and raltegravir; fosaprepitant reduces plasma concentration of dolutedegravir; plasma concentration of fosamprenavir increased by etravirine (consider reducing dose of fosamprenavir); plasma concentration of fosamprenavir reduced by lopinavir, effect on lopinavir plasma concentration not predictable—avoid concomitant use; plasma concentration of fosamprenavir reduced by maraviroc—avoid concomitant use; plasma concentration of fosamprenavir possibly reduced by nevirapine—avoid unboosted fosamprenavir; manufacturers advise avoid concomitant use of fosamprenavir with telaprevir; plasma concentration of fosamprenavir reduced by tipranavir
- Anxiolytics and Hypnotics: fosamprenavir possibly increases plasma concentration of midazolam (risk of prolonged sedation)—avoid concomitant use of oral midazolam
- Avascular: fosamprenavir possibly increases plasma concentration of avanafil—see under avanafil, p. 698
- Ciclosporin: fosamprenavir increases plasma concentration of ciclosporin
- Cytotoxics: fosamprenavir possibly increases the plasma concentration of bosutinib—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; fosamprenavir possibly increases the plasma concentration of ibritinib—reduce dose of ibritinib (see under ibritinib, p. 809)
- Dapoxetine: manufacturer of dapoxetine advises dose reduction when fosamprenavir given with dapoxetine (see under dapoxetine, p. 703)
- Ergot Alkaloids: increased risk of ergotism when fosamprenavir given with ergotamine—avoid concomitant use
- Lipid-regulating Drugs: possible increased risk of myopathy when fosamprenavir given with atorvastatin; possible increased risk of myopathy when fosamprenavir given with rosuvastatin—manufacturer of rosuvastatin advises avoid concomitant use; possible increased risk of myopathy when fosamprenavir given with simvastatin—avoid concomitant use
Fosphenytoin

- Analgesics (continued)
  - accelerates metabolism of FENTANYL (reduced effect); fosphenytoin accelerates metabolism of METHADONE (reduced effect and risk of withdrawal effects); fosphenytoin possibly increases risk of PETHIDINE toxicity; effects of fosphenytoin enhanced by ASPIRIN; fosphenytoin possibly accelerates metabolism of PARACETAMOL (also isolated reports of hepatotoxicity).
- Antihelmintics: fosphenytoin reduces plasma concentration of ALBENDAZOLE and PRAZIQUANTEL—consider increasing albendazole and praziquantel dose when given for systemic infections; plasma concentration of fosphenytoin possibly increased by LEVAMISOLE.
- Anti-arrhythmics: metabolism of fosphenytoin inhibited by AMIODARONE (increased plasma concentration); fosphenytoin reduces plasma concentration of DISOPRIMARY; fosphenytoin possibly reduces plasma concentration of DRONEDARONE—avoid concomitant use.
- Antibacterials: metabolism of fosphenytoin inhibited by CLARITHROMYCIN (increased plasma concentration); metabolism of fosphenytoin possibly inhibited by METRONIDAZOLE (increased plasma concentration); plasma concentration of fosphenytoin increased or decreased by CIPROFLOXACIN; fosphenytoin accelerates metabolism of DOXYCYCLINE (reduced plasma concentration); fosphenytoin possibly reduces plasma concentration of BEDAQUILINE—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of fosphenytoin increased by CHLORAMPHENICOL (increased risk of toxicity); metabolism of fosphenytoin possibly inhibited by SONIAZID (increased risk of toxicity); metabolism of fosphenytoin accelerated by SULFONAMIDES; fosphenytoin reduces plasma concentration of TELITHROMYCIN (avoid during and for 2 weeks after fosphenytoin); plasma concentration of fosphenytoin increased by TRIMETHOPRIM (also increased antifolate effect).
- Anticoagulants: fosphenytoin possibly reduces plasma concentration of APYXABAN; fosphenytoin accelerates metabolism of COUMARINS (possibility of reduced anticoagulant effect, but enhancement also reported); fosphenytoin possibly reduces plasma concentration of DABIGATRAN—manufacturer of dabigatran advises avoid concomitant use; fosphenytoin possibly reduces plasma concentration of Rivaroxaban—manufacturer of rivaroxaban advises monitor for signs of thrombosis.
- Antidepressants: plasma concentration of fosphenytoin increased by FLUDEXTROXIME; fosphenytoin reduces plasma concentration of MANSERIN, MIRTAZAPINE and PAROXETINE; plasma concentration of fosphenytoin possibly increased by SERTRALINE, also plasma concentration of sertraline possibly reduced; anticonvulsant effect of antiepileptics possibly antagonised by MAOI and TRICYCLIC-RELATED ANTIDEPRESSANTS (convulsive threshold lowered); anticonvulsant effect of antiepileptics possibly antagonised by SSRIS and TRICYCLICS (convulsive threshold lowered); plasma concentration of fosphenytoin possibly reduced by ST JOHN’S WORT—avoid concomitant use; fosphenytoin possibly reduces plasma concentration of TRICYCLICS.
- Antidiabetics: plasma concentration of fosphenytoin transiently increased by TOLBUTAMIDE (possibility of toxicity).
- Antiepileptics: plasma concentration of both drugs often reduced when fosphenytoin given with CARBAMAZEPINE, also plasma concentration of fosphenytoin may be increased; fosphenytoin reduces plasma concentration of ESILCARBAZEPINE, also plasma concentration of fosphenytoin may be increased; fosphenytoin reduces plasma concentration of lamotrigine, tiagabine and zonisamide; plasma concentration of fosphenytoin increased by oxcarbazepine, also plasma concentration of an active metabolite of oxcarbazepine reduced; fosphenytoin reduces plasma concentration of PERAMAPAN (see under Perampanel, p. 398); fosphenytoin often increases plasma concentration of PHENOBARBITAL and PRIMIDONE, plasma concentration of fosphenytoin often reduced but may be increased; fosphenytoin possibly reduces plasma concentration of retigabine; fosphenytoin possibly reduces plasma concentration of RUFINAMIDE, also plasma concentration of fosphenytoin increased or possibly reduced when given with SODIUM VALPROATE and VALPROIC ACID, also plasma concentration of sodium valproate and valproic acid reduced; plasma concentration of fosphenytoin increased by STRIPENTOL; plasma concentration of fosphenytoin increased by TOPRIMA (of topiramate reduced); plasma concentration of fosphenytoin reduced by VIGABATRIN.
- Antifungals: fosphenytoin reduces plasma concentration of KETOCONAZOLE and POSACONAZOLE; anticonvulsant effect of fosphenytoin enhanced by MICANAZOLE (plasma concentration of fosphenytoin increased); plasma concentration of fosphenytoin increased by FLUCONAZOLE (consider reducing dose of fosphenytoin); fosphenytoin reduces plasma concentration of TRICONAZOLE—avoid concomitant use; plasma concentration of fosphenytoin increased by VORICONAZOLE, also fosphenytoin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for fosphenytoin toxicity); fosphenytoin possibly reduces plasma concentration of caspofungin.
- Antimalarials: avoidance of fosphenytoin advised by manufacturer of ARTENIMIL with PIPERAQUINE; anticonvulsant effect of antiepileptics antagonised by MELOQUINE; anticonvulsant effect of antiepileptics possibly antagonised by PYRIMETHAMINE, also increased antifolate effect.
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ANTIPSYCHOTICS (convulsive threshold lowered); fosphenytoin reduces plasma concentration of HALOPERIDOL; plasma concentration of fosphenytoin possibly increased or decreased by CHLORPromazine; fosphenytoin possibly reduces plasma concentration of Aripiprazole (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); fosphenytoin accelerates metabolism of clozapine and quetiapine (reduced plasma concentration); fosphenytoin possibly reduces plasma concentration of Lurasidone—avoid concomitant use.
- Antivirals: fosphenytoin possibly reduces plasma concentration of ARAC, CARBAMAZEPINE, LOPINAVIR and SAQUINAVIR; avoidance of fosphenytoin advised by manufacturer of boceprevir and rilpivirine (plasma concentration of boceprevir and rilpivirine possibly reduced); fosphenytoin possibly reduces plasma concentration of DACLATASVIR and simeprevir—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; avoidance of fosphenytoin advised by manufacturer of Dolutegravir, elvitegravir, etravirine and sofosbuvir and telaprevir; fosphenytoin possibly reduces plasma concentration of INDNAVIR, also plasma concentration of fosphenytoin possibly increased; fosphenytoin possibly reduces plasma concentration of ritonavir, also plasma concentration of fosphenytoin possibly affected; plasma concentration of fosphenytoin increased or decreased by zidovudine.
- Anxiolytics and Hypnotics: fosphenytoin often reduces plasma concentration of clonazepam; plasma concentration of fosphenytoin increased or decreased by diazepam; plasma concentration of fosphenytoin possibly increased or decreased by benzo diazepines.
- Aprepitant: fosphenytoin possibly reduces plasma concentration of aprepitant.
- Bupropion: fosphenytoin reduces plasma concentration of bupropion.
- Caffeine citrate: fosphenytoin reduces plasma concentration of caffeine citrate.
Fosphenytoin (continued)

- Calcium-channel Blockers: fosphenytoin reduces effects of feleodipine and verapamil; avoidance of fosphenytoin advised by manufacturer of isradipine; avoidance of fosphenytoin advised by manufacturer of nimodipine (plasma concentration of nimodipine possibly reduced); plasma concentration of fosphenytoin increased by diltilazem but also effect of diltilazem reduced.
- Cardiovascular: fosphenytoin possibly reduces plasma concentration of a cannabinoid extract—manufacturer of cannabis extract advises avoid concomitant use.
- Cardiac Glycosides: fosphenytoin possibly reduces plasma concentration of digoxin.
- Ciclosporin: fosphenytoin accelerates metabolism of ciclosporin.
- Ciclosporin: fosphenytoin possibly reduces plasma concentration of ciclosporin—manufacturer of ciclosporin advises avoid concomitant use.
- Corticosteroids: fosphenytoin possibly reduces plasma concentration of corticosteroids.
- Diazoxide: fosphenytoin possibly reduces plasma concentration of diazoxide; also effect of diazoxide may be reduced.
- Disulfiram: fosphenytoin increases plasma concentration of disulfiram and secobarbital; also effect of disulfiram may be increased.
- Divalproex: fosphenytoin possibly reduces plasma concentration of divalproex.
- Ezetimibe: fosphenytoin possibly reduces plasma concentration of ezetimibe.
- Ezetimibe: fosphenytoin possibly reduces plasma concentration of ezetimibe—manufacturer of ezetimibe advises avoid concomitant use.
- Fosphenytoin: plasma concentration of fosphenytoin possibly reduced by leflunomide.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ritonavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Leflunomide.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by fluvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by simvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by atorvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by pravastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by allopurinol.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by ciprofloxacin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by fluconazole.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by lamivudine.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by metformin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by ritonavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by saquinavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by telaprevir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by voriconazole.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Atorvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Leflunomide.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Fluvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Simvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Pravastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Allopurinol.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ciprofloxacin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Lamivudine.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Metformin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ritonavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Saquinavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Telaprevir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Voriconazole.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Atorvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Leflunomide.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Fluvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Simvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Pravastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Allopurinol.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ciprofloxacin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Lamivudine.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Metformin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ritonavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Saquinavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Telaprevir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Voriconazole.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Atorvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Leflunomide.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Fluvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Simvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Pravastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Allopurinol.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ciprofloxacin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Lamivudine.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Metformin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ritonavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Saquinavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Telaprevir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Voriconazole.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Atorvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Leflunomide.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Fluvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Simvastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Pravastatin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Allopurinol.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ciprofloxacin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Lamivudine.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Metformin.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Ritonavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Saquinavir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Telaprevir.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Voriconazole.
- Fosphenytoin: plasma concentration of fosphenytoin possibly increased by Atorvastatin.
Fusidic Acid (continued)
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Gabapentin
- Analgesics: bioavailability of gabapentin increased by:
  - RIFAMPICIN

- Antacids: absorption of gabapentin reduced by ANTACIDS

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and TRICYCLIC-RELATED ANTIDEPRESSANTS (conversive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRI AND TRICYCLICS (conversive threshold lowered)

- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ANTIPSYCHOTICS (conversive threshold lowered)

- Orlistat: possible increased risk of convulsions when antiepileptics given with ORLISTAT

Galantamine see Parasympathomimetics

Ganciclovir
- NOTE: Increased risk of myelosuppression with other myelosuppressive drugs—consult product literature

- Antibacterials: increased risk of convulsions when ganciclovir given with IMPENEM WITH CILASTATIN

- Antivirals: ganciclovir possibly increases plasma concentration of DIDANOSINE—profound myelosuppression when ganciclovir given with ZIDOVUDINE (if possible avoid concomitant administration, particularly during initial ganciclovir therapy)

- Mycophenolate: plasma concentration of ganciclovir possibly increased by MYCOPHENOLATE, also plasma concentration of inactive metabolite of mycophenolate possibly increased

- Tacrolimus: possible increased risk of nephrotoxicity when ganciclovir given with TACROLISUM

Gefitinib
- Antibacterials: plasma concentration of gefitinib reduced by:
  - RIFAMPICIN—avoid concomitant use

- Anticoagulants: gefitinib possibly enhances anticoagulant effect of WARFARIN

- Antidepressants: manufacturer of gefitinib advises avoid concomitant use with ST JOHN’S WORT

- Antiepileptics: manufacturer of gefitinib advises avoid concomitant use with CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN and PHENINDINE

- Antifungals: plasma concentration of gefitinib increased by ITRACONAZOLE

- Antipsychotics: avoid concomitant use of cytotoxics with gefitinib

- Antivirals: avoidance of gefitinib advised by manufacturer of BUDESONIDE

- Ulcer-healing Drugs: plasma concentration of gefitinib reduced by RANITIDINE

Gemcitabine
- Anticoagulants: gemcitabine possibly enhances anticoagulant effect of WARFARIN

- Antipsychotics: avoid concomitant use of cytotoxics with gemcitabine

- Antivirals: avoidance of gemcitabine advised by manufacturer of BOCEPREVIR

- Ulcer-healing Drugs: plasma concentration of gemcitabine reduced by RANITIDINE

Gentamicin see Aminoglycosides

Gestodene see Progestogens

Glibenclamide see Antidiabetics

Gliclazide see Antidiabetics

Glibenpiride see Antidiabetics

Glipizide see Antidiabetics

Glucosamine
- Anticoagulants: glucosamine enhances anticoagulant effect of WARFARIN (avoid concomitant use)

Glyceryl Trinitrate see Nitrates

Glycopyrronium see Antimuscarinics

Golimumab (continued)
- Anakinra: avoid concomitant use of golimumab with ANAKINRA

- Antipsychotics: avoid concomitant use of cytoxotics with CLOzapine (increased risk of agranulocytosis)

- Vaccines: risk of generalised infections when monoclonal antibodies given with live VACCINES—avoid concomitant use

Granisetron see 5HT3-receptor Antagonists (under HT)

Grapefruit Juice
- Aliskiren: grapefruit juice reduces plasma concentration of ALISKIREN—avoid concomitant use

- Anthelmintics: grapefruit juice increases plasma concentration of active metabolite of ALBENDAZOLE; grapefruit juice increases plasma concentration of PRAZIQUANTEL

- Anti-arrhythmics: grapefruit juice increases plasma concentration of AMIODARONE

- Antihistamines: grapefruit juice reduces plasma concentration of BILASTINE

- Antipsychotics: avoidance of grapefruit juice advised by manufacturer of LURASIDONE and PIMOZIDE; grapefruit juice possibly increases plasma concentration of QUETIAPINE—manufacturer of quetiapine advises avoid concomitant use

- Antivirals: grapefruit juice possibly increases plasma concentration of Efavirenz

- Anxiolytics and Hypnotics: grapefruit juice possibly increases plasma concentration of ORAL MIDAZOLAM; grapefruit juice increases plasma concentration of BISPIRONE

- Avanafil: grapefruit juice possibly increases plasma concentration of AVANAFIL—manufacturer of avanafil advises avoid grapefruit juice for 24 hours before avanafil

- Calcium-channel Blockers: grapefruit juice possibly increases plasma concentration of ANGELICINE; grapefruit juice increases plasma concentration of FELODIPINE, ISRADIPINE, LACIDIPINE, LERCANDIPINE, NICARDIPINE, NIFEDIPINE, NIMODIPINE and VERAPAMIL

- Ciclosporin: grapefruit juice increases plasma concentration of CYCLOSPORIN (increased risk of toxicity)

- Colchicine: grapefruit juice possibly increases risk of COLCHICINE toxicity

- Corticosteroids: grapefruit juice increases plasma concentration of ORAL Budesonide—avoid concurrent use or separate administration by as much as possible and consider reducing oral budesonide dose

- Cytotoxics: grapefruit juice possibly increases plasma concentration of ANTIKINIB, CABOZANTINIB and PONATINIB; grapefruit juice possibly increases the plasma concentration of BOSUTINIB—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; grapefruit juice possibly increases plasma concentration of CRIZOTININ and VINFLUNINE—manufacturer of crizotinib and vinflunine advises avoid concomitant use; avoidance of grapefruit juice advised by manufacturer of DASATINIB (plasma concentration of dasatinib possibly increased); avoidance of grapefruit juice advised by manufacturer of EVEROLIMUS, IBRUTINIB, LAPATINIB, NILOTINIB and PAZOPANIB

- Ibrutinib: grapefruit juice increases plasma concentration of IVAFTOR—manufacturer of ibrutinib advises avoid concomitant use

- Lipid-regulating Drugs: grapefruit juice possibly increases plasma concentration of ATORVASTATIN; grapefruit juice increases plasma concentration of SIMVASTATIN—avoid concomitant use; avoidance of grapefruit juice advised by manufacturer of LOMITAPIDE

- Pirfenidone: avoidance of grapefruit juice advised by manufacturer of PIRFENIDONE
Grapefruit Juice (continued)
- Ranolazine: grapefruit juice possibly increases plasma concentration of RANOLAZINE — manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: grapefruit juice possibly increases plasma concentration of SILDENAFIL
- Sirolimus: grapefruit juice increases plasma concentration of SIROLIMUS — avoid concomitant use
- Tacrolimus: grapefruit juice increases plasma concentration of TACROLIMUS
- Tadalafil: grapefruit juice possibly increases plasma concentration of TADALAFIL
- Tolvaptan: grapefruit juice increases plasma concentration of TOLVAPタン — avoid concomitant use
- Vardenafil: grapefruit juice possibly increases plasma concentration of VARDENAFIL — avoid concomitant use

Griseofulvin
- Alcohol: griseofulvin possibly enhances effects of ALCOHOL
- Anticoagulants: griseofulvin reduces anticoagulant effect of COUMARINS
- Antibacterials: absorption of griseofulvin reduced by PHENOBARBITAL and PHENYTOIN (reduced effect)
- Cisoplatin: griseofulvin possibly reduces plasma concentration of CISPLATIN
- Oestrogens: anecdotal reports of contraceptive failure and increased risk of bleeding when griseofulvin given with OESTROGENS
- Progestogens: anecdotal reports of contraceptive failure and increased risk of bleeding when griseofulvin given with PROGESTOGENS

Guanethidine
- See Adrenergic Neurone Blockers

Haemophilus Vaccine
- See Vaccines

Haloperidol
- See Antipsychotics

Heparin
- See Heparins

Heparin
- ACE inhibitors: increased risk of hyperkalaemia when heparins given with ACE INHIBITORS
- Aflatoxins: increased risk of hyperkalaemia when heparins given with AFLATOXINS
- Analgesics: possible increased risk of bleeding when heparins given with NSAIDS; increased risk of haemorrhage when anticoagulants given with intravenous DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with KETOROLAC (avoid concomitant use, including low-dose heparins); anticoagulant effect of heparins enhanced by ASPIRIN
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when heparins given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with APIXABAN, DABIGATRAN and RIVAROXABAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Clopidogrel: increased risk of bleeding when heparins given with CLOPIDOGREL
- Dipryidamole: anticoagulant effect of heparins enhanced by DIPYRIDAMOLE
- Iloprost: anticoagulant effect of heparins possibly enhanced by ILOPROST
- Nitrate: anticoagulant effect of heparins reduced by infusion of GLYCEROL TRIHTRITRATE

Hepatitis Vaccines
- See Vaccines

Histamine
- Antidepressants: manufacturer of histamine advises avoid concomitant use with MAOIS; effects of histamine theoretically antagonised by ANTIHISTAMINES — manufacturer of histamine advises avoid concomitant use
- Antihistamines: effects of histamine theoretically antagonised by ANTIHISTAMINES — manufacturer of histamine advises avoid concomitant use
- Histamine (continued)
  - Antimalarials: manufacturer of histamine advises avoid concomitant use with ANTIMALARIALS
  - Antipsychotics: effects of histamine theoretically antagonised by ANTIPSYCHOTICS — manufacturer of histamine advises avoid concomitant use
  - Ato伐kone: manufacturer of histamine advises avoid concomitant use with ATOVAQUONE
  - Clonidine: manufacturer of histamine advises avoid concomitant use with CLONIDINE
  - Corticosteroids: manufacturer of histamine advises avoid concomitant use with CORTICOSTEROIDS
  - Ulcer-healing Drugs: effects of histamine theoretically antagonised by HISTAMINE H2-ANTAGONISTS — manufacturer of histamine advises avoid concomitant use

Histamine H2-antagonists
- Alpha-blockers: cinetidine and ranitidine antagonise effects of
  - TOLAZOLINE
- Aminophylline: cinetidine inhibits metabolism of
  - AMINOPHYLLINE (increased plasma concentration)
  - Analgesics: cinetidine inhibits metabolism of OPIOID ANALGESICS (increased plasma concentration)
  - Anti-arrhythmics: cinetidine increases plasma concentration of AMIODARONE and PROPafenone; cinetidine inhibits metabolism of FLECAINIDE (increased plasma concentration); cinetidine increases plasma concentration of LIDOCAINE (increased risk of toxicity)
  - Antibacterials: cinetidine increases plasma concentration of ERYTHROMYCIN (increased risk of toxicity, including deafness); cinetidine inhibits metabolism of METRONIDAZOLE (increased plasma concentration); cinetidine increases plasma concentration of TADALAFIL (increased plasma concentration)
  - Antidepressants: cinetidine increases plasma concentration of CITALOPRAM, ESCITALOPRAM, MIRTAZAPINE and SERTALINE; cinetidine inhibits metabolism of AMITRIPTYLINE, DOXEPIN, IMIPRAMINE and NORTRIPTYLINE (increased plasma concentration); cinetidine increases plasma concentration of MOXIBESTEMIDE (increased plasma concentration)
  - Antiemetics: cinetidine increases plasma concentration of METFORMIN (increased plasma concentration); cinetidine increases plasma concentration of TOLAZOLINE (increased plasma concentration)
  - Antiepileptics: cinetidine increases plasma concentration of CARBAMAZEPINE, FOSPHENTOIN, PHENTOIN, VALPROATE and VALPROIC ACID (increased plasma concentration)
  - Antifungals: cinetidine reduces plasma concentration of ITRACONAZOLE and KETOCONAZOLE; cinetidine reduces plasma concentration of POSACONAZOLE — manufacturer of posaconazole suspension advises avoid concomitant use; famotidine, nizatidine and ranitidine possibly reduce plasma concentration of POSACONAZOLE — manufacturer of posaconazole suspension advises avoid concomitant use; cinetidine increases plasma concentration of TRICYCLICs
  - Antihistamines: manufacturer of loratadine advises cinetidine possibly increases plasma concentration of LORATADINE; cinetidine increases plasma concentration of HYDROXYZINE
  - Antimalarials: avoidance of cinetidine advised by manufacturer of ARTEMETHER with LUMEFANTRINE; cinetidine inhibits metabolism of CHLOROQUINE, HYDROXYCHLOROQUINE and QUININE (increased plasma concentration)
  - Antipsychotics: cinetidine possibly enhances effects of ANTI PSYCHOTICS, CHLORPROMAZINE and CLOZAPINE
  - Antivirals: manufacturer of atazanavir advises adjust doses of both drugs when cinetidine and nizatidine given with ATAZANAVIR — consult atazanavir product literature; famotidine and ranitidine reduce the plasma concentration of ATAZANAVIR (adjust doses of both drugs — consult atazanavir product literature); famotidine increases plasma
Interactions

Appendix 1

Hormone Antagonists
- Antivirals: (continued) concentration of Raltegravir; avoidance of histamine H2-antagonists for 12 hours before or 4 hours after Rilpirivirine advised by manufacturer of rilpirivirine—consult product literature; cimetidine possibly increases plasma concentration of Saquinavir
- Anxiolytics and Hypnotics: cimetidine inhibits metabolism of Benzo Diazepines, Clomethazolone and Zaleplon (increased plasma concentration); cimetidine increases plasma concentration of Melatonin
- Beta-blockers: cimetidine increases plasma concentration of Levetisol, Metoprolol and Propranolol; cimetidine possibly increases plasma concentration of Oral Timolol
- Caffeine citrate: cimetidine increases plasma concentration of Caffeine Citrate
- Calcium-channel blockers: cimetidine possibly inhibits metabolism of Calcium-channel blockers (increased plasma concentration); cimetidine increases plasma concentration of Isradipine (halve dose of isradipine)
- Ciclosporin: cimetidine possibly increases plasma concentration of Ciclosporin
- Clopidogrel: cimetidine possibly reduces antiplatelet effect of Clopidogrel
- Cytotoxic: cimetidine possibly enhances myelosuppressive effects of Carmustin and Lomustine; cimetidine reduces plasma concentration of Doxorubicin; cimetidine increases plasma concentration of Epirubicin; cimetidine inhibits metabolism of Capetabine, Fluorouracil and Tegafur (increased plasma concentration); famotidine possibly reduces plasma concentration of Dasatinib; avoidance of cimetidine, famotidine and nizatidine advised by manufacturer of Erlotinib; ranitidine reduces plasma concentration of Erlotinib—manufacturer of erlotinib advises at least 2 hours before or 10 hours after ranitidine; ranitidine reduces plasma concentration of Gefitinib; histamine H1-antagonists possibly reduce absorption of Lapatinib; histamine H1-antagonists possibly reduce absorption of Pazopanib—manufacturer of pazopanib advises give at least 2 hours before or 10 hours after histamine H2-antagonists
- Dopaminergics: cimetidine reduces excretion of Pramipexole (increased plasma concentration)
- Ergot Alkaloids: increased risk of ergotism when cimetidine is given with Ergotamine—avoid concomitant use
- Fampridine: avoidance of cimetidine advised by manufacturer of Fampridine
- Histamine: histamine H1-antagonists theoretically antagonise effects of Histamine—manufacturer of histamine advises avoid concomitant use
- Hormone Antagonists: absorption of cimetidine possibly delayed by Octreotide
- SHT1-receptor Agonists: cimetidine inhibits metabolism of Zolmitriptan (reduce dose of zolmitriptan)
- Lipid-regulating Drugs: separating administration from cimetidine and ranitidine by 12 hours advised by manufacturer of Lomitapide
- Rivastigmin: cimetidine inhibits the metabolism of Rivastigmin
- Sildenafil: cimetidine increases plasma concentration of Sildenafil—consider reducing dose of sildenafil for erectile dysfunction
- Symptomometics: cimetidine possibly inhibits metabolism of Dobutamine
- Theophylline: cimetidine inhibits metabolism of Theophylline (increased plasma concentration)
- Thyroid Hormones: cimetidine reduces absorption of Levothyroxine

Hormone Antagonists see Antimuscarinics

Hormone Antagonists see Abiraterone, Bicalutamide, Danazol, Dutasteride, Enzalutamide, Exemestane, Flutamide, Lanreotide, Octreotide, Pasireotide, Tamoxifen, and Toremifene

SHT1-receptor Agonists see Antimuscarinics

Antibacterials: plasma concentration of eletriptan increased by Clarithromycin and Erythromycin (risk of toxicity)—

SHT1-receptor Agonists
- Antibacterials: (continued) avoid concomitant use; metabolism of zolmitriptan possibly inhibited by Quinolones (reduce dose of zolmitriptan)
- Antidepressants: increased risk of CNS toxicity when SHT1 agonists given with Citalopram (manufacturer of citalopram advises avoid concomitant use); increased risk of CNS toxicity when sumatriptan given with Citalopram, Escitalopram, Fluoxetine, Fluvoxamine or Paroxetine; metabolism of frovatriptan inhibited by Fluvoxamine; metabolism of zolmitriptan possibly inhibited by Fluvoxamine (reduce dose of zolmitriptan); CNS toxicity reported when sumatriptan given with Sertraline—possible increased serotonergic effects when SHT1 agonists given with Duloxetine or Venlafaxine; risk of CNS toxicity when rizatriptan or sumatriptan given with MAOIs (avoid rizatriptan or sumatriptan for 2 weeks after MAOIs); risk of CNS toxicity when zolmitriptan given with MAOIs or Moclobemide (avoid dose of zolmitriptan); risk of CNS toxicity when rizatriptan or sumatriptan given with Moclobemide (avoid rizatriptan or sumatriptan for 2 weeks after moclobemide); possible increased serotonergic effects when naratriptan given with SSRI—increased serotonergic effects when SHT1 agonists given with ST JOHN’S WORT—avoid concomitant use
- Antifungals: plasma concentration of eletriptan increased by Itraconazole and Ketoconazole (risk of toxicity)—avoid concomitant use; plasma concentration of almotriptan increased by Ketoconazole (increased risk of toxicity)
- Antivirals: plasma concentration of eletriptan increased by Indinavir and Ritonavir (risk of toxicity)—avoid concomitant use
- Beta-blockers: plasma concentration of rizatriptan increased by Propranolol (manufacturer of rizatriptan advises halve dose and avoid within 2 hours of propranolol)
- Dapoxetine: possible increased risk of serotonergic effects when SHT1 agonists given with Dapoxetine (manufacturer of dapoxetine advises SHT1 agonists should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping SHT1 agonists)
- Dopaminergics: avoidance of SHT1 agonists advised by manufacturer of Selegiline
- Ergot Alkaloids: increased risk of vasospasm when eletriptan, frovatriptan or naratriptan given with Ergotamine (avoid ergotamine for 24 hours after eletriptan, frovatriptan or naratriptan, avoid eletriptan, frovatriptan or naratriptan for 24 hours after ergotamine); increased risk of vasospasm when almotriptan, rizatriptan, sumatriptan or zolmitriptan given with Ergotamine (avoid ergotamine for 6 hours after almotriptan, rizatriptan, sumatriptan or zolmitriptan, avoid almotriptan, rizatriptan, sumatriptan or zolmitriptan for 24 hours after ergotamine)
- Lithium: possible risk of toxicity when sumatriptan given with Lithium
- Ulcer-healing Drugs: metabolism of zolmitriptan inhibited by Ciclosporin (reduce dose of zolmitriptan)

SHT1-receptor Antagonists
- Analgesics: ondansetron possibly antagonises effects of Tramadol
- Antibacterials: metabolism of ondansetron accelerated by Rifampicin (reduced effect)
- Antidepressants: possible increased serotonergic effects when SHT1 antagonists given with SSRI-related Antidepressants or SSRI
- Antiplatelet: metabolism of ondansetron accelerated by Carbamazepine, Fosphenytoin and Phenytoin (reduced effect)
- Cytotoxics: increased risk of ventricular arrhythmias when ondansetron given with Vanadotin—avoid concomitant use
- Dopaminergics: possible increased hypotensive effect when ondansetron given with Apomorphine—avoid concomitant use

Human papillomavirus vaccine see Vaccines

Hydralazine see Vasodilator Antihypertensives
Hydrochlorothiazide see Diuretics
Hydrocortisone see Corticosteroids
Hydroflumethiazide see Diuretics
Hydromorphone see Opioid Analgesics
Hydrotalcite see Antacids
Hydroxocobalamin
- Anticholinergics: response to hydroxocobalamin reduced by CHLORTHALIDONE
Hydroxyamphetamine
- Antiiptics: avoid concomitant use of cytoxotics with
- CLOZAINE (increased risk of agranulocytosis)
- Antivirals: increased risk of toxicity when hydroxyamphetamine given with DIONASE and STAUROLIN—avoid concomitant use

Hydroxychloroquine
- Absorbents: absorption of hydroxychloroquine reduced by 
- KALON
- Agalsidase Alfa and Beta: hydroxychloroquine possibly inhibits effects of AGALSIDASE ALFA AND BETA (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- Antacids: absorption of hydroxychloroquine reduced by ANTACIDS

- Anti-arrhythmics: increased risk of ventricular arrhythmias when hydroxychloroquine given with AMIODARONE—avoid concomitant use

- Antibacterials: increased risk of ventricular arrhythmias when hydroxychloroquine given with MOXIFLOXACIN—avoid concomitant use

- Antimalarials: avoidance of antimalarials advised by manufacturer of ARTEMET WITH LUMEFANTRINE; increased risk of convulsions when hydroxychloroquine given with MELOQUINE

- Antipsychotics: increased risk of ventricular arrhythmias when hydroxychloroquine given with DROPERIDOL—avoid concomitant use

- Cardiac Glycosides: hydroxychloroquine possibly increases plasma concentration of DIGOXIN

- Ciclosporin: hydroxychloroquine increases plasma concentration of CICLOSPORIN (increased risk of toxicity)

- Cytotoxics: possible increased risk of ventricular arrhythmias when hydroxychloroquine given with BUSULFAN

- Histamine: avoidance of antimalarials advised by manufacturer of HISTAMINE

- Lanthanum: absorption of hydroxychloroquine possibly reduced by LANTHANUM (give at least 2 hours apart)

- Laronidase: hydroxychloroquine possibly inhibits effects of LARONIDASE (manufacturer of laronidase advises avoid concomitant use)

- Parasympathomimetics: hydroxychloroquine has potential to increase symptoms of myasthenia gravis and thus diminish effect of NEOSTIGMINE and PYRIDOSTIGMINE

- Ulcer-healing Drugs: metabolism of hydroxychloroquine inhibited by CIMETIDINE (increased plasma concentration)

- Vaccines: antimalarials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Hydroxyzine see Antihistamines
Hyoscine see Antimuscarinics
Ibuprofen see NSAIDs
Ibrutinib
- Anti-arrhythmics: plasma concentration of ibrutinib possibly increased by AMIODARONE and DEXTROBEBON—reduce dose of ibrutinib (see under Ibrutinib, p. 809)
- Antibacterials: plasma concentration of ibrutinib possibly increased by CIPROFLOXACIN, CLARITHROMYCIN, ERYTHROMYCIN and TETRACYCLINIC—reduce dose of ibrutinib (see under Ibrutinib, p. 809); plasma concentration of ibrutinib reduced by RIFAMPICIN—avoid concomitant use

- Anticoagulants: manufacturer of ibrutinib advises avoid concomitant use with COUMARINS and PHENINDINE

- Antidepressants: plasma concentration of ibrutinib possibly increased by ST JOHN'S WORT—manufacturer of ibrutinib advises avoid concomitant use

- Antiepileptics: plasma concentration of ibrutinib possibly reduced by CARBAMAZEPINE, FOSPHENYTIOIN and

ibrutinib
- Antiepileptics (continued)
- PHENYTOIN—manufacturer of ibrutinib advises avoid concomitant use

- Anti-arrhythmics: plasma concentration of ibrutinib increased by KETOCONAZOLE—reduce dose of ibrutinib (see under Ibrutinib, p. 809); plasma concentration of ibrutinib possibly increased by FLUCONAZOLE, ITRACONAZOLE and VORICONAZOLE—reduce dose of ibrutinib (see under Ibrutinib, p. 809)

- Antipsychotics: avoid concomitant use of cytoxotics with CLOZAPINE (increased risk of agranulocytosis)

- Antivirals: plasma concentration of ibrutinib possibly increased by ATAZANAVIR, DARUNAVIR, FOSAMPRENAVIR, INDINAVIR, RITONAVIR and SAQUINAVIR—reduce dose of ibrutinib (see under Ibrutinib, p. 809)

- Aprepitant: plasma concentration of ibrutinib possibly increased by APREMPIANT—reduce dose of ibrutinib (see under Ibrutinib, p. 809)

- Calcium-channel Blockers: plasma concentration of ibrutinib possibly increased by CLOBASIC—reduce dose of ibrutinib (see under Ibrutinib, p. 809)

- Cardiac Glycosides: manufacturer of ibrutinib advises give DIGOXIN at least 6 hours before or after ibrutinib

- Cobicistat: plasma concentration of ibrutinib possibly increased by Cobicistat—reduce dose of ibrutinib (see under Ibrutinib, p. 809)

- Cytotoxics: plasma concentration of ibrutinib possibly increased by CRIZOTINIB and MATINIB—reduce dose of ibrutinib (see under Ibrutinib, p. 809)

- Fosaprepitant: plasma concentration of ibrutinib possibly increased by FOSAPREMITANT

- Grapefruit Juice: manufacturer of ibrutinib advises avoid concomitant use with GRAPEFRUIT JUICE

- Vitamins: manufacturer of ibrutinib advises avoid concomitant use with VITAMIN E

Ibuprofen see NSAIDs
Idarubicin
- Antipsychotics: avoid concomitant use of cytoxotics with CLOZAPINE (increased risk of agranulocytosis)

- Ciclosporin: plasma concentration of idarubicin increased by CICLOSPORIN

Idelalisib
- Alpha-blockers: manufacturer of idelalisib advises avoid concomitant use with ALZULON

- Anti-arrhythmics: manufacturer of idelalisib advises avoid concomitant use with AMIODARONE

- Antibacterials: plasma concentration of idelalisib reduced by RIFAMPICIN—avoid concomitant use

- Antidepressants: plasma concentration of idelalisib possibly reduced by ST JOHN'S WORT—manufacturer of idelalisib advises avoid concomitant use

- Antiepileptics: plasma concentration of idelalisib possibly reduced by CARBAMAZEPINE, FOSPHENYTIOIN and PHENYTOIN—manufacturer of idelalisib advises avoid concomitant use

- Antifungals: plasma concentration of idelalisib increased by KETOCONAZOLE

- Antipsychotics: avoid concomitant use of cytoxotics with CLOZAPINE (increased risk of agranulocytosis); manufacturer of idelalisib advises avoid concomitant use with PIMOZIDE and QUETIAPINE

- Anxiolytics and Hypnotics: manufacturer of idelalisib advises avoid concomitant use of oral MIDAZOLAM

- Ergot Alkaloids: manufacturer of idelalisib advises avoid concomitant use with ERGOTAMINE

- Lipid-regulating Drugs: manufacturer of idelalisib advises avoid concomitant use with SIMVASTATIN

- Sildenafil: manufacturer of idelalisib advises avoid concomitant use of SILDENAFIL for pulmonary arterial hypertension

- Symathomimetics, Beta: manufacturer of idelalisib advises avoid concomitant use with SALMETEROL

Ilosone
- Anticoagulants: ilosone possibly enhances anticoagulant effect of COUMARINS
Iloprost

- Analgesics: increased risk of bleeding when iloprost given with NSAIDS OR ASPIRIN
- Anticoagulants: iloprost possibly enhances anticoagulant effect of COUMARINS AND HEPARINS; increased risk of bleeding when iloprost given with CLOPIDOGREL
- Epithalidase: increased risk of bleeding when iloprost given with EPTIFIBATIDE
- Tirofiban: increased risk of bleeding when iloprost given with TIROFIBAN

Imatinib

- Analgesics: manufacturer of imatinib advises caution with PARACETAMOL
- Antibacterials: plasma concentration of imatinib reduced by RIFAMPICIN—avoid concomitant use
- Anticoagulants: manufacturer of imatinib advises replacement of WARFARIN with a heparin (possibility of enhanced warfarin effect)
- Antidepressants: plasma concentration of imatinib reduced by ST JOHN’S WORT—avoid concomitant use
- Antiepileptics: plasma concentration of imatinib reduced by CARBAMAZEPINE, FOSPHENITOIN, OXCARBAZEPINE and PHENYTOIN—avoid concomitant use
- Antifungals: plasma concentration of imatinib increased by CLOPIDOGREL
- Cytoxotics: imatinib possibly increases the plasma concentration of BOUSUTINIB—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; imatinib increases plasma concentration of EVEROLIMUS (consider reducing the dose of everolimus—consult everolimus product literature); imatinib possibly increases the plasma concentration of IBRUTINIB—reduce dose of ibrutinib (see under ibrutinib, p. 809)
- Lipid-regulating Drugs: imatinib increases plasma concentration of SIMVASTATIN
- Tacrolimus: imatinib increases plasma concentration of TACROLIMUS
- Thyroid Hormone: imatinib possibly reduces plasma concentration of LEVOTHYROXINE

Indapamide see ACE Inhibitors

Imipenem with Cilastatin

- Antiepileptics: carbapenems reduce plasma concentration of SODIUM VALPROATE and VALPROIC ACID—avoid concomitant use
- Antivirals: increased risk of convulsions when imipenem with cilastatin given with GANCICLOVIR OR VALGANCICLOVIR
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Imipramine see Antidepressants, Tricyclic

Immunoglobulins

- Vaccines: anti-d immunoglobulins and normal immunoglobulin might impair immune response to BCG VACCINE—give BCG vaccine at least 5 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to MMR VACCINE—give MMR vaccine at least 5 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to poliomyelitis vaccine—give oral polio vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to yellow fever vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to smallpox vaccine—give smallpox vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to varicella-zoster vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to yellow fever vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin

Indacaterol see Sympathomimetics, Beta2

Indapamide see Diuretics

Indinavir

- Aldesleukin: plasma concentration of indinavir possibly increased by ALDESELEUKIN
- Anti-arrhythmics: indinavir possibly increases plasma concentration of AMIODARONE—avoid concomitant use; indinavir possibly increases plasma concentration of FLECAINIDE (increased risk of ventricular arrhythmias—avoid concomitant use)
- Antibacterials: indinavir increases plasma concentration of RIFABUTIN, also plasma concentration of indinavir decreased (reduce dose of rifabutin and increase dose of indinavir); metabolism of indinavir accelerated by RIFAMPICIN (reduced plasma concentration—avoid concomitant use); avoidance of concomitant indinavir in severe renal and hepatic impairment advised by manufacturer of TELITHROMYCIN
- Antiepileptics: avoidance of indinavir advised by manufacturer of APIXABAN AND RIVAROXABAN
- Antidepressants: plasma concentration of indinavir reduced by ST JOHN’S WORT—avoid concomitant use
- Antiepileptics: plasma concentration of indinavir possibly reduced by CARBAMAZEPINE, FOSPHENITOIN and PHENYTOIN, also plasma concentration of carbamazepine, fosphenytin and phenytoin possibly increased; plasma concentration of indinavir possibly reduced by PHENOBARBITAL AND PRIMIDONE
- Antimalarials: caution with indinavir advised by manufacturer of ARTEMETHER WITH LUMEFANTRINE; indinavir possibly increases plasma concentration of QUININE (increased risk of toxicity)
- Antimuscarnics: avoidance of indinavir advised by manufacturer of DERIPENACIN AND TOLERODINE; manufacturer of fesoterodine advises dose reduction when indinavir given with FESOTERODINE—consult fesoterodine product literature
- Antipsychotics: indinavir possibly increases plasma concentration of ARIPIPRAZOLE (reduce dose of aripiprazole—consult aripiprazole product literature); indinavir possibly increases plasma concentration of LURASIDONE—avoid concomitant use; indinavir possibly increases plasma concentration of PIMOZIDE (increased risk of ventricular arrhythmias—avoid concomitant use); indinavir possibly increases plasma concentration of ST JOHN'S WORT
- Anticoagulants: indinavir increases plasma concentration of WARFARIN—avoid concomitant use; indinavir possibly increases plasma concentration of LEVOTHYROXINE
- Antiarrhythmics: indinavir increases plasma concentration of AMIODARONE—avoid concomitant use; indinavir possibly increases plasma concentration of FLECAINIDE (increased risk of ventricular arrhythmias—avoid concomitant use)
- Antibacterials: indinavir increases plasma concentration of RIFABUTIN, also plasma concentration of indinavir decreased (reduce dose of rifabutin and increase dose of indinavir); metabolism of indinavir accelerated by RIFAMPICIN (reduced plasma concentration—avoid concomitant use); avoidance of concomitant indinavir in severe renal and hepatic impairment advised by manufacturer of TELITHROMYCIN
- Antiepileptics: avoidance of indinavir advised by manufacturer of APIXABAN AND RIVAROXABAN
- Antidepressants: plasma concentration of indinavir reduced by ST JOHN’S WORT—avoid concomitant use
- Antiepileptics: plasma concentration of indinavir possibly reduced by CARBAMAZEPINE, FOSPHENITOIN and PHENYTOIN, also plasma concentration of carbamazepine, fosphenytin and phenytoin possibly increased; plasma concentration of indinavir possibly reduced by PHENOBARBITAL AND PRIMIDONE
- Antimalarials: caution with indinavir advised by manufacturer of ARTEMETHER WITH LUMEFANTRINE; indinavir possibly increases plasma concentration of QUININE (increased risk of toxicity)
- Antimuscarnics: avoidance of indinavir advised by manufacturer of DERIPENACIN AND TOLERODINE; manufacturer of fesoterodine advises dose reduction when indinavir given with FESOTERODINE—consult fesoterodine product literature
- Antipsychotics: indinavir possibly increases plasma concentration of ARIPIPRAZOLE (reduce dose of aripiprazole—consult aripiprazole product literature); indinavir possibly increases plasma concentration of LURASIDONE—avoid concomitant use; indinavir possibly increases plasma concentration of PIMOZIDE (increased risk of ventricular arrhythmias—avoid concomitant use); indinavir possibly increases plasma concentration of
Indinavir

> Antipsychotics (continued)
> 
> QUETIAPINE—manufacturer of quetiapine advises avoid concomitant use
> 
> ANTIvirals: avoid concomitant use of indinavir with
> 
> ATAZANAVIR: plasma concentration of both drugs increased when indinavir given with DARUNAVIR; absorption of indinavir reduced by DIDANOSINE tablets (give at least 1 hour apart); plasma concentration of indinavir reduced by EFAVIRENZ and NEVIRAPINE; plasma concentration of indinavir possibly reduced by 
>

Iron Salts (continued)

- Bisphosphonates: oral iron salts reduce absorption of BISPHOSPHONATES
- Calcium Salts: absorption of oral iron salts reduced by CALCIUM SALTS
- Dopaminergic: oral iron salts possibly reduce absorption of CO-BENELDOPA, CO-CARELDOPA and LEVODOPA; oral iron salts reduce absorption of ENTACAPONE
- Eltrombopag: oral iron salts possibly reduce absorption of ELTROMBOPEG (give at least 4 hours apart)
- Methyldopa: oral iron salts antagonise hypotensive effect of METHYLDOPA
- Mycophenolate: oral iron salts reduce absorption of MYCOPHENOLATE
- Penicillamine: oral iron salts reduce absorption of PENICILLAMINE
- Thyroid Hormones: oral iron salts reduce absorption of LEVOTHYROXINE (give at least 2 hours apart)
- Trientine: absorption of oral iron salts reduced by TRIENTINE
- Zinc: oral iron salts reduce absorption of ZINC, also absorption of oral iron salts reduced by zinc

Isocarboxazid see MAOIs

Isoflurane see Anaesthetics, General

Isomethypent see Sympathomimetics

Isoniazid

- Aminophylline: isoniazid possibly increases plasma concentration of AMINOPHYLLINE
- Anaesthetics, General: increased risk of hepatotoxicity when isoniazid given with ISOFLURANE
- Analgesics: avoidance of isoniazid advised by manufacturer of PETHIDINE
- Antacids: absorption of isoniazid reduced by ANTACIDS
- Antibacterials: increased risk of hepatotoxicity when isoniazid given with RIFAMPICIN; increased risk of CNS toxicity when isoniazid given with CYCLOSERINE
- Antiepileptics: isoniazid increases plasma concentration of CARBAMAZEPINE (also possibly increased isoniazid hepatotoxicity); isoniazid inhibits metabolism of ETHOSUXIMIDE (increased plasma concentration and risk of toxicity); isoniazid possibly inhibits metabolism of FOSPHENTOIN and PHENYTOIN (increased risk of toxicity)
- Antifungals: isoniazid possibly reduces plasma concentration of KETOCONAZOLE
- Anxiolytics and Hypnotics: isoniazid inhibits the metabolism of DIAZEPAM
- Corticosteroids: plasma concentration of isoniazid possibly reduced by CORTICOSTEROIDS
- Disulfram: isoniazid possibly increases CNS effects of DISULFRAZ
- Dopaminergic: isoniazid possibly reduces effects of CO-BENELDOPA, CO-CARELDOPA and LEVODOPA
- Lipid-regulating Drugs: separating administration from isoniazid by 12 hours advised by manufacturer of LOMITAPIDE
- Theophylline: isoniazid possibly increases plasma concentration of THEOPHYLLINE
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Isosorbide Dinitrate see Nitrates

Isosorbide Mononitrate see Nitrates

Isosceptin see Retinoids

Irsapride see Calcium-channel Blockers

Itraconazole see Antifungals, Triazole

Ivabradine

- Antifungals (continued) reduce initial dose of ivabradine; plasma concentration of ivabradine possibly increased by ITRACONAZOLE—avoid concomitant use
- Antimalarials: increased risk of ventricular arrhythmias when ivabradine given with MEfloquine
- Antipsychotics: increased risk of ventricular arrhythmias when ivabradine given with PIMOZIDE
- Antivirals: plasma concentration of ivabradine possibly increased by Ritonavir avoid concomitant use
- Beta-blockers: increased risk of ventricular arrhythmias when ivabradine given with SOTALOL
- Calcium-channel Blockers: plasma concentration of ivabradine increased by Diltiazem and VERAPAMIL—avoid concomitant use
- Grapefruit Juice: plasma concentration of ivabradine increased by GRAPEFRUIT JUICE
- Pentamidine isethionate: increased risk of ventricular arrhythmias when ivabradine given with PENTAMIDINE ISETIONATE

Ivacaftor

- Antibacterials: plasma concentration of ivacaftor possibly increased by CLARITHROMYCIN, ERYTHROMYCIN and TELITHROMYCIN (see under Ivacaftor, p. 257); plasma concentration of ivacaftor possibly reduced by rifabutin—manufacturer of ivacaftor advises avoid concomitant use; plasma concentration of ivacaftor reduced by rifampicin—manufacturer of ivacaftor advises avoid concomitant use
- Antidepressants: plasma concentration of ivacaftor possibly reduced by ST JOHN'S WORT—manufacturer of ivacaftor advises avoid concomitant use
- Antiepileptics: plasma concentration of ivacaftor possibly reduced by CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN, and PRIMIDONE—manufacturer of ivacaftor advises avoid concomitant use
- Antifungals: plasma concentration of ivacaftor increased by FLUCONAZOLE and KETOCONAZOLE (see under Ivacaftor, p. 257); plasma concentration of ivacaftor possibly increased by ITRACONAZOLE, POSACONAZOLE and VORICONAZOLE (see under Ivacaftor, p. 257)
- Anxiolytics and Hypnotics: ivacaftor increases plasma concentration of MIDAZOLAM
- Cardiac Glycosides: ivacaftor increases plasma concentration of DIGOXIN
- Grapefruit Juice: plasma concentration of ivacaftor possibly increased by GRAPEFRUIT JUICE—manufacturer of ivacaftor advises avoid concomitant use
- Lipid-regulating Drugs: separating administration from ivacaftor by 12 hours advised by manufacturer of LOMITAPIDE

Ivermectin

- Anthelmintics: plasma concentration of ivermectin possibly increased by LEVAMISOLE
- Anticoagulants: ivermectin possibly enhances anticoagulant effect of COUMARINS

Japanese Encephalitis Vaccine see Vaccines

KaoLin

- Analgesics: kaoLin possibly reduces absorption of ASPRIN
- Antibacterials: kaoLin possibly reduces absorption of TETRACYCLINES
- Antimalarials: kaoLin reduces absorption of CHLOROQUINE and HYDROXYCHLOROQUINE
- Antipsychotics: kaoLin possibly reduces absorption of PHENOTHIAZINES

Ketamine see Anaesthetics, General

Ketoconazole see Antifungals, Imidazole

Ketoprofen see NSAIDs

Ketorolac see NSAIDs

Ketotifen see Antihistamines

Labelatol see Beta-blockers

Lacidipine see Calcium-channel Blockers

Lacosamide

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and TRICYCLIC-RELATED ANTIDEPRESSANTS (convulsive threshold lowered);
### Lacosamide
- **Antidepressants (continued)**
  - Anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)
  - Antimalarials: anticonvulsant effect of antiepileptics antagonised by **MELQOQUINE**
  - Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPISYCHOTICS** (convulsive threshold lowered)
  - Orlistat: possible increased risk of convulsions when antiepileptics given with **ORLISTAT**

#### Lactulose
- Anticoagulants: lactulose possibly enhances anticoagulant effect of **COUMARINS**

### Lamivudine
- Antibacterials: plasma concentration of lamivudine increased by **TRIMETHOPRIM** (as co-trimoxazole)—avoid concomitant use of high-dose co-trimoxazole
- Antivirals: avoidance of lamivudine advised by manufacturer of **EMTRICITABINE**
- Cytotoxics: manufacturer of lamivudine advises avoid concomitant use with **CLADIREBINE**
- Orlistat: absorption of lamivudine possibly reduced by **ORLISTAT**

### Lamotrigine
- Antidepressants: plasma concentration of lamotrigine reduced by **RIFAMPICIN**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAIDS** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered)
- Anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of lamotrigine often reduced by **CARBAMAZEPINE**, also plasma concentration of an active metabolite of carbamazepine sometimes raised (but evidence is conflicting); plasma concentration of lamotrigine reduced by **FOSPHENYTOIN**, **PHENOIBARBITAL**, **PHENITOIN** and **PRIMIDONE**; plasma concentration of lamotrigine increased by **SODIUM VALPROATE** and **VALPROIC ACID** (increased risk of toxicity—reduce lamotrigine dose)
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by **MELQOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPISYCHOTICS** (convulsive threshold lowered)
- Antivirals: plasma concentration of lamotrigine possibly reduced by **RITONAVIR**
- Oestrogens: plasma concentration of lamotrigine reduced by **ESTROGENS**—consider increasing dose of lamotrigine
- Orlistat: possible increased risk of convulsions when antiepileptics given with **ORLISTAT**
- Progestogens: plasma concentration of lamotrigine possibly increased by **DESOGESTREL**

### Lanreotide
- Antidiabetics: lanreotide possibly reduces requirements for **ANTIDIABETICS**
- Ciclosporin: lanreotide reduces plasma concentration of **CICLOSPORIN**

### Lansoprazole
- see Proton Pump Inhibitors

### Lanthanum
- **Antibacterials:** lanthanum possibly reduces absorption of **QUINOLONES** (give at least 2 hours before or 4 hours after lanthanum)
- **Antifungals:** lanthanum possibly reduces absorption of **KETOCONAZOLE** (give at least 2 hours apart)
- **Antimalarials:** lanthanum possibly reduces absorption of **CHLOROQUINE** and **HYDROXYCHLOROQUINE** (give at least 2 hours apart)
- **Thyroid Hormones:** lanthanum reduces absorption of **LEVOITHYROIDINE** (give at least 2 hours apart)

### Lepirudin
- **Anticoagulants:** manufacturer of lepirudin advises avoid concomitant use with **RIFABUTIN**, **RIFAMPICIN** and **TELITHROMYCIN**

### Lapatinib
- **Antidepressants:** manufacturer of lapatinib advises avoid concomitant use with **ST JOHN’S WORT**
- **Antidiabetics:** manufacturer of lapatinib advises avoid concomitant use with **REPAGLINDINE**
- **Antiepileptics:** plasma concentration of lapatinib reduced by **CARBAMAZEPINE**—avoid concomitant use; manufacturer of lapatinib advises avoid concomitant use with **FOSPHENYTOIN** and **PHENITOIN**
- **Antifungals:** plasma concentration of lapatinib increased by **KETOCONAZOLE**—avoid concomitant use; manufacturer of lapatinib advises avoid concomitant use with **IRTRAZONAZOLE**, **POSACONAZOLE** and **VORICONAZOLE**
- **Antipsychotics:** avoid concomitant use of cytotoxics with **CLOzapine** (increased risk of agranulocytosis); manufacturer of lapatinib advises avoid concomitant use with **PIMOZIDE**
- **Antivirals:** avoidance of lapatinib advised by manufacturer of **BOCEPREVIR**; manufacturer of lapatinib advises avoid concomitant use with **RITONAVIR** and **SAQUINAVIR**
- **Cytotoxics:** lapatinib increases plasma concentration of **PAZOPANIB**; possible increased risk of neutropenia when lapatinib given with **DOCETAXEL**; increased risk of neutropenia when lapatinib given with **PACLITAXEL**; lapatinib increases plasma concentration of active metabolite of **IRINOTECAN**—consider reducing dose of irinotecan
- **Grapefruit Juice:** manufacturer of lapatinib advises avoid concomitant use with **GRAPEFRUIT JUICE**
- **Lipid-regulating Drugs:** separating administration from lapatinib by 12 hours advised by manufacturer of **LOMITAPIDE**
- **Lung-healing Drugs:** absorption of lapatinib possibly reduced by **HISTAMINE _H_2-ANTAGONISTS** and **POTASSIUM CHANNEL BLOCKERS**

### Laronidase
- **Antimalarials:** effects of laronidase possibly inhibited by **CHLOROQUINE** and **HYDROXYCHLOROQUINE** (manufacturer of laronidase advises avoid concomitant use)

### Leflunomide
- **NOTE** Increased risk of toxicity with other haematotoxic and hepatotoxic drugs
- **Antibacterials:** plasma concentration of active metabolite of leflunomide possibly increased by **RIFAMPICIN**
- **Anticoagulants:** leflunomide possibly enhances anticoagulant effect of **WARFARIN**
- **Antidiabetics:** leflunomide possibly enhances hypoglycaemic effect of **TOLBUTAMIDE**
- **Antiepileptics:** leflunomide possibly increases plasma concentration of **FOSPHENYTOIN** and **PHENITOIN**
- **Cytotoxics:** risk of toxicity when leflunomide given with **METHOTREXATE**
- **Lipid-regulating Drugs:** the effect of leflunomide is significantly decreased by **COLESTYMATE** (enhanced elimination)—avoid unless drug elimination desired
- **Vaccines:** risk of generalised infections when leflunomide given with live **VACCINES**—avoid concomitant use

### Lenalidomide
- **Antibacterials:** plasma concentration of lenalidomide possibly increased by **CLARITHROMYCIN** (increased risk of toxicity)
- **Antifungals:** plasma concentration of lenalidomide possibly increased by **IRTRAZONAZOLE** and **KETOCONAZOLE** (increased risk of toxicity)
- **Calcium-channel Blockers:** plasma concentration of lenalidomide possibly increased by **VERAPAMIL** (increased risk of toxicity)
- **Cardiac Glycosides:** lenalidomide possibly increases plasma concentration of **DIGOXIN**
- **Ciclosporin:** plasma concentration of lenalidomide possibly increased by **CICLOSPORIN** (increased risk of toxicity)

### Lercanidipine
- **see Calcium–channel Blockers**

### Leukotriene Receptor Antagonists
- **Antimicrobials:** zafirlukast possibly increases plasma concentration of **AMINOPHENYLIN**, also plasma concentration of zafirlukast reduced
- **Analgesics:** plasma concentration of zafirlukast increased by **ASPIRIN**
- **Antibacterials:** plasma concentration of zafirlukast reduced by **ERYTHROMYCIN**
Interactions | Appendix 1

**1206 Appendix 1 Interactions**

Leukotriene Receptor Antagonists (continued)

- Anticoagulants: zafirlukast enhances anticoagulant effect of WARFARIN.
- Antiepileptics: plasma concentration of montelukast reduced by PHEMBRITARIL and PRIMIDONE.
- Antifungals: plasma concentration of zafirlukast increased by FLUCONAZOLE.
- Lipid-regulating Drugs: plasma concentration of montelukast increased by GEMIFIBROZIL.
- Theophylline: zafirlukast possibly increases plasma concentration of THEOPHYLLINE, also plasma concentration of zafirlukast reduced.

**Levamisole**

- Alcohol: possibility of disulfiram-like reaction when levamisole given with ALCOHOL.
- Anthelmintics: plasma concentration of both drugs possibly reduced when levamisole given with ALBENDAZOLE; levamisole possibly increases plasma concentration of VERMECTIN.
- Anticoagulants: levamisole possibly enhances anticoagulant effect of WARFARIN.
- Antiepileptics: levamisole possibly increases plasma concentration of FOSPHENITOIN and PHENYTOIN.

**Levetiracetam**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIS and TRICYCLIC-RELATED ANTIDEPRESSANTS (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRISS and TRICYCLICS (convulsive threshold lowered).
- Anticoagulants: levetiracetam possibly increases risk of CARBAMAZEPINE toxicity.
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by MEFLOQUINE.
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ANTIPSYCHOTICS (convulsive threshold lowered).
- Opioids: possible increased risk of convulsions when antiepileptics given with ORLISTAT.

**Levobunolol** see Beta-blockers.

**Levobupivacaine**

- Anti-arrhythmics: increased myocardial depression when levobupivacaine given with ANTI-ARRHYTHMICS.

**Levocabinine**

- Anticoagulants: levocabicaine possibly enhances anticoagulant effect of CARBAMATE ANTAGONISTS.

**Levocetirizine** see Antihistamines.

**Levodopa**

- ACE Inhibitors: enhanced hypertensive effect when levodopa given with ACE INHIBITORS.
- Adrenergic Neurone Blockers: enhanced hypertensive effect when levodopa given with ADRENERGIC NEURONE BLOCKERS.
- Alpha-blockers: enhanced hypertensive effect when levodopa given with ALPHA-BLOCKERS.
- Anaesthetics, General: increased risk of arrhythmias when levodopa given with VOLATILE LIQUID GENERAL ANAESTHETICS.
- Angiotensin-II Receptor Antagonists: enhanced hypertensive effect when levodopa given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS.
- Antibacterials: effects of levodopa possibly reduced by ISONIAZID.
- Antidepressants: risk of hypertensive crisis when levodopa given with MAOIS, avoid levodopa for at least 2 weeks after stopping MAOIs; increased risk of side-effects when levodopa given with MOLOBEMIDE.
- Antiepileptics: effects of levodopa possibly reduced by FOSPHENITOIN and PHENYTOIN.
- Antimuscarinics: absorption of levodopa possibly reduced by ANTIMUSCARINICS.
- Antipsychotics: effects of levodopa antagonised by ANTIPSYCHOTICS; avoidance of levodopa advised by manufacturer of AMISULPIIDE (antagonism of effect). Anxiolytics and Hypnotics: effects of levodopa possibly antagonised by BENZODIAZEPINES.
- Beta-blockers: enhanced hypertensive effect when levodopa given with Beta-blockers.

**Levodopa (continued)**

- Bupropion: increased risk of side-effects when levodopa given with BUPROPION.
- Calcium-channel Blockers: enhanced hypotensive effect when levodopa given with CALCIUM-CHANNEL BLOCKERS.
- Clonidine: enhanced hypertensive effect when levodopa given with CLONIDINE.
- Diazoxide: enhanced hypertensive effect when levodopa given with DIAZoxide.
- Diuretics: enhanced hypertensive effect when levodopa given with DIURETICS.
- Dopaminergics: enhanced effects and increased toxicity of levodopa when given with SELEGILINE (reduce dose of levodopa).
- Iron Salts: absorption of levodopa possibly reduced by oral IRON SALT.
- Memantine: effects of dopaminergics possibly enhanced by MEMANTINE.
- Methyldopa: enhanced hypertensive effect when levodopa given with METHYLDOPA; antiparkinsonian effect of dopaminergics antagonised by METHYLDOPA.
- Moxonidine: enhanced hypertensive effect when levodopa given with MOXONIDINE.
- Muscle Relaxants: possible agitation, confusion and hallucinations when levodopa given with BACLOFEN.
- Nitrates: enhanced hypertensive effect when levodopa given with NITRATES.
- Vasodilator Antihypertensives: enhanced hypertensive effect when levodopa given with HYDRAZALINE, MINOCIDIL or SODIUM NITROPRUSSIIDE.
- Vitamins: effects of levodopa reduced by PYRIDOXINE when given without dopa-decarboxylase inhibitor.

**Levofloxacin** see Quinolones.

**Levolofolic Acid** see Folic acids.

**Levomepramazine** see Antipsychotics.

**Levonorgestrel** see Progestogens.

**Levoxacin** see Thyroid Hormones.

**Lidocaine**

NOTE Interactions less likely when lidocaine used topically.

- Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with BUPIVACAINE, LEVOBUPIVACAINE, PRILOCAIN or ROPIVACAINE.
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other ANTI-ARRHYTHMICS.
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ANTIPSYCHOTICS that prolong the QT interval.
- Antivirals: plasma concentration of lidocaine possibly increased by ATAZANAVIR and LOPINAVIR; plasma concentration of lidocaine possibly increased by DARUNAVIR and FOSAMPRENAVIR—avoid concomitant use; increased risk of ventricular arrhythmias when lidocaine given with SAQUINAVIR—avoid concomitant use; caution with intravenous lidocaine advised by manufacturer of TELAPREvir.
- Beta-blockers: increased myocardial depression when anti-arrhythmics given with BETA-BLOCKERS; possible increased risk of lidocaine toxicity when given with NADOLOL; increased risk of lidocaine toxicity when given with PROPRANOLOL.
- Diuretics: action of lidocaine antagonised by hypokalaemia caused by ACETAZOLAMIDE; LOOP DIURETICS or THIAZIDES and RELATED DIURETICS.
- Muscle Relaxants: neuromuscular blockade enhanced and prolonged when lidocaine given with SUXAMETHONIUM.
- Ulcer-healing Drugs: plasma concentration of lidocaine increased by CIMITIDINE (increased risk of toxicity).

**Linaclotide** see Antidiabetics.

**Linezolid**

NOTE Linezolid is a reversible, non-selective MAO inhibitor—see interactions of MAOIs.

- Antibacterials: plasma concentration of linezolid reduced by RIFAMPICIN (possible therapeutic failure of linezolid).
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF.

**Liothyronine** see Thyroid Hormones.
Lipophilic Drugs

- Cytotoxics: neutropenia possibly exacerbated when lipophilic drugs given with CAPECITABINE, FLUOROURACIL or TEGAFUR

Lipid-Regulating Drugs see Colesevelam, Colestipol, Colestevam, Ezetimibe, Fibrates, Lomitapide, Nicotinic Acid, and Statins

Liraglutide see Antidiabetics

Lisdexametamide see Symptomatics

Lisinopril see ACE Inhibitors

Lithium

- ACE inhibitors: excretion of lithium reduced by ACE inhibitors (increased plasma concentration)
- Aminophylline: excretion of lithium increased by AMINOPHYLLINE (reduced plasma concentration)
- Analgesics: excretion of lithium reduced by NSAIDS (increased risk of toxicity); excretion of lithium reduced by KETOROLAC (increased risk of toxicity)—avoid concomitant use
- Angiotensin-II Receptor Antagonists: excretion of lithium reduced by ANGIOTENSIN-II RECEPTOR ANTAGONISTS (increased plasma concentration)
- Antacids: excretion of lithium increased by SODIUM BICARBONATE (reduced plasma concentration)
- Anti-arrhythmics: avoidance of lithium advised by manufacturer of amiDRONE (risk of ventricular arrhythmias)
- Antibacterials: increased risk of lithium toxicity when given with METRONIDAZOLE
- Antidepressants: possible increased serotoninergic effects when lithium given with VENLAFAXINE; increased risk of CNS effects when lithium given with SSRIS (lithium toxicity reported); risk of toxicity when lithium given with TRICYCLICS
- Antiemetics: neurotoxicity may occur when lithium given with CARBAMAZEPINE, FOSPHENTOIN or PHENYTOIN without increased plasma concentration of lithium; plasma concentration of lithium possibly affected by TOPIRAMATE
- Antipsychotics: increased risk of extrapyramidal side-effects and possibly neurotoxicity when lithium given with CLOzapine, FLUENTIXOL, HALOPERIDOL, PHENOTHIAZINES;
- Anxiolytics and Hypnotics: increased risk of neurotoxicity when lithium given with OLanzapine; lithium possibly increases extrapyramidal side-effects of QUETIAPINE; increased risk of extrapyramidal side-effects when lithium given with SULPirIDE
- Anxiolytics and Hypnotics: increased risk of neurotoxicity when lithium given with CLONAZEPAM
- Calcium-channel Blockers: neurotoxicity may occur when lithium given with DILTIAZEM or VERAPAMIL without increased plasma concentration of lithium
- Cytotoxics: increased risk of ventricular arrhythmias when lithium given with ARSENIC TRIOXIDE
- Dapoxetine: possible increased risk of serotoninergic effects when lithium given with DAPoxetine (manufacturer of dapoxetine advises lithium should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping lithium
- Diuretics: excretion of lithium increased by ACETAZOLAMIDE; excretion of lithium reduced by LOOP DIURETICS and THIURAM DERIVATIVES; possible increased risk of toxicity when lithium given with SUMatriptAN
- Methyldopa: neurotoxicity may occur when lithium given with METHYLDOPA without increased plasma concentration of lithium
- Muscle relaxants: lithium enhances effects of muscle relaxants; hyperkinesis caused by lithium possibly aggravated by BACloFEN
- Parasympathomimetics: lithium antagonises effects of NEOSTIGMINE

Lithium (continued)

- Theophylline: excretion of lithium increased by THEOPHYLLINE (reduced plasma concentration)
- Lixisenatide see Antidiabetics
- Lofepramine see Antidepressants, Tricyclic
- Lofezidime
- Alcohol: increased sedative effect when lofezidime given with ALCOHOL
- Anxiolytics and Hypnotics: increased sedative effect when lofazidime given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Lomiptapide
- Alcohol: manufacturer of lomiptapide advises avoid concomitant use with ALCOHOL
- Anti-arrhythmics: manufacturer of lomiptapide advises separating administration from AMIODARONE by 12 hours; manufacturer of lomiptapide advises avoid concomitant use with DRONewARONE (plasma concentration of lomiptapide possibly increased)
- Antibacterials: manufacturer of lomiptapide advises separating administration from AZITHROMYCIN and ISONIAZID by 12 hours; manufacturer of lomiptapide advises avoid concomitant use with CLARITHROMYCIN, ERYTHROMYCIN and TELITHROMYCIN (plasma concentration of lomiptapide possibly increased)
- Anticoagulants: lomiptapide possibly enhances anticoagulant effect of WARFARIN
- Antidepressants: manufacturer of lomiptapide advises separating administration from FLUOXETINE and FLUOXAMINE by 12 hours
- Antidiabetics: manufacturer of lomiptapide advises separating administration from LIMAGLITIN by 12 hours
- Anti-inflammation: plasma concentration of lomiptapide increased by KETOCONAZOLE—avoid concomitant use; manufacturer of lomiptapide advises avoid concomitant use with DRONewARONE (plasma concentration of lomiptapide possibly increased)
- Antivirals: manufacturer of lomiptapide advises avoid concomitant use with DARunAVARI, FOSAMPRENAVARI, INDINAVARI, LOPINAVARI, RITONAVARI, SAQuINAVARI, TELAPREvari and TIPRANAVARI (plasma concentration of lomiptapide possibly increased)
- Anxiolytics and Hypnotics: manufacturer of lomiptapide advises separating administration from LAPIrATINIB, NILOThINIB and PazoPANIb by 12 hours
- Cytotoxics: manufacturer of lomiptapide advises separating administration from LAPASLO, NILOThINIB and PazoPANIb by 12 hours
- Calcium-channel Blockers: manufacturer of lomiptapide advises separating administration from AMlodipine and LAZOpine by 12 hours; manufacturer of lomiptapide advises avoid concomitant use with DILTIAZEM and VERAPAMIL (plasma concentration of lomiptapide possibly increased)
- Cisopropin: manufacturer of lomiptapide advises separating administration from CICLOsporin by 12 hours
- Clobazol: manufacturer of lomiptapide advises separating administration from CLOfaZol by 12 hours
- Cytotoxics: manufacturer of lomiptapide advises separating administration from LAPIrATINIB, NILOThINIB and PazoPANIb by 12 hours
- Spirogress: manufacturer of lomiptapide advises separating administration from OSLOTrIN by 12 hours
- Grapefruit juice: manufacturer of lomiptapide advises avoid concomitant use with GRAPEFRUIT JUICE
- Hormone Antagonists: manufacturer of lomiptapide advises separating administration from BICALAMITE by 12 hours
- Ivacaftor: manufacturer of lomiptapide advises separating administration from IVAcATOR by 12 hours
- Lipid-regulating Drugs: lomiptapide increases plasma concentration of ATorvasTATin—manufacturer of lomiptapide advises reduce dose of atorvasatin by half or separate administration by 12 hours; lomiptapide increases plasma concentration of SIMVASTATIN (see under Simvastatin, p. 181); absorption of lomiptapide possibly reduced by BILE ACID SEQUESTRANTS (give at least 4 hours apart)
- Oestrogens: manufacturer of lomiptapide advises separating administration from OESTROGENS by 12 hours
- Ranolazine: manufacturer of lomiptapide advises separating administration from RANOlAZINE by 12 hours
- Tacrolimus: manufacturer of lomiptapide advises separating administration from TACROlUMUS by 12 hours
- Ticagrelor: manufacturer of lomiptapide advises separating administration from TicaGRELoR by 12 hours
**Interactions**

**Eltrombopag:**
- **Cytotoxics:** avoid concomitant use of cytotoxics with eltrombopag.
- **Corticosteroids:** may suppress myelosuppressive effects of eltrombopag; possibly enhanced by cimetidine.

**Loperamide**
- Desmopressin: loperamide increases plasma concentration of oral desmopressin.

**Lopinavir**
- **Antipsychotics:** lopinavir increases plasma concentration of antipsychotics (increased risk of toxicity); aripiprazole possibly increases plasma concentration of lopipavir.
- **Antimuscarinics:** caution with lopinavir advised by manufacturer.
- **Antimalarials:** lopinavir possibly increases plasma concentration of antimalarials (increased risk of toxicity).
- **Antiepileptics:** lopinavir possibly increases plasma concentration of antiepileptics (increased risk of toxicity); phenytoin possibly increases plasma concentration of lopinavir.
- **Antidepressants:** lopinavir possibly increases plasma concentration of antidepressants.
- **Anticoagulants:** lopinavir increases plasma concentration of anticoagulants (increased risk of toxicity); rivaroxaban.
- **Anti-arrhythmics:** lopinavir increases plasma concentration of anti-arrhythmics (increased risk of toxicity). Erythromycin possibly increases plasma concentration of lopinavir; clarithromycin possibly increases plasma concentration of lopinavir.
- **Ulcer-healing Drugs:** lopinavir possibly increases plasma concentration of ulcer-healing drugs.
- **Lomitapide:** manufacturer of lomitapide advises separating administration from lopinavir by 12 hours.
- **Cimetidine:** manufacturer of lomitapide advises separating administration from cimetidine and ranitidine by 12 hours.

**Lumostine**
- Antipsychotics: avoid concomitant use of lumostine with antipsychotics.

**Lorazepam**
- **Anxiolytics and Hypnotics:** lorazepam may reduce absorption of aminophylline.

**Macitentan**
- **Antibacterials:** macitentan increases plasma concentration of antibacterials (increased risk of toxicity); clarithromycin and erythromycin given with macitentan may reduce absorption of oral erythromycin.
- **Antifungals:** macitentan reduces plasma concentration of antifungals (increased risk of toxicity).
- **Antihistamines:** macitentan possibly increases plasma concentration of antihistamines; azithromycin possibly increases plasma concentration of macitentan (increased risk of toxicity); clarithromycin possibly increases plasma concentration of macitentan (increased risk of toxicity). Macitentan possibly increases plasma concentration of clarithromycin advised by manufacturer of macitentan.

**Loratadine**
- **Antihistamines:** loratadine increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of loratadine.

**Losartone**
- **Anxiolytics and Hypnotics:** losartone may reduce absorption of aminophylline.

**Lurasidone**
- **Antipsychotics:** lurasidone increases plasma concentration of antipsychotics; aripiprazole increases plasma concentration of lurasidone (increased risk of toxicity); lurasidone possibly increases plasma concentration of aripiprazole (increased risk of toxicity).

**Lymecycline**
- **Tetracyclines:** lymecycline decreases plasma concentration of tetracyclines.

**Macrogols**
- **Lipid-regulating Drugs:** macrogols may reduce absorption of aminophylline.

**Lopinavir (continued)**
- **Anxiolytics and Hypnotics:** lopinavir increases plasma concentration of anxiolytics and hypnotics (increased risk of toxicity); citalopram advised by manufacturer.

**Loratadine (continued)**
- **Antihistamines:** loratadine increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of loratadine.

**Losartone (continued)**
- **Antihistamines:** losartone increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of losartone.

**Lurasidone (continued)**
- **Antipsychotics:** lurasidone increases plasma concentration of antipsychotics; aripiprazole increases plasma concentration of lurasidone (increased risk of toxicity); lurasidone possibly increases plasma concentration of aripiprazole (increased risk of toxicity).

**Lymecycline (continued)**
- **Tetracyclines:** lymecycline decreases plasma concentration of tetracyclines.

**Macrogols (continued)**
- **Lipid-regulating Drugs:** macrogols may reduce absorption of aminophylline.

**Lopinavir (continued)**
- **Antibacterials:** lopinavir increases plasma concentration of antibacterials (increased risk of toxicity); clarithromycin and erythromycin may reduce absorption of oral erythromycin.
- **Anti-arrhythmics:** lopinavir decreases plasma concentration of anti-arrhythmics (increased risk of toxicity); lopinavir possibly increases plasma concentration of anti-arrhythmics (increased risk of toxicity).

**Loratadine (continued)**
- **Antihistamines:** loratadine increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of loratadine.

**Losartone (continued)**
- **Antihistamines:** losartone increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of losartone.

**Lurasidone (continued)**
- **Antipsychotics:** lurasidone increases plasma concentration of antipsychotics; aripiprazole increases plasma concentration of lurasidone (increased risk of toxicity); lurasidone possibly increases plasma concentration of aripiprazole (increased risk of toxicity).

**Lymecycline (continued)**
- **Tetracyclines:** lymecycline decreases plasma concentration of tetracyclines.

**Macrogols (continued)**
- **Lipid-regulating Drugs:** macrogols may reduce absorption of aminophylline.

**Lopinavir (continued)**
- **Antibacterials:** lopinavir increases plasma concentration of antibacterials (increased risk of toxicity); clarithromycin and erythromycin may reduce absorption of oral erythromycin.
- **Anti-arrhythmics:** lopinavir decreases plasma concentration of anti-arrhythmics (increased risk of toxicity); lopinavir possibly increases plasma concentration of anti-arrhythmics (increased risk of toxicity).

**Loratadine (continued)**
- **Antihistamines:** loratadine increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of loratadine.

**Losartone (continued)**
- **Antihistamines:** losartone increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of losartone.

**Lurasidone (continued)**
- **Antipsychotics:** lurasidone increases plasma concentration of antipsychotics; aripiprazole increases plasma concentration of lurasidone (increased risk of toxicity); lurasidone possibly increases plasma concentration of aripiprazole (increased risk of toxicity).

**Lymecycline (continued)**
- **Tetracyclines:** lymecycline decreases plasma concentration of tetracyclines.

**Macrogols (continued)**
- **Lipid-regulating Drugs:** macrogols may reduce absorption of aminophylline.

**Lopinavir (continued)**
- **Antibacterials:** lopinavir increases plasma concentration of antibacterials (increased risk of toxicity); clarithromycin and erythromycin may reduce absorption of oral erythromycin.
- **Anti-arrhythmics:** lopinavir decreases plasma concentration of anti-arrhythmics (increased risk of toxicity); lopinavir possibly increases plasma concentration of anti-arrhythmics (increased risk of toxicity).

**Loratadine (continued)**
- **Antihistamines:** loratadine increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of loratadine.

**Losartone (continued)**
- **Antihistamines:** losartone increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of losartone.

**Lurasidone (continued)**
- **Antipsychotics:** lurasidone increases plasma concentration of antipsychotics; aripiprazole increases plasma concentration of lurasidone (increased risk of toxicity); lurasidone possibly increases plasma concentration of aripiprazole (increased risk of toxicity).

**Lymecycline (continued)**
- **Tetracyclines:** lymecycline decreases plasma concentration of tetracyclines.

**Macrogols (continued)**
- **Lipid-regulating Drugs:** macrogols may reduce absorption of aminophylline.

**Lopinavir (continued)**
- **Antibacterials:** lopinavir increases plasma concentration of antibacterials (increased risk of toxicity); clarithromycin and erythromycin may reduce absorption of oral erythromycin.
- **Anti-arrhythmics:** lopinavir decreases plasma concentration of anti-arrhythmics (increased risk of toxicity); lopinavir possibly increases plasma concentration of anti-arrhythmics (increased risk of toxicity).

**Loratadine (continued)**
- **Antihistamines:** loratadine increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of loratadine.

**Losartone (continued)**
- **Antihistamines:** losartone increases plasma concentration of antihistamines; ruxolitinib advises dose reduction of losartone.

**Lurasidone (continued)**
- **Antipsychotics:** lurasidone increases plasma concentration of antipsychotics; aripiprazole increases plasma concentration of lurasidone (increased risk of toxicity); lurasidone possibly increases plasma concentration of aripiprazole (increased risk of toxicity).

**Lymecycline (continued)**
- **Tetracyclines:** lymecycline decreases plasma concentration of tetracyclines.

**Macrogols (continued)**
- **Lipid-regulating Drugs:** macrogols may reduce absorption of aminophylline.
Macrolides
- Antibacterials (continued) when clarithromycin and erythromycin given with
  - DELAMANID; avoidance of clarithromycin and erythromycin advised by manufacturer of
    - FIDAXOMICIN; plasma concentration of clarithromycin reduced by
      - RIFAMYCINS
- Anticoagulants: avoidance of clarithromycin advised by manufacturer of
  - APIXABAN; clarithromycin and erythromycin enhance anticoagulant effect of
    - COUMARINS; azithromycin possibly enhances anticoagulant effect of
      - COUMARINS; possible increased risk of bleeding when clarithromycin given with
        - DABIGATRAN
- Antidepressants: avoidance of macrolides advised by manufacturer of
  - REBOXETINE; avoidance of intravenous erythromycin advised by manufacturer of
    - CITALOPRAM and
        - ESCITALOPRAM (risk of ventricular arrhythmias); clarithromycin possibly increases plasma concentration of
          - TRAZODONE
- Antidiabetics: clarithromycin enhances effects of
  - REPAGLINIDE
- Antiepileptics: clarithromycin increases plasma concentration of
  - CARBAMAZEPINE (consider reducing dose of carbamazepine); erythromycin increases plasma concentration of
    - CARBAMAZEPINE; clarithromycin inhibits metabolism of
      - FOSPHENYTOIN and PHENYTOIN (increased plasma concentration); erythromycin possibly inhibits metabolism of
        - SODIUM VALPROATE and VALPROIC ACID (increased plasma concentration)
- Antifungals: avoidance of concomitant clarithromycin in severe renal impairment advised by manufacturer of
  - KETOCONAZOLE; avoidance of erythromycin advised by manufacturer of
    - FLUCONAZOLE; clarithromycin increases plasma concentration of
      - ITROCONAZOLE
- Antihistamines: manufacturer of loratadine advises erythromycin possibly increases plasma concentration of
  - LORATADINE; macrolides possibly inhibit metabolism of
    - MIZOLASTINE (avoid concomitant use); erythromycin inhibits metabolism of
      - MIZOLASTINE—avoid concomitant use
- Antimalarials: avoidance of macrolides advised by manufacturer of
  - ARTEMETHER WITH LUMEFANTRINE; avoidance of macrolides advised by manufacturer of
    - ARTEMENOL WITH PIPERAPUINE (possible risk of ventricular arrhythmias)
- Antimuscarinics: erythromycin possibly increases plasma concentration of
  - DARIFENACIN; manufacturer of fosfoterodine advises dose reduction when clarithromycin given with
    - FOSFETERODINE—consult product literature; avoidance of clarithromycin and erythromycin advised by manufacturer of
      - TOLERIDONE
- Antipsychotics: avoidance of macrolides advised by manufacturer of
  - DROPERIDOL (risk of ventricular arrhythmias); increased risk of toxicity; avoidance of clarithromycin or erythromycin when
    - PARENTERAL erythromycin given with
      - ZUCLOPENTHIXOL—avoid concomitant use; increased risk of ventricular arrhythmias when erythromycin given with
        - AMISULPRIDE—avoid concomitant use; erythromycin possibly increases plasma concentration of
          - CLOzapine (possible increased risk of convulsions); clarithromycin possibly increases plasma concentration of
            - LURASIDONE—avoid concomitant use; erythromycin possibly increases the plasma concentration of
              - LURASIDONE (see under Lurasidone, p. 315); increased risk of ventricular arrhythmias when clarithromycin given with
                - PIMOZIDE—avoid concomitant use; possible increased risk of ventricular arrhythmias when erythromycin given with
                  - PIMOZIDE—avoid concomitant use; clarithromycin possibly increases plasma concentration of
                    - QUETIAPINE—manufacturer of quetiapine advises avoid concomitant use; erythromycin increases plasma concentration of
                        - QUETIAPINE
                    - PIMOZIDE—manufacturer of quetiapine advises avoid concomitant use; erythromycin increases plasma concentration of
                        - PIMOZIDE
- Antiplatelet drugs of both drugs possibly increased when clarithromycin given with
  - ATAZANAVIR; clarithromycin possibly increases the plasma concentration of
    - DACLATASVIR—reduce dose of daclatasvir (see under Daclatasvir, p. 544); plasma concentration of clarithromycin reduced by
      - EFAVIREN; also plasma concentration of active

Macrolides
- Antivirals (continued) metabolite of clarithromycin increased; plasma concentration of clarithromycin reduced by
  - ITRANAVIR and NEVIRAPINE (but concentration of an active metabolite increased, also plasma concentration of etravirine and nevirapine increased; clarithromycin possibly increases plasma concentration of
    - MARAVIROC (consider reducing dose of maraviroc); avoidance of clarithromycin and erythromycin advised by manufacturer of
      - NEVIRAPINE (plasma concentration of rilpivirine possibly increased); plasma concentration of azithromycin and erythromycin possibly increased by
        - RITONAVIR; plasma concentration of clarithromycin increased by
          - RITONAVIR (reduce dose of clarithromycin in renal impairment); increased risk of ventricular arrhythmias when erythromycin given with
            - RITONAVIR—avoid concomitant use; plasma concentration of both drugs possibly increased when clarithromycin given with
              - SAQUINAVIR and
                - TELAPREVIR (increased risk of ventricular arrhythmias); plasma concentration of both drugs possibly increased when erythromycin given with
                  - TELAPREVIR (increased risk of ventricular arrhythmias); plasma concentration of clarithromycin increased by
                    - TIPRANAVIR (reduce dose of clarithromycin in renal impairment), also clarithromycin increases plasma concentration of
                      - TIPRANAVIR; clarithromycin tablets reduce absorption of
                        - ZIDOVIDINE (give at least 2 hours apart)
- Antiplatelet drugs: clarithromycin and erythromycin inhibit metabolism of
  - MIZOLASTINE (increased plasma concentration); erythromycin increases plasma concentration of
    - BUSPIRONE (reduce dose of buspirone); erythromycin inhibits the metabolism of
      - ZOPICLONE—Aprepitant: clarithromycin possibly increases plasma concentration of
        - APREPITANT—Atomoxetine: increased risk of ventricular arrhythmias when
          - PARENTERAL erythromycin given with
            - ATOMOXETINE
- Avanafil: clarithromycin possibly increases plasma concentration of
  - AVANAFIL—manufacturer of avanafil advises avoid concomitant use; erythromycin increases plasma concentration of
    - AVANAFIL (see under Avanafil, p. 698)
- Calcium-channel blockers: clarithromycin and erythromycin possibly inhibit metabolism of
  - CALCULUM-CHANNEL BLOCKERS (increased risk of side-effects); avoidance of erythromycin advised by manufacturer of
    - LERCANDIPINE—Cardiac Glycosides: macrolides increase plasma concentration of
      - DIGOXIN (increased risk of toxicity)
- Ciclosporin: macrolides possibly inhibit metabolism of
  - CICLOSPORIN (increased plasma concentration); clarithromycin and erythromycin inhibit metabolism of
    - CICLOSPORIN (increased plasma concentration)
- Clopidogrel: clarithromycin possibly increases plasma concentration of
  - CILOSTAZOL (see under Clopidogrel, p. 206); erythromycin increases plasma concentration of
    - CILOSTAZOL (see under Clopidogrel, p. 206)
- Ciclosporin: erythromycin possibly reduces antiplatelet effect of
  - CLOPIDOGREL—Colchicine: azithromycin, clarithromycin and erythromycin possibly increase risk of
    - COLCHICINE toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Corticosteroids: erythromycin possibly inhibits metabolism of
  - CORTICOSTEROIDS; erythromycin inhibits the metabolism of
    - METHYLPRIDINOSOME; clarithromycin possibly increases plasma concentration of
      - METHYLPRIDINOSOME
- Cytotoxics: erythromycin possibly increases the plasma concentration of
  - AFINIB—manufacturer of afinityb advises separating administration of erythromycin by 6 to 12 hours; clarithromycin and erythromycin possibly increase plasma concentration of
    - AFINIB (reduce dose of afinityb—consult
Macrolides
- Cytotoxics (continued)
  - axitinib product literature; clarithromycin and erythromycin possibly increase the plasma concentration of
  - docetaxel—manufacturer of docetaxel advises avoid or reduce docetaxel dose; erythromycin increases plasma concentration of
  - clarithromycin and erythromycin possibly increase plasma concentration of cabozantinib; clarithromycin or erythromycin given with simvastatin (avoid concomitant use); separating administration from azithromycin by 12 hours advised by manufacturer of lomitapide; avoidance of clarithromycin and erythromycin advised by manufacturer of lomitapide (plasma concentration of lomitapide possibly increased)
  - mirabegron, when given with clarithromycin avoid or reduce dose of mirabegron in hepatic or renal impairment—see mirabegron, p. 673
- Oestrogens—erythromycin increases plasma concentration of estradiol
- Prostaglandins—erythromycin increases plasma concentration of galantamine
- Pentamidine isetionate: increased risk of ventricular arhythmias when parenteral erythromycin given with pentamidine
- Progestogens—erythromycin increases plasma concentration of Dienogest
- Ranolazine: clarithromycin possibly increases plasma concentration of ranolazine—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: clarithromycin increases the plasma concentration of sildenafil—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to twice daily for pulmonary hypertension; erythromycin increases plasma concentration of sildenafil—reduce initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to twice daily for pulmonary hypertension
- Sirolimus: clarithromycin increases plasma concentration of sirolimus—avoid concomitant use; plasma concentration of both drugs increased when erythromycin given with sirolimus
- Tacrolimus: clarithromycin and erythromycin increase plasma concentration of tacrolimus
tadalafil: clarithromycin and erythromycin possibly increase plasma concentration of tadalafil
- Theophylline: clarithromycin possibly increases plasma concentration of theophylline; erythromycin increases plasma concentration of theophylline (also theophylline may reduce absorption of oral erythromycin)
- Ticagrelor: clarithromycin possibly increases plasma concentration of ticagrelor—manufacturer of ticagrelor advises avoid concomitant use; erythromycin possibly increases plasma concentration of ticagrelor
- Ulipristal: avoidance of clarithromycin advised by manufacturer of low-dose ulipristal; erythromycin increases plasma concentration of low-dose ulipristal—manufacturer of low-dose ulipristal advises avoid concomitant use
- Vaccines: antibacterials inactivate oral typhoid vaccine—see under typhoid vaccine in BNF
- Vardenafil: clarithromycin possibly increases plasma concentration of vardenafil (consider reducing initial dose of vardenafil); erythromycin increases plasma concentration of vardenafil (reduce dose of vardenafil)

Magnum (parenteral)
- Calcium-channel Blockers: profound hypotension reported with concomitant use of parenteral magnesium and nifedipine in pre-eclampsia

Muscle Relaxants: parenteral magnesium enhances effects of non-depolarising muscle relaxants and succinylcholine

Magnesium Salts (oral) see Antacids

Mannitol
- Antibacterials: avoidance of mannitol advised by manufacturer of tobramycin

Lipid-regulating Drugs: clarithromycin increases plasma concentration of atorvastatin and pravastatin; possible interactions with lipid-regulating Drugs (continued)
Antiepileptics: possible increased risk of nephrotoxicity when mannitol given with ciclosporin

**MAOIs**

- **Ciclosporin**: possible increased risk of nephrotoxicity when mannitol given with ciclosporin

**NOTE** For interactions of reversible MAO-A inhibitors (RIMAs) see moclobemide, and for interactions of MAO-B inhibitors see Rasagiline and Selegiline; the bacterial Linezolid is a reversible, non-selective MAO inhibitor

- **ACE inhibitors**: MAOIs possibly enhance hypotensive effect of ACE inhibitors
- **Adrenergic Neurone Blockers**: increased risk of convulsions when MAOIs given with MAOIs (3 weeks if starting clomipramine or imipramine), also MAOIs should not be started for at least 1 week after stopping MAOIs
- **Alpha-blockers**: increased risk of hypertension and CNS excitation when MAOIs given with MAOIs (avoid concomitant use and for 2 weeks after stopping MAOIs; possible increased serumotonic effects and increased risk of convulsions when MAOIs given with tramadol—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; avoidance of MAOIs advised by manufacturer of selegiline advises avoid concomitant use; for at least 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs); after stopping MAOIs do not start
- **Antidepressants**: MAOIs possibly enhance hypotensive effect of antidepressants; increased risk of hypertension and CNS excitation when MAOIs given with reboxetine should not be started until 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs; after stopping MAOIs do not start
- **Antihistamines**: risk of antimuscarinic side-effects when MAOIs given with MAOIs possibly enhance hypotensive effect when MAOIs given with alpha-blockers
- **Analgesics**: MAOIs possibly enhance hypotensive effect when MAOIs given with alpha-blockers
- **Analgesics**: possible increased serotonergic effects when MAOIs given with fentanyl; CNS excitation or depression (hypertension or hypotension) when MAOIs given with pethidine—avoid concomitant use and for 2 weeks after stopping MAOIs; possible increased serumotonic effects and increased risk of convulsions when MAOIs given with tramadol—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs
- **Angiotensin-II Receptor Antagonists**: possible increased risk of hypertension and CNS excitation or depression (hypertension or hypotension) when MAOIs given with opioid analgesics—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs

**Antipsychotics**

- **Antimuscarinics**: MAOIs possibly enhance hypotensive effect of antimuscarinics; increased risk of antimuscarinic side-effects when MAOIs given with antimuscarinics
- **Antisypotomimetics**: CNS effects of MAOIs possibly increased by clozapine
- **Antihistamines**: risk of antimuscarinic side-effects when MAOIs given with antimuscarinics
- **Antihistamines**: increased risk of antimuscarinic side-effects when MAOIs given with antimuscarinics
- **Antipsychotics**: CNS effects of MAOIs possibly increased by clozapine

**Antidepressants**

- **Antidepressants**: possible increased risk of precipitation of convulsions when MAOIs given with MAOIs possibly enhance hypotensive effect when MAOIs given with alpha-blockers
- **Analgesics**: MAOIs possibly enhance hypotensive effect when MAOIs given with alpha-blockers
- **Analgesics**: possible increased serotonergic effects when MAOIs given with fentanyl; CNS excitation or depression (hypertension or hypotension) when MAOIs given with pethidine—avoid concomitant use and for 2 weeks after stopping MAOIs; possible increased serumotonic effects and increased risk of convulsions when MAOIs given with tramadol—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; avoidance of MAOIs advised by manufacturer of selegiline advises avoid concomitant use; for at least 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs; after stopping MAOIs do not start
- **Antidepressants**: increased risk of hypertension and CNS excitation when MAOIs given with reboxetine should not be started until 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs; after stopping MAOIs do not start
- **Antidepressants**: increased risk of hypertension and CNS excitation when MAOIs given with selective MAOIs with entacapone; risk of hypertensive crisis when MAOIs given with rasagiline, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypertensive effect when MAOIs given with selegiline—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with tolcapone
- **Antidepressants**: increased risk of serotoninergic effects when MAOIs given with dapoxtine (MAOIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping MAOIs)
- **Dopamine analogues**: risk of hypertensive crisis when MAOIs given with co-beneldopa, co-careldopa or levodopa, avoid co-beneldopa, co-careldopa or levodopa for at least 2 weeks after stopping MAOIs; avoid concomitant use of non-selective MAOIs with entacapone; risk of hypertensive crisis when MAOIs given with rasagiline, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypertensive effect when MAOIs given with selegiline—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with tolcapone
- **Antidepressants**: increased risk of serotoninergic effects when MAOIs given with dapoxtine (MAOIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping MAOIs)
- **Diazoxide**: enhanced hypotensive effect when MAOIs given with diazoxide
- **Diuretics**: enhanced hypotensive effect when MAOIs given with diuretics
- **Dopaminergic drugs**: risk of hypertensive crisis when MAOIs given with co-beneldopa, co-careldopa or levodopa, avoid co-beneldopa, co-careldopa or levodopa for at least 2 weeks after stopping MAOIs; avoid concomitant use of non-selective MAOIs with entacapone; risk of hypertensive crisis when MAOIs given with rasagiline, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypertensive effect when MAOIs given with selegiline—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with tolcapone
- **Dopaminergic drugs**: risk of hypertensive crisis when MAOIs given with co-beneldopa, co-careldopa or levodopa, avoid co-beneldopa, co-careldopa or levodopa for at least 2 weeks after stopping MAOIs; avoid concomitant use of non-selective MAOIs with entacapone; risk of hypertensive crisis when MAOIs given with rasagiline, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypertensive effect when MAOIs given with selegiline—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with tolcapone
- **Dopaminergic drugs**: risk of hypertensive crisis when MAOIs given with co-beneldopa, co-careldopa or levodopa, avoid co-beneldopa, co-careldopa or levodopa for at least 2 weeks after stopping MAOIs; avoid concomitant use of non-selective MAOIs with entacapone; risk of hypertensive crisis when MAOIs given with rasagiline, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypertensive effect when MAOIs given with selegiline—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with tolcapone
- **Dopaminergic drugs**: risk of hypertensive crisis when MAOIs given with co-beneldopa, co-careldopa or levodopa, avoid co-beneldopa, co-careldopa or levodopa for at least 2 weeks after stopping MAOIs; avoid concomitant use of non-selective MAOIs with entacapone; risk of hypertensive crisis when MAOIs given with rasagiline, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypertensive effect when MAOIs given with selegiline—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with tolcapone
Mefloquine (continued)
- Atomoxetine: increased risk of ventricular arrhythmias when mefloquine given with • ATOMOXETINE
- Beta-blockers: increased risk of bradycardia when mefloquine given with • BETABLOCKERS
- Calcium-channel blockers: possible increased risk of bradyarrhythmia when mefloquine given with • CALCIUM-CHANNEL BLOCKERS
- Cardiac glycosides: possible increased risk of bradyarrhythmia when mefloquine given with • DIGOXIN
- Cytotoxics: possible increased risk of bradyarrhythmia when mefloquine given with • CRIZOTINIB
- Histamine: avoidance of antimalarials advised by manufacturer of • HISTAMINE
- Ibrabradine: increased risk of ventricular arrhythmias when mefloquine given with • IBRABRADINE
- Vaccines: antimalarials inactivate • ORAL TYPHOID VACCINE — see under Typhoid Vaccine in BNF

Megestrol see Progestogens
Melatonin see Anxiolytics and Hypnotics
Meloxicam see NSAIDs

Mephalan
- Antibacterials: increased risk of melphalan toxicity when given with • NALIDIXIC ACID
- Antipsychotics: avoid concomitant use of cytoxotics with • CLOzapine (increased risk of agranulocytosis)
- Cardiac glycosides: melphalan possibly reduces absorption of • DIGOXIN tablets
- Ciclosporin: increased risk of nephrotoxicity when melphalan given with • CICLOSPORIN
- Memantine
  - Anaesthetics, General: increased risk of CNS toxicity when memantine given with • KETEMINE (manufacturer of memantine advises avoid concomitant use)
  - Analgesics: increased risk of CNS toxicity when memantine given with • DEXTROMETHORPHAN (manufacturer of memantine advises avoid concomitant use)
  - Anticoagulants: memantine possibly enhances anticoagulant effect of • WARFARIN
  - Antimuscarnics: memantine possibly enhances effects of • ANTIMUSCARINICS
- Antipsychotics: memantine possibly reduces effects of • ANTIpsychotics
- Dopaminergics: memantine possibly enhances effects of • DOPAMINERGICS and • SELEGILINE
- Memantine possibly reduces effects of • DOPAMINERGICS and • SELEGILINE
- Meningococcal Vaccines see Vaccines
Mepacrine
- Antimalarials: mepacrine increases plasma concentration of • PRIMAQUINE (increased risk of toxicity)
Meprobamate see Anxiolytics and Hypnotics
Meptazinol see Opioid Analgesics
Mercaptopurine
- Allopurinol: enhanced effects and increased toxicity of mercaptopurine when given with • ALLOPURINOL (reduce dose of mercaptopurine to one quarter of usual dose)
- Antimycobacterials: increased risk of haematological toxicity when mercaptopurine given with • SULFAMETHOXAZOLE (as co- trimoxazole); increased risk of haematological toxicity when mercaptopurine given with • TRIMETHOPRIM (also with co- trimoxazole)
- Anticoagulants: mercaptopurine possibly reduces anticoagulant effect of • COUMARINS
- Antipsychotics: avoid concomitant use of cytoxotics with • CLOzapine (increased risk of agranulocytosis)
- Dairy Products: plasma concentration of mercaptopurine possibly reduced by • DAILY PRODUCE — manufacturer of mercaptopurine advises give at least 1 hour before or 2 hours after dairy products
- Febuxostat: avoidance of mercaptopurine advised by manufacturer of • FEBUXOSTAT
Methotrexate
- Antiepileptics: carbapenems reduce plasma concentration of
  - SODIUM VALPROATE and VALPUROIC ACID—avoid concomitant use
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Methyldopa
- see Oestrogens

Metaraminol
- see Sympathomimetics

Methamphetamine
- see Opioid Analgesics

Methamphetamine
- Antacids; avoid concomitant use of methamphetamine with
  - ANTAGONISTS
- Antibacterials: increased risk of crystalluria when methamphetamine given with
  - SULFONAMIDES
- Diuretics: effects of methamphetamine antagonised by
  - ACETAZOLAMIDE
- Potassium Salts: avoid concomitant use of methamphetamine with
  - POTASSIUM CITRATE
- Sodium Citrate: avoid concomitant use of methamphetamine with
  - SODIUM CITRATE
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Methocarbamol
- see Muscle Relaxants

Methotrexate
- Aminophylline: methotrexate possibly increases plasma concentration of AMINOPHYLLINE
- Anaesthetics, General: antifolate effect of methotrexate increased by
  - NITROUS OXIDE—avoid concomitant use
- Analgesics: excretion of methotrexate possibly reduced by
  - NSAIDS (increased risk of toxicity); excretion of methotrexate reduced by
    - ASPIRIN, DICLOFENAC, IBUPROFEN, INDOMETACIN, KETOPIROFEN, MELOXICAM and
    - NAPROKEN (increased risk of toxicity)
- Antibacterials: absorption of methotrexate possibly reduced by
  - NEOMYCIN; excretion of methotrexate possibly reduced by
    - CIPROFLOXACIN (increased risk of toxicity); increased risk of haemato logical toxicity when methotrexate given with
    - SULFAMETHOXAZOLE (as co-trimoxazole); increased risk of methotrexate toxicity when given with
      - DOXYCYCLINE, SULFONAMIDES or TETRACYCLINE; excretion of methotrexate reduced by
        - PENCILLINS (increased risk of toxicity); increased risk of haemato logical toxicity when methotrexate given with
        - TRIMETHOPRIM (also with co-trimoxazole)
- Antiepileptics: antifolate effect of methotrexate increased by
  - FOSPHENYTIN and PHENYTOIN
- Antimalarials: antifolate effect of methotrexate increased by
  - PYRIMETHAMINE
- Antipsychotics: avoid concomitant use of cytoxotics with
  - CLOzapine (increased risk of agranulocytosis)
- Cardiac Glycosides: methotrexate possibly reduces absorption of DIGOXIN tablets
- Ciclosporin: risk of toxicity when methotrexate given with
  - CICLOSPORIN
- Corticosteroids: possible increased risk of hepatotoxicity when
  - high-dose methotrexate given with DEXAMETHASONE
- Cytotoxics: increased pulmonary toxicity when methotrexate given with
  - CISPLATIN
- Diuretics: excretion of methotrexate increased by alkaline urine due to ACETAZOLAMIDE
- Leflunomide: risk of toxicity when methotrexate given with
  - LEFLUNOMIDE
- Retinoids: plasma concentration of methotrexate increased by
  - ACITRETIN (also increased risk of hepatotoxicity)—avoid concomitant use
- Theophylline: methotrexate possibly increases plasma concentration of THEOPHYLLINE
- Ulcer-healing Drugs: excretion of methotrexate possibly reduced by PROTON PUMP INHIBITORS (increased risk of toxicity)

Methyldopa
- ACE inhibitors: enhanced hypotensive effect when methyldopa given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when methyldopa given with ADRENERGIC NEURONE BLOCKERS

Methyldopa (continued)
- Alcohol: enhanced hypotensive effect when methyldopa given with
  - ALCOHOL
- Aldesleukin: enhanced hypotensive effect when methyldopa given with
  - ALDESLEUKIN
- Alpha-blockers: enhanced hypotensive effect when methyldopa given with
  - ALPHA-BLOCKERS
- Anaesthetics, General: enhanced hypotensive effect when methyldopa given with
  - GENERAL ANAESTHETICS
- Analgesics: hypotensive effect of methyldopa antagonised by
  - NSAIDS:
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when methyldopa given with
  - ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Antidepressants: manufacturer of methyldopa advises avoid
  - concomitant use with
    - MAOIS
- Antipsychotics: enhanced hypotensive effect when methyldopa given with
  - ANTIPSYCHOTICS (also increased risk of extrapyramidal effects)
- Anticoagulants and Antihypertensives: enhanced hypotensive effect when methyldopa given with
  - ANTIHYPERTENSIVES and ANTICOAGULANTS
- Beta-blockers: enhanced hypotensive effect when methyldopa given with
  - BETA-BLOCKERS
- Calcium-channel Blockers: enhanced hypotensive effect when methyldopa given with
  - CALCIUM-CHANNEL BLOCKERS
- Clonidine: enhanced hypotensive effect when methyldopa given with
  - CLONIDINE
- Corticosteroids: hypotensive effect of methyldopa antagonised by
  - CORTICOSTEROIDS
- Diazoxide: enhanced hypotensive effect when methyldopa given with
  - DIAZOXIDE
- Diuretics: enhanced hypotensive effect when methyldopa given with
  - DIURETICS
- Dopaminergics: methyldopa antagonises antiparkinsonism effect of
  - Dopaminergics; increased risk of extrapyramidal side-effects when methyldopa given with
    - AMANTADINE; enhanced hypotensive effect when methyldopa given with
      - CO-BENELDOPA, CO-CARELDOPA or LEVDOPA; effects of methyldopa possibly enhanced by
        - ENTACAPONE
- Iron Salts: hypotensive effect of methyldopa antagonised by
  - ORAL IRON SALTS
- Lithium: neurotoxicity may occur when methyldopa given with
  - LITHIUM without increased plasma concentration of lithium
- Moxisylyte: enhanced hypotensive effect when methyldopa given with
  - MOXISYLYTE
- Moxisylyte: enhanced hypotensive effect when methyldopa given with
  - MOXONIDINE
- Muscle Relaxants: enhanced hypotensive effect when methyldopa given with
  - BACLOFEN or TIZANIDINE
- Nitrates: enhanced hypotensive effect when methyldopa given with
  - NITRATES
- Oestrogens: hypotensive effect of methyldopa antagonised by
  - OESTROGENS
- Prostaglandins: enhanced hypotensive effect when methyldopa given with
  - ALPROSTADIL
- Sympathomimetics, Alpha: acute hypotension reported when methyldopa given with infusion of
  - SALBUTAMOL
- Vasodilator Antihypertensives: possible risk of CNS toxicity when methyldopa given with
  - HYDRAZALINE, MINOXIDIL or SODIUM NITROPRUSSIATE

Methylphenidate
- see Sympathomimetics

Methylprednisolone
- see Corticosteroids

Methylothioninium
- Antidepressants: risk of CNS toxicity when methylothioninium given with
  - SSRI-RELATED ANTIDEPRESSANTS, SSRIS and
  - CLOMIPRAMINE—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylothioninium and observe patient for up to 4 hours after administration); possible risk of CNS toxicity when methylothioninium given with
  - MIRTAZAPINE—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylothioninium and observe patient for up to 4 hours after administration)
- Anxiolytics and Hypnotics: possible risk of CNS toxicity when methylothioninium given with
  - BUSPIRONE—avoid concomitant use (if avoidance not possible, use lowest
Methylthioninium
● Antipsychotics: increased risk of agranulocytosis
● Non-steroidal anti-inflammatory drugs: increased risk of bleeding

Antihistamines: increased risk of sedation

β-blockers: increased risk of bradycardia

Methylthioninium: possible increased risk of convulsions when antidepressants given with ATOMOXETINE

Clonidine: mirtazapine possibly antagonises hypotensive effect of CLONIDINE

Methylthioninium: possible increased risk of CNS toxicity when mirtazapine given with METHYLTHIONINIUM—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

Ulcer-healing Drugs: plasma concentration of mirtazapine increased by Cimetidine

Mirtazapine
● Alcohol: increased sedative effect when mirtazapine given with ALCOHOL
● Analgesics: possible increased serotoninergic effects when mirtazapine given with TRAMADOL
● Anticoaguulants: mirtazapine enhances anticoagulant effect of WARFARIN

● Antidepressants: possible increased serotoninergic effects when mirtazapine given with MAOIS

● Antidepressants: avoid concomitant use of cytotoxics with METHYLTHIONINIUM—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

Anticoaguulants: mirtazapine enhances anticoagulant effect of WARFARIN

Beta-blockers: increased risk of bradycardia

β-blockers: increased risk of bradycardia

Anticoaguulants: mirtazapine enhances anticoagulant effect of WARFARIN

Antidepressants: possible increased serotoninergic effects when mirtazapine given with MAOIS

Antidepressants: avoid concomitant use of cytotoxics with METHYLTHIONINIUM—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

Ulcer-healing Drugs: plasma concentration of mirtazapine increased by Cimetidine

Mitomycin
● Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
Moxifloxacin
- Anticoagulants: mitoxantrone possibly reduces anticoagulant effect of CUMARINS
- Antipsychotics: avoid concomitant use of cytoxics with CLOzapine (increased risk of agranulocytosis)
- Diuretics: manufacturer of moxifloxacin advises avoid concomitant use of SPIRONOLACTONE (antagonism of effect)

Mitoxantrone
- Antipsychotics: avoid concomitant use of cytoxics with CLOzapine (increased risk of agranulocytosis)
- Ciclosporin: excretion of mitoxantrone reduced by CICLOSPORIN (increased plasma concentration)

Mivacurium see Muscle Relaxants
Mizolastine see Antihistamines
MMR Vaccine see Vaccines
Moclobemide
- Analgesics: possible CNS excitation or depression (hypertension or hypotension) when moclobemide given with DEXTROMETHORPHAN or PETHIDINE—avoid concomitant use; possible CNS excitation or depression (hypertension or hypotension) when moclobemide given with OPIOID ANALGESICS—manufacturer of moclobemide advises consider reducing dose of opioid analgesics
- Antidepressants: moclobemide should not be started for at least 1 week after stopping MAOIS, SSRl-RELATED ANTIDEPRESSANTS, OLANzapine, FLUOXETINE, MIRTAZAPINE, PAROXETINE, SERTRALINE, TRICYCLIC-RELATED ANTIDEPRESSANTS or TRICYCLICS; increased risk of CNS toxicity when moclobemide given with a ESCITALOPRAM, preferably avoid concomitant use; moclobemide should not be started until 5 weeks after stopping FLUOXETINE; possible increased serotonergic effects when moclobemide given with DULOXETINE
- Antimalarials: avoidance of antidepressants advised by manufacturer of ARTEMETHER WITH LUMEFANTRINE and ARTENIMOL WITH PIPERAQUINE
- Atomoxetine: possible increased risk of convulsions when antidepressants given with ATOMOXETINE
- Bupropion: avoidance of moclobemide advised by manufacturer of BUPROPION
- Clonidine: moclobemide possibly reduces antiplatelet effect of CLOPIDOGREL
- Dopaminergics: increased risk of side-effects when moclobemide given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA; caution with moclobemide advised by manufacturer of ENTACAPONE; avoid concomitant use of moclobemide with SELEGILINE
- SHT receptor Agonists: risk of CNS toxicity when moclobemide given with a RIZATRIPTAN or a SUMATRIPTAN (avoid rizatRIPTAN or sumatriptan for 2 weeks after moclobemide); risk of CNS toxicity when moclobemide given with ZOMITRIPTAN (reduce dose of zolmitriptan)
- Sympathomimetics: risk of hypertensive crisis when moclobemide given with SYMPATHOMIMETICS
- Ulcer-healing Drugs: plasma concentration of moclobemide increased by CIMETIDINE (half life of moclobemide)

Modafinil
- Antiepileptics: modafinil possibly increases plasma concentration of FOSPHENYTOIN and PHENYTOIN
- Ciclosporin: modafinil reduces plasma concentration of CICLOSPORIN
- Ciclosporin: modafinil reduces plasma concentration of BOSUTINIB—manufacturer of bosutinib advises avoid concomitant use
- Oestrogens: modafinil accelerates metabolism of OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)

Moxepril see ACE Inhibitors
Mometasone see Corticosteroids
Monobactams see Aztreonam
Monoclonal antibodies see individual drugs
Montelukast see Leukotriene Receptor Antagonists
Morphine see Opioid Analgesics
Moxifloxacin see Quinolones

Moxisylyte
- ACE Inhibitors: enhanced hypotensive effect when moxisylyte given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when moxisylyte given with ADRENERGIC NEURONE BLOCKERS
- Alpha-blockers: possible severe postural hypotension when moxisylyte given with ALPHA-BLOCKERS
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when moxisylyte given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Beta-blockers: possible severe postural hypotension when moxisylyte given with BETA-BLOCKERS
- Calcium-channel Blockers: enhanced hypotensive effect when moxisylyte given with CALCIUM-CHANNEL BLOCKERS
- Clonidine: enhanced hypotensive effect when moxisylyte given with CLONIDINE
- Diazoxide: enhanced hypotensive effect when moxisylyte given with DIAZOXIDE
- Diuretics: enhanced hypotensive effect when moxisylyte given with DIURETICS
- Methyldopa: enhanced hypotensive effect when moxisylyte given with METHYLDOPA
- Moxonidine: enhanced hypotensive effect when moxisylyte given with MOXONIDINE
- Nitrate: enhanced hypotensive effect when moxisylyte given with NITRATES
- Vasodilator Antihypertensives: enhanced hypotensive effect when moxisylyte given with HYDRAZALINE, MINOXIDIL or SODIUM NITROPRUSSIDE

Moxonidine
- ACE Inhibitors: enhanced hypotensive effect when moxonidine given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when moxonidine given with ADRENERGIC NEURONE BLOCKERS
- Alcohol: enhanced hypotensive effect when moxonidine given with ALCOHOL
- Aidesleukin: enhanced hypotensive effect when moxonidine given with AIDESLEUKIN
- Alpha-blockers: enhanced hypotensive effect when moxonidine given with ALPHA-BLOCKERS
- Anaesthetics, General: enhanced hypotensive effect when moxonidine given with GENERAL ANAESTHETICS
- Analgesics: hypotensive effect of moxonidine antagonised by NSAIDS
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when moxonidine given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Antidepressants: enhanced hypotensive effect when moxonidine given with MAOIS; hypotensive effect of moxonidine possibly antagonised by TRICYCLICS (manufacturer of moxonidine advises avoid concomitant use)
- Antipsyehotics: enhanced hypotensive effect when moxonidine given with PHENOTHIAZINES
- Anxiolytics and Hypnotics: enhanced hypotensive effect when moxonidine given with ANXIOLYTICS AND HYPNOTICS; sedative effects possibly increased when moxonidine given with BENZODIAZEPINES
- Beta-blockers: enhanced hypotensive effect when moxonidine given with BETA-BLOCKERS
- Calcium-channel Blockers: enhanced hypotensive effect when moxonidine given with CALCIUM-CHANNEL BLOCKERS
- Clonidine: enhanced hypotensive effect when moxonidine given with CLONIDINE
- Corticosteroids: hypotensive effect of moxonidine antagonised by CORTICOSTEROIDS
- Diazoxide: enhanced hypotensive effect when moxonidine given with DIAZOXIDE
- Diuretics: enhanced hypotensive effect when moxonidine given with DIURETICS
- Dopaminergics: enhanced hypotensive effect when moxonidine given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA
- Methyldopa: enhanced hypotensive effect when moxonidine given with METHYLDOPA
- Moxisylyte: enhanced hypotensive effect when moxonidine given with MOXISYLYTE
Muscle Relaxants

Effects of non-depolarising muscle relaxants possibly antagonised by ACE INHIBITORS; effects of non-depolarising muscle relaxants and suxamethonium enhanced by CALCULIUM-CHANNEL BLOCKERS; possible increased risk of bradycardia when suxamethonium given with DILTIAZEM—manufacturer of diltiazem advises avoid concomitant use; effects of non-depolarising muscle relaxants and suxamethonium enhanced by VERAPAMIL; avoidance of intravenous dantrolene advised by manufacturer of VERAPAMIL.

Cardiac Glycosides; possible increased risk of bradycardia when tizanidine given with CARDIAC GLYCOSIDES; risk of ventricular arrhythmias when suxamethonium given with CARDIAC GLYCOSIDES.

Muscle Relaxants, depolarising

See Muscle Relaxants

Muscle Relaxants, non-depolarising

See Muscle Relaxants

Mycophenolate

Antacids: absorption of mycophenolate reduced by ANTACIDS.

Antibiotics: bioavailability of mycophenolate possibly reduced by METRONIDAZOLE and NORFLOXACIN; plasma concentration of mycophenolate possibly reduced by COAMOXICLAV; plasma concentration of active metabolite of mycophenolate reduced by rifampicin.

Antivirals: mycophenolate increases plasma concentration of ACICLOVIR and VALACICLOVIR, also plasma concentration of inactive metabolite of mycophenolate increased; mycophenolate possibly increases plasma concentration of...
Mycophenolate
Antivirals (continued)
GANCICLOVIR and VALGANCICLOVIR, also plasma concentration of inactive metabolite of mycophenolate possibly increased
> Colestilan: manufacturer of colestilan advises give mycophenolate at least 1 hour before or 3 hours after
COLESTILAN
> Iron Salts: absorption of mycophenolate reduced by oral IRON SALTS
Lipid-regulating Drugs: absorption of mycophenolate reduced by COLESTYRAMINE
> Sevelamer: plasma concentration of mycophenolate possibly reduced by SEVELAMER
Nabumetone see NSAIDs
Nadolol see Beta-blockers
Nalidixic Acid
see
Neostigmine
see
Antipsychotics:
Analgesics:
Neomycin
Antimuscarinics:
▶
Analgesics:
Nadolol
Nabumetone
see
Beta-blockers
Nalidixic Acid
see Quinolones
Nalmefene
▶
Analgesics: manufacturer of nalmefene advises avoid concomitant use with OPIOID ANALGESICS
Nandrolone see Anabolic Steroids
Naproxen see NSAIDs
Naratriptan see SHT1-receptor Agonists (under HT)
Natalizumab
▶
Analgesics: avoid concomitant use of cytoxotics with
CLOZAPINE (increased risk of agranulocytosis)
> Vaccines: risk of generalised infections when monoclonal antibodies given with live VACCINES—avoid concomitant use
Nateglinide see Antidiabetics
Nebivolol see Beta-blockers
Nefopam
▶
Antidepressants: manufacturer of nefopam advises avoid concomitant use with MAOIS; side-effects possibly increased when nefopam given with TRICYCLICS
▶
Antimuscarinics: increased risk of antimuscarinic side-effects when nefopam given with ANTIMUSCARINICS
Neomycin see Aminoglycosides
Neostigmine see Parasympathomimetics
Nevirapine
▶
Analgesics: nevirapine possibly reduces plasma concentration of METHADONE
▶
Antibacterials: nevirapine reduces plasma concentration of CLARITHROMYCIN (but concentration of an active metabolite increased), also plasma concentration of nevirapine increased; nevirapine possibly increases plasma concentration of RIFABUTIN; plasma concentration of nevirapine reduced by RIFAMPICIN—avoid concomitant use
▶
Anticoagulants: nevirapine may enhance or reduce anticoagulant effect of WARFARIN
▶
Antidepressants: plasma concentration of nevirapine reduced by ST JOHN’S WORT—avoid concomitant use
▶
Antiepileptics: plasma concentration of nevirapine reduced by CARBAMAZEPINE
▶
Antifungals: nevirapine reduces plasma concentration of KETOCONAZOLE—avoid concomitant use; plasma concentration of nevirapine increased by FLUCONAZOLE; nevirapine possibly reduces plasma concentration of CASPOFUNGIN and ITRACONAZOLE—consider increasing dose of caspofungin and itraconazone
▶
Antipsychotics: nevirapine possibly reduces plasma concentration of ARIPIPRAZOLE (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature)
▶
Antivirals: nevirapine possibly reduces plasma concentration of AZATANAVIR and ETARAVIRINE—avoid concomitant use; manufacturer of nevirapine advises avoid concomitant use with BOCEPREVIR and RILPIVIRINE; avoidance of nevirapine advised by manufacturer of DACLATASVIR (plasma concentration of daclatasvir possibly reduced); nevirapine possibly reduces the plasma concentration of DOLUTEGRAVIR (see under Dolutegravir, p. 557); nevirapine reduces plasma concentration of EFAVIRENZ—avoid concomitant use; avoidance of nevirapine advised by manufacturer of ELVITEGRAVIR; nevirapine possibly reduces plasma concentration of FOSAMPREVIR—avoid unboosted fosamprenavir; nevirapine reduces plasma concentration of Nevirapine
▶
Antivirals (continued)
INDINAVIR; nevirapine possibly reduces plasma concentration of LOPINAVIR and TELAPREVIR—consider increasing dose of lopinavir and telaprevir; nevirapine possibly reduces plasma concentration of SIMPREVIR—manufacturer of simprevir advises avoid concomitant use; increased risk of granulocytopenia when nevirapine given with ZIDOVUDINE
▶
Cobicistat: manufacturer of nevirapine advises avoid concomitant use with COBICISTAT
▶
Dose: nevirapine accelerates metabolism of OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
▶
Dristat: absorption of nevirapine possibly reduced by ORLISTAT
▶
Progestogens: nevirapine accelerates metabolism of PROGESTOGENS (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)
Nicardipine see Calcium-channel Blockers
Nicorandil
▶
Alcohol: hypotensive effect of nicorandil possibly enhanced by ALCOHOL
▶
Antidepressants: enhanced hypotensive effect when nicorandil given with MAOIS; hypotensive effect of nicorandil possibly enhanced by TRICYCLICS
▶
Avanafil: hypotensive effect of nicorandil significantly enhanced by AVANAFIL (avoid concomitant use)
▶
Sildenafil: hypotensive effect of nicorandil significantly enhanced by SILDENAFIL (avoid concomitant use)
▶
Tadalafil: hypotensive effect of nicorandil significantly enhanced by TADALAFIL (avoid concomitant use)
▶
Vardenafil: possible increased hypotensive effect when nicorandil given with VARDENAFIL—avoid concomitant use
▶
Vasodilator Antihypertensives: possible enhanced hypotensive effect when nicorandil given with HYDRALAZINE, MINOXIDIL or SODIUM NITROPRUSSIDE
Nicotine
▶
Anti-arrhythmics: nicotine possibly enhances effects of ADENOSINE
Nicotinic Acid
▶
Lipid-regulating Drugs: increased risk of myopathy when nicotinic acid given with STATINS (applies to lipid regulating doses of nicotinic acid)
Nifedipine see Calcium-channel Blockers
Nilotinib
▶
Antibacterials: manufacturer of nilotinib advises avoid concomitant use with CLARITHROMYCIN and TELITHROMYCIN; plasma concentration of nilotinib reduced by RIFAMPICIN—avoid concomitant use
▶
Antifungals: plasma concentration of nilotinib increased by KETOCONAZOLE—avoid concomitant use; manufacturer of nilotinib advises avoid concomitant use with ITRACONAZOLE and VORICONAZOLE
▶
Antipsychotics: avoid concomitant use of cytoxotics with CLOZAPINE (Increased risk of agranulocytosis)
▶
Antivirals: avoidance of nilotinib advised by manufacturer of BOCEPREVIR; plasma concentration of nilotinib possibly increased by RITONAVIR—manufacturer of nilotinib advises avoid concomitant use
▶
Anxiolytics and Hypnotics: nilotinib increases plasma concentration of MIDAZOLAM
▶
Grapefruit Juice: manufacturer of nilotinib advises avoid concomitant use with GRAPEFRUIT JUICE
▶
Lipid-regulating Drugs: separating administration from nilotinib by 12 hours advised by manufacturer of Lomitapide
Nintedanib see Calcium-channel Blockers
Nintedanib
▶
Antibacterials: plasma concentration of nintedanib reduced by RIFAMPICIN—avoid concomitant use
▶
Antifungals: plasma concentration of nintedanib increased by KETOCONAZOLE
Nitrates

- ACE Inhibitors: enhanced hypotensive effect when nitrates given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when nitrates given with ADRENERGIC NEURONE BLOCKERS
- Alcohol: enhanced hypotensive effect when nitrates given with ALCOHOL
- Aldesleukin: enhanced hypotensive effect when nitrates given with ALDESELEUKIN
- Alpha-blockers: enhanced hypotensive effect when nitrates given with ALPHA-BLOCKERS
- Anaesthetics, General: enhanced hypotensive effect when nitrates given with GENERAL ANAESTHETICS
- Analgesics: hypotensive effect of nitrates antagonised by NSAIDS
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when nitrates given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Anti-arrhythmics: effects of sublingual tablets of nitrates reduced by DISOPYRAMIDE (failure to dissolve under tongue owing to dry mouth)
  - Anticoagulants: infusion of glyceryl trinitrate reduces anticoagulant effect of • HEPARINS
  - Antidepressants: enhanced hypotensive effect when nitrates given with MAOIS; effects of sublingual tablets of nitrates possibly reduced by TRICYCLIC-RELATED ANTIDEPRESSANTS (failure to dissolve under tongue owing to dry mouth); effects of sublingual tablets of nitrates reduced by TRICYCLICS (failure to dissolve under tongue owing to dry mouth)
  - Antimuscarinics: effects of sublingual tablets of nitrates possibly reduced by ANTIMUSCARINICS (failure to dissolve under tongue owing to dry mouth)
  - Antipsychotics: enhanced hypotensive effect when nitrates given with PHENOTHIAZINES
- Anxiolytics and Hypnotics: enhanced hypotensive effect when nitrates given with ANXIOLYTICS AND HYPNOTICS
  - Avanafil: hypotensive effect of nitrates significantly enhanced by • AVANAFIL (avoid concomitant use)
  - Beta-blockers: enhanced hypotensive effect when nitrates given with BETA-BLOCKERS
  - Calcium-channel Blockers: enhanced hypotensive effect when nitrates given with CALCIUM-CHANNEL BLOCKERS
  - Clonidine: enhanced hypotensive effect when nitrates given with CLONIDINE
  - Corticosteroids: hypotensive effect of nitrates antagonised by CORTICOSTEROIDS
  - Diazoxide: enhanced hypotensive effect when nitrates given with DIAZOXIDE
  - Diuretics: enhanced hypotensive effect when nitrates given with DIURETICS
  - Dopaminergics: enhanced hypotensive effect when nitrates given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA
  - Methyldopa: enhanced hypotensive effect when nitrates given with M ETHYLDOPA
  - Moxisylyte: enhanced hypotensive effect when nitrates given with MOXYSLYTE
  - Moxonidine: enhanced hypotensive effect when nitrates given with MOXONIDINE
  - Muscle Relaxants: enhanced hypotensive effect when nitrates given with BACLOFEN or TIZANIDINE
  - Oestrogens: hypotensive effect of nitrates antagonised by OESTROGENS
  - Prostaglandins: enhanced hypotensive effect when nitrates given with ALPROSTADIL
  - Riociguat: possible enhanced hypotensive effect when nitrates given with • RIOCIGUAT—avoid concomitant use
  - Sildenafil: hypotensive effect of nitrates significantly enhanced by • SILDENAFIL (avoid concomitant use)
  - Tadalafil: hypotensive effect of nitrates significantly enhanced by • TADALAFIL (avoid concomitant use)
  - Vardenafil: possible increased hypotensive effect when nitrates given with • VARDENAFIL—avoid concomitant use
  - Vasodilator: Antihypertensives: enhanced hypotensive effect when nitrates given with HYDRAZALINE, MINOXIDIL or SODIUM NITROPRUSSIDE

Nitrazepam see Anxiolytics and Hypnotics

Nitrofurantoin

- Antacids: absorption of nitrofurantoin reduced by ORAL MAGNESIUM SALTS (as magnesium trisilicate)
- Antibacterials: nitrofurantoin possibly antagonises effects of • NALIDIXIC ACID
- Sulfapyrazine: excretion of nitrofurantoin reduced by SULFINPYRAZONE (increased risk of toxicity)
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Nitromidazoles see Metronidazole and Tinidazole

Nitrous Oxide see Anaesthetics, General

Nizatidine see Histamine H2-antagonists

Nomegestrol see Progestogens

Noradrenaline (norepinephrine) see Sympathomimetics

Norelgestromin see Progestogens

Norepinephrine

NOTE Norepinephrine interactions as for noradrenaline, see under sympathomimetics

Norethisterone see Progestogens

Norfloxacin see Quinolones

Norgestimate see Progestogens

Normal Immunoglobulin see Immunoglobulins

Nortriptyline see Antidepressants, Tricyclic NSAIDs

NOTE See also Aspirin. Interactions do not generally apply to topical NSAIDs

- ACE Inhibitors: increased risk of renal impairment when NSAIDs given with ACE INHIBITORS, also hypotensive effect antagonised
- Adrenergic Neurone Blockers: NSAIDs antagonise hypotensive effect of ADRENERGIC NEURONE BLOCKERS
- Aliskiren: NSAIDs possibly antagonise hypotensive effect of ALISKIREN

• Alpha-blockers: NSAIDs antagonise hypotensive effect of ALPHA-BLOCKERS

• Analgesics: avoid concomitant use of NSAIDs with • NSAIDS or • ASPIRIN (increased side-effects); avoid concomitant use of NSAIDs with • KETOROLAC (increased side-effects and haemorrhage); ibuprofen possibly reduces antiplatelet effect of ASPIRIN

• Angiotensin-II Receptor Antagonists: increased risk of renal impairment when NSAIDs given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS, also hypotensive effect antagonised

• Antacids: absorption of acetaminophen possibly reduced by ANTACIDS

• Antibacterials: indomethacin possibly increases plasma concentration of AMIKACIN and GENTAMICIN in neonates; plasma concentration of cececoib, diclofenac and etoricoxib reduced by RIFAMPICIN; possible increased risk of convulsions when NSAIDs given with • QUINOLONES

• Antiinflammatory: enhanced risk of haemorrhage when intravenous diclofenac given with • ANTICOAGULANTS (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when ketorolac given with • ANTICOAGULANTS (avoid concomitant use, including low-dose heparins); NSAIDs possibly enhance anticoagulant effect of • COUMARINS and • PHENINDIONE; possible increased risk of bleeding when NSAIDs given with • DABIGATRAN or • HEPARINS

• Antidepressants: increased risk of bleeding when NSAIDs given with • SSRIS or • VENLAFAXINE

• Antidiabetics: NSAIDs possibly enhance effects of • SULFONYLUREAS

• Antiepileptics: acetaminophen possibly reduces excretion of FOSPHENYTIOIN and PHENYTOIN (increased risk of toxicity)

• Antifungals: plasma concentration of paroxetine increased by FLUCONAZOLE (reduce dose of paroxetine); plasma concentration of cececoib increased by FLUCONAZOLE (half dose of cececoib); plasma concentration of flurbiprofen and ibuprofen increased by FLUCONAZOLE; plasma concentration of diclofenac and ibuprofen increased by VORICONAZOLE

• Antipsychotics: possible severe drowsiness when acetaminophen or indomethacin given with HALOPERIDOL
Appendix 1 Interactions

NSAIDs (continued)

- Antivirals: plasma concentration of piroxicam increased by
  - Ritonavir (risk of toxicity)—avoid concomitant use; plasma concentration of NSAIDs possibly increased by ritonavir; increased risk of haematological toxicity when NSAIDs given with zidovudine
- Beta-blockers: NSAIDs antagonise hypotensive effect of beta-blockers
- Calcium channel blockers: NSAIDs antagonise hypotensive effect of calcium channel blockers
- Cardiac glycosides: NSAIDs possibly increase plasma concentration of cardiac glycosides, also possible exacerbation of heart failure and reduction of renal function
- Ciclosporin: increased risk of nephrotoxicity when NSAIDs given with ciclosporin; plasma concentration of ciclofenac increased by ciclosporin (halve dose of ciclofenac)
- Clonidine: NSAIDs antagonise hypotensive effect of clonidine
- Clonodigrel: increased risk of bleeding when NSAIDs given with clonodigrel
- Corticosteroids: increased risk of gastro-intestinal bleeding and ulceration when NSAIDs given with corticosteroids
- Cytoxics: NSAIDs probably reduce excretion of
  - Mesetranate (increased risk of toxicity); diclofenac, ibuprofen, indometacin, ketoprofen, meloxicam and naproxen reduce excretion of mesetranate (increased risk of toxicity); NSAIDs possibly reduce renal excretion of remotezade—consult product literature; increased risk of bleeding when NSAIDs given with erlotinib; avoidance of mefenamic acid advised by manufacturer of regorafenib; indometacin enhances effects of fentanyl; diazoxide: NSAIDs antagonise hypotensive effect of diazoxide
- Dimethyl sulfoxide: avoid concomitant use of sulindac with
- Diuretics: risk of nephrotoxicity of NSAIDs increased by diuretics, also antagonism of diuretic effect; indometacin and ketorolac antagonise effects of diuretics; excretion of acetaminophen possibly increased by furosemide; NSAIDs possibly antagonise diuretic effect of furosemide; occasional reports of reduced renal function when indometacin given with trametracin—avoid concomitant use; possible increased risk of hyperkalaemia when NSAIDs given with potassium-sparing diuretics and aldosterone antagonists; increased risk of hyperkalaemia when indometacin given with potassium-sparing diuretics and aldosterone antagonists
- Iloprost: increased risk of bleeding when NSAIDs given with iloprost
- Lipid regulating Drugs: excretion of meloxicam increased by colestipramine
- Lithium: NSAIDs reduce excretion of lithium (increased risk of toxicity); ketorolac reduces excretion of lithium (increased risk of toxicity)—avoid concomitant use
- Methyldopa: NSAIDs antagonise hypotensive effect of methyldopa
- Mifamurtide: avoidance of high doses of NSAIDs advised by manufacturer of mifamurtide
- Moxonidine: NSAIDs antagonise hypotensive effect of moxonidine
- Muscle relaxants: ibuprofen reduces excretion of baclofen (increased risk of toxicity); NSAIDs possibly reduce excretion of baclofen (increased risk of toxicity)
- Nitrites: NSAIDs antagonise hypotensive effect of nitrites
- Oestrogens: etoricoxib increases plasma concentration of ethylhexyladrol
- Penicillamine: possible increased risk of nephrotoxicity when NSAIDs given with penicillamine
- Pentoxyphylline: possible increased risk of bleeding when NSAIDs given with pentoxyphylline; increased risk of bleeding when ketorolac given with pentoxyphylline (avoid concomitant use)
- Prasugrel: possible increased risk of bleeding when NSAIDs given with prasugrel
- Tacrolimus: possible increased risk of nephrotoxicity when NSAIDs given with tacrolimus; increased risk of nephrotoxicity when ibuprofen given with tacrolimus
- Vasodilator Antihypertensives: NSAIDs antagonise hypotensive effect of hydralazine, minoxidil and sodium nitroprusside

Obinutuzumab

- Antipsychotics: avoid concomitant use of cytoxins with clozapine (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live vaccines—avoid concomitant use

Octreotide

- Anti-infectives: octreotide possibly reduces requirements for antibiotics
- Ciclosporin: octreotide reduces plasma concentration of ciclosporin
- Dopaminergic: octreotide increases plasma concentration of bromocriptine
- Ulcer-healing Drugs: octreotide possibly delays absorption of cimetidine

Oestrogens

- ACE inhibitors: oestrogens antagonise hypotensive effect of ACE inhibitors
- Adrenergic Neurone Blockers: oestrogens antagonise hypotensive effect of adrenergic neurone blockers
- Alpha-blockers: oestrogens antagonise hypotensive effect of alpha-blockers
- Aminophylline: oestrogens increase plasma concentration of aminophylline (consider reducing dose of aminophylline)
- Analgesics: plasma concentration of ethylhexyladrol increased by etoricoxib
- Angiotensin II Receptor Antagonists: oestrogens antagonise hypotensive effect of angiotensin II receptor antagonists
- Antibacterials: plasma concentration of estradiol increased by erythromycin; metabolism of oestrogens accelerated by rifamycins (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see contraceptive interactions in BNF)
- Anticoagulants: oestrogens may enhance or reduce anticoagulant effect of coumarins; oestrogens antagonise anticoagulant effect of phenindione
- Antidepressants: contraceptive effect of oestrogens reduced by st john's wort (avoid concomitant use); oestrogens antagonise antidepressant effect of tricyclics (but side-effects of tricyclics possibly increased due to increased plasma concentration)
- Anti-diabetics: oestrogens antagonise hypoglycaemic effect of anti-diabetics
- Antiepileptics: metabolism of oestrogens accelerated by carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone, rifampicin and topiramate (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see contraceptive interactions in BNF); oestrogens reduce plasma concentration of lamotrigine—consider increasing dose of lamotrigine; ethylhexyladrol possibly reduces plasma concentration of sodium valproate and valproic acid
- Antifungals: oestrogens increase plasma concentration of voriconazole; anecdotal reports of contraceptive failure and menstrual irregularities when oestrogens given with griseofulvin; anecdotal reports of contraceptive failure when oestrogens given with midazolam; occasional reports of breakthrough bleeding when oestrogens (used for contraception) given with terbinafine
- Antivirals: plasma concentration of ethylhexyladrol increased by atazanavir; metabolism of oestrogens accelerated by nevirapine and ritonavir (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see contraceptive interactions in BNF); plasma concentration of ethylhexyladrol possibly reduced by clozapine—manufacturer of telaprevir advises additional contraceptive precautions
- Anxiolytics and Hypnotics: oestrogens possibly increase plasma concentration of chlor Diazepam, diazepam and nitrazepam; oestrogens possibly reduce plasma concentration of lorazepam, diazepam and temazepam; oestrogens increase plasma concentration of melatonin
Oestrogens (continued)

- Aprepitant: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with Aprepitant (alternative contraception recommended)
- Beta-blockers: oestrogens antagonise hypotensive effect of Beta-blockers
- Bosentan: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with Bosentan (alternative contraception recommended)
- Calcium-channel Blockers: oestrogens antagonise hypotensive effect of Calcium-channel Blockers
- Ciclosporin: oestrogens possibly increase plasma concentration of Ciclosporin
- Clonidine: oestrogens antagonise hypotensive effect of clonidine
- Cobicistat: metabolism of oestrogens accelerated by Cobicistat
- Dopaminergics: oestrogens possibly increase plasma concentration of Dopaminergics
- Diuretics: oestrogens antagonise diuretic effect of Diuretics
- Fosaprepitant: possible reduced contraceptive effect of oestrogens advised by manufacturer of fosaprepitant (alternative contraception recommended)
- Lipid-regulating Drugs: absorption of ethinylestradiol reduced by Lipid-regulating Drugs
- Moxonidine: oestrogens antagonise hypotensive effect of Moxonidine
- Muscle Relaxants: oestrogens possibly increase plasma concentration of Tizanidine (increased risk of toxicity)
- Nitrofurantoin: plasma concentration of Nitrofurantoin increased by Oestrogens
- Oxytocics: possible reduced contraceptive effect of oestrogens advised by manufacturer of Oxytocics
- Pethidine: increased plasma concentration of Opioid Analgesics when given with Pethidine
- Telithromycin: plasma concentration of Telithromycin increased by Oestrogens
Opioid Analgesics
- Antifungals: (continued) possibly increased by itraconazole (increased risk of ventricular arrhythmias); plasma concentration of alfentanil and methadone increased by voriconazole (consider reduced dosage of alfentanil and methadone); plasma concentration of fentanyl possibly increased by triazoles
- Antihistamines: sedative effects possibly increased when opioid analgesics given with sedating antihistamines
- Antimalarials: avoidance of methadone advised by manufacturer of artenimol with piperaquine (possible risk of ventricular arrhythmias)
- Antimuscarinics: of convulsions when tramadol given with SSRIS
- Antifungals
- Anticoagulants:
- Opioid Analgesics
- Antiepileptics: increased risk of ventricular arrhythmias when methadone given with antiepileptics; increased risk of ventricular arrhythmias when methadone given with amisulpride—avoid concomitant use
- Antivirals: plasma concentration of methadone possibly reduced by abacavir, nevirapine and rifilpridine; plasma concentration of methadone possibly affected by boceprevir; possible increased risk of prolonged sedation and respiratory depression when buprenorphine given with boceprevir; methadone possibly reduces plasma concentration of didanosine; plasma concentration of methadone reduced by efavirenz, fosamprenavir and ritonavir; plasma concentration of tuberine possibly increased by ritonavir; plasma concentration of dextromethorphan increased by ritonavir; plasma concentration of dextromethorphan possibly reduced by ritonavir; concentration of methadone possibly affected by plasma concentration of morphine possibly reduced by ritonavir; increased risk of ventricular arrhythmias when methadone given with saquinavir—avoid concomitant use; caution with methadone advised by manufacturer of telaprevir (risk of ventricular arrhythmias); buprenorphine possibly reduces plasma concentration of tipranavir; methadone possibly increases plasma concentration of zidovudine
- Antipsychotics and Hypnotics: increased sedative effects when opioid analgesics given with anxiolytics and hypnotics; fentanyl possibly inhibits metabolism of midazolam
- Antidepressants: increased risk of respiratory depression when methadone given with atomoxetine; possible increased risk of convulsions when tramadol given with atomoxetine
- Beta-blockers: morphine possibly increases plasma concentration of esmolol
- Calcium-channel Blockers: metabolism of alfentanil inhibited by diltiazem (risk of prolonged or delayed respiratory depression)
- Cytotoxics: possible increased risk of venous thrombosis when methadone given with busulfan; caution with alfentanil and fentanyl advised by manufacturer of crizotinib; possible increased risk of venous thrombosis when methadone given with vandetanib—avoid concomitant use
- Dapoxetine: increased risk of serotoninergic effects when tramadol given with dapoxetine (manufacturer of dapoxetine advises tramadol should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping tramadol)
- Domperidone: opioid analgesics antagonise effects of domperidone on gastro-intestinal activity
- Dopaminergics: avoid concomitant use of dextromethorphan with risperidone; risk of CNS toxicity when phenytoin given with rasagiline (avoid phenytoin for 2 weeks after rasagiline); avoidance of opioid analgesics advised by manufacturer of selegiline; hyperpyrexia and CNS toxicity reported when phenytoin given with selegiline (avoid concomitant use)

Opioid Analgesics (continued)
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and tricyclic-related antidepressants (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRIS and tricyclics (convulsive threshold lowered)
- Antiepileptics: oxcarbazepine sometimes reduces plasma concentration of carbamazepine (but concentration of an active metabolite of carbamazepine may be increased), also plasma concentration of an active metabolite of oxcarbazepine often reduced; avoidance of oxcarbazepine advised by manufacturer of eslicarbazepine; oxcarbazepine increases plasma concentration of fosphenytoin, phenobarbital, phenytoin and primidone, also plasma concentration of an active metabolite of oxcarbazepine reduced; oxcarbazepine reduces plasma concentration of perampanel (see under Perampanel, p. 398); plasma concentration of an active metabolite of oxcarbazepine sometimes reduced by sodium valproate and valproic acid
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered)
- Antioxidants: oxcarbazepine possibly reduces plasma concentration of daclatasvir and simprevir—manufacturer of daclatasvir and simprevir advises avoid concomitant use; avoidance of oxcarbazepine advised by
Oxcarbazepine
- Antivirals (continued)
  manufacturer of DOLUTEGRAVIR and SOFOSBUVIR; avoidance of oxcarbazepine advised by manufacturer of RILPVIRINE (plasma concentration of rilpivirine possibly reduced)
- Ciclosporin: oxcarbazepine possibly reduces plasma concentration of CICLOSPORIN
- Clopidogrel: oxcarbazepine possibly reduces antiplatelet effect of CLOPIDOGREL
- Cytotoxics: oxcarbazepine reduces plasma concentration of IMATINIB—avoid concomitant use
- Oestrogens: oxcarbazepine accelerates metabolism of OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
- Orlstat: possible increased risk of convulsions when antiepileptics given with ORLSTAT
- Progestogens: oxcarbazepine accelerates metabolism of PROGESTOGENS (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, eugonestrêl-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)

Oxaprozin see NSAIDs
Oxcarbazepine see Antiepileptics
Oxethazaine see Sympathomimetics
Oxetacycline see Tetracyclines
Oxycodone see Antidepressants
Oxymetazoline see Sympathomimetics
Oxytetracycline see Tetracyclines
Oxyprenolol see Beta-blockers
Oxybutynin see Antimuscarinics
Oxytocin
- Anaesthetics, General: oxytocic effect possibly reduced, also enhanced hypotensive effect and risk of arrhythmias when oxytocin given with VOLATILE LIQUID GENERAL ANAESTHETICS
- Prostaglandins: uterotonic effect of oxytocin potentiated by PROSTAGLANDINS
- Sympathomimetics: risk of hypertension when oxytocin given with vasoconstrictor SYMPATHOMIMETICS (due to enhanced vasopressor effect)

Pacitaxel
- Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
- Antivirals: plasma concentration of pacitaxel increased by RITONAVIR
- Cytotoxics: increased risk of neutropenia when pacitaxel given with LAPATINIB

Paliperidone see Antipsychotics
Pamidronate Disodium see Bisphosphonates
Pancreatin
- Antidiabetics: pancreatin antagonises hypoglycaemic effect of ACARBOSE
Pancuronium see Muscle Relaxants
Pantoprazole see Proton Pump Inhibitors
Papaveretum see Opioid Analgesics
Paracetamol
- Anticoagulants: prolonged regular use of paracetamol possibly enhances anticoagulant effect of COUMARINS
- Antidiabetics: absorption of paracetamol possibly reduced when given 1 to 4 hours after LIXISENATIDE
- Antiepileptics: metabolism of paracetamol possibly accelerated by CARBAZEPINE, FOSPHENITOIN, PHENOBARBITAL, PHENOBARBITONE and PRIMODONE (also isolated reports of hepatotoxicity)
- Antifungals: avoidance of paracetamol advised by manufacturer of KETOCONAZOLE
- Cytotoxics: paracetamol possibly reduces metabolism of intravenous BUSULFAN (manufacturer of intravenous busulfan advises caution within 72 hours of paracetamol); caution with paracetamol advised by manufacturer of IMATINIB
- Lipid-regulating Drugs: absorption of paracetamol reduced by COLESTYRAMINE
- Metoclopamide: rate of absorption of paracetamol increased by METOCLOPRAMIDE

Paraldehyde
- Alcohol: increased sedative effect when paraldehyde given with ALCOHOL
- Disulfiram: risk of toxicity when paraldehyde given with DISULFiram

Parasymptomatistics
- Anti-arrhythmics: effects of neostigmine and pyridostigmine possibly antagonised by PROPafenONE
- Antibacterials: plasma concentration of galantamine increased by ERITHROMYCIN; effects of neostigmine and pyridostigmine antagonised by AMINOGLYCOSIDES; effects of neostigmine and pyridostigmine antagonised by CLINDAMYCIN; effects of neostigmine and pyridostigmine antagonised by POLYMIXINS
- Antidepressants: plasma concentration of galantamine increased by PAROXETINE
- Antifungals: plasma concentration of galantamine increased by KETOCONAZOLE
- Antivirals: possible increased risk of bradycardia when plicarpine given with CRIZOTINIB
- C-Peptide: effects of neostigmine and pyridostigmine antagonised by ANTIMUSCARINICS
- Beta-blockers: increased risk of arrhythmias when plicarpine given with BETA-BLOCKERS; effects of neostigmine and pyridostigmine antagonised by PROPARNOLOL
- Cytotoxics: possible increased risk of bradycardia when plicarpine given with CRIZOTINIB
- Cytotoxic: increased risk of agranulocytosis
- Muscle Relaxants: doneypezil possibly enhances effects of SUXAMETHONIUM; galantamine, neostigmine, pyridostigmine and rivastigmine enhance effects of SUXAMETHONIUM; neostigmine, pyridostigmine and rivastigmine antagonise effects of NON-DEPOLARISING MUSCLE RELAXANTS; donepezil possibly antagonises effects of NON-DEPOLARISING MUSCLE RELAXANTS

Pasireotide see Antipsychotics
Parietol see NSAIDs
Paricalcitol see Vitamins
Paroxetine see Antidepressants, SSRI
Paroxetine see Antidepressants, SSRI
Paroxetine see Antidepressants, SSRI
Pazopanib
- Antibacterials: plasma concentration of pazopanib possibly increased by CLARITHROMYCIN and TELITHROMYCIN (reduce dose of pazopanib); plasma concentration of pazopanib possibly reduced by RIFAMPICIN
- Antifungals: plasma concentration of pazopanib increased by KETOCONAZOLE (reduce dose of pazopanib); plasma concentration of pazopanib possibly increased by ITRACONAZOLE and VORICONAZOLE (reduce dose of pazopanib)
- Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
- Antivirals: plasma concentration of pazopanib possibly increased by ATAZANAVIR, INDINAVIR and RITONAVIR (reduce dose of pazopanib); avoidance of pazopanib advised by manufacturer of BOCEPREVIR; increased risk of ventricular arrhythmias when pazopanib given with SAQUINAVIR—avoid concomitant use
Pazopanib (continued)
  ▶ Cytoxics: plasma concentration of pazopanib increased by
    • LAPATINIB
    • Grapefruit Juice: manufacturer of pazopanib advises avoid concomitant use with Grapefruit Juice
  ▶ Lipid regulating Drugs: separating administration from pazopanib by 12 hours advised by manufacturer of LOMITAPIDE
  ▶ Ulcer-healing Drugs: absorption of pazopanib possibly reduced by histamine H₂-antagonists—manufacturer of pazopanib advises give at least 2 hours before or 10 hours after histamine H₂-antagonists; absorption of pazopanib possibly reduced by PROTON PUMP INHIBITORS manufacturer of pazopanib advises give at the same time as proton pump inhibitors

Pegfilgrastim
  ▶ Cytoxics: neutropenia possibly exacerbated when pegfilgrastim given with CAPECITABINE, FLUROORURACIL or TEGAFUR

Penicillamin (continued)
  ▶ Analgesics: renal excretion of penetremex possibly reduced by NSAIDS and ASPIRIN consult product literature
  • Antimalarials: antifolate effect of penetremex increased by PYRIMETHAMINE
  • Antipsychotics: avoid concomitant use of cytoxotics with CLOzapine (increased risk of agranulocytosis)

Penicillamine
  ▶ Analgesics: possible increased risk of nephrotoxicity when penicillamine given with NSAIDS
  • Antacids: absorption of penicillamine reduced by ANTACIDS
  • Antipsychotics: avoid concomitant use of penicillamine with CLOzapine (increased risk of agranulocytosis)
  • Cardiac Glycosides: penicillamine possibly reduces plasma concentration of DIGOXIN
  • Iron Salts: absorption of penicillamine reduced by oral IRON SALTS
  • Sodium Aurothiomalate: manufacturer of penicillamine advises avoid concomitant use with SODIUM AUROTHIOMALATE (increased risk of toxicity)
  • Zinc: penicillamine reduces absorption of ZINC, also absorption of penicillamine reduced by zinc

Penicillins
  ▶ Allopurinol: increased risk of rash when amoxicillin, ampicillin or co-amoxiclav given with ALLOPURINOL
  • Antibacterials: absorption of phenoxymethylpenicillin reduced by NEOMYCIN; effects of penicillins possibly antagonised by TETRACYCLINES
  • Anticoagulants: an interaction between broad-spectrum penicillins and COUMARINS and PHENINDION has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be altered
  • Antiepileptics: manufacturer of pivmecillinam advises avoid concomitant use with SODIUM VALPROATE and VALPROIC ACID
  • Cytoxotics: penicillins reduce excretion of METHOTREXATE (increased risk of toxicity)
  • Muscle Relaxants: piperacillin enhances effects of NON-DEPolarising MUsCLE Relaxants and SUXAMETHONIUM
  • Mycophenolate: co-amoxiclav possibly reduces plasma concentration of MYCOPHENOLATE
  • Sulfinpyrazone: excretion of penicillins reduced by SULFINPYRAZONE
  • Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Pentamidine Isetionate
  ▶ Antiarhythmics: increased risk of ventricular arrhythmias when pentamidine isetionate given with AMIODARONE—avoid concomitant use; possible increased risk of ventricular arrhythmias when pentamidine isetionate given with DISOPYRAMIDE
  • Antipyschotics: increased risk of ventricular arrhythmias when pentamidine isetionate given with QT-PROLONGING drugs
  • Antipsychotics: increased risk of ventricular arrhythmias when pentamidine isetionate given with VALPROIC ACID
  • Antibacterials: absorption of pentamidine isetionate reduced by zinc
  • Anticoagulant clinics is that INR can be altered
  • Antipsychotics: increased risk of ventricular arrhythmias when pentamidine isetionate given with AMISULPIDE or DROPERIDOL—avoid concomitant use; possible increased risk of ventricular arrhythmias when pentamidine isetionate given with PHENOTHIAZINES
  • Antivirals: increased risk of hypocalcaemia when pentamidine isetionate given with FOSCARINET; increased risk of ventricular arrhythmias when pentamidine isetionate given with TAQUIN—avoid concomitant use
  • Cytoxotics: possible increased risk of ventricular arrhythmias when pentamidine isetionate given with VANDETANIB—avoid concomitant use
  • Ibivradine: increased risk of ventricular arrhythmias when pentamidine isetionate given with IBIVRADINE

Pentazocine see Opioid Analgesics

Penstasin
  ▶ Cytoxotics: plasma concentration of penstasin increased by amphotericin B (increased risk of nephrotoxicity)
  ▶ Lipid regulating Drugs: separating administration from penstasin by 12 hours advised by manufacturer of LOMITAPIDE
  ▶ Ulcer-healing Drugs: absorption of penstasin possibly reduced by PIELDIA

Perampanel
  ▶Antidepressants: possible increased risk of bleeding when perampanel given with NSAIDS; increased risk of bleeding (risk of agranulocytosis)
  ▶ Anticonvulsants: increased risk of bleeding when perampanel given with KETOCONAZOLE
  ▶ Antipsychotics: possible increased risk of agranulocytosis when perampanel given with TETRACYCLINES
  ▶ Cytoxotics: possible increased risk of ventricular arrhythmias when perampanel given with FLUDARABINE (increased risk of toxicity)
  ▶ Cytotoxotics: plasma concentration of perampanel increased by ANTIMALARIALS and HUMAN IMMUNODEFICIENCY VIRUS PROTEASE INHIBITORS

Periostat
  ▶ Cytotoxotics: increased risk of ventricular arrhythmias when periostat given with AMLODIPINE or DROPERIDOL (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by TRICYCLICs

Perphenazine
  ▶ Antipsychotics: increased risk of ventricular arrhythmias when perphenazine given with ORAL TYPHOID VACCINE

Periostat (continued)
  ▶ Antiepileptics given with PERIOSTAT—possible increased risk of convulsions when periprostaglandins given with PERIOSTAT—possible increased risk of convulsions when antiepileptics given with ORLSTAT

Periostat (continued)
  ▶ Progestogens: periprostaglandins increases metabolism of PROGESTOGENS (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)
Phenindione (continued)
- Oestrogens: anticoagulant effect of phenindione antagonised by OESTROGENS
- Prasugrel: possible increased risk of bleeding when phenindione given with PRASUGREL
- Progestogens: anticoagulant effect of phenindione antagonised by PROGESTOGENS
- Testolactone: anticoagulant effect of phenindione enhanced by TESTOLACTONE
- Testosterone: anticoagulant effect of phenindione enhanced by TESTOSTERONE
- Thyroid Hormones: anticoagulant effect of phenindione enhanced by THYROID HORMONES
- Vitamins: anticoagulant effect of phenindione antagonised by VITAMIN K

Phenobarbital
- Alcohol: increased sedative effect when phenobarbital given with ALCOHOL
- Aminophylline: phenobarbital accelerates metabolism of AMINOPHYLLINE (reduced effect)
- Analgesics: phenobarbital reduces plasma concentration of METHADONE; phenobarbital possibly accelerates metabolism of PARACETAMOL (also isolated reports of hepatotoxicity)
- Antibacterials: phenobarbital reduces plasma concentration of ALBENDAZOLE and PRAZIQUANTEL—consider increasing albendazole and praziquantel dose when given for systemic infections
- Anti-arrhythmics: phenobarbital accelerates metabolism of DISOPYRAMIDE (reduced plasma concentration); phenobarbital possibly reduces plasma concentration of DRONERADONE; avoid concomitant use; phenobarbital possibly accelerates metabolism of PROPAFENONE
- Antifungals: phenobarbital reduces plasma concentration of METRONIDAZOLE (reduced effect); phenobarbital possibly reduces plasma concentration of RIFAMPICIN; phenobarbital accelerates metabolism of DOXYCYCLINE (reduced plasma concentration); phenobarbital possibly accelerates metabolism of CHLORAMPHENICOL (reduced plasma concentration); phenobarbital reduces plasma concentration of TELETHROMYCIN (avoid during and for 2 weeks after phenobarbital)
- Anticoagulants: phenobarbital possibly reduces plasma concentration of APIXABAN; phenobarbital accelerates metabolism of COUMARINS (reduced anticoagulant effect); phenobarbital possibly reduces plasma concentration of RIVAROXABAN; manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: phenobarbital reduces plasma concentration of REBOSETINE; phenobarbital reduces plasma concentration of PAROXETINE; phenobarbital accelerates metabolism of MIANSERIN (reduced plasma concentration); anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and TRICYCLIC-RELATED ANTIDEPRESSANTS (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRI and TRICYCLICS (convulsive threshold lowered); plasma concentration of phenobarbital possibly reduced by ST JOHN'S WORT; avoid concomitant use; phenobarbital possibly accelerates metabolism of TRICYCLICS (reduced plasma concentration)
- Antiepileptics: plasma concentration of phenobarbital possibly increased by CARBAZEPINE; phenobarbital possibly reduces plasma concentration of ETHOSUXIMIDE, RUFINAMIDE and TOPIRAMATE; plasma concentration of phenobarbital often increased by FOSPHENITOIN and PHENYTOIN, plasma concentration of phenobarbital often reduced but may be increased; phenobarbital reduces plasma concentration of LAMOTRIGINE, TIAGABINE and ZONISAMIDE; plasma concentration of phenobarbital increased by OXCARBAZEPINE, also plasma concentration of an active metabolite of oxcarbazepine reduced; plasma concentration of phenobarbital increased by SODIUM VALPROATE and VALPROIC ACID (also plasma concentration of sodium valproate and valproic acid reduced); plasma concentration of phenobarbital increased by STRIPENREL
- Antifungals: phenobarbital possibly reduces plasma concentration of ITRACONAZOLE and POSACONAZOLE;
Phenobarbital

- Cytotoxics (continued)
  
  of hypersensitivity reactions when phenobarbital given with
  PROCARBAZINE
  
  - Diuretics: phenobarbital reduces plasma concentration of
    Eplerenone—avoid concomitant use; increased risk of
    osteomalacia when phenobarbital given with CARBONIC
    ANHYDRASE INHIBITORS
  
  ▶ Folates: plasma concentration of phenobarbital possibly
    reduced by FOLATES
  
  - Fosaprepitant: phenobarbital possibly reduces plasma
    concentration of FOSAPREPITAN
  
  - Hormone Antagonists: phenobarbital possibly reduces plasma
    concentration of ABRIRATON—manufacturer of
    abiraterone advises avoid concomitant use; phenobarbital
    accelerates metabolism of TOREMPINE (reduced plasma
    concentration)
  
  - Ivacaftor: phenobarbital possibly reduces plasma
    concentration of IVACAFTOR—manufacturer of ivacaftor
    advises avoid concomitant use
  
  - Leukotriene Receptor Antagonists: phenobarbital reduces
    plasma concentration of MONELUKAST
  
  - Oestrogens: phenobarbital accelerates metabolism of
    OESTROGENS (reduced contraceptive effect with combined
    oral contraceptives, contraceptive patches, and vaginal
    rings—see Contraceptive Interactions in BNF)
  
  - Orlistat: possible increased risk of convulsions when
    antiepileptics given with ORLISTAT
  
  - Progestogens: phenobarbital accelerates metabolism of
    PROGESTOGENS (reduced contraceptive effect with combined
    oral contraceptives, progestogen-only oral contraceptives,
    contraceptive patches, vaginal rings, etonogestrel-releasing
    implant, and emergency hormonal contraception—see
    Contraceptive Interactions in BNF)
  
  - Roflumilast: phenobarbital possibly inhibits effects of
    ROFLUMILAST (manufacturer of roflumilast advises avoid
    concomitant use)
  
  - Sodium Oxynate: avoidance of phenobarbital advised by
    manufacturer of SODIUM OXYBATE
  
  - Sympathomimetics: plasma concentration of phenobarbital
    possibly increased by METHYLPHENIDATE
  
  - Tacrolimus: phenobarbital reduces plasma concentration of
    TACROLIMUS
  
  - Theophylline: phenobarbital accelerates metabolism of
    THEOPHYLLINE (reduced effect)
  
  - Thyroid Hormones: phenobarbital accelerates metabolism of
    THYROID HORMONES (may increase requirements for thyroid
    hormones in hypothyroidism)
  
  - Ticagrelor: phenobarbital possibly reduces plasma
    concentration of TICAGRELOR
  
  - Ulipristal: avoidance of phenobarbital advised by
    manufacturer of ULIPRISTAL (contraceptive effect of
    ulipristal possibly reduced)
  
  - Vitamins: phenobarbital possibly increases requirements for
    ALFACALCOLID, CALCITRIOL, COLECALCIFEROL, DIHYDROTACHYSTEROL, ERGOCALCIFEROL, PARICALCITOL or
    VITAMIN D

Phenothiazines see Antipsychotics

Phenoxymethylpenicillin see Penicillins

Phentolamine see Alpha-blockers

Phenytoin see Sympathomimetics

Phenylalanine

- Alcohol: plasma concentration of phenylalanine possibly reduced
  by chronic heavy consumption of ALCOHOL
  
  - Aminophylline: plasma concentration of both drugs reduced when
    phenytoin given with AMINOPHYLLINE
  
  - Analgesics: excretion of phenytoin possibly reduced by
    ACEMETACIN (increased risk of toxicity); phenytoin possibly
    accelerates metabolism of FENTANYL (reduced effect); phenytoin
    accelerates metabolism of METHADONE (reduced effect and risk of withdrawal effects); phenytoin possibly
    increases risk of PETHIDINE toxicity; effects of phenytoin
    enhanced by ASPIRIN; phenytoin possibly accelerates
Phenytoin
- Analgesics (continued)
  - metabolism of paracetamol (also isolated reports of hepatotoxicity)
- Antacids: absorption of phenytoin reduced by antacids
- Antifungals: phenytoin reduces plasma concentration of albendazole and praziquantel dose when given for systemic infections; plasma concentration of phenytoin possibly reduced when given with sodium valproate and valproic acid, also plasma concentration of sodium valproate and valproic acid reduced; plasma concentration of phenytoin increased by stiripentol; plasma concentration of phenytoin increased by topiramate (also plasma concentration of topiramate reduced); plasma concentration of phenytoin reduced by vigabatrin
- Antifungals: phenytoin reduces plasma concentration of ketoconazole and posaconazole; anticonvulsant effect of phenytoin enhanced by miconazole (plasma concentration of phenytoin increased by fluconazole (consider reducing dose of phenytoin); phenytoin reduces plasma concentration of itraconazole—avoid concomitant use; plasma concentration of phenytoin increased by voriconazole, also phenytoin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for phenytoin toxicity); phenytoin possibly reduces plasma concentration of caspofungin—consider increasing dose of caspofungin
- Antimalarial: avoidance of phenytoin advised by manufacturer of artesunate with piperaquine; anticonvulsant effect of antiepileptics antagonised by mefloquine; anticonvulsant effect of phenytoin antagonised by pyrimethamine, also increased antifolate effect
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered); phenytoin reduces plasma concentration of haloperidol; plasma concentration of phenytoin possibly increased or decreased by chlorpromazine; phenytoin possibly reduces plasma concentration of aripiprazole (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); phenytoin accelerates metabolism of clozapine and quetiapine (reduced plasma concentration); phenytoin possibly reduces plasma concentration of lub谏草—avoid concomitant use
- Antivirals: phenytoin possibly reduces plasma concentration of abacavir, darunavir, lopinavir and saquinavir; avoidance of phenytoin advised by manufacturer of darunavir and lopinavir
- Boceprevir and rilpivirine (plasma concentration of boceprevir and rilpivirine possibly reduced); phenytoin possibly reduces plasma concentration of daclatasvir and simeprevir; phenytoin possibly reduces plasma concentration of indinavir, also plasma concentration of phenytoin possibly increased; phenytoin possibly reduces plasma concentration of ritonavir, also plasma concentration of phenytoin possibly affected; plasma concentration of phenytoin increased or decreased by zidovudine
- Anxiolytics and Hypnotics: phenytoin often reduces plasma concentration of clonazepam; plasma concentration of phenytoin increased or decreased by diazepam; plasma concentration of phenytoin possibly increased or decreased by benzodiazepines
- Aprepitant: phenytoin possibly reduces plasma concentration of aprepitant
- Bupropion: phenytoin reduces plasma concentration of bupropion
- Caffeine citrate: phenytoin reduces plasma concentration of caffeine citrate
- Calcium-channel Blockers: phenytoin reduces effects of felodipine and verapamil; avoidance of phenytoin advised by manufacturer of isradipine; avoidance of phenytoin advised by manufacturer of nimodipine (plasma concentration of nimodipine possibly reduced); plasma concentration of phenytoin transiently increased by tolbutamide (possibility of toxicity)
- Antiepileptics: plasma concentration of both drugs often reduced when phenytoin given with carbamazepine, also plasma concentration of phenytoin may be increased; phenytoin reduces plasma concentration of eslicarbazine, also plasma concentration of phenytoin possibly increased; plasma concentration of phenytoin possibly increased by ethosuximide, also plasma concentration of ethosuximide possibly reduced; phenytoin reduces plasma concentration of lamotrigine, tiagabine and zonisamide; plasma concentration of phenytoin increased by oxcarbazine, also plasma concentration of an active metabolite of oxcarbazine reduced; phenytoin reduces plasma concentration of perampanel (see under Perampanel, p. 398); phenytoin often increases plasma concentration of phenobarbital and primidone, plasma concentration of phenytoin often reduced but may be increased; phenytoin possibly reduces plasma concentration of retigabine;
Phenytoin
- Calcium-channel Blockers (continued)
  - Concentration of phenytoin increased by • Dilatiazem but also effect of dilatiazem reduced
- Cannabis Extract: phenytoin possibly reduces plasma concentration of • Cannabis extract advises avoidance concomitant use
- Cardiac glycosides: phenytoin possibly reduces plasma concentration of • Digoxin
- Cholestyramine: phenytoin accelerates metabolism of • Ciclosporin (reduced plasma concentration)
- Cobimetaprost: manufacturer of cobimetaprost advises avoidance concomitant use
- Corticosteroids: phenytoin accelerates metabolism of • Corticosteroids (reduced effect)
- Cytotoxics: phenytoin possibly reduces plasma concentration of • Busulfan, eribulin and etoposide; metabolism of phenytoin possibly inhibited by • Capecitabine, Fluorouracil and tegafur (increased risk of toxicity); phenytoin increases antifolate effect of • Methotrexate; plasma concentration of phenytoin possibly decreases plasma concentration of • Axitinib (increase dose of axitinib—consult axitinib product literature); phenytoin possibly reduces plasma concentration of • Bortezomib, bosutinib, crizotinib, ibritinib,idelalisib and ponatinib—manufacturer of bortezomib, bosutinib, crizotinib, ibritinib, idelalisib and ponatinib advises avoidance concomitant use; phenytoin possibly reduces plasma concentration of • Cabozantinib—avoid concomitant use; avoidance of phenytoin advised by manufacturer of • Carbazatekel, dabrafenib, gefitinib, lapatinib and vemurafenib; avoidance of phenytoin advised by manufacturer of dacarbazine and • Vismodegib (plasma concentration of dasatinib and vinblastine possibly reduced); phenytoin reduces plasma concentration of • Matinib—avoid concomitant use; phenytoin reduces plasma concentration of • Irinotecan and its active metabolite; manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when phenytoin given with • Procarbazine
- Dexrazoxane: absorption of phenytoin possibly reduced by • Dexrazoxane
- Diazoxide: plasma concentration of phenytoin reduced by • Diazoxide, also effect of diazoxide may be reduced
- Disulfiram: metabolism of phenytoin inhibited by • Disulfiram (increased risk of toxicity)
- Diuretics: plasma concentration of phenytoin possibly increased by • Acetazolamide; phenytoin antagonises effects of • Furosemide; phenytoin reduces plasma concentration of • Eplerenone—avoid concomitant use; increased risk of osteomalacia when phenytoin given with • Carbonic Anhydrase Inhibitors
- Dopaminergics: phenytoin possibly reduces effects of • Co-beneldopa, Co-careldopa and levodopa
- Enteral Foods: absorption of phenytoin possibly reduced by • Enteral foods

Phenytoin (continued)
- Lithium: neurotoxicity may occur when phenytoin given with • Lithium without increased plasma concentration of lithium
- Macitentan: avoidance of phenytoin advised by manufacturer of • Macitentan
- Modafinil: plasma concentration of phenytoin possibly increased by • Modafinil
- Muscle Relaxants: long-term use of phenytoin reduces effects of • Non-depolarising muscle relaxants (but acute use of phenytoin might increase effects of non-depolarising muscle relaxants)
- Oestrogens: phenytoin accelerates metabolism of • Oestrogens (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
- Orlistat: possible increased risk of convulsions when antiepileptics given with • Orlistat
- Progestogens: phenytoin accelerates metabolism of • Progestogens (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)
- Roflumilast: phenytoin possibly inhibits effects of • Roflumilast (manufacturer of roflumilast advises avoid concomitant use)
- Sulfipyrazone: plasma concentration of phenytoin increased by • Sulfapyrazone
- Symptomatemics: plasma concentration of phenytoin increased by • Methylphenidate
- Tacrolimus: phenytoin reduces plasma concentration of • Tacrolimus, also plasma concentration of phenytoin possibly increased
- Theophylline: plasma concentration of both drugs reduced when phenytoin given with • Theophylline
- Thyroid Hormones (may increase requirements in hypothyroidism), also plasma concentration of phenytoin possibly increased
- Tibolone: phenytoin accelerates metabolism of • Tibolone
- Ticagrelor: phenytoin possibly reduces plasma concentration of • Ticagrelor
- Ulcer-healing Drugs: metabolism of phenytoin inhibited by • Cimetidine (increased plasma concentration); effects of phenytoin enhanced by • Esomeprazole; effects of phenytoin possibly enhanced by • Omeprazole; absorption of phenytoin reduced by • Sucralfate
- Ulipristal: avoidance of phenytoin advised by manufacturer of • Ulipristal (contraceptive effect of ulipristal possibly reduced)
- Vaccines: effects of phenytoin enhanced by • Influenza Vaccine
- Vitamins: phenytoin possibly increases requirements for • Alfacalcidol, calcitriol, colcaldiferol, dihydroxachysterol, ergocalciferol, paricalcitol or vitamin D

Phenolamine
- Antidepressants: manufacturer of phenolamine advises avoid for 2 weeks after stopping MAOIs

Phosphodiesterase Type 3 Inhibitors
- Anagrelide: avoidance of enoximone and nilorinone advised by manufacturer of • Anagrelide

Pilocarpine see Parasympathomimetics

Pimozide see Antipsychotics

Pindolol see Beta-blockers

Pipiklinazole see Anti-diabetics

Piperacillin see Piperacillin

Piperaquine see Arsenimol with Piperaquine

Pipotiazine see Antipsychotics

Pirfenidone
- Antibacterials: plasma concentration of pirfenidone increased by • Ciprofloxacain—see under Pirfenidone, p. 260
- Antidepressants: plasma concentration of pirfenidone increased by • Fluvoxamine—manufacturer of pirfenidone advises avoid concomitant use
- Grapefruit Juice: manufacturer of pirfenidone advises avoid concomitant use with • Grapefruit Juice

Phosphate Esters see Phosphate Esters
Piroxicam see NSAIDs
Pimavanserin see Pimavanserin
Pixantrone
- Antipsychotics: avoid concomitant use of cytoxicotins with CLOzapine (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when pixantrone given with live VACCINES—avoid concomitant use

Pizotifen
- Adrenergic Neurone Blockers: pizotifen antagonises hypotensive effect of ADRENERGIC NEURONE BLOCKERS

Platinum Compounds
- Aldesleukin: avoidance of cisplatin advised by manufacturer of ALDOSLEUKIN
- Antibacterials: increased risk of nephrotoxicity and possibly of ototoxicity when platinum compounds given with AMINOGLYCOSIDES or POLYMIXINS; increased risk of nephrotoxicity and ototoxicity when platinum compounds given with CAPREOMYCIN; increased risk of nephrotoxicity and possibly of ototoxicity when cisplatin given with VANCOMYCIN
- Antiepileptics: cisplatin possibly reduces plasma concentration of PRIMIDONE and PHENYTOIN
- Antipsychotics: avoid concomitant use of cytoxicotins with CLOzapine (increased risk of agranulocytosis)
- Cytotoxics: increased risk of nephrotoxicity and ototoxicity when platinum compounds given with PLATINUM COMPOUNDS
- Diuretics: increased risk of nephrotoxicity and ototoxicity when platinum compounds given with DIURETICS

Pneumococcal Vaccine see Vaccines
Polimyelitis Vaccine see Vaccines
Polymyxins
- Antibacterials: increased risk of nephrotoxicity when colistimethate sodium or polymyxins given with AMINOGLYCOSIDES; increased risk of nephrotoxicity when colistimethate sodium or polymyxins given with CAPREOMYCIN; increased risk of nephrotoxicity when polymyxins given with VANCOMYCIN; increased risk of nephrotoxicity and ototoxicity when colistimethate sodium given with VANCOMYCIN
- Antifungals: increased risk of nephrotoxicity when polymyxins given with AMPHOTERICIN
- Ciclosporin: increased risk of nephrotoxicity when polymyxins given with CICLOSPORIN
- Cytotoxics: increased risk of nephrotoxicity and possibly of ototoxicity when polymyxins given with PLATINUM COMPOUNDS
- Diuretics: increased risk of ototoxicity when polymyxins given with LOOP DIURETICS
- Muscle Relaxants: polymyxins enhance effects of NON-DEPOLARISING MUSCLE RELAXANTS and SUXAMETHONIUM
- Parasympathomimetics: polymyxins antagonise effects of NEOSTIGMINE and PYRIDOSTIGMINE
- Vaccines: antibacterials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Polysaccharide-Iron Complex see Iron salts
Polystyrene Sulfonate Resins
- Antacids: risk of intestinal obstruction when polystyrene sulfonate resins given with ALUMINUM HYDROXIDE; risk of metabolic alkalosis when polystyrene sulfonate resins given with ORAL MAGNESIUM SALTS
- Thyroid Hormones: polystyrene sulfonate resins reduce absorption of LEVOTHYROXINE

Pomalidomide
- Antidepressants: plasma concentration of pomalidomide increased by FLUVOXAMINE

Ponatinib (continued)
- Antidepressants: plasma concentration of ponatinib possibly reduced by ST JOHN’S WORT—manufacturer of ponatinib advises avoid concomitant use
- Antiepileptics: plasma concentration of ponatinib possibly reduced by CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN and PRIMIDONE—manufacturer of ponatinib advises avoid concomitant use
- Antifungals: plasma concentration of ponatinib increased by KETOCONAZOLE; plasma concentration of ponatinib possibly increased by ITRACONAZOLE and VORICONAZOLE—consider reducing initial dose of ponatinib (see under Ponatinib, p. 814)
- Antipsychotics: avoid concomitant use of cytoxicotins with CLOzapine (increased risk of agranulocytosis)
- Antivirals: plasma concentration of ponatinib possibly increased by INDINAVIR, RITONAVIR and SAQUINAVIR—consider reducing initial dose of ponatinib (see under Ponatinib, p. 814)

Ponatinib
- Antibacterials: plasma concentration of ponatinib possibly increased by CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN and PRIMIDONE—manufacturer of ponatinib advises avoid concomitant use
- Anticonvulsants: possible increased risk of bleeding when prasugrel given with NSAIDS
- Anticoagulants: possible increased risk of bleeding when prasugrel given with COUMARINS or PHENINDIONE
- Clopidogrel: possible increased risk of bleeding when prasugrel given with CLOPIDOGREL
- Pravastatin see Statins
Praziquantel
- Antibacterials: plasma concentration of praziquantel reduced by RIFAMPICIN—avoid concomitant use
- Antiepileptics: plasma concentration of praziquantel reduced by CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN and PRIMIDONE—consider increasing praziquantel dose when given for systemic infections
- Antifungals: plasma concentration of praziquantel increased by KETOCONAZOLE

Potassium Aminobenzoate see Antifungals, Triazole
Potassium Canrenoate see Diuretics
Potassium Citrate see Potassium Salts
Potassium Chloride see Potassium Salts
Potassium Salts
- Notes: Includes salt substitutes
  - ACE Inhibitors: increased risk of severe hyperkalaemia when potassium salts given with ACE INHIBITORS
  - Alikiren: increased risk of hyperkalaemia when potassium salts given with ALISKIREN
  - Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when potassium salts given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
  - Antibacterials: avoid concomitant use of potassium citrate with METHENAMINE
  - Ciclosporin: increased risk of hyperkalaemia when potassium salts given with CICLOSPORIN
  - Diuretics: increased risk of hyperkalaemia when potassium salts given with POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS
  - Tacrolimus: increased risk of hyperkalaemia when potassium salts given with TACROLIMUS
  - Ulcer-healing Drugs: avoidance of potassium citrate advised by manufacturer of SUCRALFATE

Pramipexole
- Antipsychotics: manufacturer of pramipexole advises avoid concomitant use of ANTIPSYCHOTICS (antagonism of effect)
- Memantine: effects of dopaminergics possibly enhanced by MEMANTINE
- Methyl dopa: antiparkinsonian effect of dopaminergics antagonised by METHYLDOPA
- Ulcer-healing Drugs: excretion of pramipexole reduced by CIMETIDINE (increased plasma concentration)

Prasugrel
- Analgesics: possible increased risk of bleeding when prasugrel given with NSAIDS
- Anticoagulants: possible increased risk of bleeding when prasugrel given with COUMARINS or PHENINDIONE
- Clopidogrel: possible increased risk of bleeding when prasugrel given with CLOPIDOGREL

Praziquantel see Antacids
Prazosin
- Antihypertensives: plasma concentration of prazosin increased by CLOzapine (increased risk of agranulocytosis)
- Antipsychotics: avoid concomitant use of cytoxicotins with CLOzapine (increased risk of agranulocytosis)
- Antivirals: plasma concentration of praziquantel increased by INDINAVIR, RITONAVIR and SAQUINAVIR—consider reducing initial dose of praziquantel (see under Praziquantel, p. 814)
- Antipsychotics: avoid concomitant use of cytoxicotins with CLOzapine (increased risk of agranulocytosis)
Praziquantel (continued)
- Antimalarials: plasma concentration of praziquantel reduced by chloroquine—consider increasing praziquantel dose when given for systemic infections
- Corticosteroids: plasma concentration of praziquantel possibly reduced by continuous use of dexamethasone
- Grapefruit juice: plasma concentration of praziquantel increased by grapefruit juice
- Ulcer-healing Drugs: plasma concentration of praziquantel increased by cimetidine

Prazosin
- See Alpha-blockers

Prednisolone
- See Corticosteroids

Prednisone
- See Corticosteroids

Pregabalin
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and tricyclic-related antidepressants (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRI and tricyclics (convulsive threshold lowered)
- Antimarial: anticonvulsant effect of antiepileptics antagonised by antipsychotics
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with orlistat

Prilocaine
- Anti-arythmics: increased myocardial depression when prilocaine given with anti-arythmics
- Antibacterials: increased risk of methaemoglobinemia when prilocaine given with sulphonamides

Primafine
- Antimalarials: avoidance of antimalarials advised by manufacturer of arteether with lumefantrine
- Histamine: avoidance of antimalarials advised by manufacturer of histamine
- Mepacrine: plasma concentration of primaquine increased by primaquine increased by methaemoglobinaemia when prilocaine given with sulphonamides

Primidone
- Antidepressants: possible increased risk of convulsions when antiepileptics given with antidepressants
- Ulcer-healing Drugs: possible increased risk of convulsions when antiepileptics given with ulcer-healing drugs
- Anticonvulsant effect of antiepileptics antagonised by antiepileptics given with antiepileptics

Primidone (continued)
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and tricyclic-related antidepressants (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRI and tricyclics (convulsive threshold lowered); plasma concentration of primidone possibly reduced by St John’s Wort—avoid concomitant use; primidone possibly accelerates metabolism of tricyclics (convulsive threshold lowered); plasma concentration of primidone possibly reduced by alcohol—avoid concomitant use
- Antiepileptics: plasma concentration of primidone possibly increased by carbamazepine; primidone possibly reduces plasma concentration of ethosuximide, rufinamide and topiramate; plasma concentration of primidone often increased by fosphenytoin and phenytoin, plasma concentration of fosphenytoin and phenytoin often reduced but may be increased; primidone reduces plasma concentration of lamotrigine, tiagabine and zonisamide; plasma concentration of primidone increased by omeprazole and valproic acid (also plasma concentration of sodium valproate and valproic acid reduced); plasma concentration of primidone increased by stavudine
- Antifungals: primidone possibly reduces plasma concentration of voriconazole and posaconazole; primidone possibly reduces plasma concentration of voriconazole—avoid concomitant use; primidone reduces absorption of griseofulvin (reduced effect)
- Antiarrhythmics: avoidance of primidone advised by manufacturer of artemether with piperaquine; anticonvulsant effect of antiepileptics antagonised by mefloquine
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered); primidone accelerates metabolism of haloperidol (reduced plasma concentration); plasma concentration of both drugs reduced when primidone given with haloperidol; plasma concentration of both drugs reduced when primidone given with chlorpromazine; primidone possibly reduces plasma concentration of aripiprazole (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); primidone possibly reduces plasma concentration of clozapine; primidone possibly reduces plasma concentration of lurasidone—avoid concomitant use
- Antiarrhythmics: plasma concentration of abacavir, dolutegravir, fosamprenavir, indinavir, lopinavir and saquinavir; avoidance of primidone advised by manufacturer of boceprevir and rilpivirine (plasma concentration of boceprevir and rilpivirine possibly reduced); primidone possibly reduces plasma concentration of daclatasvir and simprevir—manufacturer of daclatasvir and simprevir advises avoid concomitant use; avoidance of primidone advised by manufacturer of elvitegravir, etravirine, fosofomivir and telaprevir
- Anxiolytics and Hypnotics: increased sedative effect when primidone given with anxiolytics and hypnotics; primidone often reduces plasma concentration of clonazepam
- Antiretrovirals: primidone possibly reduces plasma concentration of abacavir, darunavir, fosamprenavir, indinavir, lopinavir and saquinavir; avoidance of primidone advised by manufacturer of boceprevir and rilpivirine (plasma concentration of boceprevir and rilpivirine possibly reduced); primidone possibly reduces plasma concentration of daclatasvir and simprevir—manufacturer of daclatasvir and simprevir advises avoid concomitant use; avoidance of primidone advised by manufacturer of elvitegravir, etravirine, fosofomivir and telaprevir
- Antivirals: plasma concentration of abacavir, dolutegravir, fosamprenavir, indinavir, lopinavir and saquinavir; avoidance of primidone advised by manufacturer of boceprevir and rilpivirine (plasma concentration of boceprevir and rilpivirine possibly reduced); primidone possibly reduces plasma concentration of daclatasvir and simprevir—manufacturer of daclatasvir and simprevir advises avoid concomitant use; avoidance of primidone advised by manufacturer of elvitegravir, etravirine, fosofomivir and telaprevir
- Anticoagulants: plasma concentration of praziquantel possibly reduced by warfarin and rivaroxaban—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: primidone possibly reduces plasma concentration of reboxetine; primidone reduces plasma concentration of paroxetine; primidone accelerates metabolism of mianserin (reduced plasma concentration);
Interactions

Appendix 1

Primidone (continued)

- Ciclosporin: primidone accelerates metabolism of

  Ciclosporin (reduced plasma concentration)

- Cobicistat: primidone possibly reduces plasma concentration of

  Cobicistat — manufacturer of cobicistat advises avoid concomitant use

- Corticosteroids: primidone accelerates metabolism of

  CORTICOSTEROIDS (reduced effect)

- Cytotoxics: primidone possibly decreases plasma concentration of

  Antitumor agents (increase dose of antitinb—consult antitinb product literature); primidone possibly reduces plasma concentration of

  Bortezomib, Bosutinib, Crizotinib and Ponatinib — manufacturer of bortezomib, bosutinib, crizotinib and ponatinib advises avoid concomitant use;

  primidone possibly reduces plasma concentration of

  Carbamazepine, Fosphenytoin, Phenobarbital, Phenytoin and Primidone

- Antipsychotics: avoid concomitant use of cytoxotics with

  clozapine (increased risk of agranulocytosis)

- Cardiac Glycosides: procainamide possibly reduces absorption of

  DigiToxin tablets

Procarbazine see Antipsychotics

Procyclidine see Antimuscarinics

Progesterone see Progestogens

Progestogens

- Antibacterials: plasma concentration of dienogest increased by

  Erythromycin; metabolism of progestogens accelerated by

  Rifampicin (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see

  Contraceptive Interactions in BNF)

- Anticoagulants: progestogens may enhance or reduce anticoagulant effect of Coumarins; progestogens antagonise anticoagulant effect of

  Phenindione

- Antidepressants: concomitant use of progestogens reduced by

  St John’s Wort (avoid concomitant use)

- Antidiabetics: progestogens antagonise hypoglycaemic effect of

  Antidiabetics

- Antileptics: metabolism of progestogens accelerated by

  Carbamazepine, Edicarbazepine, Fosphenytoin, Oxcarbazepine, Perampanel, Phenobarbital, Phenytoin, Primidone, Rufinamide and Topiramate (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see

  Contraceptive Interactions in BNF); desogestrel possibly increases plasma concentration of

  Lamotrigin

- Antifungals: progestogens possibly increase plasma concentration of Voriconazole; anecdotal reports of contraceptive failure and menstrual irregularities when progestogens given with

  Griseofulvin; occasional reports of breakthrough bleeding when progestogens used for contraception given with

  Terbinafine

- Antivirals: plasma concentration of norethisterone increased by

  Atazanavir; plasma concentration of drospirenone increased by

  Boceprevir (increased risk of toxicity); contraceptive effect of progestogens possibly reduced by

  Efavirenz; plasma concentration of norgestimate increased by

  Elvitegravir; metabolism of progestogens accelerated by

  Nevirapine (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see

  Contraceptive Interactions in BNF)

- Anxiolytics and Hypnotics: progestogens possibly increase plasma concentration of Chloridiazepoxide, Diazepam and

  Nitrazen; progestogens possibly reduce plasma concentration of Darzapem, Oxazepam and Remazepam

- Aprepitant: possible contraceptive failure of hormonal

  contraceptives containing progestogens when given with

  Aprepitant (alternative contraception recommended)

- Bosentan: possible contraceptive failure of hormonal

  contraceptives containing progestogens when given with

  Bosentan (alternative contraception recommended)

- Ciclosporin: progestogens possibly increase plasma concentration of

  Ciclosporin

- Cobicistat: plasma concentration of norgestimate increased by

  Cobicistat

- Vitamins: primidone possibly increases requirements for

  Alfalcacidol, Calcitriol, Colecalciferol, Dihydrotachysterol, Ergocalciferol, Paricalcitol or Vitamin D

Procarbazine: alcohol: disulfiram-like reaction when procarbazine given with

Alcohol

Antiepileptics: manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when given with

Carbamazepine, Fosphenytoin, Phenobarbital, Phenytoin and Primidone

Primidone

- Antipsychotics: avoid concomitant use of cytoxotics with

  Clozapine (increased risk of agranulocytosis)

- Cardiac Glycosides: procainamide possibly reduces absorption of

  DigiToxin tablets

Procarbazine see Antipsychotics

Procyclidine see Antimuscarinics

Progesterone see Progestogens
**Propafenone**

- **Antivirals (continued)**
  - propafenone advised by manufacturer of **CRIZOTINIB** and **VEMURAFINIB**; possible reduced contraceptive effect of hormonal contraceptives containing propafenone advised by manufacturer of **DABRAFENIB** (alternative contraception recommended)
  - Diuretics: risk of hyperkalaemia when drosperine given with **POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS** (possibility serum potassium during first cycle)
  - Dopaminergics: propafenone increase plasma concentration of **SELEGILINE**—manufacturer of selegiline advises avoid concomitant use
  - Fosaprepitant: possible contraceptive failure of hormonal contraceptives containing propafenone when given with **FOSAPREPITANT** (alternative contraception recommended)
  - Lipid-regulating Drugs: plasma concentration of norethisterone increased by **ATORVASTATIN**; plasma concentration of active metabolite of norgestimate increased by **ROSUVASTATIN**; plasma concentration of norgestrel increased by **ROSUVASTATIN**
  - Muscle Relaxants: propafenone possibly increased by **PANTOPRAZOLE**; plasma concentration of norgestrel increased by **ROSUVASTATIN**
  - Antihistamines: increased risk of ventricular arrhythmias when propafenone given with **CITALOPRAM**; increased risk of ventricular arrhythmias when propafenone administered together with **PROPRANOLOL** and **METOPROLOL**; increased risk of ventricular arrhythmias when propafenone given with **OMEPRAZOLE**
  - Anticoagulants: increased risk of ventricular arrhythmias when propafenone given with **OMEPRAZOLE**
  - Antimuscarinics: increased risk of ventricular arrhythmias when propafenone given with **OXYTOCIN**
  - Other: increased risk of ventricular arrhythmias when propafenone given with **PROPAINE**
  - Propantheline: increased risk of ventricular arrhythmias when propafenone given with **PROPAINE**
  - Ulcer-healing Drugs: plasma concentration of propafenone possibly increased by **CIMETIDINE**

**Propafenone**

- **Antivirals**: propafenone advised by manufacturer of **TELAPREVIR** (risk of ventricular arrhythmias)
  - **Beta-blockers**: increased myocardial depression when antithrombinics given with **BETA-BLOCKERS**; propafenone increases plasma concentration of **METOPROLOL** and **PROPRANOLOL**
  - **Cardiac Glycosides**: propafenone increases plasma concentration of **DIGOXIN** (halve dose of digoxin)
  - Ciclosporin: propafenone possibly increases plasma concentration of **CICLOSPORIN**
  - Parasympathomimetics: propafenone possibly antagonises effects of **NEOSTIGMINE** and **PYRIDOSTIGMINE**
  - Thalidomide: propafenone increases plasma concentration of **THEOPHYLLINE**
  - Ulcer-healing Drugs: plasma concentration of propafenone increased by **CIMETIDINE**

**Propafenone**

- **Antifungals**: propafenone advised by manufacturer of **FLUCONAZOLE** and **KALENZOLE**; plasma concentration of norgestrel increased by **ROSUVASTATIN**
  - **Benzodiazepines**: increased risk of ventricular arrhythmias when propafenone given with **BENZODIAZEPINES**
  - **Protein Kinase Inhibitors**: propafenone increases plasma concentration of **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - **Beta-blockers**: increased hypertensive effect when alprostadil given with **BETA-BLOCKERS**
  - **Calcium-channel Blockers**: increased hypertensive effect when alprostadil given with **CALCIMUS-CHANNEL BLOCKERS**
  - Clonidine: increased hypertensive effect when alprostadil given with **CLONIDINE**
  - Diazoxide: increased hypertensive effect when alprostadil given with **DIAZOXIDE**
  - Diuretics: increased hypertensive effect when alprostadil given with **DIURETICS**
  - Methyldopa: increased hypertensive effect when alprostadil given with **METHYLDOPA**
  - Moxonidine: increased hypertensive effect when alprostadil given with **MOXONIDINE**
  - Nitrates: increased hypertensive effect when alprostadil given with **NITRATES**
  - Oxytocin: prostaglandins potentiate uterotonie effect of **OXYTOCIN**
  - Vasodilator Antihypertensives: enhanced hypertensive effect when alprostadil given with **HYDRAZALIN** and **MINOXIDIL**

**Propanolol**

- Beta-blockers: increased anticoagulant effect of **HORMONAL CONTRACEPTIVES** containing progestogens when given with **PROPAINE**
  - Coagulants: increased risk of hyperkalaemia when propafenone given with **WARFARIN**
  - **Protein Kinase Inhibitors**: propafenone increases plasma concentration of **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - **Beta-blockers**: increased hypertensive effect when alprostadil given with **BETA-BLOCKERS**
  - **Calcium-channel Blockers**: increased hypertensive effect when alprostadil given with **CALCIMUS-CHANNEL BLOCKERS**
  - Clonidine: increased hypertensive effect when alprostadil given with **CLONIDINE**
  - Diazoxide: increased hypertensive effect when alprostadil given with **DIAZOXIDE**
  - Diuretics: increased hypertensive effect when alprostadil given with **DIURETICS**
  - Methyldopa: increased hypertensive effect when alprostadil given with **METHYLDOPA**
  - Moxonidine: increased hypertensive effect when alprostadil given with **MOXONIDINE**
  - Nitrates: increased hypertensive effect when alprostadil given with **NITRATES**
  - Oxytocin: prostaglandins potentiate uterotonie effect of **OXYTOCIN**
  - Vasodilator Antihypertensives: enhanced hypertensive effect when alprostadil given with **HYDRAZALIN** and **MINOXIDIL**

**Prostaglandins**

- **ACE Inhibitors**: enhanced hypertensive effect when alprostadil given with **ACE INHIBITORS**
  - Adrenergic Neurone Blockers: enhanced hypertensive effect when alprostadil given with **ADRENERGIC NEURONE BLOCKERS**
  - Alpha-blockers: enhanced hypertensive effect when alprostadil given with **ALPHA-BLOCKERS**
  - Angiotensin-II Receptor Antagonists: enhanced hypertensive effect when alprostadil given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - Beta-blockers: increased hypertensive effect when alprostadil given with **BETA-BLOCKERS**
  - Calcium-channel Blockers: enhanced hypertensive effect when alprostadil given with **CALCIMUS-CHANNEL BLOCKERS**
  - Clonidine: enhanced hypertensive effect when alprostadil given with **CLONIDINE**
  - Diazoxide: enhanced hypertensive effect when alprostadil given with **DIAZOXIDE**
  - Diuretics: enhanced hypertensive effect when alprostadil given with **DIURETICS**
  - Moxonidine: increased hypertensive effect when alprostadil given with **MOXONIDINE**
  - Nitrates: increased hypertensive effect when alprostadil given with **NITRATES**
  - Oxytocin: prostaglandins potentiate uterotonie effect of **OXYTOCIN**
  - Vasodilator Antihypertensives: enhanced hypertensive effect when alprostadil given with **HYDRAZALIN** and **MINOXIDIL**

**Protein Kinase Inhibitors**

- **Antacids**: absorption of lansoprazole possibly reduced by **ANTACIDS**
  - **Antibacterials**: plasma concentration of both drugs increased when omeprazole given with **CLARITHROMYCIN**
  - **Anticoagulants**: pantoprazole might enhance the anticoagulant effect of **COUMARINS**; esomeprazole and omeprazole possibly enhance anticoagulant effect of **COUMARINS**
  - **Antidepressants**: omeprazole increases plasma concentration of **ESCITALOPRAM**; plasma concentration of omeprazole possibly reduced by **ST JOHN’S WORT**
  - **Antiepileptics**: omeprazole possibly enhances effects of **FOSFENYTIOIN** and **PHENYTOIN**; esomeprazole enhances effects of **FOSFENYTIOIN** and **PHENYTOIN**
  - **Antifungals**: proton pump inhibitors reduce absorption of **ITRACONAZOLE** and **KETOCONAZOLE**; esomeprazole reduces plasma concentration of **POSACONAZOLE**—manufacturer of posaconazole suspension advises avoid concomitant use; lansoprazole, omeprazole, pantoprazole and rabeprazole
Pyrimethamine (continued)
- Cytotoxics: pyrimethamine increases antifolate effect of
  - METHOTREXATE and PEMETREXED
- Histamine: avoidance of antimalarials advised by manufacturer of HISTAMINE
- Vaccines: antimalarials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Quetiapine see Antipsychotics

Quinagolide
- Memantine: effects of dopaminergics possibly enhanced by
  - MEMANTINE
- Methyldopa: antiparkinsonian effect of dopaminergics antagonised by METHYLDOPA

Quinapril see ACE Inhibitors

Quinine
- Anti-arrhythmics: increased risk of ventricular arrhythmias when quinine given with
  - AMIODARONE—avoid concomitant use; quinine increases plasma concentration of
  - FLECAINIDE
- Antibacterials: increased risk of ventricular arrhythmias when quinine given with
  - NORFLOXACIN—avoid concomitant use; plasma concentration of quinine increased by
  - PRIMAPRON
- Anticoagulants: plasma concentration of both drugs increased when quinine given with
  - WARFARIN
- Antidepressants: possible increased risk of ventricular arrhythmias when quinine given with
  - CITOLOPRAM or
  - ESCITALOPRAM—avoid concomitant use
- Antimalarials: avoidance of antimalarials advised by manufacturer of
  - ARTEMETHER WITH LUMEFANTRINE; increased risk of ventricular arrhythmias when quinine given with
  - RITONAVIR (increased risk of toxicity); increased risk of ventricular arrhythmias when quinine given with
  - SAQUINAVIR—avoid concomitant use
- Antipsychotics: increased risk of ventricular arrhythmias when quinine given with
  - AMIODARONE—avoid concomitant use; possible increased risk of ventricular arrhythmias when quinine given with
  - DISOPYRAMIDE; increased risk of ventricular arrhythmias when quinine given with
  - MELOQUIN (but should not prevent the use of intravenous quinine in severe cases)
- Cardiac Glycosides: quinine increases plasma concentration of
  - DIGOXIN
- Dopaminergics: quinine possibly increases plasma concentration of
  - AMANTADINE
- Histamine: avoidance of antimalarials advised by manufacturer of
  - HISTAMINE
- Muscle Relaxants: quinine possibly increases effects of
  - SUXAMETHONIUM
- Ulcer-healing Drugs: metabolism of quinine inhibited by
  - CIMETIDINE (increased plasma concentration)
- Vaccines: antimalarials inactivate ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Quinolones
- Aminoglycins: possible increased risk of convulsions when quinolones given with
  - AMINOPHYLLINE; ciprofloxacin and norfloxacin increase plasma concentration of
  - AMINOPHYLLINE
- Analogics: possible increased risk of convulsions when quinolones given with
  - PROCAINAMIDE
- Anti-arrhythmics: increased risk of ventricular arrhythmias when levofloxacin or moxifloxacin given with
  - AMIODARONE—avoid concomitant use; possible increased risk of ventricular arrhythmias when moxifloxacin given with
  - DISOPYRAMIDE—avoid concomitant use
- Antipsychotics: increased risk of ventricular arrhythmias when moxifloxacin given with
  - PHENOTHIAZINE—avoid concomitant use; ciprofloxacin possibly increases plasma concentration of
Quinolones

- **Antibacterials** (continued)
  - Concentration of **Bedaquiline**—avoid concomitant use if ciprofloxacin given for more than 14 days; avoidance of moxifloxacin advised by manufacturer of **Bedaquiline**; increased risk of ventricular arrhythmias when moxifloxacin given with **Delamanid**; effects of nalidixic acid possibly antagonised by **Nitrofurantoin**; possible increased risk of ventricular arrhythmias when moxifloxacin given with **Telithromycin**.
  - **Anticoagulants**: nalidixic acid, norfloxacin and ofloxacin enhance anticoagulant effect of **Coumarins**; ciprofloxacin and levofloxacin possibly enhance anticoagulant effect of **Coumarins**; levofloxacin possibly enhances anticoagulant effect of **Phenindione**.
  - **Antihistamines**: increased risk of ventricular arrhythmias when moxifloxacin given with **Mizolastine**—avoid concomitant use.
  - **Antimalarials**: avoidance of quinolones advised by manufacturer of **Artemether with Lumefantrine**; avoidance of moxifloxacin advised by manufacturer of **ArtemiNom with Plerelarquine** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when moxifloxacin given with **Tricyclines**—avoid concomitant use.
  - **Antipsychotics**: increased risk of ventricular arrhythmias when moxifloxacin given with **Benperidol**—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when moxifloxacin given with **Droperidol**, **Haloperidol**, **Phenothiazines**, **Ripamide** or **Zuclopenthixol**—avoid concomitant use; ciprofloxacin increases plasma concentration of **Clozapine**; ciprofloxacin possibly increases plasma concentration of **Danazol**.
  - **Antivirals**: manufacturer of norfloxacin advises give **Didanosine** at least 2 hours before or after norfloxacin; increased risk of ventricular arrhythmias when moxifloxacin given with **Saquinavir**—avoid concomitant use.
  - **Beta-blockers**: increased risk of ventricular arrhythmias when moxifloxacin given with **Sotalol**—avoid concomitant use; calcium salts: absorption of ciprofloxacin reduced by **Calcium Salts**.
  - **Ciclosporin**: increased risk of nephrotoxicity when quinolones given with **Ciclosporin**.
  - **Clapodogrel**: ciprofloxacin possibly reduces antiplatelet effect of **Clapodogrel**.
  - **Cytotoxics**: nalidixic acid increases risk of **Mephalan** toxicity; ciprofloxacin possibly reduces excretion of **Methotrexate** (increased risk of toxicity); possible increased risk of ventricular arrhythmias when moxifloxacin given with **Bosutinib**; ciprofloxacin possibly increases the plasma concentration of **Bosutinib**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; ciprofloxacin increases plasma concentration of **Erlotinib**; ciprofloxacin possibly increases the plasma concentration of **Ibrutinib**—reduce dose of ibrutinib (see under ibrutinib, p. 809); possible increased risk of ventricular arrhythmias when moxifloxacin given with **Vanetanib**—avoid concomitant use; increased risk of ventricular arrhythmias when levofloxacin or moxifloxacin given with **Arsenic Trioxide**.

Quinolones (continued)

- **Dairy Products**: absorption of ciprofloxacin and norfloxacin reduced by **Dairy Products**.
- **Dopaminergics**: ciprofloxacin increases plasma concentration of **Rasagiline**; ciprofloxacin inhibits metabolism of **Ropinirole** (increased plasma concentration).
- **HIV**-receptor Agonists: quinolones possibly inhibit metabolism of **Zolmitriptan** (reduce dose of zolmitriptan).
- **Iron Salts**: absorption of ciprofloxacin, levofloxacin, moxifloxacin and ofloxacin reduced by oral **Iron Salts**; absorption of norfloxacin reduced by oral **Iron Salts** (give at least 2 hours apart).
- **Lanthanum**: absorption of quinolones possibly reduced by **Lanthanum** (give at least 2 hours before or 4 hours after lanthanum.
- **Muscle Relaxants**: ciprofloxacin increases plasma concentration of **Tizanidine**—risk of toxicity—avoid concomitant use; norfloxacin possibly increases plasma concentration of **Tizanidine**. (increased risk of toxicity).
- **Mycofenolate**: norfloxacin possibly reduces bioavailability of **Mycofenolate**.
- **Pentamidine Tetrionate**: increased risk of ventricular arrhythmias when moxifloxacin given with **Pentamidine Tetrionate**—avoid concomitant use.
- **Pifendine**: ciprofloxacin increases plasma concentration of **Pifendine**—see under Pifendine, p. 260.
- **Sevelamer**: bioavailability of ciprofloxacin reduced by **Sevelamer**.
- **Streptomycin Ranelate**: absorption of quinolones reduced by **Streptomycin Ranelate** (manufacturer of streptomycin ranelate advises avoid concomitant use).
- **Theophylline**: possible increased risk of convulsions when quinolones given with **Theophylline**; ciprofloxacin and norfloxacin increase plasma concentration of **Theophylline**.
- **Ulcer-healing Drugs**: absorption of ciproflxacin, levofloxacin, moxifloxacin and ofloxacin reduced by **Sucralfate**; absorption of norfloxacin reduced by **Sucralfate** (give at least 2 hours apart).
- **Vaccines**: antibacterials inactivate **Oral Typhoid Vaccine**—see under Typhoid Vaccine in BNF.
- **Zinc**: absorption of ciprofloxacin, levofloxacin, moxifloxacin and ofloxacin reduced by **Zinc**; absorption of norfloxacin reduced by **Zinc** (give at least 2 hours apart).

**Rabeprazole** see Proton Pump Inhibitors

**Rabies Vaccine** see Vaccines

**Ranitidine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists

**Ranitidine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists

**Ranolazine** see Histamine H2-antagonists
Ranolazine (continued)

- Antimicrobials: plasma concentration of ranolazine possibly increased by clarithromycin and telithromycin—manufacturer of ranolazine advises avoid concomitant use; plasma concentration of ranolazine reduced by rifampicin—manufacturer of ranolazine advises avoid concomitant use
- Antidepressants: plasma concentration of ranolazine increased by paroxetine
- Antifungals: plasma concentration of ranolazine increased by ketoconazole—avoid concomitant use; plasma concentration of ranolazine possibly increased by itraconazole, posaconazole and voriconazole—manufacturer of ranolazine advises avoid concomitant use
- Antivirals: plasma concentration of ranolazine possibly increased by atazanavir, darunavir, fosamprenavir, indinavir, lopinavir, ritonavir, saquinavir and tipranavir—manufacturer of ranolazine advises avoid concomitant use
- Beta-blockers: manufacturer of ranolazine advises avoid concomitant use with amsertiol
- Calcium-channel blockers: plasma concentration of ranolazine increased by diltiazem and verapamil (consider reducing dose of ranolazine)
- Cardiac Glycosides: ranolazine increases plasma concentration of digoxin
- Cisplatin: plasma concentration of both drugs may increase when ranolazine given with cisplatin
- Grapefruit juice: plasma concentration of ranolazine possibly increased by grapefruit juice—manufacturer of ranolazine advises avoid concomitant use
- Lipid-regulating Drugs: ranolazine increases plasma concentration of simvastatin (see under simvastatin, p. 181); separating administration from ranolazine by 12 hours advised by manufacturer of lovastatin
- Tacrolimus: ranolazine increases plasma concentration of tacrolimus

Rasagiline

- NOTE Rasagiline is a MAO-B inhibitor
- Analgesics: avoid concomitant use of rasagline with dextromethorphan; risk of CNS toxicity when rasagline given with pethidine (avoid pethidine for 2 weeks after rasagline)
- Antimicrobials: plasma concentration of rasagline increased by ciprofloxacin
- Antidepressants: after stopping rasagline do not start fluoxetine for 2 weeks, also rasagline should not be started until at least 5 weeks after stopping fluoxetine; after stopping rasagline do not start fluvoxamine for 2 weeks; risk of hypertensive crisis when rasagline given with MAOIs, avoid MAOIs for at least 2 weeks after stopping rasagline; increased risk of CNS toxicity when rasagline given with SSRIs or tricyclics
- Dopaminergics: plasma concentration of rasagline possibly reduced by entacapone
- Memantine: effects of dopaminergics possibly enhanced by memantine
- Methyldopa: antiparkinsonian effect of dopaminergics antagonised by methyldopa
- Sympathomimetics: avoid concomitant use of rasagline with sympathomimetics

Reboxetine (continued)

- Antimalarials: avoidance of antidepressants advised by manufacturer of artemether with lumefantrine and artemisinin with piperaquine
- Atomoxetine: possible increased risk of convulsions when antidepressants given with atomoxetine
- Diuretics: possible increased risk of hypokalaemia when reboxetine given with loop diuretics or thiazides and related diuretics
- Ergot Alkaloids: possible risk of hypertension when reboxetine given with ergotamine

Regorafenib

- Analgesics: manufacturer of regorafenib advises avoid concomitant use with mefenamic acid
- Antibacterials: plasma concentration of regorafenib reduced by rifampicin—manufacturer of regorafenib advises avoid concomitant use
- Anticoagulants: increased risk of bleeding when regorafenib given with warfarin
- Antifungals: plasma concentration of regorafenib increased by ketoconazole—avoid concomitant use
- Antipsychotics: avoid concomitant use of cytotoxics with clozapine (increased risk of agranulocytosis)
- Cytotoxics: regorafenib increases plasma concentration of irinotecan

Remifentanil see Opioid Analgesics

Regapride see Antidiabetics

Retigabine

- Alcohol: increased risk of blurred vision when retigabine given with alcohol
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and tricyclic-related antidepressants (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRIs and tricyclics (convulsive threshold lowered)
- Antiepileptics: plasma concentration of retigabine possibly reduced by carbamazepine, fosphenytoin and phenytoin
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by mefloquine
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with orlistat

Retinoids

- Alcohol: etretinate formed from acitretin in presence of alcohol (increased risk of teratogenicity in women of child-bearing potential)
- Antimicrobials: possible increased risk of benign intracranial hypertension when retinoids given with tetracyclines (avoid concomitant use)
- Anticoagulants: acitretin possibly reduces anticoagulant effect of coumarins
- Antiepileptics: isoretinoin possibly reduces plasma concentration of carbamazepine
- Antifungals: plasma concentration of altretinoin increased by ketoconazole; possible increased risk of tretinoin toxicity when given with fluconazole, ketoconazole and voriconazole
- Cytotoxics: acitretin increases plasma concentration of methotrexate (also increased risk of hepatotoxicity)—avoid concomitant use
- Lipid-regulating Drugs: altretinoin reduces plasma concentration of simvastatin
- Vitamins: risk of hypervitaminosis A when retinoids given with vitamin A—avoid concomitant use

Ribavirin

- Antivirals: effects of ribavirin possibly reduced by abacavir; increased risk of side-effects when ribavirin given with didanosine—avoid concomitant use; increased risk of toxicity when ribavirin given with stavudine; increased risk of anaemia when ribavirin given with zidovudine—avoid concomitant use
- Azathioprine: ribavirin possibly enhances myelosuppressive effects of azathioprine
Rifabutin see Rifamycins
Rifampicin see Rifamycins
Rifamycins
NOTE Interactions do not apply to rifaximin
▶ ACE Inhibitors: rifampicin reduces plasma concentration of
active metabolite of IMIDAPRIL (reduced antihypertensive
effect)
▶ Aliskiren: rifampicin reduces plasma concentration of
ALISKIREN
▶

Ambrisentan: rifampicin possibly increases plasma
concentration of AMBRISENTAN
Aminophylline: rifampicin accelerates metabolism of
AMINOPHYLLINE (reduced plasma concentration)
▶ Analgesics: rifampicin reduces plasma concentration of
CELECOXIB , DICLOFENAC and ETORICOXIB ; rifampicin accelerates
metabolism of ALFENTANIL , CODEINE , FENTANYL , METHADONE
and MORPHINE (reduced effect); rifampicin possibly
accelerates metabolism of OXYCODONE
▶ Angiotensin-II Receptor Antagonists: rifampicin reduces plasma
concentration of LOSARTAN and its active metabolite
▶ Antacids: absorption of rifampicin reduced by ANTACIDS
l Anthelmintics: rifampicin reduces plasma concentration of
l PRAZIQUANTEL —avoid concomitant use
l Anti-arrhythmics: rifamycins accelerate metabolism of
l DISOPYRAMIDE (reduced plasma concentration); rifampicin
reduces plasma concentration of l DRONEDARONE —avoid
concomitant use; rifampicin accelerates metabolism of
l PROPAFENONE (reduced effect)
l Antibacterials: increased risk of side-effects including
neutropenia when rifabutin given with l AZITHROMYCIN ;
rifamycins reduce plasma concentration of CLARITHROMYCIN
and DAPSONE ; plasma concentration of rifabutin increased by
l CLARITHROMYCIN (increased risk of toxicity—reduce rifabutin
dose); plasma concentration of rifabutin possibly increased
by l ERYTHROMYCIN (increased risk of toxicity—reduce
rifabutin dose); rifampicin possibly reduces plasma
concentration of TINIDAZOLE and TRIMETHOPRIM ; rifampicin
reduces plasma concentration of DOXYCYCLINE —consider
increasing dose of doxycycline; rifabutin possibly reduces
plasma concentration of BEDAQUILINE —manufacturer of
bedaquiline advises avoid concomitant use; rifampicin
reduces plasma concentration of l BEDAQUILINE —
manufacturer of bedaquiline advises avoid concomitant use;
rifampicin accelerates metabolism of CHLORAMPHENICOL
(reduced plasma concentration); rifampicin reduces plasma
concentration of l DELAMANID ; increased risk of
hepatotoxicity when rifampicin given with l ISONIAZID ;
rifampicin reduces plasma concentration of LINEZOLID
(possible therapeutic failure of linezolid); rifampicin reduces
plasma concentration of l TELITHROMYCIN (avoid during and
for 2 weeks after rifampicin)
l Anticoagulants: rifampicin possibly reduces plasma
concentration of l APIXABAN —manufacturer of apixaban
advises avoid concomitant use when given for treatment of
deep-vein thrombosis or pulmonary embolism; rifamycins
accelerate metabolism of l COUMARINS (reduced
anticoagulant effect); rifampicin reduces plasma
concentration of l DABIGATRAN —manufacturer of dabigatran
advises avoid concomitant use; rifampicin reduces plasma
concentration of l RIVAROXABAN —manufacturer of
rivaroxaban advises monitor for signs of thrombosis
l Antidiabetics: rifamycins accelerate metabolism of
l TOLBUTAMIDE (reduced effect); rifampicin reduces plasma
concentration of l CANAGLIFLOZIN and NATEGLINIDE ; rifampicin
possibly reduces effects of LINAGLIPTIN ; rifampicin possibly
antagonises hypoglycaemic effect of REPAGLINIDE ; rifamycins
possibly accelerate metabolism of l SULFONYLUREAS (reduced
effect)
l Antiepileptics: rifabutin reduces plasma concentration of
l CARBAMAZEPINE ; rifamycins accelerate metabolism of
l FOSPHENYTOIN and l PHENYTOIN (reduced plasma
concentration); rifampicin reduces plasma concentration of
l LAMOTRIGINE ; plasma concentration of rifampicin possibly
reduced by PHENOBARBITAL and PRIMIDONE
▶

Rifamycins (continued)
l Antifungals: rifampicin accelerates metabolism of
l KETOCONAZOLE (reduced plasma concentration), also plasma
concentration of rifampicin may be reduced by ketoconazole;
plasma concentration of rifabutin increased by
l FLUCONAZOLE (increased risk of uveitis—reduce rifabutin
dose); rifampicin accelerates metabolism of l FLUCONAZOLE
(reduced plasma concentration); rifabutin and rifampicin
reduce plasma concentration of l ITRACONAZOLE —
manufacturer of itraconazole advises avoid concomitant use;
plasma concentration of rifabutin increased by
l POSACONAZOLE (also plasma concentration of posaconazole
reduced); rifampicin reduces plasma concentration of
l POSACONAZOLE and l TERBINAFINE ; plasma concentration of
rifabutin increased by l VORICONAZOLE , also rifabutin reduces
plasma concentration of voriconazole (increase dose of
voriconazole and also monitor for rifabutin toxicity);
rifampicin reduces plasma concentration of l VORICONAZOLE —
avoid concomitant use; rifampicin initially increases and
then reduces plasma concentration of CASPOFUNGIN (consider
increasing dose of caspofungin); plasma concentration of
rifabutin possibly increased by l TRIAZOLES (increased risk of
uveitis—reduce rifabutin dose)
▶ Antihistamines: rifampicin possibly reduces effects of
FEXOFENADINE
l

Antimalarials: avoidance of rifampicin advised by
manufacturer of ARTENIMOL WITH PIPERAQUINE ; rifampicin
reduces plasma concentration of l MEFLOQUINE —avoid
concomitant use; rifampicin reduces plasma concentration of
l

▶
l

l

QUININE

Antimuscarinics: rifampicin reduces plasma concentration of
active metabolite of FESOTERODINE
Antipsychotics: rifampicin accelerates metabolism of
l HALOPERIDOL (reduced plasma concentration); rifabutin and
rifampicin possibly reduce plasma concentration of
l ARIPIPRAZOLE (avoid concomitant use or consider increasing
the dose of aripiprazole—consult aripiprazole product
literature); rifampicin possibly reduces plasma concentration
of CLOZAPINE ; rifampicin reduces plasma concentration of
l LURASIDONE —avoid concomitant use
Antivirals: rifampicin possibly reduces plasma concentration
of ABACAVIR ; plasma concentration of rifabutin increased by
l ATAZANAVIR , l DARUNAVIR , l FOSAMPRENAVIR and
l TIPRANAVIR (reduce dose of rifabutin); rifampicin reduces
plasma concentration of l ATAZANAVIR , l DACLATASVIR ,
l LOPINAVIR , l NEVIRAPINE and l RILPIVIRINE —avoid
concomitant use; avoidance of rifampicin advised by
manufacturer of l BOCEPREVIR (plasma concentration of
boceprevir possibly reduced); rifabutin possibly reduces
plasma concentration of l DACLATASVIR and SIMEPREVIR —
manufacturer of daclatasvir and simeprevir advises avoid
concomitant use; rifampicin significantly reduces plasma
concentration of l DARUNAVIR , l FOSAMPRENAVIR and
l TELAPREVIR —avoid concomitant use; rifampicin reduces the
plasma concentration of l DOLUTEGRAVIR (see under
Dolutegravir, p. 557); rifampicin reduces plasma
concentration of EFAVIRENZ —increase dose of efavirenz;
plasma concentration of rifabutin reduced by EFAVIRENZ —
increase dose of rifabutin; avoidance of rifampicin advised by
manufacturer of l ELVITEGRAVIR , ETRAVIRINE , SOFOSBUVIR and
ZIDOVUDINE ; rifabutin reduces plasma concentration of
l ELVITEGRAVIR also plasma concentration of active
metabolite of rifabutin increased—reduce dose of rifabutin;
plasma concentration of both drugs reduced when rifabutin
given with l ETRAVIRINE ; rifampicin accelerates metabolism of
l INDINAVIR (reduced plasma concentration—avoid
concomitant use); plasma concentration of rifabutin
increased by l INDINAVIR , also plasma concentration of
indinavir decreased (reduce dose of rifabutin and increase
dose of indinavir); rifampicin reduces plasma concentration
of l MARAVIROC and l RALTEGRAVIR —consider increasing dose
of maraviroc and raltegravir; plasma concentration of
rifabutin possibly increased by NEVIRAPINE ; rifabutin
decreases plasma concentration of l RILPIVIRINE (increase
dose of rilpivirine—consult rilpivirine product literature);

Interactions | Appendix 1

Appendix 1 Interactions 1235

BNF 70


Interactions

Interactions

Rifamycins

- Antivirals (continued)
  - Plasma concentration of rifabutin increased by rifomycin reduces plasma concentration of ritonavir, ritonavir significantly reduces plasma concentration of saquinavir, also risk of hepatotoxicity—avoid concomitant use; plasma concentration of rifabutin reduced by saquinavir, ritonavir reduces plasma concentration of simprevir; manufacturer of simprevir advises avoid concomitant use; avoidance of rifabutin advised by manufacturer of ketoconazole and telaprevir, rifabutin possibly reduces plasma concentration of rifampicin—avoid concomitant use.

- Anxiolytics and Hypnotics: rifampicin accelerates metabolism of diazepam, zaleplon (reduced plasma concentration); rifampicin possibly accelerates metabolism of benzodiazepines (reduced plasma concentration); rifampicin possibly accelerates metabolism of buspirone; rifampicin accelerates metabolism of zolpidem (reduced plasma concentration and reduced effect); rifampicin significantly reduces plasma concentration of zopiclone.

- Arterial and Venous Hypertension: rifampicin accelerates metabolism of avanafil.

- Abrepro: rifampicin reduces plasma concentration of aprepitant.

- Atovaquone: avoidance of concomitant rifabutin advised by manufacturer of atovaquone (plasma concentration of both drugs reduced); rifampicin reduces plasma concentration of atovaquone (and concentration of rifampicin increased).

- Avanafil: rifampicin possibly reduces plasma concentration of avanafil—manufacturer of avanafil advises avoid concomitant use.

- Beta-blockers: rifampicin accelerates metabolism of bisoprolol and metoprolol; rifampicin possibly reduces plasma concentration of carvedilol, celiprolol, and metoprolol; rifampicin possibly reduces plasma concentration of oral timolol.

- Bosutinib: rifampicin reduces plasma concentration of bosutinib—avoid concomitant use.

- Calcium-channel blockers: rifampicin possibly reduces plasma concentration of felodipine; rifampicin possibly accelerates metabolism of isradipine and nicardipine (possible significantly reduced plasma concentration); rifampicin accelerates metabolism of diltiazem, nifedipine, nimodipine, and verapamil (plasma concentration significantly reduced).

- Cannabis extract: rifampicin reduces plasma concentration of cannabidiol extract—manufacturer of cannabis extract advises avoid concomitant use.

- Cardiac glycosides: rifampicin possibly reduces plasma concentration of digoxin.

- Ciclosporin: rifampicin accelerates metabolism of ciclosporin (reduced plasma concentration).

- Cobicistat: rifabutin reduces plasma concentration of cobicistat (adjust dose—consult product literature); rifampicin possibly reduces plasma concentration of cobicistat; cobicistat—manufacturer of cobicistat advises avoid concomitant use.

- Corticosteroids: rifamycins accelerate metabolism of corticosteroids (reduced effect).

- Cytotoxics: rifamycin possibly reduces effects of brentuximab vedotin; rifampicin reduces plasma concentration of afatinib, puxolitinib, sorafenib and trabectedin; rifabutin possibly decreases plasma concentration of axitinib (increase dose of axitinib—consult axitinib product literature); rifampicin decreases plasma concentration of axitinib (increase dose of axitinib—consult axitinib product literature); rifabutin possibly reduces plasma concentration of bosutinib, crizotinib, and ponatinib—manufacturer of bosutinib, crizotinib and ponatinib advises avoid concomitant use; rifampicin reduces plasma concentration of bortezomib, bosutinib, cabazitaxel, crizotinib, ponatinib, regorafenib and vanetanib—manufacturer of bortezomib, bosutinib, cabazitaxel, crizotinib, ponatinib, regorafenib and vanetanib—avoid concomitant use.

- Rifamycins (continued)
  - Cytotoxics: regorafenib and vanetanib advises avoid concomitant use; rifampicin reduces plasma concentration of cabozantinib, gefitinib, irubtinib, idelalisib, matuzumab, nilotinib—avoid concomitant use; avoidance of rifampicin advised by manufacturer of dabrafenib, lapatinib and vemurafenib; rifampicin accelerates metabolism of dastatinib (reduced plasma concentration—avoid concomitant use); rifampicin reduces plasma concentration of elotinib and sunitinib (reduced plasma concentration); rifampicin reduces plasma concentration of everolimus (avoid concomitant use or consider increasing the dose of everolimus—consult everolimus product literature); avoidance of rifabutin advised by manufacturer of cabazitaxel, lapatinib, and vemurafenib; rifampicin possibly reduces plasma concentration of eribulin and pazopanib; rifampicin reduces plasma concentration of active metabolite of temsirolimus—avoid concomitant use; rifampicin possibly reduces plasma concentration of vinflunine—manufacturer of vinflunine advises avoid concomitant use; avoidance of rifampicin advised by manufacturer of vismodegib (plasma concentration of vismodegib possibly reduced).

- Deferasirox: rifampicin reduces plasma concentration of deferasirox.

- Diuretics: rifampicin reduces plasma concentration of eplerenone—avoid concomitant use.

- Fosaprepitant: rifampicin reduces plasma concentration of fosaprepitant.

- Hormone Antagonists: rifabutin possibly reduces plasma concentration of abiraterone—manufacturer of abiraterone advises avoid concomitant use; rifampicin reduces plasma concentration of abiraterone—manufacturer of abiraterone advises avoid concomitant use; avoidance of rifampicin advised by manufacturer of enzalutamide; rifampicin possibly reduces plasma concentration of exemestane; rifampicin accelerates metabolism of tamoxifen (reduced plasma concentration).

- SHT receptor Antagonists: rifampicin accelerates metabolism of ondansetron (reduced effect).

- Ivafor: rifabutin possibly reduces plasma concentration of iebrafor—manufacturer of ivafor advises avoid concomitant use; rifampicin reduces plasma concentration of ivafor—manufacturer of ivafor advises avoid concomitant use.

- Leflunomide: rifampicin possibly increases plasma concentration of active metabolite of leflunomide.

- Lipid-regulating Drugs: rifampicin possibly reduces plasma concentration of atorvastatin—manufacturer of atorvastatin; rifampicin possibly accelerates metabolism of fluvastatin (reduced effect).

- Macitentan: rifampicin reduces plasma concentration of macitentan—avoid concomitant use.

- Muscle Relaxants: rifampicin possibly reduces plasma concentration of tizanidine.

- Mycophenolate: rifampicin reduces plasma concentration of active metabolite of mycophenolate.

- Nintedanib: rifampicin reduces plasma concentration of nintedanib—avoid concomitant use.

- Oestrogens: rifampicin accelerates metabolism of oestrogens (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF).

- Progestogens: rifamycins accelerate metabolism of progestogens (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF).

- Ranolazine: rifampicin reduces plasma concentration of ranolazine—manufacturer of ranolazine advises avoid concomitant use.

- Roflumilast: rifampicin inhibits effects of roflumilast (manufacturer of roflumilast advises avoid concomitant use).

- Sirolimus: rifabutin and rifampicin reduce plasma concentration of sirolimus—avoid concomitant use.
Rilpivirine

- Antacids: rifampicin reduces plasma concentration of TOLVAPTAN.
- Antidiabetics: rifampicin reduces plasma concentration of TADALAFIL.
- Antifungals: rifampicin reduces plasma concentration of TACROLIMUS.
- Antihistaminics: rifampicin reduces plasma concentration of TACROLIMUS.
- Antihypertensives: rifampicin reduces plasma concentration of TADALAFIL.
- Anticoagulants: rifampicin reduces plasma concentration of TELITROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiparkinsonians: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiepileptics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiemetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihypertensives: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihistaminics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Anticoagulants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidiabetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiparkinsonians: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiemetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihypertensives: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihistaminics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Anticoagulants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidiabetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiparkinsonians: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiemetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihypertensives: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihistaminics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Anticoagulants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidiabetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiparkinsonians: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiemetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihypertensives: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihistaminics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Anticoagulants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidiabetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiparkinsonians: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiemetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihypertensives: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antihistaminics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Anticoagulants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidiabetics: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antidepressants: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiparkinsonians: rifampicin reduces plasma concentration of TELTROMYCIN.
- Antiemetics: rifampicin reduces plasma concentration of TELTROMYCIN.
Ritonavir (continued)
- Cilostazol: ritonavir possibly increases plasma concentration of cilostazol (see under Cilostazol, p. 266).
- Colchicine: ritonavir possibly increases risk of colchicine toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment).
- Corticosteroids: ritonavir possibly increases plasma concentration of corticosteroids—increased risk of adrenal suppression; ritonavir possibly increases plasma concentration of budesonide (including inhaled, intranasal, and rectal budesonide)—increased risk of adrenal suppression; ritonavir increases plasma concentration of inhaled and intranasal fluticasone—increased risk of adrenal suppression.
- Cytostatics: ritonavir increases the plasma concentration of afatinib—manufacturer of afatinib advises separating administration of ritonavir by 6 to 12 hours; ritonavir possibly increases plasma concentration of axitinib (reduce dose of axitinib—consult axitinib product literature); ritonavir possibly increases the plasma concentration of bosutinib and cabazitaxel—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; ritonavir possibly increases plasma concentration of cabozantinib and vinblastine; ritonavir possibly increases plasma concentration of crizotinib, everolimus, nilotinib and vinflunine—manufacturer of crizotinib, everolimus, nilotinib and vinflunine advises avoid concomitant use; avoidance of ritonavir advised by manufacturer of dasatinib (plasma concentration of dasatinib possibly increased); ritonavir possibly increases the plasma concentration of ibritinib—reduce dose of ibritinib (see under ibritinib, p. 809); avoidance of ritonavir advised by manufacturer of lapatinib; ritonavir possibly increases plasma concentration of pazopanib (reduce dose of pazopanib); ritonavir possibly increases plasma concentration of ponatinib—consider reducing initial dose of ponatinib (see under Ponatinib, p. 814); manufacturer of ruxolitinib advises dose reduction when ritonavir given with ruxolitinib—consult ruxolitinib product literature; ritonavir possibly increases plasma concentration of docetaxel—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; ritonavir increases plasma concentration of paclitaxel.
- Dapoxetine: avoidance of ritonavir advised by manufacturer of dapoxetine (increased risk of toxicity).
- Diuretics: ritonavir increases plasma concentration of eplerenone—avoid concomitant use.
- Donperidon: possible increased risk of ventricular arrhythmias when ritonavir given with donperidon—avoid concomitant use.
- Ergot Alkaloids: increased risk of ergotism when ritonavir given with ergometrine or ergotamine—avoid concomitant use.
- Fosaprepitant: ritonavir possibly increases plasma concentration of fosaprepitant.
- 5HT1-receptor Agonists: ritonavir increases plasma concentration of eletriptan (risk of toxicity)—avoid concomitant use.
- Ib Bradine: ritonavir possibly increases plasma concentration of ibradine—avoid concomitant use.
- Lipid-regulating Drugs: possible increased risk of myopathy when ritonavir given with atorvastatin; possible increased risk of myopathy when ritonavir given with rosuvastatin—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when ritonavir given with simvastatin (avoid concomitant use); avoidance of ritonavir advised by manufacturer of lomitapide (plasma concentration of lomitapide possibly increased).
- Mirabegron: when given with ritonavir avoid or reduce dose of mirabegron in hepatic or renal impairment—see Mirabegron, p. 671.
- Oestrogens: ritonavir accelerates metabolism of oestrogens (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF).
Ritonavir (continued)

- Orlistat: absorption of ritonavir possibly reduced by \*ORLISTAT
- Ranolazine: ritonavir possibly increases plasma concentration of \*RANOLAZINE—manufacturer of ranolazine advises avoid concomitant use
- Ticagrelor: avoidance of ritonavir advised by manufacturer of \*TICAGRELOR
- Sildenafil: ritonavir significantly increases plasma concentration of \*SILDENAFIL—avoid concomitant use
- Symptomimetics: ritonavir possibly increases plasma concentration of \*DEXAMETHASONE
- Sympathomimetics, Beta₂: manufacturer of ritonavir advises avoid concomitant use with \*SALMETEROL
- Tacrolimus: ritonavir possibly increases plasma concentration of \*TACROLISUM
- Tadalafil: ritonavir increases plasma concentration of \*TADALAFIL—manufacturer of tadalafil advises avoid concomitant use
- Theophylline: ritonavir accelerates metabolism of \*THEOPHYLLINE
- Ticagrelor: ritonavir possibly increases plasma concentration of \*TICAGRELOR—manufacturer of ticagrelor advises avoid concomitant use
- Ulipristal: avoidance of ritonavir advised by manufacturer of \*ULIPRISTAL (contraceptive effect of ulipristal possibly reduced)
- Vardenafil: ritonavir increases plasma concentration of \*VARDAFENIL—avoid concomitant use

Rituximab

- Antipsychotics: avoid concomitant use of cytoxics with \*FLUOXAMINE (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live \*VACCINES—avoid concomitant use

Rivaroxaban

- Analgesics: increased risk of haemorrhage when anticoagulants given with \*INTRAVENTOUS \*DICLOFENAC (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with \*KETOROLAC (avoid concomitant use, including low-dose heparins)
- Anti-arrhythmics: manufacturer of rivaroxaban advises avoid concomitant use with \*DRONEDARONE
- Antibacterials: plasma concentration of rivaroxaban reduced by \*RIFAMPICIN—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Anticoagulants: increased risk of haemorrhage when rivaroxaban given with other \*ANTICOAGULANTS (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency); increased risk of haemorrhage when other anticoagulants given with \*APIXABAN and \*DABIGATRAN (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antidepressants: plasma concentration of rivaroxaban possibly reduced by \*ST JOHN’S WORT—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antiepileptics: plasma concentration of rivaroxaban possibly reduced by \*CARBAMAZEPINE, \*PHENYTOIN, \*PHENOBARBITAL, \*PHENOTIN and \*PRIMIDONE—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antifungals: plasma concentration of rivaroxaban increased by \*KETOCONAZOLE—avoid concomitant use; manufacturer of rivaroxaban advises avoid concomitant use with \*ITRACONAZOLE, \*POSACONAZOLE and \*VICORICAZOLE
- Antivirals: manufacturer of rivaroxaban advises avoid concomitant use with \*ATAZANAVIR, \*DARUNAVIR, \*FOSAMPRENAVIR, \*INDINAVIR, \*SAQUINAVIR and \*TIRAPANAVIR; manufacturers advise avoid concomitant use of rivaroxaban with \*LOPINAVIR; plasma concentration of rivaroxaban increased by \*RITONAVIR—avoid concomitant use
- Cobicistat: anticoagulant effect of rivaroxaban possibly enhanced by \*COBICISTAT—avoid concomitant use

Rivastigmine see Parasympathomimetics

Rizatriptan see 5HT₁-receptor Agonists (under HT)
Rocuronium see Muscle Relaxants

Roflumilast

- Aminophylline: manufacturer of roflumilast advises avoid concomitant use with \*AMINOPHYLLINE
- Antibacterials: effects of roflumilast inhibited by \*RIFAMPICIN (manufacturer of roflumilast advises avoid concomitant use)
- Antidepressants: metabolism of roflumilast inhibited by \*ANTIPSYCHOTICS
- Antiepileptics: effects of roflumilast possibly inhibited by \*CARBAMAZEPINE, \*PHENOBARBITAL, \*PHENOTIN and \*PRIMIDONE (manufacturer of roflumilast advises avoid concomitant use)
- Theophylline: manufacturer of roflumilast advises avoid concomitant use with \*THEOPHYLLINE
- Ulcer-healing Drugs: metabolism of roflumilast inhibited by \*CIMETIDINE

Ropinirole

- Antibacterials: metabolism of ropinirole inhibited by \*CIPROFLOXACIN (increased plasma concentration)
- Antipsychotics: manufacturer of ropinirole advises avoid concomitant use of \*ANTIPSYCHOTICS (antagonism of effect)
- Memantine: effects of dopaminergics possibly enhanced by \*MEMANTINE
- Methyldopa: antiparkinsonian effect of dopaminergics antagonised by \*METHYLDOPA
- Metoclopramide: manufacturer of ropinirole advises avoid concomitant use of \*METOCLOPRAMIDE (antagonism of effect)
- Oestrogens: plasma concentration of ropinirole increased by \*OESTROGENS

Ropivacaine

- Anti-arrhythmics: increased myocardial depression when ropivacaine given with \*ANTIPSYCHOTICS
- Antidepressants: metabolism of ropivacaine inhibited by \*VACCINES—avoid prolonged administration of ropivacaine

Rosuvastatin see Statins

Rotavirus Vaccine see Vaccines

Rotigotine

- Antipsychotics: manufacturer of rotigotine advises avoid concomitant use of \*ANTIPSYCHOTICS (antagonism of effect)
- Memantine: effects of dopaminergics possibly enhanced by \*MEMANTINE
- Methyldopa: antiparkinsonian effect of dopaminergics antagonised by \*METHYLDOPA
- Metoclopramide: manufacturer of rotigotine advises avoid concomitant use of \*METOCLOPRAMIDE (antagonism of effect)

Rufinamide

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by \*MAOIS and \*TRICYCLIC-RELATED \*ANTIPSYCHOTICS (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by \*SSRIS and \*TRICYCLICS (convulsive threshold lowered)
- Antiepileptics: plasma concentration of both drugs possibly reduced when rufinamide given with \*CARBAMAZEPINE; plasma concentration of rufinamide possibly reduced by \*PHENYTOIN and \*PHENOTIN, also plasma concentration of phenytoin and phenotin possibly increased; plasma concentration of rufinamide possibly increased by \*SODIUM VALPROATE and \*VALPROIC ACID (reduce dose of rufinamide)
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by \*MEFLOQUINE
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by \*ANTIPSYCHOTICS (convulsive threshold lowered)
- Oestrogens: rufinamide accelerates metabolism of \*OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
- Orlisat: possible increased risk of convulsions when antiepileptics given with \*ORLISTAT
- Progestogens: rufinamide accelerates metabolism of \*PROGESTOGENS (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives,
Rufinamide ◆ Progestogens (continued)
contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see (Contraceptive Interactions in BNF)

Ruxolitinib ◆ Antituberculars: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with: clarithromycin and telithromycin—consult ruxolitinib product literature; plasma concentration of ruxolitinib reduced by rifampicin.
◆ Antifungal manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with: fluconazole, itraconazole, ketoconazole, posaconazole and voriconazole—consult ruxolitinib product literature.
◆ Antipsychotics: avoid concomitant use of cytoxotics with increased risk of convulsions when St John's wort possibly reduces plasma concentration of vandetanib and vinflunine.
◆ Antivirals: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with: boceprevir, indinavir, lopinavir, ritonavir, saquinavir and telaprevir—consult ruxolitinib product literature.

St John's Wort
» Aminophylline: St John's wort possibly reduces plasma concentration of aminophylline.
» Analgesics: St John's wort possibly reduces plasma concentration of methadone.
◆ Anti-arrhythmics: St John's wort possibly reduces plasma concentration of droperidol—avoid concomitant use.
◆ Antibacterials: St John's wort possibly reduces plasma concentration of bedaquiline—manufacturer of bedaquiline advises avoid concomitant use; St John's wort reduces plasma concentration of telithromycin (avoid during and for 2 weeks after St John's wort).
◆ Anticoagulants: St John's wort possibly reduces plasma concentration of apixaban—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; St John's wort reduces anticoagulant effect of coumarins (avoid concomitant use); St John's wort possibly reduces plasma concentration of dabigatran—manufacturer of dabigatran advises avoid concomitant use; St John's wort possibly reduces plasma concentration of rivaroxaban—manufacturer of rivaroxaban advises monitor for signs of thrombosis.
◆ Antidepressants: possible increased serotonergic effects when St John's wort given with dapoxetine (manufacturer of dapoxetine advises St John's wort should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping St John's wort).
◆ SSRIs—avoid concomitant use.
◆ Antiepileptics: St John's wort possibly reduces plasma concentration of carbamazepine; St John's wort possibly reduces plasma concentration of fosphenytoin, phenobarbital, phenytoin and primidone—avoid concomitant use.
◆ Anti-fungals: St John's wort reduces plasma concentration of voriconazole—avoid concomitant use.
◆ Antimalarials: avoidance of antidepresants advised by manufacturer of arteether with lumefantrine and arteminol with piperaquine.
◆ Antipsychotics: St John's wort possibly reduces plasma concentration of aripiprazole; St John's wort possibly reduces plasma concentration of cabozantinib, crizotinib, everolimus, ibritinib,idelalisib, ponatinib and vinflunine—manufacturer of bortezomib, bosutinib, cabozantinib, crizotinib, everolimus, ibritinib,idelalisib, ponatinib and vinflunine advises avoid concomitant use; avoidance of St John's wort advised by manufacturer of cabazitaxel, dabrafenib, lenvatinib and vemurafenib; St John's wort reduces plasma concentration of imatinib—avoid concomitant use; avoidance of St John's wort advised by manufacturer of vandetanib and vismodegib (plasma concentration of vandetanib and vismodegib possibly reduced); St John's wort possibly reduces plasma concentration of eribulin; St John's wort accelerates metabolism of irinotecan (reduced plasma concentration—avoid concomitant use).
◆ Dapoxetine: possible increased risk of serotonergic effects when St John's wort given with dapoxetine (manufacturer of dapoxetine advises St John's wort should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping St John's wort).
◆ Diuretics: St John's wort reduces plasma concentration of eplerenone—avoid concomitant use.
◆ Fingolimod: St John's wort possibly reduces plasma concentration of fingolimod—manufacturer of fingolimod advises avoid concomitant use.
◆ Fosaprepitant: avoidance of St John's wort advised by manufacturer of fosaprepitant.
◆ Hormone Antagonists: St John's wort possibly reduces plasma concentration of abiraterone—manufacturer of abiraterone advises avoid concomitant use.
◆ Sirt-1 receptor Agonists: increased serotonergic effects when St John's wort given with sirt-1 agonists—avoid concomitant use.
◆ Ibrutinib: St John's wort possibly reduces plasma concentration of ibrutinib (manufacturer of ibrutinib advises avoid concomitant use).
◆ Lapatinib and vemurafenib; St John's wort reduces plasma concentration of lapatinib and vemurafenib; St John's wort possibly reduces plasma concentration of vinflunine.
◆ Macitentan: avoidance of St John's wort advised by manufacturer of macitentan.
◆ Oestrogens: St John's wort reduces contraceptive effect of oestrogens (avoid concomitant use).
◆ Progestogens: St John's wort reduces contraceptive effect of progestogens (avoid concomitant use).
◆ Tacrolimus: St John's wort possibly reduces plasma concentration of tacrolimus—avoid concomitant use.
◆ Cardiovascular Drugs: see section 5.1.
◆ Diuretics: Dapoxetine: possible increased risk of serotonergic effects when St John's wort given with dapoxetine (manufacturer of dapoxetine advises St John's wort should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping St John's wort).
◆ Diuretics: St John's wort reduces plasma concentration of eplerenone—avoid concomitant use.
◆ Fingolimod: St John's wort possibly reduces plasma concentration of fingolimod—manufacturer of fingolimod advises avoid concomitant use.
◆ Fosaprepitant: avoidance of St John's wort advised by manufacturer of fosaprepitant.
◆ Hormone Antagonists: St John's wort possibly reduces plasma concentration of abiraterone—manufacturer of abiraterone advises avoid concomitant use.
◆ Sirt-1 receptor Agonists: increased serotonergic effects when St John's wort given with sirt-1 agonists—avoid concomitant use.
◆ Ibrutinib: St John's wort possibly reduces plasma concentration of ibrutinib (manufacturer of ibrutinib advises avoid concomitant use).
◆ Lapatinib and vemurafenib: St John's wort reduces plasma concentration of lapatinib and vemurafenib; St John's wort possibly reduces plasma concentration of vinflunine.
◆ Macitentan: avoidance of St John's wort advised by manufacturer of macitentan.
◆ Oestrogens: St John's wort reduces contraceptive effect of oestrogens (avoid concomitant use).
◆ Progestogens: St John's wort reduces contraceptive effect of progestogens (avoid concomitant use).
◆ Tacrolimus: St John's wort possibly reduces plasma concentration of tacrolimus—avoid concomitant use.
Interactions

St John’s Wort (continued)

- Theophylline: St John’s wort possibly reduces plasma concentration of THEOPHYLLINE.
- Ulcer-healing Drugs: St John’s wort possibly reduces plasma concentration of OMEPRAZOLE.
- Ulcerative: avoidance of St John’s wort advised by manufacturer of ULPRIPLAST (contraceptive effect of ulipristal possibly reduced)

Salbutamol see Symathomimetics, Beta2

Saimeterol see Symathomimetics, Beta2

Saquinavir

- Analgesics: increased risk of ventricular arrhythmias when saquinavir given with ALFENTANIL, FENTANYL or METHADONE—avoid concomitant use
- Anti-arrhythmics: increased risk of ventricular arrhythmias when saquinavir given with AMIODARONE, DISOPYRAMIDE, DRONEDARONE, FLECAINIDE, LIDOCAINE or PROPACAFENONE—avoid concomitant use
- Antibacterials: plasma concentration of both drugs possibly increased when saquinavir given with CLARITHROMYCIN (increased risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when saquinavir with DAPSONE, ERTHROMYCIN or MOXIFLOXACIN—avoid concomitant use; saquinavir increases plasma concentration of RIFABUTIN (also plasma concentration of saquinavir reduced)—reduce rifabutin dose; plasma concentration of saquinavir significantly reduced by RIFAMPICIN, also risk of hepatotoxicity—avoid concomitant use; increased risk of ventricular arrhythmias when saquinavir given with DELAMANID; plasma concentration of both drugs increased when saquinavir given with FUSIDIC ACID; avoidance of saquinavir advised by manufacturer of TELITHROMYCIN (risk of ventricular arrhythmias)
- Anti-coagulants: saquinavir possibly enhances anticoagulant effect of WARFARIN; avoidance of saquinavir advised by manufacturer of APHABAN and RIVAROXABAN
- Antidepressants: increased risk of ventricular arrhythmias when saquinavir given with TRAZODONE or TRICYCLICS—avoid concomitant use; plasma concentration of saquinavir reduced by ST JOHN’S WORT—avoid concomitant use
- Antiepileptics: plasma concentration of saquinavir possibly increased by CARBAMAZEPINE, FOSPHENYTOIN, PHENOBARBITAL, PHENYTOIN and PRIMIDONE
- Antifungals: plasma concentration of saquinavir increased by KETOKONAZOLE—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of saquinavir possibly increased by IMIDAZOLES and TRIAZOLES
- Antihistamines: increased risk of ventricular arrhythmias when saquinavir given with MIZOLASTINE—avoid concomitant use
- Antihypertensives: caution with saquinavir advised by manufacturer of ARTEMETHER with LUMESFANTRINE, avoidance of saquinavir advised by manufacturer of ARTEMOL with PIPERAQUNI (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when saquinavir given with OZOLAPINE, HALOPERIDOL or PHENOTHIAZINES—avoid concomitant use; saquinavir possibly increases plasma concentration of ARIPIPRAZOLE (reduce dose of aripiprazole—consult aripiprazole product literature); saquinavir possibly increases plasma concentration of LURASIDONE—avoid concomitant use; saquinavir possibly increases plasma concentration of PIMOZIDE (increased risk of ventricular arrhythmias—avoid concomitant use); saquinavir possibly increases plasma concentration of QTETAPINE—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: increased risk of ventricular arrhythmias when saquinavir given with ATAZANAVIR or LOPINAVIR—avoid concomitant use; saquinavir reduces plasma concentration of DARUNAVIR; plasma concentration of saquinavir significantly

Saquinavir

- Antivirals (continued) reduced by EFAVIRENZ; plasma concentration of saquinavir increased by INDINAVIR and RITONAVIR; saquinavir increases plasma concentration of MARAVIROC (consider reducing dose of maraviroc); plasma concentration of saquinavir reduced by TIPRANAVIR
- Anti-convulsants: increases plasma concentration of AVANAFIL—manufacturer of avanafil advises avoid concomitant use
- Beta-blockers: increased risk of ventricular arrhythmias when saquinavir given with SOTALOL—avoid concomitant use
- Ciclosporin: plasma concentration of both drugs increased when saquinavir given with CICLOSPORIN
- Corticosteroids: plasma concentration of saquinavir possibly reduced by DEXAMETHASONE
- Cytototics: saquinavir possibly increases the plasma concentration of AFATINIB—manufacturer of afatinib advises separating administration of saquinavir by 6 to 12 hours; saquinavir possibly increases plasma concentration of AXTINIB (reduce dose of axitinib—consult axitinib product literature); saquinavir possibly increases the plasma concentration of BOSUTINIB and CABAZITAXEL—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; saquinavir possibly increases plasma concentration of CRIZOTINIB and EVEROLIMUS—manufacturer of crizotinib and everolimus advises avoid concomitant use; saquinavir possibly increases the plasma concentration of IBRUTINIB—reduce dose of ibrutinib (see under ibrutinib, p. 809); avoidance of saquinavir advised by manufacturer of LAPATINIB; increased risk of ventricular arrhythmias when saquinavir given with RAZOPANIB—avoid concomitant use; saquinavir possibly increases plasma concentration of PONATINIB—consider reducing initial dose of ponatinib (see under Ponatinib, p. 814); manufacturer of ruxolitinib advises dose reduction when saquinavir given with RUXOLITINIB—consult ruxolitinib product literature; saquinavir possibly increases plasma concentration of DOCETAXEL—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- Dapoxetine: avoidance of saquinavir advised by manufacturer of DAPoxetine (increased risk of toxicity)
- Diuretics: saquinavir increases plasma concentration of EPLENENONE (reduce dose of eplerenone)
- Domerperidone: possible increased risk of ventricular arrhythmias when saquinavir given with DOPERIDONE—avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when saquinavir given with ERGOTAMINE—avoid concomitant use
- Lipid-regulating Drugs: possible increased risk of myopathy when saquinavir given with ATORVASTATIN; possible increased risk of myopathy when saquinavir given with ROSUVASTATIN—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when saquinavir given with SIMVASTATIN (avoid concomitant use); avoidance of saquinavir advised by manufacturer of Lomitapide (plasma concentration of lomitapide possibly increased)
- Orlisat: absorption of saquinavir possibly reduced by ORLISTAT
- Pentamide: increased risk of ventricular arrhythmias when saquinavir given with PENTAMIDINE ISETONATE—avoid concomitant use
- Ranolazine: saquinavir possibly increases plasma concentration of RANOLAZINE—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: increased risk of ventricular arrhythmias when saquinavir given with SILDENAFIL—avoid concomitant use
- Tacrolimus: saquinavir increases plasma concentration of TACROLIMUS (consider reducing dose of tacrolimus)
- Tadalafil: increased risk of ventricular arrhythmias when saquinavir given with TADALAFIL—avoid concomitant use

Appendix 1 Interactions 1241
Selegiline

**NOTE** Selegiline is a MAO-B inhibitor.

- Analgesics: hyperpyrexia and CNS toxicity reported when selegiline given with *pefotidine* (avoid concomitant use); manufacturer of selegiline advises avoid concomitant use with *opioid analgesics*
- Antidepressants: manufacturer of selegiline advises avoid concomitant use with *citalopram* and *escitalopram*; increased risk of hypertension and CNS excitation when selegiline given with *fluoxetine* (selegiline should not be started until 5 weeks after stopping fluoxetine, avoid fluoxetine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when selegiline given with *sertraline* or *venlafaxine* (selegiline should not be started until 1 week after stopping fluvoxamine, sertraline or venlafaxine, avoid fluvoxamine, sertraline or venlafaxine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when selegiline given with *paroxetine* for 2 weeks after stopping selegiline); enhanced hypotensive effect when selegiline given with *MAOIs*—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of selegline with *moclobemide*; CNS toxicity reported when selegiline given with *tricyclics*
- Dopaminergics: selegiline enhances effects and increases toxicity of *CO-beneldopa, co-careldopa* or *levodopa* (reduce dose of co-beneldopa, co-careldopa or levodopa); max. dose of 10 mg selegline advised by manufacturer of *entacapone* if used concomitantly
- SHT-receptor Agonists: manufacturer of selegiline advises avoid concomitant use with *SHT, agonists*
- Tolbutamide: enhanced effects of dopaminergics and selegline possibly enhanced by *memantine*
- Metyldopa: antiparkinsonian effect of dopaminergics antagonised by *metyldopa*
- Oestrogens: plasma concentration of selegline increased by *oxestrols*—manufacturer of selegline advises avoid concomitant use
- Progestogens: plasma concentration of selegline increased by *progesterone*—manufacturer of selegline advises avoid concomitant use
- Symathomimetics: manufacturer of selegline advises avoid concomitant use with *sympathomimetics; risk of hypertensive crisis when selegline given with dopamine*

**Selenium**

- Eltrombopag: selenium possibly reduces absorption of *eltrombopag* (give at least 4 hours apart)
- Vitamins: absorption of selenium possibly reduced by *ascorbic acid* (give at least 4 hours apart)

**Sertraline** see Antidepressants, SSRI

**Sevelamer**

- Antioxidants: sevelamer reduces bioavailability of *ciprofloxacin*
- Ciclosporin: sevelamer possibly reduces plasma concentration of *ciclosporin*
- Mycophenolate: sevelamer possibly reduces plasma concentration of *mycophenolate*
- Tacrolimus: sevelamer possibly reduces plasma concentration of *tacrolimus*
- Thyroid Hormones: sevelamer possibly reduces absorption of *levothyroxine*
Sirolimus (continued)
» Ciclosporin: plasma concentration of sirolimus increased by **CICLOSPORIN**
» Cytoxics: caution with sirolimus advised by manufacturer of **CYCLOSPORINE**
» Grapefruit Juice: plasma concentration of sirolimus increased by **GRAPEFRUIT JUICE**—avoid concomitant use

Sitagliptin see Antidiabetics

Smallpox Vaccine see Vaccines

Sodium Aurothiomalate
» ACE inhibitors: flushing and hypotension reported when sodium aurothiomalate given with **ACE INHIBITORS**
» Penicillamine: avoidance of sodium aurothiomalate advised by manufacturer of **PENICILLAMINE** (increased risk of toxicity)

Sodium Benzoate
» Antiepileptics: effects of sodium benzoate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
» Antipsychotics: effects of sodium benzoate possibly reduced by **HALOPERIDOL**

Sodium Bicarbonate see Antacids

Sodium Citrate
» Antibacterials: avoid concomitant use of sodium citrate with **TETRACYCLINE**

Sodium Oxymtine see Antispasmodics

Sodium Phenybutyrate
» Antiepileptics: effects of sodium phenybutyrate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
» Antipsychotics: effects of sodium phenybutyrate possibly reduced by **HALOPERIDOL**

Sodium Stibogluconate see Antimonials

Sodium Valproate
» Analgesics: effects of sodium valproate enhanced by **OPPIOID ANALGESICS** (avoid concomitant use)
» Antidepressants: increased risk of side-effects when sodium valproate given with **TRICYCLICS**
» Antiepileptics: manufacturer of sodium valproate advises avoid concomitant use with **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of sodium valproate increased by **SODIUM VALPROATE** and **VALPROIC ACID** (see under Sodium Oxymtine, p. 425)
» Antipsychotics: effects of sodium oxybate possibly enhanced by **ANTIPSYCHOTICS**
» Antidepressants: plasma concentration of sodium oxybate enhanced by **BENZODIAZEPINES** (avoid concomitant use)

Sodium Phenylbutyrate
» Antiepileptics: effects of sodium phenylbutyrate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
» Antipsychotics: effects of sodium phenylbutyrate possibly reduced by **HALOPERIDOL**

Sodium Stibogluconate see Antimonials

Sodium Valproate
» Analgesics: effects of sodium valproate enhanced by **ASPIRIN**

Sodium Valproate
» Antibacterials: metabolism of sodium valproate possibly inhibited by **ERYTHROMYCIN** (increased plasma concentration)
» avoidance of sodium valproate advised by manufacturer of **PIVMECILLIN**; plasma concentration of sodium valproate reduced by **CARBAPENEMES**—avoid concomitant use

Anticoagulants: sodium valproate possibly enhances anticoagulant effect of **CUMARINS**

Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)

Antiepileptics: plasma concentration of sodium valproate reduced by **CARBAMAZEPINE**, also plasma concentration of active metabolite of carbamazepine increased; sodium valproate possibly increases plasma concentration of **ETHOSUXIMIDE**; sodium valproate increases or possibly...
Sodium Valproate
- Antiepileptics (continued)
  decreases plasma concentration of FOSPHONYTOIN and PHENOTYTIN, also plasma concentration of sodium valproate reduced; sodium valproate increases plasma concentration of LAMOTRIGINE (increased risk of toxicity—reduce lamotrigine dose); sodium valproate sometimes reduces plasma concentration of an active metabolite of OXCARBAZEPINE; sodium valproate increases plasma concentration of PHENOBARBITAL and PRIMIDONE (also plasma concentration of sodium valproate reduced); sodium valproate possibly increases plasma concentration of RUFINamide (reduce dose of rufinamide); hyperammonaemia and CNS toxicity reported when sodium valproate given with TOPIMARATE
  - Antimarial: anticonvulsant effect of antiepileptics antagonised by N-METHOQUINE
  - Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ANTIPSYCHOTICS (convulsive threshold lowered); sodium valproate possibly increases or decreases plasma concentration of CLOZAPINE; increased risk of side-effects including neutropenia when sodium valproate given with ORLANZAPINE
  - Antivirals: plasma concentration of sodium valproate possibly reduced by RITONAVIR; sodium valproate possibly increases plasma concentration of ZIDOVUDINE (increased risk of toxicity)
  - Anxiolytics and Hypnotics: plasma concentration of sodium valproate possibly increased by CLOBAZAM; increased risk of side-effects when sodium valproate given with CLONAZEPAM; sulphur doxepin possibly increases plasma concentration of DIAZEPAM and LORAZEPAM
  - Bupropion: sodium valproate inhibits the metabolism of BUPROPION
  - Cytotoxics: sodium valproate increases plasma concentration of TEMOZOLOMIDE
  - Lipid-regulating Drugs: absorption of sodium valproate possibly reduced by COLSTEYRAMINE
  - Oestrogens: plasma concentration of sodium valproate possibly reduced by ETHINYLESTRADIOL
  - Orlistat: possible increased risk of convulsions when antiepileptics given with ORLISTAT
  - Sodium Benzoate: sodium valproate possibly reduces effects of SODIUM BENZOATE
- Sodium Oxbyte: sodium valproate increases the plasma concentration of SODIUM OXBYTE (see under Sodium Oxbyte, p. 425)
- Sodium Phenylbutyrate: sodium valproate possibly reduces effects of SODIUM PHENYL BUTYRATE
- Ulcer-healing Drugs: metabolism of sodium valproate inhibited by CIMETIDINE (increased plasma concentration)

Sofosbuvir
- Anti-arhythmics: possible increased risk of bradycardia when sofosbuvir given with AMIODARONE—see under Amiodarone, p. 88
- Antibacterials: manufacturer of sofosbuvir advises avoid concomitant use with RIFABUTIN and Rifampicin
- Antidepressants: manufacturer of sofosbuvir advises avoid concomitant use with ST JOHN’S WORT
- Antiepileptics: manufacturer of sofosbuvir advises avoid concomitant use with CARBAMAZEPINE, PHOSPHONYTOIN, OXCARBAZEPINE, FENOBARBITAL, PHENOTYTIN and PRIMIDONE

Solifenacin see Antimuscarinics

Somatropin
- Corticosteroids: growth-promoting effect of somatropin may be inhibited by CORTICOSTEROIDS
- Oestrogens: increased doses of somatropin may be needed when given with OESTROGENS (when used as oral replacement therapy)

Sorafenib
- Antibacterials: bioavailability of sorafenib reduced by NEOMYCIN; plasma concentration of sorafenib reduced by RIFAMPICIN
- Anticoagulants: sorafenib possibly enhances anticoagulant effect of COUMARINS

Sorafenib (continued)
- Antipsychotics: avoid concomitant use of cytotoxics with CLOzapine (increased risk of agranulocytosis)
- Antivirals: avoidance of sorafenib advised by manufacturer of BOCEPREVIR
- Cytotoxics: sorafenib increases plasma concentration of DOCETAXEL and DOXORUBICIN; sorafenib possibly increases plasma concentration of IRINOTECAN

Sotalol see Beta-blockers

Spironolactone see Diuretics

Statins
  - Antacids: absorption of rosuvastatin reduced by ANTACIDS
  - Anti-arrhythmics: increased risk of myopathy when simvastatin given with ATRIAMORE (see under Simvastatin, p. 181); plasma concentration of rosuvastatin increased by DRONEDARONE—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when simvastatin given with DRONEDARONE; plasma concentration of atorvastatin possibly increased by DRONEDARONE
  - Antibacterials: plasma concentration of atorvastatin and pravastatin increased by SODIUM DIOXABUTYRATE; increased risk of myopathy when simvastatin given with CLARITHROMYCIN; ERYTHROMYCIN or TELETHROMYCIN (avoid concomitant use); plasma concentration of rosuvastatin reduced by ERYTHROMYCIN; possible increased risk of myopathy when atorvastatin given with ERYTHROMYCIN; plasma concentration of pravastatin increased by ERYTHROMYCIN; plasma concentration of atorvastatin and simvastatin possibly reduced by RIFAMPICIN; metabolism of fluvastatin accelerated by RIFAMPICIN (reduced effect); increased risk of myopathy when statins given with PHENOBARBITAL and PHENYTOIN; possibly reduced by DAPTOMYCIN (preferably avoid concomitant use); risk of myopathy and rhabdomyolysis when statins given with FUSIDIC ACID—avoid concomitant use and for 7 days after last fusidic acid dose; increased risk of myopathy when atorvastatin given with TELITHROMYCIN (avoid concomitant use); possible increased risk of myopathy when pravastatin given with TELITHROMYCIN
  - Anticoagulants: atorvastatin may transiently reduce anticoagulant effect of WARFARIN; rosuvastatin possibly enhances anticoagulant effect of COUMARINS and PHENINDONE; simvastatin can enhance the anticoagulant effect of COUMARINS; fluvastatin enhances anticoagulant effect of COUMARINS
  - Antidepressants: plasma concentration of simvastatin reduced by ST JOHN’S WORT
  - Antidiabetics: fluvastatin possibly increases plasma concentration of GLIBENCLAMIDE
  - Antiepileptics: plasma concentration of simvastatin reduced by CARBAMAZEPINE and ESLICARB ZEPINE—consider increasing dose of simvastatin; plasma concentration of rosuvastatin reduced by ESLICARBZEPINE; combination of fluvastatin with FOSPHONYTOIN or PHENOTYTIN may increase plasma concentration of either drug (or both)
  - Antifungals: possible increased risk of myopathy when atorvastatin given with KETOCONAZOLE—manufacturer of ketoconazole advises avoid concomitant use; increased risk of myopathy when simvastatin given with IRaconazole, KETOCONAZOLE or POSACONAZOLE (avoid concomitant use); possible increased risk of myopathy when simvastatin given with FLUCONAZOLE or ITRACONAZOLE; possible increased risk of myopathy when atorvastatin given with FLUCONAZOLE or IMIDAZOLES; plasma concentration of fluvastatin increased by FLUCONAZOLE—possible increased risk of myopathy; plasma concentration of rosuvastatin increased by ITRACONAZOLE—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when atorvastatin given with IRaconazole, POSACONAZOLE or VORICONAZOLE; increased risk of myopathy when simvastatin given with VORICONAZOLE
  - Antivirals: possible increased risk of myopathy when atorvastatin or pravastatin given with ATAZANAVIR; plasma concentration of rosuvastatin increased by ATAZANAVIR, DARUNAVIR, LOPINAVIR and TIPRANAVIR—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when simvastatin given with ATAZANAVIR,
Statins
- Antivirals (continued)
  - INDINAVIR, RITONAVIR or SAQUINAVIR (avoid concomitant use); plasma concentration of pravastatin increased by BOCEPREVIR; plasma concentration of atorvastatin increased by BOCEPREVIR (reduce dose of atorvastatin); manufacturers advise avoid concomitant use of simvastatin with BOCEPREVIR and TELAPREVI; plasma concentration of rosuvastatin increased by DACLATASVIR; plasma concentration of pravastatin possibly increased by DARUNAVIR, FOSAMPRENAVIR, INIDINAVIR, LOPINAVIR, RITONAVIR or SAQUINAVIR; plasma concentration of atorvastatin, pravastatin and simvastatin reduced by EFAVIRENZ; plasma concentration of atorvastatin possibly reduced by ETRAVIRINE; possible increased risk of myopathy when atorvastatin given with DARUNAVIR, FOSAMPRENAVIR, INIDINAVIR, LOPINAVIR, RITONAVIR or SAQUINAVIR; plasma concentration of atorvastatin, pravastatin and simvastatin reduced by EFAVIRENZ; plasma concentration of atorvastatin increased by SIMPRENAVIR (consider reducing dose of atorvastatin, rosuvastatin and simvastatin); avoidance of atorvastatin advised by manufacturer of TELAPREVI; plasma concentration of simvastatin possibly increased by TIPRANAVIR—avoid concomitant use; increased risk of myopathy when atorvastatin given with TIPRANAVIR (see under Atorvastatin, p. 179)

- Anxiolytics and Hypnotics: atorvastatin possibly increases plasma concentration of MIDAZOLAM
  - Bosentan: plasma concentration of simvastatin reduced by BOSENTAN

- Calcium-channel Blockers: possible increased risk of myopathy when simvastatin given with AMIODOPRIN and DILTIAZEM (see under Simvastatin, p. 181); plasma concentration of atorvastatin increased by DILTIAZEM—possible increased risk of myopathy; increased risk of myopathy when simvastatin given with VERAPAMIL (see under Simvastatin, p. 181); atorvastatin increases plasma concentration of VERAPAMIL, also possible increased risk of myopathy (consider reducing dose of atorvastatin)

- Cardiac Glycosides: atorvastatin possibly increases plasma concentration of DIGOXIN

- Ciclosporin: increased risk of myopathy when rosuvastatin or simvastatin given with CICLOSPORIN (avoid concomitant use); increased risk of myopathy when atorvastatin given with CICLOSPORIN (see under Atorvastatin, p. 179); increased risk of myopathy when fluvastatin or pravastatin given with CICLOSPORIN; Ciclosporin (consult product literature)

- Clonidine: plasma concentration of rosuvastatin increased by CLOPIDOGREL—adjust dose of rosuvastatin (consult product literature)

- Cobistat: plasma concentration of atorvastatin possibly increased by COBICISTAT—manufacturer of cobistat advises reduce dose of atorvastatin; avoidance of simvastatin advised by manufacturer of COBICISTAT

- Colchicine: possible increased risk of myopathy when statins given with COLCHICINE

- Cytotoxic: plasma concentration of simvastatin possibly increased by DASATINIB; avoidance of simvastatin advised by manufacturer of IDEALISIS; plasma concentration of simvastatin increased by IMATINIB

- Eltrombopag: plasma concentration of rosuvastatin increased by ELTROMBOPAG—adjust dose of rosuvastatin (consult product literature)

- Grapefruit juice: plasma concentration of atorvastatin possibly increased by GRAPEFRUIT JUICE; plasma concentration of simvastatin increased by GRAPEFRUIT JUICE—avoid concomitant use

- Hormone Antagonists: possible increased risk of myopathy when simvastatin given with DANAZOL—avoid concomitant use

- Lipid-regulating Drugs: possible increased risk of myopathy when simvastatin given with BEZAFIBRATE (see under Simvastatin, p. 181); possible increased risk of myopathy

Statins
- Lipid-regulating Drugs (continued)
  - when simvastatin given with CIPROFIBRATE (see under Simvastatin, p. 181); when given with statins reduce maximum dose of FENOFLIBRATE (see under Fenofibrate, p. 172); increased risk of myopathy when atorvastatin, fluvastatin or pravastatin given with GEMFIBROZIL (preferably avoid concomitant use); increased risk of myopathy when simvastatin given with GEMFIBROZIL (avoid concomitant use); plasma concentration of rosuvastatin increased by EZETIMIBE—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when statins given with FIBRATES; increased risk of myopathy when rosuvastatin given with FIBRATES (see under Rosuvastatin, p. 180); plasma concentration of simvastatin increased by EZETIMIBE (see under Simvastatin, p. 181); plasma concentration of atorvastatin increased by LOMITAPIDE—manufacturer of lomitapide advises reduce dose of atorvastatin by half or separate administration by 12 hours; increased risk of myopathy when statins given with NICOTINE ACID (applies to lipid regulating doses of nicotine acid)

  - Oestrogens: atorvastatin and rosuvastatin increase plasma concentration of ETHINYLESTRADIOL

  - Progestogens: atorvastatin increases plasma concentration of NORETHISTERONE; rosuvastatin increases plasma concentration of active metabolite of NORGESTIMATE; rosuvastatin increases plasma concentration of NORGESTREL

- Ranolazine: plasma concentration of simvastatin increased by RANOLAZINE (see under Simvastatin, p. 181)

- Retinoids: plasma concentration of simvastatin reduced by ALITRETINOIN

- Teriflunomide: plasma concentration of rosuvastatin increased by TERYFLUNOMIDE (consider reducing dose of rosuvastatin)

- Ticagrelor: plasma concentration of simvastatin increased by TICAGRELOR (increased risk of toxicity)

- Stavudine
  - Antivirals: increased risk of side-effects when stavudine given with DIDANOSEN; increased risk of toxicity when stavudine given with DIBAVIRIN; effects of stavudine possibly inhibited by ZIDOVUDINE (manufacturers advise avoid concomitant use)

- Cytotoxics: effects of stavudine possibly inhibited by DOXORUBICIN; increased risk of toxicity when stavudine given with HYDROXYCARMABIDE—avoid concomitant use

- Orlistat: absorption of stavudine possibly reduced by ORLISTAT

- Striperntol
  - Antidepressants: anticonvulstant effect of antiepileptics possibly antagonised by MAOI S and TRICYCLIC-RELATED ANTIDEPRESSANTS (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRI S and TRICYCLICS (convulsive threshold lowered)

- Antiepileptics: striperntol increases plasma concentration of CARBAMAZEPINE, FOSFENYTIOIN, PHENOBARBITAL, PHENYTOIN and PRIMIDONE

- Antimalarials: anticonvulsant effect of antiepileptics antagonised by MEFLOQUINE

- Antipsychotics: anticonvulstant effect of antiepileptics antagonised by ANTI PSYCHOTICS (convulsive threshold lowered)

- Anxiolytics and Hypnotics: striperntol increases plasma concentration of CLOBAZAM

- Orlistat: possible increased risk of convulsions when antiepileptics given with ORLISTAT

- Streptomycin see Aminoglycosides

- Strontium Ranelate
  - Antibacterials: strontium ranelate reduces absorption of QUINOLONES and TETRACYCLINES (manufacturer of strontium ranelate advises avoid concomitant use)

- Sucralfate
  - Aminophylline: sucralfate possibly reduces absorption of AMINOPHYLLINE (give at least 2 hours apart)

  - Antibacterials: sucralfate reduces absorption of CIPROFLOXACIN, LEVOFLOXACIN, MOXIFLOXACIN, OFLOXACIN and TETRACYCLINES;
Interactions

**Sucralfate**
- Antibacterials (continued)
  - Sucralfate reduces absorption of **Norfloxacin** (give at least 2 hours apart)
  - Anticoagulants: sucralfate possibly reduces absorption of **Coumarins** (reduced anticoagulant effect)
  - Antiepileptics: sucralfate reduces absorption of **Fosphenytoin** and **Phenytoin**
  - Antifungals: sucralfate reduces absorption of **Ketoconazole**
  - Antipsychotics: sucralfate reduces absorption of **Sulpiride**
  - Cardiac Glycosides: sucralfate possibly reduces absorption of **Cardiac Glycosides**
- Potassium Salts: manufacturer of sucralfate advises avoid concomitant use with **Potassium Citrate**
  - Sodium Citrate: manufacturer of sucralfate advises avoid concomitant use with **Sodium Citrate**
- Theophylline: sucralfate possibly reduces absorption of **Theophylline** (give at least 2 hours apart)
- Thyroid Hormones: sucralfate reduces absorption of **Levothyroxine**
- Ulcer-healing Drugs: sucralfate possibly reduces absorption of **Lansoprazole**

**Sugammadex**
- Antibacterials: response to sugammadex possibly reduced by **Fusidic Acid**
- Progestagens: sugammadex possibly reduces plasma concentration of **Progestogens**—manufacturer of sugammadex advises additional contraceptive precautions

**Sulfadiazine** see Sulfonamides

**Sulfafoxide** see Sulfonamides

**Sulfamethoxazole** see Sulfonamides

**Sulfasalazine**
- Cardiac Glycosides: sulfasalazine possibly reduces absorption of **Digoxin**
- Folicates: sulfasalazine possibly reduces absorption of **Folic Acid**

**Sulfapyrazone**
- Aminophylline: sulfapyrazone reduces plasma concentration of **Aminophylline**
- Analgesics: effects of sulfapyrazone antagonised by **Aspirin**
  - Antibacterials: sulfapyrazone reduces excretion of **Nitrofurantoin** (increased risk of toxicity); sulfapyrazone reduces excretion of **Penicillins**; effects of sulfapyrazone antagonised by **Pyrazinamide**
- Antagonists: increased risk of bleeding when sulfapyrazone given with **Apixaban**; sulfapyrazone enhances anticoagulant effect of **Coumarins**; possible increased risk of bleeding when sulfapyrazone given with **Dabigatran**
- Antiepileptics: cs:sulfapyrazone enhances effects of **Sulfonylureas**
  - Antiepileptics: sulfapyrazone increases plasma concentration of **Fosphenytoin** and **Phenytoin**
  - Calcium-channel Blockers: sulfapyrazone reduces plasma concentration of **Verapamil**
- Ciclosporin: sulfapyrazone reduces plasma concentration of **Ciclosporin**
  - Theophylline: sulfapyrazone reduces plasma concentration of **Theophylline**

**Sulfonamides**
- Anaesthetics, General: sulfonamides enhance effects of **Thiopental**
  - Anaesthetics, Local: effects of sulfonamides possibly inhibited by **Chloroprocaine** (manufacturer of chloroprocaine advises avoid concomitant use); increased risk of methaemoglobinaemia when sulfonamides given with **Prilocaine**
  - Anti-arrhythmics: possible increased risk of ventricular arrhythmias when sulfamethoxazole (as co-trimoxazole) given with **Amiodarone**—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole
  - Antibacterials: increased risk of crystalluria when sulfonamides given with **Methenamine**

**Sulfonamides (continued)**
- Anticoagulants: sulfonamides enhance anticoagulant effect of **Coumarins**; sulfonamides possibly inhibit metabolism of **Phenindione**
  - Antidiabetics: sulfonamides rarely enhance the effects of **Sulfonylureas**
- Antiepileptics: sulfonamides possibly increase plasma concentration of **Fosphenytoin** and **Phenytoin**
- Antimalarials: increased antifolate effect when sulfonamides given with **Pyrimethamine**
- Antipsychotics: avoid concomitant use of sulfonamides with **Clozapine** (increased risk of agranulocytosis)
- Azathioprine: increased risk of haematological toxicity when sulfamethoxazole (as co-trimoxazole) given with **Azathioprine**
- Ciclosporin: increased risk of nephrotoxicity when sulfonamides given with **Ciclosporin**; sulfadiazine possibly reduces plasma concentration of **Ciclosporin**
- Cytotoxics: increased risk of haematological toxicity when sulfamethoxazole (as co-trimoxazole) given with **Mercaptopurine** or **Methotrexate**; sulfonamides increase risk of **Methotrexate** toxicity
- Potassium Aminobenzoate: effects of sulfonamides inhibited by **Potassium Aminobenzoate**
- Vaccines: antibacterials inactivate **Oral Typhoid Vaccine**—see under Typhoid Vaccine in BNF

**Sulfonylureas** see Antidiabetics

**Sulindac** see NSAIDs

**Sulpiride** see Antipsychotics

**Sumatriptan** see 5HT1-receptor Agonists (under HT)

**Sunitinib**
- Antibacterials: metabolism of sunitinib accelerated by **Rifampicin** (reduced plasma concentration)
- Antifungals: metabolism of sunitinib inhibited by **Ketoconazole** (increased plasma concentration)
- Antipsychotics: avoid concomitant use of cytotoxics with **Clozapine** (increased risk of agranulocytosis)
- Antivirals: avoidance of sunitinib advised by manufacturer of **Boceprevir**

**Suxamethonium** see Muscle Relaxants

**Sympathomimetics**
- Adrenergic Neurone Blockers: ephedrine, isometheptene, metaraminol, methylphenidate, noradrenaline (norepinephrine), oxymetazoline, phenylephrine, pseudoephedrine and xylometazoline antagonise hypotensive effect of **Aldrenergic Neurone Blockers**; dexametamfamine and lidexametamfaine antagonise hypotensive effect of **Guanethidine**; increased risk of hypertension when adrenaline (epinephrine) given with **Guanethidine**
- Alcohol: effects of methylphenidate possibly enhanced by **Alcohol**
  - Alpha-adrenoceptor Stimulants: avoidance of sympathomimetics advised by manufacturer of **Aprelonidine**
  - Alpha-blockers: avoid concomitant use of adrenaline (epinephrine) or dopamine with **Volatile**
  - Aminophylline: avoidance of ephedrine in children advised by manufacturer of **Aminophylline**
    - Anaesthetics, General: avoidance of sympathomimetics advised by manufacturer of **Isoflurane** (risk of ventricular arrhythmias); increased risk of arrhythmias when adrenaline (epinephrine) or noradrenaline (norepinephrine) given with **Volatile Liquid General Anaesthetics**; increased risk of hypertension when methylphenidate given with **Volatile Liquid General Anaesthetics**
  - Antacids: absorption of pseudoephedrine possibly increased by **Aluminium Hydroxide**
  - Anticoagulants: methylphenidate possibly enhances anticoagulant effect of **Coumarins**
  - Antidepressants: risk of hypertensive crisis when adrenaline (epinephrine), dobutamine, dopamine, noradrenaline (norepinephrine) or xylometazoline given with **Maois**; risk of hypertensive crisis when dexametamfamine, ephedrine, isometheptene, lisdexametamfaine, metaraminol,
Antivirals:
- Aminophylline: possibly reduced by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Antifungals:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Aminophylline:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Theophylline:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

▶ Oxytocin:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Ergot Alkaloids:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Doxapram:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

▶ Dopaminergics:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Sympathomimetics, Beta2:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Antivirals (continued):
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Cardiac Glycosides:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

β-blockers:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Sympathomimetics:
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.

Antidepressants (continued):
- Methylphenidate: possibly increased by enantioselective effects of chlorpromazine; methylphenidate possibly increases side-effects of risperidone; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with methylphenidate; increased risk of severe hypertension and bradycardia when dobutamine given with norepinephrine; possibly enhanced by tedizolid; plasma concentration of tacrolimus possibly increased by ritonavir; plasma concentration of tacrolimus possibly reduced by saquinavir.
### Appendix 1 Interactions

#### Tacrolimus
- **Antivirals (continued)**
  - concentration of both drugs increased when tacrolimus given with **TELAPREVIR** (reduce dose of tacrolimus)
- **Calcium-channel Blockers**: plasma concentration of tacrolimus possibly increased by **FELODIPINE** and **VERAPAMIL**; plasma concentration of tacrolimus increased by **DILTIAZEM, NICARDIPINE** and **NIFEDIPINE**
- **Ciclosporin**: tacrolimus increases plasma concentration of **CICLOSPORIN** (increased risk of nephrotoxicity)—avoid concomitant use
- **Colestilan**: manufacturer of colestilan advises give tacrolimus at least 1 hour before or 3 hours after **COLESTILAN**
- **Cytoxics**: tacrolimus possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of tacrolimus by 6 to 12 hours; caution with tacrolimus advised by manufacturer of **CRIZOTINIB**; plasma concentration of tacrolimus increased by **IMatinib**
- **Dextrazoxane**: increased risk of immunosuppression with tacrolimus advised by manufacturer of **DEXRAZOXANE**
- **Diuretics**: increased risk of hyperkalaemia when tacrolimus given with **POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS**
- **Grapefruit Juice**: plasma concentration of tacrolimus increased by **GRAPEFRUIT JUICE**
- **Hormone Antagonists**: plasma concentration of tacrolimus possibly increased by **Lomitapide**
- **Mifamurtide**: avoidance of tacrolimus advised by manufacturer of **MIFAMURTIDE**
- **Omeprazole**: plasma concentration of tacrolimus possibly increased by **OMEPRAZOLE**
- **Ranolazine**: plasma concentration of tacrolimus increased by **RANOLAZINE**
- **Sevelamer**: plasma concentration of tacrolimus possibly reduced by **SEVELAMER**
- **Ulcer-healing Drugs**: plasma concentration of tacrolimus possibly increased by **OMEPRAZOLE**

#### Tadalafil
- **Alpha-blockers**: enhanced hypotensive effect when tadalafil given with **DOXAZOSIN**—manufacturer of tadalafil advises avoid concomitant use; enhanced hypotensive effect when tadalafil given with **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate tadalafil at the lowest possible dose
- **Anti-arrhythmics**: avoidance of tadalafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias)
- **Antibacterials**: plasma concentration of tadalafil possibly increased by **CLARITHROMYCIN** and **ERYTHROMYCIN**; plasma concentration of tadalafil reduced by **RIFAMPICIN**—manufacturer of tadalafil advises avoid concomitant use
- **Antifungals**: tadalafil concentration is increased by **KETOCONAZOLE**—avoid concomitant use of tadalafil for pulmonary hypertension; plasma concentration of tadalafil possibly increased by **ITRACONAZOLE**
- **Antivirals**: plasma concentration of tadalafil possibly increased by **FOSAMPRENAVIR** and **INDINAVIR**; plasma concentration of tadalafil increased by **RITONAVIR**—manufacturer of tadalafil advises avoid concomitant use; increased risk of ventricular arrhythmias when tadalafil given with **SAQUINAVIR**—avoid concomitant use; avoidance of high doses of tadalafil advised by manufacturer of **TELAPREVIR**—consult product literature
- **BoSENTAN**: plasma concentration of tadalafil reduced by **BOSENTAN**
- **Cobicistat**: plasma concentration of tadalafil possibly increased by **COBICISTAT**—manufacturer of cobicistat advises reduce dose of tadalafil (consult cobicistat product literature)
- **Dapoxetine**: avoidance of tadalafil advised by manufacturer of **DAPOXETINE**

#### Tadalafil (continued)
- **Grapefruit Juice**: plasma concentration of tadalafil possibly increased by **GRAPEFRUIT JUICE**
- **Nicorandil**: tadalafil significantly enhances hypotensive effect of **NICORANDIL** (avoid concomitant use)
- **Nitrazides**: tadalafil significantly enhances hypotensive effect of **NITRATES** (avoid concomitant use)
- **Riociguat**: possible enhanced hypotensive effect when tadalafil given with **RIOCIGUAT**—avoid concomitant use

#### Tamoxifen
- **Antibacterials**: metabolism of tamoxifen accelerated by **RIFAMPICIN** (reduced plasma concentration)
- **Anticoagulants**: tamoxifen enhances anticoagulant effect of **COUMARINS**
- **Antidepressants**: metabolism of tamoxifen to active metabolite possibly inhibited by **FLUOXETINE** and **PAROXETINE** (avoid concomitant use)
- **Antipsychotics**: avoidance of tamoxifen advised by manufacturer of **DROPERIDOL** (risk of ventricular arrhythmias)
- **Bupropion**: metabolism of tamoxifen to active metabolite possibly inhibited by **BUPROPION** (avoid concomitant use)
- **Cinacalcet**: metabolism of tamoxifen to active metabolite possibly inhibited by **CINACALCET** (avoid concomitant use)

#### Tamsulosin
see Alpha-blockers

#### Tapentadol
see Opioid Analgesics

#### Taxanes
see Cabazitaxel, Docetaxel, and Paclitaxel

#### Tegafur
- **Antibacterials**: metabolism of tegafur inhibited by **METRONIDAZOLE** (increased toxicity)
- **Anticoagulants**: tegafur enhances anticoagulant effect of **COUMARINS**
- **Antiepileptics**: tegafur possibly inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- **Antipsychotics**: avoidance of concomitant use of cytoxotics with **CLOzapine** (increased risk of agranulocytosis)
- **Filgrastim**: neutropenia possibly exacerbated when tegafur given with **FILGRASTIM**
- **Folates**: toxicity of tegafur increased by **FOLIC ACID**—avoid concomitant use
- **Lipogfilgrastim**: neutropenia possibly exacerbated when tegafur given with **LIPOGFILGRASTIM**
- **PEGFILGRASTIM**: neutropenia possibly exacerbated when tegafur given with **PEGFILGRASTIM**
- **Ulcer-healing Drugs**: metabolism of tegafur inhibited by **CIMETIDINE** (increased plasma concentration)

#### Teicoplanin
- **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE** see under Typhoid Vaccine in BNF

#### Telaprevir
- **Alpha-blockers**: manufacturer of telaprevir advises avoid concomitant use with **ALFIZOSIN**
- **Analgesics**: manufacturer of telaprevir advises caution with **METHADONE** (risk of ventricular arrhythmias)
- **Anti-arrhythmics**: manufacturer of telaprevir advises avoid concomitant use with **AMIODARONE** and **DISOPYRAMIDE** (risk of ventricular arrhythmias); manufacturer of telaprevir advises caution with intravenous **LIDOCAINE**
- **Antibacterials**: plasma concentration of both drugs possibly increased when telaprevir given with **CLARITHROMYCIN**, **ERYTHROMYCIN** and **TELITHROMYCIN** (increased risk of ventricular arrhythmias); manufacturer of telaprevir advises avoid concomitant use with **RIFAMPICIN**—avoid concomitant use
- **Anticoagulants**: telaprevir possibly affects plasma concentration of **WARFARIN**; avoidance of telaprevir advised by manufacturer of **APIXABAN**; telaprevir possibly increases plasma concentration of **DABIGRATAN**
- **Antidepressants**: telaprevir possibly increases plasma concentration of **TRAZODONE**; manufacturer of telaprevir advises avoid concomitant use with **ST JOHN’S WORT**
### Telaprevir (continued)

- **Antidiabetics:** telaprevir increases plasma concentration of **metformin** (consider reducing dose of metformin).
- **Antiepileptics:** manufacturer of telaprevir advises avoid concomitant use with **carbamazepine**, **fosphenytoin**, **phenobarbital**, and **phenytoin**.
- **Antifungals:** plasma concentration of both drugs possibly increased when telaprevir given with **ketoconazole** (increased risk of ventricular arrhythmias)—reduce dose of ketoconazole; telaprevir possibly increases plasma concentration of **itraconazole**; telaprevir possibly increases plasma concentration of **posaconazole** (increased risk of ventricular arrhythmias); telaprevir possibly affects plasma concentration of **voriconazole** (possible increased risk of ventricular arrhythmias).
- **Antipsychotics:** telaprevir possibly increases plasma concentration of **loratadine**—avoid concomitant use; manufacturer of telaprevir advises avoid concomitant use with **pimozide**; telaprevir possibly increases plasma concentration of **quetiapine**—manufacturer of quetiapine advises avoid concomitant use.
- **Antivirals:** plasma concentration of telaprevir possibly reduced by **atazanavir**, also plasma concentration of atazanavir possibly increased; telaprevir increases the plasma concentration of **daclatasvir**—reduce dose of daclatasvir (see under Daclatasvir, p. 544); avoid concomitant use of telaprevir with **darunavir**; plasma concentration of telaprevir reduced by **efavirenz**—increase dose of telaprevir; manufacturers advise avoid concomitant use of telaprevir with **osampruvir** and **lorzepam**; telaprevir increases plasma concentration of **maraviroc** (consider reducing dose of maraviroc); plasma concentration of telaprevir possibly reduced by **nevirapine**—consider increasing dose of telaprevir; plasma concentration of telaprevir possibly reduced by **biktarvy**; plasma concentration of telaprevir possibly increased by **biktarvy** (increase dose of telaprevir).
- **Beta-blockers:** manufacturer of telaprevir advises avoid concomitant use with **sotolol** (risk of ventricular arrhythmias).
- **Bosentan:** plasma concentration of telaprevir possibly increased by **bosentan**, also plasma concentration of bosentan possibly increased.
- **Calcium-channel Blockers:** telaprevir increases plasma concentration of **amlodipine** (consider reducing dose of amlodipine); manufacturer of telaprevir advises caution with **diltiazem**, **felodipine**, **nicardipine**, **nifedipine** and **verapamil**.
- **Cardiac Glycosides:** telaprevir increases plasma concentration of **digoxin**.
- **Ciclosporin:** plasma concentration of both drugs increased when telaprevir given with **ciclosporin** (reduce dose of ciclosporin).
- **Cilostazol:** telaprevir possibly increases plasma concentration of **cilostazol** (see under Cilostazol, p. 206).
- **Colchicine:** telaprevir possibly increases risk of **colchicine** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment).
- **Corticosteroids:** telaprevir possibly increases plasma concentration of **inhaled** and **intranasal budesonide** and **fluticasone**; plasma concentration of telaprevir possibly reduced by **dexmethasone**.
- **Cytotoxic:** telaprevir possibly increases the plasma concentration of **busulphan**—manufacturer of busulphan advises avoid or consider reducing dose of busulphan; manufacturer of ruxolitinib advises dose reduction when telaprevir given with **ruxolitinib**—consult ruxolitinib product literature.
- **Domeridone:** possible increased risk of ventricular arrhythmias when telaprevir given with **domperidone**—avoid concomitant use.
- **Ergot Alkaloids:** manufacturer of telaprevir advises avoid concomitant use with **ergot alkaloids**.

### Telaprevir (continued)

- **Lipid-regulating Drugs:** manufacturer of telaprevir advises avoid concomitant use with **atorvastatin**; manufacturers advise avoid concomitant use of telaprevir with **simvastatin**; avoidance of telaprevir advised by manufacturer of **lovastatin** (plasma concentration oflovastatin possibly increased).
- **Dextrans:** telaprevir possibly reduces plasma concentration of **ethinylestradiol**—manafacturer of telaprevir advises additional contraceptive precautions.
- **Sildenafil:** manufacturer of telaprevir advises avoid concomitant use with **sildenafil**.
- **Sirolimus:** plasma concentration of both drugs increased when telaprevir given with **sirolimus** (reduce dose of sirolimus).
- **Symptomimetics, Beta2:** manufacturer of telaprevir advises avoid concomitant use with **salbutamol** (risk of ventricular arrhythmias).
- **Tacrolimus:** plasma concentration of both drugs increased when telaprevir given with **tacrolimus** (reduce dose of tacrolimus).
- **Tadalafil:** manufacturer of telaprevir advises avoid concomitant use with high doses of **tadalafil**—consult product literature.
- **Vardenafil:** manufacturer of telaprevir advises avoid concomitant use with **vardenafil**.

### Telaprevir (continued)

- **Vaccines:** antibacterials inactivate oral **typhoid vaccine**—see under Typhoid Vaccine in BNF.

### Telbivudine

- **Interferons:** increased risk of peripheral neuropathy when telbivudine given with **interferon alpha** and **peginterferon alpha**.

### Telithromycin

- **Analgesics:** possible increased risk of ventricular arrhythmias when telithromycin given with **ibuprofen**; telithromycin inhibits the metabolism of **oxycodeone**.
- **Anti-arrhythmics:** possible increased risk of ventricular arrhythmias when telithromycin given with **amiodarone** and **dofetilide**, increased risk of ventricular arrhythmias when telithromycin given with **dronedarone**—avoid concomitant use.
- **Antibacterials:** possible increased risk of ventricular arrhythmias when telithromycin given with **meropenem** and **levofloxacin**; plasma concentration of telithromycin reduced by **ritampicin** (avoid during and for 2 weeks after ritampicin).
- **Anticoagulants:** avoidance of telithromycin advised by manufacturer of **apixaban**.
- **Antidepressants:** possible increased risk of ventricular arrhythmias when telithromycin given with **clozapine** and **tricyclics**; plasma concentration of telithromycin reduced by **st john’s wort** (avoid during and for 2 weeks after St John’s wort).
- **Antiepileptics:** plasma concentration of telithromycin reduced by **carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin** and **primidone** (avoid during and for 2 weeks after carbamazepine, fosphenytoin, phenobarbital, phenytoin and primidone).
- **Antifungals:** plasma concentration of telithromycin increased by **ketoconazole**—avoid in severe renal and hepatic impairment.
- **Antimycobacterics:** manufacturer of fosoterodine advises dose reduction when telithromycin given with **fosoterodine**—consult fosoterodine product literature.
- **Antipsychotics:** possible increased risk of ventricular arrhythmias when telithromycin given with **chlorpromazine**; telithromycin possibly increases plasma concentration of **loratadine**—avoid concomitant use; increased risk of ventricular arrhythmias when telithromycin given with **pimozide**—avoid concomitant use; telithromycin possibly increases plasma concentration of **quetiapine**.
- **Antivirals:** manufacturer of telithromycin advises avoid concomitant use with **atazanavir**, **fosamprenavir**, **indinavir**, **lopinavir** and **ritonavir** and **tipranavir** in severe renal and hepatic impairment; telithromycin possibly increases the plasma concentration of **daclatasvir**—reduce
Telithromycin

- Antivirals (continued) dose of daclatasvir (see under Daclatasvir, p. 544); telithromycin possibly increases plasma concentration of:
  - MARAVIROC (consider reducing dose of maraviroc); manufacturer of telithromycin advises avoid concomitant use with:
  - SAQUINAVIR (risk of ventricular arrhythmias); telithromycin possibly increases plasma concentration of:
  - SIMEPREVIR—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs possibly increased when telithromycin given with:
  - TELAPREVIR (increased risk of ventricular arrhythmias); telithromycin possibly increases plasma concentration of:
  - ANXIOLYtics and Hypnotics: telithromycin inhibits metabolism of:
  - MIDAZOLAM (increased plasma concentration with increased sedation)
  - Aprepitant: telithromycin possibly increases plasma concentration of Aprepitant
  - Dapoxetine: telithromycin possibly increases plasma concentration of:
  - DOMPERIDONE
  - Calcium-channel blockers: telithromycin possibly inhibits metabolism of:
    - CICLOSPORIN (increased risk of side-effects)
  - Cardiac Glycosides: telithromycin reduces plasma concentration of:
    - DIGOXIN
  - Cisplatin: telithromycin possibly increases plasma concentration of:
    - CICLOSPORIN
  - Colchicine: telithromycin possibly increases risk of:
    - COLCHICINE toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
  - Cytotoxics: telithromycin possibly increases plasma concentration of:
    - AXITINIB (reduce dose of axitinib—consult axitinib product literature); telithromycin possibly increases the plasma concentration of:
      - BOSONITIN and:
      - CABAZITAXEL—manufacturer of bosphitin and cabazitaxel advises avoid or consider reducing dose of bosphitin and cabazitaxel; telithromycin possibly increases plasma concentration of:
        - CRIZOTINIB and:
        - EVEROLIMUS—manufacturer of crizotinib and everolimus advises avoid concomitant use; avoidance of telithromycin advised by manufacturer of:
          - DASATINIB (plasma concentration of dasatinib possibly increased); telithromycin possibly increases the plasma concentration of:
            - IBRUTINIB—reduce dose of ibrutinib (see under ibrutinib, p. 809); avoidance of telithromycin advised by manufacturer of:
              - LAPATINIB and:
              - NILOTINIB; telithromycin possibly increases plasma concentration of:
                - PAAZOPANIB (reduce dose of pazolepin); telithromycin possibly increases plasma concentration of:
                  - PONATINIB—consider reducing initial dose of ponatinib (see under Ponatinib, p. 814); manufacturer of ruxolitinib advises dose reduction when telithromycin given with:
                    - RUXOLITINIB—consult ruxolitinib product literature; telithromycin possibly increases plasma concentration of:
                      - DOCETAXEL—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
                      - Dapoxetine: avoidance of telithromycin advised by manufacturer of:
                        - DAPOXETINE (increased risk of toxicity)
  - Diuretics: telithromycin increases plasma concentration of:
    - EPLERENONE—avoid concomitant use
  - Domperidone: possible increased risk of ventricular arrhythmias when telithromycin given with:
    - DOMPERIDONE—avoid concomitant use
  - Ergot Alkaloids: increased risk of ergotism when telithromycin given with:
    - ERGOTAMINE—avoid concomitant use
  - Fosaprepitant: telithromycin possibly increases plasma concentration of:
    - IVABRADINE—avoid concomitant use
  - Ivermectin: telithromycin possibly increases plasma concentration of:
    - IVERMECTIN (when used for onchocerciasis)
  - Lipid-regulating Drugs: increased risk of myopathy when telithromycin given with:
    - ATORVASTATIN or:
    - SIMVASTATIN (avoid concomitant use); possible increased risk of myopathy when telithromycin given with:
      - PRAVASTATIN; avoidance of telithromycin advised by manufacturer of:
        - LOVASTATIN (plasma concentration of lomitapide possibly increased)

Telithromycin (continued)

- Pentamidine isethionate: possible increased risk of ventricular arrhythmias when telithromycin given with:
  - PENTAMIDINE ISETHIONATE
  - Ranolazine: telithromycin possibly increases plasma concentration of:
    - RANOLAZINE—manufacturer of ranolazine advises avoid concomitant use
  - Sildenafil: telithromycin possibly increases plasma concentration of:
    - SILDENAFIL—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension
  - Sirolimus: telithromycin increases plasma concentration of:
    - SIROLIMUS—avoid concomitant use
  - Tacrolimus: telithromycin possibly increases plasma concentration of:
    - TACROLIMUS
  - Ulipristal: avoidance of telithromycin advised by manufacturer of:
    - LOW-DOSE ULIPRISTAL
  - Vaccines: antibacterials inactivate:
    - ORAL TYPHOID VACCINE—see under Typhoid Vaccine in BNF

Temisipamil

- Angiotensin-II Receptor Antagonists
- ANXIOLytics and Hypnotics
- TEMOCILLin

Temoporfin

- Cytotoxics: increased skin photosensitivity when temoporfin given with topical:
  - FLUOROURACIL

Temozolomide

- Antiepileptics: plasma concentration of temozolomide increased by:
  - SODIUM VALPROATE and VALPROIC ACID
- Antipsychotics: avoid concomitant use of cytoxotics with:
  - CLOZAPINE (increased risk of agranulocytosis)

Temsirolimus

- NOTE The main active metabolite of temsirolimus is sirolimus—see also interactions of sirolimus and consult product literature
- Antibacterials: plasma concentration of active metabolite of temsirolimus reduced by:
  - RIFAMPCIN—avoid concomitant use
- Antifungals: plasma concentration of active metabolite of temsirolimus increased by:
  - KETOCONAZOLE—avoid concomitant use; manufacturer of temsirolimus advises avoid concomitant use with:
    - IRaconazole (plasma concentration of temsirolimus possibly increased)
- Antipsychotics: avoid concomitant use of cytoxotics with:
  - CLOZAPINE (increased risk of agranulocytosis)

Tenofivir

- Antivirals: manufacturer of tenofivir advises avoid concomitant use with:
  - ADEOFIVIR; tenofivir reduces plasma concentration of:
    - ATAZANAVIR, also plasma concentration of tenofivir possibly increased; tenofivir increases plasma concentration of:
      - DIDANOSES (increased risk of toxicity)—avoid concomitant use; plasma concentration of tenofivir increased by:
        - LOPINAVIR and TELAPREVIR
- Orlistat: absorption of tenofivir possibly reduced by:
  - ORLISTAT

Tenofovir

- see NSAIDs

Terazosin

- see Alpha-blockers

Terbinafine

- Antibacterials: plasma concentration of terbinafine reduced by:
  - RIFAMPCIN
- Antidepressants: terbinafine possibly increases plasma concentration of:
  - PAROXETINE and TRICYCLICS
- Antifungals: terbinafine increases plasma concentration of:
  - FLUCONAZOLE
- Ciclosporin: terbinafine possibly reduces plasma concentration of:
  - CICLOSPORIN
- Oestrogens: occasional reports of breakthrough bleeding when terbinafine given with:
  - OESTROGENS (when used for contraception)
- Progestogens: occasional reports of breakthrough bleeding when terbinafine given with:
  - PROGESTGENS (when used for contraception)
- Ulcer-healing Drugs: plasma concentration of terbinafine increased by:
  - CIMETIDINE

Terbutaline

- see Sympathomimetics, Beta2
Teriflunomide
  - Antibacterials: teriflunomide increases plasma concentration of CEFACLOR; plasma concentration of teriflunomide reduced by RIFAMPICIN.
  - Antiadrenergics: teriflunomide increases plasma concentration of PEPAGUANIDE.
  - Lipid-regulating Drugs: the effect of teriflunomide is significantly decreased by COLESTYRAMINE (enhanced elimination)—avoid unless drug elimination desired; teriflunomide increases plasma concentration of:
    - ROSUVASTATIN (consider reducing dose of rosuvastatin).
  - Oestrogens: teriflunomide increases plasma concentration of ETHINYLESTRODIOL.
  - Progestogens: teriflunomide increases plasma concentration of LEVONORGESTREL.
  - Vaccines: risk of generalised infections when teriflunomide given with live vaccines—avoid concomitant use.

Testolactone
  - Anticoagulants: testolactone enhances anticoagulant effect of:
    - COUMARINS and PHENIDIONE.

Testosterone
  - Anticoagulants: testosterone enhances anticoagulant effect of:
    - COUMARINS and PHENIDIONE.
  - Antidiabetics: testosterone possibly enhances hypoglycaemic effect of ANTIADIABETICS.
  - Tetrahydrozine
    - Antidepressants: risk of CNS toxicity when tetrabenzine given with MAOIS (avoid tetrabenzine for 2 weeks after MAOIS).
    - Antipsychotics: increased risk of extrapyramidal side-effects when tetrabenzine given with ANTIPSYCHOTICS.
    - Dopaminergics: increased risk of extrapyramidal side-effects when tetrabenzine given with AMANTADINE.
    - Metoclopramide: increased risk of extrapyramidal side-effects when tetrabenzine given with METOCLOPRAMIDE.

Tetracosactide
  - see Corticosteroids.

Tetracyclines see Tetracyclines

Tetracyclines
  - ACE inhibitors: absorption of tetracyclines reduced by QUINAPRIL tablets (quinapril tablets contain magnesium carbonate).
  - Adsorbents: absorption of tetracyclines possibly reduced by KAOLIN.
  - Antacids: absorption of tetracyclines reduced by ANTACIDS.
  - Antidiabetics: plasma concentration of doxycycline reduced by RIFAMPICIN—consider increasing dose of doxycycline; tetracyclines possibly antagonise effects of PENICILLINS.
  - Anticoagulants: tetracyclines possibly enhance anticoagulant effect of:
    - COUMARINS and PHENIDIONE.
  - Antidiabetics: tetracyclines possibly enhance hypoglycaemic effect of ANTIADIABETICS.
  - Tetrabenzine
    - Antidepressants: risk of CNS toxicity when tetrabenzine given with MAOIS (avoid tetrabenzine for 2 weeks after MAOIS).
    - Antipsychotics: increased risk of extrapyramidal side-effects when tetrabenzine given with ANTIPSYCHOTICS.
    - Dopaminergics: increased risk of extrapyramidal side-effects when tetrabenzine given with AMANTADINE.
    - Metoclopramide: increased risk of extrapyramidal side-effects when tetrabenzine given with METOCLOPRAMIDE.

Teriflunomide (continued)
  - Steroidal: absorption of tetracyclines reduced by STRONTIUM RANELATE (manufacturer of strontium ranelate advises avoid concomitant use).
  - Ulcer-healing Drugs: absorption of tetracyclines reduced by CLARITHROMYCIN and ISONIAZID; plasma concentration of tetracycline increased by CLARITHROMYCIN and CIPROFLOXACIN; metabolism of tetracycline accelerated by RIFAMPICIN (reduced plasma concentration); possible increased risk of convulsions when tetracycline given with QUINOLONES.
  - Antidepressants: plasma concentration of tetracycline increased by FLUOXETINE (concomitant use should usually be avoided, but where not possible halve tetracycline dose and monitor plasma-tetracycline concentration); plasma concentration of tetracycline possibly reduced by ST JOHN’S WORT.

Teriflunomide
  - Antiepileptics: metabolism of theophylline accelerated by CARBAMAZEPINE, PHENOBARBITAL and PRIMIDONE (reduced effect); plasma concentration of both drugs reduced when theophylline given with:
    - FOSFENITOIN and PHENITOIN.
  - Antifungals: plasma concentration of theophylline possibly reduced by:
    - FLUCONAZOLE and KETOCONAZOLE.
  - Antivirals: plasma concentration of theophylline possibly increased by:
    - ACICLOVIR and VALACICLOVIR; metabolism of theophylline accelerated by:
      - RITONAVIR (reduced plasma concentration).
    - Antipsychotics: plasma concentration of theophylline possibly reduces effects of BENZODIAZEPINES.

Teriflunomide
  - Caffeine citrate: avoidance of theophylline advised by manufacturer of CAFFEINE CITRATE.
  - Calcium-channel Blockers: plasma concentration of theophylline possibly reduced by:
    - CALCIUM-CHANNEL BLOCKERS (enhanced effect); plasma concentration of theophylline increased by:
      - DILTIAZEM; plasma concentration of theophylline increased by:
        - VERAPAMIL (enhanced effect).
    - Corticosteroids: increased risk of hypokalaemia when theophylline given with CORTICOSTEROIDS.
    - Cytotoxics: plasma concentration of theophylline possibly reduced by METHOTREXATE.

Teriflunomide
  - Deferasirox: plasma concentration of theophylline increased by:
    - DEFERASIRON (consider reducing dose of theophylline).
  - Disulfiram: metabolism of theophylline inhibited by:
    - DISULFiram (increased risk of toxicity).
  - Diuretics: increased risk of hypokalaemia when theophylline given with:
    - ACETAZOLAMIDE, LOOP DIURETICS and THIAZIDES AND RELATED DIURETICS.
  - Doxapram: increased CNS stimulation when theophylline given with:
    - DOXAPRAM.
  - Interferons: metabolism of theophylline inhibited by:
    - INTERFERON ALFA and PEIGNERIFERON ALFA (consider reducing dose of theophylline).
  - Leukotriene Receptor Antagonists: plasma concentration of theophylline possibly reduced by:
    - ZAFIRILUKAST, also plasma concentration of zafirlukast reduced.
  - Lithium: theophylline increases excretion of LITHIUM (reduced plasma concentration).
  - Oestrogens: plasma concentration of theophylline increased by:
    - OESTROGENS (consider reducing dose of theophylline).
Theophylline (continued)
- Pentoxifylline: plasma concentration of theophylline increased by pentoxifylline
- Roflumilast: avoidance of theophylline advised by manufacturer of roflumilast
- Sulfapyrazone: plasma concentration of theophylline reduced by sulfipyrazone
- Symptomimetics: manufacturer of theophylline advises avoid concomitant use with ephedrine in children
- Symptomimetics, Betas: increased risk of hypokalaemia when theophylline given with high doses of beta-sympathomimetics

- Ulcer-healing Drugs: metabolism of theophylline inhibited by:
  - Cimetidine (increased plasma concentration); absorption of theophylline possibly reduced by sucralfate (give at least 2 hours apart)
- Vaccines: plasma concentration of theophylline possibly increased by influenza vaccine

Thiazolidinediones see Antidiabetics
Thiotepa see Anaesthetics, General
Thiopentone
- Antipsychotics: avoid concomitant use of cytotoxics with:
  - Clozapine (increased risk of agranulocytosis)
- Muscle relaxants: thiopentone enhances effects of suxamethonium

Thioxanthenes see Antipsychotics
Thyroid Hormones
- Antacids: absorption of levothyroxine possibly reduced by antacids
- Anti-arrhythmics: serum concentrations of thyroid hormones can be affected by amiodarone—monitor thyroid function closely
- Antibacterials: metabolism of levothyroxine accelerated by rifampicin (may increase requirements for levothyroxine in hypothyroidism)
- Anticoagulants: thyroid hormones enhance anticoagulant effect of coumarins and phenindione
- Antidepressants: thyroid hormones enhance effects of amitriptyline and imipramine; thyroid hormones possibly enhance effects of tricyclics
- Antiepileptics: metabolism of thyroid hormones accelerated by carbamazepine, phenobarbitone and primidone (may increase requirements for thyroid hormones in hypothyroidism); metabolism of thyroid hormones accelerated by fosphenytoin and phenytoin (may increase requirements in hypothyroidism), also plasma concentration of fosphenytoin and phenytoin possibly increased
- Beta-blockers: levothyroxine accelerates metabolism of propranolol
- Calcium Salts: absorption of levothyroxine reduced by calcium salts
- Colestilan: manufacturer of colestilan advises give levothyroxine at least 1 hour before or 3 hours after colestilan
- Cytotoxics: plasma concentration of levothyroxine possibly reduced by imatinib
- Iron Salts: absorption of levothyroxine reduced by oral iron salts (give at least 2 hours apart)
- Lanthanum: absorption of levothyroxine reduced by lanthanum (give at least 2 hours apart)
- Lipid-regulating Drugs: absorption of levothyroxine reduced by colesvelelam; absorption of thyroid hormones reduced by colistipol and colestyramine
- Oestrogens: requirements for thyroid hormones in hypothyroidism may be increased by oestrogens
- Orlistat: possible increased risk of hypothyroidism when levothyroxine given with orlistat
- Polystyrene Sulfonate Resins: absorption of levothyroxine reduced by polystyrene sulfonate resins
- Sevelamer: absorption of levothyroxine possibly reduced by sevelamer
- Ulcer-healing Drugs: absorption of levothyroxine reduced by cimetidine and sucralfate

Tiagabine
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by maois and tricyclic-related antidepressants
- Antiepileptics: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered)
- Anticoagulants: possible increased risk of hypothyroidism when anticoagulants are given with ticagrelor
- Antibacterials: increased risk of toxicity when ticagrelor is given with alcohol
- Antibacterials inactivate oral typhoid vaccine—see under Typhoid Vaccine in BNF
- Beta-blockers: ticagrelor increases plasma concentration of dabigatran
- Cardiovascular Glycosides: ticagrelor increases plasma concentration of digoxin
- Ciclosporin: plasma concentration of ticagrelor increased by ciclosporin
- Ergot Alkaloids: ticagrelor possibly increases plasma concentration of ergot alkaloids
- Lipid-regulating Drugs: ticagrelor increases plasma concentration of simvastatin (increased risk of toxicity); separating administration from ticagrelor by 12 hours advised by manufacturer of lomitapide

Ticagrelor
- Antiepileptics: metabolism of ticagrelor possibly increased by clarithromycin—manufacturer of ticagrelor advises avoid concomitant use; plasma concentration of ticagrelor possibly increased by erythromycin; plasma concentration of ticagrelor reduced by rifampicin
- Anticoagulants: ticagrelor increases plasma concentration of dabigatran
- Antidepressants: possible increased risk of bleeding when ticagrelor given with citalopram, paroxetine or sertraline
- Antiepileptics: plasma concentration of ticagrelor possibly reduced by carbamazepine, fosphenytoin, phenobarbitone, phenytoin and primidone
- Antifungals: plasma concentration of ticagrelor increased by ketoconazole—manufacturer of ticagrelor advises avoid concomitant use
- Antivirals: plasma concentration of ticagrelor possibly increased by atazanavir and ritonavir—manufacturer of ticagrelor advises avoid concomitant use
- Calcium-channel Blockers: plasma concentration of ticagrelor increased by diltiazem
- Cardiac Glycosides: ticagrelor increases plasma concentration of digoxin
- Ciclosporin: plasma concentration of ticagrelor increased by ciclosporin
- Ergot Alkaloids: ticagrelor possibly increases plasma concentration of ergot alkaloids
- Lipid-regulating Drugs: ticagrelor increases plasma concentration of simvastatin (increased risk of toxicity); separating administration from ticagrelor by 12 hours advised by manufacturer of lomitapide

Ticarbilin see Penicillins
Tic-borne Encephalitis Vaccine see Vaccines
Tigecycline
- Anticoagulants: tigecycline possibly enhances anticoagulant effect of coumarins
- Vaccines: antibacterials inactivate oral typhoid vaccine—see under Typhoid Vaccine in BNF

Timolol see Beta-blockers
Tinidazole
- Alcohol: possibility of disulfiram-like reaction when tinidazole given with alcohol
- Antibacterials: plasma concentration of tinidazole possibly reduced by rifampicin
- Vaccines: antibacterials inactivate oral typhoid vaccine—see under Typhoid Vaccine in BNF

Tinzaparin see Heparins
Tioguanine
- Antipsychotics: avoid concomitant use of cytotoxics with clozapine (increased risk of agranulocytosis)
- Cytotoxics: increased risk of hepatotoxicity when tioguanine given with busulfan

Tiotropium see Antimuscarinics
Tipranavir
- Analgesics: plasma concentration of tipranavir possibly reduced by buprenorphine
- Antacids: absorption of tipranavir reduced by antacids (give at least 2 hours apart)
- Antibacterials: tipranavir increases plasma concentration of clarithromycin (reduce dose of clarithromycin in renal impairment), also plasma concentration of tipranavir increased by clarithromycin; tipranavir increases plasma concentration of rifabutin (reduce dose of rifabutin); plasma concentration of tipranavir possibly reduced by rifampicin—avoid concomitant use; avoidance of concomitant tipranavir in severe renal and hepatic impairment advised by manufacturer of telithromycin
- Anticoagulants: tipranavir advised avoid concomitant use with warfarin and low molecular weight heparins
- Antidepressants: plasma concentration of tipranavir possibly reduced by st john's wort—avoid concomitant use
- Antiepileptics: plasma concentration of tipranavir possibly reduced by carbamazepine
- Antifungals: plasma concentration of tipranavir increased by fluconazole
- Antimalarials: caution with tipranavir advised by manufacturer of artemether with lumefantrine; tipranavir possibly increases plasma concentration of quinine (increased risk of toxicity)
- Antimuscarinics: avoidance of tipranavir advised by manufacturer of darifenacin
- Antipsychotics: tipranavir possibly increases plasma concentration of aripiprazole (reduce dose of aripiprazole—consult aripiprazole product literature); tipranavir possibly increases plasma concentration of quetiapine—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: tipranavir reduces plasma concentration of abacavir, fosamprenavir, lopinavir, saquinavir and zidovudine; plasma concentration of tipranavir increased by atazanavir (also plasma concentration of atazanavir reduced); manufacturer of tipranavir advises avoid concomitant use with boceprevir and telaprevir; tipranavir reduces plasma concentration of didanosine—manufacturer of tipranavir advises tipranavir and didanosine capsules should be taken at least 2 hours apart; tipranavir reduces the plasma concentration of dolastegavir (see under dolastegavir, p. 557); tipranavir reduces plasma concentration of etravirine, also plasma concentration of tipranavir increased (avoid concomitant use)
- Beta-blockers: manufacturer of tipranavir advises avoid concomitant use with metoprolol for heart failure
- Beta-blockers: manufacturer of tipranavir advises avoid concomitant use with bosentan
- Cobicistat: plasma concentration of both drugs reduced when tipranavir given with cobicistat (avoid concomitant use)
- CYP3A4 inhibitors: increased risk of myopathy when tipranavir given with atorvastatin (see under atorvastatin, p. 179); tipranavir increases plasma concentration of rosuvastatin—adjust dose of rosuvastatin (consult product literature); tipranavir possibly increases plasma concentration of simvastatin—avoid concomitant use; avoidance of tipranavir advised by manufacturer of lomitapide (plasma concentration of lomitapide possibly increased)
- CYP3A4 inducers: absorption of tipranavir possibly reduced by orlistat
- CYP3A4 substrates: tipranavir possibly increases plasma concentration of ranolazine—manufacturer of ranolazine advises avoid concomitant use
- CYP3A4 substrates: manufacturer of tipranavir advises avoid concomitant use of sildenafil for pulmonary arterial hypertension
- CYP3A4 substrates: sympathomimetics, beta; manufacturer of tipranavir advises avoid concomitant use with salmeterol
- CYP3A4 substrates: ulcer-healing drugs: tipranavir reduces plasma concentration of esomeprazole and omeprazole
- CYP3A4 substrates: manufacturer of tipranavir advises caution with vardenafil

Tipranavir (continued)
- Vitamins: increased risk of bleeding when tipranavir given with high doses of vitamin e

Tirofiban
- Heparin: increased risk of bleeding when tirofiban given with heparin
- Tizanidine see muscle relaxants
- Tolbutamide see antidiabetics
- Tolcapone
- Antidepressants: avoid concomitant use of tolcapone with MAOIs
- Memantine: effects of dopaminergics possibly enhanced by memantine
- Methyldopa: antiparkinsonian effect of dopaminergics antagonised by methyldopa
- Tolnaftate see NSAIDs
- Tolterodine see antimuscarinics

Tolvaptan
- Antibacterials: plasma concentration of tolvaptan reduced by rifampicin
- Antifungals: plasma concentration of tolvaptan increased by ketoconazole—manufacturer of ketoconazole advises avoid concomitant use
- Cardiac Glycosides: tolvaptan increases plasma concentration of digoxin (increased risk of toxicity)
- Grapefruit juice: plasma concentration of tolvaptan increased by grapefruit juice—avoid concomitant use
- Lipid-regulating Drugs: separating administration from tolvaptan by 12 hours advised by manufacturer of lomitapide

Topiramate
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by MAOIs and tricyclic-related antidepresants (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by SSRIs and tricyclics (convulsive threshold lowered)
- Antidiabetics: topiramate possibly increases plasma concentration of meformin; topiramate possibly reduces plasma concentration of glibenclamide
- Antiepileptics: plasma concentration of topiramate often reduced by carbamazepine; topiramate increases plasma concentration of fosphenytoin and phenytoin (also plasma concentration of topiramate reduced); topiramate reduces plasma concentration of perampanel; plasma concentration of topiramate possibly reduced by phenobarbital and primidone; hyperammonaemia and CNS toxicity reported when topiramate given with sodium valproate and valproic acid
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by mefloquine
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by antipsychotics (convulsive threshold lowered)
- Biuretics: plasma concentration of topiramate possibly increased by hydrochlorothiazide
- Lithium: topiramate possibly affects plasma concentration of lithium
- Oestrogens: topiramate accelerates metabolism of oestrogens (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF)
- Oestrogens: possible increased risk of convulsions when antiepileptics given with orlistat
- Progestogens: topiramate accelerates metabolism of progestogens (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, eutogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF)
Interactions

Trimethoprim

- Anticoagulants: trimethoprim possibly increases plasma concentration of \textit{CUMARINS}
- Antiepileptics: metabolism of trimethoprim possibly accelerated by \textit{CARBAMAZEPINE} (reduced plasma concentration); metabolism of trimethoprim possibly accelerated by \textit{PHOSPHENYTOIN} and \textit{PHENYTOIN}; metabolism of trimethoprim accelerated by \textit{PHENOBARBITAL} and \textit{PRIMIDONE} (reduced plasma concentration)
- Cytotoxics: possible increased risk of ventricular arrhythmias when trimethoprim given with \textit{VANDENATANIB}—avoid concomitant use
- Diuretics: increased risk of hypercalcaemia when trimethoprim given with \textit{THIAZIDES AND RELATED DIURETICS}

Trantolapril

- Antiepileptics: metabolism of toremifene possibly enhanced by \textit{CARBAMAZEPINE} (reduced plasma concentration); metabolism of toremifene possibly accelerated by \textit{PHOSPHENYTOIN} and \textit{PHENYTOIN}; metabolism of toremifene accelerated by \textit{PHENOBARBITAL} and \textit{PRIMIDONE} (reduced plasma concentration)
- Cytotoxics: possible increased risk of haematological toxicity when trimethoprim given with \textit{METHOTREXATE}
- Diuretics: increased risk of hyperkalaemia when trimethoprim given with \textit{SPIRONOLACTONE}

Trihexyphenidyl

- Vaccines: antibacterials inactivate \textit{ORAL TYPHOID VACCINE}—see under Typhoid Vaccine in \textit{BNF}

Ulipristal

- Anticoagulants: ulipristal possibly reduced (contraceptive effect of ulipristal possibly reduced)
- Antidepressants: ulipristal possibly reduced (contraceptive effect of ulipristal possibly reduced)
- Antiepileptics: increased risk of nephrotoxicity when trimethoprim given with \textit{CICLOSPORIN}, also plasma concentration of ciclosporin reduced by \textit{INTRAENOUS}

Ursooxyhemic Acid

- Bile Acids

Vaccines

- Abacavir: risk of generalised infections when monoclonal antibodies given with live \textit{VACCINES}—avoid concomitant use
- Aminophylline: influenza vaccine possibly increases plasma concentration of \textit{AMINOPHYLLINE}
Vaccines (continued)

- Anakinra: risk of generalised infections when live vaccines given with • ANAKINRA—avoid concomitant use
- Antibacterials: oral typhoid vaccine inactivated by • ANTIBACTERIALS—see under Typhoid Vaccine in BNF
- Antivirals: influenza vaccine possibly enhances anticoagulant effect of WARFARIN
- Antiepileptics: influenza vaccine enhances effects of FOSPHENYTOIN and PHENYTOIN
- Antimalarials: oral typhoid vaccine inactivated by • ANTIMALARIALS—see under Typhoid Vaccine in BNF
- Corticosteroids: immune response to vaccines impaired by high doses of • CORTICOSTEROIDS—avoid concomitant use with live vaccines
- Cytotoxics: risk of generalised infections when live vaccines given with • DOXORUBICIN, • MONOCLONAL ANTIBODIES, • PIXANTRONE or • TRABECETIN—avoid concomitant use
- Dexamethasone: risk of generalised infections when live vaccines given with • DEXAMETHASONE—avoid concomitant use
- Etanercept: risk of generalised infections when live vaccines given with • ETANERCEPT—avoid concomitant use
- Immunglobulins: impaired immune response to oral poliomyelitis vaccine might occur with • ANTI-D IMMUNOGLOBULINS and • NORMAL IMMUNOGLOBULINS—give oral poliomyelitis vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; impaired immune response to BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine might occur with • ANTI-D IMMUNOGLOBULINS—give BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins; impaired immune response to live influenza vaccine might occur with • ANTI-D IMMUNOGLOBULINS and • NORMAL IMMUNOGLOBULINS—give live influenza vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; impaired immune response to BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine might occur with • NORMAL IMMUNOGLOBULINS—give BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine at least 3 weeks before or 3 months after normal immunoglobulin
- Interferons: avoidance of vaccines advised by manufacturer of • INTERFERON GAMMA
- Leflunomide: risk of generalised infections when live vaccines given with • LEFLUNOMIDE—avoid concomitant use
- Teriflunomide: risk of generalised infections when live vaccines given with • TERIFLUNOMIDE—avoid concomitant use
- Theophylline: influenza vaccine possibly increases plasma concentration of THEOPHYLLINE

Valaciclovir

- Aminophylline: valaciclovir possibly increases plasma concentration of AMINOPHYLLINE
- Ciclosporin: increased risk of nephrotoxicity when valaciclovir given with • CICLOSPORIN
- Mycophenolate: plasma concentration of valaciclovir increased by MYCOPHENOLATE, also plasma concentration of inactive metabolite of mycophenolate increased
- Tacrolimus: possible increased risk of nephrotoxicity when valaciclovir given with • TACROLIMUS
- Theophylline: valaciclovir possibly increases plasma concentration of THEOPHYLLINE

Valganciclovir

- Antibacterials: increased risk of convulsions when valganciclovir given with • IMIPENEM WITH CLINSTATIN
- Anticancer drugs: valganciclovir possibly increases plasma concentration of DIDANOINE; profound myelosuppression when valganciclovir given with • ZIDOVUDINE (if possible avoid concomitant administration, particularly during initial valganciclovir therapy)
- Mycophenolate: plasma concentration of valganciclovir possibly increased by MYCOPHENOLATE, also plasma concentration of inactive metabolite of mycophenolate possibly increased
- Tacrolimus: possible increased risk of nephrotoxicity when valganciclovir given with • TACROLIMUS

Valproic Acid

- Analgesics: effects of valproic acid enhanced by • ASPIRIN
- Antibacterials: metabolism of valproic acid possibly inhibited by • ERYTHROMYCIN (increased plasma concentration, avoidance of valproic acid advised by manufacturer of • PIVMECILAMIN; plasma concentration of valproic acid reduced by • CARBAPENEMS—avoid concomitant use
- Anticoagulants: valproic acid possibly enhances anticoagulant effect of CUMARINS
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by • MAOIS and • TRICYCLIC-RELATED ANTIDEPRESSANTS (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by • SSRIS and • TRICYCLICS (convulsive threshold lowered)
- Antiepileptics: plasma concentration of valproic acid reduced by • CARBAMAZEPINE, also plasma concentration of active metabolite of carbamazepine increased; valproic acid possibly increases plasma concentration of • ETHOSUXIMIDE; valproic acid increases or possibly decreases plasma concentration of • FOSPHENYTOIN and • PHENYTOIN, also plasma concentration of valproic acid reduced; valproic acid increases plasma concentration of • LAMOTRIGINE (increased risk of toxicity—reduce lamotrigine dose); valproic acid sometimes reduces plasma concentration of an active metabolite of • OXCARBAZEPINE; valproic acid increases plasma concentration of • PHENOBARBITAL and • PRIMIDONE (also plasma concentration of valproic acid reduced); valproic acid possibly increases plasma concentration of • RUFINAMIDE (reduce dose of rufinamide); hyperammonaemia and CNS toxicity reported when valproic acid given with • TOPIRAMATE
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by • MELFLOQUINE
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by • ANTI-PSYCHOTICS (convulsive threshold lowered); valproic acid possibly increases or decreases plasma concentration of • CLOZAPINE; increased risk of side-effects including neutropenia when valproic acid given with • OLANZAPINE
- Antivirals: plasma concentration of valproic acid possibly reduced by • RITONAVIR; valproic acid possibly increases plasma concentration of • ZIDOVUDINE (increased risk of toxicity)
- Anxiolytics and Hypnotics: plasma concentration of valproic acid possibly increased by • CLOBAZAM; increased risk of side-effects when valproic acid given with • CLONAZEPAM; valproic acid possibly increases plasma concentration of • DIAZEPAM and • LORAZEPAM
- Bupropion: valproic acid inhibits the metabolism of • BUPROPION
- Cytotoxics: valproic acid increases plasma concentration of • TEMOZOLOMIDE
- Lipid-regulating Drugs: absorption of valproic acid possibly reduced by • COLESTYRAMINE
- Oestrogens: plasma concentration of valproic acid possibly reduced by • ETHINYLESTRIADIOL
- Orlistat: possible increased risk of convulsions when antiepileptics given with • ORLISTAT
- Sodium Benzoate: valproic acid possibly reduces effects of • SODIUM BENZOATE
- Sodium Oxbate: valproic acid increases the plasma concentration of • SODIUM OXVATE (see under Sodium Oxbate, p. 425)
- Sodium Phenybutyrate: valproic acid possibly reduces effects of • SODIUM PHENYL BUTYRATE
- Ulcer-healing Drugs: metabolism of valproic acid inhibited by • CIMETIDINE (increased plasma concentration)

Valsartan see Angiotensin-II Receptor Antagonists

Vancomycin

- Anaesthetics, General: hypersensitivity-like reactions can occur when intravenous vancomycin given with • GENERAL ANAESTHETICS
Appendix 1 Interactions

Vandetanib

- **Hormone Antagonists:**
  - **Beta-blockers:** increased risk of nephrotoxicity when vandetanib given with **AMIODARONE** or **DISOPYRAMIDE**—avoid concomitant use.
  - **Antidiabetics:** increased risk of ventricular arrhythmias when vandetanib given with **CARBAMAZEPINE**, **NICOTINICOTINE**, **PHENOBARBITAL**, **PHENYTOIN**, **SULPIRIDE**, or **ZUCLOPENTHILOXIL**—avoid concomitant use; avoid concomitant use with **ST JOHN’S WORT** (plasma concentration of vandetanib possibly reduced).
  - **Diuretics:** increased risk of ventricular arrhythmias when vandetanib given with **LUMEFANTRINE**—consider reducing dose of vandetanib (consult cobicistat product literature).

- **Antidepressants:**
  - **Antidepressants:** manufacturer of vandetanib advises avoid concomitant use with **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE** (plasma concentration of vandetanib possibly reduced).
  - **Antihistamines:** increased risk of ventricular arrhythmias when vandetanib given with **MIZOLASTINE**—avoid concomitant use.
  - **Antimalarials:** increased risk of ventricular arrhythmias when vandetanib given with **AMIFLUX**—avoid concomitant use.
  - **Antipsychotics:** increased risk of ventricular arrhythmias when vandetanib given with **AMISULPRIDE**, **HALOPERIDOL**, **PIMOZIDE**, **SULPIRIDE** or **ZUCLOPENTHILOXIL**—avoid concomitant use; avoid concomitant use of cytoxotics with **CLOZAPINE** (increased risk of agranulocytosis).

- **Analgesics:**
  - **Beta-blockers:** possible increased risk of ventricular arrhythmias when vandetanib given with **SOTALOL**—avoid concomitant use.
  - **Cardiac Glycosides:** vandetanib increases plasma concentration of **DIGOXIN**—possible increased risk of bradycardia.
  - **Cytotoxic:** possible increased risk of ventricular arrhythmias when vandetanib given with **ARSENIC TRIOXIDE**—avoid concomitant use.
  - **Hormone Antagonists:** possible increased risk of ventricular arrhythmias when vandetanib given with **Toremifene**—avoid concomitant use.
  - **SHT-receptor Antagonists:** increased risk of ventricular arrhythmias when vandetanib given with **ONDANSETRON**—avoid concomitant use.
  - **Pentamidine isonitate:** possible increased risk of ventricular arrhythmias when vandetanib given with **PENTAMIDINE ISONITRATE**—avoid concomitant use.

- **Antibacterials:**
  - **Antibacterials:** plasma concentration of vandetanib possibly increased by **FOSAMPRENAVIR**—avoid concomitant use; plasma concentration of vandetanib increased by **TIBFENIVIR**—avoid concomitant use; increased risk of ventricular arrhythmias when vandetanib given with **CRITIYBICSTAT**—avoid concomitant use; avoidance of vandetanib advised by manufacturer of **TIBFENIVIR**—caution with vandetanib advised by manufacturer of **TIBFENIVIR**.
  - **Cobain-channel Blockers:** enhanced hypotensive effect when vandetanib given with **NIFEDIPINE**.

- **Antivirals:**
  - **Antivirals:** plasma concentration of vandetanib possibly increased by **FOSAMPRENAVIR**—avoid concomitant use; plasma concentration of vandetanib increased by **INDINAVIR** and **RITONAVIR**—avoid concomitant use; increased risk of ventricular arrhythmias when vandetanib given with **SAMLOPINE**—avoid concomitant use; avoidance of vandetanib advised by manufacturer of **TIBFENIVIR**.
  - **Calcium-channel Blockers:** enhanced hypotensive effect when vandetanib given with **NIFEDIPINE**.

- **Anticonvulsants:**
  - **Anticonvulsants:** enhanced hypotensive effect when vandetanib given with **RUCTIGAN®**—avoid concomitant use.

- **Antihypertensives:**
  - **ACE Inhibitors:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ACE INHIBITORS**.
  - **Alpha-blockers:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ADRENERGIC NEURONE BLOCKERS**.
  - **Alcohol:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALCOHOL**.
  - **Aldesleukin:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALDESLEUKIN**.
  - **Alphablockers:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALPHA-BLOCKERS**.
  - **Anaesthetic, General:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **GENERAL ANAESTHETICS**.
  - **Analgesics:** enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **GENERAL ANALGESICS**.

**Vardenafil**

- **Alpha-blockers:** enhanced hypotensive effect when vardenafil given with **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate vardenafil at the lowest possible dose—separate doses by 6 hours (except with tamsulosin).
- **Anti-arrhythmics:** avoidance of vardenafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias).
- **Antibacterials:** plasma concentration of vardenafil possibly increased by **ERTHROMYCIN** (consider reducing initial dose of vardenafil); plasma concentration of vardenafil increased by **ERYTHROMYCIN** (reduce dose of vardenafil).
- **Antifungals:** plasma concentration of vardenafil increased by **KETOCONAZOLE**—avoid concomitant use; plasma concentration of vardenafil possibly increased by **ITRACONAZOLE**—avoid concomitant use.
- **Antivirals:** plasma concentration of vardenafil possibly increased by **FOSAMPRENAVIR**—avoid concomitant use; plasma concentration of vardenafil increased by **INDINAVIR** and **RITONAVIR**—avoid concomitant use; increased risk of ventricular arrhythmias when vardenafil given with **SAMLOPINE**—avoid concomitant use; avoidance of vardenafil advised by manufacturer of **TIBFENIVIR**—caution with vandetanib advised by manufacturer of **TIBFENIVIR**.
- **Calcium-channel Blockers:** enhanced hypotensive effect when vandetanib given with **RUCTIGAN®**—avoid concomitant use.
- **Anticonvulsants:** enhanced hypotensive effect when vandetanib given with **RUCTIGAN®**—avoid concomitant use.
- **Antihypertensives:** enhanced hypotensive effect when vandetanib given with **RUCTIGAN®**—avoid concomitant use.

**Varicella-zoster Vaccine**—see Vaccines.
Vasodilator Antihypertensives (continued)  
- Calcium-channel Blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with CALCULUM CHANNEL BLOCKERS  
- Clonidine: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with CLONIDINE  
- Corticosteroids: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by CORTICOSTEROIDS  
- Diazoxide: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with DIAZOXIDE  
- Diuretics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with DIURETICS  
- Dopaminergic: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with DOPIAMINERGIC  
- Vasodilator Antihypertensives: enhanced hypotensive effect when hydralazine given with MINOXIDIL or DUMOXIDINE  
  - Nitrates: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with NITRATES  
  - Oestrogens: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by OESTROGENS  
  - Prostaglandins: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with PROSTAGLANDIN  
  - Vasodilator Antihypertensives: enhanced hypotensive effect when hydralazine given with MINOXIDIL or DUMOXIDINE  

Vemurafenib  
- Analgesics: increased risk of bleeding when venlafaxine given with ANALGESICS  
- NSAIDS or ASPIRIN: possible increased serotonergic effects when SSRI-related antidepressants given with FENTANYL; possible increased serotonergic effects when venlafaxine given with TRAMADOL  
- Anticoagulants: venlafaxine possibly enhances anticoagulant effect of Warfarin; possible increased risk of bleeding when SSRI-related antidepressants given with DABIGATRAN  
- Antipsychotics: venlafaxine increases plasma concentration of HALOPERIDOL  
- Atomoxetine: possible increased risk of convulsions when antidepressants given with ATOMOXETINE  
- Dopamine: possible increased risk of serotonergic effects when venlafaxine given with DOPAMINERGIC  
- Ejaculation: manufacturer of vemurafenib advises avoid concomitant use of cytoxics with EJACULATION  
- PHENYTOIN—risk of CNS toxicity when SSRI-related antidepressants given with METHYLPHENOTHIAZINES  
- Dapoxetine: manufacturer of vemurafenib advises avoid venlafaxine for 2 weeks after stopping venlafaxine  
- Dopaminergic: caution with venlafaxine advised by manufacturer of ENTACAPONE; increased risk of hypertension and CNS excitation when venlafaxine given with Dopaminergic  
- Selegiline (selegiline should not be started until 1 week after stopping venlafaxine, avoid venlafaxine for 2 weeks after stopping selegiline)  
- Dopamine: possible increased risk of convulsions when given with dopaminergic  
- Antidepressants: possible increased risk of convulsions when given with antipsychotics  
- Antidepressants: possible increased risk of convulsions when given with MOCLOBEMIDE  
- Antipsychotics: venlafaxine increases plasma concentration of HALOPERIDOL  
- Atomoxetine: possible increased risk of convulsions when antidepressants given with ATOMOXETINE  
- Dopamine: possible increased risk of serotonergic effects when venlafaxine given with DOPAMINERGIC  
- PHENYTOIN—risk of CNS toxicity when SSRI-related antidepressants given with METHYLPHENOTHIAZINES  
- Dapoxetine: manufacturer of vemurafenib advises avoid concomitant use of cytoxics with DOPAMINERGIC  
- PHENYTOIN—risk of CNS toxicity when SSRI-related antidepressants given with METHYLPHENOTHIAZINES  
- Dapoxetine: manufacturer of vemurafenib advises avoid concomitant use of cytoxics with DOPAMINERGIC  
- PHENYTOIN—risk of CNS toxicity when SSRI-related antidepressants given with METHYLPHENOTHIAZINES  
- Dopaminergic: caution with venlafaxine advised by manufacturer of ENTACAPONE; increased risk of hypertension and CNS excitation when venlafaxine given with Dopaminergic  
- Selegiline (selegiline should not be started until 1 week after stopping venlafaxine, avoid venlafaxine for 2 weeks after stopping selegiline)  
- Dopamine: possible increased risk of convulsions when given with dopaminergic  
- Antidepressants: possible increased risk of convulsions when given with antipsychotics  
- Antidepressants: possible increased risk of convulsions when given with MOCLOBEMIDE  
- Antipsychotics: venlafaxine increases plasma concentration of HALOPERIDOL  
- Atomoxetine: possible increased risk of convulsions when antidepressants given with ATOMOXETINE  
- Dopamine: possible increased risk of serotonergic effects when venlafaxine given with DOPAMINERGIC
Vincristine

- Antibacterials: possible increased risk of ventricular arrhythmias when vincristine given with • DELAMANID
- Antifungals: possible increased risk of vincristine toxicity when given with • ITRACONAZOLE; metabolism of vincristine possibly inhibited by • POSACONAZOLE (increased risk of neurotoxicity)
- Antimalarials: avoid of vincristine advised by manufacturer of • ARTEMISOL WITH PIPERAQUINE
- Antipsychotics: avoid concomitant use of cytotoxics with • MICONAZOLE (increased risk of agranulocytosis)
- Calcium-channel Blockers: metabolism of vincristine possibly inhibited by • NIFEDIPINE
- Cardiac Glycosides: vincristine possibly reduces absorption of DIGOXIN tablets

Vinflunine

- Antibacterials: plasma concentration of vinflunine possibly reduced by • RIFAMPICIN — manufacturer of vinflunine advises avoid concomitant use; increased risk of ventricular arrhythmias when vinflunine given with • DELAMANID
- Antidepressants: plasma concentration of vinflunine possibly reduced by • ST JOHN’S WORT — manufacturer of vinflunine advises avoid concomitant use
- Antifungals: plasma concentration of vinflunine increased by • KETOCONAZOLE — manufacturer of vinflunine advises avoid concomitant use; possible increased risk of vinflunine toxicity when given with • ITRACONAZOLE
- Antimalarials: avoid of vincristine advised by manufacturer of • ARTEMISOL WITH PIPERAQUINE
- Antipsychotics: avoid concomitant use of cytotoxics with • CLOZAPINE (increased risk of agranulocytosis)
- Antivirals: plasma concentration of vinflunine possibly increased by • RITONAVIR — manufacturer of vinflunine advises avoid concomitant use
- Grapefruit juice: plasma concentration of vinflunine possibly increased by GRAPEFRUIT JUICE — manufacturer of vinflunine advises avoid concomitant use

Vinorelbine

- Antibacterials: possible increased risk of neutropenia when vinorelbine given with • CLARITHROMYCIN; possible increased risk of ventricular arrhythmias when vinorelbine given with • DELAMANID
- Antifungals: possible increased risk of vinorelbine toxicity when given with • ITRACONAZOLE
- Antimalarials: avoidance of vinorelbine advised by manufacturer of • ARTEMISOL WITH PIPERAQUINE
- Antipsychotics: avoid concomitant use of cytotoxics with • CLOZAPINE (increased risk of agranulocytosis)

Vismodegib

- Antibacterials: manufacturer of vismodegib advises avoid concomitant use with • RIFAMPICIN (plasma concentration of vismodegib possibly reduced)
- Antidepressants: manufacturer of vismodegib advises avoid concomitant use with • ST JOHN’S WORT (plasma concentration of vismodegib possibly reduced)
- Antiepileptics: manufacturer of vismodegib advises avoid concomitant use with • CARBAMAZEPINE, • FOSPHENYTOIN and • PHENYTOIN (plasma concentration of vismodegib possibly reduced)
- Antipsychotics: avoid concomitant use of cytotoxics with • CLOZAPINE (increased risk of agranulocytosis)

Vitamin A see Vitamins

Vitamin D see Vitamins

Vitamin E see Vitamins

Vitamin K (Phytonadione) see Vitamins

Vitamins

- Antitumoural: absorption of vitamin A possibly reduced by • NEOMYCIN

Vitamins (continued)

- Anticoagulants: vitamin E possibly enhances anticoagulant effect of • COUMARINS; vitamin K antagonises anticoagulant effect of • COUMARINS and • PHENIDIONE
- Antiepileptics: alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit or vitamin D requirements possibly increased when given with • CARBAMAZEPINE; alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit or vitamin D requirements possibly increased when given with • FOSPHENYTOIN; alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit or vitamin D requirements possibly increased when given with • PHENYTOIN; alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit or vitamin D requirements possibly increased when given with • PRIMODONE
- Antifungals: plasma concentration of paricalcit possibly increased by • ITRACONAZOLE; effects of alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit and vitamin D possibly reduced by • MICONAZOLE
- Antivirals: increased risk of bleeding when high doses of vitamin E given with • RITONAVIR
- Ciclosporin: vitamin E possibly affects plasma concentration of • CICLOSPORIN
- Cytotoxics: effects of alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit and vitamin D possibly reduced by • DACTINOMYCIN; avoidance of vitamin E advised by manufacturer of • IBRUTINIB
- Diuretics: increased risk of hypercalcaemia when alfalcaldil, calcitriol, clocalciferol, dihydrotachysterol, ergocalciferol, paricalcit or vitamin D given with • THIAZIDES AND RELATED DIURETICS
- Dopaminergics: pyridoxine reduces effects of • LEVODOPA when given without dopa-decarboxylase inhibitor
- Lipid-regulating Drugs: absorption of calcitriol possibly reduced by • COLESTYRAMINE (give at least 1 hour before or 4 to 6 hours after colestyramine)
- Retinoids: risk of hypervitaminosis A when vitamin A given with • RETINOIDs — avoid concomitant use
- Selenium: ascorbic acid possibly reduces absorption of • SELLERAM (give at least 4 hours apart)
- Sevelamer: absorption of calcitriol reduced by • SEVELAMER (give at least 1 hour before or 3 hours after sevelamer)
- Voriconazole see Antifungals, Triazole
- Warfarin see Coumarins
- Wasp Venom Extracts

• ACE inhibitors: possible severe anaphylactoid reaction when wasp venom extracts given with • ACE INHIBITORS

Xipamide see Diuretics

Xylometazoline see Sympathomimetics

Yellow Fever Vaccine see Vaccines

Zafirlukast see Leukotriene Receptor Antagonists

Zaleplon see Anxiolytics and Hypnotics

Zidovudine

**NOTE** Increased risk of toxicity with nephrotoxic and myelosuppressive drugs—for further details consult product literature.

- Analgesics: increased risk of haematological toxicity when zidovudine given with • NSAIDS; plasma concentration of zidovudine possibly increased by • METHADONE
- Antibacterials: absorption of zidovudine reduced by • CLARITHROMYCIN tablets (give at least 2 hours apart); manufacturer of zidovudine advises avoid concomitant use with • RIFAMPICIN
- Antiepileptics: zidovudine increases or decreases plasma concentration of • FOSPHENYTOIN and • PHENYTOIN; plasma concentration of zidovudine possibly increased by • SODIUM VALPROATE and • VALPROIC ACID (increased risk of toxicity)
- Antifungals: plasma concentration of zidovudine increased by • FLUCONAZOLE (increased risk of toxicity)
- Antimalarials: increased antifolate effect when zidovudine given with • PYRIMETHAMINE
### Zidovudine (continued)

- **Antivirals:** profound myelosuppression when zidovudine given with • **GANCICLOVIR** or • **VALGANCICLOVIR** (if possible avoid concomitant administration, particularly during initial ganciclovir or valganciclovir therapy); increased risk of granulocytopenia when zidovudine given with • **NEVIRAPINE**; increased risk of anaemia when zidovudine given with • **RIBAVIRIN**—avoid concomitant use; zidovudine possibly inhibits effects of • **STAVUDINE** (manufacturers advise avoid concomitant use); plasma concentration of zidovudine reduced by • **TIPRANAVIR**

  - Atovaquone: plasma concentration of zidovudine increased by **ATOVAQUONE** (increased risk of toxicity)
  - Orlistat: absorption of zidovudine possibly reduced by • **ORLISTAT**

- **Zinc**
  - Antibacterials: zinc reduces absorption of **CIPROFLOXACIN**, **LEVOFLOXACIN**, **MOXIFLOXACIN** and **OFLOXACIN**; zinc reduces absorption of **NORFLOXACIN** (give at least 2 hours apart); zinc reduces absorption of **TETRACYCLINES**, also absorption of zinc reduced by tetracyclines
  - Calcium Salts: absorption of zinc reduced by **CALCIUM SALTS**
  - Eflornithine: zinc possibly reduces absorption of **ELTROMBOPAG** (give at least 4 hours apart)
  - Iron Salts: absorption of zinc reduced by oral **IRON SALTS**, also absorption of oral iron salts reduced by zinc
  - Penicillamine: absorption of zinc reduced by **PENICILLAMINE**, also absorption of penicillamine reduced by zinc
  - Trientine: absorption of zinc reduced by **TRIENTINE**, also absorption of trientine reduced by zinc

### Zoledronic Acid

- **see Bisphosphonates**

### Zolmitriptan

- **see 5HT₁-receptor Agonists (under HT)**

### Zolpidem

- **see Anxiolytics and Hypnotics**

### Zonisamide

- **Antidepressants:** anticonvulsant effect of antiepileptics possibly antagonised by • **MAOIs** and • **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by • **SSRIS** and • **TRICYCLICS** (convulsive threshold lowered)

- **Antiepileptics:** plasma concentration of zonisamide reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**

- **Antimalarials:** anticonvulsant effect of antiepileptics antagonised by • **MEFLOQUINE**

- **Antipsychotics:** anticonvulsant effect of antiepileptics antagonised by • **ANTIPSYCHOTICS** (convulsive threshold lowered)

- **Diuretics:** manufacturer of zonisamide advises avoid concomitant use with **CARBONIC ANHYDRASE INHIBITORS** in children

- **Orlistat:** possible increased risk of convulsions when antiepileptics given with • **ORLISTAT**

### Zopiclone

- **see Anxiolytics and Hypnotics**

### Zuclopenthixol

- **see Antipsychotics**
Appendix 2
Borderline substances

CONTENTS

Enteral feeds (non-disease specific) page 1262
Enteral feeds (non-disease specific): less than 5 g protein/100 mL 1262
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL 1263
Enteral feeds (non-disease specific): Child under 12 years 1266
Nutritional supplements (non-disease specific) 1266
Nutritional supplements: less than 5 g protein/100 mL 1266
Nutritional supplements: 5 g (or more) protein/100 mL 1267
Specialised formulas 1271
Specialised formulas: Infant and child 1271
Specialised formulas for specific clinical conditions 1271
Feed supplements 1273
High-energy supplements 1273
Fibre, vitamin, and mineral supplements 1278
Feed additives 1279
Special additives for conditions of intolerance 1279

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee’s advice and endorsed ‘ACBS’ will normally not be investigated.

Information
General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)
All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements
For most enteral feeds and nutritional supplements, the main source of carbohydrate is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as ‘clinically lactose-free’ or ‘lactose-free’ by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of protein or amino acids are included with each product entry. The fat or oil content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of vitamins, minerals, and trace elements—the manufacturer’s product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values
Nutritional values of products vary with flavour and pack size—consult product literature.

Other conditions for which ACBS products can be prescribed
This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Birthmarks
Dermatitis
Eczema and Pruritis
Aveeno® Bath Oil; Aveeno® Cream; Aveeno® Lotion; E45® Emollient Bath Oil; E45® Emollient Wash Cream; E45® Lotion
Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)
Covermark® classic foundation and finishing powder; Dermablend® Ultra corrective foundation; Dermacolor® Camouflage cream and fixing powder; Keromask® masking cream and finishing powder; Veil® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).
Disinfectants (antiseptics)
May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for...
the treatment of patients, but not for general hygenic purposes.

**Dry mouth (xerostomia)**
For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

*AS Saliva Orthana®; Biotène Oralbalance®; BioXtra®; Glandosane®; Saliveze®*

**Photodermatoses (skin protection in)**
*Anthelios® XL SPF 50+ Melt-in cream; Sunsense® Ultra; Uvistat® Lipscreen SPF 50, Uvistat® Suncream SPF 30 and 50*

**Standard ACBS Indications**
Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula.
### Table 1: Enteral feeds (non-disease specific)

**Less than 5 g protein/100 mL**

*Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years.*

Feed additives
Special additives for conditions of intolerance

Colief®
> For the relief of symptoms associated with lactose intolerance in infants, provided that lactose intolerance is confirmed by the presence of reducing substances and/or excessive acid in stools, a low concentration of the corresponding disaccharide enzyme on intestinal biopsy or by breath hydrogen test or lactose intolerance test. For dosage and administration details, consult product literature.
Liquid, lactose 50 000 units/g
Colief 50,000 units/g infant drops (Forum Health Products Ltd)
7 ml (ACBS) - NHS indicative price = £8.40

Fructose
> (Laevulose) For proven glucose/galactose intolerance

Glucose
> (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency

VSL#3®
> Nutritional supplement for use under the supervision of a physician, for the maintenance of remission of ileoanal pouchitis induced by antibacterials in adults. For dosage and administration details, consult product literature.
POWDER, containing 8 strains of live, freeze-dried, lactic acid bacteria. Contains traces of soya, gluten, and lactose.
VSL#3® Probiotic Food Supplement oral powder 4.4g sachets (Ferring Pharmaceuticals Ltd)
10 sachet (ACBS) - NHS indicative price = £14.64 | 30 sachet (ACBS) - NHS indicative price = £41.66

Feed thickeners and pre-thickened drinks
Carobel, Instant®
> For thickening feeds in the treatment of vomiting. POWDER, carob seed flour.

Instant Carobel powder (Cow & Gate Ltd)
155 gram (ACBS) - NHS indicative price = £2.80

Multi-thick®
> For thickening of liquids and foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
POWDER, modified maize starch, gluten- and lactose-free.

Multi-thick powder (Abbott Laboratories Ltd)
250 gram (ACBS) - NHS indicative price = £4.83

Nutilis® Clear
> For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.
POWDER, maltodextrin, xanthan gum, guar gum, gluten- and lactose-free.

Nutilis Clear powder (Nutricia Ltd)
175 gram (ACBS) - NHS indicative price = £8.46

Nutilis Powder
> For thickening of foods in dysphagia. Not suitable for children under 3 years.
POWDER, carbohydrate 86 g, energy 1520 kJ (358 kcal)/100 g, modified maize starch, gluten- and lactose-free.

Nutilis powder (Nutricia Ltd)
240 gram (ACBS) - NHS indicative price = £6.40 | 300 gram (ACBS) - NHS indicative price = £4.92

Resource® ThickenUp Clear
> For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.
POWDER, maltodextrin, xanthan gum, gluten- and lactose-free.

Resource ThickenUp Clear powder (Nestle Health Science)
24 x 1.2 g sachets (ACBS) - NHS indicative price = £5.28 | 125 gram (ACBS) - NHS indicative price = £8.46

Resource® ThickenUp®
> For thickening of foods in dysphagia. Not suitable for children under 1 year.
POWDER, modified maize starch. Gluten- and lactose-free.

Resource ThickenUp® Clear
POWDER, maltodextrin, xanthan gum, gluten- and lactose-free, net price 125 g = £8.46; 24 x 1.2-g sachets = £5.28

Resource® Thickened Drink
> For dysphagia. Not suitable for children under 1 year. LIQUID, carbohydrate 22 g, energy: orange 382 kJ (90 kcal); apple 376 kJ (89 kcal)/100 mL. Gluten- and lactose-free.

Resource Thickened Drink custard (Nestle Health Science)
apple, orange 114 ml (ACBS) - NHS indicative price = £0.71

Resource Thickened Drink syrup (Nestle Health Science)
apple, orange 114 ml (ACBS) - NHS indicative price = £0.71

SLO Drinks®
> Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.
POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

SLO Drink 1 oral powder (SLO Drinks Ltd)
lemon, orange, hot chocolate, white coffee, white tea 25 cup (ACBS) - NHS indicative price = £7.30

SLO Drink 2 oral powder (SLO Drinks Ltd)
hot chocolate, lemon, orange, white tea 25 cup (ACBS) - NHS indicative price = £7.50

SLO Drink 3 oral powder orange (SLO Drinks Ltd)
25 cup (ACBS) - NHS indicative price = £7.50

Thick and Easy®
> For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
POWDER, modified maize starch

Thick & Easy powder (Fresenius Kabi Ltd)
225 gram (ACBS) - NHS indicative price = £5.06 | 900 gram (ACBS) - NHS indicative price = £31.00 | 4540 gram (ACBS) - NHS indicative price = £84.71

Thicken Aid®
> For thickening of foods in dysphagia. Not suitable for children under 1 year.
POWDER, modified maize starch, maltodextrin, gluten- and lactose-free.

Thicken Aid powder (M & A Pharmachem Ltd)
225 gram (ACBS) - NHS indicative price = £3.71 | 900 gram (ACBS) - NHS indicative price = £12.40

Thixo-D®
> For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
POWDER, modified maize starch, gluten-free.

Thixo-D (Sutherland Health Ltd)
Cal-Free powder 375 gram (ACBS) - NHS indicative price = £7.50

Vitaquick®
> For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
POWDER, modified maize starch.

Vitaquick powder (VitaFilo International Ltd)
500 gram (ACBS) - NHS indicative price = £7.05 | 2000 gram (ACBS) - NHS indicative price = £38.92

Flavouring preparations
Flavour Mix®
POWDER

Nestle Nutrition Flavour (Nestle Health Science)
Mix banana, Mix chocolate 60 gram (ACBS) - NHS indicative price = £7.17

FlavourPac®
> For use with VitaFilo’s range of unflavoured protein substitutes for metabolic diseases; not suitable for child under 3 years.
POWDER
Borderline substances  Appendix 2

Foods for special diets

Gluten-free foods

ACBS indications: established gluten-sensitive enteropathies including steatorrhoea due to gluten sensitivity, coeliac disease, and dermatitis herpetiformis.

Bread

Homocystinuria or hypermethioninaemia

HCU Anamix Infant
- Nutritional supplement for the dietary management of proven vitamin B6 non-responsive homocystinuria or hypermethioninaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 15.1g, carbohydrate 49.5g, fat 23g, fibre 5.3g, energy 1915kJ (457 kcal)/100g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2g, carbohydrate 7.4g, fat 3.5g, fibre 0.8mg, energy 287kJ (69 kcal)/100mL.
HCU express 20 Oral powder 34g sachets (Nutricia Ltd) 416kJ (99 kcal)/34g with vitamins, minerals, and trace elements.
HCU Lophlex 20 Oral powder 27.8g sachets (Nutricia Ltd) 416kJ (99 kcal)/27.8g sachet, with vitamins, minerals, and trace elements.

HCU LV®
- Nutritional supplement for the dietary management of hypermethioninaemia or vitamin B6 non-responsive homocystinuria in children over 8 years.
POWDER, protein (essential and non-essential amino acids except methionine) 20g, carbohydrate 2.5g, fat 190mg, energy 390kJ (92 kcal)/27.8g sachet, with vitamins, minerals, and trace elements.

HCU-LV Anamix Infant powder 800mg, energy 287kJ (69 kcal)/100mL.

HCU Lophlex®
- Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria in children over 8 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 77g, carbohydrate 4.5g, fat 51g, energy 1536kJ (362 kcal)/100g.

HCU LV®
- Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria in children and adults.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 77g, carbohydrate 4.5g, fat 51g, energy 1536kJ (362 kcal)/100g.

HCU LV Anamix Infant powder 800mg, energy 287kJ (69 kcal)/100mL.

HCU LV Anamix Infant powder 800mg, energy 287kJ (69 kcal)/100mL.

Hyperlysinaemia

HYPER LYS Anamix Infant
- Nutritional supplement for the dietary management of proven hyperlysinaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except lysine) 15.1g, carbohydrate 49.5g, fat 23g, fibre 5.3g, energy 1915kJ (457 kcal)/100g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2g, carbohydrate 7.4g, fat 3.5g, fibre 0.8mg, energy 287kJ (69 kcal)/100mL.

HYPER LYS Anamix Infant powder 800mg, energy 287kJ (69 kcal)/100mL.

HYPER LYS Anamix Infant powder 800mg, energy 287kJ (69 kcal)/100mL.

HYPER LYS Anamix Infant powder 800mg, energy 287kJ (69 kcal)/100mL.
Isovaleric acidaemia
IVA Anamix® Infant
- Nutritional supplement for the dietary management of proven isovaleric acidaemia or other proven disorders of leucine metabolism in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except leucine) 15.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.5 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.
IVA Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) - NHS indicative price = £38.18

XLEU Faladon®
- Nutritional supplement for the dietary management of isovaleric acidaemia.
POWDER, protein equivalent (essential and non-essential amino acids except leucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1586 kJ (326 kcal)/100 g.

XLEU Maxamaid®
- Nutritional supplement for the dietary management of isovaleric acidaemia.
POWDER, protein equivalent (essential and non-essential amino acids except leucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1531 kJ (309 kcal)/100 g with vitamins, minerals, and trace elements.

XLEU Maxamaid powder (Nutricia Ltd)
500 gram (ACBS) - NHS indicative price = £96.40

Maple syrup urine disease
MSUD Aid III®
- Nutritional supplement for the dietary management of maple syrup urine disease and related conditions in children and adults where it is necessary to limit the intake of branched chain amino acids.
POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 77 g, carbohydrate 4.5 g, fat nil, energy 1586 kJ (326 kcal)/100 g.

MSUD Aid III powder (Nutricia Ltd)
500 gram (ACBS) - NHS indicative price = £182.61

MSUD Anamix® Infant
- Nutritional supplement for the dietary management of proven maple syrup urine disease in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 15.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.5 g, energy 1915 [kJ (457 kcal)/100 g with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.
MSUD Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) - NHS indicative price = £58.18

MSUD Anamix® Junior
- Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.
POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 474 kJ (113 kcal)/29 g sachet, with vitamins, minerals, and trace elements.
MSUD Anamix Junior oral powder 29g sachets (Nutricia Ltd)
50 sachet (ACBS) - NHS indicative price = £204.00

MSUD Anamix® Junior LQ
- Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.
LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.
MSUD Anamix Junior LQ liquid (Nutricia Ltd)
125 ml (ACBS) - NHS indicative price = £8.85
Nutritional supplements for metabolic diseases

Methylmalonic or propionic acidaemia

MMA/PA Anamix® Infant
- Nutritional supplement for the dietary management of proven methylmalonic acidaemia or propionic acidaemia in children from birth to 3 years.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 15.1 g, carbohydrate 49.5 g, fat 25 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.
- MMA PA Anamix Infant powder (Nutricia Ltd) 400 gram (ACBS) - NHS indicative price = £38.18

XMTVI Asadon®
- Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia in children and adults.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1586 kJ (352 kcal)/100 g.
- XMTVI Asadon powder (Nutricia Ltd) 200 gram (ACBS) - NHS indicative price = £73.04

XMTVI Maxamaid®
- Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1511 kJ (359 kcal)/100 g, with vitamins, minerals, and trace elements.
- XMTVI Maxamaid powder (Nutricia Ltd) 500 gram (ACBS) - NHS indicative price = £96.40

XMTVI Maxamum®
- Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.
- XMTVI Maxamum powder (Nutricia Ltd) 500 gram (ACBS) - NHS indicative price = £154.52

Other inborn errors of metabolism

Isoleucine50®
- Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
- POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Isoleucine50 oral powder 4g sachets (Vitaflor International Ltd) 30 sachet (ACBS) - NHS indicative price = £53.38

KeyOmega®
- Nutritional supplement for the dietary management of inborn errors of metabolism.
- POWDER, protein (cows’ milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg), docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g

KeyOmega oral powder 4g sachets (Vitaflor International Ltd) 30 sachet (ACBS) - NHS indicative price = £39.50

Leucine100®
- Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
- POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

Leucine100 oral powder sachets (Vitaflor International Ltd) 30 sachet (ACBS) - NHS indicative price = £53.38

Low protein drink
- Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.
- POWDER, protein (cows’ milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.

Milkup LP drink (Nutricia Ltd) 400 gram (ACBS) - NHS indicative price = £9.06

Phenylalanine50®
- Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.
- POWDER, phenylalanine 50 mg, carbohydrate 5.8 g, fat nil, energy 65 kJ (15 kcal)/4 g

Phenylalanine50 oral powder sachets (Vitaflor International Ltd) 30 sachet (ACBS) - NHS indicative price = £51.83

ProZero®
- A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.
- LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.
- ProZero liquid (Vitaflor International Ltd) 250 ml (ACBS) - NHS indicative price = £1.42 | 1000 ml (ACBS) - NHS indicative price = £5.68

Tyrosine100®
- Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
- POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 65 kJ (15 kcal)/4 g sachet.

Tyrosine100 oral powder 4g sachets (Vitaflor International Ltd) 30 sachet (ACBS) - NHS indicative price = £4.89

Valine50®
- Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
- POWDER, valine 50 mg, carbohydrate 5.8 g, fat nil, energy 65 kJ (15 kcal)/4 g

Valine50 oral powder 4g sachets (Vitaflor International Ltd) 30 sachet (ACBS) - NHS indicative price = £53.38
Phenylketonuria

Add-ins®
> Nutritional supplement for the dietary management of proven phenylketonuria. Not suitable for children under 4 years.

**Powder,** protein equivalent (containing essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate nil, fat 5.1 g, energy 359 kJ (86 kcal)/18.2 g sachet, with vitamins, minerals, and trace elements.

**Add Ins oral powder 18.2g sachets (Nutricia Ltd)**
60 sachet (ACBS) - NHS Indicative price = £568.40

**Easiphën®**
> Nutritional supplement for the dietary management of proven phenylketonuria. Not suitable for children under 8 years.

**Liquid,** protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

**Easiphën liquid (Nutricia Ltd)**
250 ml (ACBS) - NHS Indicative price = £9.47

**Lophlex**
> Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 585 kJ (137 kcal)/27.8 g sachet, with vitamins, minerals, and trace elements.

**Lophlex powder 27.8g sachets (Nutricia Ltd)**
berry, orange, unflavoured 30 sachet (ACBS) - NHS Indicative price = £284.40

**Loprofin PKU Drink**
> Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults.

**Liquid,** protein (cows’ milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (40 kcal)/100 mL.

**Loprofin PKU drink (Nutricia Ltd)**
200 ml (ACBS) - NHS Indicative price = £0.74

**Loprofin® Sno-Pro**
> Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

**Liquid,** protein (cows’ milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 5.8 g, energy 273 kJ (65 kcal)/100 mL.

**Loprofin PKU drink (Nutricia Ltd)**
200 ml (ACBS) - NHS Indicative price = £1.25

**Milupa PKU 2-prima®**
> Nutritional supplement for the dietary management of phenylketonuria in children 1-8 years.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 60 g, carbohydrate 10 g, fat nil, energy 1190 kJ (280 kcal)/100 g, with vitamins, minerals, and trace elements.

**Milupa PKU 2 Prima powder (Nutricia Ltd)**
500 gram (ACBS) - NHS Indicative price = £153.73

**Milupa PKU 2-secunda®**
> Nutritional supplement for the dietary management of phenylketonuria in children 9-15 years.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 70 g, carbohydrate 6.8 g, fat nil, energy 1306 kJ (307 kcal)/100 g, with vitamins, minerals, and trace elements.

**Milupa PKU 2 Secunda powder (Nutricia Ltd)**
500 gram (ACBS) - NHS Indicative price = £179.34

**Milupa PKU 3-advanta®**
> Nutritional supplement for the dietary management of phenylketonuria in children over 15 years.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 70 g, carbohydrate 4.7 g, fat nil, energy 1270 kJ (299 kcal)/100 g, with vitamins, minerals, and trace elements.

**Milupa PKU 3 Advanta powder (Nutricia Ltd)**
500 gram (ACBS) - NHS Indicative price = £179.34

**Phlexy-10® Exchange System**
> Nutritional supplement for the dietary management of phenylketonuria.

**Capsules,** protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

**Phlexy-10 500mg capsules (Nutricia Ltd)**
200 capsule (ACBS) - NHS Indicative price = £42.00

**DrinK mix,** powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.35 g, carbohydrate 8.8 g/20-g sachet.

**Phlexy-10 drink (Nutricia Ltd)**
mix apple & blackcurrant, mix citrus burst, mix tropical surprise 600 gram (ACBS) - NHS Indicative price = £126.00

**TABLETS,** protein equivalent (essential and non-essential amino acids except phenylalanine) 835 mg tablet.

**tablets (Nutricia Ltd)**
75 tablet (ACBS) - NHS Indicative price = £27.00

**Phlexy-Vits®**
> For use as a vitamin and mineral component of restricted therapeutic diets in children over 11 years and adults with phenylketonuria and similar amino acid abnormalities.

**Powder,** vitamins, minerals, and trace elements.

**Phlexy-Vits (Nutricia Ltd)**
powder 210 gram (ACBS) - NHS Indicative price = £70.20

**Phlexy-Vits (Nutricia Ltd)**
tables 180 tablet (ACBS) - NHS Indicative price = £79.20

**PK Aid®**
> Nutritional supplement for the dietary management of phenylketonuria in children and adults.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 79 g, carbohydrate 4.5 g, fat nil, energy 1420 kJ (334 kcal)/100 g.

**PK Aid® powder (Nutricia Ltd)**
500 gram (ACBS) - NHS Indicative price = £140.37

**PKU Anamix® Infant**
> Nutritional supplement for the dietary management of proven phenylketonuria in children from birth to 3 years.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 15.1 g, carbohydrate 49.5 g, fat 25 g, fibre 5.5 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**PKU Anamix Infant powder (Nutricia Ltd)**
400 gram (ACBS) - NHS Indicative price = £34.70

**PKU Anamix® Junior**
> Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.

**Powder,** protein equivalent (essential and non-essential amino acids except phenylalanine) 8.4 g, carbohydrate 9.9 g, fat 3.9 g, energy 455 kJ (108 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

**PKU Anamix Junior powder (Nutricia Ltd)**
chocolate, neutral 870 gram (ACBS) - NHS Indicative price = £123.90

1080 gram (ACBS) - NHS Indicative price = £123.90

**PKU Anamix® Junior LQ**
> Nutritional supplement for the dietary supplement of phenylketonuria in children 1–10 years.

**Liquid,** protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**PKU Anamix Junior LQ lipid (Nutricia Ltd)**
berry, orange 125 ml (ACBS) - NHS Indicative price = £5.51
### Nutritional supplements for metabolic diseases

**PKU cooler10®**
- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. **LIQUID**, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 5.1 g, energy 258 kJ (62 kcal)/87-mL pouch, with vitamins, minerals, and trace elements.
- **PKU** (Vitaflo International Ltd) orange cooler 10 liquid, purple cooler 10 liquid, red cooler 10 liquid, white cooler 10 liquid 87 ml (ACBS) - NHS indicative price = £4.51

**PKU cooler15®**
- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. **LIQUID**, protein equivalent (essential and non-essential amino acids except phenylalanine) 15 g, carbohydrate 7.8 g, energy 386 kJ (92 kcal)/150-mL pouch, with vitamins, minerals, and trace elements.
- **PKU** (Vitaflo International Ltd) orange cooler 15 liquid, purple cooler 15 liquid, red cooler 15 liquid, white cooler 15 liquid 150 ml (ACBS) - NHS indicative price = £6.72

**PKU cooler20®**
- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. **LIQUID**, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 10.2 g, energy 517 kJ (124 kcal)/174-mL pouch, with vitamins, minerals, and trace elements.
- **PKU** (Vitaflo International Ltd) orange cooler 20 liquid, purple cooler 20 liquid, red cooler 20 liquid, white cooler 20 liquid 174 ml (ACBS) - NHS indicative price = £9.02

**PKU express15®**
- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. **POWDER**, protein equivalent (essential and non-essential amino acids except phenylalanine) 15 g, carbohydrate 2.4 g, energy 293 kJ (70 kcal)/25 g, with vitamins, minerals, and trace elements.
- **PKU express 15 powder** (Vitaflo International Ltd) lemon, orange, tropical, unflavoured 750 gram (ACBS) - NHS indicative price = £197.82

**PKU express20®**
- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. **POWDER**, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 3.5 g, energy 389 kJ (95 kcal)/34 g, with vitamins, minerals, and trace elements.
- **PKU express 20 powder** (Vitaflo International Ltd) lemon, orange, tropical, unflavoured 1020 gram (ACBS) - NHS indicative price = £255.58

**PKU gel®**
- **POWDER**, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.9 g, fat less than 100 mg, energy 518 kJ (76 kcal)/24 g, with vitamins, minerals, and trace elements.
- **PKU gel powder** (Vitaflo International Ltd) orange, raspberry, unflavoured 720 gram (ACBS) - NHS indicative price = £136.86

**PKU Lophlex® LQ 10**
- Nutritional supplement for the dietary management of phenylketonuria in children over 4 years and adults including pregnant women. **LIQUID**, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 4.4 g, fibre 250 mg, energy 245 kJ (58 kcal)/62.5 mL, with vitamins, minerals, and trace elements.
- **PKU Lophlex LQ 10 liquid juicy** (Nutricia Ltd) berries, orange 62.5 ml (ACBS) - NHS indicative price = £5.08

**PKU Lophlex® LQ 20**
- Nutritional supplement for the dietary management of phenylketonuria in children over 4 years and adults including pregnant women. **LIQUID**, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 8.8 g, fibre 340 mg, energy 490 kJ (115 kcal)/125 mL, with vitamins, minerals, and trace elements.
- **PKU Lophlex LQ 20 liquid** (Nutricia Ltd) berry, juicy berries, orange 125 ml (ACBS) - NHS indicative price = £10.14

**PKU Lophlex® sensation 20**
- Nutritional supplement for the dietary management of phenylketonuria in children under 3 years. **LIQUID**, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 22.5 g, fat 500 mg, energy 565 kJ (135 kcal)/85 g, with vitamins, minerals, and trace elements.
- **PKU Lophlex Sensation 20** (Nutricia Ltd) berry, orange, lemon, unflavoured 2550 gram (ACBS) - NHS indicative price = £150.84

**L-Tyrosine**
- **POWDER**, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

**L-Tyrosine powder** (Nutricia Ltd)
- XP Maxamaid powder 50g sachets 100 gram (ACBS) - NHS indicative price = £21.50

**XP Maxamaid®**
- Nutritional supplement for the dietary management of phenylketonuria in children aged 1–8 years. **POWDER**, protein equivalent (essential and non-essential amino acids except phenylalanine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1511 kJ (369 kcal)/100 g, with vitamins, minerals, and trace elements.
- **XP Maxamaid powder** (Nutricia Ltd) orange, unflavoured 500 gram (ACBS) - NHS indicative price = £57.03

**XP Maxum®**
- Nutritional supplement for the dietary management of phenylketonuria in children under 8 years and adults. **POWDER**, protein equivalent (essential and non-essential amino acids except phenylalanine) 39 g, carbohydrate 54 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.
- **XP Maxum oral powder 50g sachets** (Nutricia Ltd) orange, unflavoured 30 sachet (ACBS) - NHS indicative price = £264.45

**Tyrrosinaemia**

**Methionine-free TYR Anamix® Infant**
- Nutritional supplement for the dietary management of proven tyrrosinaemia type 1 in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant methionine free powder (Nutricia Ltd) 400 gram (ACBS) - NHS indicative price = £38.18

TYR Anamix® Infant
- Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 15.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant (Nutricia Ltd) methionine free powder, powder 400 gram (ACBS) - NHS indicative price = £38.18

TYR Anamix® Junior
- Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 5.9 g, energy 475 kJ (115 kcal)/29 g sachet, with vitamins, minerals, and trace elements.

TYR Anamix Junior oral powder 29g sachets (Nutricia Ltd) 30 sachet (ACBS) - NHS Indicative price = £202.50

TYR Anamix® Junior LQ
- Nutritional supplement for the dietary management of tyrosinaemia type I (when nitisinone (NTBC) is used, see type II, and type III, in children over 1 year).
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.6 g, fibre 510 mg, energy 500 kJ (121 kcal)/125 mL, with vitamins, minerals and trace elements.

TYR Anamix Junior LQ liquid (Nutricia Ltd) 125 ml (ACBS) - NHS Indicative price = £8.85

TYR cooler® 15
- Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.
- LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 395 kJ (92 kcal)/150 mL, with vitamins, minerals, and trace elements.

TYR orange cooler 15 liquid (Vitaflo International Ltd) 130 ml (ACBS) - NHS indicative price = £11.09

TYR red cooler (Vitaflo International Ltd) 15 liquid 130 ml (ACBS) - NHS indicative price = £11.09

TYR express®
- Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults.
- POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements.

TYR express 15 oral powder 25g sachets (Vitaflo International Ltd) 30 sachet (ACBS) - NHS indicative price = £326.30

TYR express®20
- Nutritional supplement for the dietary management of tyrosinaemia. Not recommended for children under 8 years.
- POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/54 g, with vitamins, minerals, and trace elements.

TYR express 20 oral powder 34g sachets (Vitaflo International Ltd) 30 sachet (ACBS) - NHS indicative price = £421.57

TYR Gel®
- Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years.
- POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.5 g, fat less than 100 mg, energy 359 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements.

TYR gel oral powder 24g sachets (Vitaflo International Ltd) 30 sachet (ACBS) - NHS indicative price = £210.07

TYR Lophlex® LQ 20
- Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

TYR Lophlex LQ 20 liquid (Nutricia Ltd) 125 ml (ACBS) - NHS indicative price = £15.75

XPHEN TYR Maxamaid®
- Nutritional supplement for the dietary management of tyrosinaemia in children 1–8 years.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1511 kJ (362 kcal)/100 g, with vitamins, minerals, and trace elements.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd) 500 gram (ACBS) - NHS indicative price = £96.40

XPHEN TYR Tyrosidon®
- Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (330 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd) 500 gram (ACBS) - NHS indicative price = £182.61

XPTM Tyrosidon®
- Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPTM Tyrosidon powder (Nutricia Ltd) 500 gram (ACBS) - NHS indicative price = £91.31
Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no sense of the original.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 51 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

Labels

1 Warning: This medicine may make you sleepy

To be used on preparations for children containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

To be used on preparations for adults that can cause drowsiness, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses. In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient’s doctor.
Side-effects unrelated to drowsiness that may affect a patient’s ability to drive or operate machinery safely include blurred vision, dizziness, or nausea. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines.
   To be used on preparations containing monoamine-oxidase inhibitors; the warning to avoid alcohol and dealkoholised (low alcohol) drink is covered by the patient information leaflet. Also to be used as for label 2 but where alcohol is not an issue.

4 Warning: Do not drink alcohol.
   To be used on preparations where a reaction such as flushing may occur if alcohol is taken (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary. Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

5 Do not take indigestion remedies 2 hours before or after you take this medicine.
   To be used with label 25 on preparations coated to resist gastric acid (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH. Label 5 also applies to drugs such as gabapentin where the absorption is significantly affected by antacids. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine.
   To be used on preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillin. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine.
   To be used on preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

8 Warning: Do not stop taking this medicine unless your doctor tells you to stop.
   To be used on preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit (e.g. antituberculous drugs). Also to be used on preparations that contain a drug whose withdrawal is likely to be a particular hazard (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop.
   To be used on preparations where a course of treatment should be completed to reduce the incidence of relapse or failure of treatment.

10 Warning: Read the additional information given with this medicine.
   To be used particularly on preparations containing anticoagulants, lithium, and oral corticosteroids. The appropriate treatment label should be given to the patient and any necessary explanations given.

11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds.
   To be used on preparations that may cause phototoxic or photoallergic reactions if the patient is exposed to ultraviolet radiation. Many drugs other than those listed in Appendix 3 (e.g. phenothiazines and sulfonamides) may, on rare occasions, cause reactions in susceptible patients. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

12 Do not take anything containing aspirin while taking this medicine.
   To be used on preparations containing sulfinpyrazone whose activity is reduced by aspirin.
   Label 12 should not be used for anticoagulants since label 10 is more appropriate.

13 Dissolve or mix with water before taking.
   To be used on preparations that are intended to be dissolved in water (e.g. soluble tablets) or mixed with water (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

14 This medicine may colour your urine. This is harmless.
   To be used on preparations that may cause the patient’s urine to turn an unusual colour. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine.
   To be used on preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.

16 Dissolve the tablet under your tongue—do not swallow.
   To be used particularly on preparations where a course of treatment is required to reduce the incidence of relapse or failure of treatment.

17 Do not take more than... in 24 hours.
   To be used on preparations for the treatment of acute migraine except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules. It may also be used on preparations for which no dose has been specified by the prescriber.

18 Do not take more than... in 24 hours. Also, do not take more than... in any one week.
   To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.

19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol.
   To be used on preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night. On the rare occasions when hypnotics are prescribed...
for daytime administration (e.g. nitrazepam in epilepsy),
this label would clearly not be appropriate. Also to be used
as an alternative to the label 2 wording (the choice being at
the discretion of the pharmacist) for anxiolytics prescribed to
be taken at night.
It is hoped that this wording will convey adequately the
problem of residual morning sedation after taking ‘sleeping
tablets’.

21 Take with or just after food, or a meal
   To be used on preparations that are liable to cause gastric
   irritation, or those that are better absorbed with food.
   Patients should be advised that a small amount of food is
   sufficient.

22 Take 30 to 60 minutes before food
   To be used on some preparations whose absorption is
   thereby improved.
   Most oral antibacterials require label 23 instead (see
   below).

23 Take this medicine when your stomach is empty. This
   means an hour before food or 2 hours after food
   To be used on oral antibacterials whose absorption may be
   reduced by the presence of food and acid in the stomach.

24 Suck or chew this medicine
   To be used on preparations that should be sucked or
   chewed. The pharmacist should use discretion as to which
   of these words is appropriate.

25 Swallow this medicine whole. Do not chew or crush
   To be used on preparations that are enteric-coated or
   designed for modified-release.
   Also to be used on preparations that taste very unpleasant or
   may damage the mouth if not swallowed whole.
   Patients should be advised (where relevant) that some
   modified-release preparations can be broken in half, but
   that the halved tablet should still be swallowed whole, and
   not chewed or crushed.

26 Dissolve this medicine under your tongue
   To be used on preparations designed for sublingual use.
   Patients should be advised to hold under the tongue and
   avoid swallowing until dissolved. The buccal mucosa
   between the gum and cheek is occasionally specified by the
   prescriber.

27 Take with a full glass of water
   To be used on preparations that should be well diluted (e.g.
   chloral hydrate), where a high fluid intake is required (e.g.
   sulfonamides), or where water is required to aid the action
   (e.g. methylcellulose). The patient should be advised that
   ‘a full glass’ means at least 150 mL. In most cases fruit
   juice, tea, or coffee may be used.

28 Spread thinly on the affected skin only
   To be used on external preparations that should be
   applied sparingly (e.g. corticosteroids, dithranol).

29 Do not take more than 2 at any one time. Do not take
   more than 8 in 24 hours
   To be used on containers of dispensed solid dose
   preparations containing paracetamol for adults when the
   instruction on the label indicates that the dose can be taken on
   an ‘as required’ basis. The dose form should be specified,
   e.g. tablets or capsules.
   This label has been introduced because of the serious
   consequences of overdosage with paracetamol.

30 Contains paracetamol. Do not take anything else
   containing paracetamol while taking this medicine. Talk
   to a doctor at once if you take too much of this medicine,
   even if you feel well.
   To be used on all containers of dispensed preparations
   containing paracetamol.

32 Contains aspirin. Do not take anything else containing
   aspirin while taking this medicine
   To be used on containers of dispensed preparations
   containing aspirin when the name on the label does not
   include the word ‘aspirin’.
Appendix 4

Wound management products and elasticated garments

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease). Advanced wound dressings, p. 1297 are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginites, foams). Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water. Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris. There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see Buyers’ Guide: Advanced wound dressings (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing. Prices quoted in Appendix 4 are basic NHS net prices; for further information see Prices in the BNF. The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

### Basic wound contact dressings

Low adherence dressings

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings.

Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only
### Wound contact material for different types of wounds

**Note:** In each section of this table, the dressings are listed in order of increasing absorbency. Some wound contact (primary) dressings require a secondary dressing.

Partly successful and it may be necessary to change the dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with ‘normal loading’ (such as Jelonet®) have been used for skin graft transfer.

Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

**Knitted polyester primary dressing**

**Atrauman**

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

**Atrauman dressing** (Paul Hartmann Ltd) 10cm x 20cm = £0.63, 20cm x 30cm = £1.72, 5cm x 5cm = £0.27, 7.5cm x 10cm = £0.28

**Knitted viscose primary dressing**

**N-A Dressing**

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A dressing (Systagenix Wound Management Ltd) 19cm x 9.5cm = £0.67, 9.5cm x 9.5cm = £0.35

**N-A Ultra**

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A Ultra dressing (Systagenix Wound Management Ltd) 19cm x 9.5cm = £0.63, 9.5cm x 9.5cm = £0.33

**Profore**

Warp knitted fabric manufactured from a bright viscose monofilament.

Profore (Smith & Nephew Healthcare Ltd) wound contact layer 14cm x 20cm = £0.32

**Tricotex**

Warp knitted fabric manufactured from a bright viscose monofilament.

Tricotex dressing (Smith & Nephew Healthcare Ltd) 9.5cm x 9.5cm = £0.34

**Paraffin Gauze Dressing**

**Cuticell**

(Tulle Gras). Fabric of leno weave, wool and mohair of cotton and/or viscose yarn, impregnated with white or yellow paraffin

Cuticell (BSN medical Ltd) Classic dressing 10cm x 10cm = £0.29

**Jelonet**

(Tulle Gras). Fabric of leno weave, wool and mohair of cotton and/or viscose yarn, impregnated with white or yellow paraffin

Jelonet dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm = £0.41

**Neotulle**

(Tulle Gras). Fabric of leno weave, wool and mohair of cotton and/or viscose yarn, impregnated with white or yellow paraffin

Neotulle (Neomedic Ltd) dressing 10cm x 10cm = £0.29
Paragauze (Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin.

Paragauze (C D Medical Ltd) dressing 10cm x 10cm = £0.28

Paramet (Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin.

Paramet (Synergy Health Plc) dressing 10cm x 10cm = £0.25

Absorbent dressings
Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

Absorbent cellulose dressing

CelluDress
Absorbent Cellulose Dressing with Fluid Repellent Backing

CelluDress dressing (Medicareplus international Ltd) 10cm x 10cm = £0.19, 10cm x 15cm = £0.20, 10cm x 20cm = £0.22, 15cm x 20cm = £0.30, 20cm x 25cm = £0.40, 20cm x 30cm = £0.45

Eclypse
Absorbent Cellulose Dressing with Fluid Repellent Backing

Eclypse (Advancis Medical) Root dressing 60cm x 70cm = £13.78, dressing 15cm x 15cm = £0.97, 20cm x 30cm = £2.14, 60cm x 40cm = £8.15,

Exu-Dry
Absorbent Cellulose Dressing with Fluid Repellent Backing

Exu-Dry dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm = £1.12, 15cm x 23cm = £2.29, 23cm x 38cm = £5.32

Mesorb
Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

Mesorb dressing (Mohlyche Health Care Ltd) 10cm x 10cm = £0.62, 10cm x 15cm = £0.81, 10cm x 20cm = £1.00, 15cm x 20cm = £1.42, 20cm x 25cm = £2.24, 20cm x 30cm = £2.54

Telfa Max
Absorbent Cellulose Dressing with Fluid Repellent Backing

Zetuvit E
Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

Zetuvit E (Paul Hartmann Ltd) non-sterile dressing 10cm x 10cm = £0.07, 10cm x 20cm = £0.09, 20cm x 20cm = £0.14, 20cm x 40cm = £0.27, sterile dressing 10cm x 10cm = £0.21, 10cm x 20cm = £0.25, 20cm x 20cm = £0.39, 20cm x 40cm = £1.10,

Absorbent perforated dressing

Adpro
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Adpro dressing (Medicareplus International Ltd) 10cm x 10cm = £0.10, 10cm x 15cm = £0.16, 10cm x 20cm = £0.30, 15cm x 25cm = £0.34, 10cm x 30cm = £0.42, 10cm x 35cm = £0.50, 7cm x 8cm = £0.08

Cosmopore E
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cosmopore E dressing (Paul Hartmann Ltd) 10cm x 20cm = £0.45, 10cm x 25cm = £0.56, 10cm x 35cm = £0.78, 5cm x 7.2cm = £0.08, 8cm x 10cm = £0.17, 8cm x 15cm = £0.28

Cutiplast Steril
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cutiplast Steril dressing (Smith & Nephew Healthcare Ltd) 10cm x 20cm = £0.31, 10cm x 25cm = £0.32, 10cm x 30cm = £0.42, 8cm x 10cm = £0.11, 8cm x 15cm = £0.24

Leukomed
Low-adenhence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Leukomed dressing (Bsn medical Ltd) 10cm x 20cm = £0.43, 10cm x 25cm = £0.48, 10cm x 30cm = £0.62, 10cm x 35cm = £0.72, 5cm x 7.2cm = £0.09, 8cm x 10cm = £0.18, 8cm x 15cm = £0.32

Medipore + Pad
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medipore + Pads dressing (3M Health Care Ltd) 10cm x 10cm = £0.15, 10cm x 15cm = £0.25, 10cm x 20cm = £0.37, 10cm x 25cm = £0.46, 10cm x 35cm = £0.64, 5cm x 7.2cm = £0.07

Medisafe
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medisafe dressing (Neomedic Ltd) 6cm x 8cm = £0.08, 8cm x 10cm = £0.13, 8cm x 12cm = £0.23, 9cm x 15cm = £0.29, 9cm x 25cm = £0.34, 9cm x 25cm = £0.36

Mepore
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Mepore dressing (Möllycke Health Care Ltd) 10cm x 11cm = £0.22, 11cm x 15cm = £0.36, 7cm x 8cm = £0.11, 8cm x 20cm = £0.44, 9cm x 25cm = £0.61, 9cm x 30cm = £0.70, 9cm x 35cm = £0.76

PremierPore
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

PremierPore dressing (Shermond) 10cm x 10cm = £0.12, 10cm x 15cm = £0.18, 10cm x 20cm = £0.32, 10cm x 25cm = £0.36, 10cm x 30cm = £0.45, 10cm x 35cm = £0.52, 5cm x 7cm = £0.05

Primapore
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Primapore dressing (Smith & Nephew Healthcare Ltd) 10cm x 20cm = £0.43, 10cm x 25cm = £0.50, 10cm x 30cm = £0.62, 10cm x 35cm = £0.96, 6cm x 8.3cm = £0.18, 8cm x 10cm = £0.19, 8cm x 15cm = £0.33

Softpore
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Softpore dressing (Richardson Healthcare Ltd) 10cm x 10cm = £0.13, 10cm x 15cm = £0.20, 10cm x 20cm = £0.35, 10cm x 25cm = £0.40, 10cm x 30cm = £0.49, 10cm x 35cm = £0.58, 6cm x 7cm = £0.06

Sterifix
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Sterifix dressing (Paul Hartmann Ltd) 10cm x 14cm = £0.52, 7cm x 7cm = £0.28, 7cm x 10cm = £0.32

Telfa Island
Low-adeherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Telfa Island dressing (Aria Medical Ltd) 10cm x 12.5cm = £0.27, 10cm x 20cm = £0.35, 10cm x 25cm = £0.45, 10cm x 35cm = £0.62, 5cm x 10cm = £0.08

Absorbent perforated plastic film faced dressing

Absopad
Low-adeherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Absopad dressing (Medicareplus International Ltd) 10cm x 10cm = £0.13, 20cm x 10cm = £0.28

Askinga Pad
Low-adeherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Askinga (B.Braun Medical Ltd) Pad dressing 10cm x 10cm = £0.21

Melolin
Low-adeherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Melolin dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm = £0.27, 20cm x 10cm = £0.53, 5cm x 5cm = £0.17
Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to capture liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

Hydrogel application (amorphous)

**ActivHeal Hydrogel**
Hydrogel containing guar gum and propylene glycol
**ActivHeal (Advanced Medical Solutions Ltd)** Hydrogel dressing = £1.41

**Aquaform**
Hydrogel containing modified starch copolymer
**AquaForm (Aspen Medical Europe Ltd)** Hydrogel dressing = £2.02

**Askina Gel**
Hydrogel containing modified starch and glycerol
**Askina (B.Braun Medical Ltd)** Gel dressing = £2.00

**Cutimed Hydrogel**
**Cutimed (BSN medical Ltd)** Gel dressing = £2.99

**Flexigran**
Hydrogel containing modified starch and glycerol
**Flexigran (A1 Pharmaceuticals)** Gel dressing = £1.90

**GranuGel**
Hydrogel containing carboxymethylcellulose, pectin and propylene glycol
**GranuGel (Convatec Ltd)** Hydrocolloid Gel dressing = £2.32

**Intrasite Gel**
Hydrogel containing modified carmellose polymer and propylene glycol
**IntraSite (Smith & Nephew Healthcare Ltd)** Gel dressing = £3.57

**Nu-Gel**
Hydrogel containing alginate and propylene glycol
**Nu-Gel (Systagenix Wound Management Ltd)** dressing = £2.09

**Purilon Gel**
Hydrogel containing carboxymethylcellulose and calcium alginate
**Purilon (Coloplast Ltd)** Gel dressing = £2.26

**Hydrogel sheet dressings**

**ActiFormCool**
Hydrogel dressing
**ActiFormCool sheet (Activa Healthcare Ltd)** 10cm x 10cm square = £2.63, 10cm x 15cm rectangular = £3.79, 20cm x 20cm square = £7.93, 5cm x 6.5cm rectangular = £1.79

**Aquaflo**
Hydrogel dressing
**Aquaflo (Covidien (UK) Commercial Ltd)** sheet 7.5cm discs = £2.60

**Coolie**
Hydrogel dressing (without adhesive border)
**Coolie (Zeroderm Ltd)** sheet 7cm discs = £1.96

**Gel FX**
Hydrogel dressing (without adhesive border)
**Gel FX sheet (Synergy Health Plc)** 8cm x 10cm square = £1.60, 5cm x 15cm square = £3.20

**Geliperm**
Hydrogel sheets
**Geliperm (Geistlich Sons Ltd)** sheet 10cm x 10cm square = £2.53

**Hydrosorb**
Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film
**Hydrosorb sheet (Paul Hartmann Ltd)** 10cm x 10cm square = £2.24, 20cm x 20cm square = £6.71, 5cm x 7.5cm rectangular = £1.56
Wound management products and elasticated garments

Hydrosorb Comfort
Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

Hydrosorb Comfort sheet (Paul Hartmann Ltd) 12.5cm x 12.5cm square = £3.58, 4.5cm x 6.5cm rectangular = £1.85, 7.5cm x 10cm rectangular = £2.46

Intrasite Conformable
Soft non-woven dressing impregnated with Intrasite gel

Intrasite Conformable dressing 10cm x (Smith & Nephew Healthcare Ltd) 10cm square = £1.80, 20cm rectangular = £2.42, 40cm rectangular = £4.33

Novogel
Glycerol-based hydrogel sheets (standard or thin)

Novogel sheet (Ford Medical Associates Ltd) 10cm x 10cm square = £3.15, 15cm x 20cm rectangular = £6.07, 20cm x 40cm rectangular = £11.56, 30cm x 30cm (0.25cm thickness) square = £12.71, (0.30cm thickness) square = £13.47, 5cm x 7.5cm rectangular = £1.99, 7.5cm diameter circular = £2.89,

Sanoskin NET
Hydrogel sheet (without adhesive border)

Sanoskin (Ideal Medical Solutions Ltd) NET sheet 8.5cm x 12cm rectangular = £2.28

Vacunet
Non-adherent, hydrogel coated polyester net dressing

Vacunet dressing 10cm x 1 (Pro-Tex Capillary Dressings Ltd) 10cm square = £1.93, 5cm rectangular = £2.86

Sodium hyaluronate dressings
The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

Hyiodine® should be used with caution in thyroid disorders.

Hyiodine
Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

Hyiodine (H & R Healthcare Ltd) dressing = £35.00

Vapour-permeable films and membranes
Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers.

Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

Non-woven fabric dressing with viscose-rayon pad

Niko Fix
For intravenous and subcutaneous catheter sites

Niko (Unomedical Ltd) Fix dressing 7cm x 8.5cm = £0.19

Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

Askina Derm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Askina Derm dressing (Braun Medical Ltd) 10cm x 12cm = £1.08, 15cm x 20cm = £2.05, 15cm x 20cm = £2.49, 20cm x 30cm = £4.44, 6cm x 7cm = £0.37

Bioclusive
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Bioclusive (Systagenix Wound Management Ltd) dressing 10.2cm x 12.7cm = £1.54

C-View
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

C-View dressing (Aspen Medical Europe Ltd) 10cm x 12cm = £1.02, 12cm x 12cm = £1.09, 15cm x 20cm = £2.36, 6cm x 7cm = £0.38

Dressfilm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Dressfilm dressing (St Georges Medical Ltd) 12cm x 12cm = £0.93, 15cm x 20cm = £1.90, 6cm x 7cm = £0.30

Hydrofilm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Hydrofilm dressing (Paul Hartmann Ltd) 10cm x 12.5cm = £0.42, 10cm x 15cm = £0.52, 10cm x 25cm = £0.81, 12cm x 25cm = £0.86, 15cm x 20cm = £0.96, 20cm x 30cm = £1.60, 6cm x 7cm = £0.22

Hypafix Transparent
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Hypafix Transparent (BSN medical Ltd) dressing 10cm x 2m = £8.71

Leukomed T
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Leukomed T dressing (BSN medical Ltd) 10cm x 12.5cm = £1.01, 11cm x 14cm = £1.23, 15cm x 20cm = £2.35, 15cm x 25cm = £2.51, 7.2cm x 5cm = £0.37, 8cm x 10cm = £0.69

Mepitel Film
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Mepitel Film dressing (Molnlycke Health Care Ltd) 10.5cm x 12cm = £1.31, 10.5cm x 25cm = £2.55, 15.5cm x 20cm = £3.24, 6.5cm x 7cm = £0.49

Mepore Film
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Mepore Film dressing (Molnlycke Health Care Ltd) 10cm x 12cm = £1.23, 10cm x 25cm = £2.39, 15cm x 20cm = £3.04, 6cm x 7cm = £0.46

OpSite Flexifix
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

OpSite Flexifix dressing (Smith & Nephew Healthcare Ltd) 10cm x 1m = £6.57, 5cm x 1m = £3.89

OpSite Flexigrid
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

OpSite Flexigrid dressing (Smith & Nephew Healthcare Ltd) 12cm x 12cm = £1.12, 15cm x 20cm = £2.84, 6cm x 7cm = £0.40
**Wound management products and elasticated garments** 1299

**PolySkin II**  
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

**Kendall Film dressing** (Aria Medical Ltd) 10cm x 12cm = £1.03, 10cm x 20cm = £2.04, 15cm x 20cm = £2.35, 20cm x 25cm = £4.11, 4cm x 4cm = £0.36, 5cm x 7cm = £0.40.

**ProtectFilm**  
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

**ProtectFilm dressing** (Wallace, Cameron & Company Ltd) 10cm x 12cm = £0.20, 15cm x 20cm = £0.40, 6cm x 7cm = £0.11.

**Vapour-permeable Adhesive Film Dressing with absorbent pad**  
Vellafilm dressing 1 (Lohmann & Rauscher (UK) Ltd) 10cm x 12cm = £0.80, 15cm x 20cm = £2.50, 5cm x 7cm = £0.33.

**Tegaderm**  
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

**Tegaderm Film dressing** (3M Health Care Ltd) 12cm x 12cm = £1.11, 15cm x 20cm = £2.41, 6cm x 7cm = £0.39.

**Pharmapore-PU dressing**  
Film dressing with acetate film backing. Supplied in single-use pieces.

**Mepore Ultra dressing**  
Film dressing with absorbent pad.

**Mepore Ultra dressing** (Molnlycke Health Care Ltd) 4cm x 5cm = £0.24, 5cm x 7cm = £0.24, 6cm x 10cm = £0.62, 7cm x 15cm = £0.92, 9cm x 20cm = £1.36, 9cm x 25cm = £1.50, 9cm x 30cm = £2.00, 9cm x 35cm = £2.49.

**OpSite Plus**  
Film dressing with absorbent pad.

**OpSite Plus dressing** (Smith & Nephew Healthcare Ltd) 10cm x 12cm = £1.19, 10cm x 20cm = £2.01, 10cm x 35cm = £3.33, 6.5cm x 5cm = £0.32, 8.5cm x 9.5cm = £0.88.

**Pharmapore-PU dressing**  
Film dressing with acetate film backing. Supplied in single-use pieces.

**PremierPore VP**  
Film dressing with absorbent pad.

**PremierPore VP dressing** (Shermon) 10cm x 10cm = £0.16, 10cm x 15cm = £0.24, 10cm x 20cm = £0.36, 10cm x 25cm = £0.38, 10cm x 30cm = £0.57, 10cm x 35cm = £0.69, 5cm x 7cm = £0.13.

**Tegaderm**  
Film dressing with absorbent pad.

**Tegaderm + Pad dressing** (3M Health Care Ltd) 5cm x 7cm = £0.26, 9cm x 10cm = £0.65, 9cm x 15cm = £0.95, 9cm x 20cm = £1.40, 9cm x 25cm = £1.57, 9cm x 35cm = £2.60.

**Tegaderm Absorbent Clear**  
Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad.

**Tegaderm Absorbent Clear Acrylic dressing** (3M Health Care Ltd) 11.1cm x 12.7cm oval = £4.11, 14.2cm x 15.8cm oval = £5.78, 14.9cm x 15.2cm rectangular = £8.66, 16.8cm x 19cm sacral = £10.37, 20cm x 20cm rectangular = £13.91, 7.6cm x 9.5cm oval = £3.17.

**Vapour-permeable transparent film dressing with adhesive foam border.**

**Central Gard**  
For intravenous and subcutaneous catheter sites.

**East-V**  
For intravenous and subcutaneous catheter sites.

**East-V** (Convatec Ltd) dressing 7cm x 7.5cm = £0.38.

**Vapour-permeable transparent, adhesive film dressing.**

**Hydrofilm I.V. Control**  
For intravenous and subcutaneous catheter sites.

**IV3000**  
For intravenous and subcutaneous catheter sites.

**IV3000 dressing** (Smith & Nephew Healthcare Ltd) 10cm x 12cm = £1.39, 5cm x 6cm = £0.42, 6cm x 7cm = £0.55, 7cm x 9cm = £0.73, 9cm x 12cm = £1.44.
**Wound management**

**Pharmapoe-PU IV**
For intravenous and subcutaneous catheter sites

**Pharmapoe-PU-LV dressing** (Wallace, Cameron & Company Ltd) 6cm x 7cm = £0.08, 7cm x 8.5cm = £0.07, 7cm x 9cm = £0.17

**Tegaderm IV**
For intravenous and subcutaneous catheter sites
Tegaderm IV dressing with securing tapes (3M Health Care Ltd) 10cm x 15.5cm = £1.67, 7cm x 8.5cm = £0.59, 8.5cm x 10.5cm = £1.16

**Soft polymer dressings**
Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see p. 1309.

**Cellulose dressings**

**Sorbion Sachet Border**
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border sorbion sachet border dressing (H & R Healthcare Ltd) 10cm x 10cm square = £2.95, 15cm x 15cm square = £4.49, 25cm x 15cm rectangular = £6.99

**Sorbion Sachet EXTRA**
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope sorbion sachet EXTRA dressing (H & R Healthcare Ltd) 10cm x 10cm = £2.35, 10cm x 20cm = £3.73, 20cm x 20cm = £7.00, 30cm x 20cm = £9.99, 5cm x 5cm = £1.45, 7.5cm x 7.5cm = £1.78

**Sorbion Sachet Multi Star**
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope sorbion sachet multi star dressing (H & R Healthcare Ltd) 14cm x 14cm = £4.89, 8cm x 8cm = £2.99

**Sorbion Sachet 5 Drainage**
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope (‘Y’ shaped dressing) sorbion (H & R Healthcare Ltd) sacchet 5 drainage dressing 10cm x 10cm = £2.64

**Suprasorb X**
 Biosynthetic cellulose fibre dressing Suprasorb X dressing (Lohmann & Rauscher (UK) Ltd) 14cm x 20cm rectangular = £8.38, 2cm x 21cm rope = £6.51, 5cm x 5cm square = £2.03, 9cm x 9cm square = £4.23

**With absorbent pad**

**Advazorb Border**
Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border Advazorb Border dressing (Advancis Medical) 10cm x 10cm = £2.10, 10cm x 20cm = £2.95, 20cm x 20cm = £4.25, 12.5cm x 12.5cm = £2.58, 15cm x 15cm = £3.15, 20cm x 20cm = £5.46, 7.5cm x 7.5cm = £1.19

**Advazorb Border Lite**
Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border Advazorb Border Lite dressing (Advancis Medical) 10cm x 10cm = £1.89, 10cm x 20cm = £2.61, 10cm x 30cm = £3.83, 12.5cm x 12.5cm = £2.32, 15cm x 15cm = £2.84, 20cm x 20cm = £4.91, 7.5cm x 7.5cm = £1.07

**Advazorb Silfix**
Soft silicone wound contact dressing with polyurethane foam film backing Advazorb Silfix dressing (Advancis Medical) 10cm x 10cm = £1.85, 10cm x 20cm = £3.18, 12.5cm x 12.5cm = £2.59, 15cm x 15cm = £3.36, 20cm x 20cm = £4.98, 7.5cm x 7.5cm = £0.99

**Advazorb Silfix Lite**
Soft silicone wound contact dressing with polyurethane foam film backing Advazorb Silfix Lite dressing (Advancis Medical) 10cm x 10cm = £1.67, 10cm x 20cm = £2.86, 12.5cm x 12.5cm = £3.33, 15cm x 15cm = £3.02, 20cm x 20cm = £4.48, 7.5cm x 7.5cm = £0.89

**Allevyn Gentle**
Soft gel wound contact dressing, with polyurethane foam film backing Allevyn Gentle dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm = £2.49, 10cm x 20cm = £4.01, 15cm x 15cm = £4.18, 20cm x 20cm = £6.68, 5cm x 5cm = £1.26

**Allevyn Gentle Border**
 Silicone gel wound contact dressing, with polyurethane foam film backing Allevyn Gentle Border dressing (Smith & Nephew Healthcare Ltd) Heel dressing 23cm x 23.2cm = £9.59, dressing 10cm x 10cm = £2.18, 12.5cm x 12.5cm = £2.67, 17.5cm x 17.5cm = £5.26, 7.5cm x 7.5cm = £1.48

**Allevyn Gentle Border Lite**
 Silicone gel wound contact dressing, with polyurethane foam film backing Allevyn Gentle Border Lite dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm = £2.15, 15cm x 15cm = £3.79, 5.5cm x 12cm = £1.84, 5cm x 5cm = £0.89, 9cm x 15cm = £3.41

**Allevyn Life**
Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border Allevyn Life dressing (Smith & Nephew Healthcare Ltd) 10.3cm x 10.3cm = £1.68, 12.9cm x 12.9cm = £2.47, 15.4cm x 15.4cm = £3.02, 21cm x 21cm = £5.95

**Cutimed Siltec**
Soft silicone wound contact dressing, with polyurethane foam film backing Cutimed Siltec (BSN medical Ltd) Heel dressing 16cm x 24cm = £7.15, Sacrum dressing 17.5cm x 17.5cm = £4.55, 23cm x 23cm = £7.29, dressing 10cm x 10cm = £2.46, 18cm x 20cm = £4.06, 15cm x 15cm = £4.59, 20cm x 20cm = £6.97, 5cm x 6cm = £3.11,

**Cutimed Siltec B**
Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds Cutimed Siltec B dressing (BSN medical Ltd) 12.5cm x 12.5cm = £2.24, 15cm x 15cm = £4.36, 17.5cm x 17.5cm = £5.35, 22.5cm x 22.5cm = £8.47, 7.5cm x 7.5cm = £1.53

**Cutimed Siltec L**
Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds Cutimed Siltec L dressing (BSN medical Ltd) 10cm x 10cm = £2.12, 15cm x 15cm = £3.48, 5cm x 6cm = £1.05

**Eclipse Adherent**
Soft silicone wound contact layer with absorbent pad and film backing Eclipse Adherent dressing (Advancis Medical) 10cm x 10cm = £2.99, 10cm x 20cm = £3.75, 15cm x 15cm = £4.99, 20cm x 20cm = £9.99, 17cm x 19cm sacral = £3.76, 22cm x 23cm sacral = £6.23,

**Flivisorb**
Absorbent polymer dressing with non-adherent wound contact layer Flivisorb dressing (Lohmann & Rauscher (UK) Ltd) 10cm x 10cm square = £5.88, 10cm x 20cm rectangular = £1.05, 20cm x 20cm square = £1.86, 20cm x 30cm rectangular = £2.35

**Flivisorb Adhesive**
Absorbent polymer dressing with non-adherent wound contact layer and adhesive border Flivisorb Adhesive dressing (Lohmann & Rauscher (UK) Ltd) 2cm x 12cm square = £3.32, 5cm x 15cm square = £4.54

**Mepilex**
Absorbent soft silicone dressing with polyurethane foam film backing
Mepilex (Molnlycke Health Care Ltd) Heel dressing 13cm x 20cm = £5.41, 15cm x 22cm = £6.22, XT dressing 10cm x 11cm = £2.66, 11cm x 20cm = £4.39, 15cm x 16cm = £4.82, 20cm x 21cm = £7.28, dressing 5cm x 5cm = £1.21.

Mepilex Border Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border.

Mepilex Border (Molnlycke Health Care Ltd) Heel dressing 18.5cm x 24cm = £6.63, Sacrum dressing 18cm x 18cm = £4.85, 23cm x 23cm = £7.91, dressing 10cm x 12.5cm = £2.72, 10cm x 20cm = £3.69, 10cm x 30cm = £5.55, 15cm x 17.5cm = £4.74, 17cm x 20cm = £5.07.

Mepilex Border Lite Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border.

Mepilex Border Lite dressing (Molnlycke Health Care Ltd) 10cm x 10cm = £2.53, 15cm x 15cm = £4.13, 4cm x 5cm = £0.92, 5cm x 12.5cm = £2.51, 7.5cm x 7.5cm = £1.39.

Mepilex Lite Thin absorbent soft silicone dressing with polyurethane foam film backing.

Mepilex Lite dressing (Molnlycke Health Care Ltd) 10cm x 10cm = £2.17, 15cm x 15cm = £4.42, 20cm x 20cm = £26.66, 6cm x 8.5cm = £1.82.

Mepilex Transfer Soft silicone exudate transfer dressing.

Mepilex Transfer dressing (Molnlycke Health Care Ltd) 10cm x 12cm = £3.51, 15cm x 20cm = £10.64, 20cm x 30cm = £27.20, 7.5cm x 8.5cm = £2.23.

Sorbon Sana Non-adherent polyethylene wound contact dressing with absorbent core.

sorbon sana gentle dressing (H & R Healthcare Ltd) 12cm x 12cm = £2.49, 12cm x 22cm = £4.49, 22cm x 22cm = £7.99, 8.5cm x 8.5cm = £1.99.

Urgotol Duo Non-adherent soft polyester wound contact dressing with absorbent pad.

Urgotol Duo dressing (Urgo Ltd) 10cm x 12cm = £3.85, 15cm x 20cm = £8.35, 5cm x 10cm = £2.26.

Without absorbant pad

Adaptic Touch Non-adherent soft silicone wound contact dressing.

Adaptic Touch dressing (Systagenix Wound Management Ltd) 12.7cm x 15cm = £4.65, 20cm x 32cm = £12.50, 5cm x 7.5cm = £1.13, 7.5cm x 11cm = £2.25.

Askina SilNet Soft silicone-coated wound contact dressing.

Askina SilNet dressing (B.Braun Medical Ltd) 10cm x 18cm = £4.98, 20cm x 30cm = £12.20, 5cm x 7.5cm = £1.13, 7.5cm x 10cm = £2.28.

Meptel Soft silicone, semi-transparent wound contact dressing.

Meptel dressing (Molnlycke Health Care Ltd) 12cm x 15cm = £6.45, 5cm x 7cm = £1.59, 8cm x 10cm = £2.19.

Meptel One Soft silicone, thin, transparent wound contact dressing.

Meptel One dressing (Molnlycke Health Care Ltd) 13cm x 15cm = £6.45, 24cm x 27.5cm = £17.38, 6cm x 7cm = £1.59, 9cm x 10cm = £3.19.

Physiotulle Non-adherent soft polyester wound contact dressing.

Physiotulle dressing 1 (Coloplast Ltd) 0cm x 10cm = £2.25, 5cm x 20cm = £6.86.

Siflex Soft coated polyester wound contact dressing.

Siflex dressing (Advancis Medical) 12cm x 15cm = £4.58, 20cm x 30cm = £11.79, 35cm x 60cm = £39.54, 5cm x 7cm = £1.11, 8cm x 10cm = £2.27.

Silon-TSR Soft silicone polymer wound contact dressing.

Silon-TSR dressing (Bio Med Sciences) 13cm x 13cm = £3.52, 13cm x 25cm = £5.47, 28cm x 30cm = £7.37.

Sobion Contact Non-adherent soft polyurethane foam contact dressing.

sobion contact dressing (H & R Healthcare Ltd) 10cm x 10cm = £1.99, 10cm x 20cm = £3.39, 20cm x 20cm = £6.59, 20cm x 30cm = £9.99, 7.5cm x 7.5cm = £1.49.

Tegaderm Contact Non-adherent soft polyurethane wound contact dressing.

Tegaderm Contact dressing (3M Health Care Ltd) 20cm x 25cm = £10.86, 7.5cm x 10cm = £2.27, 7.5cm x 20cm = £4.46.

Urgotol Non-adherent soft polyurethane wound contact dressing.

Urgotol dressing (Urgo Ltd) 10cm x 10cm = £3.06, 10cm x 40cm = £10.29, 15cm x 15cm = £5.50, 15cm x 20cm = £8.66, 20cm x 30cm = £13.92, 5cm x 5cm = £1.53.

Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

Hydrocolloid-fibrous dressings

Aquacel Soft non-woven pad containing hydrocolloid-fibres.

Aquacel (Convatec Ltd) Ribbon dressing 1cm x 45cm = £1.83, 2cm x 45cm = £2.44, dressing 10cm x 10cm square = £2.41, 15cm x 15cm square = £4.53, 4cm x 10cm rectangular = £1.30, 4cm x 20cm rectangular = £1.91, 4cm x 30cm rectangular = £2.88, 5cm x 5cm square = £1.01.

Aquacel Foam Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border.

Aquacel Foam dressing (Convatec Ltd) adhesive 10cm x 10cm = £2.34, 12.5cm x 12.5cm = £2.65, 17.5cm x 17.5cm = £5.30, 19.8cm x 14cm heel = £5.43, 20cm x 16.9cm sacral = £4.87, 21cm x 21cm = £7.76, 25cm x 30cm = £10.05, 8cm x 6cm = £1.38, non-adhesive 10cm x 10cm = £2.53, 15cm x 15cm = £4.25, 15cm x 20cm = £5.81, 20cm x 20cm = £6.94.

UrgoClean Pad Pad, hydrocolloid fibres coated with soft-adherent lipo-colloidal wound contact layer.

UrgoClean Pad dressing (Urgo Ltd) 10cm x 10cm square = £2.11, 20cm x 15cm rectangular = £3.96, 6cm x 6cm square = £0.95.

UrgoClean Rope Rope, non-woven rope containing hydrocolloid fibres.

UrgoClean rope dressing (Urgo Ltd) 2.5cm x 40cm = £2.37, 5cm x 40cm = £3.14.

Versiva XC, non-adhesive

Hydrocolloid gelling foam dressing; with or without adhesive border.

Versiva XC dressing (Convatec Ltd) 10cm x 10cm square = £2.50, 11cm x 11cm square = £2.44, 14cm x 14cm square = £3.16, 15cm x 15cm square = £4.50, 18cm x 19cm square = £5.37, 20cm x 20cm square = £6.73, 21cm x 25cm sacral = £6.46, 22cm x 22cm square = £5.97, 7.5cm x 7.5cm square = £1.47.

Polyurethan matrix dressing

Cutinova Hydro Polyurethane matrix with absorbent particles and waterproof polyurethane film.

Cutinova Hydro dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm square = £2.53, 15cm x 20cm rectangular = £5.36, 5cm x 6cm rectangular = £1.26.

### Foam dressings

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Shape</th>
<th>Size</th>
<th>Price</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Foam dressings</strong></td>
<td>Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

Cavi-Care

Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity.

Polyurethane Foam Dressing

Kendall

Kendall Foam dressing (Aria Medical Ltd) 10cm x 10cm square = £1.06, 10cm x 20cm rectangular = £2.05, 12.5cm x 12.5cm square = £1.80, 15cm x 15cm square = £2.60, 20cm x 20cm square = £3.01, 5cm x 5cm square = £0.71, 7.5cm x 7.5cm square = £1.21, 8.5cm x 7.5cm rectangular (fenestrated) = £0.91

Polyurethane Foam Film Dressing with Adhesive Border

ActivHeal Foam Adhesive

ActivHeal Foam Adhesive dressing (Advanced Medical Solutions Ltd) 10cm x 10cm square = £1.63, 12.5cm x 12.5cm square = £1.68, 15cm x 15cm square = £2.15, 20cm x 20cm square = £4.50, 7.5cm square = £1.18

Allevyn Adhesive

Allevyn Adhesive dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm square = £2.17, 12.5cm x 12.5cm square = £2.66, 12.5cm x 22.5cm rectangular = £4.14, 17.5cm x 17.5cm square = £5.25, 17cm x 17cm anatomically shaped sacral = £3.94, 22.5cm x 22.5cm square = £7.64, 22cm x 22cm anatomically shaped sacral = £5.68, 7.5cm x 7.5cm square = £1.48

Allevyn Plus Adhesive

Allevyn Plus Adhesive dressing (Smith & Nephew Healthcare Ltd) 12.5cm x 12.5cm square = £3.34, 12.5cm x 22.5cm rectangular = £5.91, 17cm x 17cm square = £6.44, 17cm x 17cm anatomically shaped sacral = £4.87, 22cm x 22cm anatomically shaped sacral = £7.04

Biatain Adhesive

Biatain Adhesive dressing (Coloplast Ltd) 10cm x 10cm square = £1.74, 12.5cm x 12.5cm square = £2.54, 17cm diameter contour = £4.94, 18cm x 18cm square = £5.13, 18cm x 28cm rectangular = £7.60, 15cm x 20cm heel = £5.13, 23cm x 23cm sacral = £4.39

Biatain Silicone

Biatain Silicone dressing (Coloplast Ltd) 7.5cm x 7.5cm = £1.45, 10cm x 10cm = £2.13, 12.5cm x 12.5cm = £2.60, 15cm x 15cm = £3.86, 17.5cm x 17.5cm = £5.13

Kendall Island

Kendall Foam Island dressing (Aria Medical Ltd) 10cm x 10cm square = £1.54, 15cm x 15cm square = £2.90, 20cm x 20cm square = £5.46

PermaFoam

PermaFoam dressing (Paul Hartmann Ltd) 16.5cm x 18cm concave = £0.42, 18cm x 18cm sacral = £3.31, 22cm x 22cm sacral = £3.80

PermaFoam Comfort

PermaFoam Comfort dressing (Paul Hartmann Ltd) 10cm x 20cm rectangular = £3.35, 11cm x 11cm square = £2.12, 15cm x 15cm square = £3.46, 20cm x 20cm square = £5.03, 8cm x 8cm square = £1.12
rectangular = £3.44, 20cm x 20cm = £5.75, Heel dressing 12cm x 20cm = £4.66.

**Biatain-Ibu Non-Adhesive**
- Biatain-Ibu Non-Adhesive dressing (Coloplast Ltd) 10cm x 12cm rectangular = £3.29, 10cm x 22.5cm rectangular = £5.18, 15cm x 15cm square = £5.18, 20cm x 20cm square = £8.81, 5cm x 7cm rectangular = £1.71

**Biatain-Ibu Soft-Hold**
- Biatain-Ibu Soft-Hold dressing (Coloplast Ltd) 5cm x 12cm rectangular = £3.29, 0cm x 22.5cm rectangular = £5.18, 5cm x 15cm square = £5.18

**Biatain Non-Adhesive**
- Biatain Non-Adhesive dressing (Coloplast Ltd) 10cm x 10cm square = £2.37, 10cm x 20cm rectangular = £3.91, 15cm x 15cm square = £4.36, 20cm x 20cm square = £6.47, 5cm x 7cm rectangular = £1.30

**Biatain Soft-Hold**
- Biatain Soft-Hold dressing (Coloplast Ltd) 10cm x 10cm square = £2.57, 10cm x 20cm rectangular = £3.91, 15cm x 15cm square = £4.28, 5cm x 7cm rectangular = £1.30

**Kendall Plus**
- Kendall Foam Plus dressing (Aria Medical Ltd) 10cm x 10cm square = £1.47, 10cm x 20cm rectangular = £2.69, 15cm x 15cm square = £3.38, 20cm x 20cm square = £4.04, 5cm x 5cm square = £0.82, 7.5cm x 7.5cm square = £1.42, 8.5cm x 7.5cm rectangular = £1.24

**Kerrahel**
- Kerrahel (Crawford Healthcare Ltd) dressing 12cm x 20cm heel = £4.61

**Lyfoam Max**
- Lyfoam Max dressing (Monelycke Health Care Ltd) 10cm x 10cm square = £1.14, 10cm x 20cm rectangular = £2.01, 15cm x 15cm square = £2.15, 15cm x 20cm rectangular = £2.71, 20cm x 20cm square = £3.99, 7.5cm x 8.5cm rectangular = £1.09

**PermaFoam**
- PermaFoam (Paul Hartmann Ltd) Cavity dressing 10cm x 10cm = £2.01, dressing (non-adhesive) 10cm x 10cm square = £2.12, 10cm x 20cm rectangular = £3.63, 15cm x 15cm square = £4.02, 20cm x 20cm square = £6.15, 6cm diameter circular = £1.10, 9cm x 8cm square (fenestrated) = £1.25

**PolyMem**
- PolyMem dressing (Aspen Medical Europe Ltd) 7cm x 7cm tube = £1.72, 9cm x 9cm tube = £2.17, finger/toe size 1 = £2.50, 2 = £2.50, 3 = £2.50,
- PolyMem dressing (non-adhesive) (Aspen Medical Europe Ltd) 10cm x 10cm square = £2.47, 10cm x 26cm rectangular = £13.10, 13cm x 13cm square = £4.12, 17cm x 19cm rectangular = £6.08, 20cm x 60cm rectangular = £30.90, 8cm x 8cm square = £1.59

**PolyMem Max**
- PolyMem Max dressing (Aspen Medical Europe Ltd) 11cm x 11cm square = £2.97, 20cm x 20cm square = £11.68

**PolyMem WIC**
- PolyMem (Aspen Medical Europe Ltd) WIC dressing 8cm x 8cm = £3.69

**Tegaderm Foam**
- Tegaderm Foam dressing (3M Health Care Ltd) 10cm x 10cm square = £2.19, 10cm x 20cm rectangular = £3.71, 10cm x 60cm rectangular = £12.54, 20cm x 20cm square = £5.92, 8.8cm x 8.8cm square (fenestrated) = £2.23

**Tiele Xtra**
- Tiele Xtra dressing (15) (Syntagenix Wound Management Ltd) 1cm x 11cm square = £2.24, 5cm x 15cm square = £3.37, 5cm x 20cm rectangular = £5.51

**Transorbent**
- Transorbent dressing (adhesive) (B.Braun Medical Ltd) 10cm x 10cm square = £1.98, 15cm x 15cm square = £3.63, 20cm x 20cm square = £5.80, 5cm x 7cm rectangular = £1.05

**Trufoam NA**
- Trufoam Non Adhesive dressing (Aspen Medical Europe Ltd) 10cm x 10cm square = £1.34, 15cm x 15cm square = £2.63, 5cm x 5cm square = £0.71

**UrgoCell TLC**
- UrgoCell TLC dressing (Urgo Ltd) 10cm x 10cm = £2.67, 15cm x 20cm = £2.06, 6cm x 6cm = £1.84, 12cm x 10cm heel = £4.77,

**Alginale dressings**
- Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

**ActiveHeal Alginate**
- Calcium sodium alginate dressing
- ActiveHeal Alginate dressing (Advanced Medical Solutions Ltd) 10cm x 10cm = £1.15, 10cm x 20cm = £2.83, 5cm x 5cm = £0.59

**ActiveHeal Aquafiber**
- Non-woven, calcium sodium alginate dressing

**Algite M**
- Calcium alginate fibre, non-woven dressing

**Algoterol**
- Calcium alginate dressing

**Biatain Alginate**
- Alginate and carboxymethylcellulose dressing, highly absorbent, gelling dressing

**Biatain Alginate dressing** (Coloplast Ltd) 10cm x 10cm = £2.30, 15cm x 15cm = £4.36, 44cm = £7.21, 5cm x 5cm = £0.97

**Cutimed Alginate**
- Calcium sodium alginate dressing

**Kaltostat**
- Calcium alginate fibre, non-woven

**Kaltostat dressing** (Convatec Ltd) 10cm x 20cm = £4.06, 15cm x 25cm = £6.98, 2g = £3.81, 5cm x 5cm = £0.95, 7.5cm x 12cm = £2.07

**Kendall**
- Calcium alginate dressing

**Kendall Calcium Alginate** (Aspen Medical Ltd) Rope dressing 30cm = £2.89, 61cm = £5.07, 91cm = £5.46, dressing 10cm x 10cm = £1.52, 10cm x 14cm = £2.45, 10cm x 20cm = £2.98, 15cm x 25cm = £5.25, 30cm x 61cm = £27.56, 5cm x 5cm = £0.72.

**Kendall Plus**
- Calcium alginate dressing

**Kendall (Aspen Medical Ltd) Foam Plus dressing 10cm x 10cm square = £1.47**
Melgisorb
Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

Melgisorb (Mohnlycke Health Care Ltd) Cavity dressing 2.2cm x 32cm = £3.55, dressing 10cm x 10cm = £1.88, 10cm x 20cm = £3.52, 5cm x 5cm = £0.90.

Sorbalan
Calcium alginate dressing

Sorbalan (Paul Hartmann Ltd) T dressing 2g = £3.47, dressing 10cm x 10cm = £1.70, 5cm x 5cm = £0.81.

Sorbasan Flat
Calcium alginate fibre, highly absorbent, flat non-woven pads

Sorbasan Flat dressing (Aspen Medical Europe Ltd) 10cm x 10cm = £1.71, 10cm x 20cm = £3.20, 5cm x 5cm = £0.81.

Sorbasan Plus
Alginate dressing bonded to a secondary absorbent viscose pad

Sorbasan Plus dressing (Aspen Medical Europe Ltd) 10cm x 10cm = £3.10, 10cm x 20cm = £3.96, 15cm x 20cm = £5.49, 7.5cm x 10cm = £1.76.

Sorbasan Ribbon
Alginate dressing bonded to a secondary absorbent viscose pad

Sorbasan (Aspen Medical Europe Ltd) Ribbon dressing 40cm = £2.04.

Sorbasan Surgical Packing
Alginate dressing bonded to a secondary absorbent viscose pad

Sorbasan (Aspen Medical Europe Ltd) Packing dressing 2g = £3.47.

Suprasorb A
Calcium alginate dressing

Suprasorb A (Lohmann & Rauscher (UK) Ltd) alginate dressing 10cm x 10cm = £1.22, 5cm x 5cm = £0.62, cavity dressing 2g = £2.26.

Tegaderm Alginate
Calcium alginate dressing

Tegaderm Alginate dressing (3M Health Care Ltd) 10cm x 10cm = £1.72, 2cm x 30.4cm = £0.87, 5cm x 5cm = £0.81.

Urgosorb
Alginate and carboxymethylcellulose dressing without adhesive border

Urgosorb (Urgo Ltd) Pad dressing 10cm x 10cm = £2.10, 10cm x 20cm = £3.85, 5cm x 5cm = £0.87, Rope dressing 30cm = £2.75.

Capillary-action dressings
Capillary-action dressings consist of an absorbent core of hydrophilic fibres sandwiched between two low-adherent wound-contact layers to ensure no fibres are shed on to the wound surface. Wound exudate is taken up by the dressing and retained within the highly absorbent central layer. The dressing may be applied to relatively superficial areas, but for deeper wounds or cavities it may be cut to shape to ensure good contact with the wound base. Multiple layers may be applied to heavily exuding wounds to further increase the fluid-absorbing capacity of the dressing. A secondary adhesive dressing is necessary. Capillary-action dressings are suitable for use on all types of exuding wounds, but particularly on sloughy wounds where removal of fluid from the wound aids debridement; capillary-action dressings are contra-indicated for heavily bleeding wounds or arterial bleeding.

Advadraw
Non-adherent dressing consisting of a soft viscose and polyester absorbent pad with central wicking layer between two perforated permeable wound contact layers

Advadraw dressing (Advancis Medical) 10cm x 10cm = £0.88, 10cm x 15cm = £1.19, 15cm x 15cm = £1.57, 5cm x 7.5cm = £0.57.

Advadraw Spiral
Advadraw (Advancis Medical) Spiral dressing 0.5cm x 40cm = £0.82.

Cerdak Aerocloth
Non-adhesive wound contact sachet containing ceramic spheres, with non-woven fabric adhesive backing

Cerdak Aerocloth dressing 5cm x (Apollo Medical Products Ltd) 10cm = £1.94, 5cm = £1.37.

Cerdak Aerofilm
Non-adhesive wound contact sachet containing ceramic spheres, with waterproof transparent adhesive film backing

Cerdak Aerofilm dressing 5cm x (Apollo Medical Products Ltd) 10cm = £2.07, 5cm = £1.51.

Cerdak Basic
Non-adhesive wound contact sachet containing ceramic spheres

Cerdak Basic dressing (Apollo Medical Products Ltd) 10cm x 10cm = £1.56, 10cm x 15cm = £2.08, 5cm x 5cm = £0.70.

Sumar Lite
Sumar Lite dressing (Lantor (UK) Ltd) 10cm x 10cm = £1.59, 10cm x 15cm = £2.12, 5cm x 5cm = £0.93.

Sumar Max
Sumar Max dressing (Lantor (UK) Ltd) 10cm x 10cm = £1.61, 10cm x 15cm = £2.15, 5cm x 5cm = £0.95.

Sumar Spiral
Sumar (Lantor (UK) Ltd) Spiral dressing 0.5cm x 40cm = £1.57.

Vacutex
Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

Vacutex dressing (Pro-Tex Capillary Dressings Ltd) 10cm x 10cm = £1.66, 10cm x 15cm = £2.23, 15cm x 20cm = £2.68, 15cm x 20cm = £3.14, 20cm x 20cm = £4.28, 5cm x 5cm = £0.94.

Odour absorbent dressings
Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

Askina Carbosorb
Activated charcoal and non-woven viscose rayon dressing

Askina Carbosorb dressing 10cm x (B.Braun Medical Ltd) 10cm = £2.88, 20cm = £3.56.

CarboFLEX
Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

CarboFLEX dressing (ConvaTec Ltd) 10cm x 10cm = £3.18, 15cm x 20cm = £7.23, 8cm x 15cm oval = £3.82.

Carbopod VC
Activated charcoal non-absorbent dressing

Carbopod VC dressing 10cm x (Synergy Health Plc) 10cm = £1.62, 20cm = £2.19.

CliniSorb Odour Control Dressings
Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

CliniSorb dressing 1 (CliniMed Ltd) 5cm x 10cm = £1.88, 10cm x 20cm = £2.50, 5cm x 25cm = £4.03.

Sorbasan Plus Carbon
Alginate dressing with activated carbon

Sorbasan Plus Carbon dressing (Aspen Medical Europe Ltd) 10cm x 15cm = £4.96, 10cm x 20cm = £5.94, 15cm x 20cm = £6.84, 7.5cm x 10cm = £2.56.

Antimicrobial dressings
Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound

BNF 70 Wound management products and elasticated garments 1305
surface but will not eliminate a spreading infection. Some
dressings are designed to release the antimicrobial into the
wound, others act upon the bacteria after absorption from
the wound. The amount of exudate present and the level of
infection should be taken into account when selecting an
antimicrobial dressing.
Medical grade honey below, has antimicrobial and anti-
inflammatory properties. Dressings impregnated with iodine
below, can be used to treat clinically infected wounds.
Dressings containing silver p. 1307, should be used only
when clinical signs or symptoms of infection are present.
Dressings containing other antimicrobials p. 1308 such as
polihexanide (polyhexamethylene biguanide) or
dialkylcarbamoyl chloride are available for use on infected
wounds. Although hypersensitivity is unlikely with
chlorhexidine impregnated tulle dressing, the antibacterial
efficacy of these dressings has not been established.

Honey
Medical grade honey has antimicrobial and anti-
inflammatory properties and can be used for acute or
chronic wounds. Medical grade honey has osmotic
properties, producing an environment that promotes
autolytic debridement; it can help control wound malodour.
Honey dressings should not be used on patients with
extreme sensitivity to honey, bee stings or bee products.
Patients with diabetes should be monitored for changes in
blood-glucose concentrations during treatment with topical
honey or honey-impregnated dressings. For Activon Tulle®,
where no size is stated by the prescriber the 5 cm size is to
be supplied. Medihoney® Antimicrobial Wound Gel is not
recommended for use in deep wounds or body cavities
where removal of waxes may be difficult.

Honey-based topical application
Activon Honey
Medical grade manuka honey
L-Mesitran SOFT ointment dressing
Honey (medical grade) 40%
L-Mesitran (Aspen Medical Europe Ltd) SOFT ointment dressing = £3.59
MANUKApil Honey
Medical grade manuka honey
MANUKApil (Manuka Medical Ltd) dressing = £5.90
Medihoney Antibacterial Medical Honey
Medical grade, Leptospermum sp.
Medihoney (Derma Sciences Europe, Ltd) Antibacterial Medical Honey dressing = £9.90
Medihoney Antibacterial Wound Gel
Medical grade, Leptospermum sp. 80% in natural waxes and oils
Medihoney (Derma Sciences Europe, Ltd) Antibacterial Wound Gel dressing = £4.02
Melladerm Plus Honey
Medical grade; Bulgarian, mountain flower) 45% in basis
containing polyethylene glycol
Mesitran Ointment
Honey (medical grade) 47% Excipients include lanolin
Mesitran (Aspen Medical Europe Ltd) ointment dressing = £9.90
Sheet dressing
Actilite
Knitted viscose impregnated with medical grade manuka honey and manuka oil
Actilite gauze dressing (Advancis Medical) 10cm x 10cm = £0.98, 10cm x 20cm = £1.90, 5cm x 5cm = £0.57
Activon Tulle
Knitted viscose impregnated with medical grade manuka honey
Activon Tulle gauze dressing (Advancis Medical) 10cm x 10cm = £2.97, 5cm x 5cm = £1.80

Algivon
Absorbtent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey
Algivon dressing (Advancis Medical) 10cm x 10cm = £3.40, 5cm x 5cm = £1.98
Algivon Plus
Reinforced calcium alginate dressing impregnated with medical grade manuka honey
Algivon Plus (Advancis Medical) Ribbon dressing 2.5cm x 20cm = £3.36, dressing 10cm x 10cm = £3.36, 5cm x 5cm = £1.96,
L-Mesitran Border
Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border
L-Mesitran (Aspen Medical Europe Ltd) Border sheet 10cm x 10cm square = £2.74
L-Mesitran Hydro
Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border
L-Mesitran Hydro sheet 1 (Aspen Medical Europe Ltd) 0cm x 10cm square = £2.63, 5cm x 20cm rectangular = £5.48
L-Mesitran Net
Hydrogel, non-adherent wound contact layer, without adhesive border
L-Mesitran (Aspen Medical Europe Ltd) Net sheet 10cm x 10cm square = £2.53
Medihoney Antibacterial Honey Apinate
Non-adherent calcium alginate dressing, impregnated with medical grade honey
Medihoney Antibacterial Honey Apinate (Derma Sciences Europe, Ltd) dressing 10cm x 10cm square = £3.40, 5cm x 5cm square = £2.00, rope dressing 1.9cm x 30cm = £4.20,
Medihoney Antibacterial Honey Tulle
Woven fabric impregnated with medical grade manuka honey
Medihoney (Derma Sciences Europe, Ltd) Tulle dressing 10cm x10cm = £2.98
Medihoney Gel sheet
Sodium alginate dressing impregnated with medical grade honey
Medihoney Gel Sheet dressing (Derma Sciences Europe, Ltd) 10cm x 10cm = £4.20, 5cm x 5cm = £1.75
MelMax
Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis
MelMax dressing (CliniMed Ltd) 5cm x 6cm rectangular = £4.82, 8cm x 10cm rectangular = £9.90, 8cm x 20cm rectangular = £19.79
Melladerm Plus Tulle
Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing
polyethylene glycol
Melladerm (SanoMed Manufacturing BV) Plus Tulle dressing 10cm x 10cm = £2.10

Iodine
Cadeoximer–iodine, like povidone–iodine, releases free
iodine when exposed to wound exudate. The free iodine acts
as an antiseptic on the wound surface, the cadexomer
absorbs wound exudate and encourages de-sloughing.
Two-component hydrogel dressings containing glucose
oxidase and iodide ions generate a low level of free iodine in
the presence of moisture and oxygen.
Povidone–iodine fabric dressing is a knitted viscose
dressing with povidone–iodine incorporated in a
hydrophilic polyethylene glycol basis; this facilitates
diffusion of the iodine into the wound and permits removal
of the dressing by irrigation. The iodine has a wide
spectrum of antimicrobial activity but it is rapidly
deactivated by wound exudate.
Systemic absorption of iodine may occur, particularly from
large wounds or with prolonged use.
Iodoflex® and Iodosorb® are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder. Iodozyme® is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding. Oxozyme® is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding. Povidone-iodine Fabric Dressing is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

Iodosorb Paste
Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

Iodosorb Ointment
Iodine 0.9% as cadexomer–iodine in an ointment basis

Iodosorb Powder
Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet

Iodozyme Hydrogel
Hydrogel (two-component dressing containing glucose oxidase and iodide ions)

Oxozyme Hydrogel
Hydrogel (two-component dressing containing glucose oxidase and iodide ions)

Povidone-iodine fabric dressing

Inadine
(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10%

Silver
Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfaazidine have broad antimicrobial activity; if silver sulfaazidine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration (see p. 1010). The use of silver sulfaazidine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfaazidine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

Alginate dressings

Aciticoat Absorbent
Calcium alginate dressing with a silver coated antimicrobial barrier

Aciticoat Absorbent (Smith & Nephew Healthcare Ltd) cavity dressing 2 cm x 3 cm = £12.87, dressing 10 cm x 12.5 cm rectangular = £12.79, 5 cm x 5 cm square = £5.33.

Algisite Ag
Calcium alginate dressing, with silver

Algisite Ag dressing (Smith & Nephew Healthcare Ltd) 10 cm x 10 cm = £4.12, 10 cm x 20 cm = £7.57, 2 g = £5.69, 5 cm x 5 cm = £1.65

Askina Calgitrol Ag
Calcium alginate and silver alginate dressing with polysulphone foam backing

Askina Calgitrol Ag dressing (B. Braun Medical Ltd) 10 cm x 10 cm square = £3.21, 15 cm x 15 cm square = £6.21, 20 cm x 20 cm square = £14.48

Askina Calgitrol Thin
Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

Askina Calgitrol Thin dressing (B. Braun Medical Ltd) 10 cm x 10 cm = £4.06, 15 cm x 15 cm = £9.12, 20 cm x 20 cm = £16.11, 5 cm x 5 cm square = £1.96

Melpisorb Ag
Alginate and carboxymethylcellulose dressing, with ionic silver

Melpisorb Ag (Molnlycke Health Care Ltd) Cavity dressing 3 cm x 4 cm = £4.47, dressing 10 cm x 10 cm = £3.59, 15 cm x 15 cm = £7.60, 5 cm x 5 cm = £1.79.

Silvercel
Alginate and carboxymethylcellulose dressing impregnated with silver

Silvercel dressing (Systagenix Wound Management Ltd) 10 cm x 20 cm rectangular = £7.68, 11 cm x 11 cm square = £4.14, 2.5 cm x 30.5 cm rectangular = £4.45, 5 cm x 5 cm square = £1.68

Silvercel Non-adherent
Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

Silvercel Non-Adherent (Systagenix Wound Management Ltd) cavity dressing 2.5 cm x 30.5 cm = £3.94, dressing 10 cm x 20 cm rectangular = £7.25, 11 cm x 11 cm square = £3.89, 5 cm x 5 cm square = £1.62.

Sorbsan Silver Flat
Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

Sorbsan Silver Flat dressing (Aspen Medical Europe Ltd) 10 cm x 10 cm = £3.97, 10 cm x 20 cm = £7.26, 5 cm x 5 cm = £1.57

Sorbsan Silver Plus
Calcium alginate dressing with absorbent backing, with silver

Sorbsan Silver Plus dressing (Aspen Medical Europe Ltd) 10 cm x 15 cm = £5.56, 10 cm x 20 cm = £6.77, 15 cm x 20 cm = £9.08, 7.5 cm x 10 cm = £3.35

Sorbsan Silver Plus SA
Calcium alginate dressing with absorbent backing and adhesive border, with silver

Sorbsan (Aspen Medical Europe Ltd) Silver Plus SA dressing 11.5 cm x 14 cm = £3.44

Sorbsan Silver Ribbon
With silver

Sorbsan (Aspen Medical Europe Ltd) Silver Ribbon dressing 1 g = £4.15

Sorbsan Silver Surgical Packing
With silver

Sorbsan (Aspen Medical Europe Ltd) Silver Packing dressing 2 g = £5.76

Suprasorb A + Ag
Calcium alginate dressing, with silver
Suprasorb A + Ag (Lohmann & Rauscher (UK) Ltd) dressing 10cm x 10cm = £4.07, 10cm x 20cm = £7.52, 5cm x 5cm = £1.62, rope dressing 2g = £0.02.

Tegaderm Alginate Ag
Calcium alginate and carboxymethylcellulose dressing, with silver
Tegaderm Alginate Ag dressing (3M Health Care Ltd) 10cm x 10cm = £1.24, 3cm x 30cm = £3.70, 5cm x 5cm = £1.39

Urgosorb Silver
Alginate and carboxymethylcellulose dressing, impregnated with silver
Urgosorb Silver (Urgo Ltd) Rope dressing 2.5cm x 30cm = £3.65, dressing 10cm x 10cm = £3.63, 10cm x 20cm = £6.85, 5cm x 5cm = £1.52.

Foam dressings

Acticoat Moisture Control
Three-layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer
Acticoat Moisture Control dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm square = £16.70, 10cm x 20cm rectangular = £22.55, 5cm x 5cm square = £7.14.

Allevyn Ag
Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border
Allevyn Ag (Smith & Nephew Healthcare Ltd) Adhesive dressing 10cm x 10cm square = £5.45, 12.5cm x 12.5cm square = £7.16, 17.5cm x 17.5cm square = £13.77, 17cm x 17cm sacral = £10.75, 22cm x 22cm sacral = £14.40, 7.5cm x 7.5cm square = £3.46, Heel Non-Adhesive dressing 10.5cm x 13.5cm = £10.66, Non-Adhesive dressing 10cm x 10cm square = £6.08, 15cm x 15cm square = £11.53, 20cm x 20cm square = £16.88, 5cm x 5cm square = £3.23.

Blatain Ag
Silver impregnated polyurethane foam film dressing, with or without adhesive border
Blatain Ag (Coloplast Ltd) cavity dressing 5cm x 8cm = £4.01, dressing 10cm x 10cm square = £8.04, 10cm x 20cm rectangular = £14.78, 12.5cm x 12.5cm square = £9.20, 15cm x 15cm square = £16.14, 18cm x 18cm square = £18.45, 19cm x 20cm heel = £18.20, 20cm x 20cm square = £22.76, 22cm x 22cm sacral = £19.34, 5cm x 7cm rectangular = £3.30.

PolyMem Silver
Silver impregnated polyurethane foam film dressing, with or without adhesive border
PolyMem Silver (Aspen Medical Europe Ltd) WIC dressing 8cm x 8cm = £7.05, dressing 10.8cm x 10.8cm oval = £8.06, 12.7cm x 8.8cm oval = £5.60, 17cm x 19cm rectangular = £17.76, 5cm x 7cm oval = £2.27.

UrgeCell Silver
Non-adherent, polyurethane foam film dressing with silver in wound contact layer
UrgeCell Silver dressing (Urgo Ltd) 10cm x 10cm = £5.86, 15cm x 20cm = £10.74, 6cm x 6cm = £4.26.

Hydrocolloid dressings

Aquadel Ag
Soft non-woven pad containing hydrocolloid fibres, (silver impregnated),
Aquadel Ag (Convatec Ltd) Ribbon dressing 1cm x 45cm = £3.08, 2cm x 45cm = £4.71, dressing 10cm x 10cm square = £4.69, 15cm x 15cm square = £8.82, 20cm x 30cm rectangular = £21.89, 4cm x 10cm rectangular = £2.85, 4cm x 20cm rectangular = £3.72, 4cm x 30cm rectangular = £5.57.

Physiostulle Ag
Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine
Physiostulle (Coloplast Ltd) dressing 10cm x 10cm = £2.25

Low-adherence dressings

Acticoat
Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm square = £8.52, 10cm x 20cm rectangular = £13.33, 20cm x 40cm rectangular = £45.60, 5cm x 5cm square = £3.49.

Acticoat
Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh for 7-day wear

Acticoat dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm square = £8.56, 10cm x 20cm rectangular = £13.37, 20cm x 40cm rectangular = £45.77, 5cm x 5cm square = £3.50.

Acticoat Flex
Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat Flex dressing (Smith & Nephew Healthcare Ltd) 10cm x 10cm square = £8.56, 10cm x 20cm rectangular = £13.37, 20cm x 40cm rectangular = £45.77, 5cm x 5cm square = £3.50.

Atrauman Ag
Non-adherent polyamide fabric impregnated with silver and neutral triglycerides
Atrauman Ag dressing (Paul Hartmann Ltd) 10cm x 10cm = £1.25, 10cm x 20cm = £2.45, 5cm x 5cm = £0.51.

Soft polymer dressings

Allevyn Ag Gentle
Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border
Allevyn Ag Gentle (Smith & Nephew Healthcare Ltd) Border dressing 10cm x 10cm = £6.33, 12.5cm x 12.5cm = £8.14, 17.5cm x 17.5cm = £15.51, 7.5cm x 7.5cm = £4.21, dressing 10cm x 10cm = £6.15, 10cm x 20cm = £10.16, 15cm x 15cm = £11.44, 20cm x 20cm = £16.94, 5cm x 5cm = £3.39.

Mepilex Ag
Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border
Mepilex (Molnlycke Health Care Ltd) Ag dressing 10cm x 10cm = £6.12, 10cm x 20cm = £10.09, 15cm x 15cm = £11.36, 20cm x 20cm = £16.94, 20cm x 50cm = £63.20, Border Ag dressing 10cm x 12.5cm = £6.16, 10cm x 20cm = £8.97, 10cm x 30cm = £13.46, 15cm x 17.5cm = £11.31, 17cm x 20cm = £14.66, 7cm x 7cm = £3.41, Border Sacrum Ag dressing 18cm x 18cm = £11.83, 20cm x 20cm = £14.38, 23cm x 23cm = £18.89, Heel Ag dressing 13cm x 20cm = £12.78, 15cm x 22cm = £14.32.

Urgotol 550
Non-adherent, soft polymer wound contact dressing, with silver sulfadiazine

Urgotol Silver
Non-adherent soft polymer wound contact dressing, with silver
Urgotol Silver dressing 1 (Urgo Ltd) 5cm x 12cm = £3.53, 5cm x 20cm = £9.61.

With charcoal

Actisorb Silver 220
Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve
Actisorb Silver 220 dressing (Syntagenix Wound Management Ltd) 10.5cm x 10.5cm = £2.58, 10.5cm x 19cm = £4.70, 6.5cm x 9.5cm = £1.64.

Other antimicrobials

Cuthmed Siltex Sorbate
Polyurethane foam dressing with acetate fabric coated with diallylcarbamoyl chloride, with adhesive border
Cutimed Siltec Sorbact dressing (BSN medical ltd) 12.5cm x 12.5cm = £6.38, 15cm x 15cm = £7.91, 17.5cm x 17.5cm = £11.06, 22.5cm x 22.5cm = £16.83, 7.5cm x 7.5cm = £2.49, 17.5cm x 17.5cm sacral = £8.00, 23cm x 23cm sacral = £12.02.

Cutimed Sorbact
Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressign pad, swabs, round swabs or ribbon gauze, cotton
Cutimed Sorbact (BSN medical ltd) Ribbon dressing 2cm x 50cm = £4.00, 5cm x 200cm = £7.87. Round swab 3cm = £3.27, dressing pad 10cm x 10cm = £5.45, 10cm x 20cm = £8.49, 7cm x 9cm = £3.49, swab 4cm x 6cm = £1.63, 7cm x 9cm = £2.72.

Cutimed Sorbact Gel
Hydrogel dressing impregnated with dialkylcarbamoyl chloride
Cutimed Sorbact Gel dressing 7.5cm x (BSN medical ltd) 15cm rectangular = £4.42, 7.5cm square = £2.63.

Cutimed Sorbact Hydroactive
Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride.
Cutimed Sorbact Hydroactive dressing (BSN medical ltd) 14cm x 14cm = £5.31, 14cm x 24cm = £8.52, 19cm x 19cm = £10.01, 24cm x 24cm = £15.17, 7cm x 8.5cm = £3.74.

Cutimed Sorbact Hydroactive B
Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border
Cutimed Sorbact Hydroactive B dressing (BSN medical ltd) 10cm x 10cm = £7.02, 20cm x 20cm = £11.24, 15cm x 15cm = £13.21, 20cm x 20cm = £20.02, 5cm x 6.5cm = £3.94.

Flaminal Forte Gel
Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds
Flaminal Hydro gel
Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

Kendall AMD
Foam dressing with polyhexamidine, without adhesive border
Kendall AMD Antimicrobial foam dressing (Aria Medical ltd) 10cm x 10cm square = £4.71, 10cm x 20cm rectangular = £8.92, 15cm x 15cm square = £8.92, 20cm x 20cm square = £13.07, 5cm x 5cm square = £2.59, 8.8cm x 7.5cm rectangular (fenestrated) = £4.23.

Kendall AMD Plus
Foam dressing with polyhexamidine, without adhesive border
Kendall AMD Antimicrobial Plus foam dressing (Aria Medical ltd) 10cm x 10cm square = £4.94, 8.8cm x 7.5cm rectangular (fenestrated) = £4.43.

Octenilin Wound gel
Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

Promotan Wound Gel
Wound gel, containing betaine surfactant and polyhexamidine

Suprasorb X + PHMB
Biosynthetic cellulose fibre dressing with polyhexamidine
Suprasorb X + PHMB dressing (Lohmann & Rauscher (UK) Ltd) 14cm x 20cm rectangular = £11.53, 2cm x 21cm rope = £7.18, 5cm x 5cm square = £2.59, 8cm x 8cm rectangular (fenestrated) = £5.07.

Telfa AMD
Low adherence absorbent perforated plastic film faced dressing with polyhexamidine
Telfa AMD dressing (Aria Medical ltd) 10cm x 7.5cm = £0.18, 20cm x 7.5cm = £0.28.

Telfa AMD Island
Low adherence dressing with adhesive border and absorbent pad, with polyhexamidine
Telfa AMD Island dressing 10cm x (Aria Medical ltd) 12.5cm = £0.59, 20cm = £0.86, 25.5cm = £0.98, 35cm = £1.22.

Chlorhexidine gauze dressing
Bactigras
Fabric of leno weave, wool and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate
Bactigras gauze dressing (Smith & Nephew Healthcare ltd) 5cm x 5cm = 28p, 10cm x 10cm = 58p.

Irrigation fluids
Octenilin Wound irrigation solution
Aqueous solution containing glycerol, ethylhexyglycerin and octenidine hydrochloride

Prontosan Wound Irrigation Solution
Aqueous solution containing betaine surfactant and polyhexamidine

Specialised dressings
Protease-modulating matrix dressings
Cadesorb Ointment
Cadesorb (Smith & Nephew Healthcare ltd) ointment = £9.18.

Catrix
Catrix dressing (Cranage Healthcare ltd) sachets = £3.80.

Promogran
Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing
Promogran dressing (Systagenix Wound Management ltd) 123 square cm = £15.62, 28 square cm = £5.19.

Promogran Prisma Matrix
Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing
Promogran Prisma dressing (Systagenix Wound Management ltd) 123 square cm = £17.98, 28 square cm = £6.31.

Tegaderm Matrix
Cellulose acetate matrix, impregnated with polyhydrated ionogens ointment in polyethylene glycol basis

UrgoStart
Soft adherent polymer matrix containing nano-oigosaccharide factor (NOSF), with polyurethane foam film backing
UrgoStart dressing (Urgo ltd) 10cm x 10cm = £6.07, 15cm x 20cm = £10.92, 6cm x 6cm = £4.39, 12cm x 19cm heel = £8.36.

UrgoStart Contact
Non-adherent soft polymer wound contact dressing containing nano-oigosaccharide factor (NOSF)
UrgoStart (Urgo ltd) Contact dressing 5cm x 7cm = £2.96.

Silicone keloid dressings
Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

Silicone gel
Bapscarcare
Silicone gel
Bapscarcare (BAP Medical Ltd) gel = £17.00.

Ciltech
Silicone gel
Ciltech (Su-Med International (UK) Ltd) gel = £50.00.

Dermafix
Silicone gel
Dermafix gel (Meda Pharmaceuticals Ltd) = £60.53.

Kelo-cote UV
Silicone gel with SPF 30 UV protection
Kelo-cote (Sinclair IS Pharma Plc) UV gel = £17.88.

Kelo-cote gel
Silicone gel
Wound management

Kelo-cote (Sinclair IS Pharma Plc) gel = £51.00
Kelo-cote spray
Silicone spray
Kelo-cote (Sinclair IS Pharma Plc) spray = £51.00
NewGel®E
Silicone gel with vitamin E
NewGel®E (Advancell Surgical Ltd) gel = £17.70
Scarsil
Silicone gel
Scarsil (Jobskin Ltd) gel = £15.19
Siligel STC-SE
Silicone gel
Siligel (Nagor Ltd) STC-SE gel = £19.00
Silicone sheets
Advasil Conform
Self-adhesive silicone gel sheet with polyurethane film backing
Advasil Conform sheet (Advancell Medical) 10cm x 10cm square = £5.20, 5cm x 10cm rectangular = £9.17
Bapscarcare T
Self-adhesive silicone gel sheet
Bapscarcare T sheet (BAP Medical UK Ltd) 10cm x 15cm rectangular = £9.00, 5cm x 30cm rectangular = £9.00, 5cm x 7cm rectangular = £3.15
Cica-Care
Soft, self-adhesive, semi-occlusive silicone gel sheet with backing
Cica-Care sheet (Smith & Nephew Healthcare Ltd) 15cm x 12cm rectangular = £28.40, 6cm x 12cm rectangular = £14.57
Ciltech
Silicone gel sheet
Ciltech sheet 1 (Su-Med International (UK) Ltd) 10cm x 10cm square = £7.50, 0cm x 20cm rectangular = £12.50, 5cm x 15cm square = £14.00
DermaTec
Self-adhesive silicone gel sheet (clear- or fabric-backed)
DermaTec (Meda Pharmaceuticals Ltd) Clear sheet 13cm x 13cm square = £15.79, 13cm x 25cm rectangular = £28.53, 20cm x 30cm rectangular = £51.97, 4cm x 13cm rectangular = £8.68. Fabric sheet 13cm x 13cm square = £15.79, 13cm x 25cm rectangular = £28.53, 20cm x 30cm rectangular = £51.97, 4cm x 13cm rectangular = £6.68,
Mepiform
Self-adhesive silicone gel sheet with polyurethane film backing
Mepiform sheet (Molnlycke Health Care Ltd) 4cm x 31cm rectangular = £10.80, 5cm x 7cm rectangular = £3.42, 9cm x 18cm rectangular = £13.37
Scar FX
Self-adhesive, transparent, silicone gel sheet
Scar FX sheet (Jobskin Ltd) 10cm x 20cm rectangular = £16.00, 22.5cm x 14.5cm shaped = £12.00, 25.5cm x 30.5cm rectangular = £60.00, 3.75cm x 22.5cm rectangular = £12.00, 7.5cm diameter shaped = £8.50
Siligel
Silicone gel sheet
Siligel (Nagor Ltd) 10cm x 10cm square = £13.50, 10cm x 30cm rectangular = £31.50, 10cm x 5cm rectangular = £7.50, 15cm x 10cm rectangular = £19.50, 20cm x 20cm square = £40.00, 25cm x 15cm shaped = £21.12, 30cm x 5cm rectangular = £19.50, 40cm x 40cm square = £144.00, 46cm x 8.5cm shaped = £39.46, 5.5cm diameter shaped = £4.00

Adjunct dressings and appliances

Surgical absorbents
Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate (‘strike through’) with an associated risk of infection. Gauche and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings, p. 1305). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous p. 1301, foam p. 1302, or alginate p. 1304) layered into the cavity is often more suitable.

Cotton
Absorbent Cotton, BP
Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls
Absorbent (Robert Bailey & Son Plc) cotton BP 1988
Absorbent Cotton, Hospital Quality
As for absorbent cotton but lower quality materials, shorter staple length etc.
Absorbent (Robert Bailey & Son Plc) cotton hospital quality
Gauze and cotton tissue
Ganggee Tissue (blue)
Consists of absorbent cotton enclosed in absorbent cotton gauze type 2 or absorbent cotton and viscose gauze type 2
Ganggee (Robinson Healthcare) tissue blue label
Ganggee Tissue (pink)
Consists of absorbent cotton enclosed in absorbent cotton gauze type 2 or absorbent cotton and viscose gauze type 2
Ganggee (Robinson Healthcare) tissue pink label DT
Gauze and tissue
Absorbent Cotton Gauze, BP 1988
Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile
Absorbent (Robert Bailey & Son Plc) cotton BP 1988
Alvita (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988
Clini (Clinisupplies Ltd) absorbent cotton BP 1988
Vermaid (Synergy Health Plc) absorbent cotton BP 1988
Absorbent Cotton and Viscose Ribbon Gauze, BP 1988
Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile
Vermaid Fast Edge ribbon gauze sterile (Synergy Health Plc) 1.25cm, 2.5cm
Lint
Absorbent Lint, BPC
Cotton cloth of plain weave with nap raised on one side from warp yarns
Absorbent (Robinson Healthcare) lint
Alvita (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC
Clini (Clinisupplies Ltd) absorbent lint BPC

Pads
Drisorb
Absorbent Dressing Pads, Sterile
Drisorb (Synergy Health Plc) dressing pad 10cm x 20cm = £0.17
PremierPad
Absorbent Dressing Pads, Sterile
PremierPad dressing pad (Shermond) 10cm x 20cm = £0.18, 20cm x 20cm = £0.25
XuPad
Absorbent Dressing Pads, Sterile
Xu pad dressing pad (Richardson Healthcare Ltd) 10cm x 20cm = £0.17, 20cm x 20cm = £0.28, 20cm x 40cm = £0.40

Wound drainage pouches
Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.
Biotrol Draina S
Wound drainage pouch
Biotrol Draina S wound drainage bag (B.Braun Medical Ltd) large (Transparent) = £94.55, medium (Transparent) = £76.86, mini (Transparent) = £77.11
Wound management products and elasticated garments

Biotrol Draina S Vision
Wound drainage pouch
Draina S Vision (B.Braun Medical Ltd) 100 wound drainage bag = £123.38, 50 wound drainage bag = £100.66, 75 wound drainage bag = £106.34

Eakin Access window
For use with Eakin pouches
Eakin (Pelican Healthcare Ltd) access window = £37.39

Eakin Wound pouch, bung closure
Wound pouch, bung closure
Eakin wound drainage bag with bung closure (Pelican Healthcare Ltd), large = £160.48, medium = £147.78, small = £133.41, and access window for horizontal wounds, extra large = £101.48, for horizontal wounds, extra large = £90.80, for vertical incision wounds, extra large = £90.80, wounds, extra large = £90.80

Option Wound Manager
Wound pouch, fold and tuck closure
Eakin wound drainage bag with fold and tuck closure, (Pelican Healthcare Ltd) large = £80.70, medium = £69.44, small = £46.07, extra large = £80.12

Option Wound Manager bag
Option wound drainage bag, with access port
Option wound manager bag (Oakeled Ltd) large = £158.71, medium = £133.16, small = £130.26, square = £138.95, extra small = £131.12

Option Wound Manager with access port
Wound drainage bag, with access port
Option wound manager bag with access port, (Oakeled Ltd) large = £169.65, medium = £138.95, small = £136.05, square = £144.74, extra small = £128.06

Option Wound Manager, cut to fit
Wound drainage bag, cut to fit
Option wound manager bag (Oakeled Ltd) large = £83.44, medium = £79.66, small = £71.91

Welland Fistula bag
Wound drainage bag, cut-to-fit
Welland (Welland Medical Ltd) Fistula wound drainage bag = £81.29

Physical debridement pads
Debrisoft® is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. Debrisoft® must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

Debrisoft Pad
Polyester fibres with bound edges and knitted outer surface coated with polyacrylate
Debrisoft (Activa Healthcare Ltd) pad 10cm x 10cm = £6.39

Complex adjunct therapies
Topical negative pressure therapy
Accessories
Renasys
Soft port and connector
Renasys (Smith & Nephew Healthcare Ltd) Soft Port = £11.11, connector for use with soft port = £3.24

V.A.C.
Drape, gel for canister, Sensa T.R.A.C. Pad
SensaT.R.A.C. (KCI Medical Ltd) pad = £10.95
T.R.A.C. (KCI Medical Ltd) connector = £3.13
V.A.C. (KCI Medical Ltd) drape = £9.39, gel strips = £3.76

Venturi
Gel patches, adhesive, and connector
Venturi (Talley Group Ltd) adhesive gel patch = £15.00, connector = £15.00

WoundASSIST gel strip
WoundASSIST (Huntleigh Healthcare Ltd) TNP gel strip = £3.37

Vacuum assisted closure products
Exsu-Fast kit 1
Dressing Kit
Exsu-Fast (Synergy Health Plc) dressing kit 1 = £28.04
Exsu-Fast kit 2
Dressing Kit
Exsu-Fast (Synergy Health Plc) dressing kit 2 = £35.83
Exsu-Fast kit 3
Dressing Kit
Exsu-Fast (Synergy Health Plc) dressing kit 3 = £35.83
Exsu-Fast kit 4
Dressing Kit
Exsu-Fast (Synergy Health Plc) dressing kit 4 = £28.04

V.A.C GranuFoam
Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver
V.A.C. GranuFoam (KCI Medical Ltd) Bridge dressing kit = £32.04
Silver with SensaT.R.A.C dressing kit medium = £36.04, small = £32.76, dressing kit large = £31.70, medium = £27.32, small = £22.95

V.A.C Simplace
Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)
V.A.C. Simplace EX dressing kit (KCI Medical Ltd) medium = £30.58, small = £26.60

V.A.C WhiteFoam
Polyvinyl alcohol foam dressing or dressing kit
V.A.C. WhiteFoam dressing (KCI Medical Ltd) large = £17.04, small = £10.64, kit large = £33.54, small = £25.91

Venturi
Wound sealing kit, flat drain; with or without channel drain
Venturi wound sealing kit with (Talley Group Ltd) channel drain = £15.00, flat drain, large = £17.50, standard = £15.00

WoundASSIST
Wound pack and channel drain
WoundASSIST TNP dressing pack (Huntleigh Healthcare Ltd) medium/large = £23.85, small/medium = £20.81, channel drain medium/large = £23.85, small/medium = £20.81, extra large = £34.05

Wound drainage collection devices
ActiV.A.C.
Canister with gel
ActiV.A.C. (KCI Medical Ltd) canister with gel = £28.42

S-Canister
Canister kit
S-Canister (Smith & Nephew Healthcare Ltd) kit = £19.00

V.A.C Freedom
Canister with gel
V.A.C. (KCI Medical Ltd) Freedom Canister with gel = £28.85

Venturi
Canister kit with solidifier
Venturi (Talley Group Ltd) Compact canister kit = £12.50, canister kit = £12.50

WoundASSIST wound pack
Canister
WoundASSIST (Huntleigh Healthcare Ltd) TNP canister = £20.30

Wound care accessories
Dressing packs
The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

Multiple Pack Dressing No. 1
Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wove bandages (banded)
Vernaid (Synergy Health Plc) multiple pack dressing
Non-drug tariff specification sterile dressing packs

Dressit
Vitrex gloves, large apron, disposable bag, paper towel, soft swabs, adsorbent pad, sterile field
Dressit sterile dressing pack with (Richardson Healthcare Ltd)
medium/large gloves = £0.60, small/medium gloves = £0.60
Nurse It
Contains latex-free, powder-free nitrile gloves, sterile
laminated paper sheet, large apron, non-sterile swabs,
paper towel, disposable bag, compartmented tray,
disposable forceps, paper measuring tape
Nurse It sterile dressing pack with (Medicareplus International Ltd)
medium/large gloves = £0.54, small/medium gloves = £0.54
Polyfield Nitrile Patient Pack
Contains powder-free nitrile gloves, laminate sheet, non-woven
swabs, towel, polythene disposable bag, apron
Polyfield Nitrile Patient Pack with (Shermond) large gloves = £0.52,
medium gloves = £0.52, small gloves = £0.52
Sterile Dressing Pack with Non-Woven Pads
Vernaid
(Drug Tariff specification 35). Contains non-woven fabric
covered dressing pad, non-woven fabric swabs, absorbent
cotton wool balls, absorbent paper towel, water repellent
inner wrapper
Vernaid (Synergy Health Plc) sterile dressing pack with non-woven
pads
Sterile dressing packs
Vernaid
(Drug Tariff specification 10). Contains gauze and cotton
tissue pad, gauze swabs, absorbent cotton wool balls,
absorbent paper towel, water repellent inner wrapper
Vernaid (Synergy Health Plc) sterile dressing pack
Woven and fabric swabs
Gauze Swab, PB 1988
Consists of absorbent cotton gauze type 13 light or absorbent
cotton and viscose gauze type 1 folded into
squares or rectangles of 8-ply with no cut edges exposed,
sterile or non-sterile
Alvita gauze swab 8ply (Alliance Healthcare (Distribution) Ltd) non-
sterile 10cm x 10cm, sterile 7.5cm x 7.5cm
CS (Clinisupplies Ltd) gauze swab 8ply non-sterile 10cm x 10cm
Clini gauze swab 8ply (Clinisupplies Ltd) non-sterile 10cm x 10cm,
sterile 7.5cm x 7.5cm
Gauze (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm x 10cm
MeCobo gauze swab 8ply (MeCobo Ltd) non-sterile 10cm x 10cm,
sterile 7.5cm x 7.5cm
Propax gauze (BSN medical Ltd) swab 8ply sterile 7.5cm x 7.5cm
Sovereign (Waymade Healthcare Plc) gauze swab sterile 7.5cm x
7.5cm
Steraid (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm x
7.5cm
Vernaid gauze swab 8ply (Synergy Health Plc) non-sterile 10cm x
10cm, sterile 7.5cm x 7.5cm
Non-woven Fabric Swab
(Drug Tariff specification 28). Consists of non-woven fabric
folded 4-ply; alternative to gauze swabs, type 13 light,
sterile or non-sterile
CS (Clinisupplies Ltd) non-woven fabric swab 4ply non-sterile
10cm x 10cm
Clini non-woven fabric swab 4ply (Clinisupplies Ltd) non-sterile
10cm x 10cm, sterile 7.5cm x 7.5cm
CliniMed (CliniMed Ltd) non-woven fabric swab 4ply non-sterile
10cm x 10cm
MeCobo (MeCobo Ltd) non-woven fabric swab 4ply non-sterile
10cm x 10cm
Multisorb (BSN medical Ltd) non-woven fabric swab 4ply sterile
7.5cm x 7.5cm
SofoSorb non-woven fabric swab 4ply (Synergy Health Plc) non-
sterile 10cm x 10cm, sterile 7.5cm x 7.5cm
SoftSwab non-woven fabric swab 4ply (Richardson Healthcare Ltd)
non-sterile 10cm x 10cm, sterile 7.5cm x 7.5cm
Topper 8 non-woven fabric swab 4ply (Sytagenix Wound Management
Ltd) non-sterile 10cm x 10cm, sterile 7.5cm x 7.5cm
Filamented gauze swabs
Cofil
As for Gauze Swab, but with thin layer of Absorbent Cotton
enclosed within, non-sterile
Cofil (Synergy Health Plc) filamented gauze swab 8ply non-sterile
10cm x 10cm
Filamented non-woven Fabric Swab
Regal
(Drug Tariff specification 29). Film of viscose fibres enclosed
within non-sterile viscose fabric folded 8-ply, non-sterile
Regal (Sytagenix Wound Management Ltd) filamented swab 8ply 10cm
x 10cm
Surgical adhesive tapes
Adhesive tapes are useful for retaining dressings on joints
or awkward body parts. These tapes, particularly those
containing rubber, can cause irritant and allergic reactions
in susceptible patients; synthetic adhesives have been
developed to overcome this problem, but they, too, may
sometimes be associated with reactions. Synthetic adhesive,
or silicon adhesive, tapes can be used for patients with skin
reactions to plasters and strapping containing rubber, or
undergoing prolonged treatment. Adhesive tapes that are
occlusive may cause skin maceration. Care is needed not to apply these tapes under
tension, to avoid creating a touriquet effect. If applied over
joints they need to be orientated so that the area of
maximum extensibility of the fabric is in the direction of
movement of the limb.
Occlusive adhesive tapes
Blenderm
(Impermeable Plastic Adhesive Tape, BP 1988). Extensible
water-impermeable plastic film spread with a
polymeric adhesive mass
Blenderm tape (3M Health Care Ltd) 2.5cm = £1.77, 5cm = £3.37
Sleek
(Impermeable Plastic Adhesive Tape, BP 1988). Extensible
water-impermeable plastic film spread with an adhesive
mass
Leukoplast Sleek tape (BSN medical Ltd) 2.5cm, 5cm, 7.5cm
Permeable adhesive tapes
3M Kid Removal Silicone Tape
Soft silicone, water-resistant, knitted fabric, polyurethane
film adhesive tape
3M Kid removal tape (3M Health Care Ltd) 2.5cm = £3.58, 5cm =
£6.48
Chemifix
(Permeable, Apertured Non-Woven Synthetic Adhesive
Tape, BP 1988). Non-woven fabric with a polyacrylate
adhesive
Chemifix tape (Medicareplus International Ltd) 10cm = £2.10, 2.5cm =
£0.90, 5cm = £1.40
Chemipore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988).
Backed of paper-based or non-woven textile material
spread with a polymeric adhesive mass
Chemipore tape (Medicareplus International Ltd) 1.25cm = £0.27,
2.5cm = £0.70, 5cm = £0.95
Clinipore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988).
Backed of paper-based or non-woven textile material
spread with a polymeric adhesive mass
Clinipore tape (Clinisupplies Ltd) 1.25cm = £0.35, 2.5cm = £0.73, 5cm =
£0.99
Elastoplast
(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in
warp (crepe-twisted cotton threads), weft of cotton and/or
viscose threads, spread with adhesive mass containing zinc
oxide
Tensoplast (BSN medical Ltd) elastic adhesive tape 2.5cm

Hypafix tape (BSN medical Ltd) 10cm = £4.63, 15cm = £6.86, 2.5cm = £1.67, 5cm = £9.10, 30cm = £13.15, 5cm = £2.65

Insil
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Insil tape (Insight Medical Products Ltd) 2cm = £5.77, 4cm = £5.77

Leukofix
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Leukofix tape (BSN medical Ltd) 1.25cm = £0.55, 2.5cm = £0.89, 5cm = £1.55

Leukopor
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Leukopor tape (BSN medical Ltd) 1.25cm = £0.49, 2.5cm = £0.76, 5cm = £1.34

Mediplast
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Mediplast tape (Neomedic Ltd) 1.25cm = £0.30, 2.5cm = £0.50

Mediplast
Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

Mediplast Zinc Oxide plaster (Neomedic Ltd) 1.25cm = £0.82, 2.5cm = £1.19, 5cm = £1.99, 7.5cm = £2.99

Mefix

Mefix tape (Molnlycke Health Care Ltd) 10cm = £2.89, 15cm = £3.94, 2.5cm = £1.02, 20cm = £5.04, 30cm = £7.24, 5cm = £1.81

Mepitac
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Mepitac tape (Molnlycke Health Care Ltd) 2cm = £0.93, 4cm = £6.93

Micropore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Micropore tape (3M Health Care Ltd) 1.25cm = £0.62, 2.5cm = £0.92, 5cm = £1.62

Omnifix

Omnifix tape (Paul Hartmann Ltd) 10cm = £4.04, 15cm = £5.97, 5cm = £2.40

OpSite Flexifix Gentle
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

OpSite Flexifix Gentle tape (Smith & Nephew Healthcare Ltd) 2.5cm = £10.20, 5cm = £19.13

Primafix

Primafix tape (Smith & Nephew Healthcare Ltd) 10cm = £2.32, 15cm = £3.43, 20cm = £4.22, 5cm = £1.58

Scanpor
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Scanpor tape (Bio-Diagnositci Ltd) 1.25cm = £0.55, 2.5cm = £0.92, 5cm = £1.75, 7.5cm = £2.56

Siltape
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Siltape (Advanics Medical) 2cm = £5.60, 4cm = £5.60

Strappal
Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

Strappal adhesive tape (BSN medical Ltd) 2.5cm = £1.37, 5cm = £2.32, 7.5cm = £3.49

Transpore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Transpore tape (3M Health Care Ltd) 1.25cm = £0.52, 2.5cm = £0.84, 5cm = £1.48

Zinc Oxide Adhesive Tape, BP 1988
Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

Fast Aid zinc oxide adhesive tape (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

Skin closure dressings
Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Skin closure strips, sterile

Leukostrip
Drug Tariff specifies that these are specifically for personal administration by the prescriber

Leukostrip (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm x 76mm = £6.28

Omnistrip
Drug Tariff specifies that these are specifically for personal administration by the prescriber

Omnistrip (Paul Hartmann Ltd) skin closure strips sterile 6mm x 76mm = £24.11

Steri-strip
Drug Tariff specifies that these are specifically for personal administration by the prescriber

Steri-strip (3M Health Care Ltd) skin closure strips 6mm x 75mm = £8.77

Bandages

Non-extensible bandages
Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Open-wound Bandage, Type 1 BP 1988
Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

Clni open wave bandage Type 1 BP 1988 (CliniSupplies Ltd) 10cm x 5m, 2.5cm x 5m, 5cm x 5m, 7.5cm x 5m

Vernaid white open wave bandage (Synergy Health Plc) 10cm x 5m, 2.5cm x 5m, 5cm x 5m, 7.5cm x 5m

White open wave bandage (Robert Bailey & Son Plc) 10cm x 5m, 2.5cm x 5m, 5cm x 5m, 7.5cm x 5m

Triangular Calico Bandage, BP 1980
Unbleached calico right-angled triangle

Clni (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm x 127cm

Triangular (BSN medical Ltd) calico bandage 90cm x 127cm

Light-weight conforming bandages
Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.
Acti-Wrap
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Acti-Wrap (cohesive/latex free) bandage (Activa Healthcare Ltd) 10cm x 4m = £0.60, 6cm x 4m = £0.46, 8cm x 4m = £0.66

Cotton Conforming Bandage, BP 1988
Cotton fabric, plain weave, treated to impart some elasticity to warp and weft

Easifix CrinX bandage (BSN medical Ltd) 10cm x 3.5m = £1.60, 15cm x 3.5m = £1.39, 5cm x 3.5m = £0.68, 7.5cm x 3.5m = £0.83

Easifix
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Easifix bandage (BSN medical Ltd) 10cm x 4m = £0.50, 15cm x 4m = £0.85, 5cm x 4m = £0.35, 7.5cm x 4m = £0.42

Easifix K
Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Easifix K bandage (6N medical Ltd) 10cm x 4m = £0.18, 15cm x 4m = £0.32, 2.5cm x 4m = £0.10, 5cm x 4m = £0.11, 7.5cm x 4m = £0.16

Hospiform
Fabric, plain weave, warp of polyamide, weft of viscose

Hospiform bandage (Paul Hartmann Ltd) 10cm x 4m = £0.19, 12cm x 4m = £0.23, 6cm x 4m = £0.13, 8cm x 4m = £0.17

K-Band
Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

K-Band bandage (Urgo Ltd) 10cm x 4m = £0.28, 15cm x 4m = £0.49, 5cm x 4m = £0.20, 7cm x 4m = £0.26

Knit Fix
Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

Knit Fix bandage (Robert Bailey & Son Plc) 10cm x 4m = £0.17, 15cm x 4m = £0.33, 5cm x 4m = £0.12, 7cm x 4m = £0.17

Knit-Band
Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Knit-Band bandage (CliniSupplies Ltd) 10cm x 4m = £0.17, 15cm x 4m = £0.30, 5cm x 4m = £0.10, 7cm x 4m = £0.15

Kontour
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Kontour bandage (Easigrip Ltd) 10cm x 4m = £0.40, 15cm x 4m = £0.66, 5cm x 4m = £0.28, 7.5cm x 4m = £0.35

Molelast
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Molelast (Lohmann & Rauscher (UK) Ltd) bandage 4cm x 4m = £0.30

Peha-haft
Polyamide and Cellulose Contour Bandage, cohesive, latex-free

Peha-haft bandage (Paul Hartmann Ltd) 10cm x 4m = £0.76, 12cm x 4m = £0.90, 2.5cm x 4m = £0.73, 4cm x 4m = £0.47, 6cm x 4m = £0.56, 8cm x 4m = £0.66

PremierBand
Polyamide and Cellulose Contour Bandage

PremierBand bandage (Sherwood) 10cm x 4m = £0.17, 15cm x 4m = £0.25, 2.5cm x 4m = £0.12, 7.5cm x 4m = £0.14

Slinky
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Slinky bandage (Molnycke Health Care Ltd) 10cm x 4m = £0.71, 15cm x 4m = £1.02, 7.5cm x 4m = £0.59

Stayform
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Stayform bandage (Robinson Healthcare) 10cm x 4m = £0.40, 15cm x 4m = £0.68, 5cm x 4m = £0.29, 7.5cm x 4m = £0.36

Tubular bandages and garments
Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing.

Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

Elasticated Surgical Tubular Stockinette, Foam padded is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For Elasticated Tubular Bandage, BP 1993, where no size stated by the prescriber, the 30 cm length should be supplied and width endorsed. Non-elasticated Cotton Stockinette, Bleached, BP 1988 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

Elasticated

Acti-Fast
(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

Acti-Fast 2-way stretch stockinette (Activa Healthcare Ltd) 10.75cm = £6.04, 17.5cm = £1.83, 20cm = £3.20, 3.5cm = £0.56, 5cm = £0.58, 7.5cm = £0.77

Clinfast
(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

Clinfast stockinette (CliniSupplies Ltd) 10.75cm = £6.04, 17.5cm = £1.83, 3.5cm = £0.56, 5cm = £0.58, 7.5cm = £0.57

Molelast (Lohmann & Rauscher (UK) Ltd) bandage 4cm x 4m = £0.30

Peha-haft
Polyamide and Cellulose Contour Bandage, cohesive, latex-free

Peha-haft bandage (Paul Hartmann Ltd) 10cm x 4m = £0.76, 12cm x 4m = £0.90, 2.5cm x 4m = £0.73, 4cm x 4m = £0.47, 6cm x 4m = £0.56, 8cm x 4m = £0.66

PremierBand
Polyamide and Cellulose Contour Bandage

PremierBand bandage (Sherwood) 10cm x 4m = £0.17, 15cm x 4m = £0.25, 2.5cm x 4m = £0.12, 7.5cm x 4m = £0.14

Slinky
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Slinky bandage (Molnycke Health Care Ltd) 10cm x 4m = £0.71, 15cm x 4m = £1.02, 7.5cm x 4m = £0.59

Stayform
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Stayform bandage (Robinson Healthcare) 10cm x 4m = £0.40, 15cm x 4m = £0.68, 5cm x 4m = £0.29, 7.5cm x 4m = £0.36
Comfifast Multistretch (Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes.

- Beige, Blue, Ecru, Grey, Pink
Wound management products and elasticated garments

Elastofit

- Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage) | £2.19

Hospicrepe 233

- Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all) | £2.19

K-Lite

- Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage) | £2.19

Knit-Firm

- Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage) | £2.19

Neosporin

- Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all) | £2.19

PremierBand

- Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all) | £2.19

Profore #3

- Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage) | £2.19

Setocrepe

- Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all) | £2.19

**Support bandages**

- Light support bandages, which include the various forms of crepe bandages, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. For a warning against injudicious compression see p. 1317.

**Clinilite**

- Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage) | £2.19

**Clinilite bandage** (Clinisupplies Ltd) 10cm x 4.5m = £0.80, 15cm x 4.5m = £1.16, 5cm x 4.5m = £0.44, 7.5cm x 4.5m = £0.61

**Cliniplus**

- Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage) | £2.19

**Cliniplus** (Clinisupplies Ltd) bandage 10cm x 8.7m = £1.80

**Cotton Crepe Bandage**

- Light support bandage, 4.5 m stretched (all) | £2.19

**Hospicrepe 2** (Paul Hartmann Ltd) 29 bandage 10cm x 4.5m = £0.81, 15cm x 4.5m = £1.18, 2.5cm x 4.5m = £0.46, 7.5cm x 4.5m = £0.62, 39 bandage 10cm x 4.5m = £0.80, 15cm x 4.5m = £1.17, 5cm x 4.5m = £0.44, 7.5cm x 4.5m = £0.62

**Cotton Crepe Bandage, BP 1988**

- Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both) | £2.19

**Elastocrepe bandage** (Bsn medical ltd) 10cm x 4.5m, 7.5cm x 4.5m | £2.19

**Flexocrepe bandage** (Robinson Healthcare) 10cm x 4.5m, 7.5cm x 4.5m | £2.19

**Sterocrepe bandage** (Steroplast Healthcare Ltd) 10cm x 4.5m, 7.5cm x 4.5m | £2.19

**Cotton Suspensory Bandage** (Drug Tarif). Type 1: cotton net bag with draw tapes and webbing waistband; small, medium, and large (all) | £2.19

**Crepe Bandage, BP 1988**

- Fabric, plain weave, warp of wool threads and crepe-twisted cotton threads, weft of cotton threads; stretch bandage; 4.5 m stretched | £2.19
Setocrep (Molnlycke Health Care Ltd) bandage 10cm x 4.5m = £1.18

Soffcrepe
Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all) Soffcrepe bandage (BSN medical Ltd) 10cm x 4.5m = £1.23, 15cm x 4.5m = £1.79, 5cm x 4.5m = £0.69, 7.5cm x 4.5m = £0.97

Adhesive bandages
Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

Elastic Adhesive Bandage, BP 1993
Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched Tensoplast bandage (BSN medical Ltd) 10cm x 4.5m, 5cm x 4.5m, 7.5cm x 4.5m

Cohesive bandages
Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local skin tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

Cohesive extensible bandages
Coban
Bandage
Coban (3M Health Care Ltd) self-adherent bandage 10cm x 6m = £2.93

K Press
Bandage
K Press bandage (Urgo Ltd) 10cm x 6.5m = £2.89, 10cm x 7.5m = £3.37, 12cm x 7.5m = £4.25, 8cm x 7.5cm = £3.18

Profore #4
Bandage
Profore #4 (Smith & Nephew Healthcare Ltd) bandage 10cm x 2.5m = £3.23, latex free bandage 10cm x 2.5m = £3.51

Ultra Fast
Bandage
Ultra (Robinson Healthcare) Fast cohesive bandage 10cm x 6.3m = £2.59

Compression bandages
High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline, p. 207 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging (unlicensed indication).

High compression bandages
High Compression Bandage
Cotton, viscose, nylon, and Lycra extensible bandage, 3 m (unstretched)
K-Three (Urgo Ltd) bandage 10cm x 3m = £2.81
SurePress (Convatec Ltd) bandage 10cm x 3m = £3.61

PEC High Compression Bandages
Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched
Setopress (Molnlycke Health Care Ltd) bandage 10cm x 3.5m = £3.50
VEC High Compression Bandages
Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)
Tensoplast bandage (BSN medical Ltd) 10cm x 3m = £3.43, 7.5cm x 3m = £2.67

Short stretch compression bandages
Actico
Bandage
Actico bandage (Activa Healthcare Ltd) 10cm x 6m = £3.33, 12cm x 6m = £4.24, 4cm x 6m = £2.38, 6cm x 6m = £2.79, 8cm x 6m = £3.21

Comprilan
Bandage
Comprilan bandage (BSN medical Ltd) 10cm x 5m = £3.36, 12cm x 5m = £4.09, 6cm x 5m = £2.66, 8cm x 5m = £3.12

Rosidal K
Bandage
Rosidal K bandage (Lohmann & Rauscher (UK) Ltd) 10cm x 10m = £5.97, 10cm x 5m = £3.43, 12cm x 5m = £4.16, 6cm x 5m = £2.63, 8cm x 5m = £3.14

Sub-compression wadding bandage
Cellona Undercast Padding
Padding
Cellona Undercast padding bandage (Lohmann & Rauscher (UK) Ltd) 10cm x 2.75m = £0.47, 15cm x 2.75m = £0.60, 5cm x 2.75m = £0.30, 7.5cm x 2.75m = £0.38

Flexi-Ban
Padding
Flexi-Ban (Activa Healthcare Ltd) bandage 10cm x 3.5m = £0.50

K Tech Reduced
Padding
K Tech Reduced bandage 10cm x (Urgo Ltd) 6m = £4.68, 7.3m = £5.11

K-Soft
Padding
K-Soft (Urgo Ltd) Long bandage 10cm x 4.5m = £0.56, bandage 10cm x 3.5m = £0.45

K-Tech (K Tech in DMD)
Padding
K Tech (Urgo Ltd) Reduced bandage 10cm x 7.3m = £5.11, bandage 10cm x 5m = £3.90, 10cm x 6m = £4.68, 12cm x 6m = £5.91, 12cm x 7.3m = £6.45, 8cm x 6m = £4.42, 8cm x 7.3m = £4.82,

Ortho-Band Plus
Padding
Ortho-Band (Millpledge Healthcare) Plus bandage 10cm x 3.5m = £0.37

Profore #1
Padding
Profore #1 (Smith & Nephew Healthcare Ltd) bandage 10cm x 3.5m = £0.70, latex free bandage 10cm x 3.5m = £0.76

Softex
Padding
Softex (Molnlycke Health Care Ltd) bandage 10cm x 3.5m = £0.62

SurePress
Padding
SurePress (Convatec Ltd) bandage 10cm x 3m = £3.61

Ultra Soft
Padding
Ultra (Robinson Healthcare) Soft wadding bandage 10cm x 3.5m = £0.39
Wound management products and elasticated garments

**Velband**
Padding

**Velband** (BSN medical Ltd) absorbent padding bandage 10cm x 4.5m = £0.72

**Multi-layer compression bandaging**
Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

**Four layer systems**

- **K-Four** Padding

  **K-Four** (Ferndale) Reduced Compression multi-layer compression bandage kit = £4.45, multi-layer compression bandage kit 18cm-25cm ankle circumference = £6.80, 25cm-30cm ankle circumference = £6.80, greater than 30cm ankle circumference = £9.36, less than 18cm ankle circumference = £7.11.

- **Profore** Wound contact layer

  **Profore** Multi-layer compression bandaging kit, four layer system

  **Profore** (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit = £5.91, multi-layer compression bandage kit 18cm-25cm ankle circumference = £10.07, multi-layer compression bandage kit 18cm-25cm ankle circumference = £9.42, 25cm-30cm ankle circumference = £7.82, above 30cm ankle circumference = £11.71, up to 18cm ankle circumference = £10.11.

- **Ultra Four** Wound contact layer

  **Ultra Four** Multi-layer compression bandaging kit, four layer system

  **Ultra Four** (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit = £8.44, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference = £9.67, up to 18cm ankle circumference = £6.41.

**Two layer systems**

- **Coban 2** Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)

  **Coban 2** (3M Health Care Ltd) Lite multi-layer compression bandage kit = £8.24, multi-layer compression bandage kit = £8.24

- **K Two** Multi-layer compression bandaging kit, two layer system

  **K Two** (Urgo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference = £8.55, 25cm-32cm ankle circumference = £9.34, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference = £8.05, 25cm-32cm ankle circumference = £8.80, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference = £8.55, 25cm-32cm ankle circumference = £9.34, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference = £8.05, 25cm-32cm ankle circumference = £8.80, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference = £10.15, 25cm-32cm ankle circumference = £11.10, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference = £7.60, 25cm-32cm ankle circumference = £8.26, multi-layer compression bandage kit size 6 short 18cm-25cm ankle circumference = £6.79.

**Medicated bandages**
Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

**Steripaste**
Cotton fabric, selvedge weave impregnated with paste containing zinc oxide (requires additional bandaging) Excipients include polysorbate 80

**Steripaste (Mohyleve Health Care Ltd)** bandage 7.5cm x 6m = £3.24

**Zinc Paste Bandage, BP 1993**
Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging Excipients: may include cetoestearyl alcohol, hydroxybenzoates

**Viscopaste (Smith & Nephew Healthcare Ltd)** bandage 7.5cm x 6m = £3.63

**Zinc Paste and Ichthammol Bandage, BP 1993**
Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging Excipients: may include cetoestearyl alcohol

**Ichthopaste (Smith & Nephew Healthcare Ltd)** bandage 7.5cm x 6m = £3.67

**Medicated stocking**

- **Zipzoc**
  
  Sterile rayon stocking impregnated with ointment containing zinc oxide 20%  
  
  **Zipzoc** (Smith & Nephew Healthcare Ltd) stockings = £31.26

**Compression hosiery and garments**
Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

Graduated Compression hosiery, Class 1 Light Support is used for superficial or early varices, varicosis during pregnancy.

Graduated Compression hosiery, Class 2 Medium Support is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy. Graduated Compression hosiery, Class 3 Strong Support is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

**Compression values for hosiery and lymphoedema garments**
Class 1: Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; Class 2 Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; Class 3 Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; Class 4 Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; Class 4 super Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.
Graduated compression hosiery

**Class 1 Light Support**
Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

**Class 2 Light Support**
Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

**Accessories**
**Suspenders**
Suspenders, for thigh stockings

**Anklets**
**Class 2 Medium Support**
Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure),

**Class 3 Strong Support**
Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure),

**Knee caps**
**Class 2 Medium Support**
Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

**Class 3 Strong Support**
Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

**Lymphoedema garments**
Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages.

A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note There are different compression values for lymphoedema garments and graduated compression hosiery, see above.
Dental Practitioners’ Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed sugar-free versions, where available, are preferred. Licensed alcohol-free mouthwashes, where available, are preferred.

Artificial Saliva Substitute Spray, DPF
Artificial Saliva Pastilles, DPF
Artificial Saliva Oral Spray, DPF
Artificial Saliva Protective Spray, DPF

Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or having undergone, radiotherapy or sicca syndrome):
- BioXtra® Gel Mouthspray
- BioXtra® Moisturising Gel
- Glandosane®
- Salvez®

Artificial Saliva Substitute Spray, DPF
Aspirin Tablets, Dispensable, BP
Azithromycin Capsules, 250 mg, DPF
Azithromycin Oral Suspension, 200 mg/5 mL, DPF
Azithromycin Tablets, 250 mg, DPF
Azithromycin Tablets, 500 mg, DPF
Beclometasone Pressurised Inhalation, BP, 50 micrograms/metered inhalation, CFC-free, as:
- Clen Modulite®
- BioModult™

Benzydamine Mouthwash, BP 0.15%
Benzydamine Oromucosal Spray, BP 0.15%
Betamethasone Soluble Tablets, 500 micrograms, DPF
Carbamazepine Tablets, BP
Cefalexin Capsules, BP
Cefalexin Oral Suspension, BP
Cefalexin Tablets, BP
Cefadroxil Capsules, BP
Cefadroxil Oral Solution, BP, 5 mg/5 mL
Cefazolin Tablets, BP, 10 mg
Chlorhexidine Gluconate Gel, BP
Chlorhexidine Mouthwash, BP
Chlorhexidine Oral Spray, DPF
Chlorphenamine Oral Solution, BP
Chlorphenamine Tablets, BP
Choline Salicylate Dental Gel, BP
Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
Clarithromycin Tablets, BP
Clindamycin Capsules, BP
Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
Diazepam Oral Solution, BP, 2 mg/5 mL
Diazepam Tablets, BP
Diclofenac Sodium Tablets, Gastro-resistant, BP
Dihydrocodeine Tablets, BP, 30 mg
Doxycline Tablets, Dispersible, BP
Doxycline Capsules, BP, 100 mg
Doxycline Tablets, 20 mg, DPF
Ephedrine Nasal Drops, BP
Erythromycin Ethyl Succinate Oral Suspension, BP
Erythromycin Ethyl Succinate Tablets, BP
Erythromycin Stearate Tablets, BP
Erythromycin Tablets, Gastro-resistant, BP
Fluconazole Capsules, 50 mg, DPF
Fluconazole Oral Suspension, 50 mg/5 mL, DPF
Hydrocortisone Cream, BP, 1%
Hydrocortisone Oromucosal Tablets, BP
Hydrogen Peroxide Mouthwash, BP, 6%
Ibuprofen Oral Suspension, BP, sugar-free
Ibuprofen Tablets, BP
Lansoprazole Capsules, Gastro-resistant, BP
Lidocaine Ointment, BP, 5%
Lidocaine Spray 10%, DPF
Loratadine Syrup, 5 mg/5 mL, DPF
Loratadine Tablets, BP, 10 mg
Menthol and Eucalyptus Inhalation, BP 1980
Metronidazole Oral Suspension, BP
Metronidazole Tablets, BP
Miconazole Cream, BP
Miconazole Oromucosal Gel, BP
Miconazole and Hydrocortisone Cream, BP
Miconazole and Hydrocortisone Ointment, BP
Nystatin Oral Suspension, BP
Omeprazole Capsules, Gastro-resistant, BP
Oxytetracycline Tablets, BP
Paracetamol Oral Suspension, BP
Paracetamol Tablets, BP
Paracetamol Tablets, Soluble, BP
Phenoxymethylpenicillin Oral Solution, BP
Phenoxymethylpenicillin Tablets, BP
Promethazine Hydrochloride Tablets, BP
Promethazine Oral Solution, BP
Saliva Stimulating Tablets, DPF
Sodium Chloride Mouthwash, Compound, BP
Sodium Fluoride Toothpaste
Sodium Fluoride Tablets, BP
Sodium Fluoride Oral Drops, BP
Sodium Fluoride Tablets, BP
Sodium Fluoride Toothpaste 0.619%, DPF
Sodium Fluoride Toothpaste 1.1%, DPF
Sodium Fusicide Ointment, BP
Temazepam Oral Solution, BP
Temazepam Tablets, BP
Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations.

For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF.

Although brand names have sometimes been included for identification purposes, preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder
- amoxicillin (as trihydrate) 3 g sachet
Artificial Saliva Gel
(proprietary product: *Biotene Oralbalance*), lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray
(proprietary product: *Xerotin*) consists of water, sorbitol, carmelllose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles
(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray
(proprietary product: *Aquoral*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray
(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules
azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL
azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets
azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms
betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray
(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL
clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL
clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg
(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg
fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL
(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%
(proprietary product: *Xylocaine Spray*), lidocaine 10%
supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL
loratadine 5 mg/5 mL

Saliva Stimulating Tablets
(proprietary product: SST), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%
(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%
(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%
Nurse Prescribers’ Formulary

Nurse Prescribers’ Formulary for Community Practitioners

Nurse Prescribers’ Formulary Appendix (Appendix NPF).
List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.
Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers’ list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

Medicinal Preparations
Preparations on this list which are not included in the BP or BPC are described on p. 1323.
Almond Oil Ear Drops, BP
Arachis Oil Enema, NPF
Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)
Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)
Bisacodyl Tablets, BP
Catheter Maintenance Solution, Sodium Chloride, NPF
Catheter Maintenance Solution, ‘Solution G’, NPF
Catheter Maintenance Solution, ‘Solution R’, NPF
Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%
Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%
Choline Salicylate Dental Gel, BP
Clotrimazole Cream 1%, BP
Co-danthramer Capsules, NPF
Co-danthramer Capsules, Strong, NPF
Co-danthramer Oral Suspension, NPF
Co-danthramer Oral Suspension, Strong, NPF
Co-danthrusate Capsules, BP
Co-danthrusate Oral Suspension, NPF
Crotamiton Cream, BP
Crotamiton Lotion, BP
Dimeticone barrier creams containing at least 10%
Dimeticone Lotion, NPF
Docusate Capsules, BP
Docusate Enema, NPF
Docusate Oral Solution, BP
Docusate Oral Solution, Paediatric, BP
Econazole Cream 1%, BP
Emollients as listed below:
Aquadrate® 10% w/w Cream
Arachis Oil, BP
Balneum® Plus Cream
Cetraben® Emollient Cream
Dermafast®
Diprobase® Cream
Diprobase® Ointment
Doublebase®
Doublebase® Dayleve Gel
E45® Cream
E45® Itch Relief Cream
Emulsifying Ointment, BP
Eucerin® Intensive 10% w/w Urea Treatment Cream
Eucerin® Intensive 10% w/w Urea Treatment Lotion
Hydromol® Cream
Hydromol® Intensive
Hydrous Ointment, BP
Lipobase®
Liquid and White Soft Paraffin Ointment, NPF
Neutrogena® Norwegian Formula Dermatological Cream
Nutraplus® Cream
Oilatum® Cream
Oilatum® Junior Cream
Paraffin, White Soft, BP
Paraffin, Yellow Soft, BP
Ultrasal®
Unguentum M®
Emollient Bath and Shower Preparations as listed below:
Aqueous Cream, BP
Balneum® (except pack sizes that are not to be prescribed under the NHS (see Part XVIIIA of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
Balneum Plus® Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIIIA of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
Cetraben® Emollient Bath Additive
Dermalo® Bath Emollient
Doublebase® Emollient Bath Additive
Doublebase® Emollient Shower Gel
Doublebase® Emollient Wash Gel
Hydromol® Bath and Shower Emollient
Oilatum® Emollient
Oilatum® Gel
Oilatum® Junior Bath Additive
Zerolatum® Emollient Medicinal Bath Oil
Folic Acid Tablets 400 micrograms, BP
Glycerol Suppositories, BP
Ibuprofen Oral Suspension, BP (except for indications and doses that are PoM)
Ibuprofen Tablets, BP (except for indications and doses that are PoM)
Ispaghula Husk Granules, BP
Ispaghula Husk Granules, Effervescent, BP
Ispaghula Husk Oral Powder, BP
Lactulose Solution, BP
Lidocaine Ointment, BP
Lidocaine and Chlorhexidine Gel, BP
Macrogol Oral Liquid, Compound, NPF
Macrogol Oral Powder, Compound, NPF
Macrogol Oral Powder, Compound, Half-strength, NPF
Magnesium Hydroxide Mixture, BP
Magnesium Sulfate Paste, BP
Malathion aqueous lotions containing at least 0.5%
Mebendazole Oral Suspension, NPF
Mebendazole Tablets, NPF
Methylcellulose Tablets, BP
Miconazole Cream 2%, BP
Miconazole Oromucosal Gel, BP
Mouthwash Solution-tablets, NPF
Nicotine Inhalation Cartridge for Oromucosal Use, NPF
Nicotine Lozenge, NPF
Nicotine Medicated Chewing Gum, NPF
Nicotine Nasal Spray, NPF
Nicotine Oral Spray, NPF
Nicotine Sublingual Tablets, NPF
Nicotine Transdermal Patches, NPF
Nystatin Oral Suspension, BP
Olive Oil Ear Drops, BP

Nurse Prescribers’ Formulary for Community Practitioners

Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)
Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)
Paracetamol Tablets, Soluble, BP (includes 120- and 500-mg tablets); (max. 96 tablets; max. pack size 32 tablets)
Permethrin Cream, NPF
Phosphates Enema, BP
Povidone–Iodine Solution, BP
Senna Oral Solution, NPF
Senna Tablets, BP
Senna and Ispaghula Granules, NPF
Sodium Chloride Solution, Sterile, BP
Sodium Citrate Compound Enema, NPF
Sodium Chloride Solution, Sterile, BP
Sodium Chloride Solution, Sterile, BP
Sodium Picosulphate Elixir, NPF
Spermicidal contraceptives as listed below:
   - Gyge® Contraceptive Jelly
   - Sterculia Granules, NPF
   - Sterculia and Frangula Granules, NPF
   - Titanium Ointment, BP
   - Water for Injections, BP
   - Zinc and Castor Oil Ointment, BP
   - Zinc Oxide and Dimeticonic Spray, NPF
   - Zinc Oxide Impregnated Medicated Bandage, NPF
   - Zinc Oxide Impregnated Medicated Stocking, NPF
   - Zinc Paste Bandage, BP 1993
   - Zinc Paste and Ichthammol Bandage, BP 1993

**Appliances and Reagents (including Wound Management Products)**
Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may not be prescribed by Nurses are annotated *N*.

**Appliances** (including Contraceptive Devices—where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff).

**Incontinence Appliances** as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

**Stoma Appliances and Associated Products** as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

**Chemical Reagents** as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:
- National Health Service Drug Tariff for England and Wales: [www.ppa.org.uk/ppa/edt_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)

**Details of NPF preparations**
Preparations on the Nurse Prescribers’ Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers’ Formulary.

Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

**Arachis Oil Enema**
arachis oil 100%  
**Catheter Maintenance Solution, Sodium Chloride** (proprietary products: OptiFlo S; Uro-Tainer Sodium Chloride; Uriflex-S), sodium chloride 0.9%

**Catheter Maintenance Solution, ‘Solution G’** (proprietary products: OptiFlo G; Uro-Tainer Saby G; Uriflex G), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 2.8%, disodium edetate 0.01%

**Catheter Maintenance Solution, ‘Solution R’** (proprietary products: OptiFlo R; Uro-Tainer Solution R; Uriflex R), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

**Chlorhexidine gluconate alcoholic solutions** (proprietary product: Unisept) chlorhexidine gluconate in alcoholic solution

**Chlorhexidine gluconate aqueous solutions** (proprietary product: Unisept) chlorhexidine gluconate in aqueous solution

**Co-danthramer Capsules** (P) co-danthramer 25/200 (dantron 25 mg, poloxamer ‘188’ 200 mg)

**Co-danthramer Capsules, Strong** (P) co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer ‘188’ 500 mg)

**Co-danthramer Oral Suspension** (P) (proprietary product: Codalax), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer ‘188’ 200 mg/5 mL)

**Co-danthramer Oral Suspension, Strong** (P) (proprietary product: Codalax Forte), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer ‘188’ 1.5 g/5 mL)

**Co-danthrusate Oral Suspension** (P) (proprietary product: Normal), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

**Dimebonium barrier creams** (proprietary products: Conotrane Cream, dimebonium ‘350’ 22%; Sispel Barrier Cream, dimebonium ‘1000’ 10%), dimebonium 10–22%

**Dimebonium Lotion** (proprietary product: Hedrin), dimebonium 4%

**Docusate Enema** (proprietary product: Noragal Micro-encema) docusate sodium 120 mg in 10 g

**Liquid and White Soft Paraffin Ointment** liquid paraffin 50%, white soft paraffin 50%

**Macrogol Oral Liquid, Compound** (proprietary product: Movicol Liquid), macrogol ‘3350’ (polyethylene glycol ‘3350’) 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

**Macrogol Oral Powder, Compound** (proprietary products: Laxido Orange, Molosao, Movicol) macrogol ‘3350’ (polyethylene glycol ‘3350’) 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet

Note: Amount of potassium chloride varies according to flavour of Movicol® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K+ 5.4 mmol/litre

**Macrogol Oral Powder, Compound, Half-strength** (proprietary product: Movicol-Half), macrogol ‘3350’ (polyethylene glycol ‘3350’) 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet
Malathion aqueous lotions
(proprietary products: Derbac-M Liquid), malathion 0.5% in an aqeous basis

Mebendazole Oral Suspension
(proprietary product: Vermox), mebendazole 100 mg/5 mL

Mebendazole Tablets
(proprietary products: Ovex, Vermox), mebendazole 100 mg

Mouthwash Solution-tablets
consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

Nicotine Inhalation Cartridge for Oromucosal Use
(for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))
(proprietary products: NicAssist Inhalator, Nicorette Inhalator), nicotine 10 mg or 15 mg

Nicotine Lozenge
nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: Nicorette Mint Lozenge, Nicotinell Mint Lozenge), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: NiQuitin Lozenges, NiQuitin Minis, NiQuitin Pre-quit)

Nicotine Medicated Chewing Gum
(proprietary products: NicAssist Gum, Nicorette Gum, Nicotinell Gum, NiQuitin Gum), nicotine 2 mg or 4 mg

Nicotine Nasal Spray
(proprietary product: NicAssist Nasal Spray, Nicorette Nasal Spray), nicotine 500 micrograms/metered spray

Nicotine Oral Spray
(proprietary product: Nicorette Quickmist), nicotine 1 mg/metered spray

Nicotine Sublingual Tablets
(to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))
(proprietary product: NicAssist Microtab, Nicorette Microtab), nicotine (as a cyclodextrin complex) 2 mg

Nicotine Transdermal Patches
(prescriber should specify the brand to be dispensed) releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: Boots NicAssist Patch, Nicorette Patch) or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: NicAssist Translucent Patch, Nicorette Invisi Patch), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: Nicopatch, Nicotinell TTS, NiQuitin, NiQuitin Clear)

Permethrin Cream
(proprietary product: Lyclear Dermal Cream), permethrin 5%

Senna Oral Solution
(proprietary product: Senokot Syrup), sennosides 7.5 mg/5 mL

Senna and Ispaghula Granules
(proprietary product: Manevac Granules), senna fruit 12.4%, ispaghula 54.2%

Sodium Citrate Compound Enema
(proprietary products: Micolette Micro-enema; Micralax Micro-enema; Relaxit Micro-enema), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

Sodium Picosulfate Capsules
(proprietary products: Dulcolax Perles), sodium picosulfate 2.5 mg

Sodium Picosulfate Elixir
(proprietary products: Dulcolax Liquid), sodium picosulfate 5 mg/5 mL

Sterculia Granules
(proprietary product: Normacol Granules), sterculia 62%
Non-medical prescribing

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers. Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name. Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient’s agreement. Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register. Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see Mixing of medicines prior to administration in clinical practice—responding to legislative changes, National Prescribing Centre, May 2010 (available at www.npc.nhs.uk/improving_safety/mixing_meds/resources/mixing_of_medicines.pdf).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

Nurses
Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction. Nurse Independent Prescribers must work within their own level of professional competence and expertise. The Nurse Prescribers’ Formulary p. 1322 for Community Practitioners provides information on prescribing.

Pharmacists
Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction. Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists
Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.
The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on ‘special-order’ manufacturers and specialist importing companies see ‘Special-order manufacturers’.

</table>
Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at tinyurl.com/cdiskk.

Licensed hospital manufacturing units also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (Pro-File; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

SUSPECTED REACTION(S)

Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):

Outcome

- Recovered
- Recovering
- Continuing
- Other

Date reaction(s) started: ____________ Date reaction(s) stopped: ____________

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):
- Patient died due to reaction
- Life threatening
- Congenital abnormality
- Involved or prolonged inpatient hospitalisation
- Involved persistent or significant disability or incapacity
- Medically significant; please give details:

If the reactions were not serious according to the categories above, how bad was the suspected reaction?
- Mild
- Unpleasant, but did not affect everyday activities
- Bad enough to affect everyday activities
It's easy to report online: www.mhra.gov.uk/yellowcard

OTHER DRUG(S) (including self-medication and complementary remedies)

Did the patient take any other medicines/vaccines/complementary remedies in the last 5 months prior to the reaction? Yes / No
If yes, please give the following information if known:

<table>
<thead>
<tr>
<th>Drug/Vaccine (Brand if known)</th>
<th>Batch</th>
<th>Route</th>
<th>Dosage</th>
<th>Date started</th>
<th>Date stopped</th>
<th>Prescribed for</th>

Adult Advanced Life Support Algorithm

Unresponsive?
Not breathing or only occasional gasps

Call Resuscitation Team

CPR 30:2
Attach defibrillator/monitor
Minimise interruptions

Assess rhythm

Shockable
(VF/pulseless VT)

Non-shockable
(PEA/Asystole)

Return of spontaneous circulation

1 Shock
Immediately resume CPR for 2 mins
Minimise interruptions

Immediate post cardiac arrest treatment
- Use ABCDE approach
- Controlled oxygenation and ventilation
- 12-lead ECG
- Treat precipitating cause
- Temperature control / therapeutic hypothermia

During CPR
- Ensure high-quality CPR: rate, depth, recoil
- Plan actions before interrupting CPR
- Give oxygen
- Consider advance airway and capnography
- Continuous chest compressions when advanced airway in place
- Vascular access (intravenous, intraosseous)
- Give adrenaline every 3-5 min
- Correct reversible causes

Reversible causes
- Hypoxia
- Hypovolaemia
- Hypo- / hyperkalaemia / metabolic
- Hypothermia
- Thrombosis – coronary or pulmonary
- Tamponade – cardiac
- Toxins
- Tension pneumothorax

Immediately resume CPR for 2 mins
Minimise interruptions

Adapted with the kind permission of the Resuscitation Council (UK) from Resuscitation Guidelines, October 2010
Medical emergencies in the community

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown, advice on supporting care is not given. Where the patient’s condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

Acute coronary syndromes

- **ANGINA: UNSTABLE**
  - Aspirin dispersible tablets p. 104 (75 mg, 300 mg)
    - By mouth (dispersed in water or chewed)
      - Adult: 300 mg
  - **PLUS**
    - **EITHER** Glyceryl trinitrate aerosol spray p. 190 (400 micrograms/metered dose)
      - Sublingually
      - Adult: 1–2 sprays, repeated as required
    - **OR** Glyceryl trinitrate tablets p. 190 (300 micrograms, 500 micrograms, 600 micrograms)
      - Sublingually
      - Adult: 0.3–1 mg, repeated as required

- **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**
  - Treat as for Angina: unstable
  - Aspirin dispersible tablets p. 104 (75 mg, 300 mg)
    - By mouth (dispersed in water or chewed)
      - Adult: 300 mg
  - Glyceryl trinitrate aerosol spray p. 190 (400 micrograms/metered dose)
    - Sublingually
    - Adult: 1–2 sprays, repeated as required
  - **OR** Glyceryl trinitrate tablets p. 190 (300 micrograms, 500 micrograms, 600 micrograms)
    - Sublingually
    - Adult: 0.3–1 mg, repeated as required

- **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**
  - Aspirin dispersible tablets p. 104 (75 mg, 300 mg)
    - By mouth (dispersed in water or chewed)
      - Adult: 300 mg
  - Glyceryl trinitrate aerosol spray p. 190 (400 micrograms/metered dose)
    - Sublingually
    - Adult: 1–2 sprays, repeated as required
  - **OR** Glyceryl trinitrate tablets p. 190 (300 micrograms, 500 micrograms, 600 micrograms)
    - Sublingually
    - Adult: 0.3–1 mg, repeated as required

- **METOCLOPRAMIDE HYDROCHLORIDE INJECTION p. 347 (5 mg/mL)**
  - By intravenous injection
    - Adult (under 60 kg) 18-19 years: 5 mg
    - Adult (over 60 kg) 18-19 years: 10 mg
    - Adult over 19 years: 10 mg

- **DIAMORPHINE HYDROCHLORIDE INJECTION p. 361 (5 mg powder for reconstitution)**
  - By slow intravenous injection (1-2 mg/minute)
    - Adult: 5 mg followed by a further 2.5–5 mg if necessary
    - Elderly or frail patients: reduce dose by half

- **MORPHINE SULPHATE INJECTION p. 367 (10 mg/mL)**
  - By slow intravenous injection (1-2 mg/minute)
    - Adult: 5–10 mg followed by a further 5–10 mg if necessary
    - Elderly or frail patients: reduce dose by half

- **OXYGEN**, if appropriate

Airways disease, obstructive

- **ASTHMA: ACUTE**
  - Regard each emergency consultation as being for severe acute asthma until shown otherwise; failure to respond adequately at any time requires immediate transfer to hospital

- **EITHER** Salbutamol aerosol inhaler p. 222 (100 micrograms/metered inhalation)
  - By aerosol inhalation via large-volume spacer (and a close-fitting face mask if child under 3 years)
    - Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

- **OR** Salbutamol nebuliser solution p. 222 (1 mg/mL, 2 mg/mL)
  - By inhalation of nebulised solution (via oxygen-driven nebuliser if available)
    - Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary
    - Child 5-11 years: 2.5–5 mg every 20–30 minutes or as necessary
    - Child 12-17 years: 5 mg every 20–30 minutes or as necessary
    - Adult: 5 mg every 20–30 minutes or as necessary

- **OR** Terbutaline sulfate nebuliser solution p. 225 (2.5 mg/mL)
  - By inhalation of nebulised solution (via oxygen-driven nebuliser if available)
    - Child 4 years and below: 5 mg every 20–30 minutes or as necessary
    - Child 5-11 years: 5–10 mg every 20–30 minutes or as necessary
    - Child 12-17 years: 10 mg every 20–30 minutes or as necessary
    - Adult: 10 mg every 20–30 minutes or as necessary

- **PLUS (in all cases)**
  - **EITHER** Prednisolone tablets p. 585 (or prednisolone soluble tablets) (5 mg)
    - By mouth
      - Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily
      - Child 12-17 years: 40–50 mg once daily for at least 5 days
      - Adult: 40–50 mg once daily for at least 5 days
  - **OR** Hydrocortisone (preferably as sodium succinate) p. 583
    - By intravenous injection
      - Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:
        - Child 1 year and below: 25 mg
        - Child 2-4 years: 50 mg
        - Child 5-17 years: 100 mg
      - Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

  - High-flow oxygen should be given if available (via face mask in children)

  - Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat nebulised beta, agonist (as above) and give with

  - Ipratropium bromide nebuliser solution p. 217 (250 micrograms/mL)
    - By inhalation of nebulised solution (via oxygen-driven nebuliser if available)
      - Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
      - Child 12-17 years: 500 micrograms every 4–6 hours as necessary
      - Adult: 500 micrograms every 4–6 hours as necessary
CROUP
Dexamethasone oral solution p. 581 (2 mg/5 mL)
BY MOUTH
» Child 1 month-2 years: 150 micrograms/kg as a single dose

Anaphylaxis

Adrenaline/epinephrine injection p. 196 (1 mg/mL (1 in 1000))
BY INTRAMUSCULAR INJECTION
» Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
» Child 6-11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
» Child 12-17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
» Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow oxygen and intravenous fluids should be given as soon as available.

Chlorphenamine maleate injection p. 245
BY INTRAMUSCULAR OR INTRAVENOUS INJECTION may help counter histamine-mediated vasodilation and bronchoconstriction.

Hydrocortisone (preferably as sodium succinate) p. 583
BY INTRAVENOUS INJECTION has delayed action but should be given to severely affected patients to prevent further deterioration.

Bacterial infection

Meningococcal disease
Benzy1penicillin sodium injection p. 480 (600 mg, 1.2 g)
BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)
» Neonate: 300 mg
» Child 1 month-11 months: 300 mg
» Child 1-9 years: 600 mg
» Child 10-17 years: 1.2 g
» Adult: 1.2 g
Note A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

OR if history of allergy to penicillin

Cefotaxime injection p. 457 (1 g)
BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)
» Neonate: 50 mg/kg
» Child 1 month-11 years: 50 mg/kg (max. 1 g)
» Child 12-17 years: 1 g
» Adult: 1 g
Note A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins

Chloramphenicol injection p. 452 (1 g)
BY INTRAVENOUS INJECTION
» Child 1 month-17 years: 12.5–25 mg/kg
» Adult: 12.5–25 mg/kg
Note A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, bacterial p. 444

Hypoglycaemia

Diabetic hypoglycaemia
Glucose or sucrose
BY MOUTH
» Adult and child over 2 years: approx. 10–20 g (55–110 mL
Lucozade® Energy Original or 100–200 mL Coca-Cola®—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

OR if hypoglycaemia unresponsive or if oral route cannot be used
Glucagon injection p. 618 (1 mg/mL)
BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION
» Child body-weight under 25 kg: 500 micrograms (0.5 mL)
» Child body-weight over 25 kg: 1 mg (1 mL)
» Adult: 1 mg (1 mL)

OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes
Glucose intravenous infusion p. 852 (10%)
BY INTRAVENOUS INJECTION INTO LARGE VEIN
» Child 1 month-17 years: 5 mL/kg (glucose 500 mg/kg)

Glucose intravenous infusion p. 852 (20%)
BY INTRAVENOUS INJECTION INTO LARGE VEIN
» Adult: 50 mL

Seizures

Convulsive (including febrile) seizures lasting longer than 5 minutes

Either Diazepam rectal solution p. 267 (2 mg/mL, 4 mg/mL) BY RECTUM
» Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
» Child 1 month-1 years: 5 mg, repeated once after 10–15 minutes if necessary
» Child 2-11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
» Child 12-17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
» Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
» Elderly 65 years and over: 10 mg, repeated once after 10–15 minutes if necessary

OR Midazolam oromucosal solution p. 414
BY BUCCAL ADMINISTRATION, REPEATED EVERY 5 MINUTES IF NECESSARY
» Neonate: 300 micrograms/kg [unlicensed]
» Child 1-2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
» Child 3 months-11 months: 2.5 mg
» Child 1-4 years: 5 mg
» Child 5-9 years: 7.5 mg
» Child 10-17 years: 10 mg
» Adult: 10 mg [unlicensed]

<td>35.2</td>
</tr>
</tbody>
</table>

### Mass

- 1 kilogram (kg) = 1000 grams (g)
- 1 gram (g) = 1000 milligrams (mg)
- 1 milligram (mg) = 1000 micrograms
- 1 microgram = 1000 nanograms
- 1 nanogram = 1000 picograms

### Volume

- 1 litre (L) = 1000 millilitres (mL)
- 1 millilitre (1 mL) = 1000 microlitres

### Other units

- 1 kilocalorie (kcal) = 4186.8 joules (J)
- 1000 kilocalories (kcal) = 4,186.8 megajoules (MJ)
- 1 megajoule (MJ) = 238.8 kilocalories (kcal)
- 1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
- 1 kilopascal (kPa) = 7.5 mmHg (pressure)

### Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

### Prescribing for children: weight, height, and gender

The table below shows the mean values for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual’s weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

<table>
<thead>
<tr>
<th>Age</th>
<th>Weight (kg)</th>
<th>Height (cm)</th>
</tr>
</thead>
<tbody>

<td>58</td>
<td>164</td>
</tr>
</tbody>
</table>

### Length

- 1 metre (m) = 1000 millimetres (mm)
- 1 centimetre (cm) = 10 mm
- 1 inch (in) = 25.4 mm
- 1 foot (ft) = 12 inches
- 12 inches = 304.8 mm
Recommended wording of cautionary and advisory labels

For details please see p. 1291

1. Warning: This medicine may make you sleepy
2. Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines.
3. Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines.
4. Warning: Do not drink alcohol
5. Do not take indigestion remedies 2 hours before or after you take this medicine
6. Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
7. Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
8. Warning: Do not stop taking this medicine unless your doctor tells you to stop
9. Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
10. Warning: Read the additional information given with this medicine
11. Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
12. Do not take anything containing aspirin while taking this medicine
13. Dissolve or mix with water before taking
14. This medicine may colour your urine. This is harmless
15. Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
16. Dissolve the tablet under your tongue—do not swallow.
   Store the tablets in this bottle with the cap tightly closed.
   Get a new supply 8 weeks after opening
17. Do not take more than... in 24 hours
18. Do not take more than... in 24 hours. Also, do not take more than... in any one week
19. Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines.
   Do not drink alcohol
21. Take with or just after food, or a meal
22. Take 30 to 60 minutes before food
23. Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
24. Suck or chew this medicine
25. Swallow this medicine whole. Do not chew or crush
26. Dissolve this medicine under your tongue
27. Take with a full glass of water
28. Spread thinly on the affected skin only
29. Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
30. Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
32. Contains aspirin. Do not take anything else containing aspirin while taking this medicine
Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c. = ante cibum (before food)
b. d. = bis die (twice daily)
o. d. = omni die (every day)
o. m. = omni mane (every morning)
o. n. = omni nocte (every night)
p. c. = post cibum (after food)
p. r. n. = pro re nata (when required)
q. d. s. = quater die sumendum (to be taken four times daily)
q. q. h. = quarta quaque hora (every four hours)
stat. = immediately
t. d. s. = ter die sumendum (to be taken three times daily)
t. i. d. = in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102 Tartrazine
E211 Sodium Benzoate
E104 Quinoline Yellow
E223 Sodium Metabisulphite
E110 Sunset Yellow FCF
E320 Butylated Hydroxyanisole
E123 Amaranth
E321 Butylated Hydroxytoluene
E124ponceau 4R
E322 Lecithins
E127 Erythrosine BS
E420 Sorbitol
E132 Indigo Carmine
E421 Mannitol
E142 Green S
E422 Glycerol
E171 Titanium Dioxide
E901 Beeswax (white and yellow)
E172 Iron oxides, iron hydroxides
E1520 Propylene Glycol
E200 Sorbic Acid

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.
